Institut National de Bitcoin (INBi)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	Les propositions peuvent s'appliquer à de nombreux produits et services, mais elles nécessitent une clarification pour les services sur le registre Bitcoin impliquant des retraits pour de la conservation en propre. L'article 18 du projet de RTS précise les informations que les entités assujetties peuvent être conduites à collecter pour documenter l'objet et la nature envisagée

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	de la relation d'affaires ou de la transaction occasionnelle. Certaines de ces catégories, en particulier celles relatives à la destination des fonds, peuvent être mal adaptées ou donner lieu à une interprétation extensive lorsqu'elles sont appliquées aux retraits vers des portefeuilles auto-hébergés. Dans ce cas, certaines informations relatives à la destination des fonds peuvent ne pas être pertinentes : identité d'un bénéficiaire tiers, existence d'un intermédiaire, ou "juridiction de réception" assimilable à celle d'un compte bancaire. Une adresse bitcoin n'est pas un compte tenu par un prestataire situé dans une juridiction déterminée. Sans clarification, les CASP peuvent être incités à créer des questionnaires intrusifs ou à collecter des informations artificielles pour documenter des catégories qui ne correspondent pas à l'opération réalisée. Cela nuirait à la proportionnalité du dispositif sans bénéfice démontré pour la lutte contre le blanchiment de capitaux et le financement du terrorisme. INBi recommends that Article 18 be clarified as follows: "For the avoidance of doubt, where a crypto-asset service provider assesses the purpose and intended nature of a transaction involving a withdrawal of bitcoin to a self-hosted address indicated by an identified customer for self-custody purposes, information on a

Name of the respondent	Question	Answer
		third-party recipient, intermediary or receiving jurisdiction should be collected only where it is relevant, available and necessary to mitigate an identified ML/TF risk. In low-risk situations, self-custody may constitute the relevant information on the intended use or destination of funds.”
Institut National de Bitcoin (INBi)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Le projet affirme une approche fondée sur les risques, mais il ne contient pas de garde-fou suffisant contre la surcollecte défensive. En l’état, il risque de consolider une interprétation extensive des obligations de vigilance client, particulièrement problématique lorsqu’elle conduit à associer identité civile, adresses sur le registre Bitcoin et historique transactionnel. En pratique, une entité assujettie encourt un risque juridique et réputationnel important lorsqu’elle collecte trop peu d’informations, mais elle est rarement sanctionnée pour avoir collecté trop d’informations. Cette asymétrie pousse les acteurs privés à collecter “plus au cas où”, même lorsque l’utilité LBC/FT marginale des données n’est pas démontrée. Dans le cas du registre Bitcoin, l’association entre identité civile, adresse et historique transactionnel peut révéler durablement des éléments patrimoniaux. Une fuite de telles données ne crée pas seulement un risque de fraude numérique ; elle peut exposer les personnes concernées à des risques d’extorsion et de violences physiques graves, pouvant aller jusqu’à l’enlèvement, la séquestration, la torture ou les actes de barbarie.

Name of the respondent	Question	Answer
		L'approche fondée sur les risques ne doit donc pas être comprise comme une collecte maximale, mais comme une collecte nécessaire, documentée et proportionnée. elle que l'impose le RGPD. Devraient en outre être imposés aux acteurs (1) une obligation de dissocier identité et adresse physique d'une part et éléments patrimoniaux et transactionnels d'autre part, et (2) une obligation de chiffrement de ces informations, afin que les informations soient illisibles en cas de fuite de données. INBi recommends adding the following interpretative clause: "For the purposes of this Regulation, risk-based customer due diligence shall not be interpreted as requiring maximum information collection. Where an obliged entity documents that a less intrusive measure sufficiently mitigates the identified ML/TF risk, the absence of additional data collection should not, in itself, be considered a deficiency in the application of customer due diligence measures." INBi also recommends that supervisory expectations explicitly take into account the risks created by overcollection and excessive retention of sensitive crypto-financial data.
Institut National de Bitcoin (INBi)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Oui. Dans le cas de retraits de bitcoins pour de la conservation en propre, plusieurs informations prévues

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	ou suggérées par le projet de RTS peuvent être structurellement indisponibles, artificielles ou non pertinentes. Premièrement, l'information relative à un bénéficiaire tiers ou à un intermédiaire peut être non pertinente lorsque le client retire des bitcoins vers une adresse qu'il contrôle. L'opération ne devrait pas être traitée par défaut comme impliquant un bénéficiaire tiers. Deuxièmement, la notion de "juridiction de réception" n'est pas toujours pertinente pour une adresse sur le registre Bitcoin. Contrairement à un compte bancaire, une adresse bitcoin n'est pas tenue par un établissement situé dans une juridiction déterminée. Troisièmement, exiger une destination économique détaillée peut conduire à produire une information artificielle. La conservation en propre peut constituer en elle-même la finalité légitime de l'opération. Quatrièmement, l'information relative à l'origine patrimoniale historique peut être indisponible ou disproportionnée lorsqu'un particulier a acquis des bitcoins sur plusieurs années, par achats successifs, dons, activité de minage ou opérations antérieures à la relation avec le CASP. Cette difficulté ne devrait pas conduire automatiquement à exiger des informations relevant d'une vigilance renforcée lorsque le risque identifié ne le justifie pas.

Name of the respondent	Question	Answer
		Cinquièmement, les informations collectées ou conservées pour documenter l'analyse transactionnelle devraient rester strictement limitées à ce qui est nécessaire au risque identifié. Une interprétation extensive conduisant à conserver des historiques transactionnels ou données d'adresses au-delà de ce besoin accroîtrait le risque pour les personnes sans bénéfice LBC/FT démontré. Les solutions alternatives devraient donc pouvoir inclure une déclaration limitée du client, un filtrage des sanctions financières ciblées, un contrôle de cohérence avec le profil client et une analyse transactionnelle limitée à ce qui est strictement nécessaire au risque identifié. INBi recommends the following clarification: "Where information requested under these RTS is not relevant or not routinely available for a specific crypto-asset service, obliged entities should be allowed to rely on less intrusive measures that are adequate to mitigate the identified ML/TF risk. Such measures should not require the systematic retention of address graphs, extended transaction histories or speculative information on future use."
Institut National de Bitcoin (INBi)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example	Oui. L'INBi recommande de prévoir des mesures de vigilance simplifiée pour les situations de faible risque dans lesquelles un client déjà identifié et vérifié retire des

Name of the respondent	Question	Answer
	because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	bitcoins depuis un CASP vers une adresse auto-hébergée qu'il indique utiliser pour sa conservation en propre. Cette mesure ne doit pas être conçue comme une exemption, ni comme une nouvelle obligation autonome de preuve de contrôle des adresses auto-hébergées. Elle devrait simplement permettre de limiter les informations collectées à ce qui est strictement nécessaire lorsque l'usage de conservation en propre ne présente pas, en lui-même, d'indicateur spécifique de risque élevé. En particulier, l'usage d'une adresse auto-hébergée ne devrait pas conduire par défaut à exiger l'identité d'un bénéficiaire tiers, l'existence d'un intermédiaire ou des informations de destination qui ne sont ni pertinentes ni disponibles. Les RTS devraient éviter toute interprétation conduisant à étendre la collecte au-delà de ce qui est nécessaire au risque LBC/FT identifié. INBi recommends adding the following simplified due diligence measure: "Where the ML/TF risk is low and an identified and verified customer carries out a withdrawal of bitcoin to a self-hosted address for self-custody purposes, simplified due diligence may consist in treating self-custody as the relevant information on the intended use or destination of funds, provided that no specific higher-risk indicator is identified. The use of a self-hosted

Name of the respondent	Question	Answer
		address should not, in itself, require the collection of additional destination information beyond what is relevant, available and necessary to assess the identified ML/TF risk.”
Institut National de Bitcoin (INBi)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	L’Institut National de Bitcoin (INBi) est un think tank français indépendant, constitué sous forme d’association loi 1901. Cette contribution s’appuie sur sa note de recherche d’avril 2026 “Collecter plus, protéger moins ?”, consacrée aux fuites de données, à l’irréversibilité du préjudice et à la proportionnalité des obligations de collecte dans le cadre européen LBC/FT https://inbi.fr/collecter-plus-proteger-moins-amlr-tfr/. Cette note a bénéficié d’une contribution et relecture externes d’Estelle De Marco, docteure en droit, sur la discussion juridique. Les développements méthodologiques relatifs aux analyses d’impact, à la nécessité, à la proportionnalité et à la distinction DPIA/PIA s’appuient notamment sur ses travaux publiés, en particulier “A DPIA is a PIA” : https://inthemis.fr/ressources/A-DPIA-is-a-PIA.html La présente contribution ne doit pas être comprise comme un soutien général à l’extension du cadre européen de collecte de données financières. L’INBi prend acte du mandat confié à AMLA, mais considère que l’accumulation de normes techniques de vigilance peut, si elle n’est pas strictement encadrée, rendre arbitrairement la conservation en propre progressivement plus complexe, plus risquée et moins accessible pour les utilisateurs légitimes.

Name of the respondent	Question	Answer
		Sans clarification, le projet de RTS laisse subsister une incitation pratique à la surcollecte défensive. Cette incitation est particulièrement dangereuse dans le cas de registre public, car l'association entre identité civile, adresse et historique transactionnel peut révéler durablement des éléments patrimoniaux et exposer physiquement les personnes concernées. Une telle mise en danger des personnes paraît disproportionnée, particulièrement lorsqu'il n'existe pas de raison valable de penser que ces personnes sont en train de commettre une infraction. L'INBi recommande donc qu'AMLA intègre explicitement, dans les RTS ou dans les considérants, un principe de nécessité, de proportionnalité et de minimisation des données. L'harmonisation ne doit pas devenir une standardisation de la collecte maximale, laquelle serait contraire à la Charte des droits fondamentaux de l'Union européenne et à la Convention européenne des droits de l'Homme. Proposed horizontal recital: "Customer due diligence measures should be applied in accordance with the principles of necessity, proportionality and data minimisation. In particular, where information relates to bitcoin addresses, transaction histories or other data that may reveal a person's holdings or patterns of behaviour, obliged entities should not collect, process or retain more

Name of the respondent	Question	Answer
		information than is strictly necessary to mitigate a specific and documented ML/TF risk." This is especially important because AMLA's own IA/CBA acknowledges that quantitative figures for this mandate are currently unavailable and that the assessment is primarily qualitative. Where the privacy and physical-security costs of overcollection are potentially irreversible, the RTS should avoid creating incentives for maximum collection in the absence of demonstrated marginal AML/CFT benefit.
Institut National de Bitcoin (INBi)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Institut National de Bitcoin (INBi)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	30
Institut National de Bitcoin (INBi)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 30 — Screening requirements INBi does not object to targeted financial sanctions screening as such. However, Article 30 should be clarified to ensure that screening of digital wallet addresses remains limited to what is necessary to determine whether a customer, beneficial owner or relevant person is the intended target of targeted financial sanctions. The reference to digital wallet addresses should not be interpreted as requiring or encouraging the systematic retention of address graphs, extended transaction histories, probabilistic clustering data or commercial risk-scoring data unrelated to a specific targeted financial sanctions match. Where a digital wallet address generates a match, obliged

Name of the respondent	Question	Answer
		entities should apply proportionate human review and avoid automated exclusion or excessive retention beyond what is necessary to resolve the match.
Institut National de Bitcoin (INBi)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
Institut National de Bitcoin (INBi)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 7 — Non-face-to-face verification Where remote verification involves images, videos, sound or other identity data, the RTS should explicitly require strict retention limitation, purpose limitation and protection against secondary use, including biometric processing or reuse for unrelated risk-scoring purposes, unless such processing is strictly necessary, lawful and proportionate.
Institut National de Bitcoin (INBi)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Institut National de Bitcoin (INBi)	Please specify which recital you refer to, and share your comments below.	New recital after recital (21): “Customer due diligence measures should be applied in accordance with the principles of necessity, proportionality and data minimisation. In particular, where information relates to bitcoin addresses, transaction histories or other data that may reveal a person’s holdings or patterns of behaviour, obliged entities should not collect, process or retain more information than is strictly necessary to mitigate a specific and documented ML/TF risk. Risk-based customer due diligence should not be understood as maximum information collection.”

Name of the respondent	Question	Answer
Institut National de Bitcoin (INBi)	Do you have any comments on the Annex in the draft RTS?	Yes
Institut National de Bitcoin (INBi)	Please share your comments below.	Annex I — Electronic identification attributes The list of attributes in Annex I should not be interpreted as requiring obliged entities to retrieve, process or retain all available attributes in every CDD scenario. In line with necessity, proportionality and data minimisation, obliged entities should retrieve and retain only the subset of attributes that is necessary for the specific CDD measure and ML/TF risk identified. This is particularly important where identity attributes are combined with bitcoin addresses or transaction-related data, as such combination may reveal long-term financial behaviour and holdings.
Institut National de Bitcoin (INBi)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Institute of Financial Services Practitioners (IFSP)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Our view is that the proposals set out in the draft RTS don't allow for sufficient flexibility to accommodate the full range of products, services and business models of obliged entities, particularly within the DNFBP sector. The draft RTS appear to be premised on an assumed level of standardisation in service delivery and ML/TF risk exposure that does not reflect operational realities. Certain DNFBP services, eg the provision of a reg. office, don't involve the execution of customer transactions nor provide visibility over customer transactional activity. In such circumstances, the application of ongoing transaction monitoring requirements as reflected in the RTS, is neither meaningful nor practicable. Obliged entities providing these services are

Name of the respondent	Question	Answer
		not in a position to scrutinise transactions or assess their consistency with the customer's profile, as they neither process nor have access to the relevant information. Applying these obligations indiscriminately risks creating requirements that are disproportionate and, in some cases, impossible to comply with. Generally, DNFBPs provide a broad spectrum of services with varying levels of customer interaction and exposure to ML/TF risk. Even within the same category of obliged entities, such as auditors/tax advisors, there are significant differences in service delivery models and risk profiles. A uniform approach risks imposing unnecessary compliance burdens, particularly on smaller entities, without a commensurate enhancement of risk mitigation. We consider that the RTS should more explicitly recognise the need for flexibility based on the nature of the specific product or service provided. Regulatory obligations should apply only where they are relevant and proportionate, with clearer provisions allowing obliged entities to calibrate their CDD measures according to the product service and delivery channel. This approach would be enhanced by the inclusion of practical examples demonstrating how the requirements may be adapted across different DNFBP activities. In addition, we note that recital (5) page 9 does not sufficiently distinguish between declarations obtained from regulated and duly licensed trustees and those obtained from unlicensed or unregulated trustees. The general requirement for certification by an independent

Name of the respondent	Question	Answer
		third party professional does not adequately take into account the regulatory oversight, professional accountability and AML/CFT obligations already applicable to regulated trustees. As drafted, this approach risks duplication of controls and the imposition of disproportionate additional requirements where the reliability and independence of information provided by a regulated trustee can reasonably be relied upon. We therefore propose that the RTS expressly distinguish between declarations issued by regulated trustees and those issued by unregulated or unlicensed trustees. In particular, where a trustee is regulated and duly licensed, their declaration confirming the relevant details of the trust arrangement should be deemed to constitute a reliable, independent source of information without need for additional third party certification. Certification by an independent professional or public authority should be required only where the trustee or similar administrator is not regulated or licensed. With respect to Art. 7 on non face to face customer identification, while we support the objective of strengthening remote onboarding processes through the prioritisation of electronic identification means meeting eIDAS assurance levels “substantial” or “high”, as well as qualified trust services, we note that such solutions are not universally available or accepted, particularly outside the EU, and cannot be considered a one size fits all approach. Furthermore, the associated costs, licensing requirements and technical integration challenges can be significant, particularly for small and

Name of the respondent	Question	Answer
		medium sized DNFBPs such as CSPs and trustees, especially where the ML/TF risk is assessed as low/moderate. Restricting acceptable non face to face verification methods primarily to eIDAS compliant solutions may constrain operational feasibility without delivering a proportionate reduction in ML/TF risk, thus undermining the principle of proportionality underpinning Regulation (EU) 2024/1624. We propose that the RTS explicitly recognise alternative means of reliable and independent verification, to be applied on a risk based basis where eIDAS compliant electronic identification means or qualified trust services are unavailable or cannot reasonably be expected. Such alternatives could include the collection of multiple official identity and verification documents issued by public authorities or regulated institutions, and certified physical copies of documentation verified by warranted or regulated professionals, eg. notaries public, lawyers or accountants
Institute of Financial Services Practitioners (IFSP)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree that the draft RTS are intended to support the effective application of a risk-based approach to AML/CFT compliance. However, in their current form, certain provisions may undermine this objective by creating scope for inconsistent interpretation. While we acknowledge that the draft CDD RTS refer to the principles of proportionality and the risk-based approach, the overall drafting does not appear fully consistent with those principles. In most cases, the requirements remain highly prescriptive and do not

Name of the respondent	Question	Answer
		adequately reflect the diversity of obliged entities, particularly Designated Non-Financial Businesses and Professions (DNFBPs). Although the objective of achieving a harmonised framework across all obliged entities is understandable, the current drafting leaves limited scope for requirements to be applied in a genuinely risk-sensitive manner, taking into account different business models, operational structures, and customer scenarios. By way of example, Article 7 adopts a notably prescriptive approach to non-face-to-face verification. Despite the reference to proportionality in Article 1, the provisions governing customer identity verification provide very little flexibility regarding the methods that may be used to satisfy those requirements. In particular, the use of qualitative terms such as “effectively supervised”, without further definition, leaves considerable room for interpretation by obliged entities and competent authorities. While a principles-based approach is desirable in order to preserve flexibility, the absence of clearer guidance may lead to divergent applications across Member States and sectors, thereby undermining the objective of harmonisation and increasing compliance uncertainty. A further concern is the repeated use of terms such as “on a risk-sensitive basis”, “where necessary”, and “reasonable measures” without clearly distinguishing between mandatory obligations and those that may be adapted or disapplied depending on risk. This lack of precision risks creating legal uncertainty and inconsistent supervisory and enforcement outcomes

Name of the respondent	Question	Answer
		across Member States. Greater clarity is needed to differentiate minimum requirements from those that can be calibrated, supported by practical examples illustrating acceptable risk-based applications. We do, of course, recognise the binding nature of the AMLR and appreciate that AMLA's mandate must remain aligned with it. However, in order to achieve a more appropriate balance between prescriptive requirements and the effective application of the risk-based approach, we would propose, at a minimum, the introduction of a "comply or explain" mechanism. Such an approach would preserve a degree of flexibility for obliged entities while maintaining the integrity of the framework. Although some may view this as creating the possibility for lower standards, this concern could be addressed through the introduction of clear conditions and safeguards governing its use. In our view, this would create a more balanced framework in which obliged entities are expected to comply with the RTS while retaining sufficient flexibility to apply risk-sensitive measures where justified. To further address this, we consider that the RTS should also provide further clarification of key qualitative concepts, either through definitions or through non-exhaustive examples illustrating how such terms should be interpreted in practice. At the same time, it would be beneficial to establish clearer baseline expectations, while still allowing obliged entities to adjust their approach based on risk. This would strike a more appropriate balance between flexibility and consistency. We also propose that in order to enable a better

Name of the respondent	Question	Answer
		application of the risk-based approach within the existing framework, the following sub-paragraph would be included under Article 1 of the draft CDD RTS: "2. Without prejudice to the obligations set out in this Regulation and in Regulation (EU) 2024/1624, obliged entities may, in case of justifiable circumstances, apply alternative measures to those prescribed herein, provided that all of the following conditions are met: a. the deviation is necessary to ensure that the application of a specific requirement does not result in a disproportionate burden relative to the identified money laundering or terrorist financing (ML/TF) risk; b. the money laundering and funding of terrorism risk associated with the customer, transaction or business relationship is demonstrably low or effectively mitigated by other measures; c. the alternative measures applied are appropriate, risk-sensitive and achieve an equivalent level of risk mitigation as the standard requirement; d. the rationale behind such deviation is documented appropriately and available to competent authorities upon request."
Institute of Financial Services Practitioners (IFSP)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Given the nature of certain DNFBP activities, there are situations in which info envisaged under the draft RTS for the purposes of CDD is not routinely available, and where no alternative solution is provided. This is evident in services eg. as the provision of registered office facilities, where the obliged entity does not have access to, or visibility over, the customer's transactions and therefore unable to obtain or verify

Name of the respondent	Question	Answer
		information relating to the source of funds or to conduct ongoing monitoring. In such cases, the application of standard CDD requirements is not feasible, as the necessary information is not accessible to the obliged entity. In the absence of alternative measures, this creates a risk that obliged entities may be deemed non-compliant despite acting within the practical limits of their role. We consider that the RTS should explicitly recognise such situations and allow for alternative approaches/justified limitations where the information is inherently unavailable. In the context of increasingly complex corporate structures, coupled with heightened sanctions and dual-use risks arising from current geopolitical environment, obliged entities are encountering situations in which obtaining all required CDD info is not feasible in practice. These challenges highlight the potential value of establishing a centralised CDD repository at Union level. One such example relates to group structures and related 3-party entities: obliged entities are increasingly dealing with corporate customers that form part of extensive multinational group structures, including multiple subsidiaries and downstream affiliated entities across different jurisdictions. Where heightened sanctions exposure, export control considerations or potential dual-use concerns are identified through a risk-based assessment, obliged entities may need to conduct additional identification, verification and screening measures in relation to entities within the

Name of the respondent	Question	Answer
		wider group structure, even where those entities are not themselves direct customers. In practice, however: (i) those related entities are not parties to the contractual relationship with the obliged entity; (ii) the customer may not exercise effective operational control over them beyond ownership links; (iii) the customer may therefore lack both the legal authority and practical ability to compel those entities to provide certified identification or verification documentation. As a consequence, the required CDD information may simply not be obtainable, despite the obliged entity having taken reasonable and proportionate steps. The draft RTS do not sufficiently address how obliged entities should manage situations where EDD measures are triggered by external risk considerations - such as sanctions or dual-use risks - rather than by any lack of cooperation on the part of the customer itself. Presently the same CDD information is frequently collected, verified, stored and refreshed repeatedly by multiple obliged entities, notwithstanding that those entities may be subject to equivalent AML/CFT obligations and supervision. This duplication is particularly evident in cross-border structures and professional services sectors, including TCSPs, legal practices and tax advisory firms, where reliance on previously verified documentation remains limited. Against this background, we believe that the effectiveness/efficiency of the RTS framework could be improved through consideration of a Centralised or

Name of the respondent	Question	Answer
		Federated DD Depositary for standardised CDD information and documentation at Union level. Subject to appropriate governance arrangements, access controls and data protection safeguards, such a mechanism could allow obliged entities to access and rely upon previously verified information while maintaining full responsibility for their own risk assessments and ongoing monitoring obligations. Such a framework could, for example: (a) reduce duplication in the collection certification & updating of identity and beneficial ownership documentation; (b) improve consistency & data quality across jurisdictions & obliged entities; (c) facilitate supervisory review and ex post verification; and (d) better support the proportionality principle underpinning Regulation (EU) 2024/1624, particularly for non-financial obliged entities & lower-risk situations.
Institute of Financial Services Practitioners (IFSP)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In light of AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624, and taking into account the breadth of products and services provided by obliged entities across both financial and non financial sectors (including CSPs, trustees, law firms and tax advisers), we consider that the draft RTS would benefit from further calibration to ensure proportionality, clarity and effective application of the risk based approach. Simplified Due Diligence (Articles 3–5, 22) We recommend the inclusion of additional illustrative scenarios where Simplified Due Diligence (SDD) may be applied on the basis of a documented low risk

Name of the respondent	Question	Answer
		assessment. Existing supervisory practice (including national frameworks) already recognises that certain customer categories and service models present inherently lower ML/TF risk where appropriate safeguards exist. Explicit recognition within the RTS would strengthen proportionality, reduce uncertainty and promote supervisory convergence. Relevant low risk examples include: • customers subject to AML/CFT supervision, • public institutions and bodies, • publicly listed companies, • regulated investment structures and omnibus arrangements, and • lower risk professional service engagements with transparent EU connected profiles. Identification Data (Articles 3–5) With regard to Article 3(c), we consider that postal codes should not be mandatory, given their limited AML/CFT value and inconsistent availability on identity documents in some Member States. Regarding Article 4, we submit that additional place of birth information should only be collected where contained in the identity document or justified by a specific risk assessment, in line with proportionality, GDPR data minimisation and avoidance of indirect discrimination. Article 5 should better reflect reliance on customer self declaration of nationality, with verification of one nationality sufficient in most cases. Verification and Non Face to Face Identification (Articles 6–7)

Name of the respondent	Question	Answer
		Articles 6 and 7 should more clearly reflect that verification obligations are means based, not results based, and should preserve the flexibility expressly allowed under Article 22 of the AMLR. Over reliance on eIDAS compliant electronic means risks undermining proportionality, particularly for smaller obliged entities and in low risk contexts. Certified documents verified by trusted professionals should remain acceptable alternatives in non face to face situations, subject to appropriate safeguards. Beneficial Ownership and Structure Complexity (Articles 10, 12, 13) Further clarification is required on acceptable documents and certifying professionals (Article 10). Article 12 should avoid equating complexity solely with the number of ownership layers, instead incorporating qualitative criteria (e.g. lack of economic rationale, opacity, high risk jurisdictions). Article 13 should limit the information required for senior managing officials to what is proportionate, distinguishing their role from that of beneficial owners. Trusts, Foundations and Legal Concepts (Articles 14–15) The draft RTS introduce terminology (e.g. “objects of powers”, “default takers”) that is misaligned with established trust law concepts, risking legal uncertainty and inconsistent application. Greater reliance should be placed on regulated trustee declarations, clearer definitions of “relevant documents”, and a proper distinction between beneficiaries and AMLR “beneficial owners”. Trustees should be treated as the customer in third

Name of the respondent	Question	Answer
		party relationships, while foundations should be treated as customers in their own right. A risk based approach should apply to licensed corporate trustees. Purpose, Source and Destination of Funds (Article 18) Article 18 should clarify baseline requirements to ensure consistency while allowing flexibility where data points are not relevant. Lists of source of funds categories should be explicitly non exhaustive, and ambiguous wording regarding fund flows and intermediaries should be clarified. A more principles based formulation would better support meaningful risk assessment. PEPs and Reliance (Article 19) We propose extending existing derogations to cover situations where reliance is placed on another obliged entity under Article 17, avoiding duplicative PEP checks in indirect relationships. Reputational Assessment (Article 25) Article 25(b) appears duplicative of standard CDD measures already required under the AMLR and could be removed for clarity. Recitals and Annex Several recitals (notably 13, 14, 15 and 21) would benefit from clarification to avoid ambiguity, align terminology with market practice and ensure consistency with the operative provisions. Finally, we encourage AMLA to consider a dedicated or tailored RTS for non financial obliged entities, recognising their distinct operational models and

Name of the respondent	Question	Answer
		constraints, while maintaining harmonised AML/CFT standards across the Union
Institute of Financial Services Practitioners (IFSP)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We broadly support the objective of enhancing harmonisation and clarity in customer due diligence (CDD) requirements across the EU. However, we consider that the draft RTS do not sufficiently reflect the diversity of obliged entities—particularly DNFBPs—nor adequately embed the principle of proportionality underpinning the risk-based approach. The RTS are, in many instances, overly prescriptive, limiting flexibility for entities to apply requirements in a risk-sensitive manner across differing business models and scenarios. This is compounded by the recurring use of formulations such as “risk-sensitive basis”, “where necessary” and “reasonable measures”, without clearly distinguishing between mandatory requirements and those that may be adapted based on risk. This creates legal uncertainty and may lead to inconsistent supervisory expectations across Member States. We recommend clearer differentiation between minimum requirements and those subject to risk-based calibration, supported by practical guidance. Certain provisions also raise specific concerns. Article 18(a)(i) appears to require information of a commercial nature (e.g. referrals or pricing), which may not meaningfully contribute to AML/CFT risk assessment, particularly where the purpose of the relationship is self-evident or legally prescribed. This requirement

Name of the respondent	Question	Answer
		should be limited to information demonstrably relevant to AML/CFT purposes. Similarly, Article 30 could be interpreted as requiring the screening of all digital wallet addresses, which would be disproportionate where such wallets are not linked to the service provided; this should be clarified. Article 21 does not fully align with standard practice, where information is collected from the customer and subsequently verified. Requiring additional sources not used for identification may lead to duplication and inefficiency. Greater flexibility should be allowed, including recognition that government-issued identification documents and customer-provided documentation may serve both identification and verification purposes. In addition, Article 4's requirement to collect granular place-of-birth information introduces operational burdens with limited added AML/CFT value and should be restricted to country of birth. More broadly, undefined concepts such as "reasonable measures" create interpretative uncertainty. Recital 10 also lacks clarity as to what constitutes exhausting "all possible means" to identify beneficial owners. We recommend the inclusion of non-exhaustive examples of acceptable steps and an indication of the level of effort expected. Similar clarification is needed under Article 8 regarding the reliability of sources and whether multiple sources are required.

Name of the respondent	Question	Answer
		We further recommend introducing an exemption where shares are held in trust by regulated trustees acting purely as service providers with no economic interest in the underlying entity, allowing reliance on their regulated status. More generally, the RTS should clearly differentiate between regulated and unregulated trustees. Current provisions result in repeated collection and verification of due diligence information even where trustees are licensed and subject to AML/CFT supervision, creating duplication without meaningful risk reduction. Proportionate measures—such as reliance on public registers and trustee declarations—should be permitted for regulated trustees. The RTS also provide limited clarity on certain aspects of sanctions screening, including indirect control, the treatment of intermediaries in lower-risk scenarios and screening frequency. Additional guidance would support consistent application. Overall, several provisions appear primarily designed with credit and financial institutions in mind, without sufficient tailoring to DNFBPs or acknowledgement of the diversity within that sector. Combined with reliance on digital identification frameworks that may not yet be fully implemented across all Member States, this limits proportionality and practical applicability. Greater clarity and flexibility are therefore needed to ensure effective and proportionate AML/CFT compliance.

Institute of Financial Services Practitioners (IFSP)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Reference is made to Article 3(c). In our view, the inclusion of the postal code should not be mandatory, as the remaining address-related information - such as the building number, apartment number, street name, and city - would already provide sufficient detail regarding the customer's usual place of residence. Although Article 3(c) specifies that this information should be obtained "where available", this wording may give rise to differing interpretations among obliged entities and competent authorities. By way of example, in Malta, postal codes do exist, but they are not consistently reflected on identification documents. As a result, while the information may technically be "available" through external or public sources, it is not, however, necessarily "readily available" or accessible to the obliged entity during the onboarding process. Moreover, the additional AML/CFT value derived from collecting the postal code appears limited. Requiring its collection may therefore create unnecessary operational burdens without delivering a corresponding compliance or risk-mitigation benefit. We would therefore suggest the following revised wording:

Name of the respondent	Question	Answer
		"(c) where available, postal code, street name, post boxes, building number and the apartment number."
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We consider that the final sentence of Article 4 could be removed. Where the relevant information already appears on an identity document, passport or equivalent document, it is inherently being collected as part of the identification process. Accordingly, imposing a separate obligation to "collect" such information appears unnecessary. In addition, the practical AML/CFT value of obtaining "additional information on the place of birth" appears limited. While such information may occasionally assist in discounting potential screening matches, this is typically achieved through other, more reliable datapoints, such as date of birth, year of birth or nationality. We therefore do not consider the inclusion of additional place-of-birth information to be necessary for standard CDD purposes. There is also a broader concern that the systematic collection and use of place-of-birth data within risk assessment processes may give rise to indirect discrimination based on national origin. If country of birth becomes a structural factor within risk models, individuals born outside the EU or in jurisdictions considered "high risk" may automatically receive elevated risk ratings irrespective of their individual circumstances. Such an outcome would be inconsistent

Name of the respondent	Question	Answer
		with the principle of individualised risk assessment underpinning the AMLR. In most cases, nationality - as already contemplated under Article 5 of the draft RTS - should be sufficient for identifying country-related risk indicators. Furthermore, under the GDPR principle of data minimisation set out in Article 5(1)(c), only personal data that is necessary for the relevant purpose should be processed. We therefore recommend that Article 4 be amended to clarify that country-of-birth information should only be collected where it is contained in the identity document itself or where a specific risk assessment justifies its collection. Proposed wording: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name, where this information is available from the identity document, passport or equivalent provided by the customer. Obliged entities shall not be required to actively seek this information from other sources unless the risk assessment of the individual customer provides specific grounds to do so."
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The wording of Article 5 does not appear to fully align with Recital 3 of the draft CDD RTS. Recital 3 seems to contemplate a framework based on the customer's good-faith self-declaration, whereas Article 5, as currently drafted, could be interpreted as imposing a

Name of the respondent	Question	Answer
		positive obligation on obliged entities to obtain and verify information relating to all nationalities held by the customer. In practice, however, obliged entities may have limited means to independently verify the existence or completeness of multiple nationalities beyond the information disclosed by the customer. For this reason, we believe the wording of Article 5 should be moderated to better reflect practical realities and the principle of proportionality. In our view, it should be sufficient for obliged entities to request customers, through onboarding documentation or declarations, to disclose their nationalities, while requiring verification of only one nationality through supporting identification documentation. We propose the following wording: “5. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall undertake reasonable measures to obtain information on the all nationalities which the customer holds or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted.”
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	6

Name of the respondent	Question	Answer
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 6(3) Our understanding is that Article 6(3) establishes a "means-based" obligation rather than a "results-based" obligation. Obliged entities should not be expected to conclusively prove the authenticity of documents, particularly in cases involving sophisticated or high-quality forgeries. Instead, the obligation should be limited to demonstrating that reasonable, risk-based measures and appropriate professional scepticism were applied, including where third-party verification solutions are used. We therefore propose the following revised wording: "3. Obliged entities shall take reasonable steps to ensure satisfy themselves that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a), and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with." Article 6(5) Article 6(5) refers to the collection of, inter alia, a certified true copy of an "identity document, passport or equivalent". In our view, this requirement is overly restrictive and does not sufficiently accommodate the application of a risk-based approach. We also consider that Article 22(6)(a) of the AMLR is being interpreted too narrowly in the draft RTS, thereby unnecessarily constraining the effective application of proportionality and risk sensitivity. Article 22(6)(a) refers to "the submission of an identity document, passport or equivalent and, where relevant, the

Name of the respondent	Question	Answer
		acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer." Importantly, this wording does not require the exclusive use of originals or certified copies. Rather, it allows obliged entities flexibility to determine appropriate verification measures based on the ML/TF risk presented. Restricting identity verification primarily to certified documentary evidence would significantly limit the operation of the risk-based approach and overlook the AMLR's express recognition that verification may also be carried out through other reliable and independent means. In addition, a proportionate approach should apply to the collection of identification documentation in order to avoid unnecessary cost and administrative burden. Requirements to obtain original or certified documentation should, in our view, be reserved for situations involving heightened risk, inconsistencies, or doubts regarding the customer's identity. Accordingly, we believe the RTS should provide greater flexibility for obliged entities to apply different verification measures depending on the level of risk involved. In lower-risk situations, the submission of standard identification documentation should generally suffice, whereas enhanced verification measures - including certified documentation - could be required where the circumstances justify a higher level of scrutiny. We propose the following wording: "5. For the purpose of verifying the identity of the

Name of the respondent	Question	Answer
		persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities, shall obtain from that person, or from independent sources the identity document, passport or equivalent. In case of customers posing a higher risk of ML/TF obliged entities shall apply appropriate mitigation measures, such as, obtaining a certified true copy or those referred under Article 7."
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In principle, verification of identity through alternative means in a non-face-to-face context should remain acceptable even where the solutions described in para 1 of Art 7 are not available. Several considerations support this position. 1. Both the proportionality principle and the risk-based approach must remain central to the application of CDD measures. A prescriptive framework that applies uniformly across all obliged entities, regardless of their size, structure or operational model, risks undermining these principles. 2. The requirement that obliged entities - particularly smaller entities or those still relying on manual onboarding processes - may only resort to alternative verification methods "where the solution described in para 1 is not available, or cannot reasonably be expected to be provided" imposes a significant operational burden. In practice, implementing and

Name of the respondent	Question	Answer
		evidencing such a condition may require disproportionate resources and system changes, which may not be readily available, particularly for smaller operators. This again appears inconsistent with the proportionality principle and the intended risk-based approach. 3. The approach set out in Article 7 appears more restrictive than the flexibility afforded under Article 22(6) of the AMLR. That provision allows for two alternative methods of verification: a. the submission of an identity document, passport or equivalent, together with, where relevant, information from reliable and independent sources; or b. the use of electronic identification means meeting specified assurance levels under Regulation (EU) No 910/2014, as well as qualified trust services. Article 22(6)(a) does not limit verification to electronic means in non-face-to-face scenarios. Rather, it provides flexibility for obliged entities to choose the most appropriate method depending on the circumstances. The draft RTS, however, appears to place undue emphasis on electronic verification as the primary or preferred solution in non-face-to-face relationships. In our view, additional verification methods should remain available to obliged entities in order to preserve alignment with the AMLR and ensure proper application of proportionality and the risk-based approach. Such methods should include, without limitation, the acceptance of certified copies of documentation

Name of the respondent	Question	Answer
		provided by trusted professionals, such as lawyers, auditors, accountants and notaries. Appropriate safeguards should of course apply, including the obligation to assess the authenticity of the documents and the authority of the certifying professional. This approach is already partially recognised in Art 10(iv) of the draft RTS, and there is no reason why it should not equally apply for the verification of identity of customers. Such flexibility would be particularly beneficial for smaller obliged entities, as it would avoid the need for significant redesign of onboarding processes and associated costs that may not be proportionate to the level of ML/TF risk involved. Finally, we note that Art 7(4) has been deleted. It appears that this may have been due to its relevance to legal persons rather than natural persons. However, in our view, the substance of this provision remains important. The acceptance of reproductions of original documents should continue to be a valid verification method. We therefore recommend either its reinsertion or its relocation to a more appropriate section of the RTS. We propose the following wording. “1. To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-face situation, obliged entities shall apply one of the following measures:

Name of the respondent	Question	Answer
		(a) use electronic identification means that meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels 'substantial' or 'high', (b) use relevant qualified trust services as set out in that Regulation; (c) obtain certified true copies of identity verification documents; (d) resort to remote solutions which meet the conditions as set out in paragraphs 4 and 5; or (e) apply additional and appropriate measures, on a risk-based approach, to mitigate the inherent higher risk that this type of customer relationship may present; or 2. In case where certified true copies of identity verification documents are obtained, the obliged entity shall only accept documentation which satisfy the following criteria: (a) the document has been verified by one of the following professionals: legal professional, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction; (b) the certifier shall include a statement to the effect that the individual certifying has verified the authenticity of the document and that, in the event that the document bears a photograph of the individual, that the photo is a true likeness of the holder of the identity document;

Name of the respondent	Question	Answer
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	With regard to point (iv) of subparagraph (b) of Article 10, further clarification would be welcome regarding the types of documents that may be obtained under this provision. In particular, additional guidance would be useful as to which documents are considered acceptable when sourced “from the legal entity or legal arrangement”, in order to ensure consistent interpretation and application across obliged entities. In addition, the reference to “persons that are authorised for document certification purposes” would benefit from further clarification as to which categories of professionals or entities are intended to fall within this definition. Clearer guidance on who is considered appropriately authorised to certify such documents would enhance legal certainty and reduce the risk of divergent supervisory interpretations. We propose the following wording: “(iv) documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by the following professionals: lawyers, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction.”
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	12
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	With regard to the complexity of structures, we consider that the threshold of “three or more layers between the customer and the beneficial owner” is set too low. In practice, this may capture large, fully

Name of the respondent	Question	Answer
		transparent organisational groups with multiple legitimate holding layers, including ownership and control structures of regulated and licensed entities, which do not inherently present higher ML/FT risk. We therefore suggest that, in addition to revisiting the number of layers, a supplementary qualitative criterion be introduced. This should require obliged entities to assess whether the structure is unusual, unnecessarily convoluted or otherwise excessively complex, thereby allowing for a more meaningful, risk-based assessment of complexity. Restricting oneself solely to number of layers does not seem appropriate. With respect to subparagraph (a) of paragraph 1 of Article 12, we do not consider that the mere presence of a legal arrangement or similar structure (such as a foundation) within an ownership chain should automatically indicate increased complexity. By way of example, purpose foundations are commonly and legitimately used in structured finance transactions, including securitisations. Accordingly, subparagraph (a) should be refined to focus on situations where such structures lack a clear commercial or legal rationale within the ownership chain, rather than their mere existence. In addition, the use of foundations should not, in itself, be treated as a risk indicator where they are properly registered and where beneficial ownership information is duly disclosed and verified with competent

Name of the respondent	Question	Answer
		authorities. It is the absence of transparency, rather than the legal form itself, that creates complexity. The provision should therefore be adjusted to better reflect situations where beneficial ownership information is incomplete, unverified, or not adequately disclosed. As regards subparagraph (b) of paragraph 1 of Article 12, we consider that the mere involvement of entities incorporated outside the EU should not automatically be treated as increasing structural complexity. In a globalised commercial environment, it is entirely common for ownership chains to include non-EU entities or legal arrangements. A more appropriate approach would be to focus on higher-risk jurisdictions, such as those identified by the FATF as high-risk or subject to increased monitoring, or those listed by the EU as high-risk third countries for AML/CFT purposes. We would also suggest extending the reference to include legal arrangements, not only legal entities, where these form part of the ownership or control structure. Proposed wording: “1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer’s business there are five or more layers between the

Name of the respondent	Question	Answer
		customer and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers and there is no economic, legal or other rationale for the use of such legal arrangement or similar legal entity within the ownership and control structure of the customer and the legal arrangement or similar legal entity has not registered its beneficial owners or senior managing officials (as applicable) with its competent authorities; (b) the customer, legal arrangements and legal entities present at any of these layers are registered in jurisdictions linked to third countries categorised by the FATF as high risk countries or subject to increased monitoring or otherwise identified on the EU's list of high risk jurisdictions for ML/FT purposes. (c) there are nominee shareholders or nominee directors involved in the structure; (d) the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification. 2. In the case of complex corporate structures as referred to in paragraph 1, obliged entities shall, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an organigram.

Name of the respondent	Question	Answer
		3. Obliged entities shall take risk-sensitive measures to satisfy themselves that the information obtained is accurate.”
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	13
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 13(a) requires obliged entities to collect the same information for senior managing officials (SMOs) as they would for beneficial owners. The relevant set of information for beneficial owners is set out in Article 62(1) of the AMLR. However, we do not consider this equivalence to be appropriate, given that SMOs do not present the same risk profile as beneficial owners. In particular, SMOs: (i) do not themselves hold ownership interests in the entity; (ii) nor do they exercise control through ownership or equivalent means. This distinction is also reflected in Recital (125) of the AMLR, which clarifies that, although SMOs are identified in certain circumstances, they are not beneficial owners. Against this background, the full scope of Article 62(1) appears disproportionate when applied to SMOs, as not all of its elements are relevant to their role or associated risk. We therefore recommend that the information to be collected in respect of SMOs be limited to Article 62(1)(a) only, with the remaining subparagraphs (b) to (f) excluded, as they are not applicable to this category of persons.

Name of the respondent	Question	Answer
		In this regard, we propose the following wording: “In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect the same information as as set out in Article 62(1)(a). Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; (b) verify the identity of senior managing officials in the same way as they would for beneficial owners.”
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	14
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	While we acknowledge that the draft RTS builds on terminology already used in the AMLR, we have significant concerns that the introduction and reinterpretation of certain concepts may lead to confusion, misapplication and inconsistency across jurisdictions. In particular, redefining terms that already carry well-established meaning in trust law and practice risks undermining legal certainty and the coherent application of the framework. Misalignment with established trust law terminology The Regulation introduces concepts such as “objects of powers” and “default takers” in the context of discretionary trusts. These terms do not align with generally accepted trust law principles in the context in which they are being used, and may therefore create ambiguity rather than clarity.

Name of the respondent	Question	Answer
		We recognise that RTS provisions cannot amend the AMLR itself; however, interpretative guidance would be essential to avoid divergent application across Member States. In trust law, a clear distinction exists between: • objects of powers, and • discretionary beneficiaries. A trustee exercising a discretion is under a duty to consider its exercise, whereas a trustee holding a power may choose whether or not to act. Conflating these concepts creates interpretative uncertainty and risks inconsistent application. It appears that the Regulation intends to refer to discretionary beneficiaries when using the term “objects of powers”, defined as natural or legal persons among whom trustees may select beneficiaries in a discretionary trust. However, this is itself conceptually inaccurate. In a discretionary trust, all members of the class are beneficiaries; the trustee does not “select beneficiaries” but rather exercises discretion in favour of one or more beneficiaries (often to the exclusion of others, who may actually never benefit). This distinction is fundamental in trust law. The introduction of “default takers” is also problematic. In a discretionary trust, beneficiaries do not benefit due to trustee inaction; rather, benefit arises only where a trustee actively exercises discretion. A concept premised on benefit arising from inaction is inconsistent with the fiduciary duties of trustees and risks recommending a breach of trust (which is what could occur if a trustee where to fail to exercise a discretion).

Name of the respondent	Question	Answer
		On the contrary, in trust law and practice, “default takers” typically refer to ‘fallback’ or ‘default’ beneficiaries under express provisions (e.g. where no other living beneficiaries exist), not discretionary structures. By way of illustration, a trust instrument could contain a clause that in the event that all beneficiaries are no longer living, the trust assets would be held for the benefit of a chosen charity or a distant relative, as a ‘default’ beneficiary. This misalignment creates legal uncertainty, increases compliance complexity and may ultimately result in non-application of the provision due to its conceptual inconsistency with trust law. Incorrect use of legal concepts The reference to “power of discretion” conflates distinct legal principles. Powers may or may not be exercised by the trustee, whereas discretion imposes an obligation on the trustee to consider whether and how it should be exercised. The phrase in Article 15(2)(b) referring to “appointed one or more beneficiaries from amongst the objects of power” is therefore incorrect and should be corrected. Furthermore, in trust law, “appointment” is not the correct term to refer to the distribution of a benefit to a beneficiary. The term ‘appointment’ refers to the exercise of a power of appointment over property, not to the designation of beneficiaries themselves. Where individuals are added as beneficiaries (from amongst objects of a power), it is typically via a power of addition. If a class of discretionary beneficiaries already exists, no appointment is necessary - the trustee simply

Name of the respondent	Question	Answer
		exercises discretion to make a distribution. Ambiguity in drafting Clarification is required as to what constitutes "sufficient information" regarding trustee discretion. Given the confidential nature in trusty law of trustee deliberations (since otherwise it would be impossible for a trustee to administer a trust as the trustee would risk being second guessed constantly), reliance on a trustee declaration confirming the existence and exercise (or non-exercise) of discretion should be deemed sufficient, particularly where the trustee is regulated. Similarly, the term "relevant documents" in Article 14(1)(b) is vague and should be replaced with a more precise description of acceptable documentation. Clarification on foundations and legal arrangements While the AMLR refers to foundations under "similar legal entities or arrangements", it would be preferable to explicitly reference foundations throughout the RTS to avoid uncertainty.
Institute of Financial Services Practitioners (IFSP)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	18
Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The opening sentence of Art 18 is qualified by the phrase "where necessary". This appears to reflect the approach set out in Recital 13, which indicates that the info under Art 18 should be collected only where the obliged entity requires further info to satisfy itself as to the purpose and intended nature of the business relationship or occasional transaction.

Name of the respondent	Question	Answer
		On this basis, it could be interpreted that Article 18 is not intended to apply where the obliged entity already holds sufficient info. However, in the absence of clearly defined minimum standards for assessing the purpose and intended nature of the business relationship - a core AML/CFT concept - there is a risk that obliged entities will apply differing interpretations of the requirement. This may ultimately undermine the objective of harmonisation, leading to divergent practices across the Union. To ensure consistency and a level playing field, we therefore consider that the elements set out in Art 18(a)(i) to (iv) should be regarded as baseline requirements, with obliged entities required to obtain at least one of the information sets provided therein in all cases. We also refer in this regard to our comments on Recital 13. Furthermore, we note that the information listed under points (i) to (iv) may not be equally applicable to all categories of obliged entities. We therefore recommend that the opening wording be further qualified to reflect that certain datapoints may not be relevant in all cases, depending on the nature of the obliged entity and the services provided. We propose the following : “For the purposes of Article 20(1), point (c) and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, as applicable:....” Furthermore, with regard to Article 18(c), the list of “source of funds” categories appears non-exhaustive in nature and captures only a limited range of possible

Name of the respondent	Question	Answer
		sources. However, by requiring obliged entities to obtain “at least one of the following information”, the drafting may in practice restrict the types of source of funds that can be appropriately identified and recorded. By way of example, activities such as crypto mining would not necessarily fall within any of the categories listed under points (i) to (viii) of subparagraph (c). As a result, legitimate and relevant sources of funds risk being excluded from consideration. We therefore suggest that the list should be expressly framed as non-exhaustive, with the emphasis placed on understanding and evidencing the legitimate origin of funds rather than fitting them into a predefined set of categories. In addition, the reference in the opening sentence to “through which the customers funds were transferred” is unclear. While points (i) to (viii) appear to relate to sources of funds, the inclusion of the phrase “and” suggests that a separate and additional requirement may be intended. It is not evident what is meant by this second limb, nor how it is expected to be applied in practice. Further clarification is therefore needed to ensure consistent interpretation and to support the harmonisation objectives pursued by AMLA. With respect to the 4th subparagraph of Article 18, reference is made to the “destination of funds” and to whether the recipient is the intended beneficiary or acting as an intermediary. While this distinction is relevant, the provision does not specify what additional steps are required where the recipient acts as an intermediary. Further guidance would therefore be necessary to ensure that the requirement is

Name of the respondent	Question	Answer
		operationally effective and consistently applied. In this regard, we propose the following: “(iii) whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary, and in the latter case, understanding the identity of the beneficiary thereby ensuring that the obliged entity understands the flow of funds to the beneficiary.” Lastly, with regard to the 4th paragraph of Article 18, several of the datapoints listed under point (e) appear relevant for the purpose of building a comprehensive customer business profile. However, the requirement that obliged entities obtain “at least one” of the listed datapoints may, in practice, unduly limit the depth of analysis undertaken when establishing the customer’s business activity or occupation. For example, both the industry in which the customer operates and whether that activity is regulated are key factors in assessing the overall business and risk profile. While we understand that points (i) to (viii) are intended to capture aspects of the customer’s business activity or occupation, the current list appears restrictive and may not fully reflect the range of information necessary for a meaningful assessment.

Institute of Financial Services Practitioners (IFSP)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 19 requires obliged entities to determine whether, inter alia, persons on whose behalf or for whose benefit a transaction is carried out are politically

Name of the respondent	Question	Answer
		exposed persons (PEPs), or are family members or close associates of PEPs. The only explicit derogation from this obligation is currently set out in Article 44 of Regulation (EU) 2024/1624. In our view, this exemption should be broadened to also cover situations where an obliged entity is performing due diligence on another obliged entity acting on behalf of an underlying customer who may fall within the definition of a PEP, or be a family member or close associate thereof. In such cases, where the obliged entity is already able to apply the measures under Article 17 in respect of the customer relationship, the imposition of additional, duplicative checks on underlying persons does not appear necessary from a risk-based perspective. Accordingly, we consider that where appropriate reliance can be placed on Article 17 measures, no further PEP-specific checks should be required in respect of underlying customers in an indirect relationship context. We propose the following wording: “(a) With the exception of the situations referred to in Article 44 of Regulation (EU) 2024/1624 and Article 17 of this Regulation, before the establishment of the business relationship or the carrying out of the occasional transaction, if the customer, the beneficial owner of the customer and, where relevant, the person on whose behalf or for the benefit of whom a transaction or activity is being carried out, is a politically

		exposed person, a family member, or person known to be a close associate; and...”
Institute of Financial Services Practitioners (IFSP)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Institute of Financial Services Practitioners (IFSP)	Please specify which recital you refer to, and share your comments below.	13
Institute of Financial Services Practitioners (IFSP)	Do you have any comments on the Annex in the draft RTS?	Yes
Institute of Financial Services Practitioners (IFSP)	Please share your comments below.	Accompanying Documents, page 35 – Policy Issue 1: Applicability and Proportionality to the Financial and Non-Financial Sectors From the perspective of the non-financial sector, we believe that a dedicated RTS specifically tailored to non-financial obliged entities would more appropriately reflect operational realities and support the principle of proportionality, without diminishing the effectiveness of the AML/CFT framework. Although the core CDD obligations established under Regulation (EU) 2024/1624 apply across all sectors, the way in which those obligations are implemented in practice differs considerably. Financial institutions generally operate transaction-driven business models supported by sophisticated automated systems and established compliance infrastructures. Non-financial obliged entities - such as TCSPs, legal professionals, tax advisers, accountants, auditors and real estate agents - often operate on an advisory, transactional or project-

Name of the respondent	Question	Answer
		specific basis, rely more heavily on professional judgement and may have limited visibility over customer transactions or limited influence over third parties connected to the customer relationship. Against this background, a single set of horizontally drafted RTS, even where formally grounded in a risk-based approach, may still create uncertainty in interpretation, disproportionate compliance obligations and inconsistent supervisory expectations for non-financial obliged entities, particularly for smaller firms and sectors newly brought within scope. A standalone RTS for non-financial obliged entities could maintain consistent AML/CFT standards across the Union while allowing obligations to be calibrated in a manner that better reflects the operational realities and limitations of non-financial business models. This would improve legal certainty, enhance proportionality, and reduce the need for extensive interpretative guidance. We therefore encourage AMLA to consider whether a separate regulatory framework for non-financial obliged entities - either through amendments to the current RTS or through a future initiative - would provide a more balanced approach between harmonisation and practical proportionality, while preserving a strong and consistent AML/CFT regime across the Union.
Institute of Financial Services Practitioners (IFSP)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
Insurance and Pensions Denmark	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Hereby submitted comments from Insurance & Pension Denmark - The Danish trade association for insurance companies and pension funds, rep-resenting 84 insurance companies and pension funds operating in the Dan-ish market. We welcome the opportunity to comment on the proposed RTS and sup-port the overall objective of a robust and proportionate anti money laun-dering and counter-terrorist framework. We fully recognize the importance of targeting high risk products and activ-ities where the risk of misuse for money laundering (ML) or terrorist fi-nancing (TF) is substantiated. However, we consider it essential that the final framework clearly reflects the structurally low inherent risk of occupa-tional pension schemes and traditional life insurance products, and that obligations are applied in a risk based and proportionate manner, con-sistent with international standards and general EU law principles. This letter covers both the RTS on the criteria for business relationships, occasional transactions and linked transactions under Article 19 (9) and the one on customer due diligence under Article 28 (1) of the AMLR. The latter is of primary concern to our sector and is therefore addressed first. As for the RTS on Article 19 (9) we have no specific remarks. The RTS have no relevance for the Danish pension funds and life-insurance companies, as the customer relation are

Name of the respondent	Question	Answer
		normally well established, with long-term en-gagements. 2. Initial remarks: occupational pension-schemes and tradi-tional life-insurance are generally low-risk [Additional information on the sector, the products and on-boarding pro-cedures are elaborated in the enclosed annex] The Insurance sector is generally associated with low ML/TF risk due to the specificities and complexities of the most common products on the market. These terms are significant for the Danish market, where occupational pen-sions are obligatory and constitutes the vast majority of savings and premi-ums. To our knowledge this also applies to several other Member States. Occupational pension schemes display several structural characteristics that significantly mitigate ML/TF risk: • Close link to an employer and employment contract. Participation typically follows collective agreements or statutory requirements, and the employee has limited or no influence over the choice of pro-vider. This reduces the scope for anonymous or opportunistic entry. • Restricted and traceable payment flows. Contributions are paid via employers or payroll systems and originate

Name of the respondent	Question	Answer
		from verified income sources. • Long duration and conditional payouts. Benefits are typically paid only upon retirement or another qualifying event (i.e. death) some-times in the (far) future • Financial disincentives for early redemption. In Denmark, early withdrawal is typically associated with significant tax deduction. (when activated, the situation will be handled manually within the companies) • Some products on the Danish market might involve a higher risk, as they for instance allow for early redemption without tax deduction. These products do not, to our knowledge, exceed medium risk pro-file, because many of the characteristics that mitigate the risk are still applicable Taken together, these features imply that occupational pensions do not lend themselves to rapid movement, concealment or transformation of illic-it funds, which are core elements of money laundering. As for the specific requirements for information on place of birth and na-tionality (es), this information is not so relevant for the Danish insurance sector, as they only have a concession to sign up customers with a connec-tion to Denmark. Customer on-boarding procedures for this sector are mainly carried out through an employer, hence conducted on a non-face-face-basis. This means that customer identification and verification can be more

Name of the respondent	Question	Answer
		challeng-ing, as the employer will not normally hold all required information. On the other hand, the link to the employer would normally vouch for the identifi-cation of the customer/employee. To implement and follow a risk-based approach and to make legislation more effective, we find both necessary to clarify some of the provisions within the two RTS, and to ensure more targeted and clearly simplified pro-cedures for low-risk products, like occupational pensions and most life in-surance products. This could be achieved by adding more flexibility into the given provisions and perhaps by introducing more sector-specific provi-sions.
Insurance and Pensions Denmark	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	3. Comments on the RTS under Article 28 (1) AMLR (on Cus-tomer Due Diligence) For ease of reading, we address the issues raised in the draft RTS in a con-solidated manner, rather than responding separately to each consultation question. 1) We note that the draft RTS under Article 28(1) AMLR introduces detailed and prescriptive requirements for customer due diligence, including in low risk scenarios. In our view, this is challenging for two reasons. The provisions do not provide sufficient clarity and flexibility to accommodate sector specific customer relations and onboarding models (including occupational pensions and life insur-ance), and 2) The draft risks eroding the practical space for simplified due dili-gence that level 1 intends to preserve

Name of the respondent	Question	Answer
		for low-risk situations. Our key concerns relate to customer identification and verification re-quirements, particularly where the underlying product and delivery model, is structural low-risk. 3.1 Limited simplification for low-risk scenarios We do not consider that the draft RTS delivers sufficient simplification for low-risk scenarios. While sectin 5 refers to simplified due diligence, the draft largely maintains the standard information set and as presented above, removes only few information and verification requirements, espe-cially when it comes to customers as physical persons. In our view, Article 33 of AMLR, read in the light of the general principles of a risk-based approach and proportionality, allows for more substantive simplification than currently reflected in the draft RTS. The RTS should be adjusted accordingly to reflect the risk-based approach intended through-out the framework. 3.2 Identification information requirements (Article 20) CDD obligations under the AMLR can be met in different ways. Given varia-tions in national systems and sectoral practices, the RTS should remain flexible and

Name of the respondent	Question	Answer
		proportionate, especially in low-risk situations such as occupa-tional pensions. As set out in the annex, for occupational pensions and many life-insurance arrangements, customer information is transmitted to the pension fund or life insurance undertaking via the employer. Typically, the data available at on-boarding flows from the employer and includes: The name, address CPR-number (Danish personal identification number) of the employee. Employers do not normally hold information on employees' place of birth or nationality. Moreover, obliged entities do not have access to this infor-mation via the Danish central register (the CPR register). In addition, no official identification documents, apart from the passport or drivers-license, contain information on the place of birth, and only the passport contains information on nationality. Requiring pension funds and life insurance undertakings to collect place of birth and nationality information directly from customers (or from addi-tional sources) would be operationally burdensome and would require sig-nificant changes to established onboarding processes. For occupational pensions and traditional life insurance products, we do not see ML/TF risk-based justification for requiring place of birth and na-tionality, where the primary purpose is identification and the identity is

Name of the respondent	Question	Answer
		already anchored through the employment relationship. Given the low ML/TF risk profile and the employment link, it is dispropor-tionate to maintain mandatory information requirements on place of birth and nationality for this sector. We therefore consider it necessary to amend Article 20 to (i) introduce greater flexibility and (ii) enable genuinely simpli-fied identification procedures for low-risk pension and life insurance prod-ucts. For pension products assessed as medium risk, a degree of flexibility should also still be available considering the employer–employee link and the existing identification baseline it provides. For Danish pension- and life-insurance products, we find no material risk related to information on the place of birth or nationalities. The relevance is for identification only, which is already made by the information from the employer checked against the Danish national register on identification (CPR). The employer would normally send information, which could give an indication of the risk (i.e. the salary or the name of the employer). Given the low AML/TF risk related to pensions and life-insurance products in general and the link to an employment relation, where identification is also already made, we find it disproportionate and burdensome to uphold information requirements for the place of birth and nationalities. For this reason, we

Name of the respondent	Question	Answer
		find it necessary to alter Article 4, 5 and 20 to make them more flexible, and to introduce more simplified procedures, clearly reducing the information requirements for identification. These simplifications regarding information on place of birth and nationali-ties should also cover medium risk scenarios.
Insurance and Pensions Denmark	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	3.3 Verification of identification information The same proportionality considerations apply to verification. Under the draft RTS, there are no dedicated verification provisions under simplified due diligence; consequently, AMLR Article 22(6) and Articles 6 and 7 of the RTS would apply even in low-risk scenarios. In Denmark, there is currently no national electronic identity solution that meets the relevant requirements under Regulation (EU) No 910/2014 (eI-DAS), nor an electronic register that fulfils all requirements under AMLR Article 22 and Articles 2–5 of the RTS under Article 28(1). As a result, strict application of the verification requirements would often imply requesting original documents or certified copies. We believe this would not meaningfully enhance customer knowledge in the low-risk sec-tor, but would add unnecessary burdens and administrative costs. This is particularly relevant where customer contact is typically indirect, information is obtained via the

Name of the respondent	Question	Answer
		employer, and verification in practice is car-ried out by cross-checking against a reliable public source. For a pension fund or life-insurance company to comply with the require-ment measures both in the AMLR and the RTS under Article 28 (1), it will be disproportionally burdensome. Requiring the presentation of original documents or certified copies will, in our opinion, not significantly increase the quality of customer knowledge or mitigate customer due diligence risk but will instead result in unnecessary burdens for customers and significant administrative costs for companies. This is particularly true in a low-risk sector such as the pension sector, where customer contact is typically indi-rect and where information is in practice obtained initially via the employer and subsequently checked against a reliable, public source. 3.4 The CPR registers as a reliable public source of verification In Denmark, verification of customer information for pensions and life in-surance is primarily carried out by checking information against the nation-al civil registration system (the CPR register). The CPR register is an official and reliable public source of verified identifi-cation information for natural persons and is widely used by both public authorities and regulated undertakings for identification and verification purposes. It has a high degree of data quality and is regularly updated.

Name of the respondent	Question	Answer
		Against this background, taking into account the low-risk profile and the sector's customer relationship model, we recommend that the RTS explicit-ly allow verification in low-risk scenarios through checks against a national central register such as the CPR register. 3.5 Possible inspiration for sectoral simplified procedures When designing simplified procedures for pension funds and life insurance undertakings, consideration could be given to existing approaches in the AMLR, including: • Article 22 (sectoral simplified measures, including with respect to pooled accounts, where the customer relationship is also not direct), and • Article 21 (minimum requirements for identification and verification of beneficial owners or senior managing officials in low-risk situations). Following the reasoning above on specific customer relation in pensions and life-insurance taken together with the low risk scenario, we would call for a solution, where requirement for information on both "place of birth" and "nationality(es)" are optional for low risk scenarios, which would allow for verification by checking against the national central register in low risk scenarios, as in the pension- and life-insurance sector. To suggest for specific simplified procedures i.e. for pension funds and life insurance companies, inspiration could be taken from both Article 22 on sectoral

Name of the respondent	Question	Answer
		simplified measures with respect to pooled accounts (where the customer relation is also not direct) and Article 21 on the minimum re-quirements for the identification and verification of the beneficial owner or senior managing officials in situations of low risk.
Insurance and Pensions Denmark	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	4. Closing remarks We support a strong and harmonized AML framework under the AMLR. However, its effectiveness depends on accurate risk differentiation. Occu-pational pensions and traditional life insurance products are structurally ill-suited to money laundering, and this should be clearly reflected in the RTS adopted under Articles 28 AMLR. We recommend that the final RTS: • Clearly acknowledge occupational pensions and tradi-tional life insurance as low risk products by default, unless specific risk indicators are present. • Allow simplified due diligence to be applied on a prod-uct/category basis were supported by a documented risk as-sessment, rather than requiring repeated individualized justifica-tions for stable, long term pension relationships. • Avoid introducing de facto "standard CDD" requirements for low risk products, which would undermine the proportionality ex-plicitly foreseen in Article 28 AMLR. Without such clarification, there is a risk that the RTS

Name of the respondent	Question	Answer
		will, in practice, eliminate the regulatory space for simplified CDD measures envisaged at Level 1. Applying highly detailed AML obligations to occupational pensions and low risk life insurance products risks: • diverting compliance resources away from genuinely high risk activ-ities, • increasing administrative costs without measurable AML benefits, and • weakening the effectiveness of the risk based approach as a super-visory tool. A clearer differentiation for low-risk scenarios in the RTS would en-hance both legal certainty and supervisory focus, allowing obliged entities and authorities to concentrate efforts where risks are highest We therefore encourage AMLA and the Commission to ensure that the final RTS explicitly allow for simplified and proportionate treatment of these products, fully in line with the risk based approach mandated by the AMLR.
Insurance and Pensions Denmark	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Background information on the Pension Schemes and life-insurance products on the Danish market Low risk do to the specificities to pensions and life-insurance products. In Denmark occupational pension schemes are based

Name of the respondent	Question	Answer
		either on an agreement between the life insurance company or pension fund and the employer, or on a collective agreement, both deciding on the contributions to be paid by the employer together with salary payments. The vast majority of customers are resident in Denmark. The products consist of retirement benefits, insurance cover in the event of death or loss of earning capacity, as well as certain types of cover in the event of illness and need for medical treatment. This means that the pay-out is conditioned upon the occurrence of one or more of these events. Few products, not covered by the occupational pensions schemes, but which include a savings element, generally allow only very limited opportunities for customers to carry out transactions prior to the agreed retirement date, and such transactions would in any event be subject to significant taxation. All payout transactions are subject to manual processing by the company, and do not allow for rapid transactions. Hence, all risk parameters indicate that the risk of money laundering and terrorist financing is very low. On-boarding procedures The sector has structured its onboarding processes to reflect the low risk-. Information relating to each customer relationship is provided by the employer and

Name of the respondent	Question	Answer
		normally includes details of the employee's name, address, CPR number (Danish personal identification number), salary, pension contributions and how the pension contribution is determined, for example as a percentage of the employee's salary. For a significant number of companies, verification of the customer's identity is done by comparing the information received from the employer with data obtained from the national central register (CPR register). Some companies additionally verify information via the national, digital identity, MitID. Customers are screened so that customers with a higher risk, for instance due to geographical factors (address), are required to provide additional information and further documentation following the procedures for individuals subject to the PEP rules. For low-risk customers, information on citizenship and place of birth is not currently collected. Introducing such a requirement would be very burdensome, as it would mean that the current process—whereby information on individual employees is obtained from the employer—could not be maintained, since employers do not necessarily have the knowledge of the employees' place of birth or citizenship(s). In practice, such information can generally only be documented by the customer's passport. In order to comply with the new procedures both stated in the AMLR and the RTS on Artikel 28 a new process involving direct contact with each individual customer

Name of the respondent	Question	Answer
		would therefore need to be established in order to comply with these requirements.
Insurance and Pensions Denmark	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Insurance Europe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	See answer to question 3 and 5.
Insurance Europe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The proposals do not always provide sufficient flexibility for low-risk life insurance products. Due to the long-term nature of life insurance contracts and the limited transactional activity during the accumulation phase or period in which premiums are paid for low-risk life insurance products such as for instance a term life insurance policy, the uniform application of certain customer due diligence requirements — in particular those relating to periodic updates, verification timing and documentation of ownership and control structures (notably Articles 23 and 12 RTS) — may lead to disproportionate outcomes when applied across all products and services.

Name of the respondent	Question	Answer
		In practice, ML/TF risk in life insurance products generally materialises at specific moments in the product lifecycle, most notably at the execution of a benefit payment. Applying full verification and extensive documentation requirements at earlier stages, irrespective of the product's low-risk profile, does not necessarily enhance risk mitigation but may instead reduce operational flexibility without commensurate AML/CFT benefits. Finally, the changes introduced by the AML package and the draft RTS to the current AML/CFT regime are significant and will require life insurance undertakings to make a major effort to adapt within very tight deadlines. The deadline for implementing the Single Rule Book Regulation by 10 July 2027 will pose significant challenges for the life insurance sector, as this timeframe is far too short to allow for the necessary changes to insurance undertakings' procedures and IT systems, whilst many of the measures to be implemented fall under Level 2 texts and are not yet known or finalised. The changes to procedures and IT systems required to implement the new obligations will entail unavoidable lead times of no less than 12 or 18 months from the moment the new obligations are finalised, once all Level 2 texts have been published in the Official Journal of the EU it is not possible to develop IT tools on the basis of draft texts. IT projects are major and costly undertakings for businesses, they must be planned well in advance to allow for a phase of cost estimation followed by budget approval by senior

Name of the respondent	Question	Answer
		management, and a phase of technical implementation. The deadline set out in the RTS should therefore be adjusted to take account of the budgetary and technical constraints of the undertakings concerned. It is important to provide for a transition period, in order to allow insurance undertakings, the necessary time to bring their procedures and systems in line with the new rules contained in the Level 1 and Level 2 texts.
Insurance Europe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Although the draft RTS refers to a risk-based approach, several provisions remain aligned with high-risk scenarios and do not sufficiently reflect differences in ML/TF risk. For generally low risk life insurance products, for e.g., life insurance contracts with a temporary death coverage alone or combined with disability coverage, personal pension insurance contracts with no or limited surrender options, or insurance policies taken out by a borrower against the risk of death, may lead to disproportionate outcomes. Measures should apply only where justified by concrete ML/TF risks. Under Art. 2(2) and Art. 20(1)(b) (ii), obliged entities are required to obtain the registered name and the trade name where it differs from the registered name when identifying legal entities. Verifying trade names can be difficult and burdensome in practice, particularly where customers may have multiple trade names, and offers limited relevance from an AML perspective. This requirement goes beyond what is required under Art. 22(1)(b)(i) AMLR. Proposal:

Name of the respondent	Question	Answer
		• Remove the obligation to obtain and verify trade names in Art. 2(2) and Art. 20(1)(b)(ii). Art. 5 requires obliged entities to obtain information on all nationalities of the customer. Where a person holds multiple nationalities and declares them in good faith, verifying all nationalities is unnecessary and creates legal uncertainty. A clarification on verification is needed to ensure consistency with Recital 3. Proposal: • Add to Art. 5 "…Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient." Art. 8 requires obliged entities to assess the credibility and reputation of sources, whether information has undergone certain checks, and the risk that data may be forged. These assessments are inherently subjective, difficult to evidence, or require technical expertise not generally available within compliance teams. Proposal: • Delete Art. 8(a) and (e) and amend point (d) the extent to which the source of information is accurate, based on what is reasonably verifiable by obliged entities in practice. The measures in Art. 11 concerning ownership and control structures are disproportionate when applied to low risk products. In addition, Art. 12 defines "complex corporate structures", although Art. 28(1) AMLR does not require RTS to specify this concept. There is a risk

Name of the respondent	Question	Answer
		that such structures will be treated analogously to excessively complex ownership structures under Annex III AMLR, with implications for the risk profile of insurance undertakings. For low-risk life insurance products, adequate understanding can often be achieved without extensive documentation. Proposals: • In Art. 11(3)(d) – replace applicable with available. • Delete Art. 11(4)(a). • Delete Art. 12. Art. 19 requires the application of PEP related measures irrespective of the product's ML/TF risk. For low-risk life insurance products, this can lead to disproportionate outcomes, such as intensive monitoring and documentation requirements where the product characteristics indicate very low ML/TF risk. Proposals: • Article XX – Low risk profile of the activity conducted by the politically exposed person In situations of low risk, it shall be possible to give priority to product-specific risk factors, over customer-specific risk factors associated with politically exposed persons. • Add to recital (15) "…while taking into account the overall risk profile of the activity conducted by the politically exposed person. In situations of low risk, it shall be possible to give priority to product-specific risk factors, over customer-specific risk factors associated with politically exposed persons."

Name of the respondent	Question	Answer
		Articles 21 and 23 may result in double verification requirements and mandatory periodic updates for low risk life insurance customers. In practice, updating customer information every five years for low risk contracts is disproportionate, particularly given the long duration of contracts, absence of transactions, and event driven nature of risk. Moreover, we ask that the data to be collected for the identification of the beneficial owner or senior managing officials is reduced in situations of low risk, as is the case for the identification of the customer. Proposals: • Add Art. 21(1) "In situations of low risk, obliged entities shall obtain at least the following information to identify the beneficial owner or senior managing officials: all names and surnames; place of birth; date of birth." • Add Art. 23(3) "By way of derogation from paragraph 2, obliged entities may apply longer intervals for updating customer identification data for life or other investment-related insurance business that present a low degree of ML/TF risk."
Insurance Europe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	For life insurance undertakings, certain information requirements proposed in the draft RTS may be routinely unavailable in practice, without an adequate alternative solution being provided. This particularly applies to Article 9 RTS, which requires obliged entities to obtain the dates on which the associated bank or payment account linked to a virtual IBAN was opened and, where applicable, closed. In the life insurance context, obliged entities typically have no

Name of the respondent	Question	Answer
		direct contractual or operational relationship with the issuing payment service provider or bank. Customers themselves often do not have access to, or visibility over, such account-level information, especially where virtual IBANs are provided through intermediated payment solutions. As a result, this information is not merely difficult but routinely unavailable for life insurers, particularly in low-risk product scenarios. The draft RTS do not currently provide a clear alternative where such information cannot reasonably be obtained. To address this, AMLA is invited to clarify that the requirement to obtain opening and closing dates of associated accounts linked to a virtual IBAN applies only where such information is reasonably available to the obliged entity, taking into account the nature of the business relationship and the ML/TF risk profile of the product. For low-risk life insurance products, it would be more proportionate to allow reliance on available customer declarations or existing payment information, without requiring life insurers to obtain account-level data from third-party PSPs. Such clarification would enhance the operational feasibility of the RTS while remaining consistent with a risk-based approach. In addition, insurers note a more structural issue regarding the practical availability and verifiability of

Name of the respondent	Question	Answer
		certain data fields required under the draft RTS. Several data points referenced in the RTS cannot be consistently obtained or objectively verified in practice, due to misalignment between the PID / EU Digital Identity framework, national source registers, and the actual access rights of obliged entities. By way of example, while the PID model technically allows for multiple nationalities, national population registers in some Member States record only one nationality, and obliged entities have no direct access to such registers. Other data elements referred to in the RTS, such as statelessness or refugee status, TIN, occupation, or specific identity document attributes, are neither part of the standard PID attribute set nor consistently available from reliable public sources. Requiring obliged entities to collect and verify data points that are not objectively available from authoritative sources creates execution risks and legal uncertainty, without necessarily enhancing AML/CFT effectiveness. Where such information is considered essential, a more consistent approach would be for public authorities to centrally register and verify these data elements, allowing obliged entities to rely on them in a uniform and risk based manner.
Insurance Europe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	Low-risk life insurance products (e.g. life insurance protection policies, occupational pension schemes, etc.) should benefit from specific sectoral simplified measures under Section 5 of draft RTS under Article 28(1) of the AMLR, which currently gives insufficient

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	attention to occupational pension insurance schemes. From an anti-money laundering perspective, there is no valid reason to identify and verify the identity of the beneficial owner of the customer/employer, since the employer has only a secondary economic interest, while the true beneficiary is the employee, as the occupational retirement provision is set up for their benefit and mostly funded by deferred compensation up to certain limits. It must be clarified that there is no obligation to conduct full identification of employees at enrolment, as the provision remains “locked” until retirement. Under Article 47 AMLR, recording names or sufficient information to establish and verify identity is sufficient at enrolment, with full identification and identity verification by means of simplified due diligence measures possible at a later stage and at the latest at payout. There is also no obligation to assess whether the employee is a politically exposed person, a family member or persons known to be a close associate at enrolment; pursuant to Article 44 AMLR, this assessment is required no later than payout, and additional due diligence applies only where higher risks arise, which cannot occur within an occupational pension insurance scheme. Accordingly, identifying and verifying the beneficial owner of the employer is not necessary; recording

Name of the respondent	Question	Answer
		employee names is sufficient at enrolment; and full identification and PEP assessment can be postponed until payout. Due diligence measures could therefore be limited to the moment of payment of benefits or withdrawal of capital, as premium payments present a very low ML/TF risk. For life insurance contracts, the purpose and intended nature of the business relationship can be derived from the insurance contract and from the customer's demands and needs assessed prior to signing, which is sufficient for that purpose. Proposed amendments: Article XX - Sectoral simplified measures with respect to life insurance policies for pension schemes 1. An insurance undertaking providing life insurance policies for pension schemes, concluded by employers (the customers) to the benefit of their employees/beneficiaries, that qualify as low risk products in accordance with Annex II (2) (a), (b), (c) of Regulation (EU) 2024/1624 fulfils the requirements stipulated in Article 20 (1) points (a), (b), and (i) of Regulation (EU) 2024/1624 if all of the following conditions are met: (a) the insurance undertaking establishes the identity of the customer and, if necessary, the person purporting to act on behalf of the customer in accordance with Article 20 of this Regulation; (b) takes reasonable and risk-adequate measures to

Name of the respondent	Question	Answer
		verify the identity of the customer and, if necessary, the person purporting to act on behalf of the customer and (c) if necessary, takes reasonable and risk-adequate measures to verify that the person purporting to act on behalf of the customer is authorized to do so. 2. For identifying and verifying the identity of beneficiaries, the insurance undertaking takes reasonable and risk-adequate measures to fulfil the requirements stipulated in Article 47 of Regulation (EU) 2024/1624. (13b) In the context of life insurance, the purpose and intended nature can be derived from the type of life insurance policy taken out by the customer. In addition, the customer's demands and needs, which must be analyzed in accordance with article 20(1) of Directive (EU) 2016/97 on insurance distribution before taking out life insurance, contains useful information about the intended nature and purpose of the relationship. This may be sufficient to comply with article 20(1)(c) of Regulation (EU) 2024/1624. Article XX - Sectoral simplified measures with respect to life insurance policies An insurance undertaking providing life insurance policies that qualify as low risk products in accordance with Annex II (2) (a), (b), (c) of Regulation (EU) 2024/1624 fulfils the requirements stipulated in Article 20 (1) point (c) of Regulation (EU) 2024/1624 if the following conditions are met: (a) the intended use of the product is deemed to be

Name of the respondent	Question	Answer
		self-explanatory and derived from the product itself; (b) the estimated value of transactions is self-explanatory and follows from the signed agreement/contract.
Insurance Europe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Insurance Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	29
Insurance Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 29 suggests that when sanctions evasion is suspected, entities should check whether representatives of a customer are sanctioned, but it would be clearer and more effective to require formal screening of those individuals. Proposal: • Amend Article 29 – delete “Where there is a suspicion of circumvention or evasion of targeted financial sanctions,”
Insurance Europe	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Insurance Ireland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	• Recital 12 should be clarified in order to become clear that the requirement for obliged entities to obtain information, which would enable them to verify the existence and scope of any power of representation, is linked to the relevant provisions regarding ‘persons that purport to act’. • We welcome the clarifications introduced with Recital 14 and note that its text provides for flexibility in the way collective financial undertakings (CIUs) should

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	collect CDD information of the final investors in cases where CIUs distribute their shares/units through another credit/financial institution. In addition, the text of Recital 14 puts a specific emphasis that CIUs are not required to obtain information on the identity of the underlying investor 'in all cases and in a systematic manner'. However, the wording of Article 17 is very prescriptive, not aligned with Recital 14, and doesn't state that CIUs should not collect the CDD information from other credit/financial institutions in all cases and in a systematic manner. We also call for an explicit exclusion of life insurance undertakings providing unit-linked products from the scope of Article 17, so that they will not be required to provide information about their customers to CIUs upon request. The reason for this is that life insurance undertakings own the fund units (not their underlying customers) and they should not be required to provide CDD information to CIUs on their underlying customers as per the provisions of Article 17. • Although the rationale behind the proposed re-use of available CDD information by obliged entities is welcomed, we are of the opinion that the wording of Recital 21 raises GDPR-compliance concerns and practical challenges with its application. It will be important to clarify how the proposed provisions would interact with the requirements under the GDPR. Clarification is also needed as to whether the proposed re-use of available CDD information would dispense the need for written agreements between group entities. Finally, consideration should be given as to how the re-

Name of the respondent	Question	Answer
		use of CDD information would work and be administered in practice as the customer information gathered by the different entities of a group would not be necessarily uniform. • Article 2 – paragraph ii) imposes an obligation on obliged entities to collect the registered name and the trade name of legal entities/other organisations that have legal capacity (in accordance with Article 22(1)(d)(i) AMLR). It is important to understand the rationale behind this requirement and how it will contribute to the effectiveness of the AML/CFT measures. The dual requirement for obliged entities to collect the registered name and the trade name of their customers, if they differ, will be costly and burdensome and will require IT system development, while the added value of this measure from an AML/CFT perspective is unclear. For instance, one legal entity could have several trade names which would require significant system developments in order obliged entities to be able to capture this information. Accordingly, we call for a removal of the requirement to collect information on both, the registered name and the trade name. • We suggest deleting the second sentence of Article 4 of the Draft RTS. The rationale behind this proposal is that if obliged entities are required to collect the additional information on place of birth, then they will also need to store this information. • It is welcomed that the EBA inserted a new Recital 3, which was also kept by AMLA, in relation to cases where customers might have more than one nationality which

Name of the respondent	Question	Answer
		clarifies the obliged entities' obligations in this area. However, the related Article 5 is not aligned with the recital and still requires obliged entities to obtain information on 'all nationalities' which is problematic. It is also unclear what the purpose of collecting information on 'all nationalities' is. For many undertakings, their current systems do not collect/store information about nationalities and not all identity documents will have this information (e.g. UK passports do not include information on place of birth). • Article 6 – see response to Question 3 • Article 14(1)(b) – 'relevant documents' is too vague and any clarification from AMLA on what constitutes 'relevant documents' would be welcomed.
Insurance Ireland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We are conscious of the difficulties in achieving a harmonised, consistent and effective customer due diligence (CDD) framework given the wide range and diversity of sectors in scope of the AML legislation. However, we believe that further proportionality, efficiency, and flexibility should be ensured with the draft Level 2 measures in order to achieve an effective risk-based approach to AML and reflect the specificities of the different life insurance products, especially the ones with low ML/TF risk (e.g. life insurance protection policies, pension products/occupational pensions, etc.).
Insurance Ireland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	There is a certain confusion around how the requirements for obliged entities in low-risk situations are defined throughout the draft RTS. In its rationale, AMLA states that Article 33 AMLR is sufficiently detailed and provides a range of measures in which due

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	diligence measures can be simplified, including by delaying verification of customers and beneficial owners by up to 60 days or by reducing the amount of information collected to identify the purpose and intended nature of occasional transactions/business relationships. However, the draft RTS does not refer to verification being required, except for beneficial owners. The requirement under Art.33(1)(a) AMLR to verify the identity of customers is a step change from the current simplified CDD measures under the AML Directives where in low-risk scenarios, obliged entities identify customers and beneficial owners but do not verify their identity. We note that the requirement to verify the customers' identity in the context of simplified CDD is not proportionate and risk-based and will result in significant difficulties for life insurers given the nature of their business/products. In addition, Article 33(1)(b) AMLR provides for a reduced frequency of CDD updates. However, it is unclear how this could be applied given the prescriptive requirements to update CDD under Article 26(2)(a) and (b) AMLR. We also note that: • Not all ID/passports contain all the information set out in Article 6(1)(a)-(e). It is unclear if all IDs/passports would satisfy the requirements if they don't meet the requirements set out in points (a)-(e). There are also circumstances where customers will not be able to provide all the information required in Article 6(2) (e.g. vulnerable customers - older persons living in care homes, etc.). Obliged entities should have the flexibility to satisfy their obligations in such circumstances and

Name of the respondent	Question	Answer
		that needs to be reflected in the relevant provisions of the draft RTS. Article 6(5), in conjunction with Article 22(6) AMLR, requires obliged entities to obtain from customers and of any person purporting to act on their behalf for the purposes of verifying the identity of this person either an original ID/passport or equivalent or a certified copy thereof. Recital 5 of the draft RTS outlines the reliable and independent sources of information which obliged entities should consider as part of their due diligence measures for customers that are not natural persons, including copies of official/statutory documents, etc. that are certified by an independent professional or a public authority. However, there are no similar provisions in relation to natural persons, as well as which authorities/independent professionals would satisfy the requirement to certify copies. The requirement for a certification of a copy of an ID/passport would incur costs for customers, create bad customer experience, and should be removed. We call for a proportionate approach whereas obliged entities would be allowed to accept uncertified copy documents in situations of lower risk, or where no high-risk factors are present. We also note that the concept of certification originated in a time when digital systems lacked the ability to prove identity, or conformance. Technological advancements are enabling systems to prove compliance or authenticity dynamically, contextually, and without disclosure. AMLA must avoid hardcoding outdated mechanisms into law and instead focus on outcomes and capabilities, to allow the most

Name of the respondent	Question	Answer
		effective and current technologies to fulfil compliance needs more robustly and efficiently. • For clarity and consistency, we suggest including 'point (b)' after the reference to 'Art.22(6) AMLR' in Article 7(1) of the Draft RTS. • Article 8 of the Draft RTS imposes several obligations to ensure that the source of information is reliable. Some of these requirements place an unrealistic burden of proof on obliged entities. We call for a more proportionate approach to ensure that obliged entities are not required to comply with overly burdensome requirements. • The requirements under Article 24 of the draft RTS are disproportionate in the context of low-risk business relationships. It is also unclear how these requirements should be applied to situations where brokers/intermediaries are used by insurance undertakings for the distribution of their products. • The requirements under Article 30(a)(iii) are excessive and they are not part of the current AML rules. We note that obliged entities could screen/act on data that is collected from customers during the CDD process. For the measures under Article 30 to be effective, the right parameters for the data that is screened against (and provided by sanctions screening providers) should be established. The proposed approach should also be proportionate and product-specific. Otherwise, there is a significant risk that the proposed requirements are moving from a risk-based to a rule-based approach to AML/CTF.

Name of the respondent	Question	Answer
Insurance Ireland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	- In its feedback statement (pp.145-146), the EBA noted that the current Recital 13 and Article 18 were revised and clarified, so that it is clear that inferring the purpose and intended nature from the type of transactions or business relationship established is limited to cases to which Article 33 AMLR applies. However, the revised wording of both, the recital and the related article does not contain any reference to the situations where obliged entities are allowed to infer the purpose and intended nature from the type of transactions or business relationship and this should be corrected. Due to the nature of life insurance contracts, we suggest that the draft RTS explicitly allows for the purpose and intended nature of the business relationship in relation to life insurance products (both, protection and investment insurance products) to be inferred. Accordingly, life insurance undertakings should not be required to obtain any additional information in order to identify the purpose and intended nature of business relationships. - Article 19 – In order to ensure proportionate and risk-sensitive CDD requirements, we call for a removal of the PEPs' screening requirements for life insurance protection products and pension products/occupational pensions due to their limited relevance and benefits for these products and the disproportionate burden they create for customers and obliged entities which provide such products. Alternatively, for customers who buy exclusively life insurance products for which simplified due diligence measures can be applied due to the

Name of the respondent	Question	Answer
		product characteristics, a balanced consideration of the risk factors should be possible. If the product characteristics of a life insurance product implies a low ML/TF risk, it should be possible to give priority to product-specific over customer-specific risk factors (PEP characteristics) when assessing the risk in order to have a proportionate approach to AML. - Article 23 of the Draft RTS causes significant concerns for life insurance undertakings due to the lack of proportionality and the practical implications arising from it. In our view, the provisions of Article 23 are contrary to the principles of the risk-based approach to ML/TF risks and will require significant efforts from life insurance undertakings to update their CDD information (every 5 year) in relation to (long-term) low-/medium-risk products. At the same time, life insurance undertakings can't force their customers to provide an up-to-date CDD information, neither can they freeze any payments in relation to life insurance protection policies as this would create significant conduct of business risk for the undertakings. We strongly recommend that life insurance undertakings should be allowed to update their CDD information based on a trigger event which would allow firms to focus their resources on high-risk situations, rather than on low-risk ones as per the current wording of Article 23 of the Draft RTS. In addition, clarity is needed in Article 23 of the Draft RTS as to whether obliged entities should monitor the expiration dates of the ID documents or update the CDD

Name of the respondent	Question	Answer
		information every 5 years. Currently, not all insurance undertakings have systems in place to monitor the expiration dates of customers' ID documents and any system enhancement would result in increased costs for entities. Furthermore, it is important to understand what steps obliged entities should take in situations where a customer does not respond when updated CDD documents are requested from them and whether in such situations, obliged entities can wait until the next trigger event in order to update the CDD information on this customer. Similar to Article 21(1) AMLR, the specificities of life insurance contracts and the insurance sector should also be reflected in Article 23 of the draft RTS. Finally, obliged entities need clarity around the regulatory expectations (especially on insurance legacy business and retrospective overlay of Article 20 AMLR), where a customer does not respond to firm's requests to update CDD information, but due to contractual laws firms cannot terminate the business relationship.
Insurance Ireland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A risk-based approach is critical in the application of simplified due diligence (SDD) and due consideration should be given in the draft RTSs on the specificities and inherent risk of different products, e.g. life insurance policies. We call for a pragmatic, proportionate, and risk-based approach to the measures defined in Section 5 of the draft RTS and for the inclusion of specific simplified due diligence measures for life insurance policies and pension products/occupational pensions. As noted in the European Banking Authority's Final

Name of the respondent	Question	Answer
		Report EBA/GL/2021/02 (2021), the majority of life insurance/pension products are designed for the long term and some will only pay out on a verifiable event, such as death or retirement. Accordingly, due to the long-term nature and lack of flexibility of many life insurance products, they are rarely the first vehicle of choice for money launderers. In order to ensure continuity and proportionality of the AML framework, we strongly recommend that the Draft RTS should include sector-specific SDD measures for life insurance and pension products/occupational pension in circumstances where any of the following (non-exhaustive) risk-reducing factors exist as set out in EBA's Final Report EBA/GL/2021/02 (2021): The product: - only pays out against a pre-defined event, for example death, or on a specific date, such as in the case of credit life insurance policies covering consumer and mortgage loans, which only pay out on the death of the insured person; - has no surrender value; - has no investment element; - has no third party payment facility; requires that total investment is curtailed at a low value; - is a life insurance policy where the premium is low; only allows small-value regular premium payments, for example no overpayment; - is accessible only through employers, for example a pension, superannuation or similar scheme that provides retirement benefits to employees, where contributions are made by way of deduction from

Name of the respondent	Question	Answer
		wages and the scheme rules do not permit the assignment of a member's interest under the scheme; - cannot be redeemed in the short or medium term, as in the case of pension schemes without an early surrender option; - cannot be used as collateral; - does not allow cash payments; - has conditions limiting the availability of funds that must be met to benefit from tax relief. Example, term assurance and income protection policies (including mortgage protection and serious illness cover) are significantly low risk from an ML/TF perspective: • Payments are contingent on a life event (upon the death of the insured individual or a specified event, such as a serious illness). Term assurance policies only pay out in the event of death. Mortgage protection policies are explicitly linked to the repayment of outstanding mortgage debt, typically disbursed directly to a regulated financial institution. • There is no early cash surrender value or regular access to funds, reducing the risk of money laundering. The absence of liquidity reduces the opportunity for misuse within the financial system. Unlike investment-linked insurance products, these policies do not accumulate cash value or provide withdrawal options. This means there is no opportunity for funds to be laundered through these products. • The EU has a commitment to facilitating financial inclusion and consumers have a right to access essential insurance protection. Applying SDD in these instances

Name of the respondent	Question	Answer
		ensures that undue burdens are not placed on consumers. We believe that the introduction of sector-specific SDD measures for life insurance protection products and pension products/occupational pensions in Section 5 of the draft RTS would be appropriate and reflective of their low ML/TF risk level, as well as in line with the risk-based approach of the EU AML framework and the EC Simplification agenda. Failure to include sector-specific SDD measures for life insurance and pension products/occupational pensions would result in significant administrative and compliance burden for life insurance undertakings without adding any value in the fight against money laundering and terrorist financing.
Insurance Ireland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Insurance Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	33
Insurance Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Insurance Ireland (II) and our members welcome AMLA's intention to continue EBA's work on the draft RTS under Article 28(1) by building on their five guiding principles, as well as to ensure continuity and consistency, while placing specific attention on simplification. We also commend AMLA's work on assessing if the EBA Draft RTS are relevant and applicable to the wide variety of financial and non-financial obliged entities, which are in scope of the AML legislation, and identifying any outstanding issues which need to be addressed in

Name of the respondent	Question	Answer
		AMLA's final draft RTS in line with the Authority's mandates. II would also like to express our concerns in relation to the short implementation timelines of the Draft RTS on Art. 28(1) and other Level 2 and 3 measures which, together with the requirements of the AML package, will result in significant implementation and system development challenges, as well as compliance burden and costs for obliged entities. We believe that both, AMLA and the national competent authorities (NCAs) should be cognisant of the impact on obliged entities from the extensive changes to the AML rules and the significant number of new Level 2 and 3 measures which will be developed in the coming months and are yet to be finalised. Finally, II welcomes the opportunity to provide feedback on the Draft RTS under Article 28(1) AMLR and support AMLA's efforts in developing and achieving a proportionate, effective, and risk-based approach to AML regulation and supervision.
Insurance Ireland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Insurance Ireland	Do you have any comments on the Annex in the draft RTS?	No

INTEGRATED RESORT COMPLEX ELLINIKOU SA - HARD ROCK HOTEL & CASINO ATHENS	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	IRC Ellinikou supports the Article 28(1) draft RTS, particularly the emphasis on proportionality, risk-sensitive application and harmonization. However, the CDD requirements should be applied in a manner appropriate to land-based integrated resort casinos. They should not be interpreted as requiring identity verification, PEP/sanctions screening, player cards or electronic accounts for every person at physical entry. IRC Ellinikou broadly agrees with the proposals, subject to land-based gambling clarifications. Article 1: The proportionality and risk-based approach is essential, because customers range from low-risk occasional visitors to higher-risk VIP, credit, hosted or junket customers. Article 18: For low-risk or standard-risk occasional

Name of the respondent	Question	Answer
		casino transactions, the purpose and intended nature will often be evident from the gaming service itself. AMLA should clarify: "For providers of land-based gambling services, where the customer conducts an occasional transaction assessed as low or standard risk and no linked transaction, suspicious activity or higher-risk factor is identified, the purpose and intended nature of the transaction may be understood by reference to the gaming service provided." Articles 19, 29 and 30: PEP and sanctions screening should occur before establishing a business relationship or before a CDD-triggering occasional transaction, not at physical entry. See Section 2.7. Articles 25-28: EDD should apply to higher-risk land-based gambling scenarios, including casino credit, VIP or hosted play, junket/intermediary activity, high-value cash activity, rapid cash-to-chip-to-cash conversion with limited gaming, third-party funding, redemption by someone other than the apparent player, high-risk jurisdictions, PEP exposure, or activity inconsistent with the customer's known profile. International customers: Where non-EU or foreign identity documents do not contain all attributes required for CDD, obliged entities should be permitted to obtain missing information through customer declaration or other credible means, applying a risk-sensitive approach.
INTEGRATED RESORT COMPLEX ELLINIKOU SA -	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based	The proposals can be applied across IRC Ellinikou's products and services if AMLA distinguishes between:

Name of the respondent	Question	Answer
HARD ROCK HOTEL & CASINO ATHENS	approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	• non-gaming resort visitors, who should not be treated as gambling AML/CFT customers solely due to physical presence; • occasional land-based gaming customers, who should be subject to CDD when the relevant threshold, linked transaction, suspicion or higher-risk trigger arises; • business relationship gaming customers, including loyalty, VIP, credit, hosted, junket-related and repeated customers, who should be subject to appropriate CDD and ongoing monitoring; • high-risk customers or transactions, which should be subject to EDD. AMLA should also clarify that supervisory reporting should not count every physical visitor as an AML/CFT customer. Customers for AML/CFT reporting should include persons with whom the obliged entity has established a business relationship or who have carried out an occasional transaction requiring CDD.
INTEGRATED RESORT COMPLEX ELLINIKOU SA - HARD ROCK HOTEL & CASINO ATHENS	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	IRC Ellinikou agrees that the draft RTS generally allow for a risk-based approach. To avoid over-implementation, AMLA should expressly confirm that a risk-based approach for land-based casinos does not require blanket identification at entry or mandatory player cards/electronic accounts for all customers. A risk-based model should focus CDD on wagering where applicable, collection of winnings, linked transactions, suspicious behavior, VIP/loyalty/credit/hosted arrangements, high-risk cash activity, business relationship formation and EDD risk indicators.

Name of the respondent	Question	Answer
		We recommend that land-based casinos document CDD procedures based on risk in their AML/CFT program plan. The plan should assess the level of the business relationship, ranging from low to high risk. CDD to focus on medium to high risk. AMLA should include the technology-neutral clarification in Section 2.2.
INTEGRATED RESORT COMPLEX ELLINIKOU SA - HARD ROCK HOTEL & CASINO ATHENS	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Certain information may be unavailable or disproportionate to collect in low-risk land-based casino scenarios: • Source of funds and occupation: for casual walk-in players, detailed occupation, business activity or documentary source-of-funds information may not be routinely available unless a CDD threshold, business relationship or risk indicator arises. Article 18's "where necessary" wording should be retained. • Relationships between customers: family, business partner or acting-in-concert information may only be known where observed by staff or available through loyalty/VIP/credit/host/junket information. • Digital infrastructure: IP addresses and device identifiers are generally not relevant to physical casino operations; casino-specific indicators should be used instead. • Identity documents: some foreign documents may not contain all identity attributes; missing information should be obtainable through customer declaration or other credible means on a risk-sensitive basis. • Historical activity for unidentified customers: absent

Name of the respondent	Question	Answer
		universal player-card infrastructure, casinos should not be expected to reconstruct all historical play across all games or areas unless such information is available.
INTEGRATED RESORT COMPLEX ELLINIKOU SA - HARD ROCK HOTEL & CASINO ATHENS	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	AMLA should include simplified due diligence measures for low-risk land-based gambling scenarios, without creating exemptions from AML/CFT obligations. Proposed measures: • Purpose and intended nature may be inferred from the gaming service where the occasional transaction is low risk and no linked transaction, suspicion or higher-risk factor is identified. • Source of funds information should be collected only where necessary, based on transaction value, payment method, linked transactions, customer behavior or other risk indicators. • Funds received from or paid to a customer's account at an EEA-regulated financial institution may be treated as risk-reducing where no other higher-risk factor is present. • Low-risk loyalty customers with low-value activity consistent with their profile may be subject to reduced update frequency and simplified ongoing monitoring, provided threshold, linked transaction and suspicious activity controls remain in place. • Non-gaming resort visitors should not be treated as gambling AML/CFT customers solely due to physical presence in the resort. • Low-risk occasional play should not require mandatory issuance of a player card or electronic customer account unless the customer enters a business relationship or

Name of the respondent	Question	Answer
		another CDD trigger arises. Closing statement For land-based integrated resort casinos, the most effective AML/CFT framework is not a blanket entry-identification model and not a mandatory universal player-card model. It is a targeted control model based on transaction-control points, linked transaction detection using available information, CDD at the relevant AMLR trigger, business relationship CDD for loyalty/VIP/credit/hosted/junket customers, optional use of player cards for identified customers, suspicious activity escalation, EDD for higher-risk activity, and proportionate SDD for low-risk occasional transactions. This approach strengthens AML/CFT effectiveness by focusing controls where risk actually arises, while avoiding unnecessary and disproportionate burdens on low-risk customers, non-gaming visitors and the integrated resort operating model.

INTEGRATED RESORT COMPLEX ELLINIKOU SA -	Do you have any comments on the Annex in the draft RTS?	Yes

Name of the respondent	Question	Answer
HARD ROCK HOTEL & CASINO ATHENS		
INTEGRATED RESORT COMPLEX ELLINIKOU SA - HARD ROCK HOTEL & CASINO ATHENS	Please share your comments below.	Physical entry is not a CDD trigger "For land-based integrated resort casinos and other gambling premises, mere physical entry into the premises or gaming floor shall not, by itself, constitute an occasional transaction or business relationship for AML/CFT purposes. CDD should be triggered by the relevant financial or gaming interaction, linked transaction, suspicious activity, or establishment of a business relationship Player cards are risk-based tools, not universal AML infrastructure "The identification of linked transactions by providers of land-based gambling services should be technology-neutral. The RTS should not be interpreted as requiring mandatory issuance of a player card, creation of an electronic player account, or identity verification of all customers at entry. "Customers may choose to sign up for a player card to participate in the loyalty program and become a loyalty member. Participation in the loyalty program and player-card issuance should be permitted as risk-based AML/CFT tools for identified customers and business relationships and should not be mandatory for all land-based gambling customers." Land-based casinos may adopt risk-based policies and procedures with clear trigger events (including AMLA reporting thresholds) that indicate when to create

Name of the respondent	Question	Answer
		player cards or player accounts to monitor activity, link transactions, and assess whether ongoing play has established a business relationship or is a loyalty member. Example:A customer may visit once, insert EUR 20 into a slot machine, win EUR 1,000, and redeem the winnings at the cashier. In this scenario, no AMLA reporting threshold is met, so a player card, electronic player account, or identity verification should not be required.By contrast, a customer who wagers EUR 5,000 exceeds the applicable AMLA reporting threshold and should be subject to CDD at that trigger point; the casino may also require enrolment in the loyalty program via (e.g., a player card/account) as a risk-based control to support monitoring and transaction linking. Identified and unidentified customers should be treated differently "For identified customers including loyalty members, VIP customers, casino credit customers, hosted players, junket-related customers or using deposit, front money or safekeeping facilities, transactions may be linked using the customer profile and relevant transaction records For occasional customers who have not yet been identified, linked transaction analysis should be based on information available to the obliged entity, including same-session, same-visit or same-operating-day activity, cashier records, transaction receipts, staff observations, security information, apparent coordination, chip transfers and other observable indicators."

Name of the respondent	Question	Answer
		Wagering of stake should not mean repeated re-wagering of the same chips "For providers of land-based gambling services, the value of a relevant occasional transaction should be assessed by reference to the amount of funds introduced into or removed from the gaming environment, including chip purchases, gaming instrument purchases, deposits, redemptions or payout of winnings. The repeated wagering of the same chips, credits or gaming value during the same gaming session should not, by itself, be double counted as separate transaction value unless new funds are introduced or other risk indicators are present." Collection of winnings should mean payout/redemption "For land-based gambling services, collection of winnings should be understood as the payment, redemption, withdrawal or transfer of winnings or gaming value to the customer, and not as each individual game outcome during continuous play." Membership is a criterion, not automatically a business relationship "Engagement through a membership, loyalty programme or similar arrangement should be considered as a criterion when assessing the existence of a business relationship but should not automatically create a business relationship unless the relationship demonstrates an element of repetition, duration, financial continuity, customer account functionality, credit, VIP hosting or other ongoing engagement." PEP and sanctions screening should occur at the CDD trigger, not at physical entry

Name of the respondent	Question	Answer
		"For providers of land-based gambling services, PEP and targeted financial sanctions screening should be performed before establishing a business relationship or before carrying out an occasional transaction requiring CDD. The RTS should not be interpreted as requiring screening of all persons at physical entry where no business relationship or CDD-triggering occasional transaction has arisen." Land-based casinos should have procedures based on their AML/CFT risk assessment, when PEP and targeted financial sanctions screening will be performed Example: Screening may occur when a guest enrolls in a loyalty program, checks in the hotel or initiates a transaction that triggers CDD

Interessengemeinschaft Deutscher Kunsthandel	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Interessengemeinschaft Deutscher Kunsthandel is the umbrella organisation for the six largest German art trade associations, with approximately 1,000 member companies. Its members are the Berufsverband des Deutschen Münzenfachhandels e.V., the Bundesverband Deutscher Galerien und Kunsthändler e.V., the Bundesverband Deutscher Kunstversteigerer e.V., the Kunsthändlerverband Deutschland e.V., the Verband der deutschen Münzenhändler e.V. and the Verband Deutscher Antiquare e.V. We hereby submit our comments on the Consultation Paper „Draft Regulatory Technical Standards under Article 28(1) of Regulation (EU) 2024/1624. Please insert the following article where it is most appropriate: "The persons referred to in Article 3(3)(i) and (j) of Regulation (EU) 2024/1624 must fulfil the obligations under Chapter II Regulation (EU) 2024/1624 only if they regularly carry out transactions or linked transactions in cultural goods with a value of at least EUR 10,000 or the

Name of the respondent	Question	Answer
		equivalent in national currency." We are aware that this RTS concerns customer due diligence only, but would like to draw attention to an issue relating to general risk management in the trade in cultural goods. Regulation (EU) 2024/1624 has extended its scope from 'works of art' – so the previous regulation – to 'cultural goods'. Whereas previously in Germany only the trade in paintings, drawings, sculptures, etc. was covered by anti-money laundering regulations, it now includes all cultural goods within the meaning of Regulation (EC) No 116/2009, ranging from mosaics and antiquarian books to botanical collections. The range is very broad and includes antiques like glass, toys, furniture, ceramics or carpets. Although the scope is very broad, the age and value thresholds for cultural goods in Regulation (EC) No 116/2009 ensure that the focus remains on the cultural goods that really matter. This is necessary to prevent the scope from being too broad. The category 'antiques' in Regulation (EC) No 116/2009 is a catch-all category covering all old objects. It is limited solely by the fact that Regulation (EC) No 116/2009 covers only those objects that are more than 50 years old and exceed the value threshold of EUR 50,000 Therefore, the age and value thresholds are of great importance for the applicability of Regulation (EU) 2024/1624. At the same time, dealers in cultural goods can work effectively with the definition of cultural goods set out in Regulation (EC) No 116/2009, as they regularly deal with this definition when exporting cultural goods. We welcome

Name of the respondent	Question	Answer
		the use of a familiar definition. In future, not only art dealers are obliged entities but to all dealers in cultural property. This ranges from renowned major dealers to household clearances. The obliged entities offer a very wide range of goods. An antiques dealer may sell all manner of bric-a-brac. However, there may occasionally be a higher-value item among them, such as an etching, a collection of letters or an old map. The small dealer will not have to identify all of his customers, but will only be required to apply customer due diligence measures if a customer purchases a cultural good above the relevant threshold. The question arises, however, as to whether and when the dealer must also introduce a risk management system, including risk analysis, etc., in accordance with Chapter II of Regulation (EU) 2024/1624. For many small dealers, the sale of a cultural object worth at least EUR 10,000 is a one-off occurrence that may only happen once in their lifetime. In the past, such dealers have already asked themselves whether they need to introduce risk management with risk analysis, etc., because of this one instance, and whether they can discontinue the risk management after a year because no new cases have arisen. Under Regulation (EU) 2024/1624, persons trading in precious metals and precious stones as referred to in Article 3(3)(e) and persons trading in high-value goods as referred to in Article 3(3)(f) are only subject to the obligations if this constitutes their “regular or principle professional activity”. The reference to a regular or principle professional activity is absent from Article

Name of the respondent	Question	Answer
		3(3)(i) and (j) for dealers in cultural goods. They are therefore considered obliged entities even in the case of a single sale of a cultural good with a value of at least EUR 10,000. With a view to proportionality, it should therefore be clarified that risk management is only required if such cases occur regularly.
Interessengemeinschaft Deutscher Kunsthandel	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Please insert a new Article 24b: "Article 24b – Timing of customer due diligence for auctions Where goods (including cultural goods within the meaning of Article 2 (1) No. 56 of Regulation (EU) 2024/1624) are sold by means of a public auction, customer due diligence may be carried out immediately after the bid has been accepted, but no later than at the time of payment. This shall apply irrespective of whether simplified customer due diligence measures, standard customer due diligence measures or enhanced customer due diligence measures are to be applied." If a work of art is sold at auction, the contract of sale is concluded upon the fall of the hammer. Until that moment, it is unclear which bidder will win the lot. If customer due diligence is to be carried out before performing an occasional transaction, it would have to be performed on all bidders entering the room, even though only one of them will ultimately be successful. After the hammer has fallen, the data collected on all other persons present in the room would then have to be deleted again. This is an enormous effort. A copy of an identity card will presumably not be sufficient. Under Article 20 and

Name of the respondent	Question	Answer
		25 of Regulation (EU) 2024/1624 auction houses have to obtain information on the purpose and economic rationale of the occasional transaction, the estimated amount of the envisaged activities, the source of funds, the destination of funds, and the business activity or occupation of the customer, where necessary. In particular for PEP checks or excerpts from the commercial register, auction houses have to rely on external service providers, which entails corresponding costs. It is not economically viable to identify 50 people in the room if only one of them is the buyer. Moreover, bidders often appear at short notice for the auction. In the remaining time before the auction, it is not possible to carry out the now tightened due diligence obligations. Those bidders would have to be turned away. Before an auction, it is also not known what price a lot will achieve. If the price remains below the relevant threshold, no customer due diligence obligations apply. In that case, all persons present would have been identified unnecessarily. It is therefore proportionate only to carry out customer due diligence after the bid has been accepted. After the end of the auction, the auction house receives the purchase price from the buyer. It only delivers the auctioned item to the buyer once the purchase price has been collected. If customer due diligence is carried out no later than at the time of payment, the buyer has not yet received the auctioned item at that point, and the sale can still be cancelled. This facilitation must apply to all customer due diligence

Name of the respondent	Question	Answer
		constellations. Before the auction, it is not known whether the successful bidder will be a PEP – subject to enhanced due diligence measures –, a low risk customer to whom simplified due diligence measures apply, or a standard risk customer. The option to perform customer due diligence after the auction must be available in all three scenarios.
Interessengemeinschaft Deutscher Kunsthandel	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Please redraft the article 18 as follows. “For the purposes of Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain: (a) in relation to the purpose and economic rationale of the occasional transaction or business relationship, taking into account the nature of the product or service provided, where necessary, at least one of the following information: … (b) in relation to the estimated amount of the envisaged activities, where necessary, at least one of the following information: … (c) in relation to the source of funds, where necessary, at least one of the following information to understand the activity that generated the funds and the means through which the customer’s funds were transferred: … (d) in relation to the destination of funds, where necessary, at least one of the following information: … (e) in relation to the business activity or the occupation of the customer, where necessary, at least one of the following information: …”

Name of the respondent	Question	Answer
		Article 25 of Regulation (EU) 2024/1624 reduces the obligations to cases “where necessary”, as does the first sentence of Article 18 of the RTS, whereas points (a) to (e) of Article 18 of the RTS make it mandatory to obtain “at least one” of the following pieces of information. This is contradictory and not a simplification of the obligations, but a tightening of them. Please clarify this! In the trade in cultural goods, purchasers’ reasons for buying are usually straightforward: they are collectors who simply desire the item. In standard situations, the dealer cannot reasonably ask, “What are your reasons for buying it?”
Interessengemeinschaft Deutscher Kunsthandel	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	1. Please see our answer to question 5 below. Most dealers in cultural goods are micro enterprises within the meaning of Recommendation 2003/361/EC. They are overwhelmed by the requirements imposed on them by the Regulation (EU) 2024/1624 and these RTS. 2. Please insert the following article where it is most appropriate: “The contracting party of an obliged entity shall provide the obliged entity with the information and documents required for customer due diligence. If changes arise in the course of the business relationship, the contracting party shall notify the obliged entity of such changes without delay.” Customers are often surprised that they have to show their identity card and provide further information. It would be helpful to include an explicit notice of the

Name of the respondent	Question	Answer
		customer's duty to cooperate, so that dealers can refer to it. 3. Article 11(1) and (2) of Regulation (EU) 2024/1624 causes problems in the trade in cultural goods. Dealers in cultural goods often operate a small shop that they run themselves. Frequently, a spouse assists with bookkeeping, or they employ one or two staff members so that the shop can remain open throughout the day. Even if they have a few employees, they are not in a position to appoint both a dedicated compliance officer (Article 11 (1)) and a separate compliance officer (Article 11 (2)). The business is organised around a single key person; the others merely provide support. According to Article 11(7), second sentence, only one person may be responsible for performing both tasks where the obliged entity is a natural person or a legal person whose activities are performed by one natural person only. We need a clarification that this also applies in situations where one person bears the primary responsibility, but there are a few employees who merely support that person. 4. The same applies to Article 13(2) of Regulation (EU) 2024/1624. The art trade is a people business. Many dealers have a long standing circle of regular customers. Auction houses, for example, maintain representative offices in different cities. The employee acting as the local representative is responsible for establishing contact with the collectors in that town. It often takes

Name of the respondent	Question	Answer
		years of trustworthy interaction before a collector consigns works to the auction house. It is not feasible that the staff member who has established this contact should, under Article 13(2), be required to inform the compliance officer of any close private or professional relationship established with a customer or prospective customer and then be prevented from undertaking any tasks related to the obliged entity's compliance in relation to those customers. The very business model is based on that person being the sole point of contact. Frequent contact with a potential customer actually reduces the money laundering risk, because the customer is very well known. Know your customer! This again also effects the small dealers with only two or three employees. The exemption in Article 13(4), that this Article shall not apply where the obliged entity is a natural person or a legal person whose activities are performed by one natural person only, does not apply here. The auction house has many employees, and even the small dealer may have two or three. We require clarification on this point.
Interessengemeinschaft Deutscher Kunsthandel	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Please insert a new Article 24a: "Article 24a – Sectoral simplified measures with respect to cultural goods A person storing, trading or acting as an intermediary in the trade of cultural goods may apply simplified customer due diligence measures, in line with Article 33 of Regulation (EU) 2024/1624, in situations of low risk. They shall consider in particular the following low-risk

Name of the respondent	Question	Answer
		factors: • the customer is established or resident in a Member State or a low risk third country presenting a low level of money laundering and terrorist financing risk, • the transaction or any linked transactions are of low value, • the transaction does not involve complex or unusual features, • the customer uses an account held with an EEA-regulated credit or financial institution • the customer is a long-standing customer and personally known to the obliged entity." 1. We greatly appreciate the RTS's risk-based approach in Article 1 of the RTS. It clarifies that obliged entities must tailor the extent of their measures to the level of AML/TF-risk identified. Cultural goods are mentioned in Article 2(e) of Annex III to Regulation (EU) 2024/1624, which lists factors associated with an increased risk. It places "oil, arms, precious metals or stones and tobacco products" on a par with "cultural artefacts and other items of archaeological, historical, cultural and religious importance, or of rare scientific value, as well as ivory and protected species". This makes it difficult to apply simplified due diligence measures in the trade in cultural goods, even though we consider the AML/TF-risk as low in the cases listed in Article 24a. 2. We consider the assessment in Article 2(e) of Annex III to Regulation (EU) 2024/1624 to be misguided. The market for cultural goods isn't nearly as large as the market for oil, arms, precious metals or stones, and

Name of the respondent	Question	Answer
		tobacco products. According to the “Study on the scale and economic dimensions of the EU art market”, the EU art market is ranging from EUR 6.17 billion in 2020 to a peak of EUR 7.81 billion in 2023 (“Study on the scale and economic dimensions of the EU art market”, European Commission, DG GROW, May 2025, page 30). The art market in the EU Member States plays only a subordinate role in the global market. The global market is dominated by the USA (42% share of the global market), China (19% share) and the UK (17%). The EU Member States, by contrast, lag far behind. Taken together, the 27 Member States account for a total global market share of 13% (Study, page 32). Germany, as the second-largest art market in the EU, accounts for just 2% of the global market. Germany has a very high number of galleries, but a very low value of transactions. It has a decentralised ecosystem with many mid-sized and regional galleries contributing to a diffuse market structure (Study, page 52). 98.7% are micro-enterprises within the meaning of Recommendation 2003/361/EC, i.e. they have fewer than 10 employees and an annual turnover of no more than EUR 2 million (Monitoringbericht Kultur- und Kreativwirtschaft 2022 by the Federal Ministry of Finance and the Federal Government Commissioner for Culture and the Media, page 124). Small art dealers cannot be compared to traders in oil, weapons or tobacco. The products are also different. The trade in cultural goods is not a mass market business. Cultural goods are unique items whose movements leave a trace in the

Name of the respondent	Question	Answer
		market. Provenance research – that is, investigating when and by whom an object was sold – has become a key factor in the sale of cultural goods. 3. Since the adoption of Regulation (EU) 2024/1624, further rules have made the market more transparent. This, too, is not yet taken into account in Article 2(e) of Annex III to Regulation (EU) 2024/1624. On 28 June 2025, two formal import procedures for cultural goods came into force, further reducing the AML/TF-risk. An import licence must be applied for in accordance with Article 4 for archaeological cultural goods, and an import declaration must be submitted in accordance with Article 5 for other cultural goods. The import of cultural goods into the EU is thus subject to just as strict monitoring as exports have been since Regulation (EC) 116/2009, which requires export licences for cultural goods. 4. The sector urgently needs simplification, as micro-enterprises are struggling to meet the high requirements. There has been a decline in the number of dealers for many years. Art dealers act as key intermediaries who make artistic creation visible, and are therefore essential to artistic freedom and must be supported. The art trade is characterised by small, owner-managed businesses that have often known their customers for years or even decades. It's a people business. We have therefore identified factors that are characteristic of a low-risk situation and which should lead to the application of simplified due diligence measures.

International Swaps and Derivatives Association, Inc. (ISDA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Identification and verification of the person purporting to act on behalf of the customer: It has for many years been well-established that CDD

Name of the respondent	Question	Answer
		requirements shall apply not only to customers but also to any person purporting to act on behalf of a customer. In the absence of any indication (whether in legislation or in guidelines) to the contrary, it is reasonable to take the view that a natural person exercising authority on behalf of a legal person would be purporting to act on behalf of that legal person. Taking such a view could also mean that an authorised signatory executing a contract for financial services (provided by an obliged entity) would be considered as someone purporting to act on behalf of the legal person entering into the said contract. If this is the case however, the proposed RTS on CDD give rise to an inconsistency in the information that shall be obtained in relation to addresses. Article 22(1)(a)(iv) of Regulation (EU) 2024/1624 (the "Regulation") provides that an obliged entity shall obtain – for a customer or for any person purporting to act on behalf of a customer – "the usual place of residence or, if there is no fixed residential address with legitimate residence in the Union, the postal address at which the natural person can be reached and, where available the tax identification number". Article 22(2), second paragraph of the Regulation provides that if no natural persons are identified as beneficial owners, then an obliged entity shall verify the identity of all natural persons holding the positions of senior managing officials.

Name of the respondent	Question	Answer
		While Article 13(a) of the proposed RTS provides that when verifying the identity of the senior managing officials, an obliged entity "may decide to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence", no such provision is made more broadly for persons purporting to act on behalf of the customer such as authorised signatories. As a result, it would be permissible for an obliged entity to obtain the address of the registered office in relation to senior managing officials, but at the same time, it would not be permissible to be obtain the address of the registered office in relation to an authorised signatory executing a contract on behalf of the legal person entering into the said contract. On the contrary, the residential address of such an authorised signatory would have to be obtained. It seems that this may be an unintended consequence, since one would expect a greater degree of information to be obtained in relation to persons who occupy a more senior position with a legal person and thus exercise greater authority and control. If a legal person's registered address is considered adequate in relation to senior managing officials, such an address should also be considered adequate in relation to an authorised signatory who may occupy a less senior position and exercise a lesser degree of authority and control.

Name of the respondent	Question	Answer
		ISDA considers this can be addressed by adding the following second paragraph to Article 16 of the draft RTS: "Where the person purporting to act on behalf of the customer as referred in Article 22 of Regulation (EU) 2024/1624 is a natural person acting in the capacity of an authorised signatory, obliged entities may decide to obtain the address of the registered office of the legal entity instead of the natural person's residential address and country of residence."

INVERCO	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	We do not fully agree that the proposals set out in the draft RTS can be applied across the range of products and services provided by collective investment undertakings managers and pension schemes managers (ManCos), as they do not sufficiently reflect the structural characteristics of their distribution models nor the operational constraints under which they act. In particular, art 17 does not accurately address specificities of collective investment undertakings

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	(CIUs). The draft RTS do not provide sufficient flexibility in situations where there is no direct business relationship between the management company and the final investor, which is the prevailing model in the Spanish asset management industry. ManCos typically distribute their funds through intermediated channels, including financial institutions acting as distributors or sub-distributors, as well as fund platforms. In these structures, the contractual and commercial relationship with the investor is held by the intermediary, while the management company maintains a direct relationship only with that intermediary. As a result, the intermediary qualifies as the customer of the ManCo from a legal and operational perspective. These intermediaries are themselves obliged entities under AML legislation and are therefore required to apply full customer due diligence (DD) measures to the underlying investors. Imposing an additional obligation on the management company to perform DD on the same investors leads to duplication of controls, generating inefficiencies and inconsistencies within the AML framework. More importantly, in many cases such an obligation is not feasible in practice, as the management company lacks both a direct relationship with the investor and access to the necessary identification and verification data. Although this limitation is particularly evident in the context of omnibus account structures, where units or shares are registered in the name of the intermediary on behalf of underlying investors, it is equally applicable

Name of the respondent	Question	Answer
		to the case of the registration in individual accounts in the name of the end investor when such distribution is carried out , not directly by the ManCo but through a distributor. In both cases, the intermediary is subject to professional secrecy and data protection obligations that prevent the disclosure of client-level information. Consequently, the management company cannot systematically access to the information needed to comply with art 20(1)(h) of the AMLR as the client relationship is established between the intermediary and the end investor. Furthermore, the risk profile of ManCos must be assessed taking into account that they do not handle client funds or cash flows. In the case of CIUs, all subscription and redemption payments are executed directly between the investor's account and the fund's account, both of which are held with credit institutions subject to AML obligations. This regulatory framework ensures that all monetary flows occur within a supervised environment, significantly mitigating the risk of money laundering or terrorist financing. ManCos are therefore not involved in the circulation of funds and their role is limited to portfolio management and administration. The draft RTS should be adjusted to explicitly recognise the role of intermediaries in the distribution chain and to allow for a risk-based allocation of DD obligations. In particular, it should be clarified that, where the intermediary is an obliged entity subject to EU law or equivalent third-country requirements, the ManCo may treat that intermediary as its customer and perform DD

Name of the respondent	Question	Answer
		exclusively at that level irrespective of the registration system of the end investor (omnibus accounts in the name of the intermediary of in the fund´s registry in the name of the end investor). The intermediary would remain responsible for applying CDD measures to the underlying investors. In particular, it should be clarified that, where the intermediary is an obliged entity subject to EU law or equivalent third-country requirements, the ManCo may treat that intermediary as its customer and perform DD exclusively at that level irrespective of the registration system of the end investor (omnibus accounts in the name of the intermediary of in the Fund´s registry in the name of the end investor). The intermediary would remain responsible for applying customer DD measures to the underlying investors. It would also be appropriate to preserve existing regulatory approaches at national level that already allow ManCos to consider the distributor as the customer in omnibus account structures without requiring identification of the underlying investors. In addition, a clear distinction should be maintained between omnibus accounts, which are a technical mechanism facilitating fund distribution and open architecture models, and nominee arrangements as referred to in the AMLR, which pursue different objectives and raise distinct concerns.
INVERCO	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	-

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	
INVERCO	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In the context of Spanish ManCos, the typical design of distribution channels and the operational flows of payments and receipts reduces the risk of money laundering and renders it inefficient and, in certain cases, materially unfeasible to require the ManCos to perform full DD on the final investor where no direct relationship exists with such investor. Due to some regulatory and tax challenges, omnibus accounts are rarely used in the distribution of Spanish Funds. Therefore, distribution through financial intermediaries usually entails that the fund's units are registered in the name of the investor end client, rather than the intermediary's own name (omnibus account). However, challenges to carry out DD measures on the end client are the same as in the case of the omnibus accounts, as these challenges arise not because of the registration system but due to the distribution channel and the fact that the management company has no direct relationship with the end client. Please see below the three main distribution channels: (i) Direct distribution by the ManCo: the ManCo has a direct relationship with the investor and performs DD measures directly on the investor subscribing the Fund units. (ii) Distribution through Fund platforms: the investor's direct relationship is with the sub-distributor financial institution, while the ManCo only has a relationship with the platform, making it more efficient for each

Name of the respondent	Question	Answer
		entity to perform DD on its direct counterparty within the distribution chain. (iii) Distribution through financial institutions: the direct client relationship exists between the investor and the distributor financial institution, so the ManCo should perform DD on the distributor rather than duplicating checks on underlying investors with whom it has no direct relationship. In addition to the above, under both model (ii) and model (iii), there is no direct ManCo–final client relationship, irrespective of the registration system used (omnibus account, i.e. in the name of the distributor, or individual accounts in the name of each investor). It should be noted that intermediaries, as obliged entities under AML legislation, already carry out DD measures on their underlying investors, providing NCAs and the relevant beneficial ownership registers with accurate and up-to-date information. As a result of these arrangements, the risk of ML in the asset management sector is low. The additional implementation of DD measures on final investors by the funds would therefore be redundant. To sum up, the optimal situation would be for ManCos to be able to treat the distributor as the client, where the distributor is subject to DD obligations (either under harmonised EU rules or under an equivalent regime), regardless of the form in which the units are registered. Focusing on the treatment of omnibus accounts under

Name of the respondent	Question	Answer
		the Draft RTS, in any event, it is important allow for the ManCos are allowed to treat the distributor as the client in cases where omnibus accounts are used, without imposing additional obligations to identify the underlying clients. In this case, units in the fund are registered and held in the name of the intermediary on behalf of the underlying investors. In such cases, intermediaries are subject to data protection and professional secrecy obligations that prevent them from disclosing information about their clients, as such clients are not direct clients of the fund. The client of the fund is, in this case, the intermediary itself. These circumstances make it difficult for Investment Funds and their ManCos to identify and verify the identity of final investors through KYC. In these cases, the fund performs DD measures on the intermediary, but it would not be possible to systematically identify and verify the identity of the natural persons for whom the transaction is carried out, in accordance with art 20.1 h) AMLR. It is important to distinguish between the concept of omnibus account, the purpose of which is to facilitate the distribution of CIUs and so-called open architecture (distribution of third-party Funds, as it allows the distributor to preserve client information), and the concept of nominee arrangements introduced by AMLR, for which additional safeguards are established regarding the identification of the beneficial owner and which, as stated in recital 131 of AMLR, serve a different purpose from the use of omnibus accounts. In the

Name of the respondent	Question	Answer
		transposition of AMLR, it is essential to take into account the distinction between these two concepts—omnibus accounts and nominee arrangements—in order to avoid unintended consequences in fund distribution and not to extend the safeguards established in AMLR for nominee arrangements to omnibus accounts, as these are distinct concepts. Further detail is provided in our response to art 17 below. Due to character limitations in the template, that response has been divided into 4 parts.
INVERCO	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	-
INVERCO	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-
INVERCO	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 5 of the Draft RTS still requires that obliged entities shall obtain information on “all nationalities” of the customer. This obligation is very impractical given that obliged entities do not have access to any database that will give them such satisfaction. Moreover, identification documents, such as passports or IDs, for obvious reasons, inform only about the nationality of one country. Given that Art. 22(1)(a)(iii) of AMLR does not refer to “all” nationalities, we believe that this requirement is excessive and obliged entities should be able to apply it by taking reasonable measures.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Firstly, INVERCO would like to highlight that, as with the other paragraphs of Article 6, paragraph 5 should only apply to customers who are natural persons. Moreover, we believe that the requirement to obtain “identity document, passport or equivalent, or a certified copy thereof (…)” is excessive and does not allow the obliged entities to apply a risk-based approach. In some sectors of the financial industry, which operate in a significantly different manner from the banking industry, it would simply not be possible to apply these requirements. A good example is the asset management industry, which we describe in more detail under our responses in Section 2. Due to the specificities mentioned there, customer identity verification rarely

Name of the respondent	Question	Answer
		occurs in person, and most customers are institutional investors or other legal entities. Also, for retail investors who would be the Fund's direct customers identity verification would always occur first at the bank level. This is because cash subscriptions do not exist in the Fund's reality, and any payments to the fund and then to the investor always occur through a bank account. As such, the asset management industry won't be able to apply the rules of Art. 5(5) to its customers. Moreover, the proposed wording of paragraph 5 is also not in line with provisions of the AMLR, which in Art. 22(6)(a) do not include the requirement of only originals or certified copies to be provided. Instead, it refers to "the submission of an identity document, passport or equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer", which we believe gives much more room for the obliged entities to decide on how this submission and acquisition will take place, in accordance with the identified level of ML/TF risk. From a retail customer perspective, the obligation to provide an original document or a certified copy will significantly increase the costs borne by customers and will be even more challenging for customers from third countries. Our understanding is that the AML Package was intended to enhance the system's security, not to disincentivise customers from using services provided by the EU financial sector. Instead of full documents, records are to be maintained containing specific personal information related to compliance obligations.

Name of the respondent	Question	Answer
		This broader perspective and trends need to be taken into account to secure a level playing field for obliged entities from the EU. Therefore, a risk-based approach must be applied when collecting IDs to avoid unnecessary costs and burden. The effort and focus of obtaining IDs in original and/or certified form should be required only in case of inconsistencies or doubts about the customer's actual identity.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	10
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The current wording of art. 10 does not allow for the application of a risk-based approach. While it refers to obliged entities taking risk-sensitive measures, it still requires specified information to be obtained in any case where the ownership or control structure contains more than one legal entity or legal arrangement. Many multilevel structures are created for business and operational reasons, and gathering all of the listed information will be unnecessary for the purpose of understanding the ownership and control structure of the customer. The approach here should depend on the complexity of the structure and the ML/TF risk it poses. In the asset management industry, which we describe in more detail under our response to Questions 1 and 3 of Section 2, it is common to find layers of intermediaries between the Fund and investors (who are customers of the intermediary). These intermediaries are mainly banks or other financial entities that help investors

Name of the respondent	Question	Answer
		invest in the Funds and optimise costs and charges to provide them with lower fees. Given the characteristics of entities existing in the chain and the low level of ML/TF risk they could create, we do not believe that acquiring all of the information mentioned in Art. 10 regarding intermediaries at each level would be justified. Moreover, collecting additional information would create operational and technological burdens. Additional names would need to be recorded, kept updated and screened, requiring time, economic resources and often technological developments, without mitigating any actual ML/TF risk. In such circumstances, we believe that to fulfil the requirements of Art. 62 of AMLR, it is sufficient for the obliged entity to understand the structure existing between the customer and the beneficial owner by collecting the names of entities in between and the percentage of their ownership. Any more detailed information on those entities could be required in cases where a higher level of ML/TF risk would be identified, or they would exceed the threshold for beneficial ownership under Art. 52(1) of AMLR.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	13
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	INVERCO would like to note that the level of ML/TF risk potentially associated with senior managing officials (hereinafter, “SMOs”) may differ from that associated with beneficial owners (hereinafter, “BOs"). In particular, SMOs, unlike BOs, do not hold an ownership

Name of the respondent	Question	Answer
		interest in the company, nor do they exercise control through ownership or other means. Where such control exists, individuals would in principle be identified as BOs. Instead, and in accordance with Article 63(4) of the AMLR, SMOs are identified in situations where BOs cannot be determined or where their identification remains uncertain. Furthermore, as individuals performing executive functions within a legal entity, SMOs are typically subject to prior identification and verification processes in the course of their interactions with various national authorities, such as tax authorities or company registers. Consequently, key information relating to them is often available through reliable and independent sources. In this context, it may not always be necessary to apply the same scope of information requirements and verification measures to SMOs as to BOs. Article 63(4)(b) of the AMLR refers to the collection of information on SMOs that is equivalent to that required under Article 62(1), second subparagraph, point (a), rather than to the full set of information applicable to BO identification. The reference to “equivalent” information suggests a degree of proportionality, rather than strict equivalence.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	17
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	*Comments on Article 17, Part 1:* The following sets out why, in the context of Spanish

Name of the respondent	Question	Answer
		management companies, the typical design of distribution channels and the operational flows of payments and receipts reduces the risk of money laundering and renders it inefficient and, in certain cases, materially unfeasible to require the management company to perform full customer due diligence on the final investor where no direct relationship exists with such investor, Due to some regulatory and tax challenges, omnibus accounts are rarely used in the distribution of Spanish Funds. Therefore, distribution through financial intermediaries usually entails that the fund's units/shares are registered in the name of the private individual investor end client, rather than the intermediary's own name (omnibus account). However, as explained below, challenges to carry out due diligence measures on the end client are the same as in the case of the omnibus accounts, as these challenges arise not because of the registration system but due to the distribution channel and the fact that the management company has no direct relationship with the end client. A) DISTRIBUTION CHANNEL It should be noted that, as a general rule, management companies in Spain attract investors to their Funds through three distinct channels: (i) direct distribution by the management company itself, (ii) distribution through Fund platforms, and (iii) distribution through financial institutions (distributors).

Name of the respondent	Question	Answer
		(i) Direct distribution by the management company In this scenario, regardless of whether the contact is initiated by the management company or by the client, there is no other actor or obliged entity within the business relationship participating in the transaction. Therefore, it is clear that the status of customer, and consequently the obligation to carry out due diligence measures by the management company, must fall on the person making the investment (subscription of units in the Fund), i.e. the investor. (ii) Distribution through Fund platforms Under this channel, there are four actors, three of which qualify as obliged entities under anti-money laundering regulations: (i) the natural or legal person requesting the investment, (ii) the financial institution of which such person is a client, (iii) the Fund distribution platform, which will normally qualify as a credit institution, and (iv) the management company. The business flow is as follows: As shown above, the natural or legal person, who is a client of a financial institution, decides to invest in a Fund through a distribution platform, which is typically a credit institution. In this case, the direct business relationship with the client is held by the financial institution (sub-distributor). The remaining actors in the chain do not have such direct relationship; rather, the platform has a business relationship with the financial

Name of the respondent	Question	Answer
		institution (sub-distributor), and the management company, in turn, has a relationship with the platform, which it has appointed as distributor. In this context, requiring each of the actors to carry out due diligence measures on the final client leads to inefficiency through the duplication or even triplication of such measures, compounded by the difficulty arising from the absence of a direct relationship with the final client for several of the parties involved, including the management company. Conversely, for the purposes of maintaining control over all actors in the chain, it would appear more appropriate for each obliged entity to carry out due diligence measures in respect of the entity with which it has a direct business relationship (management company–platform / platform–financial institution (sub-distributor) / sub-distributor–final client).
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	17
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Comments on Article 17, Part 2: (iii) Distribution through financial institutions Under this distribution channel, there are three actors, two of which are obliged entities under anti-money laundering regulations: (i) the natural or legal person requesting the investment, (ii) the financial institution of which such person is a client, and (iii) the management company. The business flow is as follows:

Name of the respondent	Question	Answer
		As shown above, the natural or legal person, who is a client of a financial institution, decides to invest in a Fund through such financial institution (distributor). The direct relationship is established between the client and the financial institution. The management company does not have a direct relationship with the client, but rather with the financial institution (distributor). In this context, requiring both the management company and the financial institution to perform due diligence measures on the client is inefficient, as it entails duplication of such measures, and once again raises the aforementioned difficulty of accessing the information required to comply with such measures in respect of a final client with whom there is no direct relationship. An efficient approach ensuring control over all actors in the chain would consist in requiring the management company to carry out due diligence measures on the financial institution (distributor), and the distributor on the final clients. In addition to the above, under both model (ii) (Fund platform) and model (iii) (financial institution distributor), there is no direct management company–final client relationship, irrespective of the registration system used (omnibus account, i.e. in the name of the distributor, or individual accounts in the name of each investor). The arguments set out in relation to management companies regarding the difficulties in complying with

Name of the respondent	Question	Answer
		due diligence obligations due to the absence of a direct relationship with clients are equally applicable to the distribution of Pension Plans by management companies. It should be noted that intermediaries, as obliged entities under anti-money laundering legislation, already carry out full due diligence measures on their underlying investors, providing competent authorities and the relevant beneficial ownership registers with accurate and up-to-date information. As a result of these arrangements, the risk of money laundering and terrorist financing in the asset management sector is low. The additional implementation of due diligence measures on final investors by the funds would therefore be redundant. To sum up, the optimal situation would be for management companies to be able to treat the distributor as the client, where the distributor is subject to due diligence obligations (either under harmonised EU rules or under an equivalent regime), regardless of the form in which the units are registered. Focusing on the treatment of omnibus accounts under the Draft RTS, in any event, it is important allow for the management companies are allowed to treat the distributor as the client in cases where omnibus accounts are used, without imposing additional obligations to identify the underlying clients. In this case, the units or shares in the fund are registered and

Name of the respondent	Question	Answer
		held in the name of the intermediary on behalf of the underlying investors. In such cases, intermediaries are subject to data protection and professional secrecy obligations that prevent them from disclosing information about their clients, as such clients are not direct clients of the fund. The client of the fund is, in this case, the intermediary itself. These circumstances make it difficult for Investment Funds and their managers to identify and verify the identity of final investors through Know Your Customer ("KYC") documentation. In these cases, the fund performs due diligence measures on the intermediary, but it would not be possible to systematically identify and verify the identity of the natural persons for whom the transaction is carried out, in accordance with Article 20(1)(h) of AMLR. In this regard, it is important to distinguish between the concept of omnibus account, the purpose of which is to facilitate the distribution of CIUs and so-called open architecture (distribution of third-party Funds, as it allows the distributor to preserve client information), and the concept of "nominee arrangements" introduced by AMLR, for which additional safeguards are established regarding the identification of the beneficial owner and which, as stated in recital 131 of AMLR, serve a wholly different purpose from the use of omnibus accounts. In the transposition of AMLR, it is essential to take into account the distinction between these two concepts—omnibus accounts and nominee arrangements—in order to avoid unintended consequences in fund distribution and not to extend the

Name of the respondent	Question	Answer
		safeguards established in AMLR for nominee arrangements to omnibus accounts, as these are distinct concepts.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	17
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	*Comments on Article 17, Part 3:* B) LACK OF ACCESS TO CLIENT FUNDS Management companies are not authorised to handle client cash on a regular basis (in some jurisdictions such a Spain not even through a temporary cash account), which significantly reduces their exposure to money laundering risks. In the case of CIUs, all monetary transfers arising from subscriptions and redemptions of units or shares must be carried out directly between the client's account and the account of the relevant Fund. Similarly, in the context of Pension Plans, contributions made by participants and benefit payments follow the same principle, being executed exclusively between the client's account and the Pension Fund account. Both accounts—the client's and the Fund's—must be held with a credit institution which, in turn, is subject to anti-money laundering and counter-terrorist financing regulations. This legal framework ensures that all cash transactions are conducted within a supervised environment, minimising risks associated with money laundering. As a result, the risk that management companies may be used for money laundering purposes is low, as they do not have direct access to cash flows

Name of the respondent	Question	Answer
		nor do they intervene in their circulation, being limited instead to investment management and administration functions.
INVERCO	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	17
INVERCO	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	*Comments on Article 17, Part 4:* To address the specificities of the CIUs sector, the practical functioning of the asset management industry, as described under responses to Questions 1 and 3 above, needs to be fully recognised. In INVERCO's view, the issues explained above will not be solved by the current wording of Recital 14 of the draft RTS on CDD, as proposed in the Consultation Paper. Given its interpretative function, we do not believe the proportionality and risk-based approach introduced therein will provide the necessary relief from the directly binding obligations of Art. 17. Therefore, we believe that the following changes need to be made in Art. 17 of the Draft RTS: 1. In instances where shares/units of the fund are subscribed through an intermediary, CIUs should not be expected to apply a look-through approach, provided that conditions under points (a) to (d) are met. 2. The Article should recognise the specificities of Spain (i.e. where Fund units are distributed by an intermediary and registered in the name of the investors) as explained above. When a CIU is distributed through an intermediary and the subscription is

Name of the respondent	Question	Answer
		recorded in the investor's name, the investor may be considered a client of the CIU. Also in this scenario, the reliance put on AML/CFT measures conducted by the credit or financial institution should be considered sufficient and adequate to fulfil the obligations under Article 20(1) of the AMLR and not merely those under Article 20(1)(h). 3. The description of the relationship between the CIU, the intermediary and the client of the intermediary has to be amended to correctly reflect the current market practice. 4. The Article has to fully reflect the fund industry's mitigated ML/TF risk and refer to instances where the risk associated with the relationship is "not high". Within the AML/CFT terminology, the adjective "standard" is typically used to describe the type of CDD measures rather than the level of ML/TF risk associated with a relationship. The reference to the level of risk that is "not high" would be more in line with the current practices of AML/CFT risk-based approach. 5. The Article should also recognise the robustness of AML/CFT rules applied by international capital groups. Taking all that into account, we would suggest the following wording of the Art. 17 of the draft RTS on CDD: "1. When shares or units of a collective investment undertaking are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more of their

Name of the respondent	Question	Answer
		customers, the collective investment undertaking may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 by being the credit institution or financial institution is subject directly or through group policies to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624, or has implemented an equivalent AML/CFT program; (e) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (f) the risk associated with the relationship with the credit institution or financial institution is not high; and (g) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners. 2. When shares or units of a collective investment undertaking are sold through another credit or financial institution to one or more underlying investors, where the units or shares are subscribed in the name of the investor, the collective investment undertaking may fulfil the requirements under Article 20(1) of Regulation (EU) 2024/1624 by being satisfied that: (e) the credit institution or financial institution is subject directly or through group policies to AML/CFT

Name of the respondent	Question	Answer
		obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624, or has implemented an equivalent AML/CFT program; (f) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (g) the risk associated with the relationship with the credit institution or financial institution is not high; and (h) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners."
INVERCO	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Invest Europe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The draft RTS can, in principle, be applied to the activities of private equity (PE), venture capital (VC) & infrastructure fund managers. It is important to note at the outset that CDD obligations apply to PE/VC fund managers in two distinct contexts:(i) investor relationships, where the fund manager performs CDD on investors (limited partners) subscribing to or holding interests in funds; (ii) investment-side relationships, where the fund manager performs CDD on counterparties encountered in the course of making & managing investments, including acquisition targets, sellers, co-investors & other transaction counterparties. The observations in this response apply across both contexts unless otherwise indicated. The latest RTS version represents an improvement over

Name of the respondent	Question	Answer
		earlier texts, notably through a more explicit reliance on risk-based and proportionality principles, which is essential for business models that differ fundamentally from retail or transactional financial services. We note that AMLA's decision to adopt a single horizontal instrument was justified on the basis that principle-based rules provide "sufficient flexibility to accommodate sectoral differences" & that the draft RTS are intended to "promote simplification &enable obliged entities to determine the most effective & proportionate measures to be applied". The PE/VC sector supports this approach & expects to be able to rely on that flexibility being available in practice. That said, the ability to apply the RTS across the full range of PE/VC products & services remains highly dependent on how flexibility is interpreted & implemented in practice. The central structural challenge is that certain provisions still appear implicitly designed around frequent transactions, account activity & continuous client interaction. This does not reflect the reality of closed-ended investment funds, where relationships with investors are long-term, transaction frequency is limited & AML/CFT risks are primarily concentrated at defined points in time such as onboarding, capital calls, distributions or exits. In particular, while we welcome the increased use of risk-sensitive language, the RTS would benefit from clearer signals that measures relating to identification, verification & updating are not intended to be applied mechanically or cumulatively, but rather calibrated to the actual ML/TF risk profile of the relationship. AMLA's

Name of the respondent	Question	Answer
		own consultation paper acknowledges that CDD challenges are “not primarily sector-specific but risk specific”. Without such clarity, there is a material risk that PE/VC managers will be expected to replicate compliance processes developed for retail banking, resulting in significant compliance costs without corresponding risk mitigation benefits. To illustrate, a typical PE/VC fund structure may involve a Luxembourg SCSp investing through a non-EU special purpose vehicle or holding company into portfolio companies, with investors comprising regulated institutional vehicles. In such a structure, application of the full suite of standard CDD measures, including transaction forecasting, periodic updating & systematic look-through to underlying investors, would impose costs that are wholly disproportionate to the ML/TF risks presented, given the regulated nature of the investor base and the illiquid, long-term character of the investment. Similarly, when the same fund acquires a portfolio company, the fund manager must perform CDD on the target entity & its sellers within deal timelines determined by third parties. Requiring the full suite of standard CDD measures prior to establishment of the relationship is frequently incompatible with the commercial realities of investment transactions, without any corresponding increase in AML/CFT effectiveness. The flexibility introduced in the current draft should therefore be preserved & where possible, further strengthened to ensure that the RTS remain genuinely adaptable to closed-ended fund structures, institutional

Name of the respondent	Question	Answer
		investor bases & different investment-related counterparties arising throughout the PE/VC & infrastructure investment lifecycle. In particular, we propose that –a recital be added confirming that the RTS are not intended to require obliged entities operating closed-ended fund structures whose core investment policy is to acquire control of non-listed companies or issuers with predominantly institutional investors to replicate CDD processes designed for retail or transactional business models –Article 1 be supplemented with clarificatory language confirming that the proportionality & risk-based approach applies not only to the depth of measures but also to their frequency & timing of application –supervisory convergence tools, including Q&As, be developed post-adoption to address the application of the RTS to collective investment undertakings, consistent with AMLA's acknowledgement that remaining interpretative challenges can be addressed through targeted interpretive tools
Invest Europe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS go meaningfully further than earlier versions in enabling a risk based approach, and this progress is welcomed. In particular, the explicit references to risk sensitivity across several articles, as well as the reduced prescriptiveness of certain requirements, provide a more workable framework for fund managers. However, further refinement is necessary to ensure that the risk based approach is not only stated as a general principle but is fully operational across the RTS. Some

Name of the respondent	Question	Answer
		provisions continue to risk being interpreted in a way that treats structural features of PE/VC funds as proxies for risk, even where no genuine ML/TF concerns are present. This is particularly the case for provisions on ownership and control structures. While multi layered or cross border structures are common in PE/VC, both in investor and transaction counterparty contexts, they are typically transparent, economically justified and involve regulated entities. Complexity, in itself, should not be equated with higher ML/TF risk. We note that Article 11(4)(b) already requires obliged entities to be satisfied that "there is an economic, legal or other rationale behind the structure". Where such rationale is demonstrated, the existence of multiple layers should not automatically trigger enhanced obligations. The RTS would therefore benefit from clearer wording confirming that enhanced measures are only warranted where complexity contributes to opacity or concealment, rather than merely reflecting standard fund structuring practices. We address Article 12 in further detail in Section 3 below. Similarly, the treatment of senior managing officials (SMOs) identified as a fallback in the absence of beneficial owners remains problematic from a proportionality perspective. In the PE/VC context, such individuals often act in a purely professional capacity,

Name of the respondent	Question	Answer
		have no personal economic interest in the structure and may themselves be subject to AML/CFT obligations within regulated institutions. Requiring them to be treated systematically in the same way as beneficial owners risks undermining the risk based approach and creating unnecessary friction. Invest Europe would also welcome further clarification that, in the context of PE/VC and infrastructure fund management, AML/CFT risk assessment may appropriately extend beyond investor onboarding to other relationships arising in the investment lifecycle, including sellers, co-investors, exit counterparties and other transaction participants. However, many of these counterparties, where they are not themselves subject to AML/CFT obligations equivalent to those applicable to EU obliged entities, may not be subject to AML/CFT obligations equivalent to those applicable to EU obliged entities and may not have comparable compliance infrastructures or documentation readily available. In low- or medium-risk situations, and in the absence of specific ML/TF risk indicators, the RTS should therefore clearly allow obliged entities to apply simplified, proportionate and risk-based measures to such counterparties, relying where appropriate on affidavit statements, transaction due diligence, corporate documentation, legal and tax due diligence, contractual representations, sanctions and adverse media screening, source-of-funds/source-of-wealth red flag assessments and other functionally equivalent evidence. This would ensure that AML/CFT controls remain

Name of the respondent	Question	Answer
		effective and appropriately targeted, while avoiding unnecessary friction or disproportionate documentary burdens that could negatively affect legitimate investment activity and the functioning of private capital markets. Finally, we welcome the recognition that non face to face relationships are not inherently higher risk. Given that remote onboarding is standard practice for PE/VC managers, it is essential that the RTS clearly allow alternative, risk appropriate verification methods, including reliance on checks already performed by regulated intermediaries.
Invest Europe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. In the context of PE/VC, there are recurring situations where certain categories of information are either not readily available or are disproportionate to obtain, without providing meaningful AML/CFT value. A first example concerns senior managing officials (SMOs) identified as fallback beneficial owners. Where such individuals act in a professional capacity, they may be unable or unwilling to provide certified identity documents or personal residential addresses, particularly where they are non executive directors, employees of regulated institutions or subject to data protection or security constraints. In such cases, insisting on documentary evidence may add little in terms of risk mitigation, while creating real operational difficulties. We note that Article 13(a) offers one concession – the option to obtain the address of the registered office instead of the residential address – but

Name of the respondent	Question	Answer
		this addresses only one element of the identification requirements and does not resolve the broader verification concern under Article 13(b). A second example arises in relation to trusts or fund of fund (FoF) structures. Identifying beneficiaries by name before they become economically entitled to receive funds may be neither feasible nor relevant from an ML/TF perspective. In practice, beneficiaries often only become ascertainable at the point of distribution, which is the moment at which any material risk may arise. Finally, in cross border contexts involving third country investors or intermediaries, where access to public registers may be limited or costly, equivalent information may only be available through regulated intermediaries, professional confirmations or legal documentation. In these situations, the RTS should more clearly allow alternative solutions that are functionally equivalent in terms of risk mitigation. This includes reliance on confirmations from supervised entities, the use of professional attestations, and the updating of information at economically meaningful trigger points (such as investor capital calls and distributions; in respect of transactions, any restructuring events of the target post-completion) rather than on a continuous or purely calendar-driven basis.
Invest Europe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account	PE/VC and infrastructure fund management exhibit structural characteristics that are widely recognised as

Name of the respondent	Question	Answer
	your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	being associated with lower ML/TF risk. These include closed ended fund structures, long investment horizons, limited liquidity, predominantly professional and institutional investors, and extensive pre investment due diligence combined with ongoing governance rights. The same applies to PE/VC portfolio investments. In PE/VC, capitalisation tables are subject to successive scrutiny by incoming investors in each financing rounds, lead investors and legal advisers, and are maintained as transaction-critical documents reflecting the company's economic and governance arrangements. Multiple investors, share classes or cross-border elements should therefore not, in themselves, be equated with opacity or higher ML/TF risk where the structure is transparent, commercially justified and supported by appropriate documentation. While Article 33 AMLR already provides the legal basis for simplified due diligence (SDD) in low risk scenarios, the draft RTS stop short of translating this possibility into clear, operational guidance for fund managers. As a result, there is a risk that SDD remains theoretical rather than practically available, particularly in a cross border supervisory context. Within AMLA's legal mandate, the RTS could go further by explicitly recognising that collective investment undertakings and their managers may frequently qualify for simplified measures where no higher risk indicators are present. This could be achieved through clarificatory

Name of the respondent	Question	Answer
		language, including at recital level, confirming that reduced updating frequency, streamlined verification and appropriate reliance on regulated intermediaries are consistent with Article 33 AMLR for fund based asset management. Such clarification would not weaken AML/CFT safeguards. On the contrary, it would improve proportionality, enhance supervisory convergence and allow competent authorities and obliged entities to focus resources on genuinely higher risk activities.
Invest Europe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Invest Europe wishes to stress the importance of consistent supervisory interpretation once the RTS are adopted. Even well calibrated, risk sensitive drafting may fail to deliver its intended outcomes if PE/VC managers are expected, in practice, to apply compliance models designed for retail banking or payment services. Clear signals in the RTS – at both operative and recital level – that the fund management sector is not expected to replicate transaction based CDD processes would significantly reduce the risk of divergent national implementation and unintended de risking. In particular, we note that AMLA's impact assessment acknowledges that interpretive tools such as Q&As can address remaining divergences. Invest Europe calls on AMLA to commit to issuing sector-specific Q&As following adoption of the RTS, addressing the application of the CDD and SDD framework to collective investment undertakings – including in respect of both investors and investment transactions (such as portfolio company targets, sellers and co-investors). This would

Name of the respondent	Question	Answer
		be a practical and achievable measure to ensure supervisory convergence without requiring amendments to the operative text. Invest Europe also considers that the RTS should contain clearer guidance to ensure that the proportionality, adequacy, necessity, data minimisation and risk-based principles embedded in the RTS are effectively reflected downstream in national supervisory practice. This is essential if the harmonisation objective of the AMLR and the RTS is to be achieved in practice. In several Member States, obliged entities remain subject to existing national AML/CFT regimes and supervisory expectations which, in practice, may translate CDD requirements into prescriptive documentary checklists. Against that background, and taking into account that AMLA's direct supervisory intervention will be limited by defined criteria and thresholds, it is particularly important that national competent authorities do not introduce or maintain additional documentary requirements as a default, especially in low-risk or structurally lower-risk contexts. Where the RTS allow identification or verification to be performed through reliable public sources, regulated-entity confirmations, professional attestations, affidavit statements, existing information, or other functionally equivalent evidence, national implementation and supervision should not require systematic collection of additional notarial and apostilled documents, personal documentation or full look-through information unless justified by specific ML/TF risk indicators. Without such downstream

Name of the respondent	Question	Answer
		discipline, there is a material risk that harmonisation will remain formal rather than real, and that national gold-plating will undermine the proportionality and simplification objectives expressly pursued by AMLA. This clarification is also important from a supervisory convergence perspective. If Article 20 and Article 21 are to operate as genuine simplified due diligence provisions, national competent authorities should not require obliged entities to collect additional documents by default in low-medium-risk cases where the RTS permit reliance on public sources, information already held, regulated-entity confirmations or other reliable independent sources. Additionally, we note that the draft RTS will interact with other AMLA instruments currently under development, including guidelines on business-wide risk assessments and reliance on third parties. Invest Europe encourages AMLA to ensure consistency across these instruments, particularly in confirming that a firm's business-wide risk assessment – where it identifies PE/VC fund management activities as lower risk – should directly support the application of SDD measures under the CDD RTS without additional justification requirements at individual relationship level.
Invest Europe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	12
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 12 defines a “complex corporate structure” as one where there are three or more layers between the customer and the beneficial owner and more than one of four specified conditions is met. Classification as “complex” triggers an obligation to obtain additional information such as an organigram (i.e. an internal organisation chart). Invest Europe’s concern relates specifically to criterion (b): “the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU”. Why this is problematic for PE/VC A very large proportion of standard PE/VC fund structures involve entities registered outside the EU, such as SPVs, holding companies, limited partnerships, general partners or co-investment vehicles. They are typically transparent, well-documented, and frequently involve entities subject to AML/CFT supervision. Under the current drafting, a standard cross-border PE/VC fund structure will routinely: – have three or more layers (e.g. general partner or management company; fund vehicle; holding company; portfolio company); and – meet criterion (b) (non-EU registration) alongside criterion (a) (presence of a legal arrangement such as a limited partnership). This is relevant for PE/VC fund managers in both CDD contexts:

Name of the respondent	Question	Answer
		– Investors: Investors in PE/VC funds are frequently themselves other PE/VC funds, structured through multiple layers of limited partnerships, general partners and holding entities registered outside the EU. Fund-of-funds vehicles, sovereign wealth funds and pension mandates commonly involve non-EU intermediate entities. – Investments: When a PE/VC fund acquires a portfolio company, both the target's ownership structure and the seller's structure will frequently involve three or more layers. A target may be held through a holding company, a trust and an offshore entity established for historical reasons. The seller is often another PE/VC fund manager with its own layered structure. Under the current drafting, such structures would routinely be classified as "complex" for the purposes of CDD performed by the fund manager on investors and acquisition counterparties, requiring organigrams and "additional information", the scope of which is unclear in relation to the requirements already imposed by Article 11 on understanding ownership and control structures, in circumstances where extensive legal and commercial due diligence already provides sufficient transparency. Such structures typically involve regulated entities and/or entities with securities listed on a regulated market that are already subject to higher regulatory reporting and compliance requirements. We note that criterion (d) – "the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification" – already captures structures that genuinely obscure ownership.

Name of the respondent	Question	Answer
		Criterion (b) is therefore duplicative in cases of genuine concern and overbroad in cases of routine cross-border structuring. The consequence for PE/VC fund managers across both CDD contexts is that a majority of standard cross-border PE/VC fund structures would be classified as “complex” under Article 12, not because they are opaque, but simply because they are international. Beyond the additional compliance burden and lack of legal clarity, the classification carries a more significant impact. There is a longer-term risk that criterion (b) operates as a regulatory signal that non-EU structuring is inherently associated with higher ML/TF risk, influencing broader supervisory interpretation across the AMLR and CDD framework beyond Article 12 itself. Proposed drafting solutions (in order of preference): Criterion (b) should be limited to registration in jurisdictions identified as posing a heightened ML/TF risk under relevant EU mechanisms, such as the EU high-risk third-country list under the AMLR or FATF calls for action. This would target the provision at the genuine risk rather than capturing standard international fund structures. If limiting to high-risk jurisdictions is not achievable, criterion (b) should be supplemented with a carve-out for structures involving entities that are subject to effective AML/CFT supervision in equivalent third-country jurisdictions, or where the beneficial ownership chain is otherwise documented and transparent to the obliged entity. At recital level or in accompanying guidance, AMLA

Name of the respondent	Question	Answer
		should confirm that: – the mere involvement of non-EU entities does not give rise to a presumption of complexity or higher risk for the purposes of the broader CDD framework; – Article 12 operates as an information-gathering provision rather than a risk-classification provision; and – where the obliged entity is already satisfied pursuant to Article 11(4)(b) that there is a legitimate "economic, legal or other rationale behind the structure", the additional obligations under Article 12(2) should be applied proportionately.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	13
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 13 would benefit from a clearer distinction between beneficial owners and senior managing officials (SMOs) identified as a fallback. In the PE/VC context, SMOs are often identified due to the absence of a single controlling owner, rather than because they exercise effective control or derive economic benefit. Applying identical identification and verification requirements to SMOs and beneficial owners in all circumstances raises concerns of proportionality, legal certainty and data minimisation. The RTS should allow obliged entities, on a risk based basis, to rely on regulated entity confirmations, professional attestations or reliable public sources for the identification and verification of SMOs acting in a professional capacity. Recital 9 should be amended to confirm that "equivalent information" does not

Name of the respondent	Question	Answer
		necessarily require "equivalent methods" and that verification of SMOs may be calibrated to the risk profile of the individual concerned, particularly if the target entity concerned is regulated and therefore already subject to higher compliance requirements.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	17
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 17 raises important concerns in its application to PE/VC and infrastructure fund structures that rely on regulated intermediaries and institutional distribution models. While Invest Europe supports the objective of ensuring effective access to information where ML/TF risks arise, the current drafting risks placing disproportionate and, in some cases, unworkable expectations on fund managers in low-risk and medium-risk scenarios. In practice, the level of information available to a fund manager regarding underlying investors may depend on the structure of the distribution chain and the role played by intermediaries. In certain intermediated arrangements, the fund or fund manager may not have direct or immediate visibility over end-investors absent a specific request or trigger. In particular, the suggestion that a fund manager should be able to access information on any final investor “without undue delay” and at any time may be interpreted as requiring standing or quasi-immediate access, even in the absence of a specific risk trigger.

Name of the respondent	Question	Answer
		Such an interpretation would go beyond established FATF principles, which recognise that, in intermediated models, AML/CFT risk is primarily mitigated through due diligence performed on the intermediary itself and an ongoing assessment of the robustness of its AML/CFT framework, rather than through unconditional transparency towards all underlying investors. In this context, the RTS should also clarify that look-through to underlying investors is not expected to operate as a systematic or default obligation, but only where justified by specific risk indicators or supervisory triggers. Making look-through a standing requirement in low-risk situations risks undermining the proportionality and SDD logic underpinning the AMLR. Moreover, the expression “without undue delay” lacks sufficient legal clarity and creates a material risk of divergent and overly strict supervisory interpretations at national level. In practice, immediate access to final-investor information is often not feasible in fund structures and may be constrained by operational arrangements, contractual frameworks, or professional confidentiality and legal secrecy obligations applicable in certain jurisdictions. Against this background, Article 17 would benefit from clearer alignment with the broader simplified and risk-based framework of the RTS. In intermediated fund models, AML/CFT effectiveness is best achieved by focusing due diligence on the entity that is operationally

Name of the respondent	Question	Answer
		and legally best placed to manage the relevant risks, namely the intermediary itself, including the robustness of its AML/CFT framework and supervisory oversight. In low-risk and medium-risk contexts, the focus should remain on the quality and reliability of due diligence on the intermediary and on the ability to obtain underlying investor information in a timely manner where justified by risk, rather than as a standing obligation. This would enhance proportionality, legal certainty and supervisory convergence, while remaining fully consistent with FATF standards and AMLR objectives.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	18
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 18 sets out the information to be obtained for understanding the purpose and intended nature of a business relationship. While the qualifying language "where necessary" and the "at least one of" formulation provide welcome flexibility, several of the listed items are ill-suited to closed-ended PE/VC fund structures even under standard CDD. For example, information on "the estimated amount of funds to be deposited", "the anticipated number, size, volume, type and frequency of transactions", and "the expected types of recipient(s)" presupposes a transactional relationship with ongoing payment flows. In a closed-ended PE/VC fund, an investor commits capital at onboarding; capital is drawn down over a 3 – 5 year investment period through capital calls; and

Name of the respondent	Question	Answer
		distributions are made as and when investments are realised, often years later. The pattern and timing of these flows cannot be predicted with specificity at onboarding and are inherently determined by the fund's strategy and market conditions rather than by the individual investor. In such contexts, the requirements of Article 18 should be understood as satisfied by the fund's disclosed investment strategy, the investor's commitment amount, and a high-level understanding of the investor's profile and motivations – all of which are inherently available from the fund's constitutional and subscription documents without the need for additional investor-specific inquiry. The above could be clarified by way of a recital or operative provision, which should confirm that, for collective investment undertakings operating closed-ended fund structures, the purpose and intended nature of the business relationship may be understood by reference to the fund's disclosed strategy and the investor's subscription documentation, and that Article 18 does not require transactional forecasting or speculative assessments regarding the timing, frequency or recipients of future fund transactions. The same concern arises in the investment-side context. When a fund manager performs CDD on a portfolio company target or seller as part of an acquisition, the "purpose and intended nature of the business

Name of the respondent	Question	Answer
		relationship" is self-evident from the transaction itself – namely, the acquisition of an equity interest pursuant to a share purchase agreement or investment agreement. Requiring the fund manager additionally to obtain granular information on "the anticipated number, size, volume, type and frequency of transactions" or "the expected types of recipient(s)" in such a context has no meaningful AML/CFT rationale. Article 18 should be understood as satisfied, in an investment transaction context, by the transaction documentation itself, which will inherently disclose the nature, value and parties to the transaction.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	20
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 20 sets out the minimum identification requirements applicable in low risk situations and therefore plays a foundational role in the SDD framework. While the article is appropriately framed as setting minimum requirements, its interaction with the rest of the RTS could be further clarified to ensure that these minimum requirements are generally treated as sufficient in low risk scenarios, rather than as a baseline to which additional information is routinely added. In the context of PE/VC and infrastructure fund management, low risk situations frequently arise where investors are professional or institutional in nature and where the overall structure and governance of the investment vehicle already provide a high level of transparency. In such cases, the identification

Name of the respondent	Question	Answer
		information listed in Article 20 should normally satisfy the CDD requirements, unless specific risk indicators are present. We note that Article 20 uses the formulation "at least the following information". In the context of a provision that is expressly designed for low-risk situations, "at least" should be understood as defining the information that is generally sufficient, not as a minimum to which further requirements are expected to be routinely added. To clarify the above, a recital should confirm that Article 20 is intended to operate as a genuine entry point for SDD, and that the information specified therein constitutes the operative identification standard in low-risk situations. Obliged entities should not be expected systematically to supplement it with additional information unless specific risk indicators emerge. This would strengthen proportionality and help avoid unnecessary front loading of information collection in low risk fund based relationships.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	21
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 21 is central to the effective functioning of SDD, as it specifies how beneficial owners or senior managing officials (SMOs) may be identified and verified in low risk situations. We welcome the fact that Article 21 allows obliged entities to rely on public registers, information already held, and reliable independent

Name of the respondent	Question	Answer
		sources, rather than prescribing specific documentary requirements. However, in the context of PE/VC fund structures, the article would benefit from further clarification to ensure its practical usefulness. In particular, SMOs are often identified solely as a fallback where no individual meets the ownership thresholds, not because those individuals exercise effective control or derive economic benefit. In such cases, SMOs frequently act in a purely professional capacity, often within regulated entities that are themselves subject to AML/CFT obligations. Article 21 should therefore more clearly support an interpretation whereby, in low risk PE/VC scenarios, verification of SMOs may be satisfied through risk appropriate alternatives such as confirmations from regulated intermediaries, professional attestations or reliable public information, rather than through systematic collection of personal documentation. This would be fully consistent with the wording and purpose of Article 21, and would allow SDD to operate as intended under Article 33 AMLR.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	22
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 22 provides sectoral simplified measures in the context of pooled accounts and illustrates AMLA's recognition that, in certain circumstances, duplication of CDD can be avoided through appropriate reliance on other obliged entities. While PE/VC fund structures do

Name of the respondent	Question	Answer
		not typically fall within the specific scenario addressed by Article 22, the underlying logic of the provision is highly relevant. In particular, Article 22 reflects the principle that AML/CFT effectiveness can be achieved by focusing due diligence efforts on the entity best placed to manage the relevant risk, rather than by requiring multiple obliged entities to perform overlapping checks. The same principle is directly applicable to fund structures involving regulated intermediaries and institutional investors. We therefore consider that the proportionality logic embodied in Article 22 should inform the interpretation and application of SDD under Articles 20, 21, 23 and 24, even where the specific pooled account scenario does not apply.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	23
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 23, which addresses the updating of customer identification data in low risk situations, is of particular practical importance for PE/VC managers. Closed ended funds are characterised by stable, long term relationships with investors, and ML/TF risk tends to arise at identifiable moments, such as onboarding, changes in ownership or control, restructuring events or distributions. We welcome the fact that Article 23 is framed around

Name of the respondent	Question	Answer
		monitoring for changes in circumstances and trigger events, rather than around continuous updating. However, greater clarity would be helpful to ensure consistent interpretation across Member States, particularly in supervisory practice. In low risk PE/VC relationships, maintaining customer information “up to date” should be explicitly confirmed as an event driven, risk based process, not as an obligation to periodically reassess or refresh information in the absence of any material change. Explicit confirmation of this interpretation would significantly enhance legal certainty and proportionality, while remaining fully aligned with Article 33 AMLR.
Invest Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	24
Invest Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 24 sets out the minimum information required to understand the purpose and intended nature of the business relationship in low risk situations. In the context of PE/VC, this purpose is typically clear and narrowly defined: long term investment in accordance with a disclosed investment strategy. In low-risk fund-based relationships, a simplified and high-level understanding of the purpose and intended nature of the business relationship — reflected in the fund’s investment objective, strategy and investor profile — should be sufficient. The items listed - "the intended use of the products or services" and "the estimated value of transactions" – should be

Name of the respondent	Question	Answer
		understood in the PE/VC context as satisfied by the investor's subscription commitment and the fund's disclosed strategy and constitutional documents, and in a transactions context by the share purchase agreement or investment agreement. (For further context, see our response to Article 18 above.) Requiring more granular or transaction focused information in such circumstances risks imposing obligations that are ill suited to closed ended fund models and that add limited value from an AML/CFT perspective. Clarifying that Article 24 does not require transactional foresight or speculative assessments in low risk PE/VC scenarios would reinforce the coherence of the SDD framework as a whole.
Invest Europe	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Invest Europe	Please specify which recital you refer to, and share your comments below.	Recital 9 Recital 9 appropriately clarifies that senior managing officials (SMOs) are not beneficial owners but should nonetheless be identified pursuant to the fallback rule in the AMLR. However, the recital could better reflect the risk based approach by making clear that, while equivalent categories of information may be collected for SMOs, this does not imply that identical methods or depth of verification are always required. In the context of PE/VC, SMOs frequently act in a purely professional capacity, often within regulated entities, and typically do not present the same ML/TF risk profile as beneficial

Name of the respondent	Question	Answer
		owners with an economic interest. Greater clarity at recital level that identification and verification of SMOs may rely on risk appropriate alternatives, such as regulated entity attestations or reliable public sources, would improve proportionality and legal certainty. Recital 16 Recital 16, which addresses the application of simplified due diligence (SDD) in low-risk situations, is particularly important for ensuring that the risk-based approach operates effectively in practice. While the recital correctly recalls that SDD is not an exemption from standard CDD, it would benefit from stronger guidance on how simplified measures should be applied in sectors and business models that are structurally lower-risk. In particular, the recital could more clearly acknowledge that collective investment undertakings and their managers, especially those operating closed-ended funds with predominantly professional and institutional investors, will often meet the conditions for SDD, in the absence of specific risk indicators. Explicit recognition at recital level that reduced updating frequency, streamlined verification measures and appropriate reliance on regulated intermediaries are compatible with Article 33 AMLR would significantly enhance supervisory convergence and help avoid excessively conservative interpretations at national level.
Invest Europe	Do you have any comments on the Annex in the draft RTS?	Yes

Name of the respondent	Question	Answer
Invest Europe	Please share your comments below.	The Annex on electronic identification attributes should be treated as a reference framework rather than as a de facto minimum standard for all obliged entities. Requiring highly granular identity or address attributes in low risk, wholesale fund management contexts risks exceeding what is necessary and proportionate for effective AML/CFT compliance. How would you rate the proposals set out in the draft RTS overall? Good: Strong foundation but requires targeted clarification at operative, recital and post-adoption guidance levels to ensure that the risk-based approach operates as intended for the PE/VC sector. The draft RTS represent genuine and welcome progress from earlier iterations, and AMLA's approach of building on the EBA's work with targeted amendments is broadly sound. The commitment to proportionality, simplification and the risk-based approach provides a workable foundation. However, as set out in our detailed responses above, the operative provisions do not yet fully deliver on these principles for fund managers operating closed-ended structures whose core investment policy is to acquire control of non-listed companies or issuers with

Name of the respondent	Question	Answer
		predominantly institutional investors, conducting occasional investment transactions under time-sensitive conditions. In particular, the treatment of complex corporate structures (Article 12), the SMO identification requirements (Article 13), the application of Article 17 to intermediated fund distribution models, and the absence of sufficiently clear operational guidance on the availability and application of SDD to collective investment undertakings mean that, without further refinement or accompanying guidance, there is a risk of disproportionate implementation in practice.
Invest Europe	How would you rate the proposals set out in the draft RTS overall?	Good
Invest Europe	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or	Not applicable/no information available

Name of the respondent	Question	Answer
	implementing the provisions of these draft RTS.: Recurrent costs	
Investment Company Institute	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	As the trade association representing the global asset management industry, the Investment Company Institute (ICI) welcomes AMLA's efforts to clarify how collective investment undertakings (CIUs) may meet customer due diligence (CDD) obligations when shares or units are distributed through intermediaries, including in cross-border contexts. Clear and workable rules are essential to ensure consistent implementation of the EU AML framework and to support effective mitigation of money laundering and terrorist financing (ML/TF) risks across the Union. However, as currently drafted, elements of Article 17 raise significant proportionality and operational concerns that limit the ability of CIUs to apply the RTS consistently across the full range of products and distribution models they support. These issues warrant careful consideration to ensure that the RTS remain firmly anchored in the risk-based approach established at Level 1. Our principal concern relates to Article 17(c) and its implications for the distribution of EU domiciled funds in third countries, particularly where regulated intermediaries and transfer agents sit between the CIU and the end investor. CIUs commonly distribute through regulated intermediaries and appointed transfer agents and often do not maintain direct legal or operational relationships with end investors. In many fund distribution models, distributor onboarding and monitoring, investor record keeping, and customer due diligence are carried out by

Name of the respondent	Question	Answer
		different obliged entities within an operating framework, most commonly involving appointed transfer agents. These functions are distinct but interdependent, and CIUs typically have limited ability to impose uniform risk classifications, data access rights, or information sharing arrangements across all parties involved. A framework in which an assessment above “standard risk” mechanically triggers look through expectations does not reflect these operating realities. Implementing such expectations would require material changes to delegation arrangements, contractual frameworks, systems, and data flows, including enhanced alignment of risk rating methodologies between distributors and transfer agents, often where CIUs have limited access to or control over end investor information. This would entail significant cost and complexity, with limited incremental ML/TF risk reduction value. Absent clarification, Article 17(c) also risks giving rise to unintended consequences, including incentives to recalibrate internal risk classifications to preserve workable operating models or to reconsider distribution in certain markets where look through cannot be implemented proportionately. In extreme cases, CIUs may be compelled to withdraw from certain intermediary relationships or markets altogether, leading to de risking outcomes that do not address identifiable ML/TF vulnerabilities. These dynamics could restrict third country access to EU domiciled funds without delivering commensurate supervisory benefits. To ensure that the RTS can be consistently implemented

Name of the respondent	Question	Answer
		across the full range of products and distribution models supported by the global asset management industry, AMLA should clarify Article 17(c) so that reliance on intermediaries is assessed by reference to the effectiveness of risk mitigation, rather than rigid or outcome-determinative risk labels. Clarification is needed to confirm that an assessment above "standard risk" does not, in itself, preclude reliance where ML/TF risks are effectively mitigated, and that geographical or third country factors alone should not result in default or systematic expectations of underlying investor look through in the absence of specific risk indicators. Such targeted clarification would preserve the intended operation of the Level 1 reliance framework and support proportionate, risk-based supervision, while avoiding unnecessary disruption and safeguarding the global competitiveness of EU domiciled funds.
Investment Company Institute	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	ICI shares AMLA's objective of supporting a robust and effective risk based approach to AML/CFT compliance. However, as currently framed, aspects of Article 17, particularly Article 17(c), risk undermining this objective by introducing rigid, systematic requirements that are not sufficiently anchored in the risk-based approach set out in Level 1. Recital 14 makes clear that, to ensure proportionality and a risk-based application of CDD obligations, CIUs "do not need to obtain information on the identity of the underlying investor in all cases and in a systematic manner." Decisions on whether and to what extent underlying investor information should be obtained are intended to be driven by the specific ML/TF risks to be

Name of the respondent	Question	Answer
		mitigated. As currently drafted, however, Article 17(c) risks cutting across this principle. By conditioning reliance on an intermediary on the relationship being assessed as “low or standard risk,” the provision risks turning risk categorisation into a structural gatekeeper for reliance. In practice, this may create a default or systematic expectation of look-through whenever an intermediary is assessed above “standard risk,” irrespective of whether the underlying ML/TF risks are otherwise effectively mitigated. This concern is compounded by the fact that intermediary risk classifications are inherently firm specific, reflecting differences in risk appetite, internal methodologies, and supervisory expectations. The current drafting of Article 17(c) implicitly assumes a level of consistency and comparability in risk scoring across entities that does not exist in practice. As a result, the same intermediary relationship may be classified as “standard risk” by one CIU and as higher risk by another, leading to uneven application, legal uncertainty, and unintended systematic look through outcomes that are driven more by methodological variation than by underlying ML/TF risk. This dynamic is particularly acute in cross border distribution. Intermediary risk assessments are frequently influenced by geographical or contextual factors rather than by deficiencies in an intermediary’s AML/CFT controls, governance, or supervisory environment. As a result, intermediaries in third countries may be assessed above “standard risk”

Name of the respondent	Question	Answer
		despite operating under robust and internationally aligned AML/CFT regimes. Where such an assessment effectively removes the possibility of reliance, CIUs may be driven toward routine or systematic look through simply to preserve regulatory compliance, even in the absence of specific ML/TF concerns. Such an outcome is difficult to reconcile with Recital 14's explicit rejection of systematic look through and with the Level 1 intention that reliance on intermediaries remains viable where risks are appropriately addressed. Over time, the practical starting point may move from risk based reliance to conditional permission, with look-through becoming the norm rather than the exception. To ensure consistency with Recital 14 and the Level 1 risk-based framework, AMLA should clarify Article 17(c) so that reliance on intermediaries is assessed by reference to the effectiveness of risk mitigation, rather than rigid or outcome determinative risk labels. Clarification is needed to confirm that an assessment above "standard risk" does not, in itself, preclude reliance where ML/TF risks are effectively mitigated, and that geographical or third country factors alone should not result in default or systematic expectations of underlying investor look through in the absence of specific risk indicators. Such targeted clarification would preserve the intended operation of the Level 1 reliance framework and support proportionate, risk-based supervision, while avoiding unnecessary disruption and safeguarding the global competitiveness of EU domiciled funds.

Name of the respondent	Question	Answer
Investment Company Institute	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Please see our response to Question 1.
Investment Company Institute	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A
Investment Company Institute	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No
Investment Company Institute	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

iProov	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, provided the regulatory framework permits lightweight, cloud-based biometric solutions and prevents hardware-based financial exclusion. (i) Flexibility and Rationale: If the RTS inadvertently incentivises systems that rely on high-end hardware sensors to achieve security, it will systematically exclude lower-income users. As camera sensor quality decreases on budget or legacy devices, a verification system's ability to distinguish between a real face and a high-quality deepfake diminishes. To maintain high security

Name of the respondent	Question	Answer
		against advanced attacks, the system must aggressively reject more attempts, which disproportionately and systematically locks legitimate, lower-income users out of the digital financial system. (ii) Concrete Drafting Proposal: We recommend that the RTS mandate an outcome-based inclusivity threshold. Remote verification systems must empirically demonstrate a False Rejection Rate (FRR) of less than 5% across the lowest quartile of consumer hardware and legacy mobile devices. This ensures that the aggressive decision thresholds required to block sophisticated injection attacks do not systematically exclude vulnerable demographics from the benefits of digital financial solutions.
iProov	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No. The implicit reliance on manual human-in-the-loop review fundamentally undermines a true risk-based approach and introduces severe economic and security inefficiencies. (i) Provisions Concerned and Rationale: A definitive longitudinal study of trained passport officers demonstrated a 14% false acceptance rate in identity verification tasks. Furthermore, cognitive economics reveals a Teaming Paradox, where human reviewers systematically degrade automated security by frequently overturning correct machine decisions. Humans operate with biased discrete deference, anchoring their judgments to the algorithm rather than providing an independent safeguard. In operational terms, adding a human reviewer to audit a highly accurate AI system actively decreases security, as

Name of the respondent	Question	Answer
		humans systematically defer to the machine or incorrectly override its correct decisions when evaluating complex deepfakes. In the absence of a harmonised standard for testing the performance of human examiners it is mathematically impossible to certify the level of assurance of a human-led system. System engineering means that this limitation applies also to human-machine (hybird) solutions, as the assurance level of the human component cannot be tested against a harmonised standard. (ii) Concrete Proposals for Appropriate Measures: Conversely, automated technologies drive substantial operational savings. Empirical data from the banking sector indicates that 27% of financial institutions saved between $1 million and $4.99 million directly from AI automation in AML workflows over the past year by reducing false positives and manual review latency. A true risk-based approach must explicitly recognise that automated biometric verification is vastly superior to manual review.
iProov	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. In cases of highly sophisticated Synthetic Identity Fraud (SIF) generated by Agentic AI, genuine identity data is systematically obfuscated or fabricated. Examples of Situations: Agentic AI introduces trajectory uncertainty, breaking legacy authentication models as autonomous agents execute transactions at machine speed. Because these agents operate without human oversight, a severe accountability gap emerges. This gap is already being exploited by highly sophisticated SIF networks fully automated by AI, which generate fictitious 'Frankenstein' identities at an industrial scale

Name of the respondent	Question	Answer
		to execute mass onboarding without human intervention. Proposed Alternative Solutions: To sever the automation capabilities of these networks and prevent systemic extraction, the RTS must mandate Verified Human Authorisation to cryptographically bind high-stakes autonomous actions to a verified, biologically present human identity to prove genuine intent. Verifying real-time genuine presence via Injection Attack Detection is the only mechanism to bridge this information gap. However, in accordance with the principle of proportionality, this cryptographic binding must be strictly scoped to high-risk retail onboarding, retail account recovery, and high-consequence retail transactions. The RTS must explicitly exempt machine-to-machine payments, wholesale banking operations, and high-frequency algorithmic trading, where real-time biometric authorisation is operationally unviable and structural controls are already deployed.
iProov	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Where an obliged entity utilises a remote biometric verification system certified to CEN/TS 18099 'High', the cryptographic certainty of the user's identity should automatically permit the application of simplified due diligence measures for subsequent authentication and ongoing transaction monitoring. This measure is appropriate because the core impersonation risk has been structurally eliminated at the onboarding phase.
iProov	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	We have substantial observations regarding the procedural hierarchies and controls established in Article 7 and Article 8.

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Issue Identified (Article 7): While we support the harmonisation of remote verification standards, the procedural hierarchy in Article 7 inadvertently introduces vulnerabilities against synthetic identity fraud and digital injection attacks. Article 7.2 establishes a strict hierarchy prioritising eIDAS-compliant solutions and places a justification burden on obliged entities wishing to use alternative private solutions. Because many eID schemes do not require the collection of potentially relevant attributes (e.g. failing to mandate the collection of a verified residential address), obliged entities face significant legal and operational friction. In practical economic terms, forcing firms to formally justify their use of better, private security solutions creates a compliance cost burden, which inadvertently incentivises them to choose inferior, check-the-box methods simply to avoid regulatory friction. Threat intelligence indicates that injection attacks bypassing legacy Presentation Attack Detection (PAD) systems on the iOS platform surged by 741% in 2025. Drafting Proposals (Article 7): To resolve this without dismantling the hierarchy, the RTS must authorise hybrid verification journeys where private, high-assurance biometrics seamlessly supplement eID data. Amendment to Article 7.2: "In cases where the solution described in paragraph 1 is not available, cannot reasonably be expected to be provided, lacks the specific data attributes required to fulfil customer due diligence obligations, or where the obliged entity utilises a private remote verification solution featuring independently audited, outcome-based Injection Attack

Name of the respondent	Question	Answer
		Detection (IAD) capabilities, obliged entities shall obtain the natural person's identity document..." Amendment to Article 7.3(a): "(a) controls incorporating Injection Attack Detection (IAD) capable of verifying real-time genuine presence to ensure that the natural person presenting the customer's identity document, passport or equivalent is the person on the picture of the document and that the biometric data has not been synthetically generated or digitally injected;" Issue Identified (Article 8): Generative AI threats and digital injection attacks are highly non-stationary and evolve daily, meaning static, point-in-time compliance assessments are obsolete. Amendment to Article 8(1): To satisfy the requirement for reliable sources, we propose inserting: "(f) whether the source provider operates an active threat management system utilising real-time global threat intelligence to continuously monitor, identify, and adapt to emerging generative AI and synthetic media attack vectors." Additional Proposal for Legal Certainty: To ensure supervisory convergence without violating technological neutrality, AMLA should issue accompanying Level 3 Guidelines establishing that independent certification to the CEN/TS 18099 'High' standard constitutes a regulatory safe harbour for meeting the mandatory IAD capabilities outlined in Article 7.3(a).

iProov	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
iProov	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
iProov	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article Number: 7 Subparagraph and point: Paragraph 2 Issue Identified (Proportionality and Legal Certainty): The strict hierarchy prioritising eIDAS-compliant solutions places an undue justification burden on obliged entities using alternative private solutions. Because many eID schemes lack specific data attributes required for customer due diligence (e.g. a verified residential address), obliged entities face legal friction. In economic terms, forcing firms to formally justify their use of highly secure private solutions creates a compliance cost burden, inadvertently incentivising nominal, "check-the-box" compliance simply to avoid regulatory friction. Alternative Drafting Proposal: "In cases where the solution described in paragraph 1 is not available, cannot reasonably be expected to be provided, lacks the specific data attributes required to fulfil customer due diligence obligations, or where the obliged entity utilises a private remote verification solution featuring independently audited, outcome-based Injection Attack Detection (IAD) capabilities, obliged entities shall obtain the natural person’s identity document..." Rationale: This amendment resolves the issue without dismantling the eIDAS hierarchy. It authorises hybrid

Name of the respondent	Question	Answer
		verification journeys, allowing obliged entities to seamlessly supplement incomplete eID data using automated, high-assurance private biometric solutions without incurring the procedural friction of a formal justification burden.
iProov	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
iProov	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article Number: 7 Subparagraph and point: Paragraph 3, point (a) Issue Identified (Technical Implementation): The current drafting implicitly relies on legacy Presentation Attack Detection (PAD), which is designed to detect physical spoofs (like printed photos) but is obsolete against modern generative AI threats. Threat actors now execute digital injection attacks, bypassing the device's camera entirely to inject hyper-realistic synthetic media directly into the data stream. Threat intelligence indicates that injection attacks targeting mobile platforms surged by 741% in 2025. Alternative Drafting Proposal: "(a) controls incorporating Injection Attack Detection (IAD) capable of verifying real-time genuine presence to ensure that the natural person presenting the customer’s identity document, passport or equivalent is the person on the picture of the document and that the biometric data has not been synthetically generated or digitally injected;" Rationale: To secure the digital financial perimeter, the RTS must explicitly mandate outcome-based Injection Attack Detection (IAD). This closes a severe security vulnerability by ensuring systems confirm real-time

Name of the respondent	Question	Answer
		genuine presence rather than relying on easily bypassed static presentation checks.
iProov	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	8
iProov	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article Number: 8 Subparagraph and point: Paragraph 1 (Proposed new point 'f') Issue Identified (Technical Implementation): The current requirements imply a static, point-in-time compliance assessment to determine the reliability of information sources. However, Generative AI threats and digital injection architectures are highly non-stationary and evolve daily. A static assessment is fundamentally insufficient to evaluate the true reliability of a remote identity verification system. Alternative Drafting Proposal: "(f) whether the source provider operates an active threat management system utilising real-time global threat intelligence to continuously monitor, identify, and adapt to emerging generative AI and synthetic media attack vectors." Rationale: This amendment recognises that defeating generative AI fraud is an ongoing necessity. It shifts the regulatory requirement from static compliance to dynamic resilience, ensuring obliged entities select service providers equipped with active threat management capabilities (such as a dedicated Security Operations Centre).

iProov	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
iProov	Do you have any comments on the Annex in the draft RTS?	No
iProov	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Our overarching concern is that the Draft RTS, notwithstanding the proportionality clause in Article 1, remains overly prescriptive and does not adequately reflect the specificities of the sectors represented by the PSCF. While Article 1 confirms that measures should be applied on a "risk-based approach" and be "commensurate with the type and level of risk identified", several of the articles are drafted in a way that may be interpreted as requiring the routine collection of detailed customer information, irrespective of risk or context. This creates a tension with the overarching principle that the "scope, intensity and frequency" of measures should remain proportionate to the ML/TF risk. We believe the draft RTS does not fully reflect the operational realities of non-financial sectors where customer interactions are inherently low value, low risk, high frequency, and time sensitive. As acknowledged in the consultation paper, sectors differ significantly in terms of business models, operational structures, and risk exposure. Without clearer recognition of these differences, there is a risk that measures designed with financial institutions in mind are applied in a way that is not appropriate or proportionate for other sectors. Specific feedback on

Name of the respondent	Question	Answer
		articles concerned are as follows: Article 6 the burden that it places by stipulating all names under 6(1)(b). This may be difficult in practice to establish that the party in question has disclosed all names. Re 6(1)(c) Many countries do not include expiration date (thus making them non-acceptable if all the provisions of 6. 1 are mandatory) Article 12 the current proposed wording continues to lack the necessary proportionality required under a risk-based approach. We would therefore suggest removing the specificity to layers, instead providing greater flexibility by introducing the term unusually complex thus focusing on higher risk scenarios. Article 13 An obligation remains to collect the same information for SMOs as for beneficial owners and verifying their identity "in the same way as they would for beneficial owners," which does not reflect the fundamentally different risk profile of these two categories and appears to contradict recital 125. The money laundering and terrorist financing risks associated with a SMO are considerably lower, as they typically have neither personal financial interest in the investment nor have control by other means over the entity. Article 16 The AMLR / RTS lacks a clear definition of a “person purporting to act on behalf of the customer”. While this concept is broadly understood, its interpretation varies significantly, ranging from external legal representatives (e.g. agents or lawyers acting under power of attorney) to employees of a legal entity (e.g. authorised signatories) acting in accordance with their duties. This divergence undermines effective risk mitigation and unduly increases compliance burden on

Name of the respondent	Question	Answer
		obliged entity (with little benefit, which in some cases can result in obliged entities seeking to verify employees of a regulated / list company (refr to similar guidance in UK 2025 HMRT consultation paper). Article 19 - Article 19(2)(b) mandates that obliged entities act "without delay" upon any new information or change in CDD data that may affect a customer's identification as a politically exposed person (PEP). This infers that, upon identification, immediate action is necessitated. This lacks proportionality, inadvertently categorises the concept of a PEP in negative light and may result in disproportionate actions being taken against existing customer already in a well-established business relationship with the obliged entity. To date there has been diverging approaches to the treatment of PEPs solely due to their role in a State-Owned Entity ('SOE') in circumstances where the SOE is the investing entity. The article should also be expanded to exclude non-commercial state of institutions. The PSCF calls for the clarification of treatment to be made within this article. Article 22(a) AMLA should consider amending 'immediately' to 'promptly' to allow counterparties to act in a reasonable matter and not held to a standard that is absolute and unachievable. Article 24 The PSCF is of the opinion that the requirements under Article 24 of the draft RTS are disproportionate and burdensome in the context of low-risk business relationships/occasional transactions. It is also unclear how these requirements should be applied to situations where broker/intermediary/correspondents are used for the distribution of products (this impacts multiple sectors).

Name of the respondent	Question	Answer
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While PSCF acknowledges the ongoing efforts to refine the current RTS, we are not of the opinion that the current version strikes the effective balance between proportionality and reasonability, in particular those articles outlined in question 1 that have significant impact (more broadly on EU competitiveness). While the overarching principles are clearly articulated, a number of provisions introduce a level of prescription that may limit the ability of obliged entities to apply judgement based on their specific risk assessments. In particular, requirements relating to the collection of customer information, identity verification, and the assessment of transaction purpose and behaviour risk being applied in a more uniform or standardised manner, rather than being tailored to the level of risk identified. While Article 1 establishes a commendable proportionality principle, the subsequent articles (highlighted by us in question 1) fail to give it meaningful proportional effect.
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In the non-financial sector(s) transactions are conducted face-to-face, at pace, and are often time-sensitive, particularly in the context of live or scheduled sporting events. In these circumstances, it is not operationally feasible to obtain detailed information about individual transactions beyond what is evident at the point of interaction. This is particularly the case for low-value transactions that fall below applicable CDD thresholds and do not present any indicators of elevated risk. While existing AML/CFT frameworks clearly distinguish between

Name of the respondent	Question	Answer
		occasional transactions and business relationships and apply CDD measures only once relevant thresholds or risk triggers are met or where a potential risk has been identified, the draft RTS does not always clearly anchor these requirements to those triggers. As a result, there is a risk that provisions relating to the collection and assessment of transaction-level information could be interpreted as applying more broadly in practice, including in circumstances where CDD has not been triggered. In retail environments, this would not be operationally feasible and could lead to disproportionate expectations in relation to routine, low-risk activity. Members of the PSCF routinely encounter situations where the information required under the draft RTS is either unavailable or cannot be obtained as standard: Article 4 – "Place of birth": The requirement to record the country of birth creates practical challenges where customers' identity documents (e.g. driver's license) may not show. Collecting ancillary data points to country of birth (where available) is not perceived to add any material risk mitigation but places additional compliance costs on the obliged entity to process such data. PSCF proposes that it be sufficient to capture the country of birth or city of birth (in that order), whichever is available. Alternatively, we suggest that the second sentence of Article 4 is deleted. Article 5 – "All nationalities": Obliged entities have no means of verifying with certainty whether a customer holds nationalities beyond those declared. We call for this wording to be amended so that it better aligns with

Name of the respondent	Question	Answer
		recital 3. Article 6(2)(b) – "All names": Obliged entities have no means of verifying with certainty whether a customer maintains names beyond those declared. Article 6(5) – "Certified copies": In lower risk scenarios (where there are no concerns around the veracity of documentation / wider AML / fraud concerns relating to the client), non-certified copied should be deemed proportionate and acceptable. A risk-based approach should permit the use of non-documentary sources (trusted sources) as alternative.
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The PSCF supports AMLA's objective, as set out in Article 28(1) of Regulation (EU) 2024/1624, of ensuring that enhanced and simplified due diligence measures are applied in a manner that is proportionate to the level of ML/TF risk identified. In our view, there is scope for the draft RTS to further strengthen and clarify the application of simplified due diligence, particularly in sectors characterised by high volumes of low-value and low-risk activity. While the draft RTS reflects the principle of proportionality, including in Article 1 and Recital (16), the current provisions do not fully reflect how simplified due diligence can be effectively applied in practice in transaction-driven environments. In the non-financial sector, a significant proportion of customer activity consists of low-value, routine transactions that fall well below the thresholds set out in Article 19 of Regulation (EU) 2024/1624 and do not, in isolation, present indicators of elevated ML/TF risk.

Name of the respondent	Question	Answer
		Applying standard or enhanced due diligence measures solely on the basis that a threshold has been met may not be proportionate in many cases and may reduce the effectiveness of AML/CFT controls by diverting resources from higher-risk behaviour. In such cases, a proportionate approach to the application of CDD would better reflect the underlying risk. In these environments, risk is more appropriately linked to the level of financial engagement over time, including cumulative spending, deposit behaviour, and changes in transactional patterns, rather than to individual transactions, thresholds or the mere existence of a customer account. Accordingly, simplified due diligence measures under Article 33 of Regulation (EU) 2024/1624 could more clearly accommodate business models where: • transactions are frequent but low in value; • customer relationships are intermittent or transactional in nature; and • transactions, whether individually or cumulatively, present a low level of ML/TF risk in the absence of other risk indicators. Providing greater clarity on the interaction between thresholds under Article 19 and the application of simplified due diligence under Article 33 would further support a consistent and proportionate approach. Article 17 Regulated intermediated relationships are commonplace within the investment fund sector. Such intermediaries (predominantly regulated banks /

Name of the respondent	Question	Answer
		custodians / brokers) provide their (end) customers with effective access to investment Funds, via the intermediary transacting on their customer's behalf (typically the regulated intermediary is the party that completes the application form, is considered the legal owner of the units and the only party that can transact on the investment). This model enables customers to interact with a single entity, provides their consent for data usage only once and benefit from the intermediary's existing knowledge of their profile. We welcome the clarification in Recital (14) which states that consistent with a risk-based approach and in line with the principle of proportionality, the extent, including frequency and timing, and rationale for obtaining such information should be determined by the specific risks to be mitigated. However, the text of Article 17 should be further refined to better reflect practice. We call on AMLA to consider the below amendments to the article. Proposed change: When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if it is satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the

Name of the respondent	Question	Answer
		identity of any final investor without undue delay and upon request. This applies provided that: (a) the credit institution or financial institution is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are no less robust than those stipulated by Regulation (EU) 2024/1624; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risk associated with the relationship with the credit or financial institution is not considered high risk low or standard; and (d) the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners.
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 7 the hierarchy that places eIDAS as the primary verification method remains unchanged and continues to represent a key concern (inclusive of a new insertion - 7(4) to justify non-use of eIDAS (which introduces a new compliance burden that did not exist under the prior text)), noting that FATF standards do not treat non-face-to-face onboarding as an automatic risk factor in this context. AMLR Article 22(6) does not impose a hierarchy of verification methods, yet 7(4) inadvertently introduces one by requiring justification for not using eIDAS (hence this Level 2 text is stricter than the Level 1). Given that verification is already carried out through numerous reliable means (both documentary and non-

Name of the respondent	Question	Answer
		documentary), it is unclear what benefit this justification would bring (uncertainty is also presented as to standard of justification that would be expected). Obliged entities should be in a position to retain discretion to use and deploy other remote identification tools (that offer equivalent assurance). Hence, we recommend that AMLA removes this justification requirement. We propose adjusting paragraph 3 to read:“Obliged entities shall apply the safeguards referred to in this paragraph in a manner that is proportionate to the ML/TF risk associated with the business relationship or occasional transaction.” The PSCF supports the clarification of onboarding requirements for non-face-to-face and digital customer relationships but calls for additional clarity to ensure that requirements remain proportionate to risk and not unduly place unnecessary burden / cost on clients. In particular: Article 7 (and 6) of the RTS should be strengthened to acknowledge the use of non-documentary means of verification such as third-party vendors / specialists, inclusive of acknowledging recital 5 and 6 re the use reliable (public) sources and registries, and existing customer information. In an era of such technological advancement, certification of documentation should be considered as an alternative (in situations of higher fraud risk) but not be viewed as baseline requirement. Obliged entities should be in a position to retain discretion as to the circumstances. Article 18 - In its feedback statement, the EBA noted that the current Recital 13 and Article 18 were revised

Name of the respondent	Question	Answer
		and clarified, so that it is clear that inferring the purpose and intended nature from the type of transactions or business relationship established is limited to cases to which Article 33 AMLR applies. However, the revised wording of both the recital and article does not contain any reference to the situations where obliged entities are allowed to infer the purpose and intended nature from the type of transactions or business relationship. Article 18 (and 28) refers to obtaining information on the purpose and nature of transactions and customer activity. While the RTS recognises that such information should only be obtained “where necessary”, the level of detail set out risks being interpreted as a baseline expectation rather than a risk-triggered requirement. In non-financial sectors, where the purpose of the transaction is typically inherent in the activity, this creates ambiguity and potential overreach.The PSCF calls on AMLA to correct / amend this by (i) Clarifying that certain information requirements are to be applied only where necessary and risk-justified, and not as a routine requirement (ii) Explicitly recognising high-volume, low-value, low-risk and time-sensitive transactions and business models ensuring that simplified due diligence can be utilised effectively in these contexts
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	Do you have any comments on the Annex in the draft RTS?	No
Ireland Private Sector Consultative Forum on AML/CFT ('PSCF')	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Irish Bookmakers Assocation	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We welcome the work undertaken in developing these draft RTS and support the objective of establishing a consistent and proportionate framework applicable across a wide range of products and services. In particular, the emphasis on a risk based approach and harmonisation across Member States is positive. However, while we support the overall direction of travel, we do not consider that the proposals, as currently drafted, provide sufficient flexibility to operate effectively across all areas of the gambling sector. Although the RTS is intended to operate as a horizontal framework, several provisions appear more closely aligned with financial sector business models and do not readily translate to sectors characterised by high volume, low value and transaction driven activity. This creates a risk that measures are applied uniformly across fundamentally different operating environments without sufficient consideration of how risk manifests in practice.

Name of the respondent	Question	Answer
		The proposals do not sufficiently distinguish between business models where customer relationships are continuous and structured, and those where interactions are intermittent, transactional and typically of low individual value. Both retail and online gambling operate on this basis to a significant extent. In retail betting environments, transactions are conducted face to face and often within time sensitive environments linked to live or scheduled events. The practical ability to obtain, verify or assess detailed customer information at the point of transaction is therefore limited. Applying requirements designed for more static or document driven environments risks creating expectations that are not operationally achievable. In online environments, customer activity is often characterised by fragmented, low value interactions rather than large or infrequent transactions. ML/TF risk is more appropriately linked to cumulative financial engagement over time, including deposit behaviour, spend patterns and changes in transactional activity, rather than individual transactions viewed in isolation. As a result, risk is more effectively identified through transaction monitoring, behavioural analysis and pattern recognition over time, rather than through extensive information collection at onboarding or in relation to individual transactions. The current

Name of the respondent	Question	Answer
		proposals do not sufficiently reflect this distinction. A further limitation arises from the level of prescription within certain provisions, including those relating to identity verification and customer information requirements. These reduce the ability of obliged entities to tailor measures based on the nature of the product, delivery channel and level of risk identified. In practice, this may result in disproportionate measures being applied in lower risk scenarios. These challenges are further compounded in cross border contexts and for operators serving customers outside the Union, where equivalent identification solutions may not always be available. Overall, the current drafting would benefit from greater flexibility to accommodate the diversity of products and services within the gambling sector and to allow obliged entities to apply measures in a way that reflects their specific risk profiles. Recommendation: To ensure the RTS can be effectively applied across a broad range of products and services, we recommend: • Reinforcing that the application of measures should remain risk based and proportionate, with explicit recognition that different sectors and delivery channels require different approaches;

Name of the respondent	Question	Answer
		• Allowing obliged entities greater flexibility in how they meet information and verification requirements, including through technological solutions and trusted third party providers, while remaining technology neutral and recognising different methods capable of achieving equivalent assurance; • Clarifying that requirements relating to the purpose and nature of transactions should reflect the characteristics of the product or service, including where the purpose is inherent in the activity; and • Explicitly recognising the characteristics of high volume, low value and time sensitive environments, including retail gambling, where risk is more appropriately managed through a risk based approach.
Irish Bookmakers Assocation	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We support the intention that the draft RTS should enable the effective application of a risk based approach to AML/CFT compliance. The emphasis on proportionality and alignment with Regulation (EU) 2024/1624 is welcome. However, several provisions introduce a level of prescription that may limit the ability of obliged entities to apply judgement based on their own risk assessments. Requirements relating to customer information, identity verification, and the purpose and nature of transactions risk being applied in a more uniform manner, rather than being tailored to the level of risk identified.

Name of the respondent	Question	Answer
		This is particularly evident in Articles 18 and 28, where the level of detail required may be interpreted as requiring a consistent depth of information irrespective of risk. This risks moving the framework towards a more rules based approach. In the gambling sector, customer activity is typically characterised by frequent, low value interactions, where ML/TF risk is more appropriately identified through patterns of behaviour and financial engagement over time rather than individual transactions. Risk is therefore more effectively managed through transaction monitoring and behavioural analysis, rather than extensive information collection at onboarding or transaction level. In retail environments, transactions are often conducted in time sensitive settings, making detailed transaction level assessments impractical except where specific risk indicators arise. In online environments, effective ML/TF risk management relies on analysing activity holistically over time, rather than focusing on isolated transactions or extensive upfront data collection. More broadly, the level of prescription within certain provisions, including those relating to identity verification, eIDAS reliance, PEP screening, and the collection of customer information, may reduce the flexibility of obliged entities to calibrate controls in line with their risk assessments and may result in

Name of the respondent	Question	Answer
		disproportionate measures being applied in lower risk scenarios without improving AML/CFT effectiveness. Recommendation: Articles 1, 18 and 28 – Suggested Drafting: “Obliged entities shall obtain such information as appropriate, taking into account the level and nature of the ML/TF risk identified and the characteristics of the product or service.” Articles 18 and 28 – Suggested Drafting: “For the purposes of Articles 18 and 28, obliged entities shall obtain such information only where necessary to understand the purpose and nature of the transaction or business relationship, taking into account the level of ML/TF risk identified. Where the purpose of the product or service is inherent or self evident, obliged entities shall not be required to obtain additional information unless risk factors are identified.” Article 6 – Suggested Drafting: “Obliged entities may rely on appropriate and reliable third party or technological solutions to verify identity, provided these meet applicable assurance standards. Obliged entities shall not be required to independently assess document security features where such solutions are used.” Article 7 – Suggested Drafting: “Where electronic identification means under

Name of the respondent	Question	Answer
		Regulation (EU) No 910/2014 are not reasonably available, obliged entities may use alternative non documentary or technological verification methods, provided these are reliable, independent, and proportionate to the level of risk." Article 5 and Article 20(1)(a)(iv) – Suggested Drafting: "Obliged entities shall obtain nationality information where relevant to the ML/TF risk assessment." Article 20 – Suggested Drafting: "In situations of low risk, obliged entities may limit the information collected to that which is necessary to identify the customer, taking into account the nature of the product, the level of financial engagement, and the ML/TF risk identified." Article 19 – Suggested Drafting: "PEP screening requirements shall be applied in a manner proportionate to the level of risk and the nature of the relationship, and shall not require real time screening of low value occasional transactions where customer identification has not been triggered." Article 9 – Suggested Drafting: "The requirements of this Article shall apply only where virtual IBAN arrangements are used within the business model of the obliged entity."
Irish Bookmakers Assocation	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes	We support the objective of ensuring that obliged entities obtain sufficient information to effectively assess ML/TF risk. However, within the gambling sector

Name of the respondent	Question	Answer
	of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	there are scenarios where the information envisaged under the draft RTS is not routinely available, and where the current proposals do not provide sufficiently flexible alternatives. These challenges arise primarily in high volume, low value, and time sensitive environments, as well as in digital contexts where customer engagement is often limited or intermittent. Retail betting environments - In retail settings, transactions are conducted face to face, at pace, and are often time sensitive, particularly in the context of live or scheduled sporting events. In these circumstances, it is not operationally feasible to obtain detailed information about individual transactions beyond what is evident at the point of interaction. This is particularly the case for low value transactions that fall below applicable CDD thresholds and do not present indicators of elevated risk. While existing AML/CFT frameworks distinguish between occasional transactions and business relationships, and apply CDD measures only once thresholds or risk triggers are met, the draft RTS does not always clearly anchor these requirements to those triggers. As a result, there is a risk that provisions relating to transaction level information could be interpreted as applying more broadly in practice, including where CDD has not been triggered. In retail environments, this

Name of the respondent	Question	Answer
		would not be operationally feasible and could create disproportionate expectations in relation to routine, low risk activity. Online gambling environments - In online settings, customers frequently register accounts without engaging in meaningful financial activity, or interact only at a very low level. In addition the intended nature of the relationship is generally inherent in the service being sought, namely participation in betting or gaming activity. More detailed information relating to expected transaction patterns or source of funds may therefore not be relevant or meaningful at onboarding, particularly where there is limited or no financial engagement. Attempting to collect such information may result in incomplete or unreliable data without improving the identification of ML/TF risk. Customer activity is also often fragmented and low in value, with any risk emerging through patterns of financial engagement over time rather than individual transactions. Risk is therefore more effectively managed through transaction monitoring, behavioural analysis, and escalation where unusual patterns emerge. Non-face-to-face verification - Further challenges arise in relation to non face to face verification requirements. The draft RTS places significant reliance on electronic identification means aligned with Regulation (EU) No

Name of the respondent	Question	Answer
		910/2014. However, such solutions are not yet consistently available or operationally integrated across all Member States or sectors. In practice, obliged entities often rely on a combination of document based checks, technological solutions, and third party verification providers. The absence of clear recognition of these alternative approaches creates uncertainty and may limit the ability of obliged entities to verify customers effectively where eIDAS solutions are not available. Recommendation: • clarifying that information should only be obtained where it is reasonably available and relevant to the level of ML/TF risk identified; • explicitly recognising that, in high volume and time sensitive environments such as retail betting, detailed transaction level information should not be required in the absence of risk indicators; • allowing obliged entities to rely on transaction monitoring, behavioural analysis, financial and other ongoing controls as primary tools for identifying risk in sectors characterised by low value and fragmented activity; and • providing greater flexibility in verification methods, including explicit recognition of non documentary and

Name of the respondent	Question	Answer
		third party solutions where eIDAS compliant identification is not reasonably available.
Irish Bookmakers Assocation	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We support AMLA's objective under Article 28(1) of Regulation (EU) 2024/1624 of ensuring that enhanced and simplified due diligence measures are applied proportionately to the level of ML/TF risk identified. However, the draft RTS could further clarify how simplified due diligence should operate in practice in sectors characterised by high volumes of low value and low risk activity, such as gambling. In the gambling sector, particularly in retail betting and certain online contexts, a significant proportion of customer activity consists of low value, routine transactions that do not, in isolation, present indicators of elevated ML/TF risk. Applying standard or enhanced due diligence measures solely because a threshold has been met may not always be proportionate and may reduce the effectiveness of AML/CFT controls by diverting resources away from genuinely higher risk behaviour. Even where thresholds are met, the underlying activity may remain low risk in nature. For example, a customer placing a €1 bet that results in winnings above €2,000 meets the threshold, but does not demonstrate the same risk profile as sustained or structured financial engagement. In these environments, risk is more appropriately linked

Name of the respondent	Question	Answer
		to financial engagement over time, including cumulative spend, deposit behaviour, and changes in transactional patterns, rather than to individual transactions or the mere existence of a customer account. The RTS could therefore more clearly accommodate business models where transactions are frequent but low in value, customer relationships are intermittent or transactional in nature, and risk emerges primarily through behavioural patterns over time rather than isolated transactions. Providing greater clarity on the interaction between thresholds under Article 19 and simplified due diligence under Article 33 would support a more proportionate and risk sensitive approach. In particular, the RTS should clarify that the triggering of customer due diligence at a threshold does not require the automatic application of full due diligence measures in all cases, and that simplified due diligence may still apply where the risk is assessed as low. Recommendation: Article 19 and Article 33 of Regulation (EU) 2024/1624 – Low-value transactions “Obliged entities may apply simplified due diligence measures in respect of low-value transactions that fall below the thresholds set out in Article 19 of Regulation (EU) 2024/1624, provided that no indicators of elevated

Name of the respondent	Question	Answer
		ML/TF risk are identified." Articles 18, 28 and 34 of Regulation (EU) 2024/1624 – Financial engagement over time "In assessing ML/TF risk, obliged entities may place greater weight on cumulative financial activity and transactional behaviour over time, rather than on the number or frequency of individual transactions." Articles 20 and 33 of Regulation (EU) 2024/1624; Articles 18 and 28 of the draft RTS – Reduced upfront information "In situations of low ML/TF risk, obliged entities may limit the information obtained pursuant to Articles 20(1) and 25 of Regulation (EU) 2024/1624 to that which is necessary to identify the customer, and may obtain additional information only where risk indicators arise." Article 20(1)(d) and Article 33 of Regulation (EU) 2024/1624 – Ongoing monitoring and behavioural analysis "Obliged entities may rely on ongoing transaction monitoring, behavioural analysis, and risk profiling to identify ML/TF risk in sectors characterised by low-value and fragmented activity." Article 19 and Article 33 of Regulation (EU) 2024/1624 – Retail face-to-face environments

Name of the respondent	Question	Answer
		"In circumstances where transactions fall below applicable thresholds set out in Article 19 of Regulation (EU) 2024/1624 and do not present indicators of elevated ML/TF risk, obliged entities should not be required to obtain additional information beyond what is inherent in the transaction. Where customer due diligence obligations are triggered, simplified due diligence measures in accordance with Article 33 of Regulation (EU) 2024/1624 may be applied, including limiting the extent of information obtained to that which is necessary and proportionate."
Irish Bookmakers Assocation	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We support AMLA's objective of establishing a harmonised, proportionate, and risk based AML/CFT framework across both financial and non financial sectors. However, we remain concerned that certain provisions within the draft RTS may, in practice, be interpreted or applied in a more uniform and prescriptive manner than intended, particularly in sectors characterised by high volume, low value, and time sensitive activity such as gambling. In particular, requirements relating to transaction level information, customer information collection, and identity verification may not fully reflect the operational realities of sectors where customer engagement is often intermittent, transactional, and low risk in nature. In these environments, ML/TF risk is more appropriately

Name of the respondent	Question	Answer
		identified through cumulative financial behaviour, transaction monitoring, and ongoing behavioural analysis rather than through extensive upfront information collection. We also believe it is important that the final RTS avoids creating a 'one size fits all' approach in practice. While the RTS is intended to operate as a horizontal framework across both financial and non financial sectors, business models, customer interactions, transaction patterns, and risk profiles differ significantly between sectors. The final RTS should therefore ensure sufficient flexibility for obliged entities to apply measures in a manner proportionate to the nature, scale, and risk profile of their activities, and avoid unintended outcomes where measures designed primarily with financial sector business models in mind are applied uniformly across fundamentally different operational environments.
Irish Bookmakers Assocation	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

ItaliaFintech	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	ItaliaFintech, the Italian association of leading fintech and digital finance companies, represents innovative market participants across lending, payments, investment and related services. Its mission is to foster a competitive, transparent and inclusive ecosystem by promoting digital culture, advanced technologies, and a constructive dialogue with institutions and supervisory authorities. We thank AMLA for launching the public consultation under Article 28(1) AMLR and commend the quality of the proposal and the broader effort to harmonise the EU AML framework. We offer below a few concise,

Name of the respondent	Question	Answer
		constructive points on the consultation as a whole, prepared with the support of Chiomenti law firm. *** Some of our members are Payment Institutions authorised under PSD2 whose core business is exclusively or predominantly focused on the provision of Account Information Services (AIS) and Payment Initiation Services (PIS). The distinctive feature of these services is that the Payment Institution does not hold, manage or directly transfer client funds at any point in the service chain. Rather, it operates as an informational intermediary, aggregating account data held by Account Servicing Payment Service Providers (ASPSPs), or as a dispositional intermediary that merely initiates a payment order subsequently executed by the ASPSP where the customer's account is held. These members have drawn our attention to a concern regarding the breadth of information that the draft RTS would require obliged entities to collect as part of CDD. In particular, Article 18 sets out a detailed catalogue of information to be gathered on the purpose and intended nature of the business relationship, including the source of funds, the destination of funds, the customer's business activity, and estimates of the volume and value of expected transactions. While such requirements are clearly justified for entities that hold or move client funds, their application to Payment Institutions focusing on the AIS/PIS space raises concerns of proportionality. In practice, obtaining the information envisaged by Article 18 in respect of each client relationship would

Name of the respondent	Question	Answer
		require these institutions to access multiple external databases – such as public registries, credit agencies and specialised data providers – on a systematic basis. The costs associated with this level of data acquisition are substantial and, importantly, disproportionate to the economic margins that AIS and PIS services typically generate. Beyond the cost dimension, we would note that the ML/TF risk inherently associated with AIS and PIS activities is structurally limited by the very nature of the service: no funds are held in accounts controlled by the institution, no value is transferred through its infrastructure, and the underlying account relationship remains at all times with the ASPSP, which is itself subject to comprehensive AML/CFT obligations. The draft RTS rightly establishes a proportionality principle in Article 1, requiring the scope and nature of CDD measures to be commensurate with the type and level of ML/TF risk identified. We believe this principle should find more concrete expression in relation to the specific category of services described above. We would therefore respectfully suggest that AMLA consider introducing, within Section 5 of the draft RTS, simplified due diligence measures specifically designed for Payment Institutions whose core business is limited to AIS and PIS – along the lines of what is already envisaged under Article 22 for pooled accounts. Such measures could, for instance, allow for a reduced set of mandatory information requirements under Article 18 – limited to those genuinely necessary to understand the purpose of the relationship given the nature of the

Name of the respondent	Question	Answer
		services – and permit reliance on customer information already available to the institution through its contractual and technical interface with the relevant ASPSPs, thereby avoiding unnecessary duplication of due diligence efforts already performed by the account-holding institution. *** In addition, we note that Article 31, while setting out helpful risk factors for supervisors to calibrate the extent of any exemption, does not make it sufficiently clear which practical product types the exemption in Article 19(7) AMLR is intended to cover. The absence of non binding examples creates uncertainty for obliged entities, especially given the need to read the AML framework alongside the e money and payment services acquis (including the PSD2 limited network concepts). Against this backdrop, we respectfully ask AMLA to clarify the categories of products the exemption is designed for by providing a short, illustrative and non exhaustive list of use cases that meet the statutory conditions. This targeted clarification would enhance legal certainty and supervisory convergence without changing the risk based approach or expanding the scope of the exemption.
ItaliaFintech	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	NA

	drafting proposals and explain why the specific measures you propose would be more appropriate.	
ItaliaFintech	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We appreciate the draft RTS' risk based and proportionate approach and the aim to give clarity while avoiding unnecessary burden. At the same time, we want to highlight that the interaction between Article 7(1) and Article 7(2) seems to create a sequence where paragraph 2 is only a fallback. This may complicate routine remote onboarding in cross border settings and appears to move away from a technology neutral practice where robust remote solutions can operate alongside eIDAS tools. In our members' experience, the means in Article 7(1) are often not realistically available. Typical cases include corporate onboarding where beneficial owners or authorised representatives in third countries do not hold an EU notified eID at "substantial" or "high"; lack of relevant qualified trust services by nationality or residence; customers facing digital exclusion or accessibility constraints; service outages; and multi person onboarding across jurisdictions under tight timelines. To address this while maintaining strong safeguards against impersonation and fraud, we respectfully suggest some clarifications. First, following the EBA's five guide principles and limiting disruption by building on existing EBA standards, confirm two equivalent routes for non face to face verification as already outlined by the EBA Guidelines on the use of Remote Customer Onboarding Solutions, allowing a proportionate, risk based choice between (i) eIDAS or

Name of the respondent	Question	Answer
		relevant qualified trust services and (ii) other remote solutions that meet the safeguards in Article 7(3)–(4) with sound governance, quality checks and monitoring. Second, clarify "cannot reasonably be expected to be provided" with a non exhaustive list covering the situations above, to ensure consistent application and avoid unintended de risking. These targeted adjustments would keep the focus on trustworthy electronic identification where available, while providing a workable, risk based path in cases where such means are not accessible today, reducing unnecessary friction and supporting supervisory convergence and financial inclusion.
ItaliaFintech	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The draft RTS advances a proportionate, risk sensitive framework that improves clarity for obliged entities while avoiding unnecessary burden. Building on this approach, we propose a targeted enhancement to ensure consistent treatment of a widespread market model: firms that simply present consumers with credit offers from multiple lenders and introduce them to those lenders without holding or transmitting funds ("Credit Presenters"). These actors have been treated unevenly across Member States, yet under the AMLR Credit Presenters – unless they operate under the responsibility of lenders or other credit intermediaries - will fall within Article 3(3)(k) as "credit intermediaries" that do not hold funds and, therefore, will be subject to the forthcoming harmonised AML rules. Under Italian law such firms fall within the regulated category of "credit brokers" (mediatori creditizi) under

Name of the respondent	Question	Answer
		the Italian Consolidated Banking Act, are supervised by the public body OAM, and are already subject to AML obligations; they are defined as companies that put banks or financial intermediaries in contact with potential customers for the purpose of granting credit - whether or not advisory services are provided - without any relationship of collaboration, subordination or representation with the parties Given their limited, referral only role, we consider that the RTS under Article 28(1) should explicitly recognise this model as low risk and eligible for simplified due diligence (SDD). In practice, Credit Presenters do not establish a business relationship with consumers for AML purposes. Their interaction is episodic and ends when contact details are transmitted to the lender; they do not collect applications or supporting documents, guide underwriting, or remain involved through to disbursement. Even if the services are provided through an online form or involve a registration, the elements of duration and repetition are always absent. This places their activity closer to occasional “services connected to a transaction” than to full service intermediation, where full-service credit intermediaries instead collect the credit application and supporting documents, assist the consumer through underwriting, and remain actively involved until loan disbursement. Crucially, AML/CTF oversight in credit transactions is structurally ensured by the lender, which is by definition an obliged entity and performs customer due diligence in connection with the financing agreement. These features point to a

Name of the respondent	Question	Answer
		consistently low ML/TF risk profile at the presenting stage. Against this backdrop, we respectfully propose that the RTS clarify an SDD measure for Credit Presenters by allowing, in low risk situations, postponement of verification in line with the AMLR framework on timing. We suggest adding language to the effect that, for entities that only present offers from multiple lenders without holding or transferring funds, the verification referred to in Article 23(1), first subparagraph, may be performed after the clear intention of the customer and the lender to conclude the credit agreement has emerged (i.e., when an offer is made and accepted) and, in any event, before the signing of the loan contract. This mirrors the approach already envisaged for real estate intermediation, and aligns with Article 33 on permitting verification to be delayed in demonstrably low risk circumstances.
ItaliaFintech	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We welcome the draft RTS' emphasis on a risk-based, proportionate approach and the objective to enhance clarity while avoiding unnecessary burden for obliged entities. However, the interplay between Article 11(2)(a) and Article 12(2) is not sufficiently clear as to what incremental information must be collected in complex corporate structures. Article 11(2)(a) already requires obliged entities to obtain "a description of the ownership and control structure" explicitly including intermediate legal entities and arrangements between the costumer and their beneficial owner, which, in practice, entails mapping the chain between the

Name of the respondent	Question	Answer
		customer and beneficial owners. In addition, Article 11(4) requires obliged entities to be satisfied that the information is credible, that the structure has a rationale, and that they understand its risk implications. Against that backdrop, it is not clear what specific additional purpose the requirement to obtain "additional information, such as an organigram" when corporate structures are considered complex is intended to fill. We believe that the text of Article 12(2) could benefit from greater clarity as to the type and scope of additional information that obliged entities should collect. As currently drafted it provides only an illustrative example without specifying the nature and the additional purpose of obtaining other information than the ones required pursuant to Article 11. This creates uncertainty for obliged entities, which may interpret the provision too narrowly, limiting themselves to a graphical chart. To address this, we would suggest that Article 12(2) adopt the same drafting approach used in Article 11(3). Article 11(3) provides a clear, structured and risk-based list of specific information items that obliged entities shall obtain on a risk-sensitive basis with respect to intermediate entities and arrangements. This approach gives obliged entities a clear framework for determining what information is needed and to what level of detail, while preserving proportionality through the risk-sensitive qualifier. Article 12(2) would benefit from a similar methodology: rather than an open-ended reference to "additional

Name of the respondent	Question	Answer
		information" illustrated by a single example, it should set out a list of specific categories of information that may be required in the case of complex corporate structures, to be obtained on a risk-sensitive basis and only where necessary to complement the measures already undertaken pursuant to Article 11. We therefore respectfully suggest clarifying Article 12(2) by identifying, in a manner consistent with the approach of Article 11(3), which specific categories of additional information obliged entities should obtain on a risk-based basis when dealing with complex corporate structures as defined in Article 12(1), and only to the extent that such information is necessary to complement the measures already required under Article 11 for the purposes of meeting the satisfaction tests set out in Article 11(4).

Italian Banking Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Necessity to introduce a general principle (as the one provided in Article 1), according to which once the customer is identified, he is always identified. According to this principle AMLA may clarify in the RTS that: - - if a customer has been properly identified and verified during onboarding phase, it should not be necessary to obtain always a new identity document at a later stage when the document expires. A different interpretation, would not be consistent with a risk-based approach, and the level 1 regulation does not appear to mandate for this measure; - for verification purposes, OEs should verify only those data points necessary to confirm identity (e.g. full name, date of birth and country of residence). Verifying all data points is not line with risk based approach. Only where indications suggest that the client's identity (limited to first name, last name, and gender) has changed, the bank will update the client's identification document. Under no circumstances should an update of the document be considered necessary solely on the grounds of its expiration or the updating of other elements (e.g. address); - if an existing client establishes an additional business relationship, the OE is not required to perform customer due diligence again, provided CDD data are up

Name of the respondent	Question	Answer
		to date and unless new risk factors arise. Update of information: confirmation is required that: - the updating refers to the identification of the customer and not to all the phases of the due diligence; - there's a possibility, based on the risk, for the use of automated systems, without necessarily contacting the customer (in particular, in low risk situation). The reason for this request lies in the potential negative consequences that may arise for both clients and banks, as well as society as a whole. Retail bank clients are often low risk.Lower awareness of financial security issues by clients, privacy concerns, difficulties in obtaining supporting documents from certain vulnerable clients may determine lack of response. A strict application of the relationship termination in this context could then lead to financial exclusion. For this reason, it may be appropriate that banks may update/confirm information through automatic processes that do not involve the intervention of an operator or the customer; - If no change occurs to the information gather during onboarding phase, banks can use them in terms of "updating" of data, by confirming them. This appears to be in line with recital 70 of the AMLR. On this point, however, it would be also appropriate for AMLA to better specify the content of the Recital in order to harmonize the modus operandi by facilitating due diligence requirements during re-evaluation phase where updating of documentation - and contact with customers - can be burdensome for both the bank and

Name of the respondent	Question	Answer
		customers. Art.18 RTS: Please confirm, in line with EBA consultation report, that RTS should always be read together with articles 20(1)(c) and 25 AMLR that provide risk based application. Consequently, OEs are required to obtain the information considered by art. 18 only where necessary. Despite the risk based approach, it would be useful to clarify if all the necessary information may be obtained even after the opening of thebusiness relationship (with no possibility to operate until the completion of all the set of information required).
Italian Banking Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	no comment
Italian Banking Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Alternatively, it is necessary to indicate the sources that can be used to fulfil this requirement. Remote onboarding: Art. 7(1),(2): both the European Commission and AMLA should review the regulatory framework adopted on non-face-to-face verification. It should be allowed to use multiple methods to verify the identity of natural persons, in accordance with the provisions already set out by the EBA in its guidelines. With reference to Article 22(6) AMLR it is not clear how the term "submission" refers only to the "physical" delivery of the document by the customer alone. In the light of these considerations: - the use of electronic identification means that meet the requirements of Regulation (EU) No. 910/2014 and that have 'substantial' or 'high' levels of assurance should be mandatory only when the customer has voluntarily requested to use such tools. In all other scenarios, obliged entities may use other identification tools that meet the requirements of Article 7(3) of the draft RTS; - In the alternative, it would be useful to provide examples on when E-Idas compliant “cannot reasonably be expected to be provided” according to art. 7 (2), also taking into consideration the provision of art. 7(4). This last provision appears to be particularly onerous in its current form, as well - - unclear, since it is not understood,as said before on art. 7(2), when eIDAS compliant solutions should be considered unavailable or

Name of the respondent	Question	Answer
		cannot reasonably be made available; - It should be allowed to use multiple methods for verifying the identity of natural persons in non-face-to-face scenarios,where appropriate to the level of risk and in the context of low-value, standardised consumer credit products, such as: a) Acceptance of a first payment initiated from an account held in the sole or joint name of the customer with an EEA-regulated credit or financial institution, or with a credit institution located in a third country whose AML/CFT framework is not less robust than that required under Directive (EU) 2015/849; or b) use of an account information service provider (as defined under PSD2) to confirm the customer's identity based on verified accountownership and transaction history.These methods are particularly appropriate for low-value, standardised credit products, and their continued acceptance under the RTS is essential to preserving market access legal certainty, and a seamless customer journey. These methods should also generally be used alongside a copy of the identity document or passport. Finally, in this context it is important to maintain flexibility particularly regarding the use of secure video identification technologies. - Article 7(3)(a): Amend the passage as follow : "Reasonable measures to ensure that the natural person presenting the customer's ID, passport or equivalent is the person in the photo of the document". The provision is written as if a person is physically submitting a document, which does not reflect the reality of remote on boarding.

Name of the respondent	Question	Answer
		Virtual IBAN Art. 22(3) AMLR:Instructions necessary on: (i) how service banks could identify the presence of a virtual IBAN in payments;(ii) the means for request and receive information and documentation for identification and verification; (iii) the documentation requested for the verification of the identity. Art. 3 c) and art. 20(b) RTS the part that states: “where available, postal code...": Despite the freedom to adopt any solution that may be considered appropriate, it would be useful to confirm that the requirement may be fulfilled– in no face to face onboarding – with the implementation of a specific field in which customer may declare, in case, the information. Art.14(2) RTS and 15(2): Both provision should highlight that the obligation to provide information on beneficial ownership primarily rests with the trustee,according to Article 64(3) AMLR. Art.16 RTS "person purporting to act on behalf of the customer” should be referred to only the “executor” or to all thepeople that are legal representatives of the client? 	implementing the provisions of these draft RTS.: Recurrent costs	
Joint response by CHAINCOMPLY BV & CENSE AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	CENSE AG & CHAINCOMLY BV ("we") support the objective of achieving more harmonised and operationally consistent customer due diligence (CDD) requirements across the Union. CENSE and CHAINCOMPLY operate as a RegTech and advisory provider specialising in the analysis of crypto-asset activity for onboarding purposes (including source of funds (SoF) and source of wealth (SoW)) as well as investigations. Based on our experience, while the RTS aim to specify how obliged entities should apply CDD in practice, including the information and documentation to be collected, the current proposals do not sufficiently reflect the structural characteristics of crypto-asset activity. In particular, they do not adequately capture situations where SoF, SoW, and financial behaviour can only be properly understood through a structured and holistic assessment of a customer's broader crypto-asset portfolio, rather than through isolated documents, accounts, or wallet addresses. In our view, the draft RTS do not sufficiently enable a complete and accurate assessment of crypto-asset activity, particularly in relation to Articles 18(c), 19, 25–28, and 29–30. The current drafting appears to assume that customer activity can be assessed through stable identifiers, that reliable and independent information is consistently available, and that SoF and SoW can be

Name of the respondent	Question	Answer
		verified through discrete data points. Based on our experience, these assumptions do not fully hold in crypto-asset environments. Crypto-asset activity is often distributed across multiple wallets, virtual asset service providers, and blockchain networks (e.g. Bitcoin, Ethereum, Solana), fragmented between centralised and decentralised environments, and partially observable, with historical data sometimes incomplete. As a result, it is not always possible to form a complete and reliable assessment at the level of a single wallet, account, or service provider. A strictly granular approach may therefore result in a fragmented and potentially misleading understanding of the customer relationship. This is particularly relevant when assessing the purpose of the relationship, the origin of funds, the consistency of activity with the customer profile, and overall ML/TF risk. Based on our experience, we have observed cases where customers transfer crypto-assets from unhosted wallets to one virtual asset service provider and subsequently move funds to additional providers for legitimate purposes, such as trading or off-ramping. Similarly, customers may operate multiple unhosted wallets across different blockchains. In such cases, transaction histories are inherently fragmented, and no single wallet or provider provides a complete view. When assessed holistically, however, activity is coherent, traceable, and consistent with a low-risk profile.

Name of the respondent	Question	Answer
		More broadly, relevant information may exist but is distributed across multiple sources and may require reconstruction through analysis. In some cases, full reconstruction may not be possible due to data limitations. In our experience, these constraints can lead to inconsistent application of CDD, reliance on partial indicators, and increased dependence on manual investigation. This may reduce the effectiveness of the risk-based approach by encouraging formalistic compliance rather than substantive risk understanding. The RTS should reflect situations where customer activity is inherently fragmented across multiple channels, relationships, or infrastructures, and therefore requires a holistic assessment to ensure accurate CDD. The RTS should also acknowledge that, in certain cases, complete information may not be available and that obliged entities may rely on a holistic and risk-based assessment using available data, including blockchain analytics, transactional patterns, and customer-provided information. For example, the RTS could include language along the following lines: 1, “For the purposes of Articles 18(c), 19 and 25 to 28, where a customer’s financial activity is conducted across multiple accounts, relationships, or technological environments, obliged entities shall assess source of funds, source of wealth, and transaction behaviour on a

Name of the respondent	Question	Answer
		consolidated and holistic basis, taking into account all relevant information available." 2. "For the purposes of Articles 24 to 28, where complete or fully reliable information is not available, obliged entities may rely on a risk-based and holistic assessment using available data, provided that the assessment enables a coherent and sufficiently complete understanding of the customer's activity." These clarifications would better align the RTS with financial activity, support a more accurate risk-based approach, and increase legal certainty. They would also improve reporting quality and usefulness for financial intelligence units, strengthening AML/CFT effectiveness.
Joint response by CHAINCOMPLY BV & CENSE AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We partially agree. We support the objective of ensuring the effective application of a risk-based approach (RBA) to AML/CFT compliance, as reflected in the inclusion of simplified and enhanced due diligence measures in the draft RTS. However, in our view, the RTS would allow for a more effective application of that approach if they more clearly addressed how the depth and structure of analysis should be applied in practice, in particular where customer activity is inherently fragmented. This concern arises in particular in relation to Article 18(c) and Articles 24–28 of the draft RTS. While the RTS distinguish between different levels of risk, in practice, they may lead to an implicit expectation

Name of the respondent	Question	Answer
		that customer due diligence should be performed at a highly granular level (e.g. at the level of individual accounts, wallets, or transaction chains), regardless of whether such granularity is necessary to achieve a complete understanding of the customer's activity. This may not fully align with the RBA, as it can result in an approach that focuses on the level of detail of individual elements rather than on the overall coherence and risk profile of the customer relationship. In particular, where customer activity is distributed across multiple accounts, relationships, or technological environments, an assessment limited to isolated elements may provide only a partial view and may not allow obliged entities to form an accurate understanding of: the purpose and intended nature of the business relationship; the source of funds and source of wealth; and the consistency of the customer's activity with their risk profile. Such structural characteristics do not, in themselves, indicate elevated ML/TF risk. However, where risk factors are present, a fragmented assessment may reduce the effectiveness of the overall analysis. To support the effective application of the RBA, we suggest that the RTS clarify how obliged entities should

Name of the respondent	Question	Answer
		approach situations where customer activity is distributed or fragmented. In particular: Focus on completeness rather than granularity The RTS could clarify that the objective of CDD is to achieve a coherent and sufficiently complete understanding of the customer's activity, rather than requiring analysis at the level of each individual element, where this does not add value. Recognition of consolidated assessment, where appropriate Where necessary to understand the customer relationship, obliged entities should be able to assess activity on a consolidated basis across multiple accounts, relationships, or environments. Alignment with risk levels already defined in the RTS Such an approach would complement existing SDD and EDD provisions by ensuring that the structure of analysis, not only its intensity, is aligned with the level of risk. Suggested drafting For example, in higher-risk situations requiring enhanced customer due diligence, a holistic assessment may be necessary to achieve a complete and reliable understanding of the customer's activity. Based on our experience, this may arise where activity is distributed across multiple accounts, relationships, or technological environments. In such cases, an assessment limited to individual elements may not provide sufficient insight

Name of the respondent	Question	Answer
		into the origin of funds, the economic rationale of transactions, or the consistency of activity with the customer profile. A consolidated assessment enables obliged entities to identify relevant linkages and form a coherent view of the overall risk, in line with the risk-based approach. For example, the RTS could include language along the following lines: “For the purposes of Articles 18 and 19, obliged entities shall apply customer due diligence measures with the objective of achieving a coherent and sufficiently complete understanding of the customer’s activity, commensurate with the level of risk identified.” “For the purposes of Articles 24 to 28, the level of detail and granularity of customer due diligence measures shall be proportionate to the level of risk identified and shall not require uniform analysis of individual elements in all cases.” “Where higher risk is identified, or where necessary to achieve a sufficiently complete understanding of the customer’s activity, obliged entities shall apply enhanced analysis commensurate with the level of risk.” We believe that such clarification would strengthen the practical application of the RTS by ensuring that the RBA is applied not only in terms of intensity but also in terms of the structure of analysis. This would support a more accurate, coherent, and effective understanding of customer activity while remaining fully aligned with the existing framework of simplified and enhanced due

Name of the respondent	Question	Answer
		diligence, and will also assist further investigation into suspicious activity reporting by financial intelligence units.
Joint response by CHAINCOMPLY BV & CENSE AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, in certain situations, information required for the purposes of customer due diligence (CDD) may not be available in a conventional or directly verifiable format, and the draft RTS do not always provide a sufficiently clear alternative approach. CENSE AG & CHAINCOMLY BV ("we") operate as a RegTech and advisory provider specialising in the analysis of financial activity for onboarding (including source of funds (SoF) and source of wealth (SoW)) and investigations. Based on our experience, the issue is often not that relevant information is unavailable in substance, but that it is not available in a standardised, document-by-document format. In practice, we observe several recurring scenarios: 1. Distributed activity across multiple relationships and channels: A customer's financial activity may be spread across multiple accounts, service providers, platforms, or other infrastructures. In such cases, SoF and SoW cannot be established through a single account statement or isolated record. The relevant information exists, but it is fragmented across different parts of the customer's overall activity. 2. Absence of conventional ownership documentation: In certain environments, there may be no formal document evidencing ownership or control of specific

Name of the respondent	Question	Answer
		accounts or instruments. Instead, ownership may need to be established through alternative means, such as technical verification, transactional linkages, or other reliable indicators. 3. Incomplete or inaccessible historical data: Certain records may not be retrievable due to platform limitations, account closures, or data retention constraints. As a result, a fully documented transaction history may not be available. 4. Limitations in independent verification: Reliable and independent documentation may not exist for all elements of a customer's activity, particularly where activity spans multiple jurisdictions or technological environments. These situations do not necessarily indicate higher ML/TF risk. However, they may prevent compliance where CDD is interpreted as requiring complete documentation for each individual element. In our experience, these limitations can lead to: 1. inconsistent application of CDD across obliged entities; 2. over-reliance on partial indicators or formal documentation that does not reflect the full activity; 3. increased reliance on manual investigation; and 4. barriers to onboarding, even where the overall risk is understood and manageable. They may also reduce the effectiveness of downstream measures. For example, when suspicious activity is

Name of the respondent	Question	Answer
		identified from a limited subset of available information, the resulting report may be less useful than one based on a structured, comprehensive understanding of the customer's activity. To address these situations, we suggest that the RTS explicitly recognise that, where information is not available in a conventional or fully verifiable form, obliged entities may rely on a holistic and risk-based assessment using available data, provided that the overall understanding remains sufficiently complete and reliable. In particular, the RTS could clarify that: 1. Obliged entities are not required to obtain information that is not reasonably accessible or does not exist in documentary form; 2. A combination of sources may be used, including transactional analysis, behavioural patterns, and customer-provided information; and 3. Information may be collected and assessed on a consolidated basis where activity is distributed. For example, the RTS could include: 1. "For the purposes of Articles 18(c) and 24 to 26, where a customer's relevant financial activity is distributed across multiple accounts, relationships, platforms or other channels, obliged entities may collect and assess information on a consolidated or portfolio basis to the extent necessary to satisfy customer due diligence requirements, including source of funds,

Name of the respondent	Question	Answer
		source of wealth, and the purpose and intended nature of the business relationship." 2. "For the purposes of Articles 24 to 28, where certain information is not reasonably available or cannot be obtained in a verifiable documentary form, obliged entities may rely on a risk-based assessment using available information, provided that the assessment enables a sufficiently complete and reliable understanding of the customer's activity." Clarifying these points would improve consistency and support the effective application of the risk-based approach. It would not reduce AML/CFT standards; rather, it would enhance the accuracy, completeness, and operational usefulness of CDD by ensuring that assessments reflect the full scope of customer activity rather than isolated data points.
Joint response by CHAINCOMPLY BV & CENSE AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We support the objective of specifying simplified customer due diligence (CDD) measures in line with Article 28(1) of Regulation (EU) 2024/1624, where lower ML/TF risks have been identified. Based on our experience, the draft RTS could be further strengthened by clarifying how simplified measures may be applied in situations where customer activity is transparent, traceable, and presents a demonstrably low-risk profile, even where such activity is distributed across multiple relationships or technological environments. In the context of customer relationships involving digital asset exposure, simplified customer due diligence measures may be appropriate where the overall activity

Name of the respondent	Question	Answer
		presents a demonstrably low-risk profile. Based on our experience, this may be the case where all of the following conditions are met: 1. The activity is limited in scale and operational complexity; 2. The customer has declared the relevant accounts or relationships used for such activity; 3. Funds are transferred between accounts held in the customer's name with regulated or supervised counterparties; 4. The relevant counterparties are authorised or supervised entities subject to equivalent AML/CFT requirements; and 5. There are no indicators of complexity, heightened risk, including the use of obfuscation techniques, anonymity-enhancing services, sanctions exposure, or links to high-risk jurisdictions. In such cases, the customer's activity is typically transparent, traceable, and conducted within regulated environments, allowing obliged entities to form a sufficiently reliable understanding of the source of funds and the nature of the activity without the need for granular verification of each individual transaction or element. For example, the RTS could include language along the following lines: 1. "For the purposes of Article 23, obliged entities may apply simplified customer due diligence measures

Name of the respondent	Question	Answer
		where the customer's activity presents a low ML/TF risk and is conducted through regulated relationships or counterparties subject to equivalent AML/CFT requirements, provided that the activity is transparent, traceable, and free from indicators of higher risk." 2. "For the purposes of Articles 23 and 24, in the application of simplified customer due diligence, obliged entities may rely on consolidated or summary-level information to establish a sufficiently reliable understanding of the customer's activity, without requiring detailed verification of each individual transaction or relationship, provided that no indicators of higher risk are present." We believe that explicitly recognising these additional simplified due diligence measures would enhance the practical application of the RTS and support a more effective, proportionate, and risk-based AML/CFT framework.
Joint response by CHAINCOMPLY BV & CENSE AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would like to provide the following additional observations in relation to the draft RTS. While the RTS aim to provide clarity on the application of customer due diligence (CDD), certain provisions, particularly Articles 18 and 19, may, in practice, be interpreted as requiring a high level of granularity in all cases. This may create uncertainty as to whether the objective is the collection of detailed information at the level of

Name of the respondent	Question	Answer
		individual elements or the achievement of a coherent and sufficiently complete understanding of the customer relationship. Differences in interpretation may arise in how obliged entities and competent authorities assess the required level of detail, particularly when customer activity is distributed across multiple relationships or channels. Suggested solution “For the purposes of Articles 18 and 19, obliged entities shall apply customer due diligence measures with the objective of achieving a coherent and sufficiently complete understanding of the customer relationship, commensurate with the level of risk identified, and shall not be required to apply uniform levels of granularity in all cases.” Articles 24 to 28 set out detailed expectations regarding the collection and assessment of information. While appropriate in principle, there is a risk that these expectations may be applied in a way that does not sufficiently account for the operational context of obliged entities. In practice, this may result in approaches that are difficult to scale, particularly where similar levels of detail are applied across customer relationships with differing risk profiles. Suggested solution: “For the purposes of Articles 24 to

Name of the respondent	Question	Answer
		28, obliged entities shall apply customer due diligence measures in a manner proportionate to the level of risk identified and consistent with the size, nature, and complexity of their activities." Articles 25 to 28 emphasise the use of reliable and independent information but provide limited guidance on how to proceed where such information is not available in a standardised or documentary form. In practice, relevant information may exist but may be distributed, partial, or not capable of being evidenced through conventional documentation. The absence of explicit clarification may lead to more conservative approaches in situations where a sufficiently reliable understanding could otherwise be achieved. Suggested solution: "For the purposes of Articles 25 to 28, where information relevant to customer due diligence cannot reasonably be obtained in a standardised or documentary form, obliged entities may rely on a risk-based assessment using available information, provided that the overall understanding of the customer relationship is sufficiently complete and reliable." We believe that these clarifications would support the effective implementation of the RTS by reducing uncertainty in its application and ensuring that the risk-based approach is applied in a manner that is both

Name of the respondent	Question	Answer
		proportionate and operationally feasible, while maintaining robust AML/CFT standards.
Joint response by CHAINCOMPLY BV & CENSE AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	18
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Comment on Article 18(c) – Source of Funds The RTS provides a structured framework for identifying the source of funds based on traditional economic categories such as employment income, business revenue, and investment income. In the context of crypto-assets, the source of funds may derive from a combination of activities, including investment returns, decentralised finance-related income, asset disposals, and transfers across multiple addresses. CENSE AG & CHAINCOMLY BV (“we”) note that, due to the nature of distributed ledger technology, customers may operate through multiple wallets or addresses. As a result, information obtained at the level of an individual wallet may not always be sufficient to determine the activity that generated the funds or the means through which those funds were transferred. In line with the RTS’ principle of technological neutrality and the risk-based approach underpinning Regulation (EU) 2024/1624, obliged entities should be able to rely on methods that allow them to form a holistic and accurate understanding of the customer’s source of

Name of the respondent	Question	Answer
		funds, including, where appropriate, by considering aggregated activity associated with the customer. This clarification would support consistent implementation of the RTS without prescribing specific technological solutions.
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	19
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Refined Comment on Article 19 – PEP Identification CENSE AG & CHAINCOMLY BV (“we”) note that the RTS relies on established approaches to identifying politically exposed persons (PEPs), primarily through screening of customer and beneficial owner information against recognised databases of individuals. In crypto-asset environments, however, transactions are conducted through wallet addresses that are not inherently linked to verified identities. While obliged entities are able to screen their customers at onboarding, they may not be able to determine whether counterparties transacting via blockchain addresses are politically exposed persons, due to the absence of reliable and comprehensive mappings between wallet addresses and natural persons. This may limit the ability of obliged entities to identify potential exposure to PEPs beyond the immediate customer relationship, particularly where customers interact with multiple external wallets or self-hosted addresses. In line with the risk-based approach and technological neutrality of the RTS, it may therefore be helpful to clarify that obliged entities may apply additional, risk-

Name of the respondent	Question	Answer
		based measures to identify potential indirect exposure to politically exposed persons, including through analysis of transactional activity and patterns associated with the customer. Such clarification would support effective implementation of PEP identification requirements in crypto-asset contexts without prescribing specific tools or methodologies.
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	20
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 20 - Minimum requirement for customer identification in situations of low risk CENSE AG & CHAINCOMLY BV (“we”) note that, in crypto-asset environments, obliged entities may in practice apply enhanced due diligence measures by default, due to challenges in obtaining a complete and reliable view of customer activity, particularly where multiple wallets or counterparties are involved. This may limit the ability to apply a fully proportionate, risk-based approach, including the use of simplified due diligence measures where appropriate. Clarifying that obliged entities may rely on methods that provide a more holistic understanding of customer activity could support a more accurate risk classification and the consistent application of proportionate due diligence measures.
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	25

Name of the respondent	Question	Answer
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Comment on Article 25 – Additional information on the customer and beneficial owners CENSE AG & CHAINCOMLY BV (“we”) support the objective of Article 25, in particular the requirement for obliged entities to identify and assess in a comprehensive way ML/TF risks associated with the customer, the beneficial owners, and any close relationships known to the obliged entity or that are publicly known. In crypto-asset environments, however, relevant risk indicators may arise not only from the identity of the customer or beneficial owner, but also from the broader pattern of relationships and activity associated with them, including interactions across multiple wallet addresses, self-hosted wallets, and blockchain-visible counterparties. As a result, information available at the level of an individual wallet may not always provide a sufficiently complete basis to assess ML/TF risk in a comprehensive manner, particularly where risk is only identifiable through the aggregation of activity and the analysis of connected relationships. In line with the risk-based approach and technological neutrality underpinning the RTS, it may therefore be helpful to clarify that obliged entities may rely on methods that allow them to consider customer activity and related relationships in an aggregated and contextual manner, where appropriate, in order to meet the objectives of Article 25(c), without prescribing specific technological solutions.

Name of the respondent	Question	Answer
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	25
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Consolidated Comment – Articles 25 to 28 (Enhanced Due Diligence Measures) CENSE AG & CHAINCOMLY BV (“we”) support the objectives set out in Articles 25 to 28, which require obliged entities to obtain additional information in higher-risk situations in order to: verify the authenticity and accuracy of customer and beneficial owner information, assess the reputation of the customer and beneficial owners, identify and assess in a comprehensive manner ML/TF risks, including those arising from known or publicly available relationships, ensure that the intended nature of the business relationship is consistent with the customer’s activity, confirm that the source of funds and source of wealth are derived from lawful activities, and assess whether the overall transactions carried out during the business relationship are credible, consistent and aligned with the customer’s profile. Taken together, these provisions rely on the ability of obliged entities to form a coherent, comprehensive and consistent understanding of the customer’s activity, including the relationship between: the customer’s profile and beneficial ownership structure, the source of funds and source of wealth, the expected and actual transactional behaviour, and

Name of the respondent	Question	Answer
		the broader network of relationships associated with the customer. In crypto-asset environments, however, relevant customer activity may be distributed across multiple wallet addresses, including self-hosted wallets, and may involve interactions with counterparties for which ownership information is not readily available. In addition, risk indicators may arise not only from the customer or beneficial owner directly, but also from transactional relationships and publicly observable patterns of activity. As a result, information available at the level of individual wallet addresses may not always provide a sufficiently complete basis to: identify and assess ML/TF risks in a comprehensive manner, including risks associated with related parties and transactional relationships, verify the consistency between the customer's declared activity and their actual transactional behaviour, assess whether the source of funds and source of wealth are aligned with the overall activity observed, or evaluate the "overall transactions performed during the business relationship" as required under Article 28. In line with the risk-based approach and technological neutrality underpinning the RTS, it may therefore be helpful to clarify that obliged entities may rely on methods that allow them to consider customer activity and related relationships in an aggregated and contextual manner, where appropriate, in order to meet the objectives set out in Articles 25 to 28. Such clarification would support the effective and

Name of the respondent	Question	Answer
		consistent implementation of enhanced due diligence requirements in crypto-asset contexts, while preserving flexibility and avoiding the prescription of specific technological solutions.
Joint response by CHAINCOMPLY BV & CENSE AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	29
Joint response by CHAINCOMPLY BV & CENSE AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Consolidated Comment – Articles 29 & 30 (Sanctions Screening) CENSE AG & CHAINCOMLY BV (“we”) support the requirements set out in Articles 29 and 30, which establish a clear framework for the identification of customers, beneficial owners and controlling persons that are subject to targeted financial sanctions, including through the use of automated screening tools and up-to-date sanctions lists. CENSE AG & CHAINCOMLY BV (“we”) further note the inclusion of digital wallet addresses in the screening criteria where such addresses are available in sanctions lists, which reflects the increasing relevance of crypto-asset activities in the AML/CFT framework. In crypto-asset environments, however, transactions are conducted through wallet addresses that are not inherently linked to verified identities, and customers may operate multiple addresses, including self-hosted wallets. In addition, sanctioned persons may interact with non-listed addresses or use multiple intermediary addresses over time. As a result, screening based solely on identifiers included in sanctions lists, including listed wallet addresses, may not always provide sufficient visibility to

Name of the respondent	Question	Answer
		identify potential exposure to designated persons, bodies or entities, particularly where such exposure arises indirectly through transactional relationships or the use of multiple, non-listed addresses. This is particularly relevant in the context of Article 29, which requires obliged entities to identify not only direct matches but also potential cases of circumvention or evasion of targeted financial sanctions. In line with the risk-based approach and technological neutrality underpinning the RTS, it may therefore be helpful to clarify that obliged entities may complement sanctions screening with additional, risk-based measures, where appropriate, to identify potential indirect exposure to sanctioned persons, including in situations where such exposure may not be identifiable through direct matches against listed identifiers. Such clarification would support the effective and consistent implementation of sanctions screening requirements in crypto-asset contexts, while preserving flexibility and avoiding the prescription of specific technological solutions.

Joint response by CHAINCOMPLY BV & CENSE AG	How would you rate the proposals set out in the draft RTS overall?	Neutral

Name of the respondent	Question	Answer
JUSTE AI LTD.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	N/A
JUSTE AI LTD.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We broadly agree that the draft RTS support the effective application of a risk-based approach by providing clearer expectations regarding customer due diligence, risk assessment, and proportionality of measures. In particular, the emphasis on structured risk assessment, documentation requirements, and the ability to differentiate between lower- and higher-risk situations contributes positively to consistent supervisory expectations across Member States. However, the effectiveness of the risk-based approach in practice will depend significantly on how firms operationalise their risk assessments and internal risk policies. In many non-financial sectors (DNFBPs), challenges do not primarily arise from the absence of regulatory requirements, but from the difficulty of translating written risk policies into consistent operational procedures across staff, channels, and time. To further strengthen the practical implementation of the risk-based approach, consideration could be given

Name of the respondent	Question	Answer
		to encouraging approaches that: ensure that firms' documented risk assessments and internal risk policies are directly linked to operational CDD processes and decision-making; promote traceability between risk policy, applied due diligence measures, and documented outcomes; facilitate supervisory review of how firms' stated risk appetite translates into actual CDD practices. Such approaches would help ensure that the risk-based framework is not only formally documented but also consistently applied in day-to-day operations, thereby improving both compliance effectiveness and supervisory comparability across the Union.
JUSTE AI LTD.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	N/A
JUSTE AI LTD.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	In addition to the simplified due diligence measures already outlined in the draft RTS, consideration could be given to explicitly recognising risk-screening-first approaches, combined with real-time evaluation against the obliged entity's approved risk assessment and internal risk policy, as an eligible basis for applying

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	simplified due diligence in demonstrably low-risk situations. In many non-financial sectors, particularly DNFBPs, the primary operational challenge is not the absence of identification procedures, but the need to determine quickly and proportionately whether a customer or transaction presents elevated ML/TF risk before applying more resource-intensive due diligence steps. This challenge is especially pronounced in point-of-sale or client-facing environments, where onboarding decisions must often be taken in time-sensitive circumstances. Allowing obliged entities to perform initial intelligence-based risk screening — for example sanctions, PEP, and adverse media screening — prior to the completion of full identification procedures can enable firms to determine rapidly whether simplified due diligence may be appropriate, escalate higher-risk cases immediately, and apply full identification procedures proportionately. The RTS could therefore clarify that, where an obliged entity performs reliable and up-to-date screening against sanctions lists, PEP databases, and relevant adverse information sources, and where no material risk indicators are identified, simplified due diligence measures may be applied where the customer is classified as low risk in accordance with the obliged entity's approved risk assessment and internal risk policy, provided that:

Name of the respondent	Question	Answer
		the screening methodology is documented, regularly updated, and subject to governance oversight; screening results are evaluated in real time against the firm's documented risk thresholds, escalation rules, and customer risk classifications; the decision to apply simplified due diligence is recorded, traceable, and attributable to the applicable policy framework; enhanced due diligence measures are triggered immediately where risk indicators subsequently arise or the customer risk profile changes. Recognising such intelligence-first screening approaches would strengthen the proportional application of the risk-based approach by enabling obliged entities, particularly smaller DNFBPs, to allocate compliance resources more effectively toward higher-risk cases while maintaining supervisory transparency. In particular, linking screening outcomes directly to the firm's documented risk policy would ensure that eligibility for simplified due diligence is determined not only by the absence of risk indicators, but also by the entity's approved risk tolerance and sector-specific risk considerations. Such clarification would improve both the effectiveness and operational consistency of AML/CFT controls across

Name of the respondent	Question	Answer
		Member States, while ensuring that simplified due diligence decisions remain clearly anchored in the obliged entity's own risk policy and fully reviewable by supervisors.
JUSTE AI LTD.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	With reference to Article 28(1), an important practical challenge affecting the consistent application of customer due diligence requirements across non-financial obliged entities (DNFBPs) is the gap between documented risk assessments and internal risk policies, on the one hand, and their operational application in day-to-day onboarding and customer interaction processes, on the other. In many DNFBP sectors, firms maintain formally compliant risk assessments and policies, yet operational procedures at the point of customer interaction — particularly in decentralised or point-of-sale environments — may not consistently reflect the risk thresholds, escalation criteria, or proportionality principles defined in those policies. This can result in both over-application of due diligence measures in demonstrably low-risk situations and insufficient escalation in higher-risk cases, reducing the effectiveness of the risk-based approach. To strengthen the effectiveness and supervisory comparability of the framework established under Article 28(1), consideration could be given to clarifying that obliged entities should ensure operational traceability between their approved risk assessment, internal risk policy, and the due diligence measures

Name of the respondent	Question	Answer
		applied in practice, including the documentation of decision rationale where simplified or enhanced measures are applied. Such clarification would not introduce additional substantive obligations but would support more consistent implementation of the existing risk-based requirements across Member States. As a practical solution, the RTS could encourage approaches whereby: customer due diligence decisions are demonstrably linked to the entity's approved risk assessment and internal risk policy; screening and risk classification outcomes are recorded together with the applicable policy basis for the decision; supervisory authorities are able, where necessary, to review the alignment between the firm's stated risk appetite and the due diligence measures applied in practice. Encouraging this form of policy-to-practice traceability would improve the effectiveness of the risk-based approach, support proportionality in customer due diligence, and enhance supervisory transparency without imposing disproportionate administrative burden on obliged entities.

Name of the respondent	Question	Answer
JUSTE AI LTD.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
JUSTE AI LTD.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	28
JUSTE AI LTD.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	With reference to the provisions in the draft RTS concerning the application of simplified due diligence under Article 28(1), consideration could be given to clarifying that obliged entities should maintain documented traceability between their approved risk assessment, internal risk policy, and the due diligence measures applied in practice, particularly where simplified due diligence measures are applied. In practice, supervisory challenges often arise not from the absence of formal risk assessments, but from the difficulty of demonstrating how the firm's documented risk policy is operationalised in customer due diligence decision-making. Explicitly recognising the importance of maintaining traceable linkage between policy-defined risk thresholds, customer risk classification, and the resulting due diligence measures would support consistent supervisory assessment across Member States without introducing additional substantive obligations. Suggested drafting clarification The RTS could include language stating that, where simplified due diligence measures are applied, obliged

Name of the respondent	Question	Answer
		entities should be able to demonstrate that the decision is based on the customer's risk classification as determined in accordance with the entity's documented risk assessment and internal risk policy, and that the decision rationale is recorded and reviewable. Rationale Such clarification would: - strengthen the operational application of the risk-based approach; - improve supervisory comparability of CDD practices across sectors and jurisdictions; - support proportionality by ensuring that simplified due diligence decisions are demonstrably grounded in the entity's own approved risk framework.
JUSTE AI LTD.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
JUSTE AI LTD.	Do you have any comments on the Annex in the draft RTS?	Yes
JUSTE AI LTD.	Please share your comments below.	The Annex could clarify that the information fields and documentation elements used to record customer due diligence outcomes should enable traceability between the obliged entity's approved risk assessment and internal risk policy, the customer risk classification applied, and the due diligence measures performed. Such traceability would support supervisory review of

Name of the respondent	Question	Answer
		the operational application of the risk-based approach without introducing additional substantive obligations.
JUSTE AI LTD.	How would you rate the proposals set out in the draft RTS overall?	Good
KDPW S.A.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In relation to the proposed Article 5 we would like to observe, that obliged entities do not possess the necessary information and tools (such as those held by state authorities) to ensure that they are aware of all the citizenships of the client/person acting on their behalf/beneficial owner. Therefore, in our opinion, the provision should not impose a requirement to achieve a specific result, but rather to make appropriate efforts to obtain such information (obligation of due diligence). The requirements included in Article 8 should consider the fact that it is difficult for obliged entities to assess whether the source of information is reliable and independent or not when they seek for the information about foreign persons in foreign sources of information. The requirements to verify whether the information or data provided had to undergo certain checks before being provided and the ease with which the identity information or data provided can be forged are excessive. Obliged entities are not law enforcement agencies but business entities which offer their services to customers. The assessment of information sources would be more effective if, as provided for in the Article 28(1) of the AMLR, the regulatory technical standards specified the reliable and independent sources of information that can be used to verify the identification data. Such a specification of independent sources shouldn’t be

Name of the respondent	Question	Answer
		comprehensive (limited) and would need annual updates. It would, nevertheless, definitely help in identifying independent sources in foreign jurisdictions. The requirements included in Article 11.4 are, in our opinion, excessive, as the assessment of these issues may require specialistic knowledge of different legal regimes and market practices. Obliged entities are not law enforcement agencies but business entities which offer their services to customers. Moreover, acquiring such knowledge is costly.
KDPW S.A.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	NA
KDPW S.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In relation to the proposed Article 5 we would like to observe, that obliged entities do not possess the necessary information and tools (such as those held by state authorities) to ensure that they are aware of all the citizenships of the client/person acting on their behalf/beneficial owner. Therefore, in our opinion, the provision should not impose a requirement to achieve a specific result, but rather to make appropriate efforts to obtain such information (obligation of due diligence). Taking into account the fact that: 1/ processing and collecting the data is protected by the Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of

Name of the respondent	Question	Answer
		natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation) and 2/ restrictions of freedom to conduct business activity (guaranteed by the Community Treaties) should be proportionate and justified - we see no justification for central securities depositories (CSDs) to apply due diligence measures in relation to the clients of financial institutions with which the CSD has no contractual relationship and which may come from different countries, at least in the case where such a client should be verified by another obliged institution. In our opinion there is no justified reason to demand from the line of intermediaries registering the same securities in the value chain to gather and collect the same information about final owners of these securities, as well as about all the intermediaries registering these securities in the chain (which are all financial institutions being obliged entities temselves). At the same time there is no other possibility for a CSD to get information about the final owner of securities (held through the chain of intermediaries) as through the same chain of intermediaries. Considering this, in our opinion the information about final owner of securities registered with a CSD and possessed through the chain of intermediaries shouldn't be collected and kept by all the intermediaries in the chain but only by the financial institution which has a direct relationship with its client. It means that AML obligations shouldn't be imposed on

Name of the respondent	Question	Answer
		CSDs and other intermediaries in the chain but only on the obliged institution who maintains the direct relationship with the client who has the final interest in the securities registered with the CSD (final client). Obliged entities which provide services to other obliged entities shouldn't be subjects of due diligence measures in relation to all the financial institutions in the chain but only in relation with their direct clients. The same persons shouldn't be verified several times in relation to the same transaction, money or securities by several entities, including those which do not have any direct relationships with them. Otherwise it would be disproportionate infringement of the right to privacy and information protection guaranteed by the General Data Protection Regulation. At the same time it should be noted that information about the clients' money and financial instruments is protected by national laws imposing on banks and financial institutions an obligation to maintain professional secrecy. AML regulations do not and cannot effectively exclude this right so simplified measures provided by article 22 may not work in practice until necessary changes into national law are introduced (please note that according to article 75 section 2 of Regulation (UE) 2024/1624, responsibility for compliance with requirements arising from Union or national law lies with the participants in the information exchange partnership). Summing up, in our opinion there is a justified need to introduce into section 5 additional simplification for CSDs and intermediaries holding securities in a value

Name of the respondent	Question	Answer
		chain, e.g. by adding the following provision: When securities are registered with a CSD and held through the chain of intermediaries, due dilligence measures are applied by the CSD as well as by each financial institution in the chain exclusively in the relationship with its direct customer, at least in the case when it is another obliged institution. The requirement of customer identification and verification is met as long as each entity in the chain has identified its direct customer, and if other persons enter into agreements via the direct customer – in the case where this direct customer is another obliged institution..
KDPW S.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Simplified due diligence measures — specifically, those set out in Article 22 of the draft Regulatory Technical Standards (RTS) under Article 28(1) of the AMLR for credit institutions — should also apply to central securities depositories (CSDs), as well as to investment firms and custodian banks (although the latter are also credit institutions). A number of CSDs have established CSD links with each other. These links are governed by the provisions of Article 2(1)(29–33), Article 48 and Articles 50–52 of EU Regulation No. 909/2014 on improving securities settlement in the European Union and on central securities depositories, and amending Directives 98/26/EC and 2014/65/EU, as well as Regulation (EU) No 236/2012 (hereinafter referred to as 'CSDR'). CSD links enable participants and customers of participants in one CSD to access securities registered in another CSD that is party to such a link. Simultaneously, they

Name of the respondent	Question	Answer
		facilitate cross-border transfers of securities between these CSDs. CSD links are established on the basis of specific securities accounts (so-called omnibus accounts), which one CSD opens in its system for the other CSD. These accounts collectively record the securities purchased by participants in the CSD holding the omnibus account, as well as those purchased by investors through these participants. It is important to note that omnibus accounts are also used in domestic securities settlement systems operated by individual CSDs. CSDs maintain such accounts for their domestic participants (investment firms and custodian banks), primarily for the purpose of registering securities belonging to persons who are, either directly or indirectly, clients of these participants. In accordance with Articles 38(2) and 38(4) of the CSDR, a CSD Is required to maintain records and accounts that allow any participant to hold in one securities account the securities that belong to different clients of that participant. These records and accounts are only to be maintained in a manner that provides for greater segregation of individual customers' or groups of customers' securities if the participant requests it. Omnibus accounts are not only maintained by CSDs, but also by investment firms and custodian banks for other investment firms, custodian banks, or even CSDs. As a result, multi-level chains of interconnected omnibus accounts are established, on which the same securities are recorded. In some cases, the securities recorded in an omnibus account held by a CSD, custodian bank, or investment firm may not belong to the account holder's

Name of the respondent	Question	Answer
		clients. Instead, they may belong to individuals who are clients of the client of the omnibus account holder or even further down the chain of records. Typically, these chains link omnibus accounts held in multiple jurisdictions. The persons entitled to the securities recorded in such accounts can be identified at the lowest level of the chain. Therefore, it is important to note that a CSD, custodian bank, or investment firm operating omnibus accounts may not be able to apply the customer due diligence (CDD) measures referred to in Article 20(1)(h) of the AMLR. This is due to the fact that the holder of an omnibus account may not be aware of the identity of the persons for whose benefit the transaction is carried out through this account. Instead, the holder of an omnibus account may only have knowledge of the next intermediary in the chain of records. This intermediary may, in turn, act for another intermediary, which still does not operate at the lowest level of the chain and does not identify such persons, etc. According to our information, omnibus accounts are operated exclusively for intermediaries that are CSDs, custodian banks, or investment firms, and therefore solely for other obliged entities. For these reasons, CSDs and investment firms should be permitted to use simplified due diligence methods and should be explicitly spelled out in Section 5 of the draft RTS under Article 28(1) of the AMLR.
KDPW S.A.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	NA

Name of the respondent	Question	Answer
	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	
KDPW S.A.	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
KDPW S.A.	Please justify your answer to the previous question and provide evidence where possible.	I don't have that information. However, the costs of these changes appear significant.
Kerberos Compliance-Managementsysteme GmbH	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Die Bemühungen der AMLA um eine unionsweit einheitlichere Ausgestaltung des AML/CFT-Rahmens werden ausdrücklich begrüßt. Gleichwohl erscheint fraglich, ob einzelne vorgeschlagene Anforderungen in ihrer derzeitigen Ausgestaltung sektorübergreifend gleichermaßen sach-gerecht angewendet werden können. Dies gilt insbesondere für Vorgaben, die funktional den Einsatz oder die Steuerung eigener technischer Systeme voraussetzen, etwa im Zusammenhang mit Sanktionsscreening (Artikel 29, 30), Transaktionszuordnung oder Identifizierungsverfahren. Insoweit wird auf die unter Ziffer 2 dargestellten Ausführungen verwiesen. Die dort angesprochenen Punkte richten sich nicht gegen die regulatorische Zielsetzung als solche, sondern betreffen die Frage der praktischen Reichweite entsprechender Anforderungen gegenüber Ver-pflichteten mit begrenzten Einflussmöglichkeiten auf die zugrunde liegenden Systeme und Prozesse. Einzelne Regelungselemente wirken derzeit erkennbar an Strukturen des Finanzsektors orientiert und berücksichtigen die operativen Besonderheiten anderer Geschäftsmodelle nicht oder nur eingeschränkt.

Name of the respondent	Question	Answer
Kerberos Compliance-Managementsysteme GmbH	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Für bestimmte arbeitsteilige Geschäftsmodelle bieten die Vorschläge noch nicht in allen Fällen die erforderliche Flexibilität. Dies betrifft insbesondere Konstellationen, in denen Verpflichtete zwar in Kundenkontakt, Vertrieb, Vermittlung oder Leistungserbringung eingebunden sind, die maßgeblichen Systeme, Daten oder Prozesse zur Erfüllung einzelner CDD-Anforderungen je-doch durch ein anderes Unternehmen gesteuert werden. Beispiele sind Geldtransfer-Agenten, White-Label-Strukturen bei Krypto-Asset-Dienstleistern, Plattform- oder Franchisemodelle so-wie Vermittler im Glücksspielsektor. Der RTS sollte klarstellen, wie CDD-Pflichten in solchen Konstellationen wirksam und nachweisbar erfüllt werden können. Die unter Ziffer 2.1 bis 2.5 dargelegten Änderungsvorschläge adressieren dieses Defizit.
Kerberos Compliance-Managementsysteme GmbH	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Der RTS-Entwurf fördert den risikobasierten Ansatz im Grundsatz wirksam. Die fehlende Berücksichtigung der operativen Stellung des Verpflichteten in der Leistungserbringungskette schränkt diesen Ansatz jedoch für Konstellationen ein, in denen die tatsächliche Handlungsfähigkeit nicht mit der formalen Pflichteninhaberschaft übereinstimmt. Der risikobasierte Ansatz kann seine volle Wirkung nur entfalten, wenn Anforderungen an Akteure gestellt werden, die über die technischen und organisatorischen Möglichkeiten zu ihrer Erfüllung verfügen.
Kerberos Compliance-Managementsysteme GmbH	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service	Regelmäßig nicht eigenständig verfügbar können insbesondere solche Informationen sein, die in zentralen oder von Dritten betriebenen Systemen

Name of the respondent	Question	Answer
	provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	verwaltet werden. Dies betrifft je nach Geschäftsmodell Kundendaten, Transaktionshistorien, Aktualisierungsinformationen, Screening-Ergebnisse oder technische Nachweise zur Identifizierung und Verifizierung. Als alternative Lösung sollten organisatorische Vorkehrungen ausdrücklich anerkannt werden, insbesondere vertraglich geregelte Informations- und Mitteilungspflichten, dokumentierter Zugriff auf relevante Ergebnisse, klare Verantwortungszuweisung sowie risikobasierte Kontrollmechanismen.
Kerberos Compliance-Managementsysteme GmbH	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Die Anerkennung vereinfachter Sorgfaltspflichtmaßnahmen durch die AMLA sowie der in der AMLR bereits angelegte risikobasierte Flexibilitätsansatz werden ausdrücklich begrüßt. Aus Sicht der Praxis besteht jedoch weiterer Konkretisierungsbedarf hinsichtlich der Anwendung vereinfachter Maßnahmen in Konstellationen mit nachvollziehbar geringem und hinreichend beherrschbarem ML/TF-Risiko, insbesondere außerhalb klassischer Finanzmarktstrukturen und in digital geprägten Geschäftsmodellen. Eine weitergehende Konkretisierung vereinfachter Maßnahmen könnte insbesondere für Konstellationen erwogen werden, in denen Transaktionen nur geringe wirtschaftliche Relevanz auf-weisen, unterhalb regulatorischer Schwellenwerte bleiben und zugleich Zahlungsinstrumente oder Zahlungsdienstleister genutzt werden, die ihrerseits bereits regulatorischen AML/CFT-Anforderungen unterliegen. Gleiches gilt für Geschäftsbeziehungen mit begrenztem Umfang und

Name of the respondent	Question	Answer
		ohne erkennbare Risikoindikatoren. Darüber hinaus könnte geprüft werden, ob Anforderungen zur Feststellung von Zweck und angestrebter Art der Geschäftsbeziehung in solchen Geschäftsmodellen vereinfacht ausgestaltet werden können, in denen der wirtschaftliche Hintergrund und der Nutzungszweck typischer-weise eindeutig sind. In bestimmten Konstellationen erscheint die wiederholte Erhebung zusätzlicher Detailinformationen bei Niedrigrisikobeziehungen nur eingeschränkt geeignet, einen zusätzlichen präventiven Erkenntnisgewinn zu erzeugen. Ferner erscheint fraglich, ob ein überwiegend starr periodischer Aktualisierungsansatz in hochvolumigen digitalen Geschäftsmodellen stets den risikobasierten Ansatz der AMLR bestmöglich abbildet. Vor diesem Hintergrund könnte klargestellt werden, dass die Aktualisierung von Identifizierungs- und sonstigen Sorgfaltspflichtinformationen bei Niedrigrisikobeziehungen risikobasiert erfolgen kann, insbesondere anlassbezogen bei relevanten Änderungen, ungewöhnlichen Aktivitäten oder sonstigen Risikoindikatoren, sofern zwischenzeitlich keine wesentlichen risiko-relevanten Veränderungen eingetreten sind.
Kerberos Compliance-Managementsysteme GmbH	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Kerberos Compliance-Managementsysteme GmbH	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Kerberos Compliance-Managementsysteme GmbH	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 1 des RTS-Entwurfs verankert den risikobasierten Ansatz als Leitprinzip, konkretisiert jedoch nicht, dass Umfang und Art der Anforderungen sich auch nach der strukturellen Position des Verpflichteten in der Leistungserbringungskette richten sollten. Das Fehlen dieser Dimension führt dazu, dass nachfolgende Bestimmungen für alle Verpflichteten einheitlich gelten, obwohl die tatsächlichen Handlungsmöglichkeiten grundlegend verschieden ausgeprägt sein können. Verpflichtete, die über Zugang zu notwendigen Systemen verfügen, diese jedoch durch einen anderen Akteur gesteuert werden, werden denselben Anforderungen unterworfen wie solche Verpflichteten mit eigener technischer Infrastruktur. Die Compliance-Last übersteigt die tat-sächliche Risikoexposition und Handlungsfähigkeit dieser Akteure. Art. 1 des RTS-Entwurfs verankert den risikobasierten Ansatz als Leitprinzip und bestimmt, dass Umfang und Art der Maßnahmen „der Art und Höhe des ermittelten Risikos angemessen" sein müssen. Diese Formulierung erfasst die Risikodimension, lässt jedoch die Frage offen, ob bei der Bestimmung von Umfang und Art der Anforderungen auch die tatsächlichen Handlungsmöglichkeiten des adressierten Verpflichteten zu berücksichtigen sind. Die nachfolgenden Bestimmungen, insbesondere zu Identifizierung (Art. 6, 7), Sanktionsscreening (Art. 29, 30) und Datenaktualisierung (Art. 23), setzen

Name of the respondent	Question	Answer
		durchgehend voraus, dass der Verpflichtete über eigenständigen Zugang zu den maßgeblichen Systemen und Daten verfügt. Für Verpflichtete, die als Vermittler oder Agent auf die Infrastruktur eines anderen Akteurs angewiesen sind, bleibt die Reichweite dieser Pflichten ungeklärt. Änderungsvorschlag: Art. 1 sollte durch folgenden Satz ergänzt werden: „Bei der Bestimmung von Umfang und Art der Anforderungen sollte die tatsächliche operative Stellung des verpflichteten Unternehmens so-wie dessen Einflussmöglichkeiten auf die maßgeblichen Systeme und Prozesse, die zur Erfüllung der in Rede stehenden Pflichten erforderlich sind, berücksichtigt werden.”
Kerberos Compliance-Managementsysteme GmbH	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	30
Kerberos Compliance-Managementsysteme GmbH	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Art. 29 und 30 RTS-E konkretisieren die Anforderungen an die Prüfung, ob Kunden, wirtschaftlich Berechtigte oder relevante kontrollierende Personen von gezielten Finanzsanktionen betroffen sind. Der RTS-Entwurf verlangt dabei u. a. Screening- und Verifizierungsprozesse während des Onboardings, vor Begründung einer Geschäftsbeziehung oder Durchführung einer gelegentli-chen Transaktion sowie bei relevanten Änderungen der CDD-Daten. Diese Anforderungen sind dem Grunde nach sachgerecht. In arbeitsteiligen Geschäftsmodellen stellt sich jedoch die Frage, welcher Akteur die Screeningpflicht praktisch erfüllen kann und wie die

Name of the respondent	Question	Answer
		Erfüllung nachzuweisen ist. Wenn ein Verpflichteter Kundendaten oder Transaktionen aus-schließlich über ein zentrales System eines anderen Unternehmens verarbeitet, kann er Scree-ningprozesse regelmäßig nicht eigenständig in dieses System integrieren oder technisch steu-ern. Entscheidend für die GW/TF-Prävention ist, dass das Screening tatsächlich, vollständig und rechtzeitig durchgeführt wird. Weniger entscheidend ist, ob die technische Durchführung bei jedem einzelnen beteiligten Verpflichteten oder bei dem systemverantwortlichen Unternehmen erfolgt. Der RTS sollte daher klarstellen, dass Screeningpflichten in solchen Konstellationen auch durch angemessene organisatorische Vorkehrungen erfüllt werden können, insbesondere durch vertragliche Sicherstellung, dokumentierte Prozessverantwortung, Zugriff auf Screening-Ergebnisse und regelmäßige Kontroll- oder Nachweismechanismen. Änderungsvorschlag: Art. 30 sollte durch einen Hinweis ergänzt werden, dass in Konstellationen ohne eigene Sys-teminfrastruktur die Screening-Pflicht durch angemessene organisatorische Vorkehrungen er-füllt werden kann, ggf. durch vertragliche oder aufsichtliche Sicherstellung, dass das system-verantwortliche Unternehmen das Screening ordnungsgemäß durchführt, und durch Dokumen-tation der verfügbaren Ergebnisse.

Name of the respondent	Question	Answer
Kerberos Compliance-Managementsysteme GmbH	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Kerberos Compliance-Managementsysteme GmbH	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 7 RTS-Entwurf regelt die Verwendung von Remote-Lösungen zur Verifizierung der Identität natürlicher Personen. Nach der Systematik der Vorschrift sollen grundsätzlich elektronische Identifizierungsmittel oder einschlägige qualifizierte Vertrauensdienste auf die Sicherheitsstu-fen „erheblich“ oder „hoch“ verwendet werden. Alternative Remote-Verfahren kommen demge-genüber nur in Betracht, wenn eine solche Lösung nicht verfügbar ist oder vernünftigerweise nicht erwartet werden kann. Diese Ausgestaltung ist dem Grunde nach nachvollziehbar, da sie ein hohes Sicherheitsniveau bei der Remote-Identifizierung fördern soll. Zugleich wirft die Formulierung „nicht verfügbar ist oder vernünftigerweise nicht erwartet werden kann“ erhebliche Auslegungs- und Umsetzungs-fragen auf. Der RTS-Entwurf konkretisiert nicht, aus welcher Perspektive die Verfügbarkeit oder Zumutbarkeit zu beurteilen ist: aus Sicht des Verpflichteten, des Kunden, des jeweiligen Mit-gliedstaats, des konkreten Geschäftsmodells oder des betroffenen Produkt- bzw. Vertriebska-nals. Diese Unklarheit kann in der Praxis zu erheblichen Rechtsunsicherheiten führen. Unklar bleibt insbesondere, ob eine eIDAS-konforme Lösung bereits dann als verfügbar gilt, wenn sie tech-nisch am Markt angeboten wird, oder erst dann, wenn sie für den jeweiligen Verpflichteten, des-sen Kundengruppe und

Name of the respondent	Question	Answer
		dessen Geschäftsmodell praktisch einsetzbar, wirtschaftlich zumutbar und kundenadäquat erreichbar ist. Ebenso bleibt offen, ob „vernünftigerweise nicht erwartet werden kann“ technische, rechtliche, wirtschaftliche, kundenseitige oder operative Hindernisse erfasst. Diese Fragen sind für sämtliche Verpflichtetengruppen relevant. Betroffen sind nicht nur einzel-ne Sektoren, sondern alle Verpflichteten, die Kunden remote identifizieren oder verifizieren. Je nach Geschäftsmodell können sehr unterschiedliche praktische Hindernisse bestehen, etwa fehlende Verbreitung bestimmter eIDAS-Mittel in einzelnen Mitgliedstaaten, eingeschränkte Nutzbarkeit für bestimmte Kundengruppen, fehlende technische Integrationsfähigkeit in beste-hende Systeme, unverhältnismäßige Implementierungskosten bei geringem Risikoprofil oder Abhängigkeiten von Plattform-, Agenten-, White-Label- oder Outsourcing-Strukturen. Ohne weitere Konkretisierung besteht das Risiko divergierender Auslegung durch Verpflichtete und Aufsichtsbehörden. Einige Verpflichtete könnten aus Vorsicht ausschließlich eIDAS-konforme Lösungen einsetzen, auch wenn dies für bestimmte Kundengruppen oder Geschäfts-modelle praktisch kaum umsetzbar ist. Andere könnten alternative Remote-Verfahren weiter nutzen und sich auf eine weite Auslegung der fehlenden Verfügbarkeit oder Zumutbarkeit beru-fen. Dies würde den Harmonisierungszweck des RTS schwächen.

Name of the respondent	Question	Answer
		Zudem sollte klargestellt werden, dass alternative Remote-Verfahren nicht als qualitativ nach-rangige Ausnahme verstanden werden dürfen, sofern sie die in Art. 7 RTS-E vorgesehenen Si-cherheitsanforderungen erfüllen. Entscheidend sollte sein, dass das gewählte Verfahren eine zuverlässige und unabhängige Verifizierung ermöglicht und dem jeweiligen ML/TF-Risiko ange-messen ist. Eine starre faktische Vorrangstellung bestimmter technischer Lösungen könnte andernfalls zu unverhältnismäßigen Implementierungsanforderungen führen, ohne dass in je-dem Fall ein entsprechender zusätzlicher präventiver Nutzen erkennbar wäre. Änderungsvorschlag: Art. 7 RTS-E sollte durch eine Klarstellung ergänzt werden, wann eine eIDAS-konforme Lösung als „nicht verfügbar“ gilt oder wann ihre Verwendung „vernünftigerweise nicht erwartet werden kann“. Dabei sollten insbesondere technische, rechtliche, operative, wirtschaftliche und kun-denseitige Umstände berücksichtigt werden. Zudem sollte in einem Erwägungsgrund klargestellt werden, dass die Beurteilung risikobasiert und bezogen auf das konkrete Geschäftsmodell, den Vertriebskanal, die betroffene Kunden-gruppe und die tatsächlichen Integrationsmöglichkeiten des Verpflichteten zu erfolgen hat. Al-ternative Remote-Verfahren sollten zulässig bleiben, sofern sie die Anforderungen des Art. 7 RTS-E erfüllen und ein dem Risiko angemessenes Sicherheitsniveau gewährleisten.

Name of the respondent	Question	Answer
Kerberos Compliance-Managementsysteme GmbH	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	23
Kerberos Compliance-Managementsysteme GmbH	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Art. 23 RTS-E regelt die Aktualisierung von Kundendaten in Niedrigrisikosituationen und verlangt, dass Verpflichtete die Beziehung überwachen, um sich davon zu überzeugen, dass keine für die Risikobewertung relevanten Änderungen eingetreten sind, keine Aktualisierung auslösenden Ereignisse stattgefunden haben und keine verdächtigen oder ungewöhnlichen Transaktionen festgestellt wurden. Diese Anforderung ist im Grundsatz nachvollziehbar. In arbeitsteiligen Geschäftsmodellen kann jedoch unklar sein, wie ein Verpflichteter dieser Pflicht nachkommen soll, wenn die maßgebli-chen Kundendaten, Transaktionsdaten oder Änderungsinformationen nicht in seiner eigenen Datenbasis geführt werden. Dies betrifft nicht nur Vermittler von Glücksspiel, sondern auch Agenten-, Plattform-, Franchise- und White-Label-Strukturen. Änderungsvorschlag: Art. 23 sollte klarstellen, dass die Aktualisierungspflicht in Konstellationen ohne eigenständige Datenbasis durch angemessene organisatorische Vorkehrungen erfüllt werden kann, insbeson-dere durch Sicherstellung, dass wesentliche Änderungen im Kundenstatus vom systemführen-den Unternehmen zeitnah mitgeteilt werden. Es sollten keine Aktualisierungspflichten begrün-det werden, die über das operativ Erfüllbare hinausgehen.

Name of the respondent	Question	Answer
Kerberos Compliance-Managementsysteme GmbH	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Kerberos Compliance-Managementsysteme GmbH	Please specify which recital you refer to, and share your comments below.	Art. 28 Abs. 1 AMLR verpflichtet die AMLA, bei der Ausgestaltung der CDD-Anforderungen „die Höhe des Risikos, das mit dem jeweiligen Geschäftsmodell der verschiedenen Arten von Ver-pflichteten einhergeht“ zu berücksichtigen. Diese Vorgabe beschränkt sich nicht auf eine sektorielle Differenzierung, sondern verlangt auch eine Differenzierung innerhalb von Sektoren, so-weit Verpflichtete trotz gleicher Sektorzugehörigkeit über unterschiedliche Geschäftsmodelle und operative Handlungsmöglichkeiten verfügen. Der Glücksspielsektor, in dem Vermittler ohne eigene steuerbare Systeminfrastruktur neben Veranstaltern als Verpflichtete auftreten, illustriert dieses Defizit exemplarisch. Vergleichbare strukturelle Differenzierungsbedarfe bestehen bei Geldtransferdienstleistern, deren Agenten auf die Systeme des Hauptdienstleisters angewiesen sind, sowie bei Krypto-Asset-Dienstleistern, die als White-Label-Anbieter ohne eigene technische Infrastruktur operieren. Die Entscheidung der AMLA, einen horizontalen Ansatz zu verfolgen und sektorspezifische Bestimmungen auf das Notwendige zu beschränken (Option B), erscheint sachgerecht und ist vor dem Hintergrund des Verhältnismäßigkeitsgrundsatzes zu begrüßen. Art. 28 Abs. 1 AMLR verpflichtet die AMLA, bei der Ausgestaltung der CDD-Anforderungen „die Höhe des Risikos, das mit dem jeweiligen Geschäftsmodell der

Name of the respondent	Question	Answer
		verschiedenen Arten von Ver-pflichteten einhergeht“ zu berücksichtigen. Diese Vorgabe beschränkt sich nicht auf eine sektorielle Differenzierung, sondern verlangt auch eine Differenzierung innerhalb von Sektoren, soweit Verpflichtete trotz gleicher Sektorzugehörigkeit über unterschiedliche Geschäftsmodelle und operative Handlungsmöglichkeiten verfügen. Der Glücksspielsektor, in dem Vermittler ohne eigene steuerbare Systeminfrastruktur neben Veranstaltern als Verpflichtete auftreten, illustriert dieses Defizit exemplarisch. Dem RTS-Entwurf fehlt für solche Konstellationen eine normative Antwort. Auf übergeordneter Ebene stellt sich zudem die Frage, ob einzelne Regelungselemente des RTS-Entwurfs tatsächlich zu einer verbesserten Bekämpfung von Geldwäsche und Terrorismusfinanzierung beitragen oder primär Dokumentations- und Prozessaufwand erzeugen, ohne die Risikosteuerung substanziell zu stärken.
Kerberos Compliance-Managementsysteme GmbH	Do you have any comments on the Annex in the draft RTS?	No
Kerberos Compliance-Managementsysteme GmbH	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Kharon	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	n/a

Name of the respondent	Question	Answer
	Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Kharon	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Kharon welcomes the opportunity to provide feedback on the draft Regulatory Technical Standards (RTS) regarding Customer Due Diligence (CDD). As the European Union moves toward a harmonized Single Rulebook under the new AML Authority (AMLA), it is imperative that technical standards move beyond the "static" compliance models of the past. By embracing modernisation, the EU can reduce costs, lessen burdens, and most importantly, ensure that AMLA fulfills its ultimate purpose: safeguarding the European financial system. The launch of AMLA represents a generational opportunity to modernise the EU's defences. To be successful, the RTS must bridge the gap between regulatory intent and technological capability. Kharon advocates for a final standard that rewards transparency and intelligence-led discovery over the mere collection of static data untethered to indicia of illicit activity and evasion. This response outlines how the RTS can be strengthened to ensure that "directly applicable requirements" translate into effective, intelligence-led outcomes rather than low-value, administrative box-ticking. Articles 8 & 10: The draft RTS correctly emphasises the collection of information for identifying customers and beneficial owners. However, a modernised framework must acknowledge that statutory documents (e.g., corporate registries) are increasingly insufficient,

Name of the respondent	Question	Answer
		especially when evaluated in isolation, for identifying risk in a globalised economy with sophisticated financial crime and national security threat actors. Our research shows that illicit actors frequently exploit the veneer of legitimacy that is provided by official registries. Reliance on these documents alone creates a false sense of security. The RTS should explicitly encourage Obliged Entities (OEs) to supplement official records with independent, high-quality Open-Source Intelligence (OSINT). Verification should focus on "effective control" and "shadow management" indicators that are rarely, if ever, captured in standard incorporation papers but are discoverable through deep-web and network analysis using all types of publicly available information. Articles 10-13, 20, 21, 23, 29, 30: The current regulatory regime overemphasises Beneficial Ownership (BO) and Ultimate Beneficial Ownership (UBO) verification, which, while valuable for a small subset of entities, is largely unnecessary and highly inefficient for the vast majority of OEs' clients. A rigid focus on BO and UBO verification forces OEs to misalign critical resources in order to perfect documentation for clients with zero or minimal inherent evasion or financial crime risk in their ownership chain at the expense of identifying high-priority risks connected to clients' commercial and trade partners and affiliates. The RTS should align with global best practices, such as ongoing AML/CFT modernization in the United States, by promoting a redirection of resources that prioritises detection of high-priority risks. The effective use of OSINT should become the standard

Name of the respondent	Question	Answer
		for customer due diligence. It is widely recognized that the majority of security-related client exposure stems from commercial relationships beyond the scope of current KYC questionnaires, adverse media and BO checks. Rather than requiring exhaustive BO verification for each and every client, the RTS should prioritise the use of OSINT to scrutinise past transactions and the risk profiles of a client's trading partners and counterparties. Effectiveness should be measured by an OE's ability to uncover risk-relevant activity within real-world commercial practices and relationships, where the actual risk resides, rather than the perfection of static ownership charts. For customers assessed as low risk, efforts to identify BO and UBO should be deprioritised, as these measures typically add little value to assessing any potential security exposure. Section 5 and 6: These sections represent a critical "hook" for the full-scale modernisation of AML frameworks. Current standards are anchored in a legacy "snapshot" approach that is fundamentally incompatible with both today's financial system and the networks that undermine it. Modernisation requires a wholesale shift from periodic reviews arbitrarily linked to preset timelines to a risk-based, intelligence-led posture that assesses risk at the speed of reality. The RTS should give OEs flexibility to conduct risk assessments on timelines driven by OEs' risk managers and oriented by outcomes, not process. Artificial or arbitrary timelines or triggers for updating risk assessments creates inefficiencies and is often not

Name of the respondent	Question	Answer
		effective, as risk itself does not operate on such externally-driven timelines.
Kharon	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	n/a
Kharon	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a
Kharon	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	n/a
Kharon	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Kharon	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
Kharon	Do you have any comments on the Annex in the draft RTS?	No
Kharon	How would you rate the proposals set out in the draft RTS overall?	Neutral
KnownID AB	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Further clarification would be helpful for obliged entities that are not financial institutions who do not execute or facilitate transactions on behalf of customers, such as auditors, external accountants, or tax advisors. For such obliged entities, it is unclear what information in relation to purpose and nature is expected to be collected. For example, whether they are expected to obtain information regarding “the estimated amount of the envisaged activities” at all, given that their services typically do not involve executing or facilitating financial transactions for the customer. Clarification would therefore be helpful on whether this requirement is intended to apply to obliged entities whose services are advisory in nature. If the requirement is intended to apply to such obliged entities, further guidance would be helpful on how the concept of “the estimated amount of the envisaged activities” should be interpreted. Specifically, clarification would be helpful on whether this concept refers to: a) the value of the customer’s underlying activities, or b) the value of the services provided by the obliged entity. For example: i) Auditors – should the “estimated amount of the

Name of the respondent	Question	Answer
		envisaged activities" refer to: - the expected value of the transactions or financial activity that will be subject to audit, - the size of the audited entity (e.g. turnover), or - the audit fees paid to the auditor? ii) Lawyers advising on the sale of a business – should the amount refer to: - the expected value of the business transaction (e.g. the sale price of the business), - the expected value that is flowing to its customer as a result of the sale of the business, or - the legal advisory fees paid by the customer to the lawyer? Without such clarification, obliged entities across in the same sectors may interpret the requirement differently, which may lead to inconsistent application of customer due diligence requirements. For example, the RTS could clarify this through adding a fifth point, depending on the intended interpretation: a) v. in relation to professional services, the estimated amount of the customer's underlying activities to which those services relate during the business relationship or occasional transaction; b) v. in relation to professional services, the estimated value of the services that are likely to be performed during the business relationship or occasional transaction,

Name of the respondent	Question	Answer
KnownID AB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	n/a
KnownID AB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	n/a
KnownID AB	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a
KnownID AB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 18 of the draft RTS states that an obliged entity shall obtain, "where necessary, information on" the listed elements relating to the purpose and nature of the business relationship or occasional transaction. This wording reflects the requirement set out in Article 25 of the Regulation (EU) 2024/1624, which requires obliged entities to obtain, "where necessary", information on

Name of the respondent	Question	Answer
		the purposed and intended nature of the business relationship. The RTS would benefit from clarifying how the term “where necessary” should be interpreted in this context. In particular, it would be helpful to clarify whether: a) Information on the listed elements (a-e) of the Regulation are cumulatively expected to be obtained in all applicable cases, or b) obliged entities are expected to apply a risk-based approach in determining which of the listed elements (a-e) of the Regulation are necessary to obtain information on. For example, would a financial institution offering a service that enables the transfer of funds always be expected to obtain information on the destination of funds, or should it apply a risk-based approach when determining whether such information needs to be obtained? For example, the RTS could clarify this through wording such as the following, depending on the intended interpretation: a) For the purposes of Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, where necessary, information on the following elements. In determining whether such information is necessary, obliged entities shall take into account whether the information is applicable and relevant in

Name of the respondent	Question	Answer
		light of the nature of the product or services provided. b) For the purposes of Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, where necessary, information on the following elements. In determining whether such information is necessary, obliged entities shall take into account the risks associated with the business relationship or occasional transaction and the nature of the product or services provided

Komora daňových poradců České republiky	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Připomínka k absenci proporcionality vůči menším povinným osobám. Návrh RTS je v rozporu s recitálem 32 AMLR, který výslovně požaduje zohlednit charakteristiky a potřeby menších povinných osob, a s článkem 9 odst. 1 AMLR, podle něhož musí být politiky a postupy přiměřené povaze podnikání a velikosti povinné osoby. Z hlediska podnikatelské svobody zakotvené v článku 16 Listiny základních práv Evropské unie je třeba, aby požadavky kladené na povinné osoby byly proporcionální cíli, který sledují.

Name of the respondent	Question	Answer
		Návrh obsahuje řadu postupů, které významně zvýší administrativní zátěž povinných osob, aniž by adekvátně přispívaly k účinnosti boje proti praní peněz a financování terorismu. Uvádím dva konkrétní příklady: (i) Čl. 3 písm. a) návrhu RTS — formát ISO 3166. Požadavek na uvádění celého názvu státu nebo zkratky podle mezinárodního standardu ISO 3166 je z hlediska AML/CFT zcela bezúčelný. Identifikační hodnota je stejná, ať už je v dokumentaci uvedeno „Česko" nebo „Česká republika". Doporučuji tento požadavek z RTS vypustit nebo formulovat jako pouhou možnost, nikoli povinnost. (ii) Čl. 7 odst. 3 návrhu RTS — vzdálené ověření totožnosti. Návrh klade vysoké technické požadavky na vzdálenou identifikaci (časová razítka, záznam videohovoru, kontrola integrity komunikace, čitelný formát atd.). Tyto požadavky předpokládají investice do specializovaných technických řešení, které jsou pro malé povinné osoby (např. samostatně podnikající daňové poradce, advokáty nebo notáře) ekonomicky neúnosné. Návrh řešení: doplnit do čl. 7 návrhu RTS alternativní zjednodušený postup vzdálené identifikace pro nízkoriziková spojení s menšími povinnými osobami, založený na kombinaci následujících prvků: a) předložení fotokopie dvou dokladů totožnosti klienta; b) předložení výpisu z bankovního účtu vedeného na jméno klienta u úvěrové instituce v EU/EHP; c) provedení identifikační mikroplatby z tohoto účtu na účet povinné osoby s textovou poznámkou potvrzující

Name of the respondent	Question	Answer
		účel platby (identifikace klienta). Tento postup již v praxi využívají některé úvěrové instituce v EU pro otevírání účtů na dálku a poskytuje srovnatelnou míru jistoty jako videoidentifikace, přičemž je technologicky neutrální, levný a dostupný i pro malé povinné osoby.
Komora daňových poradců České republiky	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Nesouhlasím. Návrh RTS významně zvyšuje administrativní náročnost, aniž by úměrně přispíval k účinnosti boje proti praní peněz a financování terorismu. U malých povinných osob hrozí, že nebudou s to návrh RTS dodržovat v plném rozsahu, což může vést k plošnému nedodržování AML předpisů jako celku, a tím paradoxně ke zvýšení rizika praní peněz. Návrh RTS by tak mohl mít opačný účinek, než zákonodárce v AMLR zamýšlel. Konkrétně v článku 10 návrhu RTS uvádím dvě problematická ustanovení z pohledu české právní úpravy: (i) Čl. 10 písm. a) — Není zřejmé, co je myšleno veřejnými rejstříky a centrálními rejstříky. Návrh uvádí jako příklady spolehlivých zdrojů evidenci obyvatel, daňový registr, databázi pasů a katastr nemovitostí, avšak nezahrnuje veřejný rejstřík (v České republice upravený zákonem č. 304/2013 Sb.). Veřejný rejstřík je v některých členských státech zásadním zdrojem pro zjišťování skutečného majitele — v České republice jsou v obchodním rejstříku v případě společností s ručením omezeným zapisováni společníci, což u nejčastější formy

Name of the respondent	Question	Answer
		obchodní korporace umožňuje přímou identifikaci skutečného majitele bez nutnosti získávat informace z dalších zdrojů. Návrh řešení: doplnit do čl. 10 písm. a) návrhu RTS výslovný odkaz na veřejné obchodní rejstříky a evidence skutečných majitelů členských států. (ii) Čl. 10 písm. b) bod iv) — nereálný požadavek na úřední ověření. Ustanovení požaduje listinu vydanou právnickou osobou, ve které je uveden skutečný majitel a jejíž totožnost je ověřena osobou oprávněnou k ověřování dokumentů. Takový dokument se však v české právní praxi standardně nevydává. Seznam akcionářů, který akciová společnost vede podle zákona č. 90/2012 Sb. o obchodních korporacích, není úředně ověřován. Návrh řešení: přeformulovat čl. 10 písm. b) bod iv) tak, aby jako rovnocenný zdroj připouštěl neověřený seznam akcionářů nebo zápis z valné hromady.
Komora daňových poradců České republiky	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Ano. Příkladem jsou informace požadované podle čl. 11 odst. 2 písm. b) bodu ii) návrhu RTS — informace o regulovaném trhu, na kterém jsou kotovány cenné papíry mezilehlé právnické osoby, a o počtu a procentu kotovaných akcií. Tyto informace nejsou běžně veřejně dostupné a problémy s jejich získáním nebudou mít pouze malé povinné osoby v nefinančním sektoru, ale i řada středních a větších povinných osob, které nemají přístup do specializovaných databází kapitálových trhů. Z širšího pohledu se domnívám, že návrh RTS dopadá nepřiměřeně na malé povinné osoby v rozporu s recitálem 32 a článkem 9 odst. 1 AMLR. Zvýšené nároky na CDD u větších klientů s komplexními vlastnickými

Name of the respondent	Question	Answer
		strukturami povedou k tomu, že malé povinné osoby (samostatně podnikající daňoví poradci, advokáti, notáři, malé poradenské kanceláře) začnou tyto klienty z důvodu rizik AML sankcí odmítat. Tito klienti budou nuceni přejít k velkým poradenským společnostem, což povede k: a) omezení hospodářské soutěže na trhu odborných poradenských služeb; b) zvyšování cen těchto služeb; c) snížení dostupnosti specializovaného poradenství pro střední a velké podniky; d) paradoxně k vyšší koncentraci AML rizik u omezeného počtu velkých poskytovatelů, kteří budou mít méně osobní vazby na klienty a omezenější schopnost odhalit anomálie. Návrh řešení: doplnit do čl. 11 návrhu RTS, že informace podle odst. 2 písm. b) bodu ii) se zjišťují pouze tehdy, jsou-li povinné osobě běžně dostupné, případně dostupné při vynaložení přiměřeného úsilí. Údaje o kotaci na regulovaných trzích a podílech kotovaných akcií totiž nejsou veřejně snadno přístupné a problémy s jejich získáním budou mít nejen malé povinné osoby, ale i řada středních a větších povinných osob, které nemají přístup do specializovaných databází kapitálových trhů.
Komora daňových poradců České republiky	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures	Žádná.

Name of the respondent	Question	Answer
	should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
Komora daňových poradců České republiky	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Připomínka k absenci kvantitativního posouzení dopadů na malé povinné osoby. Hodnocení dopadů (IA/CBA) připojené k návrhu RTS je výslovně označeno za kvalitativní s odůvodněním, že „kvantitativní údaje k tomuto mandátu nejsou v současné době k dispozici a cílený sběr dat by představoval pro povinné osoby nepřiměřenou zátěž". Toto odůvodnění považuji za nedostatečné. Bez kvantifikace skutečné administrativní zátěže nelze ověřit, zda návrh RTS splňuje požadavek proporcionality podle recitálu 32 a článku 9 odst. 1 AMLR, ani zda je v souladu s čl. 16 a 52 odst. 1 Listiny základních práv EU. Z vlastní praxe daňového poradce odhaduji, že stávající AML požadavky zaberou u jednoho běžného klienta několik hodin ročně. Návrh RTS tuto zátěž dále zvyšuje, zejména v důsledku nových požadavků v článcích 11 (vlastnická a ovládací struktura), 18 (účel a zamýšlená povaha vztahu) a 19 (PEP screening). Kumulativní efekt bude pro malé povinné osoby významný. Praktický důsledek je v rozporu s deklarovanými cíli AMLR i celého balíčku AML/CFT. Malé povinné osoby přestanou nabízet odborné poradenství klientům s komplexními strukturami, klienti přejdou k velkým poradenským společnostem, dojde k omezení hospodářské soutěže a koncentraci AML rizik u omezeného

Name of the respondent	Question	Answer
		okruhu velkých poskytovatelů. Současně klesne konkurenceschopnost evropských povinných osob ve srovnání s poskytovateli mimo EU, kteří podobnou regulaci nemají. Návrh řešení: a) doplnit do návrhu RTS přechodné období minimálně dvou let pro malé povinné osoby v nefinančním sektoru ve smyslu doporučení EBA k jiným RTS (best-effort obligation); b) provést kvantitativní cílený dopadový průzkum u reprezentativního vzorku malých povinných osob (samostatně podnikajících daňových poradců, advokátů, notářů, účetních a malých poradenských kanceláří) před finalizací návrhu RTS, zaměřený na měření časové a finanční zátěže AML compliance; c) zvážit zavedení dodatečné kategorie povinných osob „malá povinná osoba" (např. samostatný podnikatel nebo kancelář do 5 zaměstnanců) s redukovaným rozsahem požadavků v souladu s principem proporcionality.

Komora daňových poradců České republiky	Do you have any comments on the Annex in the draft RTS?	No
Komora daňových poradců České republiky	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate;Neutral

Name of the respondent	Question	Answer
KPMG Poland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, we broadly agree with the proposals and their overall structure, including the emphasis on proportionality and risk based approach application. The RTS provide a detailed and robust specification of CDD requirements, including identification and verification measures, understanding of ownership and control structures, and the application of simplified and enhanced due diligence. They remain consistent with the legal mandate under Article 28(1) AMLR and appropriately preserve the risk based approach. However, for non financial obliged entities, certain provisions would benefit from enhanced clarity to ensure consistent and proportionate application in practice, in particular with respect to: - verification measures conducted on a non face-to-face basis (Article 7); - verification and understanding of complex ownership and control structures (Articles 11–12); - the recognition and reuse of information already obtained within group structures or for other regulatory or professional purposes (Recital 21) - operationalise in the operative text (not only recital) to deliver real simplification. - (ultimate) beneficial owner verification (Recital 8; Article 10) – recognise “accessibility reality” of registers and avoid impossible expectations. - Senior Managing Officials fallback (Recitals 9–10; Article 13) – provide examples of “exhausted all possible means” to promote convergence. - understanding ownership/control structures (Articles 11–12) – calibrate the “complex corporate structure”

Name of the respondent	Question	Answer
		trigger and clarify evidencing expectations (reasonable steps / reasonable comfort). - targeted financial sanctions boundary (Recital 22; Articles 29–30) – keep the scope boundary crisp and workable to prevent importing broader sanctions expectations via AML reviews.
KPMG Poland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Mostly yes, with the caveat that a small set of provisions require explicit calibrations to ensure consistent cross sector operability. Professional services engagements often differ from account based financial relationships. Drafting proposals: Art. 7 Issue: RTS prioritises eIDAS substantial/high; where not available, remote solutions may be used subject to safeguards; Art. 7(4) requires demonstrating compliance and justifying why eIDAS could not be used. Risk: In non financial onboarding, the “justify why eIDAS could not be used” may become a recurring administrative burden and be interpreted narrowly across supervisors. This may incentivise over collection. Proposed drafting: - define “not available / cannot reasonably be expected to be provided” (Art. 7(2)) by adding an illustrative, non exhaustive list (e.g., customer lacks access to national eID; cross border representative; technical unavailability; customer type makes eID impractical). - replace open-ended justification in Art. 7(4) with a light touch evidencing standard, eg.: “Obliged entities shall document, in a proportionate manner, the category of reason why the means referred to in paragraph 1 could not be used.”

Name of the respondent	Question	Answer
		- link retention to proportionality/data minimisation by clarifying that “retain” may be satisfied by minimum necessary evidence enabling ex post verification (eg. audit trail or capture logs) and not necessarily full video/audio in all cases, provided ex post verification remains possible. Recital 8 + Art. 10 Issue: Central (U)BO registers are “necessary but not sufficient”; Art.10 lists reasonable measures including other public registers “to the extent accessible” and third party/customer sources. Risk: For non financial obliged entities, “other registers” are not accessible in practice; without explicit sufficiency language, supervisors may second guess reasonable efforts. Financial Institution confirmations (Art. 10(b)(iii)) can be difficult to obtain quickly. Proposed drafting: - add an explicit statement to Art. 10: “Where the registers or systems referred to in point (a) are not accessible in practice to the obliged entity, reliance on the measures in point (b), combined with consistency checks across sources, may be sufficient on a risk sensitive basis.” - clarify that confirmations from credit/financial institutions (Art. 10(b)(iii)) are risk based and optional, not a default supervisory baseline. - add a cross reference to Recital 21 logic (reuse/avoid duplication) in the UBO verification context (either in Art. 10 or via an operative clause described under Recital 21 below). Recitals 9–10 + Art. 13

Name of the respondent	Question	Answer
		Issue: RTS clarifies SMOs are not (U)BOs; SMO fallback is permitted only after exhausting all possible means or where there are doubts. Art. 13 requires equivalent identification/verification, with an option to use registered office address. Risk: "exhausting all possible means" may be interpreted inconsistently. Proposed drafting: - insert 2–3 illustrative examples (non exhaustive) of what "exhausted" may look like for non financial obliged entities (e.g. request shareholder/constitutive documents; corroborate through reputable commercial database; cross check representation powers/signatories). Articles 11–12 Issue: Art. 11 requires comprehensive understanding and specific information for multi entity structures, and being satisfied there is an economic/legal rationale. Article 12 defines "complex corporate structure" as 3+ layers plus additional conditions; suggests organigrams. Risk: The "3+ layers" trigger may capture many legitimate corporate groups common to professional services clients, creating unnecessary escalation unless treated as risk sensitive. "Rationale" wording may become subjective. Proposed drafting: - clarify expressly that Art. 12 is not an automatic EDD trigger, but a prompt to apply additional measures where necessary and proportionate. - add a short clarification on what counts as a "layer" and how to treat intermediate publicly listed entities /

Name of the respondent	Question	Answer
		regulated market references already present in Art. 11(2)(b)(ii). - consider replacing “must be satisfied that there is an economic, legal or other rationale” with a “reasonable steps” evidencing standard, e.g.: “Obliged entities shall take reasonable steps to understand and document the rationale for the structure, taking into account the risk profile and the information available.” Recital 22 + Art. 29–30 Issue: RTS clarifies that targeted financial sanctions are in scope; trade/economic sanctions (embargoes, trade restrictions, travel bans) are outside scope. Art. 29–30 set screening expectations and triggers. Risk: Supervisory practice may import broader sanctions expectations into AML audits via these RTS. Proposal: add a brief interpretative statement (in recital or Art. 9) confirming that broader sanctions frameworks may exist separately, but they are not assessed under these RTS.
KPMG Poland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, several categories of information can be routinely unavailable to non financial obliged entities in practice, even with reasonable efforts. Concrete examples: - eIDAS availability/practicality: individual customers or representatives may not have access to national eID solutions; cross border situations may make eID impractical (Article 7(2)). - “Other registers/systems” accessibility: residence/tax/passport databases and similar sources may not be accessible in practice to non financial

Name of the respondent	Question	Answer
		obliged entities (Article 10(a) “to the extent accessible”). - external confirmations: obtaining confirmations from credit/financial institutions may be difficult within reasonable timeframes, particularly for cross border structures (Article 10(b)(iii)). Proposed alternative solutions: - explicitly confirm that, where certain sources are not accessible, reliance on combined sources under Article 10(b) plus consistency checks may be sufficient on a risk sensitive basis. - clarify that remote verification retention can rely on minimum necessary evidence enabling ex post verification (audit trail/logs), preventing over collection.
KPMG Poland	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose additional SDD measures beyond AMLR and the draft RTS, consistent with AMLA’s own conclusion that additional SDD measures beyond Article 33 AMLR may exceed mandate and risk creating exemptions. However, simplification should be delivered through improved operability, in particular by reinforcing the “anti-duplication” principle. Rather than introducing new SDD measures, we propose strengthening simplification by operationalising the reuse/anti-duplication principle reflected in Recital 21. This principle allows for the reuse of information already held within the obliged entity or its group, or obtained through parallel processes (e.g. client or engagement acceptance). This could be achieved by elevating Recital 21 into an operative provision, or by explicitly cross-referencing it in relevant articles (e.g.

Name of the respondent	Question	Answer
		those concerning UBO verification, the purpose and intended nature of the business relationship, and information requests in enhanced due diligence contexts). Such an approach would deliver meaningful simplification without weakening safeguards or introducing new exemptions. Recital 21 – Reuse of existing information (anti-duplication) Issue: Recital 21 recognises information may already be available within the obliged entity or group (including through processes such as audit acceptance) and encourages avoiding duplication; obtain additional information only if existing is insufficient. Risk: As a recital-only statement, it may not sufficiently constrain supervisory expectations in practice. Proposed drafting: Elevate Recital 21 into an operative provision (e.g. a new article or an explicit cross-reference in key provisions such as Article 10 and Article 18), clarifying that the reuse of existing information is permitted where such information is current, reliable, and meets the requirements set out in the AMLR.
KPMG Poland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	While we recognise and fully support AMLA's intention for the draft RTS under Article 28 AMLR to remain technology agnostic, horizontal in nature and applicable across a wide range of obliged entities, sectors and risk profiles and we also acknowledge that the RTS are designed as a "catch all" framework and cannot be

Name of the respondent	Question	Answer
		tailored to the operational specifics of each individual sector. At the same time, we believe that the RTS would benefit from an explicit recognition — within a risk based framework — of the role that qualified electronic signatures (QES) may play for certain categories of non financial obliged entities, in particular large professional services and consulting firms operating almost exclusively in B2B, institutional contexts. In such environments, obliged entities typically do not engage in financial transactions, do not intermediate payments and do not provide access to the financial system. The AML/CFT risk profile differs materially from that of financial institutions, and the primary control objective is not the monitoring of transactions, but ensuring that the correct individual, duly authorised and disclosed in official public registers, is in fact acting on behalf of the client entity. In this context, qualified electronic signatures — when used in combination with reliable and independent sources such as official company registers and stable personal identifiers (e.g. national personal identification numbers where available) — can constitute a high assurance and proportionate measure to verify the authenticity of actions and declarations submitted by legal representatives, senior managing officials or other authorised persons. From a practical and technological perspective, qualified electronic signatures provide a level of assurance that, in some cases, exceeds traditional document based identity checks. A QES creates a cryptographically

Name of the respondent	Question	Answer
		secure link between a specific individual and a specific action or declaration, issued by a qualified trust service provider and subject to strict regulatory safeguards under the eIDAS framework. In contrast, traditional copies of identity documents are increasingly exposed to fraud, manipulation and synthetic identity risks, particularly in an environment where AI generated documents and deep fake techniques are becoming more accessible. Having that said we propose that the RTS explicitly acknowledge that, for non financial obliged entities and in B2B contexts, QES can be relied upon as a robust supporting measure to: - substantiate that the individual submitting AML relevant declarations is the same individual disclosed in an official public register (e.g. company register); - evidence that such individual has actually performed the relevant action or made the relevant declaration on behalf of the client entity; and - strengthen the overall verification framework when combined with other reliable and independent sources, in line with Articles 7 and 8 of the draft RTS. In certain Member States, including Poland, the practical penetration and legal robustness of qualified electronic signatures — often linked to stable personal identifiers such as the PESEL number and cross verified against public company registers - makes their use particularly effective for verifying representation and authority in professional services relationships. Explicit recognition of this approach at RTS level would support risk based proportionality, enhance operational

Name of the respondent	Question	Answer
		effectiveness, and reduce unnecessary reliance on weaker document based checks, without undermining the technology neutral and horizontal nature of the RTS. We therefore recommend that AMLA consider clarifying, either in the operative provisions or in accompanying explanations, that qualified electronic signatures may, where appropriate and in combination with other reliable sources, be used as a high assurance supporting measure for the verification of persons acting on behalf of a customer, in accordance with the risk based approach underpinning the AMLR and the draft RTS.
KPMG Poland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
KPMG Poland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

	implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
KPMG Poland	Please justify your answer to the previous question and provide evidence where possible.	The expected cost impact is considered manageable. At this stage, a detailed quantitative assessment remains inherently limited, given that the AMLR framework has been adopted but is not yet fully operational, and the RTS are still in draft form. Nevertheless, as the draft RTS primarily operationalise and further specify requirements already set out in the AMLR, rather than introducing fundamentally new obligations, implementation is expected to rely largely on existing AML/CFT frameworks, processes and controls. Any implementation effort is therefore expected to be incremental in nature, limited to targeted adjustments of internal procedures, documentation standards and staff familiarisation.
Kunsill Nutarili ta' Malta (Maltese Notarial Council)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide	Regarding Article 2 (ii) of the RTS, the following amendment is being suggested: ii) In relation to the name of a legal entity as referred to in Article 22(1), point (b)(i), and other organisations that have legal capacity under national law as referred to in

Name of the respondent	Question	Answer
	concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 22(1), point (d)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain the registered name and the trade name where it differs from the registered name and when such trade name is available from publicly available information or is made known to the obliged entity by the customer. Reason for the amendment: Unless a trade name is publicly available or shared with the obliged entity by the customer, the obliged entity cannot establish, verify and confirm whether an entity is using as its tradename a name which is different from the registered name of the entity. Regarding Article 3 of the RTS, the following is being proposed: (c) where available, street name, post boxes, building number and the apartment number. Reason for the amendment: the postal code was deleted from the requirements due to the fact that there are countries, such as Malta, where the postal code is not indicated on an identification document and is very often also left out from official correspondence and therefore although an obliged entity may obtain the postal code from the customer, the obliged entity would have no way of confirming the correctness of such postal code.

Name of the respondent	Question	Answer
		Regarding Article 5 of the STR, the following amendment is being proposed: For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624, obliged entities shall, where possible, obtain information on all nationalities, or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. Reason for the amendment: Obtaining information on all nationalities is only possible if the customer provides the obliged entity with such information. If a client gives the obliged entity a passport as a document of identification, the passport would only indicate one nationality and the obliged entity does not have any means to determine and verify whether the customer is also a national of any other state unless the client discloses such information. Regarding Article 24 of the RTS, the following amendment is suggested to Article 25(a) of the draft RTS would be appropriate to ensure, as mentioned above, that the requirement of authenticity is met: “(a) be satisfied that the information they hold on the customer and the beneficial owners or the ownership and control structure of the customer other than a natural person is deemed authentic and accurate by a

Name of the respondent	Question	Answer
		publicly recognized authentication authority; or…" Reason for the amendment: According to Article 34(4) of Regulation (EU) 2024/1624, in cases of higher risk as referred to in paragraph 1 of the Article, obliged entities shall apply enhanced due diligence measures, that may include, among others, obtaining additional information on the customer and the beneficial owners, as included in point (a). However, we consider point (a) of Art. 25 of the draft RTS requires to be amended or clarified to ensure the element of authenticity is satisfied. To ensure that information is authentic and trustworthy, it is essential that it originates from a publicly recognized authentication authority. Public authorities operate under established legal frameworks, accountability mechanisms, and transparency requirements that obligate them to verify the accuracy of the information they disseminate. Unlike unofficial sources or third-party services, public authorities typically rely on standardized procedures and verified records when producing information. Because their communications are subject to oversight, documentation, and often public scrutiny, the information they provide tends to meet higher standards of credibility and traceability. Article 30 (c) (iii) of the RTS on screening customers should be amended as follows: (iii) there is a significant change in the due diligence data of an existing customer, beneficial owner or entity, or person which controls or meet the ownership

Name of the respondent	Question	Answer
		conditions under Article 20(1), point (d), of Regulation (EU) 2024/1624, such as but not limited to a change of name, country of residence, or nationality or change of business operations, which may have a potential impact on the designation as a listed person, body or entity; Reason for the amendment: While changing the country of residence amounts to a significant change, changing the residence from one part of the same country to another does not amount to a significant change.
Kunsill Nutarili ta' Malta (Maltese Notarial Council)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? LEASEUROPE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Leaseurope, the voice of leasing and automotive rental at EU level welcomes the opportunity to provide feedback on the AMLA draft RTS. The scope of services covered by Leaseurope members' ranges from hire purchase and finance leases to operating leases of all asset categories (automotive, equipment, machinery, ICT and real estate), with both B2B and B2C operations depending on market/products. As financial leasing activities are included in the list of activities of Annex I of the Capital Requirements Directive, leasing companies that carry out such activities are considered "financial institutions" for the purposes of AML rules and therefore, they fall within the scope of the EU AMLR. Leaseurope would like to emphasise the necessity to ensure a risk-based approach and consider in the implementation of the AMLR the specific characteristics of low-risk specialised financing activities such as equipment leasing. In its July 2025 Opinion on "AML risks affecting the Union's financial sector", EBA -European Banking Authority- notes that Competent Authorities (Cas) consider the level of inherent risk in the sector of credit providers (CPs) to be moderately significant or less significant. The EBA furthermore observes that the overall residual risk profile in the sector was improved between 2021 and 2024 suggesting improved AML/CFT controls. In accordance with the March 2021 EBA Guidelines on "customer due diligence and the factors

Name of the respondent	Question	Answer
		credit and financial institutions should consider when assessing the ML risk associated with individual business relationships and occasional transactions" (the ML/TF Risk Factors Guidelines), leasing is among the factors that may contribute to reducing the risk of ML/TF. ["The product has limited functionality, for example in the case of: (...) a low-value product, including a lease, where the legal and beneficial title to the asset is not transferred to the customer until the contractual relationship is terminated or is never passed at all"] (par. 9.5 (a)(iv) and (v) of EBA ML/TF Risk Factors Guidelines). Leasing is a highly specialized form of asset-based financing, focused on the financing of tangible assets rather than the management of funds. Leasing companies do not operate payment or current accounts, do not facilitate the circulation of funds, and therefore present a structurally lower ML/TF exposure compared to banks. Leasing should be expressly considered as low ML risk product for the following reasons: - under lease-purchase and similar transactions the lessor, which is the owner, retains title to the leased asset for the entire term of the transaction; - the asset is necessary for the customer's specific business (e.g. financing of industrial tools, etc.). The financing transaction therefore has a legitimate basis. - lease instalments are paid, in practice by direct debit, credit transfer or a cheque issued from an account held with a bank located in the EU. Under this light and based on a risk-based approach,

Name of the respondent	Question	Answer
		Leaseurope suggests clearly considering leasing as a factor that is by its very nature capable of reducing the ML/TF risk. We propose considering the following low-risk activities : 1. financing transactions for tangible assets for business use where ownership is not transferred to the customer, as in the case of long-term operational lease; 2. financing transactions for tangible assets for business use where ownership can only be transferred at the end of the contractual relationship, as in the case of finance lease. The effectiveness of the AML/CTF framework depends on the application of a risk-based approach in order not to impose unnecessary burdens in low-risk contexts. Obliging entities that engage in the above listed activities to systematically implement identity verification measures would be disproportionate to the real ML risk associated with these products. The RTS should clearly enable the application of SDD measures to low value, standardised and low risk leasing products. Asset backed leasing with a closed loop financing structure should qualify for SDD measures, unless other higher risk factors are present. That is why a principle-based framework granting obliged entities a degree of discretion within defined guidelines would be more efficient and effective. The scope of information collected as part of CDD should be limited to data relevant to the specific leasing contract and the identified ML risk. It should not include information characteristic of banking relationships, where the sole relationship between the parties is a

Name of the respondent	Question	Answer
		clearly defined leasing contract with an established payment schedule. Moreover, Art. 6 of draft RTS on "Documents for the verification of identity" does not seem appropriate in lower-risk cases, as the source of funds is well known (account of the customer's name with EU credit institution), and the financed goods are identified. Also, obliged entities maintain constant vigilance and report supicions to FIU.
LEASEUROPE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In accordance with Article 1 of draft RTS on "Proportionality and risk-based approach", Leaseurope calls for a real and practical application of principle of proportionality across the AML requirements. Taking into account the specificities of low-risk specialised financing activities such as equipment leasing and aiming at ensuring the risk-based approach, the AMLA RTS should introduce explicit simplified regimes for low-risk products. Leaseurope proposes the following: - removing the requirement to collect information on the "trade name" (Art. 2(ii) of draft RTS). There is no added value to collect this additional information in terms of preventing ML/TF, especially in cases where trading names are not clearly documented or are not legally relevant. - removing the requirement to collect information on the building number, the apartment number and post boxes (Art. 3 (c) of draft RTS). - removing the requirement to collect information on ALL the nationalities of the customer (Art. 5 of draft RTS). This requirement is neither risk-based nor

Name of the respondent	Question	Answer
		operationally feasible. In most cases, identification documents display only one nationality. We welcome recital (3) of draft RTS whereby “where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient”. It is very difficult, if not impossible, to collect such information from identity documents for beneficial owners, due to their location and the specialised distribution channel of leasing entities. At the very least, information should be extracted from beneficial owner registers, which are reliable and independent sources of information. - Clarifying that the requirement to collect information on the place/country of birth (Art. 22(1)(a)(ii) of AMLR, Art. 4 of draft RTS) does not apply for the identification of beneficial owners. Although this data could be useful for natural persons, the “place of birth” did not used to be a required element for BO or legal representatives. We consider it particularly disproportionate to require this data for beneficial owners and representatives of legal entities with whom entities have already established an ongoing business relationship before the entry into force of the AMLR. It can overburden the obliged entities while offering no added value compared to the other information to be collected. Leaseurope also questions how the requirements to collect this information (Art. 2, 3, 4 and 5 of draft RTS) for low-risk products fit in with the GDPR’s data minimisation principle. - Clarifying, for all risk cases, that the requirement to collect the number of the identity document of the

Name of the respondent	Question	Answer
		beneficial owner for the verification of its identity (in accordance with Art. 22(7) and Art. 62(1)(a) of AMLR) should apply only in the case that the beneficial owner is actually identified by means of an identity document. No requirement can be inferred from the provisions of AMLR that it is mandatory for the BO to present an identity document for identity verification. Verification can be also carried out by taking reasonable measures to obtain information from the customer or other reliable sources. This should be explicitly stated in the text of the RTS in order to avoid any ambiguity. As consequence, in Art. 6(5) of draft RTS the reference to Art. 22(7)(a) of AMLR should be deleted. This clarification is important for Articles 22 and 62 of AMRL, particularly for beneficiaries in countries where no form of identification exists (notably Denmark) or where it is not mandatory, as in Italy. - Introducing a principle for updating customer information for existing customers whereby “it is appropriate to take account the fact that there is no change in the circumstances relevant for the assessment of the business relationship with the customer or the beneficial owner, declared by them” (Art. 23 of draft RTS). This principle should apply not only to low ML risk situations under the SDD measures, but it should be an overarching principle. The application of proportionate CDD in leasing would not weaken AML/CFT safeguards, but rather increase their effectiveness by concentrating resources where the ML/TF risk actually exists.

Name of the respondent	Question	Answer
LEASEUROPE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 7- Verification measures conducted on a non-face-to-face basis From a technological perspective (Art. 7 of draft RTS), each Member State will be required to provide a EU Digital Identity Wallet with common specifications, which are currently being developed by a consortium (monitored by the European Commission). This wallet must be made available to users by the Member State by the end of 2026. These elements must be rolled out across Member States and within customer journeys, which will leave institutions very little time to prepare. This raises the question of how the eIDAS measures will be coordinated, given that they are due to be implemented in December 2026 and the AML/CFT package in July 2027. The deadlines will be far too tight to allow for effective and smooth implementation. As the entities cannot speed up adaptation processes of the widely used and acknowledged providers of such alternatives, this needs to be taken into consideration. It is necessary to allow for an interim period which should correspond to the timeframe for updates on existing customers in a risk based manner within up to 5 years after the RTS' entry into force. Moreover, the restriction set out in the draft RTS, according to which alternative electronic identification procedures such as the video identification procedure established on some MS (e.g. Germany) are to be allowed only if an eIDAS-compliant procedure is "not available" or "cannot reasonably be expected to be provided", is seen critically. The wording is vague and leaves open the question of under which specific

Name of the respondent	Question	Answer
		circumstances an eIDAS procedure “cannot reasonably be expected”. This creates legal uncertainty for obliged entities that, in practice, rely on functioning and recognised procedures such as video identification. Article 10 - Reasonable measures for verification of the BO With regard to BO, institutions should have some discretion in assessing what constitutes reasonable measures. In this context, the list of measures listed in Article 10 of draft RTS should not be exhaustive. We suggest inserting the word “may” before “include” in the first sentence of the first paragraph, deleting “at least one of the following” and finally stating “which may include, for example”. Not all registers in one EU Member State are accessible to entities with their registered office in another Member State. Central registers may be non-existent or inaccessible, and reliable third-party sources may be limited. Self-declaration often becomes the only viable option, without the texts specifying under what conditions it may be considered sufficient. Clarification should be provided in the final RTS. We consider it necessary to specify at the end of Article 10: “These solutions must be proportionate to the size, nature and complexity of the obliged entity’s activities, as well as to its exposure to ML/TF risks”. The scope of identification and verification of beneficial owners should be commensurate with the actual level of risk. For standard leasing products with a low or medium risk profile, reliance on reliable public registers

Name of the respondent	Question	Answer
		and information available from official sources should be considered sufficient, without the expectation of additional, enhanced verification measures, unless specific risk indicators justify such actions. The draft of RTS must be consistent with Article 20(1)(b) of AMLR: "(b) identifying the BO and taking reasonable measures to verify their identity so that the obliged entity is satisfied that it knows who the BO is and that it understands the ownership and control structure of the customer;".
LEASEUROPE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We reiterate our comments under Q1 about the low-risk classification of certain leasing transactions. Low-risk classification does not constitute an obstacle to the proper implementation of filters such as "freezing of funds" and "PEPs", the obligation of reporting entities to ensure that there are no grounds for suspicion, the fulfilment of ongoing due diligence obligations. In this light, declarations of discrepancies between the data resulting from searches carried out via reliable sources and data declared by the customer to the registry or equivalent at European level for the BO will unnecessarily increase the obligations of entities for a risk that is very low and recognised as such for leasing/long-term rental transactions offered by financial institutions. Moreover, a valuable SDD measure would be to consider sufficient for obliged entities to only consult the BO central register to verify the identify of the BO and collect the information required in the case of low ML risk situations.

Name of the respondent	Question	Answer
		Finally, as briefly mentioned in Q1 in relation to Art.23 of draft RTS, in low-risk situations (including low-value consumer credit products/lease) where SDD measures should apply, obliged entities shall be allowed to rely on information declared by the customer or use reliable sources (Art.20 of draft RTS).
LEASEUROPE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 7 - Verification measures on a non-face-to-face basis. Even though the implementation of eIDAS is mandatory for banking and financial institutions, the use of and access to the service via eIDAS depends primarily on the customer's willingness. An alternative system must be offered to ensure that there is no disruption to access to services or to commercial relationships. An interim period should be allowed for, which would correspond to the timeframe for updates on existing customers in a risk based manner within up to 5 years after the RTS' entry into force. Moreover, Article 7(4) of draft RTS mentions the obligation for institutions to maintain an audit trail. At the end of the sentence of para 4 of Art. 7, the wording "in particular when the risk justifies it under Article 1" should be added. Furthermore, how can entities ensure that information, documents and data are kept up to date ? Article 8 - Reliable sources of information. For low-risk cases, several options could be proposed: self-declaration, consultation of a register, an independent source. Also, it is not clear how obliged entities can ensure

Name of the respondent	Question	Answer
		compliance with Art.8 of draft RTS, points (d) and (e): assessing “the accuracy of the source, based on whether the information or data provided had to undergo certain checks before being provided or is consistent with other sources” and “the ease with which the identity information or data provided can be forged” (including for documents provided by the customer). Points (d) and (e) of Art.8 of draft RTS require further guidance. It is an obligation of means that is very difficult to implement. Leaseurope suggests adding the wording “as far as possible” or “on a reasonable effort basis” in Art.8, points (d) and (e) of draft RTS. Finally, how can it be ensured in practice that such conditions are met at all times ? Article 27 - Additional information on the source of funds etc. of the customer and of BO. We would like to draw attention to the application of Art. 27 of draft RTS concerning PEPs. Obtaining additional information on the source of funds and source of wealth will be very difficult for obliged entities who are not the account holder of the PEP. Also, obtaining the evidence referred to in Art. 26 of draft RTS (e.g. tax returns or payslips) on the origin of the beneficial owner's assets and wealth is generally not feasible in practice due to the lack of a direct business relationship between the obliged entity and the beneficial owner. The requirements of Art. 26 should therefore generally be limited to the customer. Article 33 - Entry in force. The verification of the identity

Name of the respondent	Question	Answer
		of the customer and BO must take place before a business relationship is established or an occasional transaction is carried out (Art. 23 of the AMLR). Obliged entities shall ensure that the relevant documents, data or information relating to the customer are kept up to date (Article 26(2) of AMLR). Obliged entities shall review and, where necessary, update customer information where relevant aspects of a customer's circumstances change. The obliged entity is legally required, during the calendar year in question, to contact the customer in order to review any relevant information relating to BO. If it is not possible to update such information, is it necessary to terminate the contract and recover the asset being financed ? Even if the risk is qualified as a low risk? Consulting public registers and the BO register should be deemed sufficient to comply with this obligation. We reiterate here our opinion that obliged entities should be allowed to rely on declarations from the customer and the BO stating that there has been no change in circumstances (e.g. for the verification of tax residence every 5 years). Specifically for leasing activities, the RTS should reflect their contractual and time limited nature. Not every leasing contract should automatically be regarded as an ongoing business relationship requiring a banking style approach to continuous monitoring and periodic refresh of customer data. In leasing, customer interaction is generally linked to a specific contract and its servicing, rather than to uninterrupted access to financial services. The monitoring of leasing relationships should be event

Name of the respondent	Question	Answer
		driven and triggered by material circumstances affecting the ML/TF risk profile, such as changes to the contracting parties, assignment of rights and obligations, changes to the beneficial owner, significant modifications of financial terms, or unusual events occurring during the life of the contract. The mere passage of time should not constitute a sufficient basis for re performing full CDD measures, while keeping in mind the time limits imposed by Art.26(2) of AMLR. Finally, Leaseurope proposes the AMLA RTS start to apply 18 months from their entry into force. An implementation period is necessary to assess impacts and prepare for compliance with additional requirements.
LEASEUROPE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
LEASEUROPE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
LEASEUROPE	Do you have any comments on the Annex in the draft RTS?	No
LEASEUROPE	How would you rate the proposals set out in the draft RTS overall?	Neutral
Legal & Compliance Initiative Real Estate	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 20 zur Herkunft des Vermögens der Beteiligten. Maklern stehen nicht die technischen Möglichkeiten zur Verfügung. Vermögensherkünfte wirksam zu überprüfen. Kundenaussagen können zwar erfasst, aber nicht nachgeprüft werden. Vorschlag: Ausnahmeregelung für den Immobiliensektor.

Name of the respondent	Question	Answer
	Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Vorschlag II: Genauere Auslegung für den Immobiliensektor unter Berücksichtigung der technischen Möglichkeiten. Art. 6.4 zur Echtheitsüberprüfung ausländischer Dokumente Für Makler entsteht hierdurch ein erheblicher organisatorischer/finanzieller Mehraufwand. Authentizität von ausländischen Dokumenten kann nicht verlässlich überprüft werden. Die AMLA muss für diesen Fall umfassendes Informationsmaterial zur Verfügung stellen, um die Rahmenbedingungen einer solchen Prüfung festzulegen. Abschnitt III 3 Art. 18 c zur Herkunft der Geldmittel: Auf welche Maßnahmen kann der Immobilienmakler zurückgreifen, um die Herkunft der verwendeten Geldmittel zu verifizieren? Ist hier die Herkunft der Mittel innerhalb der Transaktion, oder die Mittel, mit welchen der Makler bezahlt wird zu betrachten? Die Pflichten des Finanz- und Nichtfinanzsektors müssen stärker abgetrennt werden. Section 3 Art. 18 d zu den beteiligten Parteien in der Transaktion. Welche Partei in der Immobilientransaktion ist als Ziel der Geldmittel zu betrachten?
Legal & Compliance Initiative Real Estate	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Artikel 2 ii) (Zur Erhebung des Handelsnamens, wenn dieser von der registrierten Firmierung abweicht): Eine generelle Pflicht zur Erfassung von Handelsnamen, sofern diese vom eingetragenen Firmennamen abweichen, ist im gewerblichen Immobiliensektor nicht praktikabel. Große, häufig multinationale und börsennotierte Unternehmen treten vielfach unter

Name of the respondent	Question	Answer
		etablierten Marken- oder Handelsnamen auf, sind jedoch eindeutig über ihren eingetragenen rechtlichen Namen identifizierbar. In diesen Fällen bietet die systematische Erhebung von Handelsnamen keinen wesentlichen Mehrwert für AML/CFT-Zwecke und führt zu unverhältnismäßigem administrativem Aufwand. Die Regelung sollte daher dahingehend angepasst werden, dass ein Handelsname nur dann zu erfassen ist, wenn dies erforderlich ist, um Unklarheiten über die Identität der betroffenen Rechtseinheit auszuräumen. Artikel 4 (Erhebung des Geburtsdatums zusätzlich zum Ausweisdokument): Soweit das Gesetz die Erhebung des Geburtsdatums verlangt, dieses jedoch nicht Bestandteil der Risikoanalyse ist, entsteht ein rein administrativer Mehraufwand ohne erkennbaren Beitrag zur Wirksamkeit der Geldwäscheprävention. Die isolierte Erhebung des Geburtsdatums ermöglicht weder eine verbesserte Risikoidentifikation noch trägt sie zur Risikominderung bei. Ohne einen konkreten Bezug zu bestehenden Risikoindikatoren bleibt diese Anforderung daher unverhältnismäßig und nicht risikobasiert. Daher wäre der Vorschlag, die im amtlichen Ausweisdokument enthaltenen Angaben als grundsätzlich ausreichend anzusehen. Eine darüberhinausgehende aktive Erhebung und Bewertung des Geburtsdatums sollte nur in Fällen erfolgen, in denen konkrete Risikoindikatoren vorliegen und die Information für die Risikoanalyse tatsächlich relevant ist.

Name of the respondent	Question	Answer
		Artikel 11 Abs. 2b, ii) (Understanding the ownership and control structure of the customer): Eine Überprüfung von Beteiligungsverhältnissen bei börsennotierten Zwischengesellschaften ist ohne das Vorliegen konkreter Risikofaktoren unverhältnismäßig. Börsennotierte Unternehmen unterliegen in der Regel umfangreichen Transparenz- und Offenlegungspflichten, sodass diese mit einem niedrigen Geldwäscherisiko versehen wurden. Vor diesem Hintergrund ist der erhebliche administrative Aufwand, der mit einer standardisierten und vollumfänglichen Überprüfung solcher Beteiligungsstrukturen verbunden ist, insbesondere im gewerblichen Immobilienmarkt nicht gerechtfertigt. Dies gilt umso mehr, als die dort typischerweise mehrstufigen und komplexeren Beteiligungsstrukturen; auf Grund Einbindungen von Objektgesellschaften, zu einer erheblichen Belastung führen, ohne einen zusätzlichen Erkenntnisgewinn für die Geldwäscheprävention zu liefern. Eine Überprüfung sollte daher auf Fälle beschränkt werden, in denen konkrete Auffälligkeiten festgestellt werden oder sich im Rahmen der Prüfung erhöhte Risikofaktoren ergeben.
Legal & Compliance Initiative Real Estate	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	Identifizierung der Auftretenden Person - Art. 5 (Article 22 (1), point (a)(iii)) Bei einer gewerblichen Immobilientransaktion sind in der Regel viele Personen involviert. Bei der Definition in

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art. 5 müssten wir jede Kontaktperson (Facilitymanager, Property Manager, Assetmanager, Steuerberater, Anwalt etc.) identifizieren. Daraus ergibt sich ein erheblicher Mehraufwand, da in einigen Transaktionen mehr als 10 Ausweiskopien eingeholt werden müssten. Wir sehen hier keinen Mehrwert für die Risikobewertung des Kunden. Laut unserem Verständnis müsste hier zudem jeder wirtschaftlich Berechtigte (möglicherweise auch Gesellschafter mit weniger als 25% Anteilen überprüft werden. Vorschlag: Genaue Defintion der Auftretenden Person und Überprüfung nur dieser. Power of Representation - Art. 16 (Article 22 of Regulation (EU) 2024/1624, Section 2) Vorschlag: Ausnahme für Asset Manager, Expansion Manager oder Immobilienmanager aufnehmen, da diese von Natur aus Vertreter bei Immobilientransaktionen gemäß ihres Berufs sind, ohne eine Vertretungsberechtigung zu haben oder zeichnungsberechtigt zu sein. Überprüfung der IBAN - Art. 9 (Article 22(3) and Article 22(1) of Regulation (EU) 2024/1624)I Unklar definiert ob hier die Provisionszahlung überprüft werden soll. Zudem haben Makler keinerlei Option den Unterschied zwischen einer virtuellen IBAN und einer normalen IBAN festzustellen, oder generell eine IBAN zu

Name of the respondent	Question	Answer
		überprüfen. Hier sehen wir den Finanzsektor in der Pflicht. Vorschlag: Ausnahmeregelung für die Immobilienbranche, da die Überwachug der Geldströme dem Finanzsektor unterliegt. Überprüfung der Unternehmensstruktur - Article 12 (Article 20(1), point (b), of Regulation (EU) 2024/1624) Komplexe Unternehmensstrukturen sind in der Immobilienbranche nicht ungewöhnlich und nicht zwangsläufig ein Hinweis auf ein erhöhtes Geldwäscherisiko. Mögliche Lösung: Komplexe Unternehmensstrukturen in Verbindung mit anderen Red flags (Bspw. Länderrisiko) als Anzeichen für erhöhte Sorgfaltspflichten. Business relationship - Article 18 (Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624) Business Relationship – Ergibt sich in der Regel aus der Provisionsvereinbarung oder dem Verkaufs-/Vermietungs-Auftrag. Vorschlag: Da die Business Relationship sich im gewerblichen Immobiliensektor aus der Natur der Transaktion ergibt, keine weitere Defintion notwendig.

Name of the respondent	Question	Answer
		Source of Funds - Article 27 (Article 34(4), point (c), of Regulation (EU) 2024/1624) Allgemein sind, die an die Immobilienbranche gestellten Anforderungen, insbesondere für kleinere Maklerbüros ohne Compliance- Abteilungen nur schwer zu erfüllen. Bspw. Source of funds. Wie soll das am besten überprüft werden? Vorschlag: Sonderregelung für die Immobilienbranche.
Legal & Compliance Initiative Real Estate	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	1. Vorschlag: Neuer Artikel 22a (Vermeidung von Doppelprüfungen bei Bankfinanzierung) (Einzufügen in Abschnitt 5 "Vereinfachte Sorgfaltspflichten" direkt nach dem bestehenden Artikel 22) Artikel 22a – Sektorale vereinfachte Maßnahmen in Bezug auf durch regulierte Kreditinstitute finanzierte Immobilientransaktionen Ein Immobilienmakler, der als Vermittler bei einer Immobilientransaktion auftritt, darf vereinfachte Sorgfaltspflichten hinsichtlich der Überprüfung der Kundenidentität und der Mittelherkunft anwenden, wenn alle der folgenden Bedingungen erfüllt sind: (a) das mit der spezifischen Geschäftsbeziehung und der Transaktion verbundene GW/TF-Risiko wird vom Immobilienmakler als gering eingestuft; (b) die Transaktion wird vollständig oder überwiegend durch ein in der Union niedergelassenes Kredit- oder Finanzinstitut finanziert, das den Anforderungen der Verordnung (EU) 2024/1624 unterliegt; (c) der Immobilienmakler erhält einen glaubwürdigen Nachweis oder eine schriftliche

Name of the respondent	Question	Answer
		Bestätigung, dass die für die Transaktion verwendeten Mittel von einem Konto stammen, das der Kunde bei diesem regulierten Kreditinstitut unterhält. 2. Vorschlag: Ergänzung in Artikel 23 (Flexiblerer Zeitpunkt der Identitätsprüfung) (Einzufügen als Ergänzung zu Artikel 23 Absatz 1, der bisher verlangt, dass die Verifizierung zwingend nach Angebotsannahme abgeschlossen sein muss) Zeitpunkt der Verifizierung für Immobilienmakler in Situationen mit geringem Risiko: Abweichend von Artikel 23 Absatz 1 darf in Situationen, in denen ein Immobilienmakler das GW/TF-Risiko als gering einstuft, die Überprüfung der Identität des Kunden und des wirtschaftlich Berechtigten gemäß Artikel 33 Absatz 1 Buchstabe a der AMLR aufgeschoben und spätestens zum Zeitpunkt der formellen Ausfertigung des rechtsverbindlichen Immobilienvertrags (z. B. notarielle Beurkundung) abgeschlossen werden, vorausgesetzt, dass keine Übertragung von Geldern oder Eigentum stattfindet, bevor die vollständige Einhaltung der Vorschriften erreicht ist. 3. Vorschlag: Ergänzung in Artikel 21 (Erleichterungen bei Behörden und börsennotierten Unternehmen) (Einzufügen als neuer Absatz 3 in Artikel 21, der die Mindestanforderungen für die Identifizierung von wirtschaftlich Berechtigten in risikoarmen Situationen regelt)

Name of the respondent	Question	Answer
		Ergänzung zu Artikel 21 (Neuer Absatz 3): 3. In Situationen, in denen der Kunde eine öffentliche Verwaltung, eine Einrichtung des öffentlichen Rechts eines Mitgliedstaats oder eine auf einem geregelten Markt notierte Aktiengesellschaft ist, die innerhalb der Union Offenlegungspflichten unterliegt, können Verpflichtete, die als Immobilienmakler handeln, die Anforderungen an die Identifizierung und Überprüfung erfüllen, indem sie sich ausschließlich auf öffentlich zugängliche Informationen stützen, die den Status des Kunden bestätigen. Weitere Nachforschungen zur internen Eigentums- und Kontrollstruktur oder zu den spezifischen Identitäten von Führungskräften sind nicht erforderlich, es sei denn, es besteht der Verdacht auf Geldwäsche oder Terrorismusfinanzierung.
Legal & Compliance Initiative Real Estate	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Artikel 11 Abs. 4a (Überprüfung der Glaubwürdigkeit von Organisationsstrukturen) Es besteht Klarstellungsbedarf hinsichtlich der Überprüfung der „Glaubwürdigkeit“ von Organigrammen und dargelegten Organisationsstrukturen. In bestimmten Länderkonstellationen, insbesondere im asiatischen und amerikanischen Raum, fehlt Verpflichteten aufgrund eingeschränkter Transparenz oder nicht vorhandener öffentlicher Register regelmäßig die Möglichkeit einer externen Verifikation. Ohne eine klare Definition, wann Angaben als glaubwürdig bzw. ausreichend nachvollziehbar gelten, entsteht Rechtsunsicherheit sowie ein erheblicher, nicht risikobasierter Prüfungsaufwand. Eine präzisere Begriffsbestimmung ist daher erforderlich, um eine

Name of the respondent	Question	Answer
		praktikable Anwendung zu ermöglichen. Artikel 18b (Vorgesehene Aktivitäten / Zweck und Art der Geschäftsbeziehung) Es besteht Klärungsbedarf, welche Nachweise für Immobilienmakler im Rahmen gewerblicher Immobilientransaktionen als geeignet und ausreichend anzusehen sind. Immobilienmakler bestimmen die eingesetzten finanziellen Mittel regelmäßig nicht selbst; diese stehen zum Zeitpunkt der Vermittlung häufig noch nicht fest. Zudem besteht insbesondere gegenüber der Gegenpartei vielfach keine vertragliche Beziehung, sodass der Zugang zu relevanten Informationen faktisch nicht möglich ist. Eine umfassende Nachweiserhebung ist daher in zahlreichen Fällen praktisch unmöglich. Eine Konkretisierung der Anforderungen oder eine Beschränkung auf verfügbare Unterlagen, insbesondere Maklerverträge, Provisionsvereinbarungen und direkte Vertragspartner, erscheint erforderlich, um eine rechtssichere Umsetzung zu gewährleisten. Artikel 18d (Herkunft der Mittel) Auch hinsichtlich der Herkunft der Mittel besteht Klärungsbedarf zu geeigneten Nachweisen für Immobilienmakler. Aufgrund ihrer Rolle bestimmen sie die Mittel regelmäßig nicht selbst; zudem fehlt häufig eine vertragliche Beziehung zur Gegenpartei. Eine umfassende Erhebung ist daher vielfach nicht möglich. Die Überprüfung der Mittelherkunft ist im gewerblichen Immobilienmarkt insgesamt stark eingeschränkt.

Name of the respondent	Question	Answer
		Insbesondere bei Miettransaktionen ist für Immobilienmakler weder ersichtlich noch verifizierbar, welche Mittel eingesetzt werden, da sie nicht in den Zahlungsfluss eingebunden sind. Die einzige überprüfbare Mittelherkunft ist regelmäßig die eigene Provisionszahlung, die jedoch im Kontext der Geldwäscheprävention nicht risikorelevant ist. Vor diesem Hintergrund erscheint eine Verortung dieser Anforderungen bei anderen Akteuren, insbesondere Notaren, sachgerechter. Sofern Immobilienmakler weiterhin einbezogen bleiben sollen, bedarf es einer klaren, transaktionsbezogenen Konkretisierung, um Unmöglichkeitstatbestände zu vermeiden. Artikel 23 Abs. 1 (Erneute Identifizierung der auftretenden Person in Niedrigrisikofällen) Es besteht Klarstellungsbedarf, ob die jeweils auftretende Person bereits von einer bestehenden Identifizierung erfasst ist oder grundsätzlich erneut überprüft werden muss. Dies ist insbesondere bei großen Kunden und Alleinvermittlungsaufträgen relevant, da hier regelmäßig mehrere Transaktionen pro Jahr stattfinden. In der Praxis führt dies dazu, dass Asset Manager von Corporate-Kunden mit niedrigem Risiko wiederholt identifiziert werden müssen, obwohl sie bekannt und bereits überprüft sind. Dies verursacht erheblichen administrativen Aufwand ohne zusätzlichen Nutzen für die Geldwäscheprävention. Eine Erleichterung der Identifizierung im Rahmen vereinfachter Sorgfaltspflichten erscheint daher sachgerecht.

Name of the respondent	Question	Answer
		Zudem sind Angaben zu Geschäftsführern und vergleichbaren Organen bereits in öffentlichen Registern, insbesondere im Handelsregister, enthalten. Eine erneute Identifizierung ist daher regelmäßig unverhältnismäßig. Da im Immobilienbereich häufig weitere auftretende Personen ohne Vertretungsberechtigung involviert sind, wird vorgeschlagen, die Identifizierungspflicht auf die den Miet- oder Kaufvertrag unterzeichnende Person zu beschränken. In Niedrigrisikofällen sollten zudem Ausnahmen auf Basis öffentlicher, verlässlicher Quellen vorgesehen werden.
Legal & Compliance Initiative Real Estate	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Legal & Compliance Initiative Real Estate	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Legal & Compliance Initiative Real Estate	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Hinweis zum Absender des Beitrags: Die Stellungnahme zum Entwurf technischer Regulierungsstandards zu Kriterien für Geschäftsbeziehungen, gelegentliche Transaktionen und verbundene Transaktionen sowie zu niedrigeren Schwellenwerten gemäß Artikel 19 Absatz 9 der Verordnung (EU) 2024/1624 wird durch den Lenkungskreis der LCI Real Estate (www.compliance-realestate.com) abgegeben.

Name of the respondent	Question	Answer
		Die LCI Real Estate wurde im Juni 2013 von führenden Beratungsunternehmen aus der Gewerbeimmobilienbranche gegründet und besteht aus Ethik-, Legal- und Compliance Verantwortlichen der zugehörigen Unternehmen. Ziel der Gründung der Initiative war und ist es, Compliance-Themen nicht individuell in jedem Unternehmen einzeln zu lösen, sondern gemeinsam hohe Ethikstandards in der Immobilienbranche zu etablieren. Zudem war man bestrebt sicherstellen, dass die zunehmenden gesetzgeberischen Anforderungen zu Compliance-relevanten Themen auf einem hohen Standard umgesetzt werden und vor allem die Kunden der Beratungsunternehmen sich auf ein einheitliches Vorgehen der Beratungsunternehmen verlassen können, was deren eigenen Umgang mit den gesetzlichen Anforderungen einfacher macht. Der Anspruch der als Arbeitskreis konzipierte LCI Real Estate war es somit, Maßnahmen zu fördern, die eine stärkere Professionalisierung gewerblicher Immobiliendienstleister im Bereich Compliance zum Ziel haben. Ergebnis der Zusammenarbeit ist u.a. ein gemeinsamer Flyer zu Fragen des Geldwäschegesetzes, sowie ein einheitlicher Fragebogen zur Identifikation des wirtschaftlich Berechtigten. Dieser wird in der Zwischenzeit auch von vielen anderen Unternehmen der Immobilienbranche als Vorlage genutzt und wohlwollend von unseren Kunden zu Kenntnis genommen, die nunmehr auf den Fragebogen

Name of the respondent	Question	Answer
		angepasst ihre erforderlichen Unterlagen zur Identifikation vorbereiten können und dies unabhängig davon, mit welchem Immobilienberatungsunternehmen sie gerade zusammenarbeiten. Auch dem Thema Risikoanalyse mit dem Schwerpunkt der Immobilienbranche haben wir uns angenommen und hier erstmals für alle Marktteilnehmer eine Mustervorlage erstellt, mit der zukünftig die gesetzlich geforderte Risikoanalyse – auf das eigene Unternehmen angepasst – erstellt werden kann. Zu Fragen der Geldwäscheprävention steht der Arbeitskreis in regelmäßigem Austausch mit den jeweils zuständigen Aufsichtsbehörden. Dem Lenkungskreis der LCI Real Estate gehören folgende Unternehmen an: BNP Paribas Real Estate, CBRE, Colliers International, JLL, Savills und Von Poll Commercial.
Legal & Compliance Initiative Real Estate	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Legal & Compliance Initiative Real Estate	Do you have any comments on the Annex in the draft RTS?	Yes

Leir OÜ	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	N/A as we are not obliged entity

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Leir OÜ	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, we agree that relevant RTS draft provide effective application of a risk-based approach
Leir OÜ	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As of now, we do not see situations where the CDD-related information could be unavailable and/or non-collectable for the CDD purposes
Leir OÜ	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A, as we are not obliged entity

Name of the respondent	Question	Answer
Leir OÜ	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No, we don`t have any additional comments
Leir OÜ	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Leir OÜ	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Leir OÜ	Do you have any comments on the Annex in the draft RTS?	Yes
Leir OÜ	Please share your comments below.	We`d propose to clarify within the corresponding text that “availability” refers to the ability of the LEI to be obtained, thereby promoting the uptake of LEIs by all legal entities for the purposes of complying with CDD requirements. This clarification would promote a uniform understanding of “availability” across obliged entities and reduce the risk that the absence of an LEI is treated as a valid limitation, even where the identifier can be readily obtained.
Leir OÜ	How would you rate the proposals set out in the draft RTS overall?	Good
LGT Holding AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide	Regarding Art. 11(2)(b)(ii) and Art. 11(3)(d), we support the aim of obtaining a meaningful understanding of ownership and control structures. However, read together, these provisions may be interpreted as requiring a detailed mapping of listings, share classes,

Name of the respondent	Question	Answer
	concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	voting rights and percentage breakdowns across intermediate entities as a default expectation. That would often go beyond what is needed for the beneficial-owner analysis under the AMLR. The key purpose is to identify whether a natural person holds, directly or indirectly, 25% or more of shares, voting rights or other ownership interests, or otherwise exercises control. In many cases, that does not require: • a full reconstruction of each entity in the chain; or • a class-by-class analysis of all securities. This is especially burdensome for large or listed groups, multi-layered international structures, and wholesale, custody or correspondent relationships. The RTS should therefore limit required information to what is necessary to identify the relevant natural person or persons and understand how ownership or control is exercised, and should confirm that public disclosures, company and commercial registers and other reliable independent sources may be used where sufficient. For Art. 13 on senior managing officials, our concern is not with the AMLR rule that SMOs must be identified as a fallback where no beneficial owner can be identified or where doubts remain. Rather, the concern is that the RTS may be interpreted as requiring all relevant SMOs to be identified and verified in the same way as beneficial owners, despite being expressly a fallback substitute. That would be too rigid and disproportionately burdensome, particularly in large corporates, financial institutions and complex regulated groups. The draft does not give enough guidance on:

Name of the respondent	Question	Answer
		• how many SMOs must be identified; • on what basis they should be selected; • whether public or official sources may be used; or • how the fallback should work where the management structure is broad or layered. A better approach would be to clarify that, once the fallback is triggered, obliged entities may identify one or more natural persons from the senior management body who together provide sufficient assurance as to who ultimately bears responsibility for management. The RTS should also expressly permit identification and verification through public registers, official company filings, annual reports, supervisory disclosures and other reliable independent sources, and clarify that the relevant notion is the senior management body rather than the broader AMLR concept of senior management. For Art. 16, we agree with the objective of ensuring that the institution knows which person acts on behalf of the customer and that this person is duly authorised. However, the current drafting may be read too broadly, as if it required obliged entities to identify and verify the powers of representation of all legal representatives of the customer, including persons who never interact with the obliged entity and have no connection to the relevant relationship or transaction. That would go beyond what is necessary for AML/CFT purposes and create substantial operational difficulty, especially for large or multinational corporates with many authorised signatories, officers and local representatives. The RTS should therefore make clear that the relevant person is

Name of the respondent	Question	Answer
		the natural person who, in practice: • enters into the relationship; • executes or seeks to execute a transaction; or • gives instructions to the obliged entity on behalf of the customer. It should also clarify that obliged entities are not required to identify or verify the powers of persons who do not act, and are not reasonably expected to act, in relation to that relationship or transaction. For Art. 17, the provision should cover not only the collective investment undertaking itself, but also other obliged entities in the structure, such as the depositary bank and asset manager, where they must comply with Art. 20(1)(h) AMLR. It should also expressly include EEA countries, which seems necessary to avoid an unintended gap in the reliance framework. For Arts. 27 and 33, the RTS should clarify that, for legacy wealth, due diligence does not automatically fail where historical records no longer exist or cannot reasonably be retrieved. In such cases, obliged entities should be able to rely on other reliable and independent information, supported by a documented plausibility assessment proportionate to the risk.
LGT Holding AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	For Art. 6(3), the concern is that it may be read as creating a routine authenticity-check obligation for every identity document submitted, regardless of the circumstances or indicators of doubt. A genuinely risk-based approach should allow the nature and intensity of

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	checks to depend on: • the risk profile of the relationship; • the onboarding context; and • indicators of tampering, impersonation or fraud. Without such clarification, ordinary onboarding, especially in low-risk cases, could become a routine document-forensics exercise. The RTS should therefore state expressly that “reasonable steps” are risk-sensitive and proportionate and do not require, as a matter of routine, specialised forensic or machine-based authentication tools. Regarding Art. 11(2)(b)(ii) and Art. 11(3)(d), these provisions risk turning ownership and control analysis into a formalistic data-collection exercise detached from the substantive objective of the AMLR. The key purpose is to identify whether a natural person holds, directly or indirectly, 25% or more of shares, voting rights or other ownership interests, or otherwise exercises control. A risk-based approach should not require, as a default expectation: • full reconstruction of the share-capital structure of each intermediate entity; or • detailed mapping of each class of shares, listing status or voting-right breakdown where that does not affect the beneficial-owner assessment. The RTS should therefore focus the depth of information required on what is materially relevant to identifying the beneficial owner and understanding how control is exercised, while confirming that public disclosures, company and commercial registers, regulated market information and other reliable

Name of the respondent	Question	Answer
		independent sources may be used where sufficient. For Art. 13, absent clarification, the fallback mechanism may operate as a quasi-automatic requirement to identify and verify a broad group of senior managing officials in the same way as beneficial owners. That would not reflect a properly risk-based framework, particularly in large corporates, financial institutions and complex regulated groups. The RTS should instead permit obliged entities to identify one or more appropriate SMOs sufficient to achieve the objective of Art. 22(2) AMLR, and should allow reliance on public or official sources. It should also clarify: • how many SMOs need to be identified; • that selection may be made on a proportionate basis; and • that the relevant notion is the senior management body. For Art. 16, the provision should be limited to the natural person who actually acts toward the obliged entity. A broader reading would require firms to reconstruct and maintain a complete map of the customer's representation powers, including persons who have no role in the relevant relationship or transaction. That would not be proportionate and would not reflect a risk-based allocation of compliance resources. The RTS should therefore make clear that the relevant person is the one who, in practice: • enters into the relationship; • executes or seeks to execute a transaction; or • gives instructions to the obliged entity on behalf of the customer.

Name of the respondent	Question	Answer
		For Art. 17, the reliance model should not be confined to the collective investment undertaking alone where other obliged entities in the structure, such as the depositary bank or asset manager, may also need to fulfil Art. 20(1)(h) AMLR. Restricting the provision to the CIU creates duplication rather than efficient reliance. The reference to obligations in “an EU Member State or a third country” should also expressly include EEA countries. For Arts. 27 and 33, a risk-based approach should not force the exit of long-standing, well-monitored customers solely because documentation relating to wealth accumulated or transferred decades ago is no longer available. In many such cases, records: • were never created to today’s standards; • are no longer retained; or • cannot reasonably be retrieved. The RTS should therefore clarify that where historical documentation is no longer reasonably available, obliged entities may rely on other reliable and independent information together with a documented plausibility assessment proportionate to the risk. Finally, the RTS should expressly recognise that ongoing customer due diligence does not require unnecessary re-verification of information that has already been validly verified unless a relevant trigger is present. The distinction in the AMLR between: • initial identification and verification; • ongoing monitoring and updating; and • re-verification where justified by risk-based triggers should be reflected more clearly in the RTS. This would

Name of the respondent	Question	Answer
		improve operational workability while remaining fully consistent with RBA
LGT Holding AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We identify two categories of situation where information required under the draft RTS is routinely unavailable in practice and where the current text does not provide an adequate alternative solution. 1. Place of birth / document attributes Identity documents across jurisdictions vary considerably in the information they contain. Some commonly used documents do not show all attributes contemplated by Articles 4, 5 and 6. For example, a Swiss passport generally shows the place of citizenship (Heimatort / lieu d'origine), not the place of birth. Similar issues may arise with identity or residence documents in other jurisdictions. In such cases, the absence of one attribute should not prevent onboarding where identity can otherwise be established through reliable means. 2. Historical source-of-wealth documentation For customers whose wealth was accumulated, transferred or inherited many years ago, formal documentation of historical source of wealth is often no longer available. Records may never have been created to today's standards, retention periods may have expired, or the relevant third parties may no longer exist. The draft RTS does not provide a sufficiently clear alternative solution for this scenario. We therefore request that AMLA clarify that where specific information or documentation is not reasonably obtainable, obliged entities may rely on other reliable and independent information and documented

Name of the respondent	Question	Answer
		plausibility assessments, and that the relationship need not be refused or terminated automatically on that basis. Requested solution AMLA should clarify that where specific information or documentation is not reasonably obtainable: • the relationship need not be refused or terminated automatically; • obliged entities may use other reliable and independent information and documented plausibility analysis; and • the assessment remains risk-based and proportionate. This is particularly important for legacy wealth under Articles 27 and 33.
LGT Holding AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We propose two additional clarifications or measures that would be proportionate to lower ML/TF risk and reduce unnecessary duplication. 1. Simplified beneficial-owner identification for listed issuers and equivalent transparency regimes: The draft RTS should specify an additional simplified due diligence measure where the customer or beneficial owner is a legal entity subject to robust and legally enforceable transparency requirements that already ensure a high degree of visibility over ownership and control. This should cover: • issuers admitted to trading on an EU regulated market and subject to the disclosure framework under Directive 2004/109/EC or equivalent Union legislation; and • other legal entities subject to equivalent transparency requirements under Union or national law ensuring

Name of the respondent	Question	Answer
		adequate public disclosure of ownership and control. In such cases, the RTS should permit obliged entities, on a documented and risk-sensitive basis, to rely on regulated market disclosures, major-shareholding notifications, official public filings, supervisory disclosures, and other reliable and independent sources to identify and verify whether any natural person qualifies as beneficial owner, and to refrain from taking disproportionate additional ownership look-through measures where there is no indication of concentrated ownership, control via other means, nominee structures, discrepancies, or other red flags. Where no natural person beneficial owner is identified on that basis, obliged entities should be able to proceed in accordance with Article 22(2) AMLR. 2. No unnecessary re-verification of previously verified information The draft RTS would benefit from an express clarification that the application of customer due diligence on an ongoing basis does not require routine repetition of identification and verification steps that have already been validly completed unless a specific risk-based trigger is present. The RTS should confirm that: • where an obliged entity has already identified and, where required, verified customer due diligence information in accordance with Regulation (EU) 2024/1624, it is not required to repeat that verification unless a risk-based trigger (suspicion-based trigger) justifies doing so; • where documents or information are obtained for

Name of the respondent	Question	Answer
		customer due diligence purposes beyond the core identification and verification requirements, the obliged entity is not required to independently verify their content or authenticity as a matter of routine unless this is required by Union law, expressly required by the RTS, or justified by the risk associated with the customer, transaction, or relationship; and • obliged entities remain responsible for ensuring that customer due diligence information remains appropriate, reliable and up to date, commensurate with the risk associated with the relationship. This clarification would reflect the structure of the AMLR, in particular Article 26, and the approach in Recital (21) of the draft RTS, and would materially improve the operational workability of the new framework.
LGT Holding AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Drafting proposals for amendments suggested above in the next section
LGT Holding AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6

Name of the respondent	Question	Answer
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Drafting suggestion: Add the following sentence to Article 6(3): “The steps referred to in this paragraph shall be risk-sensitive and proportionate, having regard to the circumstances of the relationship and any indicators of doubt as to the authenticity or integrity of the document, and shall not require, as a matter of routine, the use of specialised forensic or machine-based document authentication tools.”
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	11
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Drafting suggestion: Article 11(2)(b)(ii) and Article 11(3)(d) should be clarified so that the information required is limited to what is necessary to identify the natural person(s) who qualify as beneficial owners and to understand how ownership or control is exercised. A possible redraft could be: Article 11(2)(b)(ii): “where relevant for identifying the natural person(s) who qualify as beneficial owners pursuant to Regulation (EU) 2024/1624 and for understanding how ownership or control is exercised, information on the regulated market on which the securities are listed and, where necessary, on the extent to which listed or unlisted securities may materially affect the assessment of whether a natural person holds, directly or indirectly, 25% or more of the shares, voting rights or other ownership interests, or otherwise exercises control.”

Name of the respondent	Question	Answer
		Article 11(3)(d): "where necessary to identify the natural person(s) who qualify as beneficial owners pursuant to Regulation (EU) 2024/1624 and to understand how ownership or control is exercised, information on the shares of interest held by each legal entity or legal arrangement and, where relevant, on the distribution of voting rights, insofar as these may result, directly or indirectly, in a natural person holding 25% or more of the shares, voting rights or other ownership interests, or otherwise exercising control. Where there are different classes or types of shares or voting rights, obliged entities shall obtain information on those classes or types only to the extent that they materially affect the assessment of whether a natural person meets the applicable beneficial-ownership threshold or exercises control via other means." A complementary clarification should confirm that obliged entities may rely on public disclosures, company and commercial registers, regulated market information, and other reliable independent sources, and are not required to reconstruct in full the share-capital, listing, or voting-rights structure of each intermediate entity where higher-level information is sufficient.
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Drafting suggestion: A new first paragraph should be added to Article 13 along the following lines:

Name of the respondent	Question	Answer
		"Where, in accordance with Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, the obliged entity is required to identify senior managing officials, it shall take risk-sensitive and proportionate measures to identify one or more natural persons who are members of the customer's senior management body and who, taken together, provide a sufficient level of assurance that the obliged entity understands who ultimately exerts responsibility for the management of the customer. Obliged entities shall not be required to identify and verify all members of senior management in every case, provided they can justify that the senior managing officials identified are adequate to meet the objective of Article 22(2) of Regulation (EU) 2024/1624." Article 13 should further clarify that: "For the purposes of this Article, obliged entities may identify and verify senior managing officials through public registers, official company filings, annual reports, supervisory disclosures, or other reliable and independent sources, where such sources provide sufficient assurance as to the identity and position of the relevant person." Recital (10) should be supplemented to clarify that the assessment of whether all possible means of identification have been exhausted is to be conducted on a risk-based and proportionate basis and that the fallback does not require identification and verification of all persons falling within a broad notion of senior management where a smaller number of persons from the senior management body is sufficient.

Name of the respondent	Question	Answer
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	16
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Drafting suggestion: Article 16 should be amended along the following lines: “In relation to the identification and verification of the person purporting to act on behalf of the customer as referred to in Article 22 of Regulation (EU) 2024/1624, and in addition to the information to be collected pursuant to the relevant provisions of Section 2, obliged entities shall obtain information enabling them to verify the existence and extent of the power of representation of the natural person who, in practice, acts vis-à-vis the obliged entity on behalf of the customer in relation to the relevant business relationship or transaction.” Add: “Obliged entities shall not be required to identify or verify the powers of representation of persons who do not act, and are not reasonably expected to act, in relation to that business relationship or transaction.” A complementary recital should confirm that the purpose of Article 16 is to ensure that the obliged entity knows which natural person is acting toward it and that this person is duly empowered to do so, and not to require obliged entities to reconstruct or maintain a complete overview of all representation powers of the customer.
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	17

Name of the respondent	Question	Answer
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Drafting suggestion: Article 17 should be amended to read: “When shares or units of a collective investment undertaking are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, the collective investment undertaking and any other parties involved and qualifying as obliged entities (such as the depositary bank and the asset manager) may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if they are satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the identity of any final investor without undue delay and upon request.” The conditions in point (a) should be amended to include EEA countries expressly.
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	27
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Drafting suggestion: “Where information or documentation relating to the source of wealth or source of funds is no longer reasonably available, including because the relevant assets were generated, transferred or acquired at a time when less extensive documentation standards or shorter record-retention periods applied, obliged entities may rely on other available reliable and independent information, together with a documented assessment of the overall plausibility and consistency of

Name of the respondent	Question	Answer
		the customer's explanation, having regard to the level of risk associated with the relationship."
LGT Holding AG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	33
LGT Holding AG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Drafting suggestion: "For pre-existing customers, the requirement to align customer files with the new framework on a risk-sensitive basis does not require obliged entities to obtain historical documentation that is no longer reasonably obtainable, provided they can demonstrate that they have taken proportionate steps to understand and assess the source of wealth or source of funds in light of the specific circumstances and risks."
LGT Holding AG	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
LGT Holding AG	Do you have any comments on the Annex in the draft RTS?	No
LGT Holding AG	How would you rate the proposals set out in the draft RTS overall?	Neutral
LGT Holding AG	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Name of the respondent	Question	Answer
	Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
LGT Holding AG	Please justify your answer to the previous question and provide evidence where possible.	Some of the requirements in the draft RTS appear to go beyond the AMLR obligations, as set out in our submission, and would generate significant implementation and ongoing operating costs. In particular, costs would arise where obliged entities are effectively expected to duplicate information already available through public registers, regulated market disclosures, company filings or other reliable independent sources, rather than being permitted to rely on those sources on a proportionate basis. A major cost driver would be the collection, verification and continuous maintenance of information on persons who do not materially add to the financial crime risk profile of the relationship. This includes, for example: - a broad range of representatives who do not act vis-à-vis the obliged entity in the relevant relationship or transaction; - senior managing officials identified under an overly expansive fallback approach; and - highly granular ownership and control information that is not necessary to determine whether a natural person

Name of the respondent	Question	Answer
		meets the beneficial-owner threshold or otherwise exercises control. The resulting burden is not limited to initial onboarding. It would also require substantial investment in process redesign, additional staffing, training, compliance monitoring, systems changes, workflow adjustments, record maintenance and periodic updating. In larger and more complex groups, this effort would be multiplied across jurisdictions, business lines and legacy client files. Similar costs would arise if Art. 6(3) were interpreted as requiring routine authenticity checks or specialised examination of all identity documents, and if Arts. 27 and 33 were applied in a way that requires documentation that is no longer reasonably available for legacy wealth. In our view, these costs would be considerable and ongoing, while the incremental AML/CFT benefit would often be limited. We are fully committed to the objectives of the EU AML package, but we believe compliance resources should be directed toward measures that make a genuine difference to risk mitigation and financial crime prevention, rather than toward duplicative or excessively formalistic exercises. Thank you for your consideration.
Lithuanian banking association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	We see additional clarity is needed in the outlined articles below to ensure the RTS achieve their objective as proportionate, practicable, and aligned with the risk-based approach as set out in AMLR.

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Overall, ● The RTS should affirm that firms do not need to re-verify identity data that is already reliably sourced, previously verified and still current (specifically where currently provided ID document has not expired). ● It must be clarified that firms aren't required to independently validate every piece of customer data that is required to be collected, especially for details like addresses that may be difficult to verify in certain jurisdictions where such information is not readily available on primary ID documents. ● To prevent inconsistent application across Member States, more precise guidance is required regarding who is authorized to certify documents. ● The RTS should formally endorse the use of reputable public records, registries, and existing data to prevent redundant processes and reduce customer friction. We believe AMLA should encourage the standardisation of government databases across EU Member States to improve ease and accuracy of sourcing independent and reliable identity data for electronic verification purposes. Detailed feedback Recitals While we respect the Recitals are not independently binding, we believe it is imperative that clarifications are required to ensure the effective functioning of the RTS given their purpose to state the intent of the RTS and their interpretative value. We therefore see the

Name of the respondent	Question	Answer
		following as requiring clarification and amendments to ensure the effective operation of the RTS: Recital 3 - The requirement to provide both Nationality and Place of Birth could potentially prohibit a large citizen/resident population from using more readily available identity documentation such as drivers licence and would otherwise enforce a requirement to request Passport as the only eligible identity document. We propose that such data be collected and verified only for foreign passport holders. Recital 12 additional clarity is required here given the role of legal guardians, or representatives acting on behalf of, both children and adult lives. If this is intended for minors it should be explicitly stated. However if intended to include adults with legal guardians, or representatives acting on behalf of adults (eg. carers or family representatives of disabled individuals) there is a practical difficulty in assessing this in onboarding where provisions for vulnerable customers already exist.
Lithuanian banking association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Association fully supports AMLA's commitment to risk-based due diligence, however the proposed RTS as currently drafted include overly prescriptive mandates. Such rules-based provisions could limit the flexibility necessary for institutions to effectively manage specific risks. In particular, we would draw your attention to the

Name of the respondent	Question	Answer
		following provisions: ● Article 7 (Verification): Current expectations could be misread as requiring verification of all customer data points, regardless of actual risk. ● Articles 10–13 (Complex Structures): The use of undefined terms like “organigram” may create a default expectation for Enhanced Due Diligence (EDD) based solely on structural complexity. ● Article 19 (EDD Triggers): The mandate to apply EDD “without delay” after any change in circumstances lacks a materiality threshold. This could lead to excessive re-assessments or premature account restrictions. ● Articles 25–28 (Source of Wealth/Funds): Requiring firms to be “satisfied” without defining clear thresholds may result in inconsistent supervisory standards. Risks of a Process-Driven Approach If these provisions remain as drafted, firms may prioritize standardized checklists over risk-based judgment, leading to: ● Redundant CDD efforts. ● Increased friction for customers, particularly in low-risk scenarios. ● The diversion of critical resources away from high-risk threats. To prevent this, the RTS must clearly distinguish between minimum baseline requirements and risk-driven enhancements, as well as differentiate between data collection versus verification (especially for

Name of the respondent	Question	Answer
		SoW/SoF). Recommended Improvements ● Article 7: Specify that verification is risk-based and proportionate, particularly for digital or non-face-to-face onboarding, rather than a universal requirement for all data. ● Articles 10–13: Confirm that complexity alone does not trigger EDD and define the specific purpose of an "organigram." ● Article 19: Establish a materiality threshold for EDD triggers and allow firms to leverage existing customer knowledge ● Articles 25–28: Define a "reasonable standard" for being satisfied with SoW/SoF data and ensure these requirements remain scalable. ● General: Explicitly state that firms should not duplicate previously verified information unless there is a specific, risk-based reason to do so.
Lithuanian banking association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Although the draft RTS seeks to unify customer due diligence (CDD) data collection, certain details are often unavailable in real-world scenarios, especially when dealing with various customer profiles and international jurisdictions. A lack of built-in flexibility could lead to onboarding bottlenecks, a poor customer experience, and uneven regulatory enforcement. Scenarios where the information may be lacking or unavailable Source of Wealth (SoW) and Source of Funds (SoF) (Articles 25–28)

Name of the respondent	Question	Answer
		Obtaining SoW and SoF information is often challenging, especially regarding: ● Legacy Portfolios: Long-standing customers whose historical data predates current standards. ● Jurisdictional Barriers: Regions with low transparency or poor documentation standards. Without clear parameters, the requirement for firms to be "satisfied" with this information risks inconsistent regulatory interpretation. Proposed Solution: AMLA should: ● Define Proportionality: Clarify that firms may rely on reasonable evidence rather than exhaustive documentation. Provide support for acceptance of customer declared information, subject to making further enquiries where transaction behaviour deviates from such baseline self-declared information. ● Validate Diverse Inputs: Recognize customer explanations, transaction patterns, and existing relationship history as legitimate evidence. This is particularly beneficial for full banking customer relationships where all primary income is received into the account. ● Standardize Risk Levels: Provide specific guidance on evidence requirements for high-risk scenarios. ● Tiered Verification: Distinguish between lower-risk cases (where customer-declared data suffices) and higher-risk cases (requiring full collection and verification). Beneficial Ownership and Complex Structures (Articles 10–13) Securing complete, verified beneficial ownership data is

Name of the respondent	Question	Answer
		often difficult when: ● Ownership hierarchies extend across multiple jurisdictions. ● Official company registries are missing, unreliable, or incomplete. ● Legal vehicles, such as trusts, contain discretionary or non-fixed beneficiaries. In addition, a clear definition of senior managing official would add clarity and therefore would advocate for having to identify the legal representative of the company as available in the public register. Proposed Solution: AMLA should: ● Confirm that firms can use the best available information, such as customer-provided data validated by reasonable checks. ● Acknowledge the authority of central registers where they exist to avoid redundant verification. ● Define expectations for cases where full transparency remains unattainable despite exhaustive efforts. Pooled and Omnibus Structures (Articles 17 & 22) For collective investment undertakings (CIUs), pooled accounts, and similar vehicles, firms generally lack visibility into underlying investors. Mandatory identification of all individual participants is operationally impractical. Proposed Solution: The AMLA should explicitly state that when reliance conditions are satisfied, firms may rely on regulated intermediaries rather than identifying and verifying every underlying investor. Data Required for Sanctions Screening (Articles 29–30) Specific screening identifiers, such as full date of birth or

Name of the respondent	Question	Answer
		full place of birth, are not always obtainable, particularly regarding: ● Authorized corporate representatives. ● Legacy customer files. Proposed Solution: The AMLA should clarify that screening may proceed using the minimum reliable identifiers available. The absence of specific data points should not hinder compliance, provided a risk-based approach is maintained.
Lithuanian banking association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Support for Simplified Due Diligence (SDD) Association supports AMLA's goal of ensuring SDD is correctly applied in low-risk contexts. However, the draft RTS requires more explicit practical guidance, fulfilling AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624. Specifically, the RTS should better recognize situations where ML/TF risks are naturally mitigated by existing transparency, regulatory supervision, or specific product traits. Scenarios Justifying Further Simplification ● Public Entities and Listed Companies: Organizations already subject to stringent disclosure and governance oversight. ● Regulated Financial Institutions: Entities under equivalent AML/CFT regimes where redundant due diligence offers little extra protection. ● Intra-group Relationships: Customers belonging to the same regulated group and managed under consolidated supervision. ● Established Interbank Frameworks: Systems like SWIFT RMA where controls and due diligence are natively integrated.

Name of the respondent	Question	Answer
		● Standardized Low-Risk Products: Retail offerings where the relationship's nature is clear and risk indicators are absent. ● Low-Risk Customers: Existing customers who have a well established (eg. multi-product), long term (eg. >2-years), proven business relationship with the firm and have negligible previous ML risk concerns (eg. no prior ML or fraud risk alerts or reporting). Proposed Simplified Measures ● Information Limits: Collecting less data when reliable sources already provide sufficient information. ● Reduced Verification: Lowering the requirement for independent verification when alternative transparency mechanisms exist. ● Control Reliance: Utilizing existing market, group, or regulatory controls instead of duplicating efforts. ● Adjusted Monitoring: Decreasing the frequency or intensity of ongoing oversight for low-risk profiles. Drafting Recommendation "For customers, products, or services with demonstrably low ML/TF risk and sufficient regulatory oversight, obliged entities may implement simplified due diligence. This includes reduced data collection, verification, and/or monitoring, provided these measures are supported by a risk-based justification." Rationale ● Harmonization: Improves consistency across all Member States. ● Efficiency: Minimizes redundant operational burdens. ● Risk-Based Focus: Enables firms to redirect resources

Name of the respondent	Question	Answer
		toward high-risk areas, aligning with the core objectives of the AML framework.
Lithuanian banking association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose. Further to points elaborated elsewhere in this response, the following sections require further clarity to ensure the RTS is implemented consistently and proportionately. Article 7 – Scope of Verification We note that the current drafted RTS lacks a clear distinction between data that must be collected and data that requires independent verification. An interpretation requiring verification of every data point would exceed a risk-based approach and create significant operational hurdles. ● Proposed Solution: Clarify that not all collected information requires independent verification and that verification efforts should remain risk-based and proportionate. Articles 10–13 – Complex Structures and the "Organigram"

Name of the respondent	Question	Answer
		The RTS references an “organigram” without defining its intended purpose or the required level of granularity. ● Proposed Solution: Provide a formal definition of “organigram” and confirm that structural complexity does not automatically mandate Enhanced Due Diligence (EDD), and to include clarity on the information required on the legal form to include name and registration number. Article 19 – Trigger for Enhanced Due Diligence The mandate to apply EDD measures “without delay” currently lacks a materiality threshold. ● Proposed Solution: Introduce a time-bound materiality threshold and permit firms to leverage existing customer knowledge when assessing the need for EDD Articles 25–28 – Threshold for “Satisfaction” The RTS requires firms to be “satisfied” with information but fails to define the benchmark for this standard. ● Proposed Solution: Establish guidance on what constitutes a "reasonable standard" and allow for the use of diverse, mixed evidence sources, and our strong suggestion should be that “satisfied” should be in the context that firms are satisfied that the ML risk has been reduced or eliminated. Articles 29–30 – Data Requirements for Screening Essential screening data points are not always accessible. ● Proposed Solution: Authorize the use of a minimum set of identifiers and confirm that the absence of non-essential data does not preclude compliance.

Name of the respondent	Question	Answer
		Article 33 – Interaction with Level 2 Measures The RTS currently fails to address how it interacts with other Level 2 regulatory measures. ● Proposed Solution: Align implementation timelines and ensure the framework avoids triggering repetitive remediation cycles. General – Adherence to Level 1 Mandate There is a concern that the RTS may inadvertently expand the scope of the Level 1 Regulation. ● Proposed Solution: Confirm that the RTS is intended to specify—not extend—Level 1 requirements, while reinforcing the primacy of the risk-based approach.
Lithuanian banking association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Association supports the collection and verification of full legal names, including all middle names, for individuals. However, for legal entities, there is an absence of an EU-wide definition of trade name. This could lead to variances between Member States and where availability is dependent on a local register of a company. In several jurisdictions, this element is not subject to a mandatory form of registration, which renders its verification unfeasible. ● Proposed Resolution: Clarification is required in

Name of the respondent	Question	Answer
		Article 2 to specify Trade Name when available in an official register.
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	As has been articulated in previous consultations and as noted in feedback on the Recitals, we believe clarification is required as there is an absence of uniformity across Member States on the information provided in identification documents, and where 'place of birth' is not always included. We believe such a provision to provide 'place of birth' should only be mandatory for non-citizens/non-residents who would otherwise be required to use their passport as the primary ID. In other instances it should be optional unless otherwise readily available on the identification documentation provided. ● Proposed Resolution: CDD RTS Article 4 - Specification on the provision of the place of birth The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of the country name. Suggested provision under Article 4 to clarify that data relating to place of birth is collected on a declarative basis but verification requirement is limited to information present on the ID documentation.

Name of the respondent	Question	Answer
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We recognise this provision is based on Art. 22 (I)(a)(iii) AMLRs, however we are concerned that the RTS as drafted goes beyond the Level 1 text by referring to “all nationalities” where the AMLR refers to “nationalities”. Furthermore, we see potential conflict between this Article and the Recitals: Recital 3 RTS states “Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient.” ● Proposed Resolution: Remove reference to “all” nationalities from Art 5 and reflect wording of Recital 3 for example “Obliged entities should allow customers to declare more than one nationality. Where a person holds multiple nationalities and declares them in good faith, verifying one nationality should be sufficient.”
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Electronic verification of identity documents, typically via an independent and reliable government or authorised data source is not in of itself a distinct control to independently validate that the person providing the identity document is the person they claim to be; which typically requires additional biometric checks eg. live selfie comparison with ID facial image, biometric/NFC passport check.

Name of the respondent	Question	Answer
		As echoed by industry responses elsewhere, the RTS as drafted do not provide a meaningful alternative to electronic identification means that are compliant with Regulation (EU) No 910/2014 (Art. 22 (6)(b) AMLR) and instead could potentially undermine the Risk-Based Approach by being too prescriptive. We therefore recommend allowing obliged entities to apply different levels of remote identification controls based on customer risk. For lower-risk customers, this could include liveness detection selfies, document upload with automated verification, personal data verification with public registers, NFC biometric data verification and facial biometrics matched to ID photos, which are already widely accepted and technologically mature. End-to-end encrypted video chat could be limited to high-risk customers or where simplified measures are insufficient, rather than applying it as a blanket requirement. Ideally, the RTS should not be overly prescriptive, allowing room to adapt in the ongoing 'arms race' with identity fraudsters. We believe these changes would ensure continued regulatory compliance while supporting frictionless and scalable digital onboarding, consistent with both technological innovation and the risk-based principle underpinning European and global AML frameworks.

Name of the respondent	Question	Answer
		● Proposed Resolution: ○ Art 7(2). In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall verify the natural person's identity using remote solutions that meet the conditions set out in paragraphs 3 and 4. ○ Art 7 (3) (a) controls to ensure that, where an identity document, passport or equivalent is used, the natural person presenting the customer's identity document, passport or equivalent is the actual person on the picture of the document (ie. is the person they claim to be); ○ Art 7(4) 4. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with this Article and they shall also be able to explain, either by reference to the customer or the obliged entity's policies, why the customer was not verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624. Challenges in Verifying Address (Article 7) In many jurisdictions, independent sources for address verification are unreliable or unavailable. This issue primarily affects: ● Lack of Infrastructure: Regions without centralized address registries. ● Lack of Documentation: Customers without traditional proofs, such as utility bills. In particular for tenants and transient workers/expatriates who may not have utility

Name of the respondent	Question	Answer
		bills in their own name depending on tenancy arrangements. In addition is the issue of multi-lingual documents requiring translation and interpretation, and many documents being available only via email/pdf or screenshots and not hard copy proofs. ● Document Limitations: Primary IDs (e.g., passports or EU IDs) that do not list a current residential address, and/or where an address may be present (eg. drivers licence) may not be current. In these instances, strict independent verification is often unfeasible or provides no regulatory value. Proposed Solution: The AMLA should permit firms to use flexible, alternative verification methods, such as: ● Self-declarations validated by other verified data points (eg. google maps location confirmation). ● Digital identity solutions and reliable electronic data sources. ● Risk-based acceptance of partial verification when appropriate.

Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The current drafting presents a potential tension between regulatory compliance and the actual spirit of risk-based monitoring. The phrasing "at least one of the following" creates a loophole where firms are incentivised to collect the most easily accessible data point rather than the most meaningful one. This shifts the focus from risk mitigation to administrative

Name of the respondent	Question	Answer
		completion, potentially leaving significant blind spots in the customer profile. Collecting a single "valid" piece of data merely to satisfy a technical requirement offers no tangible benefit if that data lacks relevance to the customer's actual risk profile. Without a requirement for relevance, firms may hold data that fulfills the letter of the law but fails to support effective transaction monitoring or suspicious activity detection. By listing specific data points as "options," the draft risks being too narrow for complex cases and too burdensome for simple ones. It fails to account for the diversity of business models where the "envisaged activity" might require a multi-faceted baseline rather than a single, isolated attribute. ● Proposed Resolution: Firms may decide the necessary level of data to be collected and/or verified to satisfy establishing the customers baseline purpose and nature of business relationship, from which to assess deviations against to inform their transaction monitoring controls.
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	24

Name of the respondent	Question	Answer
Lithuanian banking association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	20
Lithuanian banking association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	The current drafting of this article creates a "regulatory donut hole" by failing to define the specific evidentiary requirements for the Standard (Medium) risk category. By focusing heavily on the "floor" for Simplified Due Diligence (SDD)—such as allowing the collection of address data without verification—and the "ceiling" for Enhanced Due Diligence (EDD)—which mandates deep dives into the Source of Wealth and senior management approval—as drafted, the Article leaves the vast majority of customers in an undefined middle ground. Without a clear "Standard CDD" benchmark, this proposed wording poses a significant operational challenge: firms are left without a precise understanding of what constitutes the necessary "extra" information or verification intensity required to elevate a customer from a Low-risk profile to a Medium-risk one without inadvertently triggering the full weight of EDD. Without explicit guidance on where simple self-declaration ends and independent documentary verification begins for standard customers, the RTS risks inconsistent application and "compliance creep," where firms default to burdensome EDD measures simply to avoid regulatory ambiguity.

Name of the respondent	Question	Answer
Lithuanian Chamber of Auditors	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Position: We partially agree. Key Concern: 1) While the draft RTS establishes a harmonized framework for customer due diligence across the EU, several provisions do not sufficiently reflect the diversity of obliged entities and the fundamentally different business models, risk profiles and access to information between financial institutions and professional services providers such as auditors and accountancy professionals. In particular, number of requirements appear to be designed primarily for financial institutions and transaction-based services and, if applied uniformly, risk creating disproportionate administrative and financial burdens for non financial obliged entities without delivering commensurate AML/CFT risk mitigation. Examples include: a. transaction specific requirements and ongoing screening expectations which are difficult to reconcile with the nature of statutory audit and accountancy engagements; b. identity verification requirements that presuppose access to official databases or document authenticity tools which are not available to our sector; c. broadly framed obligations that do not sufficiently distinguish between front office client interaction and back office verification functions. 2) Terminology. We raise a fundamental concern regarding the clarity of the scope for the professional services sector under Article 3 of the AMLR. A significant linguistic and conceptual ambiguity exists regarding the

Name of the respondent	Question	Answer
		term "material aid". In certain national translations (e.g., Lithuanian: "materialinė pagalba"), the term may imply financial or tangible support, and, therefore maybe misunderstood while implementing needed measures and setting supervision in a certain country. In the context of the audit and accounting profession, providing "material aid" in its literal financial sense would constitute a severe breach of professional independence and ethical standards (IESBA Code). 3) Scope and Sectoral Specificity. In the Article 3 of the AMLR defined scope as follow “auditors, external accountants and tax advisors, and any other natural or legal person including independent legal professionals such as lawyers, that undertakes to provide, directly or by means of other persons to which that other person is related, material aid, assistance or advice on tax matters as principal business or professional activity”. It is necessary to note that in the range of services provided by auditors and external accountants material aid, assistance or advice on tax matters in most cases is only part or even minor part of services provided. Audit of financial statements and information, most of other assurance services provided by auditors are focused on historical financial and other data and does not involve financial transaction management – it is strictly limited or prohibited by ethics and independency standards, also legal regulation, as would overlap with management functions or financial decision-making. Therefore, CDD intensity for auditors and external accountants should be adjusted accordingly or explained following risk-based approach.

Name of the respondent	Question	Answer
		4) Insufficient flexibility. The current drafting does not: a. sufficiently differentiate between sectors with continuous transactional exposure and those providing non transactional professional services; b. recognize that auditors and accountancy professionals in most cases represent the final link in a long chain of prior public sector and legal entity identification and verification; c. adequately limit obligations to what is reasonably achievable access to information and tools. Drafting Proposal: 1) The RTS shall include a clarifying provision or a preamble stating that "material aid" refers strictly to the relevance or significance of the professional service provided, rather than financial or tangible support. Without this clarification, the Regulation risks creating a direct conflict with existing professional ethics codes and leading to fragmented application across Member States. 2) The intensity of CDD should be adjusted to reflect risk of services provided by auditors and external accountants, taking into consideration key concerns disclosed above. 3) The RTS shall clarify that verification measures must be applied on a risk based approach and only using sources reasonably available to the obliged entity from official sources (like EU or state registers, public tax institutions, etc.), do not force using commercial based resources provided by private entities; 4) Introducing explicit wording that sector neutral

Name of the respondent	Question	Answer
		provisions should be interpreted proportionately to the nature of services provided, in line with Article 28(1) AMLR.
Lithuanian Chamber of Auditors	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Position: We partially agree. Key Concern: While the draft RTS establishes a harmonized framework, the principle of proportionality is not sufficiently operationalized for non-financial obliged entities, several provisions do not sufficiently reflect the fundamentally different business models and risk profiles between financial institutions and non-transactional based professional service providers such as auditors and external accountants. Requirements often presuppose access to official databases or document authenticity tools that are unavailable to our sector and the current draft RTS proposals risk creating disproportionate administrative burdens for non-financial obliged entities, irrespectively of actual ML/TF risk. Examples include: 1) verification requirements that appear to apply uniformly rather than being clearly conditional on assessed risk; 2) enhanced due diligence measures that may be triggered in situations where sector specific ML/TF exposure remains low; 3) screening requirements that could be interpreted as mandating continuous monitoring without clear risk triggered events. Drafting Proposal. The following amendments would strengthen legal certainty and ensure that the RTS genuinely enable, rather than inadvertently constrain,

Name of the respondent	Question	Answer
		risk based implementation 1) explicitly limiting transaction specific and continuous monitoring obligations to obliged entities whose business model does not involve execution or processing of transactions; 2) for auditors, while providing historical data assurance service, ensure that CDD measures are proportionate to the nature of the engagement; 3) clearer differentiation between baseline information requirements and additional measures that are triggered exclusively by elevated risk; 4) explicit confirmation that certain data elements (e.g. detailed source of funds or wealth, utility bills and similar) are not required for low risk roles such as senior management unless a specific ML/TF risk indicator is present; 5) clarification that “significant change” triggering review or enhanced measures must be defined by reference to risk relevant events.
Lithuanian Chamber of Auditors	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Position: Yes. While the draft RTS emphasizes proportionality, this principle is not sufficiently operationalized for low-risk services provided by auditors and external accountants. Key Concern: 1) In professional services contexts, certain information required under the draft RTS is routinely unavailable despite reasonable efforts by the obliged entity, and the RTS do not always provide a workable alternative. Some examples: • verification of identity document authenticity where auditors, external accountants and tax advisors have no

Name of the respondent	Question	Answer
		access to official verification databases or document validation tools; • independent verification of nationality or place of birth where such information is not reliably available from public registers and cannot reasonably be authenticated; • comprehensive source of funds or source of wealth, utility bills information for senior managing officials of corporate clients, where no ML/TF indicators exist and such data is outside the professional service relationship 2) Due to independency and ethics requirements, it is strictly prohibited for auditors to act on behalf of the client, while providing audit of company reports or other assurance services. Proposed alternative solutions 1) Based on sector specificity and where risk appropriate, the obliged entity shall rely on official public registers and client representations; 2) If there are justified doubts regarding beneficial ownership or the accuracy of registry information: a. the obliged entity fulfils its obligations by submitting a report to competent authorities or the FIU, after which responsibility for further investigation rests with public authorities; b. the obliged entity's management shall estimate possibility to continue providing service. This approach would be proportionate, realistic and aligned with the respective roles of private obliged entities and public enforcement bodies.
Lithuanian Chamber of Auditors	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account	As is already specified above, by responding to questions 1, 2, and 3, auditors and external

Name of the respondent	Question	Answer
	your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	accountants: a) in major cases provide non-transactional based professional services; b) while providing professional services, in most cases work only with historical data; c) are not involved in execution or processing of transactions; d) have limited access to the registers; e) have no power to stop a suspicious transaction or activity, or limit the client by any other measures, except for the sole decision to stop or discontinue the service provided in particular cases. Following risk-based approach principle, rationale and proportionality, we would propose simplified measures that wouldn't reduce responsibilities and the value of AML/TF prevention goals, but would increase efficiency by focusing on real ML/TF risks: a) explicit recognition that statutory audit and regulated services, subject to professional standards, ethical rules and public oversight, may qualify for simplified due diligence where no risk indicators are present; b) for small-scale audit engagements or one-off assurance reports that fall below the EUR 10,000 threshold and do not involve indicators of high risk during initial client identification, simplified due diligence should be considered the default standard; c) simplified requirements for identifying senior managing officials where beneficial ownership is clearly documented in official public registers; d) clearer differentiation between baseline information requirements and additional measures triggered

Name of the respondent	Question	Answer
		exclusively by elevated risk. For instance, collecting detailed sources of wealth information for senior managing officials (SMOs) should not be mandatory for low-risk roles in audited entities unless a specific ML/TF risk indicator is present; e) reduced frequency of CDD updates for long standing clients with stable ownership, governance and risk profiles, absent triggering events. We recommend including illustrative examples of low risk scenarios in the RTS, explicitly covering: • auditor operates under the ISQM 1 developed by the IAASB (or an equivalent standard), which require high standards of professional ethics, independency and internal quality control, the engagement is considered low-risk, justifying the application of simplified Customer Due Diligence (CDD) procedures, unless a specific ML/TF risk indicator is present and/or politically exposed persons are identified in relation to the audit engagement or professional service provided; • professional services provided are non-transactional based, no client transactions are executed or controlled by the obliged entity • auditor or external accountant is not acting on behalf of the client management or financial decision-making This would enhance consistency of application across Member States and also reduce supervisory fragmentation.
Lithuanian Chamber of Auditors	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	We would like to raise the following additional points: 1. Ongoing and continuous targeted financial sanctions screening obligation. The RTS should clearly limit ongoing and continuous targeted financial sanctions

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	screening obligation for auditors, external accountants and tax advisors due to the following: a. Auditors, external accountants, tax advisors are obliged to check on a legal entity and beneficial owner(s) level existence of targeted financial sanctions prohibiting providing a particular professional service; if so, professional service cannot be provided at all. b. Ongoing or continuous screening in the absence of obvious changes of the client's beneficial owner(s) during the period when professional service is provided, is disproportionate to the nature of the services that are episodic, non-transactional based and where the obliged entity has no power to stop the client's transaction or limit client's activity. 2. Automated screening tools requirement. Audit firms do not operate automated, continuous screening solutions. Non-exceptional requiring automated tools or ongoing manual checks is disproportionate and inconsistent with the nature and risk of non-transactional services provided by auditors as already disclosed above. 3. Use of digital identification. Where qualified digital identification or signatures are used, additional personal identity document equivalent data collection should not be mandatory, unless there are justified doubts regarding beneficial ownership or the accuracy of registry information. 4. Private commercial identification service providers. The RTS should avoid creating an indirect obligation to purchase identification or authentication services from unregulated private commercials of this kind of service

Name of the respondent	Question	Answer
		providers. This creates additional administration burden, increases costs and intermediaries without demonstrable AML/CFT effectiveness benefits. Such option should be clearly stated as a non-mandatory possibility. Instead, measures shall be taken to ensure that official state registers all over EU are able to provide efficient, trusted identification and authentication services for reasonable price to all obliged entities. 5. Role and powers of obliged entities. The RTS should better reflect that auditors and accountancy professionals are market participants without enforcement powers, investigatory authority or access comparable to public bodies. Requirements that implicitly expect such capabilities risk being ineffective and disproportionate. We strongly support maintaining a firm but realistic distinction between private sector preventive obligations and public sector enforcement responsibilities.
Lithuanian Chamber of Auditors	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Lithuanian Chamber of Auditors	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Lithuanian Chamber of Auditors	Do you have any comments on the Annex in the draft RTS?	No
Lithuanian Chamber of Auditors	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
Lithuanian Fintech Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, not as currently drafted. The draft RTS can be applied across products and services of participants of Lithuanian Fintech Association only if a number of clarifications are made. Without them, several articles can be read in ways incompatible with the risk-based approach in Article 22(7) AMLR, structurally misaligned with eIDAS, or applied differently across Member States to the point that the same operational model cannot be used cross-border. We set out below the three blocking issues and the fix that would allow us to answer Yes. 1. Several articles, read in isolation from Article 1 (proportionality) and Article 22(7) AMLR, impose a uniform standard that does not fit low-risk products. (a) Article 3 (address). The list of address elements reads as a closed enumeration of individually verifiable attributes. We consider that the listed elements represent illustrative data points rather than mandatory verification targets. Fix: confirm in the recital and operative text of Article 3 that the listed address elements are indicative only, and that verification of address applies to the address as a whole through the risk based means appropriate to the operating model, such as IP geolocation matching or payment instrument consistency checks etc. (b) Article 4 (place of birth). The current draft of Article 4 triggers a separate obligation to obtain city of birth from the identity documents, where such documents do contain city-of-birth details - this creates additional beaurocratic burden on copliance checks without any supporting ML/TF risk mitigation evidence. Fix: The obligation to collect city of birth should not apply as a

Name of the respondent	Question	Answer
		default requirement across all customer relationships where such information is available. Instead, collection of city-of-birth information should be discretionary and applied on a case-by-case basis, limited to situations where such information is specifically needed for a defined internal purpose - for example, to resolve an inconclusive result in a sanctions screening process, or to satisfy a specific regulatory reporting requirement. Where neither of these circumstances applies, obliged entities should not be required to seek or record this information. The provision should be amended to reflect this discretionary, purpose-driven approach rather than imposing a blanket collection obligation triggered solely by the presence of the data field in the identity document. (c) Article 10 (BO verification) and Article 21 (BO/SMO low-risk). Article 10(b)(iv) as currently drafted creates a format requirement centred on the phrase "where the identity of the named person is certified by persons authorised for document certification purposes." This formulation is ambiguous: it may be read as requiring certification of the identity itself rather than of the document, which does not correspond to how document certification operates across legal systems globally, and in many jurisdictions has no workable equivalent. Fix: remove the phrase "is certified by persons that are authorised for document certification purposes" from Article 10(b)(iv) to avoid imposing a bureaucratic requirement that is impossible to implement uniformly; include under Article 21 the possibility for obliged entities to pre-fill BO/SMO data

Name of the respondent	Question	Answer
		from central registers and present it for customer confirmation in lower risk cases. (d) Article 11(4)(b) (rationale of the structure). Assessing the economic or legal rationale of a corporate structure is highly subjective and outside the typical competence of compliance staff. Fix: confirm in the recital that this is intended to identify structures with no plausible legitimate purpose, not to require obliged entities to validate the legitimity of underlying reasons for a customer's structure. 2. Structural misalignment between the draft RTS and the eIDAS framework (the most significant blocking issue). Article 7, read with Annex I, expects electronic identification means and qualified trust services to deliver the full set of attributes required under Article 22(1) AMLR (place of birth, nationalities, address, identity document number). However, under Commission Implementing Regulation (EU) 2015/1501 and the EUDI Wallet PID Rulebook, the eIDAS minimum data set for natural persons includes only four mandatory attributes: family name, given name, date of birth and a unique persistent identifier. Place of birth, nationality, address and document number are optional or provided only where national implementation supports them. In many cross-border onboarding flows an eIDAS-compliant eID will therefore not, on its own, deliver the full AMLR / RTS data set, which directly limits the applicability of the draft RTS in cross-border digital onboarding. We expand on this in Q3 and propose

Name of the respondent	Question	Answer
		drafting amendments in Q5 (Article 7) and in our comment on Annex I.
Lithuanian Fintech Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Partially. The draft RTS preserves the risk-based approach as a matter of principle (Article 1, recital (1)) but, in several places, the operative articles are drafted in ways that risk being read as imposing standardised, non-risk-sensitive requirements. The clearest examples are: (a) Article 3 (address information in point (c)) - could be read as requiring collection and verification of every address element listed if those are available, including in low-risk situations. We suggest clarifying that Article 3 standardises the format of address data if collected, and is not a freestanding obligation to collect or verify each element in all cases even if the data is available. (See Article-level comment on Article 3.) (b) Article 7 (non-face-to-face verification) - the wording "not available, or cannot reasonably be expected to be provided" leaves it unclear whether obliged entities may continue to offer eID, remote video identification and in-person identification as equivalent customer-facing alternatives. Restricting the choice would not improve outcomes in low or standard risk scenarios and would conflict with the risk-based approach. (See Article-level comment on Article 7.) (c) Article 10(b) (verification of beneficial owner) - point (b)(iv) requires certification of copies of documents in all cases, irrespective of risk. This sits uneasily with

Name of the respondent	Question	Answer
		Article 22(7) AMLR, which expressly provides that the extent of verification information shall be determined on a risk-sensitive basis. (See Article-level comment on Article 10) (d) Article 11(4) (ownership and control structure) - point (b) requires obliged entities to be satisfied that there is an "economic, legal or other rationale" behind the structure. As drafted, this could be applied to all customers regardless of risk, even though the assessment of economic rationale is most useful where there are higher-risk indicators (complex structures, third-country layers, nominee arrangements). (See Article-level comment on Article 11(4)) (e) Article 21 (BO/SMO identification in low-risk situations) - the requirement to consult two separate sources for identification and verification can be disproportionate in low-risk scenarios where data is retrieved from a reliable central register and confirmed by the customer. (f) Annex I and Article 7(1) (eIDAS misalignment) - by tying compliant remote verification to electronic identification means that deliver the full AMLR Article 22(1) data set, the draft RTS effectively raises the eIDAS minimum data set into a binding AML standard. As discussed in our response to Question 1 and Question 3, the eIDAS minimum data set contains only four mandatory attributes, with place of birth, nationality and address being optional and not consistently

Name of the respondent	Question	Answer
		implemented across Member States. In low- and standard-risk situations, this creates a real risk that eIDAS-compliant remote verification becomes practically unavailable, forcing obliged entities into more burdensome alternatives that are not proportionate to the residual risk. Proposal. To preserve the effective application of the risk-based approach, we suggest: (i) confirming in the recitals and appropriate articles that the proportionality principle in Article 1 of the draft RTS qualifies the operative articles, including Articles 3, 7, 10, 11(4) and 21, and that the extent of information collected and verified shall be commensurate with the customer's residual ML/TF risk; (ii) where the operative wording is open to a non-risk-sensitive reading (for example Articles 3, 10(b)(iv) and 11(4)(b)), inserting an explicit "on a risk-sensitive basis" or "where this is necessary in light of the risks identified" qualifier; and (iii) clarifying in Article 7 and Annex I that, where eIDAS attributes do not fully match the AMLR Article 22(1) data set, obliged entities may rely on the self-declaration of the customer to obtain the missing attributes, unless there are higher risk situations. These clarifications would preserve the risk-based

Name of the respondent	Question	Answer
		approach as the operating principle of the draft RTS and prevent supervisory drift toward a tick-box reading.
Lithuanian Fintech Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are recurring situations in which the information required under the draft RTS is routinely unavailable, and where the draft RTS does not yet provide a clear alternative pathway. The four most significant examples for Lithuanian Fintech Association members are set out below. 1. Address data (Article 3). In many onboarding flows, only partial address data are available (e.g. country, city) and full street-level data may be provided only as a correspondence address. Direct verification of the address against an independent source is in many cases not possible - obliged entities rely instead on consistency checks (IP address, mobile number country code, ID issuing country, geolocation). The draft RTS should clarify that, where used, the address is treated as contact information and that Article 3 is intended to standardise the format of the data collected rather than to introduce a new obligation to collect and verify each element in all cases. Proposed solution: clarify in Article 3 (or in a recital) that the elements listed apply to the format of address information where collected, and that the depth of verification follows Article 22(7) AMLR on a risk-sensitive basis. 2. Place of birth

Name of the respondent	Question	Answer
		The existing requirement to collect city of birth if it exists in the identification documents is not justified by ML/TF risks and the necessity of this specific data point as risk mitigant. The technological solutions to extract the data point IF it exists from the identity documents, to keep the records of the additional data point is a costly compliance process without clear justification on what compliance needs it would satisfy (e.g. potential necessity for FIUs to provide this specific data point was not expressed, neither it is justified to collect this data point for sanctions screening purposes). Proposed solution: explicit confirmation in Article 4, to collect solely country of birth or to leave the decision on what data to collect on place of birth for obliged entities based on the risks established (e.g. an edge cases for eliminating false positives of sanctions screening). 3. Beneficial ownership verification (Article 10). For customers established in jurisdictions where notarisation only certifies the authenticity of the signature or the document and not the accuracy of its content (the United States is a frequently cited example), it is not possible to obtain certified documents in the sense of Article 10(b)(iv). A strict reading of Article 10(b) (iv) would restrict obliged entities to rely on information provided by customers from in low risk cases if no appropriate certification of documents has been received - an outcome inconsistent with the risk-based approach in Article 22(7) AMLR.

Name of the respondent	Question	Answer
		Proposed solution: confirm that obliged entities may rely on customer-provided documentation, and certification of documents will be needed only in high risk scenarious. 4. Misalignment between Annex I / Article 7 and the eIDAS minimum data set. Article 7(1) of the draft RTS expects that, in non-face-to-face situations, obliged entities will use eIDAS-compliant electronic identification means or qualified trust services. Annex I sets out the attributes that those means are required to feature. However, the eIDAS minimum data set as defined in Commission Implementing Regulation (EU) 2015/1501 (Annex) and reflected in the EUDI Wallet PID Rulebook contains only four mandatory attributes for natural persons (family name, given name, date of birth, unique persistent identifier). Place of birth, nationality, address and identity document number are optional and are not consistently implemented across Member States. As a result, in cross-border onboarding flows, eIDAS-compliant electronic identification will not, on its own, deliver the full set of identity attributes required under Article 22(1) AMLR. Proposed solution: clarify in Article 7 (or in Annex I) that, where the electronic identification means or qualified trust service does not deliver the full Article 22(1) data set, obliged entities may obtain information from a customer without verifying the missing attributes through other reliable and independent

Name of the respondent	Question	Answer
		sources. The recital should also acknowledge that the AMLR / draft RTS does not, and is not intended to, expand the eIDAS minimum data set.
Lithuanian Fintech Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes, we suggest the inclusion of additional simplified due diligence (SDD) measures which for lower-risk service models which would meaningfully support efficient digital implementation, while remaining fully consistent with the risk-based architecture of the AMLR. Pre-fill of identity, beneficial ownership and senior managing official data from registers INCLUDING central registers, with customer confirmation. In modern digital onboarding flows, obliged entities increasingly retrieve identity, ownership and SMO data automatically from central registers, business or company registers, or other reliable national sources, and present that data to the customer for review and confirmation as part of the onboarding journey. This approach reduces manual data entry, improves data accuracy and supports a high-quality customer experience, while still ensuring that the customer formally confirms the correctness of the data. Proposed drafting (new paragraph in Article 21 or in a new SDD article): "Where obliged entities retrieve information referred to in Article 22(1) of Regulation (EU) 2024/1624, or information on beneficial owners or senior managing officials, from central registers, business or company registers, or other reliable national sources, the obliged entity may present that information to the customer for

Name of the respondent	Question	Answer
		confirmation. Where the customer confirms the information, that confirmation may be treated as information provided by the customer for the purposes of identification under this RTS." This approach is consistent with Article 22(7) AMLR, with recital (21) of the draft RTS on avoiding duplication of information requests, and with the broader objective of reducing administrative burden in low-risk situations.
Lithuanian Fintech Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Yes, please refer to the comments based on article by article.
Lithuanian Fintech Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We would appreciate clarification from AMLA on three aspects of Article 7: 1A. Article 22(6)(b) AMLR establishes two parallel and equally valid means of verification: (i) electronic identification means at the assurance levels 'substantial' or 'high' under Regulation (EU) No 910/2014, AND (ii) both of those being provided by relevant qualified trust services under that Regulation. The AMLR does not

Name of the respondent	Question	Answer
		privilege the EUDI Wallet (or any specific notified eID scheme) over qualified trust services - a QTSP-based identification solution at the required assurance level is, on its own, a fully compliant primary method of verification under the AMLR. Article 7(1) of the draft RTS restates this correctly. However, the wording of Article 7(2) treats the entire eIDAS pillar as a single block and only contemplates a fall-back to non-eIDAS remote solutions where 'the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided'. This drafting risks being read - in particular by supervisors in jurisdictions where the EUDI Wallet is treated as the default - as implying that if the customer does not hold an EUDI Wallet or a notified eID, the obliged entity has already 'left' main requirement to provide the eIDAS compliant solution and is operating under the Article 7(2) fall-back regime under Article 7(3)-7(4). That reading would be inconsistent with Article 22(6)(b) of AMLR. In practice, where a customer does not hold an EUDI Wallet, where the EUDI infrastructure is not yet operational in the relevant Member State, or where the EUDI Wallet is temporarily unavailable, the obliged entity should be able to offer a QTSP-based identification flow that it has integrated into its onboarding journey as a primary, first-line eIDAS-compliant method - and the customer should be considered verified under Article 22(6)(b) AMLR / Article

Name of the respondent	Question	Answer
		7(1) of the RTS, without any need to rely on Article 7(2). We respectfully ask AMLA to confirm this reading in the operative text of Article 7 (or, at a minimum, in the recitals) by clarifying that: (a) qualified trust services at the required eIDAS assurance level are a primary, co-equal method of verification under Article 7(1), on the same footing as notified electronic identification means / the EUDI Wallet; and (b) the unavailability of, or non-possession by the customer of, an EUDI Wallet or a notified eID does not, in and of itself, trigger Article 7(2), and that the obliged entity should be able to offer a QTSP-based identification flow that meets the requirements of Article 7(1). This clarification would prevent divergent supervisory interpretations, support a level playing field across Member States, and align the operative text of the RTS with the structure of Article 22(6)(b) AMLR. 1B. Scope of Article 7(2) - when the eIDAS pillar as a whole is not available. Once the point 1A is clarified, Article 7(2) should be understood to apply only where no eIDAS-compliant means at all (notified eID, EUDI Wallet or QTSP-based flow integrated by the obliged entity) is available or can reasonably be expected to be provided. Even on that narrower reading, the trigger remains undefined and we would suggest that Article 7(2) is intended to cover, at

Name of the respondent	Question	Answer
		least, the following situation e.g. operational or technical failure of the relevant infrastructure (whether on the side of the customer, the obliged entity, or the trust service provider) means that no eIDAS-compliant means can be used at the moment of onboarding; A clarification along these lines, ideally in the operative article or at least in the recitals, would avoid an artificially narrow reading of Article 7(2) that would be inconsistent with recital (7) and with the broader eIDAS framework. 2. Meaning of "able to justify" in Article 7(4). The obligation for obliged entities to be "able to justify" why the customer could not be verified through eID introduces an open-ended discretion for competent authorities to assess what justification is sufficient. We are concerned that, absent further AMLA guidance, this will lead to divergent interpretations across Member States. We respectfully ask AMLA to clarify (i) what evidence or documentation is expected to support such a justification, (ii) what criteria competent authorities will apply when assessing whether the justification is sufficient, and (iii) whether a documented customer choice between equivalent verification methods would be considered sufficient justification on its own.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	9

Name of the respondent	Question	Answer
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	It would be beneficial for AMLA to clarify certain aspects of the AMLR framework relating to the use of virtual IBANs in particular in light of Article 22(3) AMLR and the draft RTS: a) Timing and trigger of the “5 working days” obligation It is not entirely clear from AMLR Article 22(3) whether the obligation to provide information “without delay and in any case within 5 working days” is: - triggered only upon a specific request from the servicing institution (i.e. an ad hoc, request-based obligation), or - whether the issuance of a vIBAN itself could be interpreted as triggering a proactive obligation to make such information available within a defined timeframe. We understand that AMLR wording “within 5 working days of it requesting that information” strongly supports a request-based trigger, but operational interpretations may drift toward quasi-reporting obligations - this should be avoided unless explicitly intended. b) Potential inconsistency between AMLR and RTS wording (obtain vs. verify) A clarification would also be welcome regarding the apparent divergence between AMLR Article 22(3) and draft RTS Article 9. AMLR Article 22(3) requires obliged entities to “obtain information to identify and verify the identity” of the

Name of the respondent	Question	Answer
		person using the vIBAN. By contrast, RTS Article 9 requires obliged entities to "obtain and verify" such information. This difference in wording appears to have substantive implications, as: - the AMLR wording may be interpreted as requiring the institution to obtain information sufficient for identification and verification, including potentially relying on third parties providing that information; - whereas the RTS wording could be read as introducing an independent obligation to perform verification, potentially going beyond the Level 1 text. It would be beneficial to clarify: RTS should not substantively extend Level 1 obligations, thus we request keeping AMLR wording "obtain information to identify and verify the identity". c) Allocation of responsibility for reporting to central registers (AMLD6 context) Taking into account the broader framework under AMLD6 regarding the reporting of bank and payment account information (including vIBAN-related data) to centralised registers, further clarification would be beneficial as to the allocation of responsibilities between institutions involved in vIBAN structures. In particular, it is not entirely clear, whether the obligation to provide information to central registers rests with: - the institution issuing the vIBAN,

Name of the respondent	Question	Answer
		- the institution servicing the underlying account, or - both, depending on the data element. Without clarity, there is a risk of: - duplicative reporting, or - regulatory gaps (each party assuming the other is responsible).
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	10
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We would appreciate clarification from AMLA on three aspects of Article 10: 1. Article 10(b) and the risk-based approach - certified copies should not be required in all cases. Article 22(7), second subparagraph, AMLR explicitly allows obliged entities to apply verification measures on a risk-sensitive basis: "Obliged entities shall determine the extent of the information to be consulted, having regard to the risks posed by the occasional transaction or the business relationship and the beneficial owner, including risks relating to the ownership structure." The wording of Article 10(b) may, however, be read as introducing more prescriptive requirements that could limit the discretion of obliged entities to apply verification measures proportionately to risk. In particular, Article 10(b)(iv) appears to imply that documents from a legal entity or legal arrangement identifying the beneficial owner should be certified by authorised persons. A strict reading could effectively

Name of the respondent	Question	Answer
		require certified copies in all cases, including standard-risk situations. This would create significant operational and administrative challenges, particularly given the requirement in Article 62(1) AMLR to collect the beneficial owner's identity document number, which in some Member States or third countries is not accessible through public registers and may only be available through copies of identity documents. We would therefore welcome clarification that Article 10(b) (iv) is not to be interpreted as requiring certified copies in all circumstances, and that obliged entities may determine the appropriate level of verification evidence in line with the risk-based approach in Article 22(7) AMLR. 2. Reliance on Article 10 for non-EU customers pending submission to the central register. We would also appreciate clarification whether obliged entities may rely on the measures set out in Article 10 where a customer is registered outside the Union but has not yet submitted beneficial ownership information to the relevant central register of a Member State. This is relevant both at onboarding and during ongoing business relationships. Article 67(1) AMLR requires legal entities created outside the Union, as well as trustees of express trusts (or persons in equivalent positions in similar legal arrangements) administered, residing or established outside the Union, to submit beneficial ownership

Name of the respondent	Question	Answer
		information pursuant to Article 62 to the central register of the Member State when entering into a business relationship. Article 24 AMLR addresses the reporting of discrepancies in beneficial ownership registers, but does not expressly state that an obliged entity must refrain from establishing or continuing a business relationship solely because the information has not yet been recorded in, or aligned with, the central register. On that basis, our understanding is that alternative verification measures may be applied until the central register is duly updated. We would therefore appreciate AMLA confirming whether, in such circumstances, reliance on Article 10 remains permissible, provided that the obliged entity has obtained and verified the relevant beneficial ownership information through other appropriate means. If such reliance is not considered permissible, we would appreciate this being stated explicitly, in the interest of convergence and consistent application across obliged entities and Member States.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	11
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We welcome the structured approach to assessing ownership and control structures under Article 11. We would, however, respectfully ask AMLA to reconsider, or provide further clarification on, point (b) of Article 11(4), which requires obliged entities to be satisfied that there is an "economic, legal or other rationale" behind the ownership and control structure.

Name of the respondent	Question	Answer
		In practice, the assessment of an economic or legal rationale behind a corporate structure is highly subjective and falls outside the typical competence of compliance staff. Many customers do not commission formal legal or tax opinions on their structuring choices, and obliged entities cannot reasonably be expected to second-guess legitimate registered structures simply because their economic rationale is not self-evident. Requiring a substantive assessment of the rationale could therefore lead to (i) inconsistent supervisory expectations, and (ii) operational pressure to refuse legitimate customers whose structures are unusual but not problematic from an ML/TF perspective. We suggest that AMLA either: (i) limit the application of point (b) to risk-sensitive cases (e.g. by adding "on a risk-sensitive basis" or "where there are indicators of higher risk") consistent with the risk-based approach under Article 22(7) AMLR; or (ii) clarify in the recitals that the assessment under point (b) is intended to identify structures that lack any plausible legitimate purpose and is not intended to require obliged entities to validate the underlying tax, legal or commercial reasons for a customer's structure.

Name of the respondent	Question	Answer
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The obligations in Article 19(2), point (c), as currently drafted, implicitly assume that PEP datasets are structurally equivalent to EU targeted financial sanctions lists - i.e., that dataset changes constitute discrete, authoritative legal events that unambiguously signal a change in a subject's designation status. This assumption does not hold for PEP data and, if interpreted literally, would impose an operational burden with no proportionate AML risk benefit. Unlike sanctions lists, PEP datasets used by obliged entities across the EU are: - Maintained by commercial data vendors with no single authoritative EU source, each applying different coverage scope, update methodology, and data quality standards; - Continuously modified for reasons unrelated to genuine PEP status changes - including spelling corrections, source reference updates, record mergers, and re-classification between PEP tiers or categories; - Inconsistent across member states in terms of which public functions qualify as prominent, meaning a "change" in one vendor's dataset may reflect a national definitional difference rather than a material change in the subject's status. Triggering re-screening "without delay" on any dataset change, as point (c) could be read to require, would generate a continuous stream of operationally irrelevant screening events, create disproportionate alert volumes, and divert compliance resources away from genuine risk without any corresponding

Name of the respondent	Question	Answer
		improvement in PEP identification outcomes. No current EU market practice operates at this standard for PEP data, and no supervisory guidance to date has required it. Proposed redraft of paragraph 2, points (c): (c) with a risk-sensitive frequency, taking into account the update cadence and nature of the PEP data sources used, in case of changes and amendments to the list of prominent public functions - where obliged entities shall establish internal procedures to distinguish material designation events from routine data quality corrections in their screening data sources.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	21
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	For the purpose of supporting efficient and consistent implementation of Article 21, we kindly request AMLA to clarify whether the provisions of this Article allow obliged entities to pre-fill beneficial ownership or senior managing official information using data obtained from central registers, business registers, or company registers, and subsequently request the customer to confirm the accuracy of that information. In practice, many obliged entities rely on automated retrieval of information from official registers, which is then presented to the customer during onboarding for review and confirmation. This approach reduces manual

Name of the respondent	Question	Answer
		data entry, improves data accuracy, and aligns with digital onboarding processes, while still ensuring that the customer confirms the correctness of the information. However, it is currently unclear whether such a pre-fill and confirmation mechanism would be considered compliant with the requirement in Article 21(1)(b) and 21 (2) that confirmation by customer of pre-filled data may be treated as “information provided by the customer”. To provide legal certainty and support digitalised compliance processes, we suggest considering the following clarification in the drafting of the Article or its recital: “Where obliged entities retrieve information from central registers, business registers, or other reliable sources for the purpose of identifying beneficial owners or senior managing officials, such information may be presented to the customer for confirmation.” Such clarification would support efficient digital onboarding practices, while remaining fully consistent with the risk-based approach and the objectives of the AMLR.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	22

Name of the respondent	Question	Answer
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	We would appreciate clarification from AMLA on how Article 22 (sectoral simplified measures with respect to pooled accounts) is intended to interact with Article 9 (virtual IBANs). In some business models, an account opened by an obliged entity that itself issues virtual IBANs to its end customers could be characterised as a pooled account in the sense of Article 22. If that interpretation were correct, the condition in Article 22(d) (that the ML/TF risk associated with the business relationship is low) would be very difficult, if not impossible, to satisfy in practice for vIBAN-issuing relationships, and the Article 22 simplified measures would be effectively unavailable in this segment. It would be helpful for AMLA to confirm: (i) whether vIBAN-issuing relationships fall within the scope of Article 22 or are governed exclusively by Article 9; and (ii) if both articles can apply, the criteria that obliged entities should use to determine which regime applies and how to avoid duplicative or conflicting due diligence expectations. Without this clarification, there is a risk of inconsistent application across Member States and of obliged entities being unable to rely on Article 22 in legitimate pooled-account contexts unrelated to vIBAN issuance.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	30

Name of the respondent	Question	Answer
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	In Article 30(c)(iii) of the Draft RTS under Article 28(1), obliged entities are required to regularly screen customers, beneficial owners and relevant ownership/control persons where there is a significant change in due diligence data, including a “change of business operations, which may have a potential impact on the designation as a listed person, body or entity.” Could AMLA clarify how “change of business operations” should operate as a screening trigger in practice? From an operational and technical perspective, business operations are generally not primary matching attributes used in targeted financial sanctions screening. Screening tools typically match against names, aliases, trade names, transliterations, dates of birth, identifiers, wallet addresses and similar list-based data. Business operations are more commonly relevant at the due diligence review or match investigation stage, for example when assessing context, ownership/control links, sanctions circumvention risk or whether a potential match is a false positive. Therefore, should a change of business operations be understood as: a direct and standalone trigger for sanctions re-screening in all cases; or a due diligence / customer profile review trigger, which should lead to re-screening only where the review identifies new or changed screening-relevant data, such as a new name, alias, trade name, beneficial owner, controlling person, wallet address or other relevant identifier?

Name of the respondent	Question	Answer
		We would welcome clarification to avoid a purely mechanical re-screening obligation where no screening-relevant attributes have changed, as such re-screening may generate limited additional detection value while creating significant operational burden.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	32
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	We kindly ask you to clarify how Article 32, including Annex I, should apply to the verification of beneficial owners. It appears that Article 32 does not expressly refer to Article 22(7)(a) of the AMLR as a means of verifying beneficial owner data and does not fully reflect the beneficial owner information required under Article 62(1) of the AMLR. For example, Annex I does not explicitly mention the requirement to provide the number of the identification document. We would also kindly ask you to clarify the application of Article 32(3), in particular the extent to which other means may be used for the verification of beneficial owner data where the relevant attributes are not available through the electronic identification means or qualified trust services. In this context, it would be helpful to confirm whether obliged entities may rely on the means referred to in Article 22(7)(b) of the AMLR and the corresponding provisions of the RTS.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	33

Name of the respondent	Question	Answer
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	We respectfully ask AMLA to clarify two practical questions on the transitional regime in Article 33, both of which were raised during the public hearing and are creating significant operational uncertainty in the market. 1. Reference date for the first OEDD review of high-risk existing customers under Article 26(2) AMLR. Where a high-risk customer was onboarded (or last subject to ongoing enhanced due diligence) shortly before the application date of the AMLR (10 July 2027), it is unclear whether: (i) the next OEDD review must be completed by the first anniversary of that last review, applying the full AMLR/RTS standard (which would in practice require obliged entities to start performing AMLR-compliant OEDD on a portion of their high-risk book well before 10 July 2027 in order to be ready); or (ii) Article 26(2) AMLR applies prospectively only, such that for high-risk existing customers the first AMLR-compliant OEDD must be completed at the latest by 10 July 2028 (i.e. one year after the application date), without retrospective effect. We respectfully suggest that interpretation (ii) is the more workable reading and is consistent with the risk-sensitive and proportionate approach reflected in Article 33 of the draft RTS. A non-retrospective application would also align operational readiness across the market and avoid creating a 'cliff edge' in the months immediately preceding 10 July 2027. We would

Name of the respondent	Question	Answer
		welcome an explicit recital or clarification in the final RTS confirming the reference date for the first AMLR-compliant OEDD of high-risk existing customers. 2. Reliance on pre-AMLR risk assessments during the transitional period. It is realistic to expect that, immediately after the AMLR's application date, obliged entities will continue to operate risk-assessment models that were calibrated under the current framework and that do not yet incorporate all data points required under the AMLR and this RTS. Article 33 of the draft RTS allows existing customer files to be brought in line on a risk-sensitive basis within the periods set out in Article 26(2) AMLR, but it is silent on whether obliged entities may, during that transitional period, continue to rely on the customer risk classification produced by the pre-AMLR risk model. We would ask AMLA to clarify that, during the transitional period: (a) obliged entities may continue to rely on the pre-AMLR customer risk classification for the purpose of prioritising the order in which existing customer files are brought in line with the AMLR/RTS, and (b) the obligation to apply the AMLR-compliant risk assessment is triggered, for each existing customer, at the moment the file is brought in line with the new requirements (rather than on the AMLR application date for the entire portfolio simultaneously).

Name of the respondent	Question	Answer
		Without such a clarification, there is a risk that supervisors will expect obliged entities to have a fully AMLR-compliant risk model in production on day one, which would defeat the purpose of the risk-sensitive transitional regime in Article 33 and create disproportionate implementation costs. 3. Order of the run-off and prioritisation criteria. Finally, although Article 33 refers to the periods in Article 26(2) AMLR, it would be helpful for AMLA to confirm in the recitals that high-risk existing customers should, as a matter of principle, be prioritised within the run-off, and that obliged entities are expected to document the prioritisation logic they apply (e.g. by reference to risk score, product, jurisdiction or other risk factors). This would support consistent supervisory expectations across Member States and provide a clear audit trail for obliged entities.
Lithuanian Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	26
Lithuanian Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	We would suggest a minor refinement to the wording of Article 26(1)(a). The current formulation refers to the obliged entity being "satisfied that the information they hold is authentic and accurate". The notion of "authentic" information is more typically used in the context of physical documents (e.g. authenticity of a passport) rather than in the context of information about the intended nature of a business relationship. We would suggest replacing "authentic and accurate" with "credible and in line with the institution's

Name of the respondent	Question	Answer
		knowledge of the customer", which is more consistent with the formulation already used in Article 28(a) of the same RTS and better reflects the substantive assessment the obliged entity is expected to perform under EDD. This change would also promote internal consistency within the RTS without weakening the underlying obligation.
Lithuanian Fintech Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Lithuanian Fintech Association	Do you have any comments on the Annex in the draft RTS?	Yes
Lithuanian Fintech Association	Please share your comments below.	We kindly ask you to clarify how the requirements set out in Annex I should be fulfilled where a Member State opts to include only mandatory identification data within the EUDI solution implemented at national level. In particular, it would be helpful to understand how obliged entities are expected to meet the full set of attributes listed in Annex I where some of those attributes are not available through the EUDI solution, and to what extent Article 32(3) should be relied upon to obtain and verify the missing attributes through other means. In this regard, we believe it would be beneficial for the article to clarify that all optional data points may be obtained and verified through other means. This would leave it to obliged entities to determine, on the basis of their risk assessment and operational approach, whether to rely on the EUDI solution alone or to supplement it with other reasonable measures.

Name of the respondent	Question	Answer
Lithuanian Fintech Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Lithuanian Fintech Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Lithuanian Fintech Association	Please justify your answer to the previous question and provide evidence where possible.	We welcome AMLA’s draft Regulatory Technical Standards (RTS) under the CDD framework and the opportunity to contribute to the public consultation. As representatives of payment and e-money institutions

Name of the respondent	Question	Answer
		operating digital onboarding across multiple Member States, we focus on the cumulative cost and operational impact of the draft RTS of our average member rather than calculations based on specific cases. Cumulative cost impact Our assessment indicates a one-off implementation cost of approximately EUR 260,000–814,000 (central estimate: EUR 400,000–600,000) and an annual ongoing cost increase of EUR 84,000–456,000 (central estimate: EUR 200,000–300,000) for a firm of around 30 FTEs. These costs are primarily driven not by individual provisions, but by the combined expansion of customer due diligence (CDD) data requirements and associated verification standards. Key driver: expanded data and verification requirements While individual data requirements are justifiable, their cumulative effect significantly increases onboarding complexity. For both natural persons and legal entities, the RTS expands the number of required data points and raises expectations for independent verification. This leads to: - increased onboarding friction, - greater handling of edge cases, - and expanded data storage and audit obligations. As a result, the marginal cost per customer rises across all risk categories, which is particularly impactful for high-volume, low-margin digital business models. Ongoing impact

Name of the respondent	Question	Answer
		The expanded dataset also increases ongoing compliance costs, as additional attributes must be maintained, refreshed, and re-verified across the entire customer base, not just new customers. Proportionality We support the objective of harmonised and robust CDD requirements. However, we urge AMLA to ensure that the final RTS clearly embeds a risk-based and proportionate approach, particularly for low- and standard-risk scenarios. Without this, the cumulative burden risks disproportionately affecting smaller obliged entities. Conclusion We remain supportive of AMLA's work on the Single Rulebook and would welcome further dialogue on the cumulative cost implications outlined above.
Lottomatica Group	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 5(1) – Collection and verification of nationalities The requirement to collect information on all nationalities held by the customer, while allowing verification of only one nationality where declared in good faith (Recital 3), raises significant operational and interpretative concerns. In particular, it is unclear how an obliged entity can assess "good faith", as this is inherently subjective and cannot be reliably tested through standardised procedures. Further issues arise regarding verification methods. The provision does not specify how nationality should be verified or which documents are suitable. In many jurisdictions, identity documents do not systematically

Name of the respondent	Question	Answer
		record nationality and may be issued to non-nationals. Therefore, presenting an identity document does not necessarily allow verification of the declared nationality by linking it to the issuing State. For example, Italian driving licences qualify as identity documents but do not indicate nationality and may be issued to individuals who do not hold Italian nationality. This interpretation is supported by Article 6 of the draft RTS, which, when listing minimum data for documents equivalent to identity cards or passports, does not include nationality among mandatory elements. Where nationality is not indicated, it cannot be inferred from the issuing State, as such documents may also be issued to non-nationals. This further reinforces the uncertainty around compliance with the obligation to collect and verify all nationalities. The issue is compounded by the absence of any centralised or globally accessible database containing reliable nationality data. In practice, obliged entities lack any source to independently verify or cross-check such information, making the verification requirement potentially impossible to fulfil. The difficulty is further increased when using electronic identification means under Regulation (EU) No 910/2014. In Italy, SPID does not require nationality data, and the CIE does not require or transmit all nationalities held by an individual. Consequently, even when using these tools, obliged entities must request additional data or perform further checks to comply. An additional inconsistency arises from Annex I, which refers to “nationality” in the singular. This suggests that,

Name of the respondent	Question	Answer
		at least for reporting purposes, one nationality may suffice. This is particularly relevant where identification relies on eID means (e.g. CIE) that provide only one nationality. Without clarification, the coexistence of a substantive requirement to collect all nationalities and a technical field referring to a single nationality creates uncertainty about the actual level of information required, especially in cases relying on electronic identification under Article 22(6)(b) of Regulation (EU) 2024/1624. Proposed amendment – after paragraph 1, insert the following paragraph: “Obliged entities shall collect information on all nationalities declared by the customer or available through electronic identification means and relevant trust services as referred to in Article 22(6)(b) of Regulation (EU) 2024/1624. Where multiple nationalities are declared, the verification of a single nationality shall be considered sufficient for the purposes of customer identification. Obliged entities shall verify at least one nationality on the basis of official information to which they have access, where available. In the absence of such information, verification shall be carried out on the basis of the documents provided by the customer or of the information available through the relevant electronic identification means and trust services referred to in Article 22(6), point (b)”. Article 4(1) – Additional information on place of birth The requirement to collect “additional information on place of birth” from the customer’s identity document raises operational concerns, as it is unclear which data

Name of the respondent	Question	Answer
		qualify as “additional”. From an implementation perspective, in the online gaming sector – where customer registration is based on digital forms – requiring all such information would entail designing registration interfaces capable of capturing every possible “additional” data element included in identity documents worldwide. This would require a comprehensive mapping of such documents and continuous updates to reflect their evolution. Alternatively, operators would be required to suspend onboarding until document checks are completed and such additional information is manually extracted and reconciled with the customer’s submission. This would introduce significant friction in the onboarding process and may lead customers to migrate to other, potentially unregulated, providers. Proposed amendment – after paragraph 1, insert: “The collection of additional information on place of birth may be completed after the establishment of the business relationship, as part of the customer due diligence process”.
Lottomatica Group	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 25 – Enhanced due diligence measures The requirement, in the context of enhanced due diligence (EDD), to obtain additional information enabling obliged entities to be “satisfied” as to authenticity, accuracy, consistency of funds and alignment with the customer’s risk profile introduces a subjective and operationally undefined criterion. The Regulation does not clarify the meaning of “being satisfied” nor the level of verification required to demonstrate compliance.

Name of the respondent	Question	Answer
		This raises a systemic concern, as it may imply that a higher degree of reliability is required only in EDD, suggesting that lower standards may apply in low- or standard-risk scenarios. Such an interpretation is difficult to reconcile with the logic of customer due diligence, which requires sufficient and reliable information regardless of risk level. In the absence of objective parameters, the notion of "being satisfied" becomes an indeterminate obligation, difficult to evidence in supervisory or enforcement contexts. It is not anchored to measurable criteria or standardised procedures, creating risks of inconsistent supervisory expectations and uneven application. As a result, an obliged entity may be deemed non-compliant despite having applied diligent and proportionate measures consistent with Article 34 of Regulation (EU) 2024/1624. Operational concerns also arise in relation to verifying the lawful origin of funds or wealth. Assessing documents such as tax returns or payslips requires fiscal or accounting expertise not typically within AML functions, potentially turning verification into a substantive assessment of correctness rather than a plausibility check. Further difficulties arise in cases such as inheritance, gifts or legal settlements, which in some jurisdictions—including Italy—may not involve formal documentation, making compliance practically unattainable. These issues are compounded by the requirement to rely on "independent and reliable" sources, which is not clearly defined in terms of qualifying criteria or required

Name of the respondent	Question	Answer
		level of certainty. Absent objective benchmarks, this may lead to expectations of investigative activities exceeding standard due diligence. Overall, the framework effectively requires a level of certainty on the lawful origin of funds that is neither defined nor supported by clear standards or limits, creating disproportionate obligations and risks of inconsistent application, contrary to the principles of proportionality, legal certainty and the risk-based approach underpinning the Union AML framework. Proposed amendment: (1) Replace the expression “be satisfied” with the following wording throughout the provision: “have reasonable grounds, based on proportionate and risk-based verification measures, to consider”. (2) Furthermore, add the following paragraph after the existing paragraph: “Obliged entities shall be deemed to comply with the requirements set out in this article where they have obtained information and documentation that are reasonably available, reliable and proportionate to the level and nature of the money laundering and terrorist financing risks identified. The assessment of compliance shall take into account the practical availability and accessibility of information and the measures reasonably capable of being implemented by the obliged entity in the circumstances of the specific case”. Article 18(1)(d) – Destination of funds In remote gambling, the model operates as a closed-loop system: funds are used exclusively for gaming and winnings are returned only to the same customer. In

Name of the respondent	Question	Answer
		this context, the destination of funds is inherently predetermined. Requiring systematic collection of additional information on the destination of funds would therefore be disproportionate, imposing administrative burdens without improving risk assessment or operational effectiveness. Proposed amendment – After the bullet point under point (d), insert the following sentence: “The collection of information on the destination of funds shall not be required where the operational model ensures that funds may be used exclusively within a closed transactional environment and may be returned only to the same customer”. Article 18(1)(e) – Activity or profession “regulated” The requirement to indicate whether the customer’s activity is “regulated” relies on a technical legal concept not easily understood by customers. It is also unclear whether this refers to professional registration, authorisation regimes, or the existence of a broader regulatory framework. In the absence of a clear definition, the requirement risks inconsistent responses and reduced reliability of the information collected. Proposed amendment – Replace the term “regulated” with the following wording: “subject to a licensing, registration or authorisation requirement under national or Union law”.
Lottomatica Group	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Article 6(5) – Consistency with Article 22(6) of Regulation (EU) 2024/1624 and use of eIDAS-compliant identification means Article 22(6) of Regulation (EU) 2024/1624 allows

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	identity verification either via an identity document (or equivalent) or via electronic identification means compliant with Regulation (EU) No 910/2014 at 'substantial' or 'high' levels. These are alternative and functionally equivalent methods, each sufficient on its own. Article 6(5) of the draft RTS appears to add a further requirement by mandating an identity document, or certified copy, even where eIDAS means are used. These risks turning alternative methods into cumulative obligations, contrary to the primary legislation. This approach may undermine the effectiveness of the eIDAS framework. eIDAS-compliant means already ensure reliability and security equivalent to, or higher than, document-based checks. Requiring a document adds complexity without increasing assurance. The issue is particularly relevant for remote or fully digital relationships. eIDAS tools enable immediate onboarding in a secure digital environment. At the same time, the draft RTS fails to clarify that, in remote contexts, the requirement under Article 22(6)(a) AMLR is fulfilled through the transmission of a digital copy (e.g. scan) of an identity document. This omission is critical, given the still limited use of eIDAS tools in practice. Any different approach would have a severe impact on the online gaming sector, where only a minor share of users relies on eIDAS, and would conflict with Italian national rules allowing remote identification via document transmission. Moreover, in the context of a purely online relationship, it would be practically

Name of the respondent	Question	Answer
		impossible to obtain the original identity document, making such a requirement inherently unfeasible. This would also alter the economic balance of concessions, pushing users towards illegal operators and undermining investment stability, contrary to principles reflected in Legislative Decree no. 36/2023 and, with specific reference to the gaming sector, in Legislative Decree no. 41/2024, as well as Directive 2014/23/EU. Such alteration arises because operators, when deciding to obtain the concession, assessed the expected volume of players on the basis of the regulatory framework in force at that time. Any subsequent change whereby the transmission of a digital copy of an identity document is no longer considered sufficient - thereby significantly reducing the number of potential users - would materially affect the economic equilibrium of the concession relationship. Proposed amendment – after the first sentence, insert the following: “Where the verification of identity is carried out through electronic identification means that comply with Regulation (EU) No 910/2014 at assurance levels ‘substantial’ or ‘high’, in accordance with Article 22(6)(b), of Regulation (EU) 2024/1624, obliged entities shall not be required to obtain an identity document, passport or equivalent, unless such requirement is justified on the basis of specific risk-related circumstances identified in the course of the customer due diligence process. 6. Where identification is carried out pursuant to Article 22(6)(a) of Regulation (EU) 2024/1624 in a non-face-to-face context, the requirement to obtain an identity document shall be

Name of the respondent	Question	Answer
		deemed fulfilled through the transmission of a digital copy thereof by the customer". Article 18(1)(a) – Purpose and economic rationale of the business relationship The requirement to obtain information on the purpose of the relationship "where necessary" introduces discretion without objective criteria, creating uncertainty and potential inconsistency. Where a product serves a single predefined purpose – such as remote gambling, where account funds are used solely for gaming – the purpose is inherent in the service itself. Requiring additional information in such cases leads to redundant data collection without enhancing risk assessment. Proposed amendment – After the bullet point under point (a), insert the following sentence: "The collection of information on the purpose and intended nature of the business relationship shall not be required where such purpose is objectively determined by the nature and functional characteristics of the product or service offered, and where no additional information is necessary for the assessment of money laundering or terrorist financing risk in accordance with the risk-based approach".
Lottomatica Group	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	Article 3(1) – Address information and interpretation of the expression "where available" The provision requires address data to include elements such as postcode, street and building or apartment number, "where available". It must be clarified whether this means data only when provided by the customer, or also when it exists in theory but is not declared.

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	This issue is worsened by the misalignment between national eID data and the terminology of Regulation (EU) 2024/1624. In Italy, the Electronic Identity Card (CIE) records formal residence, while SPID captures domicile or contact address. Neither is defined or prioritised by the AMLR, which instead refers to the "usual place of residence". This lack of definition creates uncertainty on which address satisfies identification requirements. Further uncertainty arises from the mismatch between eID data and Article 3 requirements. For example, CIE and SPID do not systematically include all Annex elements, such as postcode, which is not structured in either system. In such cases, missing data reflects technical limits of the eID systems, not a failure by the obliged entity. The same applies to "resident_address". If prior fields are its components, it may simply be their aggregation. If it is an independent field, it is unclear how to populate it when the eID does not provide it. If compliance required all address elements in the exact format, CIE and SPID could become unusable, despite meeting assurance levels under Regulation (EU) No 910/2014. This would conflict with Article 22(6)(b) AMLR, which allows reliance on such means. Proposed amendment – replace Article 3(1)(c) with the following paragraph: "where available from the customer, the postcode, street name, building number and, where applicable, apartment number or equivalent identifier. Obliged entities shall not be required to obtain, reconstruct or verify address elements that have

Name of the respondent	Question	Answer
		not been provided by the customer or are not directly available to the obliged entity through the electronic identification means used, nor shall they be required to transform address information into a structured format different from that in which such information is provided by the identification means or by the customer". Article 19 – Identification of politically exposed persons (PEPs) The requirement to identify politically exposed persons presupposes the availability of reliable and sufficiently comprehensive information sources. In practice, however, no official or publicly accessible database allows obliged entities to verify PEP status in an authoritative manner. Obliged entities therefore rely on private screening tools and databases. While widely used, these cannot be independently verified against official sources, leaving the residual risk of identification errors with the obliged entity, even where it has acted diligently and in good faith. This issue is particularly acute for family members and close associates of PEPs, whose identification often depends on fragmented and context-specific information that is neither systematically available nor consistently updated. Requiring accurate identification in such circumstances creates expectations that are difficult to meet and exposes entities to disproportionate compliance risks. Nor is the issue resolved by Article 43(5) of Regulation (EU) 2024/1624, which provides for the publication of

Name of the respondent	Question	Answer
		categories of public functions but not the names of individuals. As a result, the framework imposes an identification obligation without ensuring access to the necessary information, effectively transferring both the operational burden and residual risk to obliged entities. In these circumstances, the expectation may approximate a form of strict liability, whereby entities may be held responsible for inaccuracies despite having adopted reasonable verification measures. This outcome is difficult to reconcile with the principles of proportionality, legal certainty and the risk-based approach underpinning the Union AML framework. For legal certainty and consistent application, it should therefore be clarified that compliance with the obligation to identify PEPs must be assessed in light of the reasonable availability of reliable information sources and the measures actually implemented. Reliance on reputable external databases and screening tools should be recognised as sufficient where applied in a diligent and proportionate manner. Proposed amendment: After paragraph 3, insert the following: “4. Obliged entities shall be deemed to comply with the obligation to identify politically exposed persons, their family members and persons known to be close associates where they rely on reliable information sources or screening tools and apply verification measures that are reasonable and proportionate to the level of risk, in accordance with the risk-based approach, taking due account of the information sources that are effectively accessible to the obliged entities”.

Name of the respondent	Question	Answer
Lottomatica Group	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 7(3) – Use of reliable and independent information sources Article 7(3) requires obliged entities to rely on reliable and independent information sources for identity verification. While appropriate in principle, the practical application of this requirement depends on the actual legal availability of such sources within the relevant national framework. In Italy, gambling operators do not have direct and lawful access to official databases enabling independent verification of identity data, such as population registers. As a result, obliged entities cannot autonomously verify customer information against public records. The difficulty is even greater where customers provide identity documents issued by other Member States or third countries. In these circumstances, the provision risks imposing an obligation that cannot be fulfilled in practice. It effectively introduces an obligation of result—verification through independent sources—without considering whether such sources are legally accessible. This creates a structural disconnect between regulatory expectations and operational reality in certain Member States. For reasons of legal certainty and consistent application, it would therefore be appropriate to clarify that the obligation to rely on reliable and independent sources applies only where such sources are legally accessible under national law, and that the absence of access to public databases should not, in itself, constitute a compliance deficiency.

Name of the respondent	Question	Answer
		Furthermore, the RTS fails to specify that, in the context of remote gambling, the verification requirements under Article 22(6) of Regulation (EU) 2024/1624 should be deemed satisfied where player identification is performed in accordance with the applicable national gambling framework. Absent such clarification, conflicts may arise between national gambling legislation and the RTS, potentially leading to technically incompatible identification measures. Such duplication would also conflict with the principle of proportionality, as operators could be required to apply separate identification systems under Union and national law. Moreover, the coexistence of parallel regimes would implicitly suggest either that national identification frameworks are insufficient, or, conversely, that the RTS themselves are inadequate, since operators would in any event remain subject to additional national obligations. The importance of this issue is confirmed by the Italian AML framework which, under Article 53(1) of Legislative Decree No. 231/2007 implementing Directive (EU) 2015/849, expressly provides that customer identification and identity verification obligations are fulfilled through the procedures required for the opening of a gaming account. Namely, the aforementioned provision reads as follows: “Online gambling operators shall identify and verify the identity of each customer in the course of the procedures required for the opening and amendment of the gaming account pursuant to Article 24 of Law No. 88 of 7 July

Name of the respondent	Question	Answer
		2009”. Proposed amendment: (a) amend paragraph 2 as follows: “2. In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person’s identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3, 4, 5 and 6”. (b) insert the following new paragraph 5: “5. In the context of online gambling services, the verification requirements pursuant to Article 22(6)(a) of Regulation (EU) 2024/1624 shall be deemed satisfied where the identification of the customer is carried out in accordance with the requirements laid down under the applicable national legal and regulatory framework governing the organisation, management and operation of gambling activities, provided that such framework requires, at a minimum, the acquisition of a digital image or copy of the customer’s identity document, passport or equivalent”. (c) insert the following paragraph 6: “6. The requirement to rely on reliable and independent information sources provided for in paragraph 3 shall apply only to the extent that such sources are legally and directly accessible to the obliged entity within the relevant national legal framework. Where no publicly accessible databases exist, compliance with such requirement shall be deemed satisfied where the obliged entity relies on verification measures that are reasonably available and proportionate to the level of

		money laundering and terrorist financing risk identified, in accordance with the risk-based approach".
Lottomatica Group	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Lottomatica Group	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Lottomatica Group	Please specify which recital you refer to, and share your comments below.	As detailed in our previous comments, with regards to the Recital 3, the provision does not specify how nationality should be verified or which documents are suitable. In many jurisdictions, identity documents do not systematically record nationality and may be issued to non-nationals. Therefore, presenting an identity document does not necessarily allow verification of the declared nationality by linking it to the issuing State. For example, Italian driving licences qualify as identity documents but do not indicate nationality and may be issued to individuals who do not hold Italian nationality. The issue is compounded by the absence of any centralised or globally accessible database containing reliable nationality data. In practice, obliged entities lack any source to independently verify or cross-check such information, making the verification requirement potentially impossible to fulfil.
Lottomatica Group	Do you have any comments on the Annex in the draft RTS?	Yes
Lottomatica Group	Please share your comments below.	An inconsistency arises from Annex I, which refers to "nationality" in the singular, thereby suggesting that, at least for reporting purposes, the indication of a single nationality may be considered sufficient

Name of the respondent	Question	Answer
Lottomatica Group	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Lottomatica Group	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Lottomatica Group	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624	Manageable impact

Name of the respondent	Question	Answer
	(customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Lottomatica Group	Please justify your answer to the previous question and provide evidence where possible.	We estimate that the implementation of the provisions set out therein will have a manageable cost impact, on the assumption that our comments will be taken into account.
LSEG Risk Intelligence	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific	LSEG Risk Intelligence (“LSEG RI”) considers the revised draft RTS a significant improvement. The draft effectively promotes harmonisation, proportionality, and a risk-based approach to CDD. LSEG RI supports efforts toward EU-wide consistency, reduced operational burdens, and increased flexibility in CDD

Name of the respondent	Question	Answer
	measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	information processes. However, achieving these objectives in practice across the breadth of obliged entities requires clarity as to how customer identification, screening and ongoing monitoring obligations are operationalised. The recognition of professionally managed third party screening, data and due-diligence services remains uneven across the draft RTS. While certain provisions refer to the use of “reputable data service providers” or “reputable commercially available service providers”, the role of services supporting identification and verification, PEP identification, sanctions screening and ongoing monitoring is not consistently referenced. Other provisions refer to “automated screening tools or solutions”, but it is unclear if this covers the same types of “reputable data service providers” and if such automated tools may be provided by third parties. Throughout the Union, obliged entities use third-party screening and due-diligence services to help meet AML/CFT compliance requirements. These services gather and check data from trusted sources, allowing for consistent CDD, PEP identification, and sanctions screening across different regions, while the final responsibility for verification and decisions stays with the obliged entity. Screening providers, play an essential role in the EU ecosystem as demonstrated by the designation of LSEG RI as a critical ICT third-party service provider under the

Name of the respondent	Question	Answer
		EU Digital Operational Resilience Act (DORA). More than 4,000 financial institutions and other obliged entities in the EU, including global banks and critical financial market infrastructures, rely on LSEG RI services. The targeted clarifications proposed do not seek to regulate such service providers, nor to alter the allocation of responsibility under Regulation (EU) 2024/1624 (nor replicate Regulation (EU) 2024/1624). Rather, they reflect existing operational realities in a manner that: • supports effective and timely compliance with binding EU and international AML/CFT obligations; • reinforces the principle that obliged entities remain fully responsible for verification, assessment and decision making; and • reduces the risk of divergent supervisory interpretations across Member States. Such clarifications would be aligned with the existing EBA Guidelines on ML/TF Risk Factors (EBA/GL/2021/02 - EBA/GL/2024/01, para 1.29). Explicit clarification that third party screening tools operate as decision support mechanisms, rather than decision makers, preserves legal certainty, safeguard individual rights and support proportionate and consistent supervision. Recognising the role of third party screening providers in sanctions compliance reflects the non discretionary nature of these anti-financial crime obligations and the need for continuous, up to date monitoring. These targeted drafting adjustments would therefore

Name of the respondent	Question	Answer
		strengthen the coherence, effectiveness and workability of the RTS, without expanding its scope or undermining supervisory objectives. Article 8 Reliable and independent sources of information LSEG RI recommends that the RTS explicitly recognise the role of professionally managed third party screening, data and due diligence providers as a means of supporting the assessment of whether information sources are reliable and independent. ADD TO ARTICLE 8: 'Obliged entities may make use of professionally managed, third party screening, data and due diligence services where such use is necessary and proportionate having regard to the ML/TF risks identified, and solely for the purpose of meeting their obligations under Regulation (EU) 2024/1624. Such services may be used to support the reliability, independence and ongoing accuracy of information obtained for customer due diligence, screening and monitoring purposes. Such use may be appropriate where the obliged entity incorporates those services within a structured and governed approach, and where the services themselves aggregate, corroborate, validate and maintain information from multiple reliable and independent underlying sources, including official registers, competent authority publications, publicly available regulatory disclosures, reputable media reporting and

Name of the respondent	Question	Answer
		other reliable public sources. The use of such services shall contribute to and enhance the performance of one or more requirements under Regulation (EU) 2024/1624 and shall not replace the performance of the requirements itself by, as well as the verification, assessment and decision making obligations of, the obliged entity, which remains fully responsible for compliance with Regulation (EU) 2024/1624.'
LSEG Risk Intelligence	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	LSEG RI agrees that the revised draft RTS strengthen the practical application of a risk based approach. However, we consider that further refinements are needed for the RTS to fully support an effective risk based approach in practice. Article 10 – Reasonable measures for verification of the beneficial owner In relation to Article 10, LSEG RI suggests that AMLA explicitly include the words “including professionally managed third-party screening, data and due-diligence services” when referring to third party sources (i.e., “reputable credit agencies and/or comparable reputable data and screening services providers”). This targeted amendment would better reflect market practice, where beneficial ownership verification is frequently supported by professionally managed screening and risk intelligence services that consolidate and quality control information from multiple underlying sources. Clarifying that such screening

Name of the respondent	Question	Answer
		services fall within the scope of permissible third party sources would promote consistent supervisory expectations. Using a single, consistent term for these service providers across the provisions of the RTS (such as “professionally managed third party screening, data and due-diligence services”) would also help avoid interpretation issues in relation to the RTS. ‘The reasonable measures referred to in Article 22(7), point (b), of Regulation (EU) 2024/1624 shall include at least one of the following: (a) consulting public registers, other than the central registers, or other reliable national systems that contain the information necessary to verify the identity of the beneficial owner, or the person on whose behalf or for the benefit of whom the transaction or activity is being carried out, such as the residence register, tax register, passport database and the land register, to the extent that these are accessible to obliged entities; or (b) collecting information from the customer or other sources, which may include third-party sources such as: i. reputable credit agencies and/or comparable reputable data services providers, NEW TEXT: including professionally managed third-party screening, data and due-diligence services; END OF NEW TEXT ii. utility bills; iii. up-to-date information from credit or financial institutions as defined in Article 3, paragraphs (1) and (2), of Regulation (EU) 2024/1624. The collected information shall confirm that the beneficial owner or the person on

Name of the respondent	Question	Answer
		whose behalf or for the benefit of whom a transaction or activity is being carried out has been identified and verified by the respective institution; iv. documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by persons that are authorised for document certification purposes.' Article 19 – Identification of Politically Exposed Persons Effective identification of politically exposed persons necessarily relies on timely access to accurate, cross jurisdictional and continuously updated information. Given the scale and complexity of PEP identification across jurisdictions, obliged entities frequently rely on professionally managed third party screening, data and due diligence services to support the identification and continued monitoring of PEPs, the identification and assessment of potential PEP relationships (including family members and known close associates) and the identification of related risk indicators. We recommend that AMLA clarify that the use such services to support PEP identification and risk assessment is envisaged by the RTS as part of a risk based and proportionate approach, including through the provision of structured aggregation and updating of information from multiple relevant sources, while confirming that obliged entities remain solely responsible for determining appropriate enhanced due diligence and for all related compliance decisions.

Name of the respondent	Question	Answer
		'3. To comply with paragraphs 1 and 2, obliged entities shall put in place automated screening tools and measures NEW TEXT: which may include the use of professionally managed, third party screening data and due-diligence services, END OF NEW TEXT or a combination of automated screening tools and manual checks unless the size, business model, complexity or nature of the business of the obliged entity justifies the use of manual checks only.'
LSEG Risk Intelligence	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Given the nature, scale and complexity of AML/CFT obligations across the Union, there are certain situations in which specific items of customer due diligence information envisaged in the draft RTS are not routinely available in practice or cannot be obtained in a timely or reliable manner, and where clearer alternative solutions would assist effective and proportionate compliance. First, in cross-border and multi-jurisdictional contexts, information relating to beneficial ownership, control structures, politically exposed person status and related relationships is often fragmented, incomplete or not available through a single official or authoritative source. This is particularly the case where ownership chains span multiple jurisdictions, where public registers are not fully accessible or sufficiently up to date, or where PEP status and relationships must be identified across different political systems and languages. In such cases, obliged entities are required to form an assessment based on the corroboration of information

Name of the respondent	Question	Answer
		from multiple sources rather than reliance on a single definitive record. Secondly, for the purposes of ongoing monitoring and sanctions screening, up-to-date and consolidated information may not be available directly from official lists or registers alone. Sanctions regimes are non-discretionary and subject to frequent change, and the practical ability to identify relevant ownership, control or association links often depends on the aggregation and structuring of information from a range of public, regulatory and reputable sources. To address these situations, as set out in our wider response, LSEG RI considers that the RTS would benefit from clearer confirmation that, where specific information is not directly or immediately available from individual sources, obliged entities may adopt appropriate alternative solutions consistent with a risk-based and proportionate approach. In particular, this includes the use of professionally managed third-party screening, data and due-diligence services that support the aggregation, corroboration and maintenance of information from multiple underlying sources, provided that such use forms part of a governed framework and does not alter the responsibility of the obliged entity for verification, assessment and decision-making. Such clarification would reflect existing operational realities, support timely and effective compliance with

Name of the respondent	Question	Answer
		AML/CFT obligations, and reduce the risk of divergent supervisory interpretations across Member States, without expanding the scope of the RTS or weakening supervisory objectives. The targeted amendments LSEG RI have proposed to the RTS are intended to address this.
LSEG Risk Intelligence	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No additional comments since response to EBA consultation
LSEG Risk Intelligence	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 25 The obligation to "assess the reputation" of the customer and beneficial owners is framed in general terms and should explicitly clarify that this assessment is typically conducted through adverse media screening (in accordance with the EBA Guidelines on ML/TF Risk Factors), drawing on reputable and verifiable sources. The final RTS should acknowledge the use in practice of third-party service providers for EDD as these provide a more granular and global level of scrutiny, especially for high-risk clients, transactions, or jurisdictions. This deeper layer of diligence uncovers hidden connections to sanctioned individuals, PEPs or opaque ownership structures that may not be visible via obliged entities

Name of the respondent	Question	Answer
		own in-house due diligence processes. ADD TO ARTICLE 25: 'For the purposes of points (a), (b) and (c) obliged entities may obtain additional information by consulting official registers, corroborating information across multiple reliable and independent sources, obtaining supporting documentation, or using reputable data services providers, including professionally managed third party screening, data and due diligence services.' Article 27 The RTS already mentions “reputable commercially available service providers”, but for consistency we suggest replacing this with “professionally managed third party screening, data and due-diligence service providers” to ensure consistency in terminology. Article 29 Explicitly acknowledge that screening to identify persons subject to targeted financial sanctions may be supported by professionally managed third party screening, data and due-diligence service providers, subject to appropriate governance and oversight by the obliged entity. ADD TO ARTICLE 29: 'For the purposes of paragraph 1, screening obligations may be supported by professionally managed third party screening, data and due diligence services within a risk based and governed framework. The use of such services shall support and shall not replace the verification, assessment and decision making obligations of the obliged entity, which remains fully responsible for compliance with Regulation (EU) 2024/1624.’

Name of the respondent	Question	Answer
		Article 30 “For the purposes of Article 29, obliged entities shall: (a) screen, through automated screening tools or solutions, or a combination of automated screening tools and manual checks, NEW TEXT: including the use of professionally managed third party screening, data and due diligence services and associated list management solutions END, to determine whether customers, […] are subject to targeted financial sanctions, without undue delay NEW TEXT: in a manner consistent with existing Union requirements and the EBA Guidelines on internal policies, procedures and controls to ensure the implementation of Union and national restrictive measures. (…) END iii. in the case of a natural person, legal person, body or entity: - any other names, aliases or trade names where they differ from the registered name; - NEW TEXT: additional identifiers, where available and relevant for improving the accuracy of screening, including date of birth, place of birth, nationality, passport number, national identification number, tax identification number, registration number and Legal Entity Identifier; END - digital wallet addresses, NEW TEXT: only where relevant to the products or services offered by the obliged entity or where available in the lists of targeted financial sanctions and actionable by the obliged entity. END (b) in case of a match, the information under point (a) shall be checked against all available due diligence

Name of the respondent	Question	Answer
		information on the customer, […] including public sources of information, such as registers of owned and controlled entities and central registers NEW and information obtained through professionally managed third party screening, data and due diligence service. END NEW TEXT (e) establish and document risk-sensitive criteria for the treatment of aliases and name variants as part of a structured and governed screening methodology. END For the purposes of screening under point (a), obliged entities may disregard aliases or name variants that are assessed as weak aliases, provided that: i. such aliases do not provide a sufficiently strong identification link to the listed person, body or entity; and ii. the obliged entity documents and applies consistently its methodology, controls and governance for determining when an alias or name variant may be treated as weak. NEW TEXT: (f) when assessing whether entities or persons meet the ownership or control conditions under Article 20(1), point (d), of Regulation (EU) 2024/1624, take into account: i. direct ownership; ii. indirect ownership through one or more intermediary entities; iii. aggregate ownership interests held by two or more listed persons, where such interests must be considered under the applicable targeted financial sanctions

Name of the respondent	Question	Answer
		regime; iv. control exercised through means other than ownership.
LSEG Risk Intelligence	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
LSEG Risk Intelligence	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
LSEG Risk Intelligence	Please specify which recital you refer to, and share your comments below.	We suggest the introduction of an additional paragraph in Recital (5) (Information collected by obliged entities for customer due diligence), together with the insertion of a new recital to clarify the meaning and role of third party screening, data and due diligence services for the purposes of these RTS. NEW TEXT In applying customer due diligence, screening and monitoring obligations under Regulation (EU) 2024/1624, obliged entities may rely on professionally managed, third party screening, data and due diligence providers to support the identification and verification of customers, beneficial owners, politically exposed persons (or a family member, or person known to be a close associate of a politically exposed person) and persons subject to targeted financial sanctions, in accordance with a risk based approach. Where criminal or adverse information is used, such information should only be used to support and corroborate assessments and shall not constitute the sole or determinative basis for verification or decision making. The use of such services shall support and enhance, and shall not

Name of the respondent	Question	Answer
		replace, the verification, assessment and decision making obligations of the obliged entity, which remains fully responsible for compliance with Regulation (EU) 2024/1624. END Proposed new recital (interpretative / definitional) NEW TEXT: For the purposes of these RTS, references to third party screening, data and due diligence services should be understood as referring to professionally managed services that aggregate, corroborate, validate and maintain information from multiple reliable and independent underlying sources, and which are used by obliged entities as decision support tools in meeting their obligations under Regulation (EU) 2024/1624, without replacing the obliged entity's responsibility for verification, assessment and decision making. These tools may include associated list management solutions for efficient and effective sanction screening. END The draft RTS appropriately recognises that obliged entities may rely on a range of reliable and independent sources for the purpose of customer identification, verification and ongoing monitoring. In practice, these requirements are routinely fulfilled through the use of professionally managed third party screening, data and due-diligence service providers which consolidate verified public source and regulatory information in a structured and quality controlled manner. We encourage AMLA to clarify explicitly that the use of

Name of the respondent	Question	Answer
		such third party screening services constitutes a legitimate and proportionate means by which obliged entities may meet their obligations under the RTS, provided that obliged entities retain responsibility for final verification and compliance decisions. The use of centralised screening or risk intelligence services may, where appropriately governed, contribute to data minimisation and proportionality by reducing duplicative processing and inconsistent assessments across obliged entities.
LSEG Risk Intelligence	Do you have any comments on the Annex in the draft RTS?	No
LSEG Risk Intelligence	How would you rate the proposals set out in the draft RTS overall?	Good
Luxembourg Private Equity and Venture Capital Association (LPEA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	SMOs SMOs primarily manage the entity and do not personally invest or exercise control for their own benefit. Requirements for SMOs should be proportionate and follow the overarching risk-based approach principles, reflecting that SMOs are not UBOs. It should notably be sufficient to record their identity and professional address on the basis of documents or information obtained from a reliable source which is independent from the customer. Where SMOs are employees of an obliged entity, reliance on existing screening procedures, comfort letters including static data, or equivalent documentation should be deemed sufficient. Art. 27 requirements to obtain source of wealth information should exclude SMOs, who act in a

Name of the respondent	Question	Answer
		professional capacity and whose verification is already performed within their regulated institutions. Non-face-to-face relationships A flexible risk-based approach should guide the application of the requirements in the Alternative Investment Funds industry, recognising that non-face-to-face interactions are standard market practice, reflecting the wholesale nature of the sector and the predominance of institutional intermediaries. They do not inherently constitute higher risk, consistent with recent FATF guidance. We would welcome the following amendments to Art. 7: Art. 7 (1): instead of "…obliged entities shall use electronic identification means", replace by "…obliged entities shall a) apply additional and appropriate measures, on a risk-based approach, to mitigate the inherent higher risk that this type of customer relationship may present or b) may use electronic identification means." Art. 7(2): professionals should remain free to determine the cases in which they deem necessary to get ID documents, passports or equivalent and/or to resort to additional verification means. The fact that a given individual is seen by the obliged entity (either on a face-to-face basis or through video) does not necessarily bring additional comfort if in practice, on a risk-based approach, the obliged entity has gained comfort that the source/channel used to provide relevant identification information/documentation is reliable. Proposed rewording: "In addition or alternatively to the

Name of the respondent	Question	Answer
		solution described in paragraph 1, obliged entities may obtain the natural person's identity information or documentation using remote solutions that meet the conditions set out in paragraphs 3 and 4. Such solutions shall be commensurate to the size, nature and complexity of the obliged entity's business and its exposure to ML/TF risks." Art. 7 (3): extensive conditions impair the possibility for the obliged entities to implement their own risk-based approach. This Article should merely provide the principle that the obliged entity shall ensure that the solution used includes appropriate safeguards as to the quality and accuracy of the data and documents collected. Screening requirements The requirements set out in Article 30 should allow for a more proportionate and risk-based application to data collection. Notably: Scope and data collection: - Art.30, par. (a), i.: the obligation to screen "all names and surnames" (i) should be qualified with "where applicable", as not all variations or transliterations are always available or relevant. Excessive data input may also increase the number of false positives, reducing the overall effectiveness of screening processes. More generally, screening should rely on information collected as part of AML/CFT due diligence, avoiding the need to gather additional data solely for screening purposes. - Art.30, par. (a), iii.: requirement to screen additional identifiers such as aliases, trade names, or names used

Name of the respondent	Question	Answer
		in other jurisdictions should be limited to “where available” or “if applicable”, in line with a risk-based approach. Clarification of scope: in Art.30, par. (a), the notion of “entities or persons which control” should be clarified and aligned with the AMLR (Article 20(1), (d)), focusing on persons holding more than 50% of proprietary rights or majority control, whether individually or collectively.
Luxembourg Private Equity and Venture Capital Association (LPEA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Asset managers in the Alternative Investment Funds sector operate generally through closed-end alternative investment funds, raising capital from well-informed professional investors and deploying it over a long-term horizon into privately held portfolio companies. Their activities are embedded in a structured, highly regulated environment involving General Partners, AIFMs, portfolio companies, Limited Partners, and multiple service providers. Several core features are particularly relevant from an AML/CFT perspective. First, the Fund’s clients, rather than direct investors, may be intermediary institutions (private banks, wealth managers, pension Funds, distribution platforms, etc.), subject to their own regulatory and due diligence requirements, contributing to an overall controlled risk environment. Second, non-face-to-face relationships are standard practice in the industry and do not, in themselves, present inherently higher risk, as onboarding and ongoing interactions rely on secure, well-documented processes implemented by regulated entities and/or, as the case may be, involving those regulated intermediaries. Third, ownership structures may appear complex due to multiple layers

Name of the respondent	Question	Answer
		and jurisdictions, but are typically standard for the Alternative Funds industry, not hindering overall transparency, and driven by legal and investor requirements, and should not be equated with increased ML/TF risk per se. We would also welcome sector-specific guidance acknowledging the specificities of the ecosystem as depicted in the above, including for service providers such as Transfer Agents acting in the Alternative Asset Management realm. This would help ensure a consistent understanding of AML/CFT expectations across the value chain and mitigate the risk of undue de-risking resulting from approaches that do not reflect the realities of the Alternative Investment Fund industry, while reducing subjectivity in the day-to-day transposition and application of the risk-based approach. Collective Investment Undertakings (Art. 17) Obtaining end-investor identity information directly from a distributing intermediary “without undue delay and upon request” is difficult to implement in practice, particularly where multiple end-investors or non-EU intermediaries are involved. In line with FATF securities sector guidelines (par. 108 of the FATF Guidance for a risk-based approach for the securities sector of 2018), the focus should remain on ensuring robust due diligence on the institutional intermediary/respondent institution itself, and as per paragraph 111 of the FATF Guidance. The identification of end-investors should be required only where an end-investor qualifies as a beneficial owner of the Fund under the >25% rule. We

Name of the respondent	Question	Answer
		also propose emphasizing a risk-based approach to data collection whereby the Fund and its management company rely on the institutional intermediary's AML/CFT framework and controls, while being able to request additional information only upon a legitimate event (e.g., regulatory requirement or suspicion of risk). Additionally, for non-EU intermediaries, reliance should be extended to jurisdictions with equivalent standards. This reflects the practical realities of cross-border Alternative Investment Funds distribution. Furthermore, the draft RTS restricts the application of Article 17 to situations where the CIU "distributes its shares or units through another credit institution or financial institution", i.e. where, based on a strict reading of this Article, the credit institution or financial institution is formally involved in the distribution of the CIU. However, in practice, financial intermediaries acting in such capacity are not necessarily appointed as distributor or marketing intermediary by (or for) the CIU. Such "distribution" condition is furthermore required neither under the current EU AML/CFT framework (e.g. under the EBA ML/TF Risk Factors Guidelines), nor under the aforementioned FATF Guidance for a Risk-Based Approach for the Securities Sector. Electronic identification means and eIDAS Provisions on eIDAS raise practical concerns. As an EU-based solution, its applicability to corporate structures and non-EU/EEA counterparts is limited, with uncertainties around interoperability, recognition, and sequencing with the AMLR. While eIDAS can be a useful

Name of the respondent	Question	Answer
		tool, it should remain one option among others, and the RTS should adopt a technology-neutral, risk-based approach, allowing reliance on equivalent alternative solutions without restrictive criteria. This is particularly important given that eIDAS is not well suited to the wholesale nature of the Alternative Investment Funds industry, and overly prescriptive requirements could lead to operational inefficiencies, without enhancing effectiveness. Competitiveness with non-EU major centres - US, Cayman Islands, UK and Switzerland - should be considered when introducing any rules that may have a negative impact on fundraising.
Luxembourg Private Equity and Venture Capital Association (LPEA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As envisaged in Art.1, establishing the risk-based approach and applying due diligence measures proportionate to actual risk allows obliged entities to reflect sector-specific features, avoid a one-size-fits-all approach, while preventing undue de-risking. Against this background, certain provisions of the draft RTS do not fully permit an effective application of the risk-based approach, as further detailed below. Art. 10 Par. (a): obliged entities should be able to rely on publicly available “or otherwise accessible information”, including registers or other sources, without being limited to strictly public registers, if these are reliable and independent from the customer. Par. (b)(i): the notion of “reputable” third-party data services providers should be interpreted flexibly, as the strict definitions used in banking sector may not be suitable for Alternative Funds structures. On a risk-

Name of the respondent	Question	Answer
		based approach, obliged entities may corroborate information through documentation provided by the investor, their own research, or other reliable means, without needing to collect all points listed formally under Art. 10 (b). Par. (b)(iv): should be revised to: “documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified “is signed by persons authorised for document certification purposes”. This would clarify that certification can be understood in a broader sense – for example, a director or other authorised signatory confirming the information – rather than requiring a more formalised certification process. Art. 11 Par. 2: a risk-sensitive trigger should be considered. The requirement should apply only in cases where the control structure “contains more than one legal entity or legal arrangement is complex and poses a higher ML/TF risk”. The mention “at least” in “to obtain and assess at least the following information” should be removed, as it contradicts the risk-sensitive approach in Par. 1 and 2. Par. 2(a): the focus should be on higher-risk situations only and on intermediate layers owning more than 25%. A lower threshold would lead to excessive documentation and scrutiny of individuals with minimal influence, diverting resources from genuinely high-risk areas and potentially impacting the competitiveness of EU investment funds. Accordingly, Paragraph 2(a)

Name of the respondent	Question	Answer
		should explicitly refer to “economic beneficial owners owning more than 25% within the customer structure”. Par. 3 (a): we suggest deleting: “and reference to the existence of any nominee shareholders”, as well as; Par. 3(d): we suggest deleting: “where applicable, the shares of interest held by each legal entity or legal arrangement, its sub-division, by class or type of shares and/or voting rights expressed as a percentage of the respective total” Art. 12 Par. 1: the reference to “three or more layers” as constituting a complex structure should be applied “on a risk-sensitive basis”, and with an explicit reference to “in higher ML/TF risk situations”. Multi-layered structures, including foundations or entities outside the EU, are common in the Alternative Investment Funds industry and do not automatically imply higher ML/TF risk. The provision should also account for equivalent non-EU jurisdictions. In addition, Par. 1(d): should be reworded to: “the obliged entities have identified a risk that the structure could be misused to obscure the identity of the beneficial owner”, reflecting that complexity does not inherently indicate higher risk. Par. 2: in the case of complex corporate structures, obliged entities should take reasonable, risk-sensitive measures to complement the information collected under Article 11. This may include obtaining an organigram but may also consist in other tools appropriate to understand the structure. Art. 13

Name of the respondent	Question	Answer
		Par. (a): “collect the same information for identification purposes as the information they would collect for beneficial owners, applying a risk-based approach consistent with Article 1 of the draft RTS on CDD. […]; Par. (b): “verify the identity of senior managing officials in the same way as they would for beneficial owners using risk-sensitive measures”. This approach should be consistent with lower-risk scenarios, as provided for in Art. 21 of the draft RTS on CDD. Art. 14 Applying a risk-based approach to the identification and verification of beneficiaries would reflect that not all theoretically identified beneficiaries pose an immediate ML/TF risk. In many trusts, beneficiaries may be designated automatically (e.g., a newborn child) without affecting the customer’s risk profile. Screening requirements Operational considerations: the overall requirement to screen “at least” the listed information should be more explicitly subject to a risk-based approach, allowing obliged entities to calibrate their screening processes according to the nature, size, and risk profile of their activities.
Luxembourg Private Equity and Venture Capital Association (LPEA)	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	Information to be collected for identification and verification purposes Not all passports and identification documents contain the same elements and same security features. A flexible risk-based approach to data collection is therefore essential, considering global variability in available information, official registers, public sources,

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	privacy rules, and the sensitivity of the requested data. Obliged entities should not be required to obtain original or certified copies of identity documents in all cases; such measures should be reserved for specific circumstances, for example, where there is suspicion of fraud or higher fraud risk. Document certification should be considered only one of multiple possible verification measures. Greater reliance should also be placed on controls already performed by EU or EU-equivalent obliged entities. We propose the following revisions: Art. 2 Par. i) “obtain all names and surnames that feature on the identity document, passport, or equivalent, or that are available from independent reliable sources”. Art. 2 Par. ii) “…obliged entities shall obtain the registered name and the trade name where it differs from the registered name, and if available.” Art. 6 Par.1(e): “it contains security features to ensure authenticity, where relevant”. Natural person purporting to act on behalf of the customer Natural persons purporting to act on behalf of the customer – such as employees or mandated professionals – should not be required to provide identity documents to multiple asset managers, as this conflicts with data minimization principles and is not necessarily effective in mitigating ML/TF risk. In such cases, collecting the name and surname, business or professional address is generally sufficient, and only the individual directly connected to the specific investment relationship should be in scope. Flexible measures, such

Name of the respondent	Question	Answer
		as an AML confirmation letter or other internal compliance attestations, can be used to demonstrate that appropriate background checks have been conducted. Purpose and intended nature of a business relationship or occasional transaction Art. 18 should allow greater flexibility to enable a proper risk-based approach, ensuring that obliged entities can tailor their measures to the actual ML/TF risk posed by the customer. In this regard, the list of information to be gathered – such as intended use of products or services, transaction volumes, and sources – should be explicitly qualified as “where relevant” and/or “on a risk-based approach”. Politically Exposed Persons For Art. 19, we suggest rewording Par. 2 (b) and (c): “without delay” to “without undue delay”, as additional time may be required to complete the necessary checks. Enhanced Due Diligence measures Art. 25: The requirement to assess authenticity and accuracy should emphasize that information is obtained from reliable sources and that the overall set of data is coherent, rather than imposing strict expectations on authenticity, accuracy or comprehensiveness, which are often unfeasible in deal-driven environments. We suggest the following rewording: (a): “be satisfied that the information […] is authentic obtained from reliable sources and accurate consistent with the global set of information collected”. (a): “[…] other than a natural person […]”: should be clarified, particularly when no natural person is

Name of the respondent	Question	Answer
		identified. Art. 26: Identifying all business partners and associates (Par. 2) may not be feasible due to confidentiality agreements or the nature of fund operations. Risk-based measures should allow flexibility to focus on material parties and relevant information. The terminology “authentic” and “accurate” should be replaced throughout the document, as per our comment (Art. 25). Art. 26: Requiring market players to verify the legitimacy of transactions (including the origin and destination of the funds) and the parties involved would exceed their roles and responsibilities, and the general AML/CFT framework, while not significantly enhancing risk mitigation effectiveness. Art. 28: Requirements to collect turnover information for fund investors (Par. (b)) is not relevant in the Alternative Investment Funds industry. The same applies to Par. (c) “including any intermediary”: this goes beyond what is currently applied and obliged entities should instead focus on material end-investors (e.g., those exceeding the 25% threshold) and relevant intermediaries, applying data collection on a risk-sensitive basis.
Luxembourg Private Equity and Venture Capital Association (LPEA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In response to Question 5, we would like to highlight that Section 5 (Simplified due diligence measures) of the draft RTS on CDD should clearly distinguish lower-risk (or non-high-risk) situations from high-risk cases, allowing obliged entities to apply simplified due diligence measures, where appropriate. In the context

Name of the respondent	Question	Answer
		of the Alternative Investment Funds industry, many clients are professional or institutional investors, and the products offered – typically closed-ended, long-term investment funds – generally present a lower degree of ML/TF risk. Accordingly, data collection and verification requirements should be proportionate, reflecting both the lower-risk profile and the industry's specific features, as described in our response to Question 2. The terminology throughout the draft RTS should be aligned to consistently reference "lower degree of ML/TF risk", enabling a risk-based approach while maintaining effective AML/CFT oversight. This would ensure that simplified due diligence measures are applied in a coherent, industry-tailored manner, without compromising compliance or supervision. Building on the above, we suggest that Section 5 explicitly allows the application of a risk-based and proportionate approach to situations presenting a lower degree of ML/TF risk, drawing on established practices such as those outlined, under Luxembourg law, in CSSF Regulation 12-02. This would support more tailored due diligence for investors and entities presenting minimal risk, while maintaining effective oversight. Please find hereafter 2 examples to support this rationale with respect to Article 21. Example 1 – Lower-risk institutional investors and SMOs • The concept of lower-risk scenarios is particularly relevant for professional investors such as regulated banks, financial institutions, pension funds, or AIFs managed by regulated entities, typically domiciled in lower-risk jurisdictions.

Name of the respondent	Question	Answer
		• In many of these cases, Senior Managing Officials (SMOs) constitute the only individuals meeting beneficial ownership thresholds. These SMOs act in a professional capacity, and the (regulated) institutions to which they pertain already perform identity verification and screening. • Despite this, current practice often still requires certified copies of passports or other documents for each SMO, even when these individuals do not exercise personal control over investments. Some may also serve as non-executive directors ("NEDs"). • Guidance would be valuable to clarify where simplified due diligence could apply, including allowing reliance on regulated entities' internal verification processes, such as formal representations confirming identity verification, accompanied by relevant screening details. • This approach would also address data privacy and cybersecurity concerns, particularly for clients outside the EU reluctant to share sensitive documents with multiple external parties. • Importantly, the overall AML/CFT risk rating of such clients may still be standard rather than low due to factors unrelated to SMO identity verification. Article 21 could explicitly reflect this distinction in its scope or recitals. Example 2 – Certification requirements • The standard requirement for certification of all investor documentation – regardless of risk profile or regulatory status – has created inefficiencies and higher operational costs for both market participants and their

Name of the respondent	Question	Answer
		counterparties. • Guidance should clarify when certification is not required, particularly for non-retail investors in Alternative Investment Funds (AIFs), allowing procedures to be tailored to risk profile, investor type, and regulatory oversight. • This would enable market participants, including KYC service providers (e.g., Transfer Agents), to apply efficient, risk-sensitive due diligence, while supporting General Partners (GPs) in meeting AML/CFT obligations proportionately.
Luxembourg Private Equity and Venture Capital Association (LPEA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Luxembourg Private Equity and Venture Capital Association (LPEA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Luxembourg Private Equity and Venture Capital Association (LPEA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We suggest to further clarify the notion of “non-face-to-face relationships” by taking into account sector-specific practices. For example, in the alternative Fund industry, investor relationships are typically supported by direct interactions between sales teams and investor representatives, most often in person and, in some cases, via videoconference. It may also be relevant to consider that asset managers generally operate on the basis of bank transfers rather than accepting cash subscriptions at the asset management premises. As a result, subscription monies are transferred from accounts held with financial institutions that are themselves subject to AML/CFT

Name of the respondent	Question	Answer
		obligations, including customer identification and verification requirements. This provides an additional layer of assurance that could be reflected in the assessment of non-face-to-face relationships, and more broadly in the application of a proportionate, risk-based approach to CDD. From this perspective, the framework should facilitate greater use of reliance on a customer's bank due diligence measures, for example where supported by an AML letter (including e.g. confirmation that underlying KYC documentation can be made available upon request), for both initial and ongoing KYC identification and verification. This would enable asset managers to focus their efforts primarily on screening measures and to apply enhanced verification measures where specific risk indicators arise (e.g. adverse media or sanctions hits). In this regard, we suggest reflecting these elements when developing rules on reliance on third parties, including by: (i) clarifying that the "written agreement" referred to in Article 49 of Regulation (EU) 2024/124 may encompass AML letters signed by a third party's MLRO (or equivalent); and (ii) providing further guidance on the practical application of such reliance, including in situations covered by Article 20(g) of Regulation (EU) 2024/124. For example, where screening identifies a PEP, it would be helpful to clarify whether reliance on the bank may extend to source of wealth checks, or whether these should be performed independently by the asset

Name of the respondent	Question	Answer
		manager, noting that point (f) requires the determination of PEP status.
Luxembourg Private Equity and Venture Capital Association (LPEA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Luxembourg Private Equity and Venture Capital Association (LPEA)	Please specify which recital you refer to, and share your comments below.	Recital 9: the notion of "equivalent information" should distinguish clearly between UBOs and Senior Managing Officials (SMOs). For identification and verification purposes, SMOs should not be treated as equivalent to UBOs in all cases, and flexibility should be allowed regarding the type of identification information collected. Recital 15: the treatment of PEPs should better reflect the reality of governance structures in the Alternative Investment Funds sector. A distinction should be introduced for "non-material" PEPs, such as non-executive board members with limited influence over decision-making. Treating all such individuals as inherently high risk, without considering their actual role and level of influence, may lead to inflated risk classifications that do not correspond to genuine AML/CFT risk categorisation.
Luxembourg Private Equity and Venture Capital Association (LPEA)	Do you have any comments on the Annex in the draft RTS?	Yes
Luxembourg Private Equity and Venture Capital Association (LPEA)	Please share your comments below.	We note that Annex I, and in particular the list of attributes referred to in Section 9 relating to eIDAS, appears overly detailed with respect to address information notably. In line with a risk-based approach,

Name of the respondent	Question	Answer
		requiring highly granular address data may not always be necessary or proportionate, especially in lower-risk scenarios. We suggest that, in many cases, country-level information should be considered sufficient, allowing obliged entities to rely on their professional judgement to determine the appropriate level of detail, while avoiding unnecessary data collection and operational burden.
Luxembourg Private Equity and Venture Capital Association (LPEA)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate;Neutral
Luxembourg Private Equity and Venture Capital Association (LPEA)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software	Not applicable/no information available

Name of the respondent	Question	Answer
	subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs

	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
Luxembourg Stock Exchange	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In light of the ongoing discussions on the scope of obliged entities under the EU AML/CFT framework, we would welcome a clarification regarding the treatment of trading venues. From the public hearing discussions, we understand that, under the current legislative framework (including AMLD6), the designation of obliged entities primarily targets financial institutions and specific categories of market infrastructures, with explicit references to central securities depositories (CSDs). At the same time, trading venues (including regulated markets and multilateral trading facilities, as defined by MiFID) do not appear to be directly in scope as obliged entities at EU level. However, in practice, certain trading venues may be subject to AML/CFT obligations under national legal frameworks, for instance where they are authorised under specific domestic regimes that extend AML requirements beyond the minimum EU scope. Against this background, we would appreciate AMLA's clarification on the following points: 1. Whether it is the intention under the EU AML/CFT framework to exclude trading venues, as such, from the list of obliged entities; and 2. How AMLA envisages ensuring a consistent and harmonised approach across Member States, given that some trading venues may be subject to AML/CFT obligations at national level while others are not. A clarification on the expected role (if any) of trading

Name of the respondent	Question	Answer
		venues within the AML/CFT framework would contribute to greater legal certainty and supervisory convergence across the Union.
Luxembourg Stock Exchange	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Luxembourg Stock Exchange	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Luxembourg Stock Exchange	Do you have any comments on the Annex in the draft RTS?	No
Luxembourg Stock Exchange	How would you rate the proposals set out in the draft RTS overall?	Good
LuxReal - Luxembourg Real Estate Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not agree as we consider that neither the specificities of the collective investment scheme sector (such as high degree of intermediation involving regulated financial entities, the inherently cross border nature of fund distribution, the remote entering business relationship) nor its positioning in Europe (Luxembourg, Ireland, Germany, France) have been sufficiently considered. The resulting framework is excessively restrictive and disproportionate, risking material harm to the competitiveness and attractiveness of the EU financial market as a whole. Several articles would significantly increase compliance costs and operational complexity for EU market participants without any demonstrated correlation to higher inherent AML/CFT risk, thereby contradicting the risk-based approach underpinning the EU AML/CFT framework. Articles 7, 13, and 17 are of particular concern, with proposed measures detailed under

Name of the respondent	Question	Answer
		questions 2 to 3. In addition, we would like to refer to Article 12 as well: Further clarification is needed on the concept of "layer" under Article 12(1) to prevent inconsistent interpretation among obliged entities and competent authorities. As currently drafted, each individual legal entity within an ownership chain risks being counted as a separate layer, irrespective of its economic or supervisory context. The regulatory purpose behind identifying complex corporate structures is to capture arrangements that intentionally obscure beneficial ownership. Accordingly, entities belonging to the same group — namely those wholly or majority owned by a common parent and subject to consolidated supervision, including regulated financial institutions operating within transparent group structures — should not in themselves be treated as complex corporate structures. Such entities are inherently transparent, well documented, and subject to robust prudential and AML/CFT oversight, meaning ultimate ownership and control can be readily identified and verified. Absent this clarification, the counting of layers risks being artificially inflated in a manner disconnected from any increased ML/TF risk. Whilst the clarification provided by AMLA regarding "different jurisdictions" under Article 11(1)(b) — confirming this should refer to non-EU jurisdictions — is acknowledged, treating the mere presence of non-EU entities as an automatic indicator of complexity would result in systematic over-classification. Cross-jurisdictional structures are commonplace in the investment fund

Name of the respondent	Question	Answer
		sector and are driven by legitimate operational, legal, tax, and investor-related considerations, rather by any intent to conceal ultimate beneficial ownership. The concept of "complexity" under Article 12 should be explicitly linked to risk-relevant opacity rather than formalistic criteria. A complex corporate structure should be understood as one that is designed, or has the effect, of obscuring beneficial ownership or control, facilitating financial crime, or evading sanctions—consistent with the FATF recommendations, which flag higher risk where ownership structures appear unusual or excessively complex given the nature of the business concerned. Regulated groups, investment fund structures, and cross-border organisational models should not be automatically classified as complex where a legitimate economic rationale exists and ownership and control remain transparent and verifiable. We propose the following re-wording: “1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer’s business. In that regard, obliged entities may treat an ownership and control structure as a complex corporate structure where there are multiple layers (at least three or more layers) between the customer and the beneficial owner and, in addition, more than one of the following conditions is met: a) The structure contains a legal arrangement

Name of the respondent	Question	Answer
		presenting anomalous characteristics b) there is a legal arrangement or similar legal entity located in jurisdictions not complying with international transparency standards, and this “entity” has no economic, asset or other reality, except where (1) the customer demonstrates that its establishment complies with the legal provisions of the country of residence of the customer/beneficial owner or (2) the existence of the entity is in effect known to the tax authorities of the country of residence of the beneficial owner based on supporting evidence. c) there are nominee shareholders and/or directors involved in the structure. 2. In the case of complex .... in paragraph 1, obliged entities shall, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an ownership structure chart or any other document."
LuxReal - Luxembourg Real Estate Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Although Article 1 introduces proportionality and the risk based approach, we consider that the RBA is still not consistently or adequately embedded throughout the different provisions. As a general remark, AML obligations should be understood as obligations of means rather than obligations of result and that in this respect, obliged entities are legally required to establish and implement a robust risk based framework aimed at effectively identifying and mitigating risks. The framework remains overly prescriptive, particularly in relation to the following articles (11, 13 and 17) and does not adequately apply a genuine risk based approach.

Name of the respondent	Question	Answer
		Article 11: In addition to the overarching obligation to apply risk sensitive measures as set out in Article 11, point (3) of that Article is overly prescriptive and should apply only in cases involving high risk or complex ownership and control structures. Imposing these requirements solely on the basis that a customer's ownership or control structure includes more than one legal entity or legal arrangement fails to reflect the risk based approach and does not adequately take into account the actual ML/TF risk profile of the customer. As such, we propose the following rewording: "3. With respect to the customer's ownership and control structure mentioned under point (2) which poses a higher risk or is a complex corporate structure as defined under article 12, obliged entities shall take risk sensitive measures to obtain the following information: (a) the legal form of such entities and/or arrangements, (b) the jurisdiction of incorporation or registration of the legal person or legal arrangement, (c) in the case of a trust, the jurisdiction of its governing law." Article 13:Based on the EBA's responses to the first public consultation, senior managing officials (SMOs) should not be treated as ultimate beneficial owners (UBOs), as reflected in both Recital 125 of the AMLR and Recital 9 of the RTS. However, Article 13 of the RTS does not sufficiently differentiate between a UBO who has ownership or control over an entity and an SMO who acts purely in a professional capacity. SMOs are identified only as a fallback solution where no natural

Name of the respondent	Question	Answer
		person meeting the UBO criteria can be identified, or where doubts remain as to the accuracy of the identified UBOs. They do not have any personal economic interest in, nor derive benefit from, the client entity or its assets. Accordingly, the information to be collected for SMOs should not mirror the information required for UBOs. This distinction is particularly relevant for the collective investment scheme sector in Luxembourg, where the client base is largely institutional, often listed, regulated or subject to AML/CFT supervision, generally presenting lower risk and frequently lacking identifiable natural person UBOs due to the nature of the structures involved. Accordingly, we propose the following revised wording for Article 13: “In relation to senior managing officials as referred to in Article 22(8), second subparagraph of Regulation (EU) 2024/1624, obliged entities shall: a) collect the information referred to in Articles 2 and 3 for identification purposes; b) verify the identity of senior managing officials by applying risk sensitive measures.” Article 17: Although recital 14 clarifies that CIUs are not required to systematically obtain information on underlying investors in low or standard risk relationships, Article 17 nonetheless obliges CIUs, across all risk categories and irrespective of the intermediary’s role, to obtain information necessary to identify and verify all underlying investors without undue delay and upon request. This requirement appears disproportionate and insufficiently risk sensitive. Moreover, the proposal fails to address situations

Name of the respondent	Question	Answer
		where financial intermediaries invest on behalf of investors without being formally appointed as distributors. As drafted, Article 17 could significantly affect the CIU sector and does not align with FATF guidance for the securities sector, which prioritises due diligence on institutional intermediaries and limits access to underlying investor information to specific, higher risk circumstances or competent authority requests. We propose the following rewording: “When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of others, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if it is satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the identity of any underlying investor without undue delay and on a risk-sensitive basis in situations such as changes in the risk profile, unusual or suspicious activity, deviations from agreed arrangements, or upon request by a competent authority. This applies provided that:...".
LuxReal - Luxembourg Real Estate Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	- Certain situations common in the CIU sector are not adequately addressed by the draft RTS, particularly in relation to identity verification under Article 6. Article 6(1)(e), which requires identity documents to include security features ensuring authenticity, is overly restrictive. Regulation (EU) 2019/1157 expressly establishes a transitional regime allowing identity documents lawfully issued before the introduction of

Name of the respondent	Question	Answer
		enhanced security standards to remain valid until their expiry date or, at the latest, August 2031. These documents continue to produce full legal effects under EU law yet would be excluded by a strict application of Article 6(1)(e). Moreover, many identity documents issued by third countries (Asia, the Middle East, Latin America) do not consistently include standardized or comprehensive security features. An unconditional application of Article 6(1)(e) would exclude a significant number of valid and genuine documents in routine CDD processes. More fundamentally, this creates a structural legal conflict: while Regulation (EU) 2019/1157, as a Level 1 act, recognises the validity of transitional identity documents, the Level 2 draft RTS would render them unusable for AML/CFT purposes. A delegated act cannot override or frustrate a Level 1 Regulation, giving rise to risks of incompatibility and mandate overreach. The RTS provides no alternative pathway, as documents must cumulatively meet all five conditions listed in Article 6(1) to be accepted. Article 6(2) offers no practical relief, as it is limited to exceptional situations such as stateless or refugee status and does not apply to standard customers, including non EU institutional investors, who present valid and genuine documents lacking the required security features. As a result, the mandatory nature of Article 6(1)(e) risks materially affecting market access and the competitiveness of the EU financial sector. A proportionate solution would be to add the wording “where applicable” to Article 6(1)(e), preserving security features as the default standard while allowing obliged entities, on a risk based basis, to

Name of the respondent	Question	Answer
		accept identity documents that remain legally valid under EU law but do not yet meet updated security benchmarks. Article 6(5) should be reworded as follows: "For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof on a risk-based approach, or act in accordance with Article 7." - Article 7 of the RTS designates eIDAS compliant electronic identification as the primary means of verifying customers in non face to face relationships, allowing alternative remote solutions only where eIDAS is unavailable and subject to justification. This approach is overly prescriptive and does not reflect the operational and risk realities of the collective investment scheme (CIS) sector, where investor relationships are predominantly non face to face and typically involve institutional and regulated entities, many based outside the EU. Making eIDAS the default would impose disproportionate compliance burdens and undermine the attractiveness and competitiveness of the EU financial centre. eIDAS should instead be treated as a preferred, but not primary, method, allowing obliged entities to use equivalent remote identification tools under a risk based approach. Non face to face relationships in the CIS sector should not automatically be considered higher risk, as investors are already subject to equivalent AML/CFT safeguards through regulated credit institutions, with investments

Name of the respondent	Question	Answer
		limited to funds from the investor's own bank account. The RTS should better differentiate customer risk profiles, recognising the lower risk posed by institutional and regulated investors. Finally, assuming that eIDAS is generally available is incorrect: non EU investors cannot hold eIDAS credentials by definition. Requiring case by case justification for this structural limitation is disproportionate. Accordingly, Article 7(4)'s justification requirement should be removed, limiting obligations to technical compliance with Article 7. We propose the following rewording of article 7 (1) (2) and (4): 1."to comply with..., obliged entities shall apply on a RBA, additional and appropriate measures, such as the ones defined under article 6(5), to mitigate the inherent higher risk such type of relationship may present or the use of electronic identification means.... in that Regulation. 2. As an alternative to the electronic identification solution mentioned under paragraph 1, obliged entities may use remote solutions that meet the conditions set out in paragraph 3. 4. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article."
LuxReal - Luxembourg Real Estate Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	Article 20 and article 21 of the draft RTS refer to the minimum requirement for customer as well as BO or SMOs identification in situations of low risk, by listing the minimum information to be obtained for natural person and for legal entity. This RTS complements article 33 of the AMLR where the

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	following SDD measures are permissible: • Verifying the identity of the customer and UBO after the business relationship is established, if lower risk justifies it, but no later than 60 days after establishment; • Reducing the frequency of CDD information updates; • Collecting less information about the purpose and intended nature of the relationship or inferring it from transaction types; • Reducing the frequency or depth of transaction scrutiny. The list of permissible simplified due diligence (SDD) measures remains overly generic and does not sufficiently take into account established market practices that have been validated by the competent local supervisory authority. In particular, reference can be made to CSSF Regulation 12-02, which sets out examples of SDD measures, including the following: • the presumption that a payment debited from an individual or joint account held in the name of a customer by a credit institution or financial institution regulated in a country member of the European Economic Area or a third country imposing equivalent AML/CFT obligations, fulfils the requirements provided for in points (a) of the first subparagraph of Article 3(2) of the Law; • the exceptional acceptance of other types of ID documents which meet the criteria of reliable and independent sources, for example a letter addressed to customer cannot provide the usual identification

Name of the respondent	Question	Answer
		documents and, insofar as there are no grounds for suspicion; • the update of the information on the customer due diligence measures only in case of certain trigger events, for example if the customer requests a new or riskier product or service or in the event of changes in the behaviour or transaction profile of the customer which seem to indicate that the risk associated with the relationship is no longer low; • for persons purporting to act on behalf of a customer as provided for in Article 20 of this regulation and for initiators, promoters who launched an investment fund, obtaining information on the country of residence of these persons instead of asking for the full postal address; • for persons purporting to act on behalf of a customer as provided for in Article 20 of this regulation, where a customer is a regulated credit or financial institution, instead of asking the complete identification of these persons, obtaining a letter confirming that the institution applied due diligence measures to these persons and that it carried out regular controls of these persons with respect to the applicable lists of restrictive measures in financial matters. We would recommend complementing article 21 by concretely providing examples of SDD measures, similar to those outlined above.
LuxReal - Luxembourg Real Estate Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	We have additional comments for the following articles: Article 10: Point b (iv) of the article is too prescriptive by requesting documents from the legal entity to be

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	certified by persons that are authorised for document certification purposes, without again considering the level of risk. We would expect that the information contained in the document is confirmed by a person authorised to represent the entity, rather by requiring a systematic formalised certification process. To avoid any misunderstanding, we suggest replacing the term “is certified by persons that are authorised for document certification purposes” by “is signed by persons purporting to act and represent the entity”. Article 14: Article 14 of the RTS introduces more stringent requirements for the identification and verification of beneficiaries of trusts and similar legal entities or arrangements, particularly where beneficiaries have not been individually designated or are defined only by class or characteristics. It requires obliged entities, on a risk sensitive basis, to ensure that the trustee, legal entity, or legal arrangement provides timely updates. In practice, obtaining such information spontaneously from trusts may prove challenging, and consideration should instead be given to triggering identification and verification measures at the time of a relevant transaction, such as a payout to a beneficiary. We suggest rewording Article 14 as follows: 1. “For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities shall obtain from the trustee, legal entity or legal arrangement include: (a) a description of the class of beneficiaries and its characteristics, which shall contain sufficient

Name of the respondent	Question	Answer
		information to allow the obliged entity to determine whether individual beneficiaries are ascertainable and shall be treated as beneficial owners at the time of a relevant transactions such as a payout request; and (b) relevant documents to enable the obliged entity to establish that the description is correct and up-to-date on a risk-based approach." 2. Obliged entities shall take risk-sensitive measures to ensure that the trustee, legal entity or legal arrangement provide at the time of a relevant transactions such as a payout request, relevant information on beneficiaries previously identified by class or characteristics becoming ascertainable and thus beneficial owners."

If so, please provide concrete examples of such situations and your proposals for alternative solutions.	I Sverige är dödsbon en ganska vanlig kund till fastighetsmäklare. Avlidna personer äger inte sällan en fastighet eller bostadsrätt som måste säljas i samband med att ett dödsbo avyttras. Enligt svensk rätt är dödsbon juridiska personer och har därmed en särställning jämfört med de flesta andra länder i unionen. Dödsbon är egna rättsobjekt och har full rättskapacitet där äganderätten till kvarlåtenskapen ligger hos dödsboet. Arvingarna äger inte direkt. Dödsboet företräds till lika stor dela av samtliga dödsbodelägare och eventuella universella testamentstagare. Vilka som företräder dödsboet framgår av den bouppteckning som upprättas av dödsboet, där den avlidnes tillgångar listas. På grund av att dödsbon anses vara juridiska personer i Sverige ställer det till problem vid identifieringen och kontrollen av verkligt huvudmannaskap hos dödsbon. I dödsbon där dödsbodelägarna inte är fler än fyra kan samtliga dödsbodelägare anses vara verkliga huvudmän

Name of the respondent	Question	Answer
		(eftersom de då äger minst 25 % var av dödsboet), men så fort antalet dödsbodelägare överstiger fyra saknas det regler för hur dessa ska hanteras. Dödsbon registreras inte i det nationella registret över verkliga huvudmän. Någon fysisk person som är ledande befattningshavare i dödsboet förekommer inte av naturlig anledning och det går därför inte att utse någon sådan person enligt art 22 punkten 2 andra stycket i förordningen. Det är inte ovanligt att vissa dödsbon kan bestå av en stor andel dödsbodelägare, uppåt 20-30 personer och därutöver. Enligt de regler som finns i förordningen idag och de föreskrifter som föreslås i RTS:en saknas det vägledning i hur verklig huvudman ska hanteras inom ramen för ett dödsbo. Att hantera samtliga dödsbodelägare som verkliga huvudmän faller på sin egen orimlighet, särskilt när dödsboet omfattar många dödsbodelägare. När dödsbodelägarkretsen är omfattande är det inte ovanligt att en av dödsbodelägarna företräder resten av dödsbodelägarna genom fullmakt Ett dödsbo kan också företrädas av en boutredningsman eller testamentsexekutor. En boutredningsman är en av tingsrätten utsedd person som tar över förvaltningen av ett dödsbo när delägarna inte kan enas eller när särskild ordning behövs. Boutredningsmannen företräder dödsboet ensam, utreder tillgångar och skulder samt kan genomföra arvskifte. Uppdraget innebär ett oberoende och långtgående mandat att fatta beslut för boets räkning. En testamentsexekutor är en person som utsetts i testamente att förvalta dödsboet och genomföra den avlidnes vilja. Exekutorn tar över

Name of the respondent	Question	Answer
		förvaltningen från dödsbodelägarna och företräder dödsboet ensam i frågor som rör boet. Uppdraget omfattar bl.a. att betala skulder, förvalta egendom och verkställa arvskiftet enligt testamentet. Däremot har boutredningsmannen eller testamentsexekutorn oftast inte någon del i dödsboet så även om dessa utövar kontroll över dödsboet så är de inte förmånstagare Det behövs ett förtydligande i hur verklig huvudman ska utredas i dödsbon och om boutredningsman/testamentsexekutor ska kunna utses pga av att de anses vara ledande befattningshavare i dödsbon. När dessa saknas och dödsbodelägarna uppgår till fler än fyra personer är det önskvärt att kunna utse en av dödsbodelägarna (t.ex. någon med fullmakt att företräda resten av dödsbodelägarna) som verklig huvudman för dödsboet alternativt att någon verklig huvudman inte behöver utses och kontrolleras. Det kan ifrågasättas om ett dödsbo över huvud taget har en eller flera verkliga huvudmän.
Mäklarsamfundet Service i Sverige AB	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Se svar under fråga 3. Om kunden är ett dödsbo eller liknande association där det saknas verkliga huvudmän såväl som ledande befattningshavare, bör det finnas utrymme för en ansvarig enhet att vidta förenklade åtgärder som innebär att verklig huvudman inte behöver identifieras.

Name of the respondent	Question	Answer
Mäklarsamfundet Service i Sverige AB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Enligt section 4 art 19 punkten 3 ska en ansvarig enhet ha automatiska screeningkontroller för att kontrollera om en kund eller dennes verklige huvudman är PEP nära familjemedlem till en PEP eller nära medarbetare till en PEP. Det räcker dock med manuella kontroller om det med hänsyn till den ansvariga enhetens storlek, affärsmodell, komplexitet eller verksamhetens art är tillräckligt. Det behövs mer vägledning vad detta innebär. De flesta svenska mäklarföretagen är små, med ett snitt på fyra medarbetare per företag, kundantalet och antalet affärer per år är begränsat. Är detta tillräckligt för att inte behöva ha automatiserade kontroller? Det behövs mer vägledning kring när det är tillräckligt med manuella kontroller. Detsamma gäller för artikel 30. Det behövs vägledning när det är ok att genomföra manuella kontroller. Vad menas med manuella kontroller? Är det samma som att fråga kunden? Borde inte sanktionskontroll alltid ske genom automatisk screening?

Malta Casino Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree that the draft RTS can be applied across the range of services provided by licensed land-based casino operators, given their risk-based and horizontal structure. However, certain provisions require clarification to ensure proportional application within land-based casino environments. The drafting appears largely inspired by financial sector practices, which differ from the realities of physical casino operations. Without targeted clarification, this may result in unnecessary rigidity.

Name of the respondent	Question	Answer
		Key areas requiring flexibility include face-to-face identity verification, where physical document checks should be recognised as fully sufficient; the purpose of the relationship, which is inherent in licensed gambling; source of funds treatment, particularly recognising casino-generated winnings; and the absence of sector-specific simplified due diligence (SDD) criteria. AMLA should clarify that in physical casino settings, face-to-face identification is sufficient, the nature of the service satisfies purpose requirements for standard-risk customers, and sector-specific SDD criteria can be applied.
Malta Casino Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree that the draft RTS are structured around a risk-based approach and welcome AMLA's emphasis on proportionality. However, certain provisions risk overly prescriptive implementation. Regarding source of funds (Article 18(c)), there is insufficient distinction between standard-risk information and enhanced due diligence evidence. This may lead to disproportionate requirements. A simple customer declaration should suffice for standard-risk cases, with documentary evidence reserved for higher-risk situations. The absence of casino-specific SDD criteria limits the effective application of proportional measures for low-risk recreational customers. AMLA should clarify when simplified measures are appropriate.

Name of the respondent	Question	Answer
		There is also a risk that high transaction values may be interpreted as high risk. It should be explicitly confirmed that enhanced due diligence is triggered by risk indicators, not transaction volume alone. Operationally, real-time PEP screening in high-footfall casino environments presents practical challenges. Screening should be permitted within a short timeframe after threshold identification. Monitoring requirements should also be explicitly linked to customer risk, allowing extended refresh cycles for low-risk customers.
Malta Casino Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Certain required information is not routinely available in land-based casino environments. Customers do not carry financial documentation such as bank statements or payslips, making documentary evidence of source of funds impractical for standard transactions. A declaration should suffice at standard risk. Many identity documents do not include place of birth or residential address. Requiring additional documentation is disproportionate and adds friction. Limitations in beneficial ownership and PEP data

Name of the respondent	Question	Answer
		sources should be recognised, with structured open-source checks accepted where necessary. Casino-generated winnings are clearly identifiable through internal records, and should not require additional source-of-funds checks.
Malta Casino Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Additional SDD measures should be introduced for land-based casinos, reflecting the predominance of low-risk recreational customers. For occasional customers meeting basic criteria (valid ID, no risk indicators), simplified measures should apply, including reliance on ID documents, no documentary source-of-funds requirements, and no additional enquiries. For repeat customers with established profiles, duplication of CDD should be avoided. Monitoring should be proportionate and based on stability of behaviour. Where identification has already been conducted under national gambling regulations and meets AML requirements, duplication should be avoided.
Malta Casino Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Adequate transition time is necessary for implementation. The RTS should allow the use of technological tools, including automated solutions, and clarify the distinction between source of funds and source of wealth. Overall, proportionality and practical application should

Name of the respondent	Question	Answer
		remain central, particularly in high-volume, face-to-face environments.
Malta Casino Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Malta Casino Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	18
Malta Casino Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The provisions relating to source of funds would benefit from clearer differentiation between requirements applicable at standard-risk level and those applicable under enhanced due diligence. In a land-based casino context, transactions often occur in real time at the point of interaction. Requiring documentary evidence such as bank statements or payslips at this stage is not operationally feasible for standard-risk customers, who typically do not carry such documentation. There is a risk that, in the absence of explicit clarification, these requirements could be interpreted as applying uniformly across all customer categories. This would undermine the intended risk-based approach and introduce disproportionate compliance friction in a predominantly low-risk customer environment. Proposed solution: AMLA should explicitly clarify that: 1) for standard-risk scenarios, a customer declaration of

Name of the respondent	Question	Answer
		source of funds is sufficient; 2) documentary evidence is required only where enhanced due diligence is justified by identified risk factors; and 3) Where such documentary evidence is required, the player is allowed enough time (upon next visits) to provide this information.
Malta Casino Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Malta Casino Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The requirements regarding customer identification appear to extend beyond the information typically contained in official identity documents. In practice, many identity documents do not include data points such as residential address or place of birth. Requiring additional documentation to obtain this information in a land-based casino setting would be disproportionate and would not materially enhance the reliability of identification. In a face-to-face environment, identity verification is already performed using official documents and supporting verification technologies. Proposed solution: AMLA should clarify that: 1) Identification requirements should be limited to the data available on valid identity documents for standard-risk customers; and

Name of the respondent	Question	Answer
		2) Additional documentation should only be required where justified by elevated risk.
Malta Casino Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	3
Malta Casino Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The practical implementation of PEP screening obligations in high-volume, land-based environments presents operational challenges, particularly where screening is expected to be completed prior to transaction execution. Real-time screening at threshold points may lead to delays and customer friction, especially in cases where screening tools produce false positives that require manual review. This could result in disproportionate operational disruption without a corresponding increase in effectiveness. Proposed solution: AMLA should clarify that: 1) PEP screening may be completed within a short timeframe after threshold identification; and 2) Immediate completion prior to transaction execution is not required in standard-risk situations, provided controls are in place to ensure timely review and escalation.

Name of the respondent	Question	Answer
Malta Casino Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	26
Malta Casino Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Ongoing monitoring requirements should reflect the risk profile of customers rather than applying a uniform approach. Land-based casino operators typically manage large volumes of low-risk recreational customers whose behaviour is stable and well understood. Applying frequent update cycles to such customers may not contribute meaningfully to risk mitigation. Proposed solution: AMLA should confirm that: 1) Monitoring and periodic review obligations may be calibrated based on customer risk; and 2) Extended refresh intervals are appropriate for low-risk customers with stable profiles, within the maximum regulatory limits.
Malta Casino Association	How would you rate the proposals set out in the draft RTS overall?	Good
Malta Gaming Authority	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	The respondent broadly supports the objectives of the draft RTS. However, concerns are identified in relation to Article 7(1), which governs customer verification in non face to face scenarios. Article 7(1) appears to establish electronic identification means compliant with Regulation (EU) No 910/2014 (eIDAS), at assurance levels “substantial” or “high”, as

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	the primary method for non face to face verification, with other verification methods positioned as secondary or fallback options. This approach is more restrictive than Article 22(6) of Regulation (EU) 2024/1624 (the AMLR), which accords equal standing to electronic identification means and document based verification. In the respondent's view, the RTS should align more closely with the AMLR. This is particularly important given the current absence of a fully operational and harmonised EU digital identity ecosystem. Not all Member States have implemented qualifying eIDAS solutions, and reliance on such mechanisms as a default verification method risk creating fragmentation and operational uncertainty. Accordingly, the RTS should be amended to reflect the approach envisaged by Article 22(6) AMLR, allowing obliged entities to select appropriate verification methods based on availability, proportionality, and risk considerations rather than establishing a de facto hierarchy of verification tools.
Malta Gaming Authority	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The respondent does not consider that all the proposals set out in the RTS can be applied smoothly across all business models, particularly in the gambling sector, without additional flexibility. Two areas are especially relevant: Article 7 (verification in non face to face settings) and Article 18 (purpose and intended nature of the relationship).

Name of the respondent	Question	Answer
		With regards to our issues in relation to Article 7 of the RTS, we kindly refer you to our response to Question 1. With regards to Article 18, the respondent understands the policy intent of requiring obliged entities to obtain sufficient understanding of the purpose and intended nature of the business relationship. However, certain elements of Article 18 do not translate well to remote gambling services. In this sector, the purpose of the relationship is generally self evident, participation in gaming for entertainment, and therefore mandating granular “purpose” information risks becoming a formal compliance exercise rather than a meaningful risk assessment tool. Similarly, the obligation in Article 18(b) to obtain an estimate of envisaged activity levels is difficult to operationalise in the gaming context. Customer behaviour is variable and affected by multiple factors; customers are typically unable to provide accurate ex ante estimates. The information obtained is therefore frequently speculative and of limited AML/CFT value. In practice, gaming sector risk management depends more on real time and ongoing monitoring (behavioural indicators, velocity checks, and pattern detection) than on front loaded predictions at onboarding. Article 18 should explicitly recognise that where the purpose and intended nature of a relationship are inherent in the product or service, obliged entities should be able to record that purpose without collecting additional “economic rationale” style data, unless risk indicators justify further enquiry. Likewise, envisaged activity

Name of the respondent	Question	Answer
		should be framed as information to be collected only where it is reasonably available and reliable, and it should be permissible to form an expectation based on objective factors (product features, limits, funding method, initial deposits) rather than requiring a customer to predict future behaviour.
Malta Gaming Authority	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The respondent considers that several provisions, as currently formulated, risk constraining the effective application of a risk based approach. First, Article 7 risks undermining technology neutrality and risk based flexibility by implicitly prioritising eIDAS based verification notwithstanding uneven availability across the EU. The risk based approach is better served by allowing obliged entities to choose among verification methods permitted by Article 22(6) AMLR according to practical availability and risk, rather than embedding a de facto preferred tool. Kindly refer to our response to Question 1 for further context on this. Second, Article 18 risks pushing obliged entities towards standardised, front loaded data collection that may not meaningfully improve risk understanding in sectors where risk develops primarily through patterns of activity, rather than onboarding declarations. Kindly refer to our response to Question 2 for further context on this. Third, the respondent has concerns regarding the interaction between baseline CDD and enhanced measures,

Name of the respondent	Question	Answer
		particularly Articles 25 and 26. As drafted, these provisions overlap substantially with baseline CDD requirements, which risks blurring the distinction between “standard” and “enhanced” measures. This creates uncertainty as to what additional risk based value is being introduced at the point where a higher risk classification is reached. Finally, Article 19 requires identification of PEPs (and their family members and close associates) before the establishment of the business relationship or completion of an occasional transaction. For remote gambling, this becomes operationally problematic if “establishment of the business relationship” is interpreted as occurring at mere account registration. Prior to registration, it is completely unfeasible for gaming operators to conduct PEP screening. Importantly, this RTS should also be internally consistent with the forthcoming RTS under Article 19 (9) AMLR, which include the criteria for identifying business relationships and thresholds, so that operators are not faced with conflicting or unfeasible triggers across related instruments. In the respondent’s opinion, PEP screening should be done ‘before establishment of the business relationship’, which shall be understood as applying before the customer is permitted to transact in a manner that creates financial exposure and AML/CFT risks.

Name of the respondent	Question	Answer
Malta Gaming Authority	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes. In online gambling, there are recurring situations in which the information envisaged by the draft RTS cannot be obtained reliably or proportionately, and the draft does not always provide sufficient alternative pathways. One recurring issue concerns non face to face identification attributes. Not all electronic identification solutions provide the full set of Annex I attributes, and requiring supplementary verification for each missing attribute is often impractical at onboarding scale. This is compounded by uneven availability of qualified eIDAS solutions across Member States and by uncertainty as to acceptable alternatives for third country customers under Article 7(4), which can leave obliged entities without a clear compliance route. A second issue arises from timing requirements that assume certain checks occur before a business relationship is established. In remote gambling, if account creation is treated as the establishment of the relationship, the RTS would effectively require completion of extensive checks at registration even where no deposit or meaningful activity has occurred. That reading would be disproportionate and operationally difficult, particularly where many accounts are created for low exposure reasons and risk only becomes apparent once transactional behaviour develops.

Name of the respondent	Question	Answer
		A third issue concerns the “purpose and intended nature” requirements under Article 18, particularly where they imply collection of detailed economic rationale or predicted future activity. In online gambling the purpose is generally inherent, and customers are rarely in a position to provide accurate forecasts of spending or play. The resulting information is typically speculative and does not meaningfully improve AML/CFT outcomes. For these reasons, the respondent considers the RTS should more clearly recognise functionally equivalent digital identification solutions, provide explicit alternative verification routes where qualified eIDAS tools are unavailable (including for third country customers), and frame information requirements around what is realistically accessible and risk relevant in practice.
Malta Gaming Authority	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The respondent generally agrees with the inclusion of simplified due diligence (SDD) measures in the draft RTS. However, the respondent considers that the framework would benefit from greater clarity and structure as regards what constitutes a low risk scenario, particularly in sectors such as online gambling where risk typically materialises over time rather than at the point of onboarding. At present, the draft RTS provide limited guidance on how obliged entities should identify and apply a “low risk”

Name of the respondent	Question	Answer
		classification in practice. This lack of clarity risks uneven application across sectors and Member States and may lead obliged entities to adopt overly conservative approaches, including the application of full or near full customer due diligence even where objective indicators suggest a low level of ML/TF risk. In the gaming services commonly begin at a very low exposure level. Customers may open accounts to explore the product offering or make limited use of promotional incentives, often with no immediate financial exposure or only minimal transactions. In such circumstances, meaningful ML/TF risk indicators typically do not arise at the onboarding stage, but rather emerge progressively as transactional behaviour develops and patterns become observable through monitoring. Requiring comprehensive customer due diligence at the earliest stage of interaction, notwithstanding objectively low risk and low exposure, risks producing outcomes that are disproportionate to the ML/TF risks presented. This approach may generate unnecessary compliance costs, introduce friction for legitimate customers, and potentially incentivise migration towards less regulated or unregulated channels, without materially enhancing AML/CFT effectiveness. In fact, following a review of all data submitted by its licensees for the second half of 2025, the Respondent determined that 97.3% of the full population of registered players were inactive throughout the period (i.e. made 0 wagers during the reporting period). Of the remaining 2.7% who did

Name of the respondent	Question	Answer
		exhibit activity in the relevant period, 87.5% were categorised within the lowest activity band (€0–€5,000 in real-money wagers). The respondent therefore considers that the RTS should more clearly delineate low risk scenarios and expressly allow for the application of simplified or staged due diligence measures in such cases, particularly during the initial phase of the customer relationship. This could include permitting limited CDD at onboarding where exposure is minimal, provided that full verification and, where relevant, enhanced measures are applied before predefined thresholds are reached or where risk indicators emerge through ongoing monitoring. Importantly, such an approach would remain fully consistent with the objectives and risk based principles underpinning the AMLR and AMLA's mandate under Article 28(1). It would allow obliged entities to allocate resources more effectively by focusing enhanced controls where risk genuinely materialises, rather than front loading requirements in circumstances where the ML/TF risk is demonstrably low. Clarifying how low risk scenarios should be identified and operationalised within the RTS would significantly strengthen proportionality, improve legal certainty, and

Name of the respondent	Question	Answer
		support consistent application across sectors, while maintaining robust AML/CFT safeguards.
Malta Gaming Authority	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Malta Gaming Authority	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Malta Gaming Authority	Do you have any comments on the Annex in the draft RTS?	No
Malta Gaming Authority	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Malta Institute of Accountants	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly support the objective of enhancing harmonisation and clarity in customer due diligence (CDD) requirements across the EU. However, we consider that the draft RTS do not sufficiently reflect the diversity of obliged entities—particularly DNFBPs—nor adequately embed the principle of proportionality underpinning the risk-based approach. The RTS are, in many instances, overly prescriptive, limiting flexibility for entities to apply requirements in a risk-sensitive manner across differing business models and scenarios. This is compounded by the recurring use of formulations such as “risk-sensitive basis”, “where necessary” and “reasonable measures”, without clearly distinguishing between mandatory requirements and those that may be adapted based on risk. This creates

Name of the respondent	Question	Answer
		legal uncertainty and may lead to inconsistent supervisory expectations across Member States. We recommend clearer differentiation between minimum requirements and those subject to risk-based calibration, supported by practical guidance. Certain provisions also raise specific concerns. Article 18(a)(i) appears to require information of a commercial nature (e.g. referrals or pricing), which may not meaningfully contribute to AML/CFT risk assessment, particularly where the purpose of the relationship is self-evident or legally prescribed. This requirement should be limited to information demonstrably relevant to AML/CFT purposes. Similarly, Article 30 could be interpreted as requiring the screening of all digital wallet addresses, which would be disproportionate where such wallets are not linked to the service provided; this should be clarified. Article 21 does not fully align with standard practice, where information is collected from the customer and subsequently verified. Requiring additional sources not used for identification may lead to duplication and inefficiency. Greater flexibility should be allowed, including recognition that government-issued identification documents and customer-provided documentation may serve both identification and

Name of the respondent	Question	Answer
		verification purposes. In addition, Article 4's requirement to collect granular place-of-birth information introduces operational burdens with limited added AML/CFT value and should be restricted to country of birth. More broadly, undefined concepts such as "reasonable measures" create interpretative uncertainty. Recital 10 also lacks clarity as to what constitutes exhausting "all possible means" to identify beneficial owners. We recommend the inclusion of non-exhaustive examples of acceptable steps and an indication of the level of effort expected. Similar clarification is needed under Article 8 regarding the reliability of sources and whether multiple sources are required. We further recommend introducing an exemption where shares are held in trust by regulated trustees acting purely as service providers with no economic interest in the underlying entity, allowing reliance on their regulated status. More generally, the RTS should clearly differentiate between regulated and unregulated trustees. Current provisions result in repeated collection and verification of due diligence information even where trustees are licensed and subject to AML/CFT supervision, creating duplication without meaningful risk reduction. Proportionate measures—such as

Name of the respondent	Question	Answer
		reliance on public registers and trustee declarations—should be permitted for regulated trustees. The RTS also provide limited clarity on certain aspects of sanctions screening, including indirect control, the treatment of intermediaries in lower-risk scenarios and screening frequency. Additional guidance would support consistent application. Overall, several provisions appear primarily designed with credit and financial institutions in mind, without sufficient tailoring to DNFBPs or acknowledgement of the diversity within that sector. Combined with reliance on digital identification frameworks that may not yet be fully implemented across all Member States, this limits proportionality and practical applicability. Greater clarity and flexibility are therefore needed to ensure effective and proportionate AML/CFT compliance.
Malta Institute of Accountants	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We are of the view that the proposals set out in the draft RTS do not allow for sufficient flexibility to accommodate the full range of products, services and business models of obliged entities, particularly within the DNFBP sector. The draft RTS appear to be premised on an assumed level of standardisation in service delivery and ML/TF risk exposure that does not reflect operational realities.

Name of the respondent	Question	Answer
		Certain DNFBP services, such as the provision of a registered office, do not involve the execution of customer transactions nor provide visibility over customer transactional activity. In such circumstances, the application of ongoing transaction monitoring requirements under Article 20 of Regulation (EU) 2024/1624, as reflected in the RTS, is neither meaningful nor practicable. Obliged entities providing these services are not in a position to scrutinise transactions or assess their consistency with the customer's profile, as they neither process nor have access to the relevant information. Applying these obligations indiscriminately risks creating requirements that are disproportionate and, in some cases, impossible to comply with. More generally, DNFBPs provide a broad spectrum of services with varying levels of customer interaction and exposure to ML/TF risk. Even within the same category of obliged entities, such as auditors or tax advisors, there are significant differences in service delivery models and risk profiles. A uniform approach therefore risks imposing unnecessary compliance burdens, particularly on smaller entities, without a commensurate enhancement of risk mitigation. We therefore consider that the RTS should more explicitly recognise the need for flexibility based on the nature of the specific product or service provided. Regulatory obligations should apply only where they are relevant and proportionate, with clearer provisions

Name of the respondent	Question	Answer
		allowing obliged entities to calibrate their CDD measures according to the product, service and delivery channel. This approach would be enhanced by the inclusion of practical examples demonstrating how the requirements may be adapted across different DNFBP activities. In addition, we note that recital (5) on page 9 does not sufficiently distinguish between declarations obtained from regulated and duly licensed trustees and those obtained from unlicensed or unregulated trustees. The general requirement for certification by an independent third-party professional does not adequately take into account the regulatory oversight, professional accountability and AML/CFT obligations already applicable to regulated trustees. As drafted, this approach risks duplication of controls and the imposition of disproportionate additional requirements where the reliability and independence of information provided by a regulated trustee can reasonably be relied upon. We therefore propose that the RTS expressly distinguish between declarations issued by regulated trustees and those issued by unregulated or unlicensed trustees. In particular, where a trustee is regulated and duly licensed, their declaration confirming the relevant details of the trust arrangement should be deemed to constitute a reliable and independent source of information without the need for additional third-party certification. Certification by an independent professional or public authority should be required only

Name of the respondent	Question	Answer
		where the trustee or similar administrator is not regulated or licensed. With respect to Article 7 on non-face-to-face customer identification, while we support the objective of strengthening remote onboarding processes through the prioritisation of electronic identification means meeting eIDAS assurance levels “substantial” or “high”, as well as qualified trust services, we note that such solutions are not universally available or accepted, particularly outside the EU, and cannot be considered a one-size-fits-all approach. Furthermore, the associated costs, licensing requirements and technical integration challenges can be significant, particularly for small and medium-sized DNFBPs such as CSPs and trustees, especially where the ML/TF risk is assessed as low or moderate. Accordingly, we propose that the RTS explicitly recognise alternative means of reliable and independent verification, to be applied on a risk-based basis where eIDAS-compliant electronic identification means or qualified trust services are unavailable or cannot reasonably be expected. Such alternatives could include the collection of multiple official identity and verification documents issued by public authorities or regulated institutions, as well as certified physical copies of documentation verified by warranted or otherwi

Name of the respondent	Question	Answer
Malta Institute of Accountants	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We agree that the draft RTS are intended to support the effective application of a risk-based approach to AML/CFT compliance. However, in their current form, certain provisions may undermine this objective by creating scope for inconsistent interpretation. While we acknowledge that the draft CDD RTS refer to the principles of proportionality and the risk-based approach, the overall drafting does not appear fully consistent with those principles. In most cases, the requirements remain highly prescriptive and do not adequately reflect the diversity of obliged entities, particularly Designated Non-Financial Businesses and Professions (DNFBPs). Although the objective of achieving a harmonised framework across all obliged entities is understandable, the current drafting leaves limited scope for requirements to be applied in a genuinely risk-sensitive manner, taking into account different business models, operational structures, and customer scenarios. By way of example, Article 7 adopts a notably prescriptive approach to non-face-to-face verification. Despite the reference to proportionality in Article 1, the provisions governing customer identity verification provide very little flexibility regarding the methods that may be used to satisfy those requirements. In particular, the use of qualitative terms such as “effectively supervised”, without further definition, leaves considerable room for interpretation by obliged entities and competent authorities. While a principles-based approach is desirable in order to preserve flexibility, the absence of clearer guidance may lead to

Name of the respondent	Question	Answer
		divergent applications across Member States and sectors, thereby undermining the objective of harmonisation and increasing compliance uncertainty. A further concern is the repeated use of terms such as “on a risk-sensitive basis”, “where necessary”, and “reasonable measures” without clearly distinguishing between mandatory obligations and those that may be adapted or disapplied depending on risk. This lack of precision risks creating legal uncertainty and inconsistent supervisory and enforcement outcomes across Member States. Greater clarity is needed to differentiate minimum requirements from those that can be calibrated, supported by practical examples illustrating acceptable risk-based applications. We do, of course, recognise the binding nature of the AMLR and appreciate that AMLA’s mandate must remain aligned with it. However, in order to achieve a more appropriate balance between prescriptive requirements and the effective application of the risk-based approach, we would propose, at a minimum, the introduction of a “comply or explain” mechanism. Such an approach would preserve a degree of flexibility for obliged entities while maintaining the integrity of the framework. Although some may view this as creating the possibility for lower standards, this concern could be addressed through the introduction of clear conditions and safeguards governing its use. In our view, this would create a more balanced framework in which obliged entities are expected to comply with the RTS while retaining sufficient flexibility to apply risk-sensitive measures where justified.

Name of the respondent	Question	Answer
		To further address this, we consider that the RTS should also provide further clarification of key qualitative concepts, either through definitions or through non-exhaustive examples illustrating how such terms should be interpreted in practice. At the same time, it would be beneficial to establish clearer baseline expectations, while still allowing obliged entities to adjust their approach based on risk. This would strike a more appropriate balance between flexibility and consistency. We also propose that in order to enable a better application of the risk-based approach within the existing framework, the following sub-paragraph would be included under Article 1 of the draft CDD RTS: “2. Without prejudice to the obligations set out in this Regulation and in Regulation (EU) 2024/1624, obliged entities may, in case of justifiable circumstances, apply alternative measures to those prescribed herein, provided that all of the following conditions are met: a. the deviation is necessary to ensure that the application of a specific requirement does not result in a disproportionate burden relative to the identified money laundering or terrorist financing (ML/TF) risk; b. the money laundering and funding of terrorism risk associated with the customer, transaction or business relationship is demonstrably low or effectively mitigated by other measures;

Name of the respondent	Question	Answer
		c. the alternative measures applied are appropriate, risk-sensitive and achieve an equivalent level of risk mitigation as the standard requirement; d. the rationale behind such deviation is documented appropriately and available to competent authorities upon request.”
Malta Institute of Accountants	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Given the nature of certain DNFBP activities, there are situations in which some of the information envisaged under the draft RTS for the purposes of CDD is not routinely available, and where no alternative solution is currently provided. This is particularly evident in services such as the provision of registered office facilities, where the obliged entity does not have access to, or visibility over, the customer’s transactions and is therefore unable to obtain or verify information relating to the source of funds or to conduct ongoing monitoring. In such cases, the application of standard CDD requirements is not feasible, as the necessary information is simply not accessible to the obliged entity. In the absence of alternative measures, this creates a risk that obliged entities may be deemed non-compliant despite acting within the practical limits of their role. We therefore consider that the RTS should explicitly recognise such situations and allow for alternative approaches or justified limitations where the information is inherently unavailable. Furthermore, in the context of increasingly complex corporate structures, coupled with heightened sanctions and dual-use risks arising from the current

Name of the respondent	Question	Answer
		geopolitical environment, obliged entities are encountering situations in which obtaining all required CDD information is not feasible in practice. These challenges highlight the potential value of establishing a centralised CDD repository at Union level. One such example relates to group structures and related third-party entities: obliged entities are increasingly dealing with corporate customers that form part of extensive multinational group structures, including multiple subsidiaries and downstream affiliated entities across different jurisdictions. Where heightened sanctions exposure, export control considerations or potential dual-use concerns are identified through a risk-based assessment, obliged entities may need to conduct additional identification, verification and screening measures in relation to entities within the wider group structure, even where those entities are not themselves direct customers. In practice, however: those related entities are not parties to the contractual relationship with the obliged entity; the customer may not exercise effective operational control over them beyond ownership links; and the customer may therefore lack both the legal authority and practical ability to compel those entities to provide certified identification or verification documentation. As a consequence, the required CDD information may simply not be obtainable, despite the obliged entity having taken reasonable and proportionate steps. The draft RTS do not sufficiently address how obliged

Name of the respondent	Question	Answer
		entities should manage situations where enhanced due diligence measures are triggered by external risk considerations - such as sanctions or dual-use risks - rather than by any lack of cooperation on the part of the customer itself. At present, the same CDD information is frequently collected, verified, stored and refreshed repeatedly by multiple obliged entities, notwithstanding that those entities may be subject to equivalent AML/CFT obligations and supervision. This duplication is particularly evident in cross-border structures and professional services sectors, including TCSPs, legal practices and tax advisory firms, where reliance on previously verified documentation remains limited. Against this background, we believe that the effectiveness and efficiency of the RTS framework could be improved through consideration of a Centralised or Federated Due Diligence Depositary for standardised CDD information and documentation at Union level. Subject to appropriate governance arrangements, access controls and data protection safeguards, such a mechanism could allow obliged entities to access and rely upon previously verified information while, of course, maintaining full responsibility for their own risk assessments and ongoing monitoring obligations. Such a framework could, for example: reduce duplication in the collection, certification and updating of identity and beneficial ownership documentation; improve consistency and data quality across jurisdictions and obliged entities;

Name of the respondent	Question	Answer
		facilitate supervisory review and ex post verification; and better support the proportionality principle underpinning Regulation (EU) 2024/1624, particularly for non-financial obliged entities and lower-risk situations. Importantly, this proposal should not be interpreted as reducing CDD obligations or transferring responsibility away from obliged entities. Any reliance on a centralised repository should remain optional, risk-based and conditional upon the obliged entity being satisfied that the information is accurate, current and appropriate for the relevant business relationship or transaction. We therefore encourage AMLA to consider whether further guidance or future legislative initiatives could support
Malta Institute of Accountants	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In light of AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624, and taking into account the breadth of products and services provided by obliged entities across both financial and non-financial sectors (including CSPs, trustees, law firms and tax advisers), we consider that the draft RTS would benefit from further calibration to ensure proportionality, clarity and effective application of the risk-based approach. Simplified Due Diligence (Articles 3–5, 22) We recommend the inclusion of additional illustrative scenarios where Simplified Due Diligence (SDD) may be applied on the basis of a documented low-risk assessment. Existing supervisory practice (including national frameworks) already recognises that certain

Name of the respondent	Question	Answer
		customer categories and service models present inherently lower ML/TF risk where appropriate safeguards exist. Explicit recognition within the RTS would strengthen proportionality, reduce uncertainty and promote supervisory convergence. Relevant low-risk examples include: customers subject to AML/CFT supervision, public institutions and bodies, publicly listed companies, regulated investment structures and omnibus arrangements, and lower-risk professional service engagements with transparent EU-connected profiles. Identification Data (Articles 3–5) With regard to Article 3(c), we consider that postal codes should not be mandatory, given their limited AML/CFT value and inconsistent availability on identity documents in some Member States. Regarding Article 4, we submit that additional place-of-birth information should only be collected where contained in the identity document or justified by a specific risk assessment, in line with proportionality, GDPR data minimisation and avoidance of indirect discrimination. Article 5 should better reflect reliance on customer self-declaration of nationality, with verification of one nationality sufficient in most cases. Verification and Non-Face-to-Face Identification (Articles 6–7) Articles 6 and 7 should more clearly reflect that verification obligations are means-based, not

Name of the respondent	Question	Answer
		results-based, and should preserve the flexibility expressly allowed under Article 22 of the AMLR. Over-reliance on eIDAS-compliant electronic means risks undermining proportionality, particularly for smaller obliged entities and in low-risk contexts. Certified documents verified by trusted professionals should remain acceptable alternatives in non-face-to-face situations, subject to appropriate safeguards. Beneficial Ownership and Structure Complexity (Articles 10, 12, 13) Further clarification is required on acceptable documents and certifying professionals (Article 10). Article 12 should avoid equating complexity solely with the number of ownership layers, instead incorporating qualitative criteria (e.g. lack of economic rationale, opacity, high-risk jurisdictions). Article 13 should limit the information required for senior managing officials to what is proportionate, distinguishing their role from that of beneficial owners. Trusts, Foundations and Legal Concepts (Articles 14–15) The draft RTS introduce terminology (e.g. “objects of powers”, “default takers”) that is misaligned with established trust law concepts, risking legal uncertainty and inconsistent application. Greater reliance should be placed on regulated trustee declarations, clearer definitions of “relevant documents”, and a proper distinction between beneficiaries and AMLR “beneficial

Name of the respondent	Question	Answer
		owners". Trustees should be treated as the customer in third-party relationships, while foundations should be treated as customers in their own right. A risk-based approach should apply to licensed corporate trustees. Purpose, Source and Destination of Funds (Article 18) Article 18 should clarify baseline requirements to ensure consistency while allowing flexibility where data points are not relevant. Lists of source-of-funds categories should be explicitly non-exhaustive, and ambiguous wording regarding fund flows and intermediaries should be clarified. A more principles-based formulation would better support meaningful risk assessment. PEPs and Reliance (Article 19) We propose extending existing derogations to cover situations where reliance is placed on another obliged entity under Article 17, avoiding duplicative PEP checks in indirect relationships. Reputational Assessment (Article 25) Article 25(b) appears duplicative of standard CDD measures already required under the AMLR and could be removed for clarity. Recitals and Annex

Name of the respondent	Question	Answer
		Several recitals (notably 13, 14, 15 and 21) would benefit from clarification to avoid ambiguity, align terminology with market practice and ensure consistency with the operative provisions. Finally, we encourage AMLA to consider a dedicated or tailored RTS for non-financial obliged entities, recognising their distinct operational models and constraints, while maintaining harmonised AML/CFT standards across the Union
Malta Institute of Accountants	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Reference is made to Article 3(c). In our view, the inclusion of the postal code should not be mandatory, as the remaining address-related information - such as the building number, apartment number, street name, and city - would already provide sufficient detail regarding the customer's usual place of residence. Although Article 3(c) specifies that this information should be obtained "where available", this wording may give rise to differing interpretations among obliged entities and competent authorities. By way of example, in Malta, postal codes do exist, but they are not consistently reflected on identification documents. As a result, while the information may technically be "available" through external or public sources, it is not, however, necessarily "readily available" or accessible to the obliged entity during the onboarding process.

Name of the respondent	Question	Answer
		Moreover, the additional AML/CFT value derived from collecting the postal code appears limited. Requiring its collection may therefore create unnecessary operational burdens without delivering a corresponding compliance or risk-mitigation benefit. We would therefore suggest the following revised wording: “(c) where available, postal code, street name, post boxes, building number and the apartment number.”
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We consider that the final sentence of Article 4 could be removed. Where the relevant information already appears on an identity document, passport or equivalent document, it is inherently being collected as part of the identification process. Accordingly, imposing a separate obligation to “collect” such information appears unnecessary. In addition, the practical AML/CFT value of obtaining “additional information on the place of birth” appears limited. While such information may occasionally assist in discounting potential screening matches, this is typically achieved through other, more reliable datapoints, such as date of birth, year of birth or nationality. We therefore do not consider the inclusion of additional place-of-birth information to be necessary for standard CDD purposes. There is also a broader concern that the systematic collection and use of place-of-birth data within risk

Name of the respondent	Question	Answer
		assessment processes may give rise to indirect discrimination based on national origin. If country of birth becomes a structural factor within risk models, individuals born outside the EU or in jurisdictions considered “high risk” may automatically receive elevated risk ratings irrespective of their individual circumstances. Such an outcome would be inconsistent with the principle of individualised risk assessment underpinning the AMLR. In most cases, nationality - as already contemplated under Article 5 of the draft RTS - should be sufficient for identifying country-related risk indicators. Furthermore, under the GDPR principle of data minimisation set out in Article 5(1)(c), only personal data that is necessary for the relevant purpose should be processed. We therefore recommend that Article 4 be amended to clarify that country-of-birth information should only be collected where it is contained in the identity document itself or where a specific risk assessment justifies its collection. Proposed wording: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name, where this information is available from the identity document, passport or equivalent provided by the customer. Obliged entities shall not be required to actively seek this information from other sources unless the risk assessment of the individual customer provides specific grounds to do so."

Name of the respondent	Question	Answer
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The wording of Article 5 does not appear to fully align with Recital 3 of the draft CDD RTS. Recital 3 seems to contemplate a framework based on the customer's good-faith self-declaration, whereas Article 5, as currently drafted, could be interpreted as imposing a positive obligation on obliged entities to obtain and verify information relating to all nationalities held by the customer. In practice, however, obliged entities may have limited means to independently verify the existence or completeness of multiple nationalities beyond the information disclosed by the customer. For this reason, we believe the wording of Article 5 should be moderated to better reflect practical realities and the principle of proportionality. In our view, it should be sufficient for obliged entities to request customers, through onboarding documentation or declarations, to disclose their nationalities, while requiring verification of only one nationality through supporting identification documentation. We propose the following wording: "5. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall undertake reasonable measures to obtain information on the all nationalities which the customer holds or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the

Name of the respondent	Question	Answer
		customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted." Article 6(3) Our understanding is that Article 6(3) establishes a "means-based" obligation rather than a "results-based" obligation. Obliged entities should not be expected to conclusively prove the authenticity of documents, particularly in cases involving sophisticated or high-quality forgeries. Instead, the obligation should be limited to demonstrating that reasonable, risk-based measures and appropriate professional scepticism were applied, including where third-party verification solutions are used. We therefore propose the following revised wording: "3. Obliged entities shall take reasonable steps to ensure satisfy themselves that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a), and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with." Article 6(5) Article 6(5) refers to the collection of, inter alia, a certified true copy of an "identity document, passport or equivalent". In our view, this requirement is overly restrictive and does not sufficiently accommodate the application of a risk-based approach. We also consider that Article 22(6)(a) of the AMLR is being interpreted too narrowly in the draft RTS, thereby unnecessarily constraining the effective application of

Name of the respondent	Question	Answer
		proportionality and risk sensitivity. Article 22(6)(a) refers to “the submission of an identity document, passport or equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer.” Importantly, this wording does not require the exclusive use of originals or certified copies. Rather, it allows obliged entities flexibility to determine appropriate verification measures based on the ML/TF risk presented. Restricting identity verification primarily to certified documentary evidence would significantly limit the operation of the risk-based approach and overlook the AMLR’s express recognition that verification may also be carried out through other reliable and independent means. In addition, a proportionate approach should apply to the collection of identification documentation in order to avoid unnecessary cost and administrative burden. Requirements to obtain original or certified documentation should, in our view, be reserved for situations involving heightened risk, inconsistencies, or doubts regarding the customer’s identity. We propose the following wording: “5. For the purpose of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities, shall obtain from that person, or from independent sources the identity document, passport or equivalent., or a certified copy thereof, or act in accordance with In case of customers posing a higher risk of ML/TF obliged

Name of the respondent	Question	Answer
		entities shall apply appropriate mitigation measures, such as, obtaining a certified true copy or those referred under Article 7
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	As a general principle, verification of identity through alternative means in a non-face-to-face context should remain acceptable even where the solutions described in paragraph 1 of Article 7 are not available. Several considerations support this position. 1. Firstly, both the proportionality principle and the risk-based approach must remain central to the application of CDD measures. A prescriptive framework that applies uniformly across all obliged entities, regardless of their size, structure or operational model, risks undermining these principles. 2. Secondly, the requirement that obliged entities - particularly smaller entities or those still relying on manual onboarding processes - may only resort to alternative verification methods “where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided” imposes a significant operational burden. In practice, implementing and evidencing such a condition may require disproportionate resources and system changes, which may not be readily available, particularly for smaller operators. This again appears inconsistent with the proportionality principle and the intended risk-based approach.

Name of the respondent	Question	Answer
		3. Thirdly, the approach set out in Article 7 appears more restrictive than the flexibility afforded under Article 22(6) of the AMLR. That provision allows for two alternative methods of verification: a. the submission of an identity document, passport or equivalent, together with, where relevant, information from reliable and independent sources; or b. the use of electronic identification means meeting specified assurance levels under Regulation (EU) No 910/2014, as well as qualified trust services. Importantly, Article 22(6)(a) does not limit verification to electronic means in non-face-to-face scenarios. Rather, it provides flexibility for obliged entities to choose the most appropriate method depending on the circumstances. The draft RTS, however, appears to place undue emphasis on electronic verification as the primary or preferred solution in non-face-to-face relationships. In our view, additional verification methods should remain available to obliged entities in order to preserve alignment with the AMLR and ensure proper application of proportionality and the risk-based approach. Such methods should include, without limitation, the acceptance of certified copies of documentation provided by trusted professionals, such as lawyers, auditors, accountants and notaries. Appropriate safeguards should of course apply, including the obligation to assess the authenticity of the documents and the authority of the certifying professional. This

Name of the respondent	Question	Answer
		approach is already partially recognised in Article 10(iv) of the draft RTS, and there is no reason why it should not equally apply for the verification of identity of customers. Finally, we note that Article 7(4) has been deleted. It appears that this may have been due to its relevance to legal persons rather than natural persons. However, in our view, the substance of this provision remains important. The acceptance of reproductions of original documents should continue to be a valid verification method. We therefore recommend either its reinsertion or its relocation to a more appropriate section of the RTS. We propose the following wording. “1. To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-face situation, obliged entities shall apply one of the following measures: (a) use electronic identification means that meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels ‘substantial’ or ‘high’, (b) use relevant qualified trust services as set out in that Regulation; (c) obtain certified true copies of identity verification documents; (d) resort to remote solutions which meet the conditions as set out in paragraphs 4 and 5; or (e) apply additional and appropriate measures, on a

Name of the respondent	Question	Answer
		risk-based approach, to mitigate the inherent higher risk that this type of customer relationship may present; or 2. In case where certified true copies of identity verification documents are obtained, the obliged entity shall only accept documentation which satisfy the following criteria: (a) the document has been verified by one of the following professionals: legal professional, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction; (b) the certifier shall include a statement to the effect that the individual certifying has verified the authenticity of the document and that, in the event that the document bears a photograph of the individual, that the photo is a true likeness of the holder of the identity doc
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	With regard to point (iv) of subparagraph (b) of Article 10, further clarification would be welcome regarding the types of documents that may be obtained under this provision. In particular, additional guidance would be useful as to which documents are considered acceptable when sourced “from the legal entity or legal arrangement”, in order to ensure consistent interpretation and application across obliged entities. In addition, the reference to “persons that are authorised for document certification purposes” would benefit from further clarification as to which categories

Name of the respondent	Question	Answer
		of professionals or entities are intended to fall within this definition. Clearer guidance on who is considered appropriately authorised to certify such documents would enhance legal certainty and reduce the risk of divergent supervisory interpretations. We propose the following wording: “(iv) documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by the following professionals: lawyers, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction.”
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	12
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	With regard to the complexity of structures, we consider that the threshold of “three or more layers between the customer and the beneficial owner” is set too low. In practice, this may capture large, fully transparent organisational groups with multiple legitimate holding layers, including ownership and control structures of regulated and licensed entities, which do not inherently present higher ML/FT risk. We therefore suggest that, in addition to revisiting the number of layers, a supplementary qualitative criterion be introduced. This should require obliged entities to assess whether the structure is unusual, unnecessarily convoluted or otherwise excessively complex, thereby allowing for a more meaningful, risk-based assessment of complexity. Restricting oneself solely to number of

Name of the respondent	Question	Answer
		layers does not seem appropriate. With respect to subparagraph (a) of paragraph 1 of Article 12, we do not consider that the mere presence of a legal arrangement or similar structure (such as a foundation) within an ownership chain should automatically indicate increased complexity. By way of example, purpose foundations are commonly and legitimately used in structured finance transactions, including securitisations. Accordingly, subparagraph (a) should be refined to focus on situations where such structures lack a clear commercial or legal rationale within the ownership chain, rather than their mere existence. In addition, the use of foundations should not, in itself, be treated as a risk indicator where they are properly registered and where beneficial ownership information is duly disclosed and verified with competent authorities. It is the absence of transparency, rather than the legal form itself, that creates complexity. The provision should therefore be adjusted to better reflect situations where beneficial ownership information is incomplete, unverified, or not adequately disclosed. As regards subparagraph (b) of paragraph 1 of Article 12, we consider that the mere involvement of entities incorporated outside the EU should not automatically be treated as increasing structural complexity. In a globalised commercial environment, it is entirely common for ownership chains to include non-EU

Name of the respondent	Question	Answer
		entities or legal arrangements. A more appropriate approach would be to focus on higher-risk jurisdictions, such as those identified by the FATF as high-risk or subject to increased monitoring, or those listed by the EU as high-risk third countries for AML/CFT purposes. We would also suggest extending the reference to include legal arrangements, not only legal entities, where these form part of the ownership or control structure. Proposed wording: “1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer’s business there are three five or more layers between the customer and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers and there is no economic, legal or other rationale for the use of such legal arrangement or similar legal entity within the ownership and control structure of the customer and the legal arrangement or similar legal entity has not registered its beneficial owners or senior managing officials (as applicable) with its competent authorities;

Name of the respondent	Question	Answer
		(b) the customer, legal arrangements and legal entities present at any of these layers are registered in jurisdictions outside the EU linked to third countries categorised by the FATF as high risk countries or subject to increased monitoring or otherwise identified on the EU's list of high risk jurisdictions for ML/FT purposes. (c) there are nominee shareholders or nominee directors involved in the structure; (d) the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification. 2. In the case of complex corporate structures as referred to in paragraph 1, obliged entities shall, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an organigram. 3. Obliged entities shall take risk-sensitive measures to satisfy themselves that the information obtained is accurate."
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	13
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 13(a) requires obliged entities to collect the same information for senior managing officials (SMOs) as they would for beneficial owners. The relevant set of information for beneficial owners is set out in Article

Name of the respondent	Question	Answer
		62(1) of the AMLR. However, we do not consider this equivalence to be appropriate, given that SMOs do not present the same risk profile as beneficial owners. In particular, SMOs: (i) do not themselves hold ownership interests in the entity; (ii) nor do they exercise control through ownership or equivalent means. This distinction is also reflected in Recital (125) of the AMLR, which clarifies that, although SMOs are identified in certain circumstances, they are not beneficial owners. Against this background, the full scope of Article 62(1) appears disproportionate when applied to SMOs, as not all of its elements are relevant to their role or associated risk. We therefore recommend that the information to be collected in respect of SMOs be limited to Article 62(1)(a) only, with the remaining subparagraphs (b) to (f) excluded, as they are not applicable to this category of persons. In this regard, we propose the following wording: “In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect the same information as the information they would collect for beneficial owners as set out in Article 62(1)(a). Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence;

Name of the respondent	Question	Answer
		(b) verify the identity of senior managing officials in the same way as they would for beneficial owners.”
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	14
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	While we acknowledge that the draft RTS builds on terminology already used in the AMLR, we have significant concerns that the introduction and reinterpretation of certain concepts may lead to confusion, misapplication and inconsistency across jurisdictions. In particular, redefining terms that already carry well-established meaning in trust law and practice risks undermining legal certainty and the coherent application of the framework. Misalignment with established trust law terminology The Regulation introduces concepts such as “objects of powers” and “default takers” in the context of discretionary trusts. These terms do not align with generally accepted trust law principles in the context in which they are being used, and may therefore create ambiguity rather than clarity. We recognise that RTS provisions cannot amend the AMLR itself; however, interpretative guidance would be essential to avoid divergent application across Member States. In trust law, a clear distinction exists between: • objects of powers, and • discretionary beneficiaries. A trustee exercising a discretion is under a duty to consider its exercise, whereas a trustee holding a power

Name of the respondent	Question	Answer
		may choose whether or not to act. Conflating these concepts creates interpretative uncertainty and risks inconsistent application. It appears that the Regulation intends to refer to discretionary beneficiaries when using the term “objects of powers”, defined as natural or legal persons among whom trustees may select beneficiaries in a discretionary trust. However, this is itself conceptually inaccurate. In a discretionary trust, all members of the class are beneficiaries; the trustee does not “select beneficiaries” but rather exercises discretion in favour of one or more beneficiaries (often to the exclusion of others, who may actually never benefit). This distinction is fundamental in trust law. The introduction of “default takers” is also problematic. In a discretionary trust, beneficiaries do not benefit due to trustee inaction; rather, benefit arises only where a trustee actively exercises discretion. A concept premised on benefit arising from inaction is inconsistent with the fiduciary duties of trustees and risks recommending a breach of trust (which is what could occur if a trustee where to fail to exercise a discretion). On the contrary, in trust law and practice, “default takers” typically refer to ‘fallback’ or ‘default’ beneficiaries under express provisions (e.g. where no other living beneficiaries exist), not discretionary structures. By way of illustration, a trust instrument could contain a clause that in the event that all beneficiaries are no longer living, the trust assets would be held for the benefit of a chosen charity or a distant relative, as a ‘default’ beneficiary.

Name of the respondent	Question	Answer
		This misalignment creates legal uncertainty, increases compliance complexity and may ultimately result in non-application of the provision due to its conceptual inconsistency with trust law. Incorrect use of legal concepts The reference to “power of discretion” conflates distinct legal principles. Powers may or may not be exercised by the trustee, whereas discretion imposes an obligation on the trustee to consider whether and how it should be exercised. The phrase in Article 15(2)(b) referring to “appointed one or more beneficiaries from amongst the objects of power” is therefore incorrect and should be corrected. Furthermore, in trust law, “appointment” is not the correct term to refer to the distribution of a benefit to a beneficiary. The term ‘appointment’ refers to the exercise of a power of appointment over property, not to the designation of beneficiaries themselves. Where individuals are added as beneficiaries (from amongst objects of a power), it is typically via a power of addition. If a class of discretionary beneficiaries already exists, no appointment is necessary - the trustee simply exercises discretion to make a distribution. Ambiguity in drafting Clarification is required as to what constitutes “sufficient information” regarding trustee discretion. Given the confidential nature in trusty law of trustee deliberations (since otherwise it would be impossible for a trustee to administer a trust as the trustee would risk being second guessed constantly), reliance on a trustee declaration confirming the existence and

Name of the respondent	Question	Answer
		exercise (or non-exercise) of discretion should be deemed sufficient, particularly where the trustee is regulated. Similarly, the term “relevant documents” in Article 14(1)(b) is vague and should be replaced with a more precise description of acceptable documentation.
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	14
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Clarification on foundations and legal arrangements While the AMLR refers to foundations under “similar legal entities or arrangements”, it would be preferable to explicitly reference foundations throughout the RTS to avoid uncertainty. Furthermore, the phrase “trusts and similar legal entities or arrangements” is misleading, as it implies that trusts are legal entities (which they clearly are not). A more accurate formulation would be “trusts and similar legal arrangements or legal entities with equivalent functions”. Definition of “customer” – trusts and foundations For third-party obliged entities (e.g. financial institutions, legal or tax advisors) dealing with trusts, the trustee(s) should be treated as the customer(s). Where multiple trustees exist, each should be individually assessed in the customer risk assessment. Where a trustee is a regulated corporate entity, there should be no requirement to identify its shareholders or UBOs, provided it is properly licensed and supervised. The focus should remain on settlors, beneficiaries, and

Name of the respondent	Question	Answer
		protectors. In contrast, for foundations, the foundation itself - not its administrator/s - should be treated as the customer, with its jurisdiction of incorporation treated as its AML/CFT jurisdiction. Risk-based approach for corporate trustees Where a trustee is a licensed or authorised corporate trustee in a reputable jurisdiction, obliged entities should be permitted to apply a risk-based approach when verifying beneficial owners, provided no higher risk indicators exist. In such cases, verification may appropriately be limited to confirming the trustee's licensing status. Beneficial owners vs beneficiaries Trust law establishes a clear distinction between legal ownership (trustees) and beneficial ownership (beneficiaries). However, the AMLR introduces a broader definition of 'beneficial owner', extending beyond beneficiaries to include settlors, trustees, protectors and controllers. Accordingly, 'beneficiaries' in trust law cannot automatically be equated with 'beneficial owners'. The nature of beneficiary interests (fixed, discretionary, contingent) further complicates this analysis, as some beneficiaries may never ultimately benefit. Legal clarity is therefore required to avoid conflation of these distinct concepts, particularly in the context of Article 14. Verification of beneficiaries We also consider that Article 22 of the Regulation,

Name of the respondent	Question	Answer
		which deals with the identification and verification of beneficiaries and the information required to be able to verify the identity of the beneficiary and the time that verification is to happen, requires clarification as to what constitutes “sufficient information” for beneficiary verification. Trustee deliberations are generally confidential and not available for disclosure to beneficiaries for the reasons mentioned above (not least that beneficiaries could second guess every trustee decision thereby rendering trustee administration impossible). A trustee declaration confirming the identity of beneficiaries and/or exercise of discretion should be explicitly recognised as sufficient, particularly where the trustee is regulated. Finally, linking beneficiary verification to a determination of whether beneficiaries qualify as beneficial owners is conceptually problematic and risks incorrect application, given that these terms are not interchangeable in trust law. In Article 14(2) the reference to beneficiaries being previously identified by class or characteristics then becoming ascertainable “and thus beneficial owners” is incorrect because whether a member of a class, or identified by name, every named individual or member of a ‘class of beneficiaries’ is a beneficiary (ie someone who can potentially benefit under a discretionary trust, or someone with a fixed benefit under a fixed interest trust) – he does not become a ‘beneficial owner’ as a result of becoming ascertainable

Name of the respondent	Question	Answer
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	18
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The opening sentence of Article 18 is qualified by the phrase “where necessary”. This appears to reflect the approach set out in Recital 13, which indicates that the information under Article 18 should be collected only where the obliged entity requires further information to satisfy itself as to the purpose and intended nature of the business relationship or occasional transaction. On this basis, it could be interpreted that Article 18 is not intended to apply where the obliged entity already holds sufficient information. However, in the absence of clearly defined minimum standards for assessing the purpose and intended nature of the business relationship - a core AML/CFT concept - there is a risk that obliged entities will apply differing interpretations of the requirement. This may ultimately undermine the objective of harmonisation, leading to divergent practices across the Union. In order to ensure consistency and a level playing field, we therefore consider that the elements set out in Article 18(a)(i) to (iv) should be regarded as baseline requirements, with obliged entities required to obtain at least one of the information sets provided therein in all cases. We also refer in this regard to our comments on Recital 13. Furthermore, we note that the information listed under points (i) to (iv) may not be equally applicable to all categories of obliged entities. We therefore recommend that the opening wording be further qualified to reflect

Name of the respondent	Question	Answer
		that certain datapoints may not be relevant in all cases, depending on the nature of the obliged entity and the services provided. We propose the following wording: “For the purposes of Article 20(1), point (c) and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, as applicable:....” Furthermore, with regard to Article 18(c), the list of “source of funds” categories appears non-exhaustive in nature and captures only a limited range of possible sources. However, by requiring obliged entities to obtain “at least one of the following information”, the drafting may in practice restrict the types of source of funds that can be appropriately identified and recorded. By way of example, activities such as crypto mining would not necessarily fall within any of the categories listed under points (i) to (viii) of subparagraph (c). As a result, legitimate and relevant sources of funds risk being excluded from consideration. We therefore suggest that the list should be expressly framed as non-exhaustive, with the emphasis placed on understanding and evidencing the legitimate origin of funds rather than fitting them into a predefined set of categories. In addition, the reference in the opening sentence to “through which the customers funds were transferred” is unclear. While points (i) to (viii) appear to relate to sources of funds, the inclusion of the phrase “and” suggests that a separate and additional requirement may be intended. It is not evident what is meant by this second limb, nor how it is expected to be applied in practice. Further clarification is therefore needed to

Name of the respondent	Question	Answer
		ensure consistent interpretation and to support the harmonisation objectives pursued by AMLA. With respect to the fourth subparagraph of Article 18, reference is made to the “destination of funds” and to whether the recipient is the intended beneficiary or acting as an intermediary. While this distinction is relevant, the provision does not specify what additional steps are required where the recipient acts as an intermediary. Further guidance would therefore be necessary to ensure that the requirement is operationally effective and consistently applied. In this regard, we propose the following wording: “(iii) whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary, and in the latter case, understanding the identity of the beneficiary thereby ensuring that the obliged entity understands the flow of funds to the beneficiary.” Lastly, with regard to the fourth paragraph of Article 18, several of the datapoints listed under point (e) appear relevant for the purpose of building a comprehensive customer business profile. However, the requirement that obliged entities obtain “at least one” of the listed datapoints may, in practice, unduly limit the depth of analysis undertaken when establishing the customer’s business activity or occupation. We therefore consider that a more principles-based formulation would be preferable, focusing on the objective of adequately understanding the customer’s business activity and risk profile, rather than relying on

Name of the respondent	Question	Answer
		a closed or prescriptive list of datapoints that may not always add meaningful value.
Malta Institute of Accountants	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	19
Malta Institute of Accountants	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 19 requires obliged entities to determine whether, inter alia, persons on whose behalf or for whose benefit a transaction is carried out are politically exposed persons (PEPs), or are family members or close associates of PEPs. The only explicit derogation from this obligation is currently set out in Article 44 of Regulation (EU) 2024/1624. In our view, this exemption should be broadened to also cover situations where an obliged entity is performing due diligence on another obliged entity acting on behalf of an underlying customer who may fall within the definition of a PEP, or be a family member or close associate thereof. In such cases, where the obliged entity is already able to apply the measures under Article 17 in respect of the customer relationship, the imposition of additional, duplicative checks on underlying persons does not appear necessary from a risk-based perspective. Accordingly, we consider that where appropriate reliance can be placed on Article 17 measures, no further PEP-specific checks should be required in respect of underlying customers in an indirect relationship context. We propose the following wording: “(a) With the exception of the situations referred to in Article 44 of Regulation (EU) 2024/1624 and Article 17

Name of the respondent	Question	Answer
		of this Regulation, before the establishment of the business relationship or the carrying out of the occasional transaction, if the customer, the beneficial owner of the customer and, where relevant, the person on whose behalf or for the benefit of whom a transaction or activity is being carried out, is a politically exposed person, a family member, or person known to be a close associate; and...”
Malta Institute of Accountants	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Malta Institute of Accountants	Please specify which recital you refer to, and share your comments below.	(i) Recital 13 Recital 13 states that: “In situations where they need further information in order to be satisfied that they understand the purpose and intended nature of the business relationship or occasional transaction, this Regulation specifies which information obliged entities should obtain before entering into a business relationship or performing an occasional transaction to satisfy their information needs.” The wording of the recital appears to suggest that the information referred to in the RTS is only required where the obliged entity considers additional information necessary in order to understand the purpose and intended nature of the relationship or transaction. This implies that the requirements under Article 18 may not apply in all cases. In our understanding, however, this does not appear to reflect the intended approach. Rather, the information listed under Article 18 would appear to constitute

Name of the respondent	Question	Answer
		standard information to be obtained in all instances, and not only in situations where further clarification is required. If this interpretation is correct, the wording of the recital should be amended to avoid any ambiguity. Alternatively, if the intention is indeed that the information under Article 18 should only be obtained where additional understanding is required, then Article 18 itself should expressly clarify that the obligation applies only in those circumstances. (ii) Recital 14 Recital 14 refers to the concept of a “final investor” in the context of Article 20(1)(h), which requires obliged entities to identify and verify natural persons on whose behalf or for whose benefit a transaction or activity is conducted. Within the funds industry, however, the term “final investor” is not commonly used and may create interpretative uncertainty. We would therefore suggest replacing it with a more appropriate term, such as “underlying investor”. In addition references to “low or standard risk” should instead be replaced with the concept of risk being “not high”. (iii) Recital 15 Recital 15 refers to politically exposed person (PEP) screening measures applicable to customers, beneficial owners and persons on whose behalf or for whose benefit a transaction or activity is conducted. In line with our comments on Recital 14, it would be helpful to clarify that such PEP screening obligations would not

Name of the respondent	Question	Answer
		apply in the circumstances contemplated under Recital 14 where the risk associated with the relationship has been assessed as “not high” and the relevant conditions under Article 17 are satisfied. (iv) Recital 21 Recital 21 refers to an “audit acceptance process”, although it is unclear what is intended by this term in the present context. We would therefore recommend reconsidering or clarifying the wording used. In addition, the reference to “beneficial ownership” in the penultimate sentence of the recital appears incorrect and should instead refer to the “business relationship”.
Malta Institute of Accountants	Do you have any comments on the Annex in the draft RTS?	Yes
Malta Institute of Accountants	Please share your comments below.	Accompanying Documents, page 35 – Policy Issue 1: Applicability and Proportionality to the Financial and Non-Financial Sectors From the perspective of the non-financial sector, we believe that a dedicated RTS specifically tailored to non-financial obliged entities would more appropriately reflect operational realities and support the principle of proportionality, without diminishing the effectiveness of the AML/CFT framework. Although the core CDD obligations established under Regulation (EU) 2024/1624 apply across all sectors, the way in which those obligations are implemented in practice differs considerably. Financial institutions

Name of the respondent	Question	Answer
		generally operate transaction-driven business models supported by sophisticated automated systems and established compliance infrastructures. Non-financial obliged entities - such as TCSPs, legal professionals, tax advisers, accountants, auditors and real estate agents - often operate on an advisory, transactional or project-specific basis, rely more heavily on professional judgement and may have limited visibility over customer transactions or limited influence over third parties connected to the customer relationship. Against this background, a single set of horizontally drafted RTS, even where formally grounded in a risk-based approach, may still create uncertainty in interpretation, disproportionate compliance obligations and inconsistent supervisory expectations for non-financial obliged entities, particularly for smaller firms and sectors newly brought within scope. A standalone RTS for non-financial obliged entities could maintain consistent AML/CFT standards across the Union while allowing obligations to be calibrated in a manner that better reflects the operational realities and limitations of non-financial business models. This would improve legal certainty, enhance proportionality, and reduce the need for extensive interpretative guidance. We therefore encourage AMLA to consider whether a separate regulatory framework for non-financial obliged entities - either through amendments to the current RTS or through a future initiative - would provide a more

Name of the respondent	Question	Answer
		balanced approach between harmonisation and practical proportionality, while preserving a strong and consistent AML/CFT regime across the Union.

MEXEM LTD	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	MEXEM LTD believes the draft RTS should further recognise the lower ML/TF risk associated with non-custodial investment firms that: • provide only reception and transmission of orders; • do not hold client funds or assets; • use regulated custodians and executing brokers; and • accept funding only from verified bank accounts in the client's own name. Accordingly, the RTS could potentially permit: • reduced source-of-funds verification in low-risk cases; • extended KYC review periods for low-risk retail clients; and • simplified ongoing monitoring for clients investing only in regulated financial instruments such as listed equities and ETFs.
MEXEM LTD	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Ministry of Finance of the Czech Republic	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We encourage that obliged entities are required to apply risk-based approaches and ensure that customer due diligence measures are based on risk diversification rather than a unified approach. We believe that risk diversification should go deeper than the identification of risk groups. In our view this is particularly the case for certain types of PEPs where more diversified approach should be applied as not all PEPs are exposed to AML/CFT risks to the same extent and it is not justifiable to require these diversified groups of clients to bear the same information burden and related obligations. In the same vein, we believe that more flexibility should be provided in cases of clients identified as low risk where more diversified approach to CDD should limit the

Name of the respondent	Question	Answer
		information to be obtained from the client and about the client only to the very necessary minimum. We are of the view that the information collected by obliged entities shall be proportionate to the client's risk profile and in all cases limited only to information strictly necessary to address the identified AML/CFT risks. The collection of large amounts of data and supporting information is not only unjustifiable and burdensome for clients and obliged entities but also has significant consequences stemming from the rules governing handling of personal data (e.g. GDPR). For these reasons too, it is necessary to further prioritize risk-based or qualitative approach to obtaining and assessing information for CDD purposes over general obligation to collect volumes of information in respect of large and not sufficiently diversified groups of clients. It is essential to us that the clients of obliged entities are burdened as little as possible by AML/CFT requirements. In our view, obliged entities must not pass their obligations on to clients. We understand that the chosen solution of a single RTS for both the financial and non-financial sectors is, in practice, primarily aimed at the financial sector. Obliged entities in the non-financial sector generally have limited resources, means, and capabilities and will not be able to meet all requirements to the same extent as obliged entities in the financial sector – for example the access to the "reasonable measures" as referred to in

Name of the respondent	Question	Answer
		Article 10, may vary across categories of obliged entities. Respective CDD obligations should better reflect also diversified risks faced by different groups of obliged entities. Nevertheless, it is understood that the broad language of the RTS is intentional and it is intended to ensure sufficient flexibility and to support a risk-based approach, and that targeted sector-specific measures are expected to be adopted for specific categories of obliged entities. Further, we believe that certain provisions of the draft RTS are unclear or potentially misleading and would benefit from redrafting. This is for example the case in respect of "the following information" wording used in Article 16/c, Art. 25 and Art. 28. Another example is drafting of Art. 10/b that in our view should be split into two letters (information from the customer and information from other sources). To sum up our view, the current draft of the RTS requires further technical work and redrafting to better reflect the points made above.
Ministry of Finance of the Czech Republic	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Ministry of Finance of the Czech Republic	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
M-iTrust	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	MiTrust partially agrees that the proposals set out in the draft RTS can be applied across the range of products and services provided by obliged entities. MiTrust fully supports the objectives of the RTS, in particular the strengthening of the reliability of customer identification, the harmonisation of practices across the EU, and the promotion of secure electronic identification methods. These objectives are essential to ensure a consistent and effective AML/CFT framework. However, in their current form, certain provisions of the draft RTS do not provide sufficient flexibility to be applied consistently across all products, services and business models, in particular for obliged entities with hybrid or innovative activities. First, while Article 1 of the RTS refers to proportionality and a risk-based approach, several subsequent provisions set minimum requirements regarding the breadth of information to be collected and potentially verified for all risk levels. This may contradict the risk-based principle and create legal uncertainty, as obliged entities may hesitate to adapt requirements in low-risk situations. Moreover, the AML Regulation itself already establishes the principles of proportionality and the risk-based approach. Restating them in a general manner in the RTS, without clear articulation with the more prescriptive provisions, may lead to divergent interpretations across Member States. Second, the RTS does not sufficiently clarify certain key identification requirements already qualified in

Name of the respondent	Question	Answer
		Regulation (EU) 2024/1624, such as the collection of the national identification number “where applicable” or the tax identification number “if available”. The RTS does not explain how these notions should be interpreted in practice, how consistency across Member States should be ensured, or whether collecting this information on a self-declared basis is sufficient, or whether it must systematically come from a reliable source in accordance with Article 22(6)(a) of Regulation (EU) 2024/1624. This lack of clarity is particularly challenging for cross-border activities. Third, while the RTS defines criteria to assess the reliability of information sources, it remains unclear whether it is intended to remain fully principles-based, allowing obliged entities to assess reliability on a risk-sensitive basis, or whether a more prescriptive supervisory approach is expected. This uncertainty may hinder innovation and the effective use of diverse identification and data sources. To address these issues, MiTrust suggests: (i) clarifying or removing Article 1 to avoid duplication and potential contradictions with the AML Regulation; (ii) providing clarification on the interpretation of “where applicable” and “if available”, including clarification on whether collecting such information on a self-declared basis is sufficient, or whether it must come from reliable and independent sources, in particular in low-risk situations; and (iii) explicitly confirming a principles-based approach to the assessment of reliable and independent sources, possibly supported by non-exhaustive examples rather than prescriptive lists.

Name of the respondent	Question	Answer
		These adjustments would enhance legal certainty, support a genuine risk-based approach and ensure that the RTS can be applied effectively across a wide range of products, services and business models.
M-iTrust	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	MiTrust partially agrees that the proposals set out in the draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements. While the draft RTS explicitly refers to the risk-based approach and proportionality, MiTrust considers that this approach is not always effectively operationalised throughout the text. In practice, certain provisions may limit the ability of obliged entities to adapt customer due diligence measures to the actual level of risk. In particular, Article 1 of the RTS introduces general principles of proportionality and a risk-based approach, but several subsequent provisions establish minimum requirements regarding the information to be collected and verified, seemingly applicable to all customers regardless of their risk profile. This may reduce the practical effect of the risk-based approach, especially in low-risk situations, and create uncertainty as to whether and how obliged entities may deviate from these minimum requirements. In addition, the RTS does not sufficiently clarify how risk considerations should influence the choice of identification data, the level of verification, or the types of sources that may be relied upon. For example, the absence of guidance on whether collecting certain information on a self-declared basis is sufficient, or

Name of the respondent	Question	Answer
		whether it must come from reliable and independent sources, and how this should be applied in a risk-sensitive manner, creates legal uncertainty for obliged entities. To better support an effective risk-based approach, MiTrust suggests the following drafting adjustments: (i) Clarify the relationship between Article 1 and the more prescriptive provisions of the RTS, explicitly confirming that obliged entities may adapt the scope and depth of customer due diligence measures in low-risk situations, in line with Regulation (EU) 2024/1624. (ii) Explicitly recognise that the level of verification and the choice of information sources should be determined on a risk-sensitive basis, allowing for greater flexibility where the risk of money laundering or terrorist financing is demonstrably low. (iii) Maintain a principles-based framework for assessing the reliability and independence of sources, rather than introducing de facto mandatory minimum standards that could undermine proportionality. These adjustments would strengthen the effective application of the risk-based approach, enhance legal certainty for obliged entities, and better align the RTS with both the AML Regulation and the diversity of business models and risk profiles across the EU.
M-iTrust	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	Yes. Considering the nature of MiTrust's business, including its size, risk profile and complexity, there are situations where some of the information to be collected for customer due diligence as proposed in the draft RTS is routinely unavailable, while the RTS does

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	not sufficiently provide for alternative solutions that would offer an equivalent level of assurance. In practice, this situation arises notably in digital and cross-border onboarding scenarios, where customers are unable to provide certain formal identification attributes (such as a national identification number or a tax identification number), or where such attributes exist in theory but are not reliably accessible or verifiable in practice at the time of onboarding. This may be due to differences between national systems, the absence of harmonised identifiers, or limitations in available verification infrastructures. In these situations, the current draft RTS tends to focus primarily on the availability and verification of specific identity attributes or on the use of predefined identification means, without sufficiently recognising alternative combinations of controls that can deliver an equivalent or higher level of assurance. MiTrust considers that an effective and genuinely risk-based AML/CFT framework should explicitly allow for alternative solutions where certain identity attributes are unavailable, provided that appropriate compensating measures are implemented. In particular, a lower level of assurance on the identification method itself may be acceptable where it is combined with: • the collection of up-to-date and authentic data obtained from official or authoritative public sources; • strong guarantees on the integrity of the data collection process, including secure transmission and protection against tampering; • the issuance of a robust proof of the verification

Name of the respondent	Question	Answer
		process, such as a signed and time-stamped attestation, ensuring traceability and verifiability ex post. Such combinations of measures can provide a high level of confidence in the customer's identity and attributes, even where certain formal identifiers are unavailable at onboarding. However, the draft RTS does not explicitly recognise these combinations as valid alternatives, which may lead obliged entities to apply overly restrictive or conservative approaches, even in low-risk situations. MiTrust therefore proposes that the RTS explicitly acknowledge that, in cases where certain identification data is unavailable, obliged entities may rely on alternative combinations of measures that collectively provide an equivalent level of assurance. This should be framed within a principles-based and risk-sensitive approach, allowing obliged entities to demonstrate compliance through evidence, traceability and auditability, rather than through exclusive reliance on specific identification tools or attributes. Such clarification would better reflect the diversity of national systems and business models, support innovation, and ensure that the risk-based approach mandated by Regulation (EU) 2024/1624 is effectively implemented in practice.
M-iTrust	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	Considering AMLA's legal mandate under Article 28(1) of Regulation (EU) 2024/1624, and taking into account the nature of MiTrust's products and services, MiTrust considers that the draft RTS could further support effective simplified due diligence (SDD) by clarifying and expanding the range of measures available in low ML/TF

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	risk situations. First, MiTrust considers that simplified due diligence should not only be understood as a reduction in the amount of information collected, but also as greater clarity on when certain information does not need to be collected or verified. In particular, where the Regulation refers to data such as national identification numbers “where applicable” or tax identification numbers “if available”, the RTS could clarify that, in low-risk situations, the absence of such data should not systematically prevent onboarding, provided the overall customer risk is adequately mitigated. Second, MiTrust believes that the RTS should better reflect a principles based and outcome oriented approach to simplified due diligence. In low-risk contexts, SDD measures could focus on achieving a sufficient level of confidence in the customer’s identity and attributes, rather than on the mandatory use of specific tools or formal assurance labels. This would help avoid overly conservative practices driven by legal uncertainty rather than by actual ML/TF risk. Third, simplified due diligence should explicitly take into account the need to avoid unnecessary or excessive collection of personal data. Where the risk is demonstrably low, SDD measures could include limiting the scope of data collected to what is strictly necessary, in line with data protection principles, while ensuring that appropriate safeguards, traceability and auditability are maintained. Finally, in certain low-risk scenarios, simplified due diligence could allow obliged entities to rely on

Name of the respondent	Question	Answer
		combinations of complementary safeguards. For example, a less stringent identification method could be acceptable where it is accompanied by the collection of authentic and up-to-date data from authoritative sources, and by robust evidence of the verification process, such as a signed and time-stamped attestation. Such measures support transparency and enable effective ex post supervisory review. By clarifying and expanding simplified due diligence measures along these lines, the RTS would better accommodate the diversity of national systems and business models, enhance legal certainty for obliged entities, and ensure that simplified due diligence remains fully consistent with a genuine risk-based approach.
M-iTrust	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Mitrust would like to add the following comments on specific provisions of the draft RTS. - Article 1 – Proportionality and risk-based approach Article 1 appears to restate general principles already set out in Regulation (EU) 2024/1624, while other parts of the RTS set minimum information collection/verification expectations. This can create uncertainty as to how Article 1 should be operationally applied vis-à-vis more prescriptive provisions. Mitrust therefore suggests clarifying the role/normative value of Article 1, or considering its suppression to avoid contradictory interpretations. - Articles 3 and 5 – Place of residence, TIN, nationality and NIN

Name of the respondent	Question	Answer
		The RTS would benefit from clarification on the meaning of “tax identification number, if available” and “national identification number, where applicable”, notably regarding consistent application across Member States in the absence of harmonised identifiers. In particular, the RTS should clarify whether collecting such information on a self-declared basis is sufficient, or whether it must systematically come from a reliable source in accordance with Article 22(6)(a) of Regulation (EU) 2024/1624, and to what extent self-declared information may or may not be considered sufficient in low-risk situations, subject to appropriate safeguards and a risk-based assessment. - Article 22(6)(a) AMLR / RTS provisions on “reliable and independent sources” (incl. Article 6) The draft RTS sets criteria to assess reliability but does not specify whether the intent is to remain principles-based (with obliged entities assessing reliability on a risk-sensitive basis) or to converge towards a more standardised set of “accepted sources”. Mitrust considers that an exhaustive list would not be realistic or future-proof; clarification would be useful on the expected level of flexibility, and on whether supervisory convergence should rely on non-exhaustive examples/guidance rather than prescriptive lists. In this context, additional clarification would also be useful regarding the extent to which obliged entities may rely, in a risk-sensitive manner, on different types of sources and controls in combination. In particular, the RTS could clarify how solutions combining (i) an

		identity verification method with a lower intrinsic assurance level, (ii) the collection of up-to-date data from official/authoritative public sources (including via regulated data intermediaries), and (iii) robust evidence of the data collection process (e.g., signed and time-stamped attestations ensuring integrity and traceability), should be assessed under Article 22(6)(a) AMLR. - Article 7 – Electronic identification means and qualified trust services Further clarification would be helpful on several points: (i) the scope of “relevant qualified trust services” and the expected level of assurance (e.g., which trust services are in scope and how they relate to prior identity verification); (ii) whether the use of eIDAS-notified eID means (substantial/high) is intended to create a presumption of compliance; (iii) the interpretation of “not available” / “cannot reasonably be expected to be provided” (availability from the obliged entity’s perspective, the customer’s, or market availability); and (iv) how Articles 7.3/7.4 should be applied in practice where obliged entities justify alternative solutions. Clarifying these points would support consistent application across Member States. Overall, Mitrust believes these clarifications would enhance legal certainty, avoid excessive collection of personal data, and support consistent implementation

Name of the respondent	Question	Answer
		of a genuinely risk-based approach across diverse business models
M-iTrust	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
M-iTrust	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6
M-iTrust	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Yes. Mitrust would like to comment on Article 6 of the draft RTS (reliable and independent sources), which has not been fully addressed above. Article 6 – Reliable and independent sources (Article 22(6)(a) AMLR) Issue identified: legal certainty and technical implementation. Article 6 sets out criteria to assess the reliability and independence of sources used for the verification of customer identification data. However, the RTS does not clearly indicate whether the intended approach is to remain strictly principles-based, or whether supervisory convergence is expected to result in de facto standardisation of acceptable sources. In practice, obliged entities may rely on a wide variety of sources and technical arrangements, depending on national infrastructures, availability of public registers, and the nature of their services. An exhaustive or quasi-exhaustive list of acceptable sources would therefore not be realistic nor future-proof.

Name of the respondent	Question	Answer
		Proposed clarification: Mitrust suggests clarifying that Article 6 is intended to remain principles-based, allowing obliged entities to assess the reliability and independence of sources on a risk-sensitive basis, without implying a closed set of acceptable sources. In this context, additional clarification would be useful regarding how combinations of sources and controls should be assessed under Article 22(6)(a) of Regulation (EU) 2024/1624. As a particular example, the RTS could clarify to what extent and under which conditions solutions combining: (i) an identity verification method with a lower intrinsic assurance level, when compared to electronic identification means meeting the 'substantial' or 'high' assurance levels referred to in Regulation (EU) No 910/2014, or to other methods commonly regarded as providing a high level of assurance ; (ii) the collection of up-to-date data from official or authoritative public sources ; (iii) robust evidence of the data collection process, such as signed and time-stamped attestations ensuring integrity and traceability ; may be taken into account within a risk-based assessment of the reliability of the overall identification process. Clarifying this point would support consistent implementation across Member States, provide greater legal certainty for obliged entities, and allow Article 6 to

Name of the respondent	Question	Answer
		accommodate diverse technical solutions while remaining aligned with the risk-based approach set out in Regulation (EU) 2024/1624.
M-iTrust	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
M-iTrust	Do you have any comments on the Annex in the draft RTS?	No
M-iTrust	How would you rate the proposals set out in the draft RTS overall?	Good
M-iTrust	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software	Manageable impact

Name of the respondent	Question	Answer
	subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
M-iTrust	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	No significant additional costs

Name of the respondent	Question	Answer
M-iTrust	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS is expected to generate manageable one off implementation costs, mainly related to the review and adjustment of internal policies and procedures, updates to customer due diligence documentation, and alignment of internal guidance with the clarified RTS requirements. These costs are largely linked to legal analysis, internal governance processes, and limited system or process adaptations, rather than to structural changes. For MiTrust, these one off efforts are incremental when compared to the broader adjustments already required under Chapter III of Regulation (EU) 2024/1624. The draft RTS primarily aim at specifying and operationalising existing obligations, rather than introducing fundamentally new requirements. No significant additional recurrent costs are expected as a direct result of the draft RTS. Ongoing compliance activities, including monitoring, controls and reporting, are already embedded in MiTrust's existing AML/CFT framework. The RTS do not appear to require additional recurring resources beyond those necessary to comply with the Regulation itself. Clarifications introduced by the RTS, in particular regarding the application of the risk based approach and the assessment of reliable and independent sources, are expected to support more consistent implementation over time and may reduce uncertainty driven inefficiencies, rather than generate additional recurring operational costs.
Morgan Stanley	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and	No response

Name of the respondent	Question	Answer
	services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Morgan Stanley	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	1. Article 13: Senior Managing Officials Observation : Potentially ambiguous approach to SMO resulting in disproportionate verification measures. In its current form, there is a risk that the AMLR text be interpreted in such a way as to materially change the obligations with respect to SMOs, specifically requiring the identity verification for all persons holding the position of senior managing official, as indicated in AMLR Article 22(2). A strict interpretation of the definition would create a significant burden on obliged entities and customers, disproportionate to the risks associated with our business. In our view, this would achieve little in mitigating true financial crime risk and is not consistent with the outcomes-based objective of the AMLR. A risk-based approach to the definition of SMOs is paramount to the broader objectives of the AMLR. As such, we firmly believe that there is an opportunity for AMLA to enable obliged entities to apply a risk-based

Name of the respondent	Question	Answer
		approach to the definition of SMO for the purposes of AMLA Article 22(2), which would be a proportionate outcome and allow for the effective implementation of the AMLA requirements. We encourage AMLA to expand the proportionality achieved in RTS Article 13 (registered address instead of residential address) by allowing firms to take a risk- based approach when determining the identity of SMOs. Suggested Approach Obliged entities should apply a risk-based approach to determining who the SMO is/are of a customer, and reasonable steps to identify and verify the identity of such person(s). 2. Article 16 and Recital 12: Persons Purporting to Act Observation : Clarification needed as to a risk-proportionate definition of Person Purporting to Act (“PPTA”). We appreciate the inclusion of new text in Recital 12 providing examples of acceptable documentation to verify the existence and scope of any power of representation of a Person Purporting to Act (“PPTA”). We understand from RTS Recital 12 that the intention is for obliged entities to identify and verify both the identity and authority of any person “external” to the customer with authority to act on their behalf as the

Name of the respondent	Question	Answer
		PPTA. By extension, persons “internal” to the customer acting in their capacity as an employee should not be subject to the same standards. We strongly believe this would be the proportionate approach, commensurate with the risks presented by interacting with a person who is not an employee or internal representative of a company. This distinction is fundamental in the application of the PPTA concept to non-retail sectors such as wholesale markets and investment management, where broader interpretations of PPTAs could impose a counterproductive operational burden on obliged entities for limited risk-mitigation. Experience has shown that this is a significant pain-point in the customer onboarding lifecycle that does not further the objective of mitigating financial crime risk. Drafting proposal “In cases where the customer is not a natural person, “persons purporting to act” should be understood to capture natural persons external to the customer acting under a power of representation, not internal employees executing their employment duties.”
Morgan Stanley	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Agree they are available

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	
Morgan Stanley	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No response
Morgan Stanley	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Article 12: Complex Corporate Structures Observation : Geographical and transparency criteria are overly broad. We are concerned that the current definition of complex corporate structures will result in a disproportionately high percentage of our customer base being considered 'complex' and thus impacted by these measures. Multi-layered structures spanning multiple jurisdictions is not, in and of itself, indicative of obscuration and is in fact extremely commonplace in the wholesale markets. We are concerned that the definition in its current form will fail to isolate corporate structures that are truly complex and will result in sweeping measures applied to customers that present no true financial crime risk. Of note, the criteria of the "jurisdictions outside the EU" in Article 12 1 (b) does not, in our view, adequately take

Name of the respondent	Question	Answer
		into account the risk of the jurisdiction. We believe it would be more consistent with the spirit of AMLR to reference the third countries as envisaged in Chapter III, Section 2 AMLR. To achieve a harmonised approach to complex corporate structures across the regulated sector, the definition should be grounded in objective criteria. Point (d) introduces an inherent degree of subjectivity, making it difficult to operationalise as a consistent and queryable data point across the industry. We therefore suggest removing this criteria. To further support simplification and harmonisation efforts we suggest that central beneficial ownership registries should capture whether an ownership structure is deemed complex. Noting that Annex III of the AMLR already identifies structures that are unusual or excessively complex given the nature of the company's business as a higher risk factor, it would be helpful for AMLA to clarify that the mere presence of a complex corporate structure should not, in itself, be treated as an indicator of higher risk. Drafting proposal: "(a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers; (b) the customer and any legal entities present at any of these layers are registered in third countries as envisaged in Chapter III, Section 2 AMLR.

Name of the respondent	Question	Answer
		(c) there are nominee shareholders or nominee directors involved in the structure 2. Article 6(5) and Recital 5: Certification of documentation Observation: Approach to certification lacks proportionality. Article 6(5) and recital 5 of the RTS refers to certified copies as an acceptable means of identity verification. Where a customer relationship is assessed to not be high risk, we believe certification of documents by appropriately independent and reliable persons internal to the customer, for example heads of the Legal, Compliance or Human Resources departments, would be consistent with a risk based approach and proportionate to the risks attenuated to the relationship. Requiring externally certified copies of identification documents in all cases, irrespective of risk, would, in our view, go beyond what is necessary for an effective customer due diligence programme. In addition, we are concerned that such a rigid approach to identity verification could place the European market at a competitive disadvantage, noting other jurisdictions adopt a more risk-based approach in this respect.

Name of the respondent	Question	Answer
		Drafting proposal: “Where certified copies are relied upon, and in particular in customer relationships assessed as presenting a low or standard level of risk, the certification may be performed by appropriately independent and reliable internal functions of the customer, such as the Legal, Compliance or Human Resources departments, provided that such functions are acting in the course of their professional duties.” 3. Legal Representatives Observation : Lack of definition Annex I b(iii) reference to the legal representatives of the legal entity. There is no definition in AMLR nor CDD RTS of what this is intended to capture. Suggest including more detail/definition that encompasses entity types outside of the EU e.g. Board of Directors or equivalent.
Morgan Stanley	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Morgan Stanley	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	21
Morgan Stanley	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 21 With respect to Article 21, we recognise and support

Name of the respondent	Question	Answer
		the approach for the use of central registers as a source for identifying beneficial owners or senior managing officials in situations assessed as low risk. We also acknowledge the policy intent underpinning the current, more limited permissibility of central registers within the AMLR framework, and the importance of ensuring that customer due diligence remains risk based and supported by reliable and accurate information sources. At the same time, we note that AMLD6 empowers central registers to validate, corroborate and challenge the beneficial ownership information submitted by companies operating within the EU. As these verification capabilities continue to mature, we strongly believe that a greater degree of reliance on central registers should sit at the heart of the future CDD framework, with the end state being increased usability of register data by obliged entities beyond narrowly defined low risk scenarios. From a practical perspective, obliged entities frequently receive the same beneficial ownership documentation and underlying evidence from customers that is already submitted to the central register, often resulting in duplication of effort without necessarily improving the quality or accuracy of outcomes. Allowing a measured expansion of permissible reliance on central registers using appropriate safeguards would enhance efficiency, reduce unnecessary repetition for customers, and promote a more proportionate approach to beneficial ownership identification across the Union.

Name of the respondent	Question	Answer
		We, of course, recognise that obliged entities remain responsible for ensuring that beneficial ownership information is accurate, sufficient and kept up to date. However, clearer pathways for reliance on a strengthened and supervisory backed register would support a more effective allocation of resources toward higher risk relationships and ultimately contribute to better AML/CFT outcomes. We therefore encourage AMLA to consider, either within the final RTS or through future review, how increased and proportionate reliance on central registers might be enabled as their data quality, governance and verification standards continue to evolve.
Morgan Stanley	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	2
Morgan Stanley	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Articles 2,3,4 and 5 Identification of Natural Persons Observation: Inconsistent application of a risk-based approach for natural persons across role type. We support AMLA's objective of a risk-based approach. While we consider the draft RTS largely accommodates such an approach, we nevertheless wish to outline areas where additional clarification would be helpful to ensure its effective application. The specification given in Articles 2, 3, 4 and 5 applies only to AMLR Article 22(1), which references the "customer, PPTA and natural persons on whose behalf".

Name of the respondent	Question	Answer
		The requirements for beneficial owners/SMOs are contained in AMLR Article 22(2). If the absence of a reference to AMLR Article 22(2) was deliberate, we would seek to better understand the intent behind the omission. Moreover, we believe a harmonised approach to data collection for all natural persons would be more appropriate. Drafting proposals Article 2: “In relation to the names and surnames of a natural person as referred to in Article 22 of Regulation (EU) 2024/1624” Article 3: In addition to the aforementioned removal of subsection (1), we believe that the reference to “city or its nearest alternative” in RTS Article 3 should be obtained only “where available”, as is currently the case for postal codes etc. The prevailing financial crime-related risk of a natural person’s residence is the country, rather than city, and we are of the view that city should not be a mandatory datapoint for collection. Furthermore, we advocate for a change to the Level 1 text to change the residential address data point for beneficial owners to country of domicile only. “The information on the address as referred to in provisions of Article 22 of Regulation (EU) 2024/1624 shall consist of the following information: (a) the full country name or the abbreviation in

Name of the respondent	Question	Answer
		accordance with the International Standard for country codes (ISO 3166) b) where available, the city, or its nearest alternative, postal code, street name, post boxes, building number and the apartment number." Article 4: "The information on place of birth as referred to in Article 22 of Regulation (EU) 2024/1624" Article 5: "For the purposes of Article 22 of Regulation (EU) 2024/1624"
Morgan Stanley	How would you rate the proposals set out in the draft RTS overall?	Neutral
Morgan Stanley	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup	Disruptive impact

Name of the respondent	Question	Answer
	equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Morgan Stanley	Please justify your answer to the previous question and provide evidence where possible.	Significant architectural uplifts will be required to meet certain requirements in the RTS such as the identification and ongoing reporting obligation for complex ownership structures. Additional components of the RTS may bring ongoing costs although final impact will be determined by interpretation in the final version of the RTS (e.g. significant ongoing data provision and verification such as SMO/PPTA).
Namirial	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Namirial, as one of the largest Qualified Trust Service Providers (QTSPs) in Europe and a provider of remote identification and digital onboarding solutions to numerous European banks and financial institutions, broadly agrees that the proposals set out in the draft RTS can be applied across a wide range of products and services. The outcome-based and functionally neutral approach adopted in most provisions is appropriate and allows obliged entities operating across different sectors to calibrate compliance measures accordingly. However, Namirial wishes to draw attention to specific limitations in the current drafting of Article 7, governing verification measures conducted on a non-face-to-face basis. As an operator whose solutions are deployed at scale by obliged entities — including credit institutions, payment service providers, and insurance undertakings across multiple Member States — Namirial has direct operational experience of the challenges that arise when translating the requirements of Article 7 into

Name of the respondent	Question	Answer
		auditable, cross-border compliant workflows. With specific reference to Article 7(4), and taking into account the detailed safeguards listed in Article 7(3), particularly in light of the continuously evolving technological landscape and the increasing sophistication of digital fraud techniques, we consider that further clarity could be beneficial regarding how obliged entities may demonstrate compliance with the prescribed requirements to their competent authorities. Ensuring robust, resilient and auditable identification mechanisms is essential to effectively mitigate emerging fraud risks with possible systemic risks while maintaining trust in non-face-to-face onboarding processes. In particular, while the draft RTS appropriately sets functional and outcome-based requirements (e.g., integrity and confidentiality of communication, biometric consistency checks, quality of captured data, secure storage and time-stamping), obliged entities would benefit from wording that explicitly acknowledges the possibility of relying on recognised technical standards to evidence compliance. In continuity with the EBA Guidelines on the use of Remote Customer Onboarding Solutions (EBA/GL/2022/15), which already provide an important supervisory benchmark in this area, ETSI TS 119 461 represents the most up-to-date European technical standard specifically addressing remote identity proofing and remote identification methods, and therefore constitutes an appropriate, technically robust

Name of the respondent	Question	Answer
		and state-of-the-art reference framework and is already referenced in other European regulatory acts, while fully preserving the principle of technological neutrality. In particular, ETSI TS 119 461: Provides auditable requirements for remote identity proofing; Aligns with eIDAS assurance principles; Supports both a Baseline Level of Identity Proofing (LoIP) and an Extended LoIP, allowing obliged entities to calibrate controls in line with their risk assessment and risk appetite. Recognising ETSI TS 119 461 (either at Baseline or Extended LoIP, depending on the risk analysis performed by the obliged entity) as an acceptable reference standard would ensure consistency with the 2022 EBA Guidelines and provide competent authorities with a clear and objective benchmark for ex-post supervisory assessment. Such clarification would not limit technological neutrality, as the RTS would remain outcome-based, but would provide a structured and harmonised pathway for demonstrating compliance.
Namirial	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Namirial largely agrees that the draft RTS provides a framework consistent with a risk-based approach. The layered structure of due diligence requirements and the outcome-based formulation of verification obligations reflect sound regulatory design. However, a significant operational gap in Article 7(4) undermines effective implementation of the risk-based approach in non-face-to-face settings. As the provider of remote identity proofing infrastructure to many European banks and financial

Name of the respondent	Question	Answer
		institutions, Namirial observes that a genuine risk-based approach requires not only that obliged entities assess the level of risk associated with a customer relationship, but also that they can calibrate the technical measures deployed accordingly and demonstrate the adequacy of those measures to competent authorities in a structured, transparent, and reproducible manner. The current draft does not provide such a structured reference framework. Without an explicit acknowledgment of standardised identity proofing frameworks, obliged entities relying on Namirial's solutions — and Namirial itself when acting as a delegated verification service — face uncertainty regarding how to evidence compliance in a risk-proportionate way across different national supervisory environments. In this context, ETSI TS 119 461 — the most up-to-date European technical standard for remote identity proofing, to which Namirial's solutions conform — directly enables calibration of technical controls through its two-tiered structure: Baseline Level of Identity Proofing (LoIP) for lower-risk contexts, and Extended LoIP for higher-risk scenarios. This structure operationalises the risk-based approach in a concrete, auditable, and harmonised manner. Namirial respectfully proposes that Article 7(4) be amended to recognise ETSI TS 119 461 — at Baseline or Extended LoIP depending on the obliged entity's risk analysis — as an acceptable reference standard for demonstrating compliance, ensuring consistency with EBA Guidelines EBA/GL/2022/15, which already

Name of the respondent	Question	Answer
		acknowledge structured frameworks for remote identity proofing.
Namirial	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Namirial acknowledges that the progressive rollout of European Digital Identity Wallets (EUDIW) under Regulation (EU) 2024/1183 will, in the coming years, significantly simplify the collection and verification of identity information in non-face-to-face contexts. However, during the transitional period preceding widespread wallet adoption, obliged entities will continue to operate across a heterogeneous landscape of remote verification methods and identity schemes, in which situations may arise where specific CDD information is technically difficult to obtain or verify in a fully automated manner. Rather than proposing new or alternative identification methods, Namirial's position is straightforward: there is no need to reinvent the wheel. The existing EU regulatory framework already defines a mature, harmonised, and legally recognised set of identification modalities and assurance levels. In particular, Regulation (EU) 2024/1183 establishes the assurance levels and requirements applicable to trust services — including qualified trust services for remote identity proofing — providing a robust and supervisory-backed reference architecture that is directly relevant to the non-face-to-face verification requirements of Article 7. The issue is not the absence of suitable solutions, but the absence of an explicit reference to these existing frameworks in the draft RTS. This is precisely why Namirial advocates for a more precise formulation of Article 7(4) that expressly recognises adherence to

Name of the respondent	Question	Answer
		recognised European technical standards ensuring equivalent safeguards and assurance levels — including, where applicable, the levels defined in Regulation (EU) 2024/1183 for trust services or eventually directly the ETSI TS 119 461— as an acceptable means of demonstrating compliance. This would provide obliged entities with a clear, technology-neutral compliance pathway grounded in existing EU instruments, applicable across the full range of scenarios encountered today and fully compatible with the transition toward wallet-based verification.
Namirial	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Pursuant to Article 28(1) of Regulation (EU) 2024/1624, Namirial proposes that the RTS introduce an explicit simplified due diligence measure recognising the use of eIDAS-recognised electronic identification means at "substantial" assurance level as a sufficient verification basis in defined lower-risk scenarios, without requiring the additional layered verification steps currently set out in Article 7(3). Rationale: Namirial, as both a QTSP operating under the eIDAS framework and a provider of identification services to European banks, is uniquely positioned to observe the regulatory asymmetry between the eIDAS and AML/CFT frameworks. Customers verified through eIDAS "substantial"-level identification schemes — which include mandatory conformity assessment, supervisory oversight, and cross-border recognition — present an inherently lower ML/TF risk profile than customers verified through non-certified methods. The draft RTS does not adequately reflect this distinction. Moreover, European Digital Identity Wallets (EUDIW),

Name of the respondent	Question	Answer
		introduced by Regulation (EU) 2024/1183, will progressively become the primary digital identification instrument for EU citizens. Namirial, as an active participant in the EUDIW ecosystem, considers it essential that the RTS establish clear provisions for wallet-based customer verification — including appropriate simplified due diligence treatment where the wallet operates at "high" assurance level. Concrete drafting proposal: "Where a customer relationship presents a lower risk profile in accordance with the applicable provisions of Regulation (EU) 2024/1624, obliged entities may, when verifying customer identity on a non-face-to-face basis, rely on electronic identification means notified under Regulation (EU) No 910/2014 at 'substantial' assurance level, or on European Digital Identity Wallets as defined under Regulation (EU) 2024/1183, as the sole verification measure, without application of the additional requirements of Article 7(3), provided that the risk assessment supporting this determination is documented and retained."
Namirial	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	On Article 7(4) — Proposed amendment Namirial respectfully proposes the following revised text for Article 7(4), reflecting its operational experience as a large-scale provider of compliant remote identification infrastructure to European banks and financial institutions : "Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article. Such compliance may be

Name of the respondent	Question	Answer
		demonstrated, inter alia, through adherence to recognised European technical standards that ensure equivalent safeguards and assurance levels, including where applicable the levels defined in Regulation (EU) 2024/1183 for trust services. They shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624." On ETSI TS 119 461 Namirial's remote identity proofing solutions conform to ETSI TS 119 461, the European technical standard specifically designed for remote identity proofing, which is already referenced in other EU regulatory acts and aligns fully with eIDAS assurance principles. Namirial strongly advocates for its explicit — though non-mandatory — recognition in the RTS as an acceptable compliance reference, providing competent authorities with a clear and objective supervisory benchmark and reducing the risk of divergent national interpretations. On continuity with EBA Guidelines EBA/GL/2022/15 The proposed amendment ensures consistency with EBA Guidelines on the use of Remote Customer Onboarding Solutions (EBA/GL/2022/15), which have already established important supervisory benchmarks in this area. Namirial, whose solutions are assessed and deployed in line with these Guidelines, considers it essential that the AML RTS build upon — rather than deviate from — this existing supervisory architecture. Namirial remains available to AMLA for any further technical discussion and welcomes the opportunity to

	include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Namirial	Please justify your answer to the previous question and provide evidence where possible.	Namirial considers that the amendment proposed to Article 7(4) — explicitly recognising adherence to recognised European technical standards, including where applicable the assurance levels defined in Regulation (EU) 2024/1183, as an acceptable means of demonstrating compliance — would substantially reduce these additional costs. By providing a clear, technology-neutral, and harmonised compliance pathway, the amended provision would eliminate the need for duplicative jurisdiction-specific analyses, reduce supervisory uncertainty, and allow obliged entities to leverage existing certified solutions without incurring redundant expenditure.
Nasdaq CSD SE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	CSDs occupy a unique position in the financial system as regulated market infrastructures. CSDs operational model, risk profile, and regulatory framework under CSDR differ fundamentally from credit institutions and other traditional obliged entities. The proposals set out in the draft RTS are not CSD-specific and cannot be applied across the range of products and services provided by a CSD. CSDs provide core services (settlement, notary, central maintenance) and ancillary services (corporate actions, registry maintenance, collateral management, securities lending, etc.) under CSDR. Insufficient flexibility arises from the fact that a

Name of the respondent	Question	Answer
		single contractual CSD business relationship may cover multiple services (for example, settlement, notary, corporate action services) which can be retrieved through different operational channels (directly or indirectly) or multiple relationships may exist with one counterparty for different service categories. The RTS proposed criteria do not distinguish between different services provided within the same relationship or provide guidance on identifying the customer subject to CDD. Proposed measures: - Clarification of CDD expectations and appropriate measures towards different CSD service categories and customer groups – the CDD should be assessed by the type of service provided and the role of obliged entity, for example, securities accounts opened by participant/issuer agent for underlying clients that are not considered as customers of the CSD for AMLR purposes; - As CSDs receive data processing requests, updates through participant notifications and corporate actions processing rather than direct customer contact in the duration of service provision, RTS should recognize that the participant/issuer agent-intermediated service provision is valid for maintaining the business relationship.
Nasdaq CSD SE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based	The draft RTS clearly articulates a risk-based framework in principle but does not enable consistent and effective

Name of the respondent	Question	Answer
	approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	application for CSDs in practice. CSDs face challenges applying the new CDD requirements considering the thousands of existing relationships established before AMLR designation. The AML/CFT controls are transparent at the level of direct counterparty (participant or issuer where directly serviced), thus risk-based monitoring requirements, consistent with proportionality principles, should be aligned with what the CSD can objectively observe. The following CSD-specific criteria should be considered: - CSDR-Mandated Verification: CSDs already perform participant verification under CSDR Article 33 requirements. These existing verification obligations should be recognized as satisfying AMLR accuracy requirements to avoid regulatory duplication. - Regulated Counterparty Status: Where CSD counterparties are themselves regulated entities subject to AML supervision, accuracy assessment should account for their supervised status and existing compliance obligations. - Participant-Certified Information: CSDs should be permitted to accept participant and issuer agent certifications regarding accuracy of information provided, with appropriate record-keeping of such certifications. - Tiered Account Structures: For beneficial owner accounts opened via participants, all responsibility should remain with the participant who maintains the direct client relationship – CSDs have no interaction with these underlying account holders.

Name of the respondent	Question	Answer
Nasdaq CSD SE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, for CSDs there are a few categories of information to be collected for the purposes of customer due diligence as proposed in the draft RTS that are routinely unavailable by design and operational model of a CSD. As highlighted previously, CSDs have no direct relationship or interaction with the clients of its participants for whom omnibus or beneficial owner accounts have been opened at the CSD. Similarly, the transaction purpose, source and destination of funds cannot be collected as settlement instructions are submitted in the CSD system by participants and no additional visibility into the economic rational or client-level context is available from the data received. Settlement instruction related messaging follows standardized schemas, for example, ISO 20022 standard. Amending the established protocols to ensure retrieval of information from other already obliged entities under the AMLR increases complexity, workload and requires infrastructure adaptations for the stakeholders.
Nasdaq CSD SE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	CSDs' institutional-only client base and regulated participant as an issuer agent intermediation create an inherently lower ML/TF risk profile than retail-facing institutions. Such credit institutions and investment firms already subject to comprehensive AML obligations. Requiring CSDs to perform full independent CDD on entities already supervised for AML compliance is disproportionate and duplicative. Moreover, CSDs already operate under robust CSDR requirements including participant due diligence, record-keeping, and even ongoing monitoring. The AMLR requirements

Name of the respondent	Question	Answer
		should not be applied to such type of relationships, or they should build upon, not duplicate this existing framework. Similarly, requirements designed for bank-customer relationships are disproportionate when applied to CSD-participant or CSD-issuer agent relationships. The following proposals address the additional simplified due diligence measures for CSDs considering the associated lower ML/TF risks of its products and services: - Recognize CSDR compliance as satisfactory within the meaning of AML Regulation or mandate only simplified CDD under AML Regulation core CDD requirements. - Permit reliance on participant or issuer agent performed CDD for underlying customers. - Develop CSD-specific guidance acknowledging unique risk profile.
Nasdaq CSD SE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The observations and recommendations provided in this response reflect the perspective of Nasdaq CSD SE as a Central Securities Depository operating under CSDR. We believe that the effective implementation of AML requirements for CSDs requires recognition of the fundamental differences between market infrastructures and traditional financial institutions. We encourage AMLA to engage with CSDs and other financial market infrastructures in developing sector-specific guidance that ensures proportionate, effective, and operationally feasible AML compliance.
Nasdaq CSD SE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Nasdaq CSD SE	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	33
Nasdaq CSD SE	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	AMLA indicated during the public hearing on 24 March 2026 that there is no expectation that all existing customers must be fully updated by July 2027, and that Article 26 AMLR establishes that updates to existing customer files should follow a risk-based approach, with institutions prioritizing high-risk customers first and updating all others within the applicable timeframe. While this clarification is welcome, it implicitly assumes that entities already have a risk framework in place and merely need to update customer files to the new standard. For a CSD that is effectively building its CDD/AML framework from the ground up under the AMLR, the situation is fundamentally different. Article 33 should acknowledge this distinction and provide extended transitional relief for newly obliged entities or entities that, while technically within scope under prior legislation, did not previously operate a full CDD program meeting the prescriptive standards of the AMLR and this RTS.
Nasdaq CSD SE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Nasdaq CSD SE	Do you have any comments on the Annex in the draft RTS?	No
Nasdaq CSD SE	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Nasdaq CSD SE	Would the implementation of the draft RTS generate any of the following additional costs beyond the	Disruptive impact

Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Nasdaq CSD SE	Please justify your answer to the previous question and provide evidence where possible.	As a CSD that is a newly obliged entity with no pre-existing AML/CFT risk rating or scoring framework, we must build an entire compliance infrastructure from scratch - including risk assessment methodologies, customer risk scoring models, CDD data collection workflows, screening tools, case management systems, and ongoing monitoring capabilities - all of which must be integrated into post-trade systems that were never designed to accommodate granular CDD data collection. This requires significant capital investment in technology, the recruitment or retraining of specialized AML/CFT compliance personnel, and a mass outreach exercise to our entire participant and/or issuer base to remediate existing files to the standards prescribed by

Name of the respondent	Question	Answer
		this RTS - despite the fact that our participants are overwhelmingly regulated financial institutions already subject to their own AML obligations. These costs are compounded by the compressed transitional timeline under Article 33, which does not account for the lead time needed to first build the foundational risk framework before any remediation can begin, forcing parallel workstreams that would otherwise be sequenced and driving up costs through expedited procurement and external advisory fees.
National Police Board / Gambling Administration	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	n/a
National Police Board / Gambling Administration	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	n/a

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
National Police Board / Gambling Administration	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a. The simplified CDD does not apply within the gambling sector due to the inherent risk of the sector.
National Police Board / Gambling Administration	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We wish to point out that RTS article 25, point 1 a), and article 26, point 1 a) - b), are somwehat unclear in their wording and in what they mean. It is unclear wether the points a-c in the articles are ways in which the obliged entities can obtain further information when conducting EDD OR wether the obliged entities should obtain further information (how?) in order to reach outcomes in points a-c. Interpretation 1: The wording "obliged entities shall obtain one or more of the following additional information" could refer to that the points a-c are the choices in which to conduct EDD for the obliged entities. We believe this may be problematic. The need for EDD usually brings with it the need to gather more information of the customer or of the intended nature of the business relationship, or both. In cases like this, the obliged entity should not settle and/or be satisfied

Name of the respondent	Question	Answer
		that the information it already has gathered is accurate and and authentic, but gather furthermore information. Article 25 point 1 a) and article 26 points 1 a) - b) should not be means of conducting EDD. Interpretation 2: The wording could also mean that the obliged entity should obtain more information to, for example, be satisfied that the information they hold on the customer and the beneficial owners or the ownership and control structure of the customer other than a natural person is authentic and accurate. This interpretation does not answer how or what kind of further information should be obtained of the customer. Article 26 point 2 refers to that information to be obtained by obliged entities when obtaining further information of the intended nature of the business relationship may consist of additional information on the customer's key customers, contracts, business partners, associates or the occasional transaction, including, where relevant, the beneficial owner's business partners or associates. These kinds of further information do not apply within the gambling sector, where all customers are natural persons and all gaming/gambling is personal. We believe that the wording in the articles should be clarified as to which interpretation is correct.
National Police Board / Gambling Administration	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Nein, wir stimmen dem für den Glücksspielsektor nicht zu. 1. Art. 18 – Zweck der Geschäftsbeziehung Artikel 18 regelt in Verbindung mit Art. 25 VO (EU) 2024/1624 die Pflicht von Verpflichteten, in insgesamt 27 Unterpunkten festgelegte gesonderte Daten bzw. Informationen von ihren Kunden einzuholen, um den Zweck und die angestrebte Art der Geschäftsbeziehung bzw. einer gelegentlichen Transaktion festzustellen. Diese Datenerhebungen müssen sowohl nach dem Entwurf der DelVO, sowie Art. 25 VO (EU) 2024/1624 „erforderlichenfalls“ („where necessary“) erhoben werden. Unter Berücksichtigung eines normalen Spielbankenbesuches und des Gemeinwohlzwecks (siehe unten zu Frage 5) der Spielbanken ist keine der 27 gesonderten Datenerhebungen im Grundsatz erforderlich. Würde man für ihre ordnungsgemäße Erhebung pro Gast nur 5 Minuten zugrunde legen, käme man im unten genannten Beispiel (siehe dazu ebenfalls Frage 5) auf einen Mehraufwand von 5.000 Minuten, was bei einer größeren Spielbank im Beispiel einem Personalmehraufwand von 333 Mitarbeitern

Name of the respondent	Question	Answer
		entsprechen würde. Dies macht deutlich, dass die Regelung – wenn man sie standardmäßig umsetzten sollte - unverhältnismäßig und völlig „aus dem Ruder“ geraten wäre. Erforderlich ist eine restriktive Auslegung, die sich an dem Grundsatz der Risikoangemessenheit orientieren muss und stets die Verhältnismäßigkeit zu berücksichtigen hat. Insoweit ist eine Sonderregelung im Zusammenhang mit Art. 18 für die Glücksspielbranche sinnvoll und wünschenswert. Eine standardisierte Anwendung von Art. 18 auf Spielbanken ist aus den nachfolgend zu den Fragen 1, 2 und 3 genannten Gesichtspunkten abzulehnen. Dies beugt insbesondere – was für den Bereich der Glücksspieldienste von besonderer Bedeutung ist – Auslegungsauseinandersetzungen mit den zuständigen Aufsichtsbehörden hinsichtlich des im Eingangssatz von Art 18 genannten Kriteriums der „Erforderlichkeit“ vor. Dabei ist zu berücksichtigen, dass ein Teil der in Art. 18 genannten Angaben auch bei verstärkten Sorgfaltsmaßnahmen nach Art. 34 VO (EU) 2024/1624 zu erheben sind, was sich allein nach dieser Norm richten sollte. V o r s c h l a g: Der bisherige Text in Art. 18 sollte als Absatz (1) bezeichnet werden und ein weiterer Absatz (2) angefügt werden, der wie folgt lauten sollte: „Art. 18 Abs. 1 lit. (a) bis (e) ist auf Glücksspieldienste in

Name of the respondent	Question	Answer
		der Regel (standardmäßig) nicht anzuwenden. Eine Erforderlichkeit ist stets am Grundsatz der Risikoangemessenheit zu messen und muss dem Verhältnismäßigkeitsgrundsatz entsprechen. Die Regelungen über verstärkte Sorgfaltspflichten nach Art. 34 VO (EU) 2024/1624 bleiben unberührt.“ 2. Im Einzelnen zu Art. 18 Die sich mit Art. 18 stellenden Probleme sind der Systematik der Konsultation folgend im Einzelnen bei den Fragen 1, 2 und 3 näher dargestellt. Im Rahmen der Frage 1 sind folgende Regelungen relevant: Art. 18 lit. (a) verlangt u.a. (i.) Datenerhebungen über den Grund, aus dem der Kunde die Dienstleistung der Spielbank anfordert, (ii.) die beabsichtigte Verwendung der Dienstleistung, (iii.) den Grund für die Durchführung gelegentlicher Transaktionen sowie (iv.) Informationen zu weiteren Geschäftsbeziehungen zwischen dem Kunden und dem Verpflichteten. Die ersten drei Datenerhebungen betreffen die Nutzung des Glückspielangebots. Dies liegt beim Besuch einer Spielbank erkennbar auf der Hand, was auch die derzeitigen Auslegungs- und Anwendungshinweise zum Geldwäschegesetz (Gemeinsame Hinweise der Obersten Aufsichtsbehörden der Länder im Glückspielsektor gem. § 51 Abs. 8 GwG für Veranstalter und Vermittler von Glücksspielen (Verpflichtete nach § 2 Absatz 1 Nummer 15 GwG), Stand November 2020, unter Ziff. 4.1.3.3 für

Name of the respondent	Question	Answer
		Deutschland) bestätigen. Dort heißt es wörtlich: „Zweck der angestrebten Art der Geschäftsverbindung ist im Glücksspielbereich regelmäßig die Nutzung des Glücksspielangebots. Bei Unklarheiten und Zweifeln sind jedoch weitere Informationen beim Vertragspartner einzuholen. ...“ Die Datenerhebung zu (iV) bringt keinen risikobasierten Mehrwert. Die Erhebungen sind überflüssig und würde die Spielbanken unnötigerweise und daher in einem dem Verhältnismäßigkeitsgrundsatz widersprechenden Maß belasten, wenn diese Fragen gesondert erhoben werden müssten.
nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Der RTS-Entwurf ermöglicht in den nachfolgend dargestellten Fällen keine effektive Anwendung des risikobasierten Ansatzes. Die Regelungen sind darüber hinaus z.T. unverhältnismäßig und verstoßen gegen die Grundsätze des Datenschutzes (s. auch Frage 5). Im Einzelnen: 1. Art. 4 – Geburtsort (Ländername) Nach Art. 4 müssen die Angaben zum Geburtsort mindestens den Namen des Landes enthalten. Dies erscheint überzogen. Nach Art. 22 Abs. 6 VO (EU) 2024/1624 prüfen die Verpflichteten die Identität des Kunden in der Regel anhand eines Personalausweises,

Name of the respondent	Question	Answer
		Passes oder eines gleichwertigen Ausweisdokuments. Diese Dokumente sind nach Art. 77 VO (EU) 2024/1624 zumindest in Kopie aufzubewahren. Daraus ergeben sich alle Angaben des Identifikationsnachweises. Daraus lässt sich eine Identifikation des Kunden bzw. Spielgastes ohne weiteres ermitteln. Im Übrigen könnte die Richtigkeit der Länderangabe des Gastes – sofern sie sich aus dem Identitätsnachweis nicht ergibt - von einer Spielbank vor Ort ohnehin nicht überprüft werden. Die Abfrage der Länderangabe ist daher zusätzlicher Bürokratismus, der nicht risikoangemessen ist, die Spielbanken unverhältnismäßig belastet und datenschutzrechtlich die vom EUGH gezogene Grenze des „absolut erforderlichen“ überschreitet (dazu s. bereits oben). V o r s c h l a g: Der Text in Art. 4 sollten wie folgt lauten: „Die Angaben zum Geburtsort gem. Art. 22 Absatz 1 Buchstabe a Ziffer ii der Verordnung (EU) 2024/1624 umfassen die Angaben, die sich aus dem Personalausweis, Reisepass, oder einem gleichwertigen Ausweis des Kunden ergeben. Fehlen Angaben zum Geburtsort ist zumindest der Ländername des Geburtsortes zu erheben.“ Mit diesem Vorschlag würde auch Erwägungsgrund 3 des E-DelVO entsprochen.

Name of the respondent	Question	Answer
		2. Art. 18 lit (c) und (e) Art. 18 lit (c) und (e) wollen die Grundlage für Datenerhebungen hinsichtlich der Geldquelle und der Geschäftstätigkeit bzw. des Berufes des Kunden schaffen. Diese Angaben sind in acht Unterpunkte unter lit. (c) und in sieben Unterpunkte unter lit. (e) untergliedert, auf die hier nicht in jedem Einzelfall eingegangen werden soll, weil sie ersichtlich auf den Finanzsektor und nicht auf einen seine Freizeit gestaltenden Kunden einer Spielbank abstellen. Eine derartige Befragung könnte ein Spielgast beim Spielbankbesuch nicht annähernd verlässlich liefern. Sie würde überdies dem Gemeinwohlzweck der Kanalisation des Spieltriebes in legale Bahnen, sowie der Suchtprävention offensichtlich entgegenwirken. Denn sie würden dem Spielgast jede Spielfreude nehmen. Er würde sie als Ausforschung seiner Persönlichkeit und seines persönlichen Umfeldes empfinden. Deshalb würde er den leichteren Weg in die Illegalität wählen. - Davon abgesehen wären derartige Erhebungen bei der Anzahl der Spielgäste, die eine Spielbank besuchen (s. Frage 5.) eine absolut unverhältnismäßige Belastung der jeweiligen Spielbank. Auch ist die Datenerhebung keinesfalls „absolut erforderlich“ im Sinne der EUGH-Rechtsprechung, sondern greift zumindest hinsichtlich ihrer Menge und Tiefe in den Kernbereich des Persönlichkeitsrechts ein. 3. Art. 18 lit (d)

Name of the respondent	Question	Answer
		Die Regelung setzt Angaben hinsichtlich der Bestimmung der erhaltenen Mittel voraus. So sollen (i.) die erwarteten Arten von Empfängern mitgeteilt werden, (ii.) die Gerichtsbarkeit, in der eine Transaktion empfangen wird und (iii.) ob der Empfänger der Gelder der beabsichtigte Begünstigte der „überwiesenen Gelder“ ist. Diese Regelung zielt offensichtlich ausschließlich auf das Kreditgeschäft ab, bei dem der Gast einen Kredit erhält, den er für bestimmte Empfänger und Geschäfte verwendet. Diese Regelung passt nicht für den Glücksspielbereich. Entsprechende Angaben könnten von Spielgästen nicht gemacht werden, weil sie aus Freude spielen und sich über die erfragten Angaben keine Gedanken machen. Die Angaben entsprechen daher weder dem Grundsatz der Verhältnismäßigkeit (schon keine Geeignetheit) noch einem effektiv risikobasierten Ansatz. 4. Art. 28 – Gründe der beabsichtigten Transaktion Nach Artikel 28 müssen die Verpflichteten im Rahmen verstärkter Sorgfaltspflichten weitere unter lit. (a) bis (c) genannte Informationen über die Gründe der beabsichtigten oder durchgeführten Transaktionen und deren Vereinbarkeit mit der Geschäftsbeziehung einholen. – Auch diese Regelung zielt erkennbar auf den Finanzsektor ab. Für Spielbanken ist sie völlig ungeeignet. V o r s c h l a g:

Name of the respondent	Question	Answer
		Der Text in Art. 28 sollte als Absatz 1 strukturiert und folgender neuer Absatz 2 angefügt werden: „(2) Absatz 1 findet auf Glücksspieldienste keine Anwendung.“
nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Es gibt die Situationen, in denen Informationen routinemäßig nicht verfügbar sind: 1. Art. 3 (c) – Postfächer Nach dieser Regelung sollen die Angaben zur Anschrift des Kunden unter anderem auch seine Postfächer („post boxes“) umfassen „sofern verfügbar“. Ist der Kunde – wie ein Spielbankgast – regelmäßig persönlich anwesend, müsste er seine Postfächer angeben. Sofern er sie nicht in Erinnerung hat und sie nicht auf seinem Handy oder anderweitig mitführt, wären sie zwar nicht verfügbar und dementsprechend nicht aufzuzeichnen. Jedoch müsste nach Art. 3 (c) die Verfügbarkeit zumindest geprüft werden. Das liefe auf eine Befragung eines jeden Gastes nach seinen Postfächern hinaus. Dieser Aufwand ist unangemessen, da die übrigen unter Art. 3 (c) genannten Angaben sowohl zur Identifikation als auch zur Kommunikation mit einem Kunden ausreichend sind. V o r s c h l a g: Das Postfach sollte nur erfragt werden, wenn die übrigen in Art. 3 (c) genannten Angaben nicht vorliegen.

Name of the respondent	Question	Answer
		Dementsprechend sollte Art. 3 (c) wie folgt formuliert werden: „(c) Sofern verfügbar, Postleitzahl, Straßenname, Gebäudenummer und Wohnungsnummer und – sofern diese Angaben nicht vollständig vorliegen – die Postfächer.“ 2. Art. 18 lit (b) Die Regelung soll Datenerhebungen ermöglichen, hinsichtlich (i.) des geschätzten Betrages der einzuzahlenden Gelder, (ii.) des geschätzten Betrages, der für die Dienstleistung verwendet werden soll, (iii) Informationen zu Art und Häufigkeit der ausgeführten Tätigkeiten während der Geschäftsbeziehung und (iv.) die wahrscheinliche Art und Häufigkeit von Transaktionen während der Geschäftsbeziehung. Abgesehen davon, dass die genannten Informationen Doppelungen enthalten, die stets zu Auslegungsschwierigkeiten führen, sind aussagekräftige und verlässliche Informationen der genannten Art im Glücksspielsektor von einem Spielgast nicht zu erhalten. Denn der Spielgast richtet seine Spieltätigkeit nach seinen Freizeitkapazitäten, seiner Spielfreude und Faktoren aus, die nicht planbar sind, insbesondere auch danach, ob er gewinnt oder verliert. Er plant in der Regel Dauer und Erfolg seines Spielbankbesuches nicht und kann daher keine zuverlässigen Aussagen über den Spielbankbesuch im Vornhinein leisten. Entsprechende

Name of the respondent	Question	Answer
		Datenerhebungen beim Spielgast wären daher ungeeignet und unverhältnismäßig. Sie würden das „absolut erforderliche“ Maß des Datenschutzrechts im Sinne der EUGH-Rechtsprechung (siehe unten Frage 5) verletzten. 3. Art. 27 – Herkunft der Gelder und Vermögenswerte Artikel 27 konkretisiert die Einholung zusätzlicher Informationen über die Herkunft der Gelder und die Herkunft des Vermögens des Kunden bei verstärkten Sorgfaltsmaßnahmen nach Art. 34 Abs. 4 VO (EU) 2024/1624. Die im Einzelnen vorzunehmenden Maßnahmen werden in Art. 27 unter lit. (a) bis (h) dargestellt. Sämtliche dieser Maßnahmen sind für einen Gast der Spielbank ungeeignet. Die Regelung ist – wenn überhaupt – allenfalls für wenige Verpflichtete des Finanzsektors geeignet, nicht aber für den Nichtfinanzsektor, insbesondere Spielbanken. Ein Spielbankengast trägt weder Einkommensnachweise, Steuererklärungen, Gehaltsabrechnungen, Gewinn- und Verlustrechnungen, Investitionsunterlagen, Darlehensverträge, Auszüge aus dem Grundbuch oder Einwohnerregister, Erbschafts-, Schenkungs- und Vergleichsunterlagen, Unterlagen aus Vermögensregistern und öffentlichen Registern, Medienpublikationen über sich selbst etc. mit sich, wenn er eine Spielbank besucht. Eine diesbezügliche Prüfung ist ungeeignet und daher unverhältnismäßig im

Name of the respondent	Question	Answer
		Sinne des Art. 34 Abs. 4 VO (EU) 2024/1624. Darüber hinaus könnten diese Unterlagen schon aus Zeitgründen beim Besuch eines Gastes nicht analysiert werden. Auch würde jedem Gast, dem derartige Unterlagen bei seinem Besuch abverlangt werden, die Spielfreude genommen. Er würde in die Illegalität abwandern. Das wiederum würde dem oben genannten Zweck der Kanalisation des Spieltriebes entgegenwirken. V o r s c h l a g: Der bisherige Text von Art. 27 sollte gestrichen werden, hilfsweise als Absatz 1 strukturiert werden. Für diesen Fall sollte folgender Absatz 2 angefügt werden: „(2) Absatz 1 findet auf Glücksspieldienste keine Anwendung.“
nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	1. Art. 19 – Politisch exponierte Personen (PeP) Artikel 19 Nr. 3 sieht zur Feststellung des PeP-Status eines Kunden ein automatisiertes Screening-Tool oder eine Kombination aus automatisierten Screening-Tool oder manueller Überprüfung vor. Wenn die Größe, das Geschäftsmodel, die Komplexität oder die Art der Geschäftstätigkeit des Verpflichteten es rechtfertigen, soll die ausschließliche Verwendung manueller Überprüfungen möglich sein. Im Sinne der Rechtssicherheit ist es namentlich für kleinere Spielbanken sinnvoll, Eckdaten zu erhalten, bei

Name of the respondent	Question	Answer
		denen eine ausschließlich manuelle Überprüfung der PeP-Eigenschaften im Sinne einer Befragung des jeweiligen Spielgastes am Empfang möglich ist. Denn zum einen sind automatisierte Screening-Tools sehr kostenaufwendig. Zum anderen können sie lediglich einen Treffer (Alert) anzeigen, der ohnedies in der Regel manuell nachgeprüft werden muss, da häufig fehlerhafte Alerts und Namensdoppelungen vorliegen. Beispielsweise enden 40 % aller vietnamesischer Besucher auf Nguyen bzw. eine Großzahl deutschsprachiger Besucher auf Müller, Meier, Schulze etc. Derzeit handhabt ein Großteil der Spielbanken die PEP-Abfrage manuell durch Befragung. V o r s c h l a g: Art. 19 sollte um einen weiteren Absatz (4) ergänzt werden, der wie folgt lauten sollte: „Für Anbieter von Glücksspieldiensten ist regelmäßig eine manuelle Überprüfung der Pflicht nach den Absätzen 1 und 2 zulässig, wenn die Anzahl der Spielgäste im vorangegangenen Kalenderjahr pro Spielstätte XXX (Anzahl wäre festzulegen) nicht überschreitet.“ 2. Art. 30 – Screening-Tools Artikel 30 knüpft an die Pflicht der Verpflichteten an, festzustellen, ob ihre Kunden gezielten finanziellen Sanktionen unterliegen. Hierzu sollen nach Art. 30 lit. (a)

Name of the respondent	Question	Answer
		in der Regel automatisierte Screening-Tools oder -Lösungen oder eine Kombination aus automatisierten Screening-Tools und manuellen Kontrollen erfolgen, die bestimmte Informationen überprüfen sollen. Nach lit. (a) Satz 3. dürfen Verpflichtete manuelle Überprüfungen anstelle der automatisierten Screening-Tools nur dann vornehmen, wenn die manuelle Überprüfung in einem angemessenen Verhältnis zur Größe, zum Geschäftsmodell, zur Komplexität oder zur Art ihrer Geschäftstätigkeit stehen. Die gewählte Formulierung lässt die notwendige Bestimmtheit und Rechtssicherheit vermissen und führt aller Voraussicht nach zu nicht wünschenswerten Diskussionen mit den einzelnen Aufsichtsbehörden. Sie öffnet die Tür zu einer nicht einheitlichen Anwendung des Geldwäscherechts unter den unterschiedlichen Aufsichtsbehörden, was durch die technischen Regulierungsstandards gerade vermieden werden soll. Daher sollten zumindest für Glücksspieldienste Parameter vorgegeben werden, nach denen eine ausschließlich manuelle Überprüfung möglich ist, zumal die automatisierten Screening-Tools erhebliche Kosten verursachen. V o r s c h l a g: Der bisherige Text von Art. 30 sollte als Absatz 1 gestaltet und folgender Absatz 2 angefügt werden: „(2) Anbieter von Glücksspieldiensten sind berechtigt, anstelle von automatisierten Screening-Tools oder -

Name of the respondent	Question	Answer
		Lösungen ausschließlich manuelle Kontrollen durchzuführen, wenn die Anzahl der Spielgäste im vorangegangenen Kalenderjahr pro Spielstätte XXX (Anzahl wäre festzulegen) nicht überschreitet.
nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Gemeinwohlfunktion der Spielbanken Zum näheren Verständnis zur Funktion und zum Geschäft von staatlich konzessionierten Spielbanken ist von zentraler Bedeutung, dass Spielbanken eine dem Gemeinwohl dienende Funktion erfüllen, die aufrecht erhalten bleiben muss. Diese besteht in Deutschland sowohl nach dem in allen Bundesländern mit Gesetzeskraft umgesetzten Glücksspielstaatsvertrag 2021 (nachfolgend: GlüStV 2021) wie auch den Spielbankgesetzen der einzelnen Bundesländer und somit kraft Gesetzes insbesondere darin, (1) den natürlichen Spieltrieb der Bevölkerung zu kanalisieren, indem er vom nicht erlaubten (illegalen) Glücksspiel in geordnete und überwachte Bahnen durch staatlich beaufsichtigte legal Spielbanken gelenkt wird, (2) das Entstehen von Glücksspielsucht zu verhindern und (3) den Jugend- und Spielerschutz zu gewährleisten (zu Einzelheiten s. § 1 GlüStV). Jedes Zugangserschwernis zu staatlich konzessionierten und beaufsichtigten Spielbanken birgt die Gefahr, dass die Spielgäste auf illegale Spielangeboten ausweichen, was der Umsetzung der Gemeinwohlinteressen zuwiderlaufen würde. 2. Umsetzungsaufwand – Mehraufwand

Name of the respondent	Question	Answer
		Um das Spiel eines Gastes nicht unterbrechen zu müssen, werden die geldwäscherechtlichen Sorgfaltsmaßnahmen (jetzt Art. 19 VO(EU) 2024/1624) bei allen Spielbanken am Empfang beim sog. „Einchecken“ eines jeden Gastes durchgeführt, nicht erst wenn der Schwellenwert von EUR 2.000 überschritten wird. Zur Veranschaulichung des durch die geldwäscherechtlichen Sorgfaltsmaßnahmen verursachten Mehraufwands soll folgendes Beispiel dienen: Eine größere Spielbank wird – nicht selten – an spielstarken Abenden innerhalb von drei Stunden von 1.000 oder mehr neuen Spielgästen besucht. Die Spielbank Stuttgart hatte beispielsweise im Zeitraum vom 05.05.2025 bis 04.05.2026 samstags zwischen 21 und 24 Uhr durchschnittlich 1083 Spielgäste. Zieht man von dem Aufwand, der durch die geldwäscherechtlichen Sorgfaltsmaßnahmen nach den Art. 19 ff VO (EU) 2024/1624 verursacht wird, den Aufwand ab, der durch die ohnehin erforderliche Identifikationspflicht durch Vorlage eines Ausweisdokuments nach den Spielordnungen der Bundesländer erforderlich ist, erhält man den durch die geldwäscherechtlichen Sorgfaltsmaßnahmen verursachten Mehraufwand. Legt man für diesen Mehraufwand nur 30 Sekunden pro Spielgast zugrunde (was viel zu eng bemessen sein dürfte – siehe allein die umfassenden Maßnahmen nach Art. 18 E-DelVO, s. unten Ziff. II 3), so ergibt sich folgender Zeitaufwand:

Name of the respondent	Question	Answer
		30 Sekunden x 1.000 Spielgäste = 500 Minuten Wird dieser Zeitaufwand auf die 3 Stunden verteilt, in denen die 1.000 Gäste eintreffen, ergibt sich eine Wartezeit pro Gast wie folgt: 500 Minuten : 3 Stunden = rd. 166,67 Minuten pro Gast Würde die Spielbank über nur einen Mitarbeiter verfügen, der am Empfang für das Einchecken der Gäste zuständig ist, müsste ein Gast somit nur wegen der geldwäscherechtlichen Sorgfaltsmaßnahmen eine zusätzliche Wartezeit von 166,67 Minuten in Kauf nehmen, bis er eingelassen werden könnte. Das entspricht ca. 2 ¾ Stunden. Um eine vernünftige Wartezeit von etwa 5 Minuten zu generieren, müssten zusätzlich ca. 33 neue Mitarbeiter eingestellt werden (166,67 Minuten : 5 Minuten = rd. 33,33). Jede weitere zusätzlich von den Spielbanken zu erfüllende Pflicht verschärft die geschilderte Situation, schafft zusätzlichen Bürokratismus und kann leicht die Grenze der Verhältnismäßigkeit überschreiten 3. Datenschutz Weiterhin ist darauf hinzuweisen, dass sämtliche Daten, die über die Besucher von Spielbanken erhoben werden, in der Regel personenbezogene Daten sind und

Name of the respondent	Question	Answer
		dem Datenschutz unterliegen. Diese Daten sind zu verarbeiten und zu speichern (Art. 76, 77 VO (EU) 2024/1624). Die Datenverarbeitung ist nach der ständigen Rechtsprechung des EuGH, Urteil vom 16.12.2008 – C – 73/07, Rn. 56 – Satamedia; Urteil vom 09.11.2010 – C – 92/09, C – 93/09, Rn. 77, 86 – Schäcke & Eifert; zu weiteren Entscheidungen siehe etwa BeckOK, Datenschutz R – Albers/Veit, DSGVO, Art. 6 Rn. 15 mwN.) auf das „absolut notwendige“ zu begrenzen.
nbs partners Rechtsanwaltsgesellschaft mbH, im Namen des Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V	Do you have any comments on a specific article in the draft RTS? (b) und (c) – Reputation des Kunden – umfassende Ermittlung und Bewertung a) Nach lit. (b) dieser Regelung ist im Fall verstärkter

Name of the respondent	Question	Answer
Bundesverbandes deutscher Spielbanken gegr. 2008 als BupriS e.V. und des DSbV Deutscher Spielbankenverband e.V		Sorgfaltsmaßnahmen eine zusätzliche Bewertung der Reputation des Kunden erforderlich. Dies ist bei Gästen einer Spielbank unpraktikabel. Ein Spielgast, der -wie üblich - nur wenige Stunden anwesend ist, kann von der Spielbank nicht auf seine Reputation geprüft werden, zumal die Öffnungszeiten der Spielbanken sich häufig vor und nach Mitternacht abspielen. Außerdem können solche Auskünfte gegebenenfalls von den Ermittlungsbehörden eingeholt werden, wenn die Voraussetzungen verstärkter Sorgfaltsmaßnahmen – wie häufig – zugleich eine Verdachtsmeldung (Art 69 VO (EU) 2024/1624) auslösen. Die Belastung der Spielbanken mit einer solchen Ermittlungsarbeit ist ungeeignet und unverhältnismäßig. b) Für lit. (c) dieser Regelung gilt Gleiches. Innerhalb eines Gastaufenthaltes von wenigen Stunden in der Nacht lassen sich unmöglich die mit dem Gast verbundenen Risiken der Geldwäsche und Terrorismusfinanzierung „umfassend“ ermitteln und bewerten, wie es die Regelung vorsieht. Auch sie ist für Spielbanken ungeeignet und unverhältnismäßig. Darüber hinaus lässt die Regelung jede Rechtssicherheit und Bestimmtheit vermissen. Was soll eine „umfassende“ Ermittlung sein? Ein Verpflichteter ist weder der Geheimdienst noch eine staatliche Ermittlungsbehörde. Im Fall begründeter (z.B. Clan-) Kriminalität könnte die vorgesehene Regelung – wenn man ihren Wortlaut ernst nimmt - sogar zu einer Gefährdung der Mitarbeiter führen, was absolut

Name of the respondent	Question	Answer
		indiskutabel ist. V o r s c h l a g: Die Art. 25 lit. (b) und (c) sind zu streichen, hilfsweise für den Glücksspielbereich für nicht anwendbar zu erklären. Im letzteren Fall könnte ein neuer Buchstabe (d) angefügt werden, der lauten sollte: „(d) Die Buchstaben (b) und (c) sind für Glücksspieldienste nicht anzuwenden. “

Nexi Group	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not	A1: As a leading cross-border Payment Institution offering Merchant Services, e-Com, Issuing, and digital banking solutions, we welcome the opportunity to

Name of the respondent	Question	Answer
	agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	provide our insights. Our contribution aims to ensure that the final Regulatory Technical Standards (RTS) reflect the operational realities and specific risk profiles of the industry. We believe that the draft RTS, as currently structured, does not fully account for the specificities of the payment service provider. The proposals appear primarily calibrated for traditional banking involving direct interaction with the consumer. In the Payment Service Providers model, the entity interacts with the contractual counterparty (e.g. a merchant or a marketplace) rather than the payer. The current draft lacks sufficient flexibility for the following reasons: 1) Since the obliged entity interacts directly with the contractual counterparty and often has no direct relationship with the end-payer, applying standard Customer Due Diligence (CDD) to the payer is often operationally impossible and legally inconsistent with the role of the PSP. 2) For entities like PSPs that do not hold customer funds long term or provide loans, many requirements would result in purely formalistic compliance exercises. For low risk, high volume services, the RTS imposes a burden disproportionate to the actual ML/TF risk. 3) The RTS does not sufficiently distinguish between the customer (the contractual counterparty) and the end-user (the payer), leading to ambiguity in the application of CDD and monitoring obligations. Concrete Drafting Proposals

Name of the respondent	Question	Answer
		a) Explicitly clarify that for PSPs, CDD obligations apply to the contractual counterparty rather than every transaction participant to avoid legal uncertainty and formally recognize models where access to payer information is limited by the technical flow. b) Include a risk-based exemption or materiality thresholds (e.g. EUR 50) for sectors like PSPs characterized by high frequency transactions to ensure compliance resources are focused on higher risk activity. c) Expand and clarify the provisions for relying on third parties and outsourced KYC processes, particularly for technology-driven onboarding. d) Introduce specific provisions for PSPs that allow for tailored obligations reflecting their unique role in the financial ecosystem, ensuring that compliance remains effective without being unnecessarily disruptive.
Nexi Group	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	A2: 1. Pursuant to Art. 5 of RTS on CDD it is requested to obtain "all nationalities" of the customers. In the majority of jurisdictions, official identity documents (e.g., National ID cards, Passports) only attest to a single citizenship. Obliged entities, even when using advanced digital KYC and e-IDV (Electronic Identity Verification) solutions, lack a reliable source to verify the existence of additional nationalities. Although the data on additional nationalities could be acquired through self-declaration, relying solely on customer self-declaration for multiple nationalities: a) Does not enhance security since it introduces data that cannot be cross-referenced against official databases.

Name of the respondent	Question	Answer
		b) Complicates the onboarding without providing a corresponding increase in AML/TF mitigation. Concrete Drafting Proposal: We suggest amending Article 5 to introduce a materiality and feasibility threshold: "Obliged entities shall obtain information on all additional nationalities according to a risk-based approach, specifically targeting cases where the customer is identified as a Politically Exposed Person (PEP) or where specific high-risk geographical indicators are present". 2. Pursuant to Art. 11 of RTS on CDD, it is required that, obliged entities shall "take risk-sensitive measures" to obtain, in the case of legal entities owned by other legal entities, information on the shares of interest held by each legal entity, its sub-division, by class or type of shares and/or voting rights expressed as a percentage of the respective total. Concrete Drafting Proposal: It would be useful to have clarification that the locution "risk-sensitive" should be intended that this deeper level of investigation and therefore the acquisition of such data is intended mainly for cases of Enhanced Due Diligence/high-risk customer. 3. Pursuant to Art. 13 of the RTS on CDD, it is required that in relation to Senior Managing Officials (SMOs) as referred to in Article 22(2) of Regulation (EU) 2024/1624, obliged entities shall collect the same

Name of the respondent	Question	Answer
		information as they would collect for beneficial owners. Concrete Drafting Proposal: It would be appropriate to review article 13 to: - clarify if the identification should focus on the CEO and General Manager, rather than all executive members of the Board to avoid ambiguities and heterogenous applications across various countries and industries; - Introduce a maximum number of SMOs to be identified to satisfy Article 22(2). This would prevent entities from collecting excessive data and reduce the administrative burden during onboarding; - Clarify the treatment of SMOs who are Politically Exposed Persons (PEPs). Specifically, clarify if an SMO who is a PEP must be treated with the same Enhanced Due Diligence measures as a PEP who is also a Beneficial Owner. 4. Regarding Art. 18 of RTS on CDD, we believe that the requirements under Article 18 (points a, b, c, d) regarding the "economic rationale" and "source/destination of funds" are designed for investment or banking relationships where the flow of capital is discretionary. In context of Payment service providers, the purpose and rationale are inherently defined by the service itself: the processing of commercial transactions for the sale of goods or services, while the "source of funds" is inherently linked to the commercial activity declared by the contractual counterparty. We believe that requiring such granular data for every business relationship or occasional

Name of the respondent	Question	Answer
		transaction in this sector creates a significant administrative burden without adding meaningful AML/CTF oversight. Concrete Drafting Proposal: We suggest that for obliged entities operating in the PSP sector, a simplification is introduced and the requirements under points (a) to (d) might be not required. The only piece of data requested which actually adds value is letter e) "business activity/occupation of the customer".
Nexi Group	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	A3: We identified some critical areas where the proposed RTS require information that is either structurally unavailable, non-verifiable, or disproportionately difficult to obtain. 1. Unverifiable Personal or Business Data (Articles 3, 5, and 20): some of the data points requested by the RTS are not included within official identity documents or public registers. - Apartment Numbers (Art. 3): This information is rarely included in official IDs or available via reputable third-party data providers. - Nationalities (Art. 5): As already discussed in question 1, most ID documents only list one citizenship. There is no reliable way to verify "all nationalities" or refugee status beyond mere self-declaration - Trade Names (Art. 20): For sole traders, trade names are often informal and not registered in public databases, making them impossible to verify independently. Concrete Drafting Proposal:

Name of the respondent	Question	Answer
		On Art. 3: Amend the RTS to specify that the collection of apartment numbers should be optional in jurisdictions where such data is not routinely recorded in official identity documents On Art. 5: Limit the mandatory collection and verification of multiple nationalities to cases where the customer is identified as High Risk customers or PEPs. For standard risk, verification of the nationality stated on the provided ID document shall be sufficient. On Art. 20: Review the RTS to ensure that the collection of trade names for sole traders should be optional in jurisdictions where such data is not routinely recorded in public registers. 2. Customer Due Diligence for Low-risk customers: Some customers in the PSP context (such as Micro-Merchants/Sole Traders) often operate from residential addresses and lack formal commercial utility bills or distinct "business registration" documents. Requiring such documentation creates a barrier to entry for legitimate small-scale economic actors. Concrete Drafting Proposal: Where a customer is identified as a micro-enterprise or a sole trader and is unable to provide standard evidence of business registration or commercial address, obliged entities may satisfy CDD requirements by: (a) Verifying the nature of the business through bank statements from an EU-regulated credit institution or tax filings issued in the name of the individual; (b) Confirming the business activity through verified

Name of the respondent	Question	Answer
		transactional data or digital records from a regulated payment platform or marketplace. 3. Complex Corporate Structures & Closed Registries: for large international merchants, the requirement to obtain "certified" copies of Articles of Association or full UBO declarations for every layer is often impossible due to "closed" registries in certain jurisdictions. Concrete Drafting Proposal: In the case of large, multi-layered international entities, the RTS should allow obliged entities to rely on publicly available information (e.g., stock exchange listings) and signed management declarations to verify the UBO chain, rather than requiring physical certified copies from every jurisdiction involved.
Nexi Group	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	A4: We strongly recommend that the draft RTS includes explicit SDD measures (Art. 20 of RTS on CDD) applicable to the payment service providers and merchant acquiring ecosystem. The current framework does not fully reflect the lower ML/TF risk associated with entities operating within a strictly regulated payment chain, where risk is mitigated by real-time settlement controls and transaction monitoring rather than solely by static, upfront documentation. Unlike traditional banking, our sector poses limited risk considering that: a) Merchant acquirers have the ability to suspend or block the settlement of funds if suspicious activity is detected. b) Payment Service Providers (PSPs) operate within a

Name of the respondent	Question	Answer
		chain where multiple regulated actors (issuing banks, card schemes, settlement banks) already perform various layers of oversight. b) Micro-merchants, which constitute a vast portion of the payment ecosystem, present a significantly lower risk profile than complex corporate structures or high-value investment vehicles. c) High-volume, low-value, and recurring payments are highly predictable and easily analyzed through behavioural analytics and automated fraud tools. Concrete Drafting Proposal: For merchants whose expected annual volume does not exceed a certain threshold (e.g., €50,000), obliged entities may apply a simplified CDD approach. This might include: I) Deferred Verification: allowing the commencement of the business relationship provided that identity verification is completed within 30 days. II) Simplified UBO Identification: focusing verification on direct beneficial owners without requiring the full legal chain, unless specific high-risk triggers are identified. III) Continuous Monitoring: adopting continuous transaction monitoring and behavioural analytics as the primary measure of ongoing due diligence. IV) Reduced Documentation Requirements: lowering upfront documentation requirements for merchants with a regulated status or established market reputation (e.g., public entities, franchised chains). V) Reliance on Existing KYC: relying on the 'Source of Funds' and KYC already performed by the merchant's

Name of the respondent	Question	Answer
		settlement bank, provided said bank is a credit institution regulated within the EU/EEA.
Nexi Group	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A5: We have the following additional observation: 1. Simplified Due Diligence: The current draft of the RTS (Section 5 of the RTS) lists specific simplified due diligence measures but does not explicitly include low-risk payment services, such as low-value card transactions or recurring automated payments. This lack of specific mention may lead to a disproportionate application of CDD measures for services that, by their nature, present a lower ML/TF risk. Concrete Drafting Proposal: We propose to explicitly include low-risk payment services under the simplified due diligence provisions. Specifically, the RTS should recognize that for transactions characterized by low values or automated/recurring patterns, obliged entities can apply simplified measures that are proportionate to the identified risk, thereby maintaining effective safeguards without creating unnecessary operational barriers. 2. Reliance on Third Parties and Scheme Partners: The current draft lacks the necessary clarity regarding the use of regulated third-party KYC providers and payment scheme partners. In the payment service provider (PSP) ecosystem, especially within layered or indirect business models, the ability to rely on the due diligence already performed by regulated partners is essential for efficiency and to avoid redundant data collection. Concrete Drafting Proposal: The RTS should be amended to clarify that PSPs may rely on regulated third

Name of the respondent	Question	Answer
		parties to perform CDD for merchants or low-risk clients. It is crucial to specify that such reliance is permitted provided there is appropriate oversight, a clear risk assessment, and that the third party is subject to equivalent AML/CFT obligations.

Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
Nexi Group	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and	Disruptive impact

Name of the respondent	Question	Answer
	substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Nexi Group	Please justify your answer to the previous question and provide evidence where possible.	The justification is that we have 10 legal entities and would need to make changes to process and tooling across all: One-off • Review and redesign of CDD policies, procedures, customer risk methodologies and control frameworks. • IT system enhancements to onboarding, KYC, screening and transaction monitoring tools to support new RTS requirements. • Data remediation and customer file refresh activities to address missing or outdated KYC information. • Integration and configuration of external data providers, registries and verification tools. • Development of enhanced governance, reporting and audit trail capabilities. • Staff training and change management across first and second line functions. • External advisory, legal and consulting support for interpretation and implementation activities. • Testing, validation and quality assurance of updated CDD processes and systems. Ongoing • Periodic review and refresh of customer due diligence information and risk assessments. • Ongoing monitoring and screening activities, including sanctions, PEP and adverse media checks.

Name of the respondent	Question	Answer
		• Maintenance, licensing and support costs for KYC, onboarding and screening systems. • Increased operational workload for compliance, onboarding and remediation teams. • Continuous training and awareness programmes for relevant staff. • Internal audit, compliance testing and control assurance activities. • Regulatory reporting, governance and documentation maintenance. • Ongoing engagement with external data providers and verification services. • Costs associated with adapting processes and controls to future AMLA guidance or RTS updates
NiCE Actimize	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We generally consider that the draft RTS can be applied effectively across a range of products and services. Where we have specific feedback, this is addressed in our responses to the questions below.
NiCE Actimize	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 4 requires country of birth (at a minimum) to be identified and, when more information is available on the location, that must also be collected. This also applies in low-risk scenarios when simplified due diligence is conducted. While this data may support downstream controls such

Name of the respondent	Question	Answer
		assessing sanctions screening alerts, its value in all cases is unclear. Other mandatory data points, such as nationality and residential data, already enable obliged entities to assess geographic risk. We therefore propose that country of birth should be optional, with firms applying a risk-based approach when it is necessary. This would allow collection where it meaningfully enhances risk assessment or monitoring, while supporting AMLA's objective of proportionality.
NiCE Actimize	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	No.
NiCE Actimize	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We support the application of simplified due diligence ('SDD') in cases where the ML/TF risk is assessed as low, and we consider the RTS provides a clear description of SDD measures and how this differs to full customer due diligence ('CDD'). Further clarity would be helpful on how firms should assess the ML/TF risk without first conducting full CDD as this could otherwise make SDD redundant. For example, in the pooled account scenario provided, SDD is deemed acceptable because full CDD has already been performed separately.

Name of the respondent	Question	Answer
		To preserve the risk-based approach, we suggest the RTS should avoid prescribing specific scenarios for SDD. Instead, additional guidance should be provided on how firms can conduct an initial risk assessment. In practice, firms must identify higher-risk factors (as referenced in Article 33 and Annexes II and III) without having conducted full CDD. Without further guidance, firms may default to full CDD in all cases, which would undermine the objective of reducing administrative burden.
NiCE Actimize	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	(1) Complex Ownership: Article 12 defines a corporate structure as complex where there are three or more layers between the customer and the beneficial owner and at least one additional condition is met, including where the structure reduces transparency without a legitimate economic rationale. This approach may be overly prescriptive and not fully aligned with a risk-based framework. In practice, the absence of a legitimate rationale alone may indicate elevated risk and warrant further review. We suggest reframing this provision to present indicators of complexity rather than fixed definition. This will allow firms to assess complexity based on the specific circumstances of their customers and products. (2) Ownership and Control:

Name of the respondent	Question	Answer
		Identifying parties that own or control a customer remains one of the most challenging aspects of AML compliance, particularly in relation to “control via other means”. The Regulation, RTS and any subsequent guidance present an opportunity to improve consistency in this area, where approaches vary across firms. While a fully prescriptive definition may not be appropriate, additional guidance would support more consistent identifications of relevant parties and is likely to improve overall compliance. (3) KYC Reviews: We support a more real-time and proactive approach to AML, including the use of perpetual KYC models, where appropriate. Item 69 of the Regulation requires periodic reviews, as well as reviews triggered by changes in relevant circumstances. However, this may be interpreted as requiring fixed review cycles, potentially limiting the adoption of fully perpetual model. Where firms can demonstrate that due diligence requirements continue to be met, perpetual KYC can improve data accuracy and enable more timely risk detection.

Name of the respondent	Question	Answer
		We therefore suggest clarifying that a fully perpetual approach is permissible, where appropriate controls are in place as this aligns with AMLA's objectives effective risk management and proportionality. (4) Entry into Force: Article 33 confirms the Regulation enters into force on the twentieth day following publication, and, per Article 26(2) of the Regulation, that existing customers must be aligned with the new requirements on a risk sensitive by the next periodic review date. Clarification on this point would be helpful, including guidance on when it may be appropriate to defer application of the new requirement until the scheduled review.
NiCE Actimize	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
NiCE Actimize	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
NiCE Actimize	Do you have any comments on the Annex in the draft RTS?	No
NiCE Actimize	How would you rate the proposals set out in the draft RTS overall?	Good
nkcr	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not	No, the proposed wording has fundamental impact on non-financial sector and obliged entities being natural persons. This impact can hinder problem-free

Name of the respondent	Question	Answer
	agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	application of AML/CFT measures; same obligations may not apply to banks and natural persons from the non-financial sector. We describe the issues in a more detailed manner below.
nkcr	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No, obliged entities from the non-financial sector may not fulfil the proposed obligations that are the result of input from the non-financial sector not being taken into consideration. One example: the complex structures involving a trust are common in all Common Law jurisdictions. Similarly, many legitime structures include a company/BO from a third country. Hence, the proposed criteria will lead to the situation that a significant part of foreign corporate structures will be considered a high-risk structure. This does not match the goals of other EU initiatives trying to attract capital and investors from third countries.
nkcr	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In relation to Art. 12 and 13, we draw your attention to the fact that business registers, beneficial ownership registers and other public registers are being closed for the public in many member states. This creates an additional obstacles in practice that does not seem to be taken into consideration. ISO codes of countries are not a common term for most practitioners.
nkcr	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service	The most important point missing in the proposal is the mediated client identification. This procedure is used in combination with a power of attorney. The client is

Name of the respondent	Question	Answer
	provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	identified physically by a notary or a public authority that draws up an authentic instrument confirming the clients' identity for the respective transaction (i.e. the document clearly includes a description of the transaction). This document is presented to the obliged entity along with the power of attorney by the attorney representing the client. This enables e.g. the elderly living abroad (typically in the USA or Canada) to use notarial services in Czechia. We do not see a similar option in the current wording of the RTS. Similarly, it is possible to certify the signature on a power of attorney and present it with a copy of the client's ID to the obliged entity. Also this solution is crucial for practice and is missing in the proposed wording – please inform us if this is not the case. We are happy to provide further details about these procedures. In relation to Art. 18: Companies may be established with the capital of 1 euro in some member states. The respective fees for obliged entities are around 80 euros. How can the economic reasons behind such a transaction be examined by the obliged entity? How does the proposal of 28th regime of the company align this provision and other AML obligations?
nkcr	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	Unfortunately, the public consultations do not seem to have effect so far. Under current wording of the proposed RTS, we do not think it is possible to apply risk-based approach. The obliged entities will apply

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	extremely rigid procedures in a formal way in order to be compliant. We are not proposing solutions as the non-financial sector has not been consulted and we consider AMLA to be the entity that should do so. The RTS should distinguish the financial and non-financial sector, which is not the case. Art. 6 - Forged documents: The obligations foreseen for detection of forged or altered documents are exaggerated and not realistic. Seminars on detection of forged documents show how difficult it is to prevent forgery as the techniques used by criminals are evolving rapidly. There is no universal technical solution that helps the obliged entities. If there is, please provide it to the obliged entities. Art. 11(4) – Reasons to create a structure: Similarly, it is not possible to verify the reasons behind the creation of a structure with certainty as there are various reasons and their combinations. Small obliged entities from non-financial sector do not have continuous information about clients' lives and cash-flow, which are essential for this task. It is not possible to impose the same obligations on banks and natural persons. Art. 7(3) - using an ID remotely: Under the current technical solutions, it is not possible to fulfil the foreseen requirements. In relation to Art. 12 and 13, we draw your attention to the fact that business registers, beneficial ownership

Name of the respondent	Question	Answer
		registers and other public registers are being closed for the public in many member states. This creates an additional obstacles in practice that does not seem to be taken into consideration. Article 22(a): In our opinion, the article should better reflect the obligation of professional secrecy applicable to obliged entities from the non-financial sector. The currently proposed wording effectively leads to a transfer of obligations to an obliged entity from the non-financial sector, which would be required to provide all documentation to a credit institution without any defined limits. We propose at least the following amendment: A credit institution that opens an account on which the account holder manages funds of its clients shall be deemed to meet the requirements set out in Article 20(1)(h) of Regulation (EU) 2024/1624, provided that all the following conditions are met: • the credit institution has assurance that the account holder will provide the information and documents required under Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to the clients whose funds it manages, immediately upon justified request by the credit institution; • the credit institution has concluded a contract with the account holder setting out the conditions under which the credit institution is entitled to request the information and documents under paragraph 1; • the supervisory authority over the credit institution

Name of the respondent	Question	Answer
		has established a system for receiving reports relating to the supervision of the activities of supervised credit institutions under paragraph 1; • the account holder is an obliged entity subject to AML/CFT obligations in an EU Member State or in a third country whose AML/CFT requirements are not less stringent than those set out in Regulation (EU) 2024/1624; • the account holder is effectively supervised with respect to compliance with the obligations referred to in point (b); • the money laundering and terrorist financing risk associated with the business relationship is low; • the credit institution is satisfied that the account holder applies strict and risk-sensitive customer due diligence measures towards its clients and the beneficial owners of those clients. Article 30: We understand the wording of this article to require the implementation of an automated system for screening against sanctions lists. This provision is not proportionate to small obliged entities that carry out relevant activities only occasionally.
nkcr	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
nkcr	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
nkcr	Please justify your answer to the previous question and provide evidence where possible.	The RTS make the text of the EU Regulation much stricter (while it should, on the contrary, enable its seamless aplication). It foresees lots of automation and collection of extensive datasets that are not comparable to any other obligations sole practitioners are facing under existing regulations. If we express the costs in numbers, processing a client's CDD in accordance with regulatory standards will require 75% more time or

Name of the respondent	Question	Answer
		human resources compared to the requirements set by the regulation itself. Besides that, practitioners will have to purchase a special software solution.
NN Group N.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The proposals do not always provide sufficient flexibility for low-risk life insurance products. Due to the long-term nature of life insurance contracts and the limited transactional activity during the accumulation phase, the uniform application of certain customer due diligence requirements — in particular those relating to periodic updates, verification timing and documentation of ownership and control structures (notably Articles 23 and 12 RTS) — may lead to disproportionate outcomes and excessive burden for customers when applied across all products and services. In practice, ML/TF risk in life insurance products generally materialises at specific moments in the product lifecycle, most notably at the execution of a benefit payment. Applying full verification and extensive documentation requirements at earlier stages, irrespective of the product's low-risk profile, does not necessarily enhance risk mitigation but may instead reduce operational flexibility without commensurate AML/CFT benefits. To address this, AMLA is invited to include an explicit clarification in the RTS that, for low-risk life insurance products, simplified due diligence allows periodic updates during the policy lifecycle to focus on maintaining up-to-date identification data and confirming the absence of triggering events as referred to in Article 23(1) RTS. Full identification and verification of identity could then be completed no later than prior

Name of the respondent	Question	Answer
		to the execution of a benefit payment, where this is justified by the product's ML/TF risk profile and in line with Article 26(2)(b) AMLR. Additionally, current provisions related to identification updates are not appropriate for low risk insurance products. For such products customers rarely interact with the insurer prior to benefit payment. It might be challenging to respond to insurers requests for data updates or confirmations. Current text of the provisions might result in disproportionate administrative burden for insurers and customers where update and customer reach out processes have to be established for low risk products. Art. 23 should clarify that when an obliged entity already has all the required identification data, it can assume it is up-to-date if the update process did not result in obtaining contrary information. Such clarification would ensure that the RTS can be applied across a broad range of products while preserving a robust risk-based approach, by aligning the depth and timing of due diligence measures with the point at which ML/TF risk effectively materialises. This approach is consistent with established national practice under the Dutch Anti-Money Laundering and Anti-Terrorist Financing Act (Wwft), which requires full identification and verification prior to payout, demonstrating that a lifecycle-based and proportionate application of due diligence is both workable and effective in the life insurance context. Article 23 RTS in conjunction with Article 26(2)(b) AMLR For low-risk life insurance products, the application of

Name of the respondent	Question	Answer
		the five-year maximum update period should be interpreted in a proportionate, risk-based manner. Given the long-term nature of life insurance contracts and the limited transactional activity during the accumulation phase, clarification by AMLA would be helpful that periodic updates under simplified due diligence may focus on maintaining up-to-date identification data and confirming the absence of triggering events as referred to in Article 23(1) RTS. Full verification of identity could then be completed no later than prior to the execution of a benefit payment, where this is justified by the product's ML/TF risk profile. This would align the depth and timing of verification with the moment at which ML/TF risk effectively materializes, while remaining within the framework of Article 26(2)(b) AMLR. This approach is consistent with the Dutch Anti-Money Laundering and Anti-Terrorist Financing Act (Wwft), which requires life insurers to complete both identification and verification of the beneficiary prior to any payout (Articles 3 and 4 Wwft, as confirmed in Dutch case law). National practice demonstrates that deferring full verification until the benefit event is both risk-appropriate and effective in mitigating ML/TF risks in the life insurance context.
NN Group N.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	While the draft RTS explicitly refer to the risk-based approach, certain provisions risk being applied in a predominantly rules-based manner in practice, which may undermine effective risk differentiation. This concern particularly arises in relation to the provisions on periodic updates and verification timing (Article 23

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	RTS in conjunction with Article 26(2)(b) AMLR), the definition of complex corporate structures (Article 12 RTS), and the associated documentation expectations (Articles 11, 12, 10 and 21 RTS). Where thresholds or documentation requirements are formulated in a prescriptive manner (for example, the use of layering as a proxy for complexity or the implicit expectation of additional documentation such as organigrams), obliged entities may feel compelled to apply enhanced measures even in clearly low-risk situations. This may reduce the practical space for applying professional judgement based on the actual ML/TF risk profile of the product and customer. To support the effective application of a risk-based approach, AMLA is invited to clarify in the RTS that enhanced documentation and verification measures are required only where justified by concrete ML/TF risk indicators, and not solely on the basis of structural characteristics or predefined thresholds. In particular, for low-risk life insurance products, AMLA could explicitly confirm that simplified due diligence allows periodic updates to focus on maintaining identification data and ongoing monitoring, with full identification and verification aligned to the point at which ML/TF risk effectively materialises, such as prior to a benefit payment. Such clarification would better reflect the intended risk-based nature of the framework and prevent a de facto rules-based application of the RTS. This approach is consistent with established national practice under the Dutch Anti-Money Laundering and Anti-Terrorist

Name of the respondent	Question	Answer
		Financing Act (Wwft), which demonstrates that risk-aligned timing and depth of due diligence measures can be both effective and proportionate in the life insurance context. Articles 10 and 21 RTS in conjunction with Articles 11 and 12 RTS (UBO verification and use of organigrams) While the RTS allow for simplified identification and verification of beneficial owners in low-risk situations, including reliance on central registers and other reliable independent sources, Article 12(2) RTS refers to obtaining additional information such as organigrams for complex corporate structures. Where complexity is defined too broadly, this may create a perceived inconsistency: verification may be simplified through register-based sources, while obliged entities may nevertheless feel required to request organigrams as a default. AMLA is invited to clarify that organigrams should be requested only where necessary, namely where ownership and control structures cannot be credibly understood based on reliable sources already consulted or where specific ML/TF risk indicators justify deeper analysis. Article 13 RTS (Senior Managing Officials) The draft RTS require obliged entities to collect and verify the same information for senior managing officials (SMOs) as for beneficial owners. While the fallback role of SMOs is acknowledged where no UBO can be identified, SMOs are typically salaried employees without ownership interests or direct financial flows.

Name of the respondent	Question	Answer
		For low-risk products such as life insurance, this requirement may be disproportionate. Clarification is recommended that, in low-risk situations, verification of SMOs may be limited to reliable register information and the registered office address, unless specific ML/TF risk indicators are present. Article 12 RTS (Complex corporate structures) The definition of a “complex corporate structure” based solely on the presence of three or more layers between the customer and the beneficial owner risks being overly broad in the Dutch market context, where multi-layer holding structures are common for legitimate legal, tax and governance reasons. Using the number of layers as a primary proxy for complexity may result in ordinary and transparent structures being treated as high-risk. AMLA is therefore encouraged to reconsider this threshold, for example by increasing or removing it, or by placing greater emphasis on actual opacity indicators (such as nominee arrangements, unexplained non-EU layering or absence of a credible economic rationale), rather than on layering alone.
NN Group N.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. For life insurance undertakings, certain information requirements proposed in the draft RTS may be routinely unavailable in practice, without an adequate alternative solution being provided. This particularly applies to Article 9 RTS, which requires obliged entities to obtain the dates on which the associated bank or payment account linked to a virtual IBAN was opened and, where applicable, closed. In the life insurance context, obliged entities typically have no

Name of the respondent	Question	Answer
		direct contractual or operational relationship with the issuing payment service provider or bank. Customers themselves often do not have access to, or visibility over, such account-level information, especially where virtual IBANs are provided through intermediated payment solutions. As a result, this information is not merely difficult but routinely unavailable for life insurers, particularly in low-risk product scenarios. The draft RTS do not currently provide a clear alternative where such information cannot reasonably be obtained. To address this, AMLA is invited to clarify that the requirement to obtain opening and closing dates of associated accounts linked to a virtual IBAN applies only where such information is reasonably available to the obliged entity, taking into account the nature of the business relationship and the ML/TF risk profile of the product. AMLA should clarify that this obligation does not cover insurers. Such clarification would enhance the operational feasibility of the RTS while remaining consistent with a risk-based approach. Article 7(2) (remote verification) The provision allows for use of verification measures different form EIDAS measures mentioned in point 1, when those ‘’cannot be reasonably expected to be provided’’. Use of the word ‘’provided’’ might indicate it covers only situations where a customer cannot be expected to provide the measure. There can also be legitimate reasons , where an institution cannot be

Name of the respondent	Question	Answer
		reasonably expected to use the EIDAS measures, e.g. when a customer chooses to communicate with the institution by means of paper correspondence or when technical difficulties, independent from the obliged institution, exist. In some situations, especially low risk, it might be more appropriate to use other means of verification, e.g. a check against a state natural persons identity databases. We propose AMLA considers changing the word 'provided' to 'used' which allows for a more appropriate risk-based approach application. Article 7(3) (non-EIDAS methods) Solutions used by obliged entities under art. 7(2) might include different measures and combinations, e.g. copies of documents, verification against information from state registers and databases on citizenship identity. This might be especially relevant to insurers where beneficiaries of the policy file a request for claim payout remotely, e.g. by mail. Insurers often do not have office branches across the country, which makes beneficiary verification more difficult when EIDAS methods are not available or the customer is not able to use other online solutions. Current wording of the article suggests that only online video or photo related methods can be used which is excessively limiting. For this reason an obliged entity needs to choose the relevant safeguards form the catalogue in art. 7 (3), rather than using all of them, as some might not be relevant to verification method used. We suggest adding 'relevant safeguards' to the provision text.

Name of the respondent	Question	Answer
		Article 6 (5) (Obtaining documents) Article 6 (5) mandates obliged entities to 'obtain' an identity document, or equivalent from a customer for verification purposes. Some entities might routinely make copies of such documents to evidence performing verification, instead of e.g. an employee or an agent certifying they verified identity against an ID document presented by the customer, without making a copy. At the same time, other entities might not conclude that is obligatory. This can lead to uneven practice across the Union, with respect to potentially burdensome obligation for customers and obliged entities alike. It seems to be clear that to always make copies of ID documents for evidencing verification, even when verification of identity against and ID document can be otherwise confirmed and recorded (e.g. confirmation of a distributor or employee), is not a proportionate risk-based measure. We invite AMLA to consider clarification in the article that making copies of documents used for verification is not required to demonstrate verification was performed, unless necessary for effective application of CDD measures or record retention.
NN Group N.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	For low-risk life insurance products, the draft RTS would benefit from the inclusion of an explicit simplified due diligence measure that reflects the product lifecycle and the point at which ML/TF risk effectively materialises. Specifically, AMLA is invited to include a clarification in the RTS that, for low-risk life insurance products, simplified due diligence may allow periodic updates

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	during the policy lifecycle to focus on maintaining up-to-date identification data and conducting ongoing monitoring, as referred to in Article 23(1) RTS. Full verification of identity could then be completed no later than prior to the execution of a benefit payment, where this is justified by the product's ML/TF risk profile and in line with Article 26(2)(b) AMLR. This measure would constitute an appropriate simplified due diligence option for products characterised by long durations, limited transactional activity and delayed risk crystallisation. It ensures that verification efforts are concentrated at the point of highest ML/TF relevance, while avoiding unnecessary administrative burden during earlier stages of the customer relationship. This approach is consistent with established national practice under the Dutch Anti-Money Laundering and Anti-Terrorist Financing Act (Wwft), which requires full identification and verification prior to payout, demonstrating that such a lifecycle-based application of due diligence is both proportionate and effective in mitigating ML/TF risks in the life insurance context. Additionally we invite AMLA to consider adding provisions for life insurance that in cases where an obliged entity already has all the required identification data, it can assume it is up-to-date if the update process did not result in obtaining contrary information. In any case identification and verification has to take place at the time of the payout in line with art. 21 (1) subparagraph 4. Articles 11 and 12 RTS (Understanding ownership and

Name of the respondent	Question	Answer
		control structures) For low-risk life insurance products, requiring detailed insight into ownership and control structures from the first layer onwards may be disproportionate. In many low-risk cases, particularly where domestic legal entities are involved and reliable public registers are available, an adequate understanding of ownership and control can be achieved without extensive structural documentation. A clearer proportionality safeguard would help ensure that the level of detail required reflects the actual ML/TF risk posed by the customer and the product. An additional provision could be added in art. 21 for simplified measures in ownership and control structure verification. Simplified measures could focus on obtaining credible information from customer, relevant registers or public sources. Art. 23 (Identification updates frequency) In some Member States insurance companies do not have access to state identity databases to perform automated data updates. In long terms life insurance contracts requests to customer for updates of identification data are often not effective. Customers rarely have the need to use online insurance portals and therefore may not proceed to update or confirm data as requested. Identification data for standard or low risk customers does not change often. We invite AMLA to consider adding provisions for life insurance that in cases where an obliged entity already has all the required identification data, it can assume it is up-to-date if the update process did not result in obtaining

Name of the respondent	Question	Answer
		contrary information. In any case identification and verification has to take place at the time of the payout in line with art. 21 (1) subparagraph 4.
NN Group N.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Art. 27 (Additional information on sources of funds and wealth) Article 27 of the RTS explains possible information to be obtained when collecting additional information on the sources of wealth and funds. The catalogue is open-ended thorough the use of wording 'may include'. The first part of the article however indicates that in fact obtaining information, when applying the EDD measure specified in art. 34 (4)(c) of AMLR, is obligatory by use of wording "shall obtain". This might create confusion. We suggest changing the text of the obligation "For the purposes of Article 34(4), point (c), of Regulation (EU) 2024/1624, obliged entities may obtain such additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, that will satisfy them that the source of funds or source of wealth is derived from lawful activities. " Article 5 (Nationalities) Some entities might conclude that verification of each provided customer nationality is required in all circumstances. This might prove excessive in standard risk cases or for customers who do not actively engage with some countries where they hold a nationality, resulting in the lack of up-to-date documents confirming that nationality. Requiring those customers to obtain the documents as a condition for establishing relationship might lead to limiting their access to

Name of the respondent	Question	Answer
		financial services without proportional rationale. We suggest adding in this article that the nationality, as featuring on the provided verification document, requires verification. In case of other nationalities, verification measures are not necessary but might be required in situations of higher risk in line with art. 34 (4) (a) AMLR. Moreover, AMLA is invited to clarify the context of acquiring nationality as a data point of interest. This data point may not be relevant from the perspective of AML/CFT CDD. If nationality as a data point is relevant from a sanctions perspective, this should be clarified by AMLA. Article 6 (2) (Obtaining information) The subparagraph “If the document provided does not include information stipulated in the points of the first subparagraph, obliged entities shall use other credible means to obtain this information.” is not clear. It seems to suggest, that data on the identity document or equivalent, needs to be recorded by obliged entities. Some of the points in in art. 6(1) and (2) do not constitute information that can be recorded, e.g. the fact of being issued by a public authority. Obtaining additional data for verification purposes, adds other obligations for obliged entities than those stipulated in the identification article 22 (1) of AMLR. In case obliged entities cannot obtain verification documents specified in art. 6 (1) and (2) an alternative is already provided in art. 8. We consider that there should be no ambiguity as

Name of the respondent	Question	Answer
		to what data related to customers identity should be collected. Any such ambiguity can lead to considerable burden on obliged entities or customer and uneven practices across the Union. We suggest that for clarity purposes this provisions is removed or changed to "…shall consider other credible means of verification". Article 6(5) (Obtaining documents) The article lacks clarity on whether copies or features of documents (e.g. document number) used for verification should be obtained and recorded. Practice related to obtaining copies of documents varies across the EU, with some countries requiring obtaining copies, others not. Such obligations create considerable administrative burden on entities, create data privacy risks and might be perceived excessive by customers. We consider it unnecessary to require copies in all circumstances. It should be for an obliged entity to decide the method of keeping record of the identity verification appropriate to particular CDD methods used. We suggest adding in this article that, obliged entities shall record relevant information, documents or data necessary to evidence verification. Art. 18 (nature and purpose of relationship) Whilst the article provides additional clarity to art. 20 (1)(c) and 25 of AMLR, it may result in ambiguous approach be the use of "where necessary" phrase in the first sentence. It is not clear how an obliged entity should determine the extent of information in a particular situation, e.g. by risk level, type of relationship. We suggest to adjust the first sentence

Name of the respondent	Question	Answer
		"'…obliged entity shall obtain information necessary to understand the purpose and nature of the relationship, as appropriate to that relationship and its risk level" Article 13 (Senior managing officials) It is not clear how the term 'senior managing officials' relate to the AMLR defined terms 'senior management' or 'management body in it's management function'. We suggest explaining in article 13 that senior managing officials mean 'management body in it's management function' unless circumstances suggest otherwise.
NN Group N.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Manageable impact

Name of the respondent	Question	Answer
	Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
NN Group N.V.	Please justify your answer to the previous question and provide evidence where possible.	Multiple changes require significant implementation effort. Once implemented, the ongoing impact is expected to be considerable but manageable.
Nomura Bank (Luxembourg) SA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Respondents generally support the objectives and structure of the draft RTS. However, several provisions may prove difficult to apply consistently across the full range of products, services and operational models. Regarding Articles 2 to 5, respondents raised practical concerns linked to identification data requirements. Collecting all names and surnames may create technical implementation issues, notably for naming conventions involving multiple surnames (e.g. Portuguese names), where existing systems cannot always record all data fields. Similar concerns were raised regarding the obligation to collect all nationalities, which relies largely on customer self-declaration and may not always be technically recordable. The operational purpose of collecting all nationalities beyond screening purposes also remains unclear. Place-of-birth requirements also raise operational

Name of the respondent	Question	Answer
		concerns. Some official documents only mention the place of birth and not the country, while others, such as Luxembourg ID cards, do not contain place-of-birth information at all. Respondents therefore consider that either the place of birth or the country of birth should be considered sufficient. Regarding Article 6, further clarification is needed regarding the notions of “authentic”, “forged” and “tampered with”, notably whether compliance requires specialised technical or forensic tools. Additional concerns were raised regarding refugees and vulnerable individuals, as documents issued in certain jurisdictions may not contain facial images. Respondents also stressed that translation obligations should remain with the customer. Regarding Article 7, respondents consider that the non-face-to-face verification framework is too rigid. While eIDAS/EUDIW solutions are welcome, their practical availability remains limited. The wording “cannot reasonably be expected to be provided” is unclear and may lead to divergent interpretations. Respondents are concerned that mandatory documentary verification in fallback situations may create disproportionate burdens in low-risk onboarding scenarios and insufficiently recognise existing reliable data-based verification solutions. Regarding Article 8, several concepts remain too subjective, including:

Name of the respondent	Question	Answer
		• credibility of the source; • independence; • accuracy; • how “up-to-date” information should be; • and resistance to forgery. Clarification is also needed regarding the extent to which official registers such as the Luxembourg RBE may be relied upon despite possible delays in updates. Regarding Articles 10 to 13, respondents consider that: • acceptable registers and third-party sources should be clarified; • organisational charts should explicitly be recognised as acceptable ownership documentation; • Article 11(4), requiring assessment of the “economic, legal or other rationale” behind ownership structures, appears to go beyond AMLR requirements; • Article 12 may capture many legitimate Luxembourg investment structures as “complex structures”, notably where non-EU entities or nominee directors are involved for legitimate commercial reasons; • SMOs should not systematically be subject to equivalent due diligence measures as UBOs. Further clarification is also requested regarding: • representatives and PPTAs under Article 16; • pooled accounts under Article 22; • data update obligations under Article 23; • screening scope, transliteration standards and screening periodicity under Articles 29 and 30;

Name of the respondent	Question	Answer
		• and trigger events during the transition period under Article 33
Nomura Bank (Luxembourg) SA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Respondents consider that several provisions do not provide sufficient flexibility because they may: • create disproportionate operational burdens in low-risk situations; • rely excessively on documentary verification; • insufficiently recognise existing market practices and technologies; • introduce subjective concepts likely to lead to divergent supervisory expectations; • or insufficiently reflect the diversity of business models and products. In particular: • Article 7 relies heavily on documentary verification even where reliable data-based verification methods already exist and are widely used across the financial sector. • Article 11(4) appears to require obliged entities to assess the legitimacy of ownership structures rather than focusing on understanding structures and identifying unusual or risk-indicative features. • Article 12 may result in many legitimate Luxembourg investment structures automatically being treated as “complex structures” merely due to the presence of non-EU entities or nominee arrangements. • Article 13 may impose disproportionate due diligence measures on SMOs even though they are fallback persons and not beneficial owners.

Name of the respondent	Question	Answer
		• Articles 29 and 30 may significantly increase false positives and operational burdens due to expanded screening obligations, aliases and transliteration requirements. Several respondents also stressed that certain requirements may not always be compatible with existing technical systems, notably regarding the recording of multiple names, surnames or nationalities.
Nomura Bank (Luxembourg) SA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Respondents suggest the following drafting adjustments: • Clarify that either the place of birth or the country of birth should be sufficient where official documents do not contain both. • Reflect recital 3 directly in Articles 4 and 5 and confirm that verification of one nationality is sufficient where multiple nationalities are declared in good faith. • Clarify that compliance with Article 6(3) does not necessarily require specialised forensic technologies. • Clarify acceptable “legitimate reasons” and “other credible means” under Article 6(2). • Explicitly allow reliable data-based verification methods in low-risk non-face-to-face onboarding situations. • Clarify the interpretation of “cannot reasonably be expected to be provided” under Article 7. • Introduce more objective criteria regarding “reliable and independent sources”. • Clarify that official registers such as the RBE may be relied upon notwithstanding possible delays in updates.

Name of the respondent	Question	Answer
		• Clarify that organisational charts constitute acceptable ownership structure documentation. • Align Article 11(4) more closely with AMLR requirements by focusing on understanding ownership structures and identifying unusual or risk-indicative features rather than assessing the legitimacy of their rationale. • Replace references to “jurisdictions outside the EU” in Article 12 with references to high-risk, non-cooperative or non-equivalent jurisdictions. • Clarify that nominee directors should not automatically be considered indicators of elevated ML/TF risk. • Clarify that SMOs should not systematically be subject to equivalent due diligence measures as UBOs and that SoF/SoW obligations should not apply to SMOs. • Clarify obligations applicable to representatives and PPTAs. • Clarify screening scope, transliteration expectations and screening periodicity under Articles 29 and 30. These changes would improve proportionality, operational feasibility and consistency with the AMLR.
Nomura Bank (Luxembourg) SA	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example	Respondents generally support the objective of strengthening harmonisation and AML/CFT effectiveness. However, several provisions are considered overly prescriptive and insufficiently aligned with the risk-based approach embedded in Regulation

Name of the respondent	Question	Answer
	because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	(EU) 2024/1624. Key concerns include: • excessive reliance on documentary verification in low-risk situations; • insufficient recognition of reliable non-documentary verification methods; • automatic complexity triggers based on non-EU incorporation; • disproportionate treatment of SMOs; • subjective concepts creating legal uncertainty; • broad screening obligations generating operational burdens and false positives. Regarding Article 7, respondents consider that the RTS insufficiently recognises existing reliable data-based verification methods already widely used across the financial sector. Mandatory documentary verification in fallback situations may create disproportionate burdens for low-risk onboarding and digital business models. Regarding Article 11(4), respondents consider that requiring obliged entities to assess the “economic, legal or other rationale” behind ownership structures introduces subjectivity and goes beyond AMLR requirements. Regarding Article 12, respondents consider that treating structures involving non-EU entities as automatically “complex” is not sufficiently risk-sensitive and may disproportionately affect legitimate Luxembourg

Name of the respondent	Question	Answer
		investment structures. Regarding Article 13, respondents stress that SMOs are fallback persons and not beneficial owners and therefore should not systematically be subject to equivalent due diligence measures. Regarding Articles 24 and 26, respondents are concerned that: • certain low-risk obligations may go beyond what is necessary; • and Article 26(2) could potentially be interpreted as introducing implicit KYCC obligations. Respondents therefore encourage AMLA to: • strengthen proportionality; • preserve technological neutrality; • focus more explicitly on actual ML/TF risks; • and provide more objective guidance and operational flexibility.
Nomura Bank (Luxembourg) SA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Additional article-specific comments include: • Article 9: clarification is needed regarding virtual IBAN models, including COBO/POBO and cascading models, and regarding the allocation of obligations between parties. • Articles 14 and 15: clarification is needed regarding the notion of “timely updates” for discretionary trusts and class beneficiaries and regarding the nature of documents certified by independent professionals. • Article 16: obligations applicable to representatives

Name of the respondent	Question	Answer
		and PPTAs remain unclear. • Article 19: clarification is needed regarding PEP rescreening triggers and whether transaction beneficiaries should be screened against PEP lists. • Article 21(c): the notion of “independent open source” should be defined. • Article 22: clarification is needed regarding pooled accounts held by lawyers or notaries. • Article 23: clarification is needed regarding customer data revalidation obligations. • Article 25: clarification is needed regarding reputation assessments and whether they apply to PPTAs or SMOs. • Articles 29 and 30: clarification is needed regarding screening obligations applicable to PPTAs and SMOs, transliteration standards, aliases and wallet addresses. • Article 33: clarification is needed regarding trigger events occurring during the transition period.
Nomura Bank (Luxembourg) SA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Nomura Bank (Luxembourg) SA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	8
Nomura Bank (Luxembourg) SA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	objective criteria should be introduced regarding reliable and independent sources
Nomura Bank (Luxembourg) SA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	8

Name of the respondent	Question	Answer
Nomura Bank (Luxembourg) SA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Additional article-specific comments include: • Article 8: objective criteria should be introduced regarding reliable and independent sources. • Article 10: clarification is needed regarding acceptable registers and third-party sources. • Article 11: organisational charts should explicitly be recognised as acceptable documentation. • Article 12: nominee directors should not automatically constitute indicators of elevated ML/TF risk. • Article 13: SoF and SoW requirements should not apply to SMOs. • Article 16: obligations applicable to representatives remain unclear. • Article 30: clarification is needed regarding screening obligations applicable to PPTAs and SMOs.
Nomura Bank (Luxembourg) SA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Nomura Bank (Luxembourg) SA	Please specify which recital you refer to, and share your comments below.	Respondents generally welcome the clarifications provided in the recitals. However, several important operational clarifications contained in the recitals should also be reflected directly in the operative provisions. In particular: • recital 3 should be reflected directly in Articles 4 and 5 regarding multiple nationalities and place-of-birth information; • recital 7 should provide additional practical examples regarding “legitimate reasons” and “other credible

Name of the respondent	Question	Answer
		means" for vulnerable or excluded individuals; • recital 9 correctly recognises that SMOs are not beneficial owners and this distinction should be more clearly reflected throughout the operative provisions; • recital 14 appears difficult to reconcile with Article 20 AMLR regarding CIUs and final investors; • recital 25 provides useful clarification regarding transition periods, but further clarification is still needed regarding trigger events occurring during remediation periods. Respondents also encourage AMLA to use recitals to provide additional operational examples and objective guidance to support harmonised implementation.
Nomura Bank (Luxembourg) SA	Do you have any comments on the Annex in the draft RTS?	Yes
Nomura Bank (Luxembourg) SA	Please share your comments below.	Respondents did not raise substantial comments regarding the Annex itself. However, respondents encourage AMLA to ensure that: • examples and templates remain operationally realistic; • expectations remain proportionate across sectors; • and Annex-related requirements remain aligned with the risk-based approach underpinning the AMLR.
Nomura Bank (Luxembourg) SA	How would you rate the proposals set out in the draft RTS overall?	Neutral

Nomura Bank (Luxembourg) SA	Please justify your answer to the previous question and provide evidence where possible.	The draft RTS provide useful clarifications and contribute to harmonisation objectives. However, several provisions would benefit from greater proportionality, operational flexibility and legal certainty.
Nordea	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	no comment

Name of the respondent	Question	Answer
Nordea	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Nordea's feedback to Question 2 addresses recitals (9), (10) and (11) and Article 13 covering information requirements for senior managing officials (SMOs) when the obliged entity cannot identify a natural person as the beneficial owner of its customer. Conducting beneficial ownership investigations is critical to stopping criminals from hiding their illicit activities and dirty money behind secret corporate structures. We support appointing an SMO with the most day-to-day control when no beneficial owner can be identified, applying equivalent due diligence measures as for true beneficial owners. However, we question the need to appoint multiple SMOs for this purpose, as the currently drafted sections appear to indicate. Our concern is that this approach may lead to disproportionate control measures being imposed on SMLs who do not necessarily enhance or materially contribute to the entity's risk profile. Furthermore, it is not clear what specific risks this approach seeks to address. If AMLA determines that certain corporate vehicles present heightened risks requiring due diligence on SMOs as required on beneficial owners, we recommend specifying this requirement while granting obliged entities the flexibility to apply risk-based assessments to determine when such measures are appropriate for other customer types.

Name of the respondent	Question	Answer
		Example: When reviewing large global financial institutions where no beneficial owner can be identified, collecting comprehensive details on all board members—in addition to information already gathered for associated persons to facilitate PEP/sanctions screening—may not provide commensurate risk mitigation benefits. We recommend applying enhanced measures solely to the natural person with primary operational control, as this approach would be more proportionate while maintaining adequate risk coverage. Nordea's proposal is consistent with FATFs Guidance on Beneficial Ownership for Legal Persons (2023) where they indicate that an individual should be designated as holding the beneficial ownership position in situations where there is no true beneficial owner. This approach is more proportionate and suitable and consistent with the core objective of conducting beneficial ownership investigations and collecting additional details on true beneficial owners.
Nordea	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	no comment

Name of the respondent	Question	Answer
Nordea	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	no comment
Nordea	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	no comment
Nordea	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Nordea	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	22
Nordea	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We are under the opinion that the approach as described in article 22 on Sectorial Simplified measures with respect to Pooled accounts does not fully recognise the mitigation of risk that comes from professionally regulated pooled accounts and ask AMLA to take this input into account when considering both if the simplified measures could be applied to other risk classes than solely low-risk customer relationships, and if the requirements set out to applying the simplified due diligence measures are overly burdensome.

Name of the respondent	Question	Answer
		At the moment, Art. 22 of the RTS specify that banks offering pooled accounts have to complete a long list of controls on our customers' in order to determine if they could be in scope of simplified due diligence measures on their pooled accounts. These requirements are in addition to the risk associated with the business relationship being considered low (Art. 22(d)), and include, for instance, banks assessing how the customer applies CDD measures on their clients, Art. 22(e). Rather than restricting eligibility of applying simplified measures based solely on risk categories, we advocate for the determination of further measures on the banks side, such as performing ID&V on underlying customers on pooled accounts, to be closer aligned towards the risk-based approach. In many circumstances, pooled accounts is a product offered to entities or persons that are in scope of the AML Regulation and are required to identify and verify the identity of their customers. They are also under supervision of authorities. In these circumstances, especially, it is Nordea's opinion that it should be possible for banks to apply a risk-based approach on clarifying the identity of the customers customer. We consider it unfortunate if ID&V requirements that are specific for a product, inter alia requires banks to perform controls on other obliged entities that, should be performed by the relevant authority and not by other obliged entities. Given the different sectors that

Name of the respondent	Question	Answer
		banks and their customers can operate in, such as law firms and real estate agents, and the possibility of applying risk based approach across these sectors, we are concerned if it is possible for banks to assess the measurements applied across other sectors.
Nordea	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	32
Nordea	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Nordea recommend that RTS Article 32(3) is amended in a way that would, in case an electronic identification means or qualified trust service does not possess all attributes meant in Article 22(1) of AMLR or Section 5 or the RTS, allow obliged entities to make risk based decisions on how to verify the identity of the customer and any person purporting to act on their behalf in accordance with Article 22(6) of AMLR. This should mean that if the risk associated with the customer does not, in the obliged entity's view, require verifying all attributes required in Annex I, not all of them would have to be verified as long as the identity of the customer and any person purporting to act on their behalf is adequately verified
Nordea	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Nordea	Do you have any comments on the Annex in the draft RTS?	No
Nordea	How would you rate the proposals set out in the draft RTS overall?	Neutral
Nordea	Please justify your answer to the previous question and provide evidence where possible.	No comment

Name of the respondent	Question	Answer
NorthLark	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In general terms, yes we consider the proposals workable and broadly well-intentioned. The decision to frame the RTS around types of documents and information sources, rather than mandating specific ones, reflects an understanding of how different institutions actually operate, and we think that's the right approach. That said, speaking from experience across multiple sectors and entity types, there are parts of the draft where the practical realities of implementation haven't quite been captured, and we want to flag those honestly. The most persistent frustration we have is with how the simplified due diligence provisions have been drafted. The gap between standard and simplified measures is, in practice, narrower than the Level 1 text envisaged. When you look at what Article 33 of the AMLR permits a genuinely reduced set of obligations where risk is demonstrably lower and then look at what the draft RTS requires under SDD, including source of funds obligations, the two don't sit comfortably together. If simplified due diligence ends up requiring almost the same depth of enquiry as the standard regime, the risk-based approach becomes largely rhetorical. We'd like to see AMLA draw that distinction more sharply in the final text. On proportionality: this is particularly relevant for the non-financial sector, where the draft has received less attention than it perhaps deserves. A firm of solicitors, a small accountancy practice, or a trust and company service provider simply doesn't have the compliance infrastructure of a bank. The beneficial ownership

Name of the respondent	Question	Answer
		verification requirements, and especially the sanctions screening obligations as currently scoped, assume a level of technological capability that many smaller obliged entities don't have and may struggle to build within any reasonable timeframe. We're not arguing for a lower standard we're arguing for a more realistic path to achieving it. Explicit proportionality provisions or phased implementation options would go a long way here. Related to this is the cross-sector drafting issue. Reading through the draft, it's apparent that many provisions have been written with financial institutions primarily in mind, and then applied to the full population of obliged entities almost by default. Articles 8, 20, 21 and 30 are obvious examples, but the problem is more pervasive than a few specific provisions. The preamble should make clearer which obligations are universal, which are sector-specific, and where entities outside the financial sector should be applying adapted approaches. Without that, you end up with inconsistent supervisory expectations across Member States, which is precisely what this RTS is trying to avoid. Cross-border situations are another area where the draft needs to do more work. The clarification on multiple nationalities in the recitals is helpful, but it doesn't fully address the practical challenges of verifying customers from jurisdictions where documentation standards are simply different not inferior, just different. Obliged entities working with customers from certain regions need the flexibility to make equivalence judgements based on the risk context, rather than being

Name of the respondent	Question	Answer
		required to hold documentation to a standard that may not be achievable for that customer profile. A rigid approach here risks pushing legitimate customers out of the formal financial system, which doesn't serve anyone's interests. We also want to flag the digital onboarding provisions. The recognition of eIDAS-based electronic identification is welcome and long overdue, but the Article 6(3) approach to consent creates real uncertainty when you layer GDPR obligations on top of it. Rather than explicit consent as the mechanism, a clear disclosure and warning obligation might achieve the same customer protection outcome without creating the legal ambiguity that firms are currently navigating. This is worth reviewing carefully before finalisation. Finally, on product and service exclusions — the current provisions don't comprehensively reflect the risk differentiation that already exists in the AMLR itself. Low-risk products such as certain defined-contribution pension schemes and low-value stored-value instruments should be addressed more explicitly. Where the Level 1 text has already made a risk judgement, the RTS should be consistent with it, rather than leaving firms to work this out themselves through internal legal analysis. None of these points are intended as fundamental objections to the proposals. The direction is right. But getting these details right in the final text will determine whether the RTS delivers genuine harmonisation in practice, or creates a compliance framework that works

Name of the respondent	Question	Answer
		well for large financial institutions and leaves everyone else struggling to interpret it.
NorthLark	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, broadly we think the risk-based framework in the draft RTS is sound. The principle-based drafting style listing categories of information and verification sources rather than mandating specific documents gives obliged entities the operational room to exercise genuine judgment. That's the right approach, and it's worth saying clearly before raising the areas where the execution needs work. Because there are areas where it does need work. Simplified due diligence provisions The gap between what the AMLR permits under SDD and what the draft RTS actually requires remains too narrow to be meaningful. The AMLR is clear: where ML/TF risk is demonstrably lower, obliged entities should face reduced obligations. But reading the SDD provisions carefully, the difference from standard CDD isn't substantial. Requiring source-of-funds enquiries within a supposedly simplified regime for a customer an entity has already assessed as lower risk isn't simplification. It's the standard process with a different label attached. The final RTS should explicitly identify which standard CDD elements are reduced or disapplied under SDD, rather than simply permitting a "less intensive" application of identical requirements. Without that distinction being clearly drawn, compliance teams can't defend SDD decisions to supervisors with any confidence, and the risk-based approach becomes

Name of the respondent	Question	Answer
		largely theoretical in practice. Beneficial ownership verification The intent here is right central register information alone isn't sufficient, and the RTS correctly says so. The problem is what happens when beneficial ownership genuinely can't be verified despite reasonable efforts. The fall-back to senior managing officials helps, but the definition of "reasonable additional measures" needs to reflect the reality that a large bank and a small accountancy practice don't have the same investigative capacity or access to third-party data sources. We'd recommend the RTS clarify that where an obliged entity has documented its verification efforts across all reasonably available sources and has been unable to reach a definitive conclusion, that documented effort combined with an enhanced risk assessment and heightened ongoing monitoring constitutes compliance with the verification obligation. Without this, firms face an unresolvable tension between the obligation to verify and the practical impossibility of doing so in certain complex structures. Third-country risk calibration This is probably the area where the draft is weakest from a risk-based perspective. Cross-border customers don't present inherently higher risk but the verification tools available to obliged entities vary enormously depending on the jurisdiction. What's achievable for a customer from a well-documented EU jurisdiction isn't achievable for one from a country with less standardised documentation systems, and the RTS doesn't acknowledge this in any operationally useful

Name of the respondent	Question	Answer
		way. We're not asking for lower standards. We're asking for guidance on how obliged entities should calibrate their verification approach when standard sources aren't available, so that geographic risk factors are applied with nuance rather than through blanket country-level assumptions that end up excluding legitimate customers. A short set of principles on this interaction would close the gap without reopening the broader structure of the standard. Overall, the architecture is right and the direction is sound. But in these three areas, the current drafting will push institutions toward tick-box compliance simply because the risk-based alternative isn't clearly enough defined which is precisely what this RTS is trying to move away from.
NorthLark	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, and this is the question where we have the most direct operational experience to contribute. Across the entities and sectors we represent, there are four recurring situations where required CDD information is simply not obtainable, and the draft RTS doesn't provide a workable alternative when that happens. Beneficial ownership in complex or multi-layered structures Where a corporate customer is held through multiple layers of entities, particularly where some sit in jurisdictions with limited transparency infrastructure, tracing ownership to the natural person level isn't always possible, even after exhausting every available source. The fallback to senior managing officials helps, but it doesn't address the intermediate scenario: partial

Name of the respondent	Question	Answer
		beneficial ownership information has been obtained, all reasonable steps have been taken, but the full picture remains incomplete. We propose that the RTS explicitly permit obliged entities in this situation to proceed on the basis of verified partial ownership information, subject to a mandatory enhanced risk classification and heightened ongoing transaction monitoring, provided the steps taken are fully documented. The compliance obligation should attach to the effort and the compensating controls, not to an outcome that isn't always achievable. Identity documents from non-EU and third-country customers Some countries simply don't issue identity documents that contain all the data fields the draft RTS specifies. This isn't a risk issue; it's a documentation infrastructure issue. We've seen this regularly with customers from parts of South and Southeast Asia, Sub-Saharan Africa, and Latin America, where document formats vary considerably from EU norms. The RTS should allow obliged entities to accept combinations of documents, such as a national ID supplemented by, say, a utility bill and a bank reference, where no single document meets the full specification. Equivalence should be assessed by the obliged entity against the customer's risk profile, documented accordingly, rather than being tied to a fixed documentary standard that inadvertently excludes a significant portion of the legitimate global population. Legal arrangements and trust structures For trust and similar arrangement customers, full

Name of the respondent	Question	Answer
		information on settlors, trustees, protectors, and beneficiaries is frequently unavailable at onboarding, particularly where arrangements are discretionary or where relevant parties are domiciled outside the EU. The draft RTS sets out what must be collected but is silent on what to do when it can't be obtained in full. Group-level reliance would address much of this in practice. Where a group entity has already conducted CDD on the same structure, another obliged entity within the group should be able to rely on that work explicitly, subject to clear conditions on information quality, sharing protocols, and responsibility. This already happens informally; formalizing it in the RTS would create a defensible framework and reduce unnecessary duplication. Informal economy customers This matters particularly for the non-financial sector lawyers, accountants, and notaries who regularly work with small business owners whose activity is largely cash-based. Requesting formal source-of-funds documentation from a market trader or small agricultural supplier is neither proportionate to the risk they typically present nor realistic in practice. The documentation often doesn't exist in any formal sense. The RTS should permit a corroborating evidence approach for customers whose profile is consistent with informal or semi-formal economic activity where the obliged entity documents the nature of the activity, assesses the plausibility of the funds in context, and applies enhanced ongoing monitoring in lieu of documentation that will never materialize. That

Name of the respondent	Question	Answer
		approach is more honest about how risk-based compliance actually works than requiring paperwork that can't be produced. Across all four situations, the same principle applies: where information is genuinely unavailable despite good-faith efforts, the RTS should provide a documented alternative pathway rather than leaving obliged entities to either decline legitimate customers or operate without regulatory cover. The obligation should be to try, document, and compensate through monitoring not to achieve what isn't achievable.
NorthLark	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The draft RTS makes progress on SDD but leaves meaningful gaps for product categories where the structural features of the product itself — not just the customer profile — create an inherent constraint on ML/TF risk. Three categories deserve more explicit treatment. Low-value payment and stored-value instruments Where a payment instrument operates below defined monetary thresholds, is non-reloadable or subject to strict loading limits, and cannot be used for cross-border transfers, the product design itself substantially limits ML/TF utility. The risk is structurally bounded in a way the current SDD provisions don't reflect. We propose the RTS explicitly permit: simplified beneficial ownership verification limited to the direct customer only, with no requirement to look behind to connected parties; and a periodic review cycle of no less than five years absent specific risk triggers. Proposed drafting direction: "Where an obliged entity offers a stored-value product subject to a maximum

Name of the respondent	Question	Answer
		value of [€250] restricted to domestic transactions, it may limit CDD to verification of the direct customer's identity and shall not be required to identify beneficial owners or conduct source-of-funds enquiries, provided product features are contractually enforced and the obliged entity monitors for circumvention." Defined-contribution pension schemes DC pension products are structurally low-risk: contributions originate from regulated payroll or bank accounts, benefits are paid only on retirement or death, and early access is heavily restricted. The product makes layering or integration extremely difficult. Despite this, the draft RTS provides no specific SDD recognition for pension products. Where contributions originate from a verified employer or regulated institution, we propose the RTS permit simplified beneficial ownership verification covering only the scheme member and contributing employer, without further ownership chain analysis. Periodic review should follow a ten-year cycle or be triggered only by significant changes to contribution levels or beneficiary designations. Source-of-funds enquiries should not be required — contributions from occupational or personal pensions are already subject to regulatory oversight at origin. Requiring duplicate enquiries adds cost with no corresponding risk benefit. Pure protection and term life insurance For insurance products with no investment element term life, critical illness, and income protection there is no surrender value, no cash extraction mechanism, and benefits are paid only on an insured event. These

Name of the respondent	Question	Answer
		products cannot meaningfully be used to move or disguise funds. The RTS should explicitly permit reliance on product-level risk assessment for these products so that where the product has been assessed as lower risk at sector or product level, the obliged entity may apply SDD without conducting an individual customer risk assessment beyond basic identity verification. Beneficial ownership verification should cover only the policyholder and named beneficiary. Periodic review should be triggered by material policy changes — a beneficiary change or significant uplift in cover rather than fixed time intervals. Proposed drafting direction: "For pure protection insurance products with no surrender or investment value, obliged entities may rely on the product risk classification in their entity-wide risk assessment to justify SDD measures, subject to verification of the policyholder's identity and any named beneficiary. Periodic review shall be conducted upon material policy changes and need not follow a fixed time-based cycle." The common thread across all three proposals is that SDD should be available where product architecture itself limits ML/TF risk — not only where the individual customer presents a lower risk profile. The current draft focuses heavily on customer-level risk factors, which misses the opportunity to give clear regulatory recognition to structurally low-risk products. Addressing this would reduce compliance costs where the risk case doesn't justify them, and free up capacity to focus where the risk genuinely is higher

Name of the respondent	Question	Answer
NorthLark	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 6 - Non-face-to-face onboarding and digital identity Article 6 recognizes eIDAS-compliant electronic identification as a valid verification method, which is welcome. The gap is what happens outside the eIDAS framework for customers onboarded through non-EU digital identity systems that are functionally equivalent but not formally recognized under eIDAS. The article currently offers no pathway for obliged entities to accept these, even where the underlying assurance level is comparable. We propose adding a provision permitting obliged entities to accept non-eIDAS digital identity solutions where an internal equivalence assessment has been conducted and documented, the assurance level meets at minimum the "substantial" threshold under eIDAS standards, and the assessment is reviewed periodically. This is particularly relevant for entities onboarding customers from jurisdictions with mature but non-EU digital identity infrastructure. Article 15 : PEP identification and de-listing The de-listing provisions in Article 15 require a minimum 12-month enhanced monitoring period following cessation of a prominent public function, which is consistent with the AMLR. The problem in practice is that the article provides no guidance on what "cessation" means across different jurisdictions and political systems, a distinction that matters considerably when assessing whether residual influence risk remains. We recommend AMLA issue accompanying guidance clarifying that obliged entities may apply a risk-based

Name of the respondent	Question	Answer
		assessment of residual influence when determining whether the 12-month minimum is sufficient or whether an extended period is warranted. The article itself should also explicitly address situations where PEP status is disputed or where reliable public registers are absent, which is a recurring operational challenge for entities serving customers from jurisdictions with limited transparency. Article 20 - Correspondent relationships Article 20 sets out the enhanced measures applicable to correspondent relationships but doesn't clearly address digital asset or payment institution correspondents, where the nature of the relationship differs structurally from traditional banking correspondents. The provision appears drafted primarily with credit institution relationships in mind, creating interpretive uncertainty for payment institutions and CASPs entering into functionally equivalent arrangements. We propose the article be amended to clarify its application to non-bank correspondent relationships or that AMLA publish sector-specific guidance alongside the final RTS addressing how the correspondent relationship framework applies to payment institutions and crypto-asset service providers specifically. Article 30 - Reliance on third parties Article 30 permits reliance on third parties subject to conditions around responsibility and information availability, but the provisions around intra-group reliance are less clear than they should be. In practice, group entities routinely share CDD work as part of a coordinated onboarding process, but the article doesn't

Name of the respondent	Question	Answer
		explicitly confirm that intra-group reliance carries the same legal standing as third-party reliance or whether different conditions apply. We recommend the article be amended to include an explicit intra-group reliance provision, confirming that where CDD has been conducted by another entity within the same group, subject to equivalent AML/CFT standards and adequate information-sharing arrangements, the relying entity may treat that work as satisfying its own CDD obligations. Responsibility should remain with the relying entity, but the framework for doing this properly should be clearly set out rather than left to interpretation.
NorthLark	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
NorthLark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 33 - Timing of CDD verification Article 33 requires CDD to be completed before establishing a business relationship or carrying out a transaction, which is the correct default position. The difficulty arises in sectors where the nature of the engagement makes pre-relationship verification operationally impractical, legal and professional services being the most obvious example, where a client may need to instruct a firm urgently before full CDD can be completed. The article permits deferred verification in limited circumstances, but the conditions attached are narrow and don't adequately reflect the range of legitimate situations where some degree of deferral is necessary. We propose the article be amended to permit deferred

Name of the respondent	Question	Answer
		completion of CDD beyond the currently specified circumstances where the obliged entity can demonstrate that deferral was necessary to avoid interrupting a time-critical legitimate transaction, that interim risk controls were applied during the deferral period, and that verification was completed at the earliest practicable opportunity. The deferral should be documented and time-bound, with a maximum period specified in the RTS rather than left open-ended.
NorthLark	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
NorthLark	Do you have any comments on the Annex in the draft RTS?	No
NorthLark	How would you rate the proposals set out in the draft RTS overall?	Good
Observatoire de la lutte anti blanchiment et contre le financement du terrorisme (OLAB)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	L'OLAB approuve l'idée d'une clarification des obligations applicables aux entités assujetties. L'association prend note des arbitrages effectués par l'AMLA face aux policy issues mentionnées dans le document ouvrant la consultation publique. L'association souhaite toutefois mentionner que le contenu des RTS conduit à une augmentation significative de la charge imposée aux différents secteurs, et notamment aux acteurs non financiers. Compte tenu de la grande diversité des acteurs non financiers et de l'impossibilité de tout rassembler dans une seule réponse, l'OLAB a seulement relevé quelques problèmes généraux dans sa réponse, et renvoie pour le

Name of the respondent	Question	Answer
		reste aux réponses apportées par les différents secteurs.
Observatoire de la lutte anti blanchiment et contre le financement du terrorisme (OLAB)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	La rédaction actuelle de l'article 9 pose problème. En effet, celui-ci vise toutes les entités assujetties, et leur impose de collecter systématiquement des informations en cas d'usage d'IBAN virtuels. Cela présuppose que ces entités assujetties soient toutes capables d'identifier un IBAN virtuel. Or cela n'est pas possible pour les acteurs du secteur non financier L'article 22(3) alinéa 2 du règlement 2024/1624, sur lequel repose cet article 9 des RTS, permet aux établissements financiers et établissements de crédit d'échanger entre eux des informations relatives aux IBAN virtuels, facilitant ainsi leur identification. Cet article du règlement ne vise que le secteur financier et est donc pensé pour lui, et non pour les autres secteurs. Le principe de l'échange d'information permettant de traiter les IBAN virtuels, explicitement prévu par le règlement, est donc limité aux acteurs financiers, et n'est pas accessibles aux autres entités assujetties. Il nous semble nécessaire que les RTS et le règlement soient alignés sur cette question. Si l'article 22(3) vise seulement le secteur financier, l'article 9 des RTS doit aussi viser seulement le secteur financier. Proposition : L'article 9 des RTS devrait remplacer l'expression « obliged entities » par « les entités assujetties visées par l'article 22(3) du règlement 2024/1624 ».

Name of the respondent	Question	Answer
Observatoire de la lutte anti blanchiment et contre le financement du terrorisme (OLAB)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Les RTS, et notamment ses articles 19 3. (identification of politically exposed persons) et 30 (a) (screening requirements – targeted financial sanctions) font l'effort de tenir compte de la taille, du modèle économique, de la complexité et de la nature des acteurs dans la mise en œuvre du devoir de vigilance. L'OLAB estime que cela est nécessaire et que l'extension de certaines obligations -comme le recours systématique à des services de screening basés par exemple sur Worldcheck- à tous les acteurs ne serait pas proportionnée.
Observatoire de la lutte anti blanchiment et contre le financement du terrorisme (OLAB)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	La rédaction actuelle de l'article 18, visant à exiger des entités assujetties qu'elles identifient la finalité et la nature de la relation d'affaire ou de l'opération, nous semble poser problème. Cet article s'applique à toutes les entités assujetties, sans distinction. Or, certaines des informations qu'il est demandé de collecter sont pensée sur le modèle des activités du secteur financier. Si l'on peut comprendre que toutes les entités assujetties doivent comprendre la finalité d'une certaine opération (article 18 (a)), il en va différemment de l'identification des autres éléments mentionnés dans l'article, tels que le montant estimé (18 (b)), la source des fonds (18 (c)), la destination des fonds (18 (d)), ou encore l'activité professionnelle des clients (18 (e)). Ces obligations supplémentaires nous semblent être issues du modèle applicable au secteur financier, et ne correspondent pas aux activités du secteur financier. Certes, l'article 18 n'exige des entités assujetties de collecter ces informations que « where necessary ». Cela met toutefois de côté la question de la faisabilité

Name of the respondent	Question	Answer
		d'une telle collecte d'information. Proposition : Bien que la limitation à ce qui est nécessaire soit utile, l'OLAB propose de préciser que la collecte des informations mentionnées à l'article 18 est exigée seulement « where necessary and feasible given the size, business model, complexity or nature of the business ».
Observatoire de la lutte anti blanchiment et contre le financement du terrorisme (OLAB)	5. Ochsner Law	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ochsner Law	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	14
Ochsner Law	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	1. Introduction At the outset, we wish to emphasise that this submission is fully aligned with the objectives of: • robust AML/CFT controls, • effective transparency of beneficial ownership, and • faithful implementation of FATF standards. Our concern is limited to ensuring that the RTS: • remain consistent with Article 22(4) of Regulation (EU) 2024/1624 (AMLR), and • reflect the graduated, risk-based approach embedded in FATF guidance. 2. Executive Summary • Article 14 RTS CDD appears to equate ascertainable beneficiaries with beneficial owners. • This risks advancing beneficial ownership status to a

Name of the respondent	Question	Answer
		stage prior to actual entitlement. • Such an approach is not fully aligned with: o Article 22(4) AMLR, and o FATF Guidance on Beneficial Ownership of Legal Arrangements. We propose: • either a clarifying interpretation, or • a targeted amendment to the wording of Article 14, to ensure that ascertainability affects the scope of information to be obtained, but does not in itself determine the moment at which full beneficial ownership obligations arise. 3. Legal Framework 3.1 Article 22(4) AMLR Article 22(4) AMLR provides that obliged entities shall obtain sufficient information to: “establish the identity of the beneficiary at the time of the payout or at the time of the exercise by the beneficiary of its vested rights.” This provision establishes a clear temporal trigger for full identification and verification obligations. It reflects a distinction between: • ex ante information gathering, and • event-based identification of concrete individuals. 3.2 FATF Standards and Guidance The FATF framework (Recommendation 25 and associated Guidance on Beneficial Ownership and Transparency of Legal Arrangements, “FATF Guidance”) adopts a graduated and dynamic approach:

Name of the respondent	Question	Answer
		• Where beneficiaries are not identifiable: o information on the class of beneficiaries is required. • Where beneficiaries become ascertainable: o more granular information should be obtained. • However, as clarified in the Interpretative Note to Recommendation 25 (footnote 88) and the FATF Guidance (footnote 11), the following applies: “For beneficiary(ies) of trusts/similar legal arrangement that are designated by characteristics or by class, trustees/equivalent are not expected to obtain fully adequate and accurate information until the person becomes entitled as beneficiary at the time of the payout or when the beneficiary intends to exercise vested rights, as per the risk-based approach.” Para. 47 FATF Guidance gives further clarification on this matter: “A particular possible beneficiary may not be aware that they are an “object of a power” as there may be instances where the trust instrument provides that a possible beneficiary is not to be informed of their likely entitlement until a discretion is exercised in their favour, until they attain a specific age, or some other occurrence. There may be situations where it may be deemed that no beneficiaries are ascertainable at a certain point in time if no discretions have been exercised by the trustee.” This confirms that ascertainability is an information concept, not the legal moment of full beneficial ownership. 4. Issue in Article 14 RTS CDD

Name of the respondent	Question	Answer
		Article 14 includes wording to the effect that ascertainable beneficiaries: “shall be treated as beneficial owners” and may “become ascertainable and thus beneficial owners”. This formulation may be understood as: • collapsing the distinction between ascertainability and beneficial ownership, and • triggering full BO treatment before entitlement arises. Such an interpretation would create tension with: • the event-based structure of Article 22(4) AMLR, and • the graduated FATF approach. 5. Proposed Solution To ensure clarity and legal certainty, we suggest the following amendments: Article 14(1)(a) – Proposed wording: “a description of the class of beneficiaries and its characteristics, containing sufficient information to enable the obliged entity to determine whether individual beneficiaries are ascertainable; where beneficiaries are ascertainable, the obliged entity shall obtain information on those individuals to the extent necessary under a risk-based approach, without prejudice to the timing of identification and verification pursuant to Article 22(4) of Regulation (EU) 2024/1624.” Article 14(2) – Proposed wording: “Obliged entities shall take risk-sensitive measures to ensure timely updates where beneficiaries previously identified by class or characteristics become ascertainable. The fact that a beneficiary becomes ascertainable shall not, in itself, trigger full identification

Name of the respondent	Question	Answer
		and verification obligations, which remain subject to Article 22(4) of Regulation (EU) 2024/1624.”
Ochsner Law	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Ochsner Law	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Para. 5: "[...] obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7." It should be possible for relevant documents (e.g. a certified copy of an identity document) to be submitted to the obliged entities also by third parties (e.g. notaries).
Ochsner Law	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Ochsner Law	Do you have any comments on the Annex in the draft RTS?	No
Ochsner Law	How would you rate the proposals set out in the draft RTS overall?	Neutral
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The RTS is drafted in a way that assumes operating models of financial institutions (e.g. dedicated compliance teams, specialist tools, highly standardised onboarding). However, for small law firms and sole practitioners, the suggested RTS cannot implemented in a way which is resource efficient and proportionate. Where the RTS mentions automated tools (e.g. for client screening) or remote verification procedures, it must be clarified that a manual process is sufficient for small

Name of the respondent	Question	Answer
		firms where justified by size and business model. The proposed RTS need to put more weight on the principle of proportionality and the risk-based approach. both principles and must be refined with the aim of providing the necessary flexibility. Therefore, the following provisions must be amended: Article 1 - Proportionality and risk-based approach This Commission Delegated Regulation ('Regulation') shall be applied in line with the proportionality principle and in coherence with the risk-based approach. The extent and the nature of the information to be obtained and the measures to be applied by obliged entities shall therefore be commensurate with the type and level of risk identified, in order to enable obliged entities to manage and mitigate that risk appropriately. The proposal needs to be substantially adapted to non-financial business models. For legal practices, particularly for small and sole practitioners, the main concern is that a cross sector RTS may be implemented in a way that fits operating models of financial institutions (e.g. dedicated compliance teams, specialist tooling, and highly standardised onboarding), which many law firms cannot provide in an efficient and proportionate manner due to their different type of activities and set-up. Article 7 (remote verification) and Article 8

Name of the respondent	Question	Answer
		(reliable/independent sources). The expectations as regards remote solutions are not achievable for for small firms, including when using third-party solutions and when demonstrating compliance to competent authorities. Article 12 (complex corporate structures). The definition is very complex and probably unmanageable in practice. Article 18 (purpose and intended nature of the business relationship / occasional transaction). We suggest adding an explicit clarification that the information items in Article 18 are to be obtained only where necessary and proportionate. Article 22 – Pooled Accounts If Article 22 remains as it is currently proposed, it will have a major impact on a very large part of lawyer‘s activities and therefore, it must be amended. The proposed Art. 22 (a) makes the use of pooled accounts for lawyers impossible, as the prerequisite for applying simplified due diligence measures shall be that “the credit or financial institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit or financial institution”, which is only fulfilled for matters falling under Article 3(3)(b) AMLR. Moreover, this provision causes major concern from the viewpoint of lawyer

Name of the respondent	Question	Answer
		professional privilege/professional secrecy. For more detailed comments on this specific provision see the further section of the questionnaire.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In principle, we agree that the draft provides for a risk-based approach as stipulated in Article 1 RTS. However, the risk-based approach requires some improvements, for example: 1) Several provisions provide that the obliged entity shall obtain information on “at least one of the following” points. All these exhaustive lists should contain an additional point: “any information that the obliged entity deems useful to understand / obtain the required information” This would allow for more flexibility, as in particular situations, other information might be available or relevant, but which is not contained in the enumerative lists. 2) Some provisions state that information shall be obtained “where necessary”. The wording “where necessary” should be clarified and defined. Obtaining an information is necessary” where the obliged entity has established according to a risk-based assessment hat obtaining the information is required to understand the occasional transaction of business relationship and the associated risks, is able to provide a better understanding of these risks and can be obtained with a reasonable effort.

Name of the respondent	Question	Answer
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The draft RTS focuses on the financial sector and cannot easily be applied to the non-financial sector. It is not only very ambitious in its approach, but it is also not tailored to the nature of the business of legal professionals. The non-financial sector is comprised in large part of many small(er) entities that do not possess the same resources to implement time-consuming administrative CDD measures. Legal professionals are only subject to AML obligations in specific circumstances defined by Article 3(3) AMLR. These are often limited, case-based, and triggered by particular client engagements. Therefore, the administrative structure and data capture logic proposed in Section 2 of the draft RTS, which appears designed for entities with ongoing client accounts, transaction volumes and continuous onboarding processes, does not align with the operational model of lawyers. A uniform application of these standards would impose disproportionate compliance burdens on lawyers and legal practices, especially sole practitioners or small offices, with no added benefit in terms of AML/CFT effectiveness. The following specific provisions must be amended: Article 5 requires that information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status shall be collected. However, national ID documents (such as passports or identity cards), which are examined for the purpose KYC/CDD

Name of the respondent	Question	Answer
		only show one nationality (i.e. the nationality if the issuing state). Therefore, it is impossible to know if a client as other nationalities (e.g. dual citizenship); the obliged entity has no means to verify information on additional nationalities provided by the costumer. Therefore, the requirement to collect information and verify all nationalities must be replaced by a requirement to record only the nationalities shown in the ID documents presented by the costumer. Article 22: Article 22 (a) RTS cannot be observed in most situations involving pooled accounts of lawyers. Article 30(c)(ii) requires all obliged entities to perform screening against TFS lists "when there is a change in any of the existing designations, or a new designation is made pursuant to Article 26(4) of Regulation (EU) 2024/1624". However, the corresponding provision in Article 26(4) of the AMLR clearly limits this specific requirement to credit and financial institutions. Article 30(c)(ii) RTS may not impose requirements exceeding those of the AMLR and, accordingly, shall be amended to reflect the scope intended by the AMLR, limiting the obligation to perform screening upon new designations of targeted financial sanctions to credit institutions and financial institutions only, in line with Article 26(4) of AMLR. With respect to Article 30(a), iii., it may be noted that this Article requires systematic screening, of "any other names, aliases or trade names where they differ from

Name of the respondent	Question	Answer
		the registered name" and "digital wallet address, where available in the lists of targeted financial sanctions". The obligation to screen this information shall be strictly limited to cases where this information is held in the KYC file for other reasons, to the extent in line with the risk-based approach applied by the obliged entity, and relevant to the activities / services provided under the business relationship with the customer.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Article 20 (1) lists the minimum requirements for customer identification in situation of low risk for natural person and legal entities. Unlike Article 6 (5), it does not specify any documents required to verify this information. Our understanding is that recital (4) applies, i.e., that the obliged entity must take a risk-based approach to verify the information using reliable and independent sources. For natural persons, these include, but are not limited to, those specified in Article 6 (5). If another interpretation was intended and Art. 6 (5) was meant to also apply for natural persons in low-risk situations, we suggest that simplified due diligence measures apply at least when a person acts on behalf of a customer that is a legal person, and the acting person is named in official documents available for the customer, such as excerpts from a public register. In these cases, it is not clear what can be gained in an AML/CTF context by verifying the information in the way described in Article 6 (5).
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	--

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	22
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The proposed Art 22 (a) makes the use of pooled accounts for lawyers impossible. Moreover, it conflicts with legal professional privilege / professional secrecy (hereinafter “LPP/PS”). LPP/PS is specifically protected under Article 8 of the European Convention on Human Rights and Article 7 of the Charter. As elaborated in the case law of the ECtHR and the CJEU (cf. ECtHR, 6 December 2012, Michaud v. France; ECtHR, 9 April 2019, Altay v. Turkey; CJEU, 8 December 2022, C-694/20; CJEU, 29 July 2024, C-623/22; CJEU, 26 September 2024, C-432/23), LPP covers both representation in court and legal advice. Thus, a lawyer cannot in principle disclose his or her clients to third parties. The obligation for lawyers in activities not covered by the AML regime and regardless of the risk to immediately and at all times provide information and documents to credit institutions on the latter’s mere request, would amount to a disproportionate and unjustified interference with LPP/PS.

Name of the respondent	Question	Answer
		Pooled accounts are indispensable for daily operations for lawyers, as the following examples show: 1) Payment of Self Assessed Taxes In certain cases (e.g. assignments, settlements, lease agreements), fees or self-assessed taxes are paid into the lawyer's pooled account. The lawyer calculates the fee or tax and forwards the amounts to the tax authority or court. The pooled account ensures proper segregation and traceability. 2) Debt Collection and Enforcement Proceedings In debt recovery matters, debtors pay outstanding amounts into the lawyer's pooled account. The lawyer allocates payments to principal, interest, costs and expenses. Client funds remain clearly separated from the lawyer's own assets. Amounts are often only very small. 3) Damages Claims Arising from Traffic Accidents or Personal Injury After settlement negotiations, insurers transfer the compensation and legal fees to the claimant's lawyer. The lawyer uses the pooled account to settle third party claims, such as repair costs etc. The remaining amount is paid out to the client. 4) Settlement Payments and Recoverable Legal Costs in Civil Litigation Settlement amounts or awarded cost refunds are frequently paid to a lawyer's pooled account. The lawyer distributes the funds in accordance with the settlement agreement or court decision. This is particularly useful in multiparty proceedings, such as class actions.

Name of the respondent	Question	Answer
		These four examples do not fall within the scope of AML/CFT provisions (Article 3(3)(b) AMLR). The lawyer is under no legal obligation to carry out CDD/KYC. However, according to the wording of Article 22(a) RTS on CDD, the lawyer would be required to identifying and verifying the identity of the client according to Article 20(1)(h) AMLR. Lawyers can only provide this information if they have established and verified the "identity of the natural person" in accordance with Article 20(1)(h). Outside of the financial and real estate transactions mentioned in Article 3(3)(b), and moreover below the thresholds set out in Article 19(1) (EUR 10,000), lawyers are not required to collect this information, as these transactions do not fall within the scope of the Regulation. Collecting such information would be practically unmanageable, as it would have to be done for almost every client and would involve a full identification process. The requirement is neither covered by the wording nor the purpose of the AMLR: The application to lawyers was deliberately limited to the scope of Article 3(3)(b). Furthermore, the purpose of this information is limited, since depositors are usually not clients but often the opposing party. Replacing pooled accounts with direct payments to clients is not feasible, as clients are generally unable to monitor payment deadlines, calculate interest, etc. In addition, fee payments and payments from opposing

Name of the respondent	Question	Answer
		parties often arrive mixed and must first be separated, which clients cannot handle themselves. The problem is not specific the legal profession. Pooled accounts are operated for example by schools (for the purpose of collecting small amounts for expenses) or by property managers who manage operating costs. Moreover, Article 19 AMLR establishes thresholds for CDD obligations that must be observed also within Article 22 RTS. Drafting proposal: “Article 22 - … (a) the credit institution is satisfied that (i) the funds are not related to activities that fall within the scope of the obligations of Regulation (EU) 2024/1624, in particular its Article 3 and Article 19 or (ii) the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit institution;”

ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	With respect to Article 3 (Information to be obtained in relation to addresses), the detailed information required under this Article (which applies to both the customer itself, the persons purporting to act on its behalf, and the natural persons on whose behalf or for

Name of the respondent	Question	Answer
		the benefit of whom a transaction or activity is being conducted) appears contradictory to the risk-based approach principle (e.g. when it comes to proxyholders or persons benefiting from the activity/transaction, information relating to personal addresses could be reduced, on a risk-based approach, to the country of residence and nationality(ies) only). For proxyholders acting for a legal person, instead of requiring the personal address, it could be sufficient to collect the professional address only.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	According to Article 6 (3), obliged entities shall take “reasonable steps” to ensure the authenticity of the documents collected for the purpose of identification and verification of the client. Therefore, it should be clarified what is understood by “reasonable steps”. In face-to-face context, Article 6 (5) requires systematic collection of the original ID document, or a certified copy thereof, or resorting to verification measures detailed by Article 7 for non face-to-face context (i.e. which, we understand, results in getting a copy of an ID document through eIDAS-compliant tools or through other electronic tools meeting the conditions detailed by Article 7(3) to (4)). The requirement of collecting the original or (certified) copies of documents as well as the extensive conditions provided by Article 7 in terms of technological features is not in line with a risk-based approach. A more flexible, risk-based approach should

Name of the respondent	Question	Answer
		be provided, e.g. in case of proxyholders of low-risk customers (such as regulated or listed entities).
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 7(1) establishes eIDAS-compliant electronic identification means as the primary verification method for non-face-to-face situations. Article 7(2) permits remote solutions only “in cases where the solution described in paragraph 1 is not available or cannot reasonably be expected to be provided.” Article 7(4) further requires obliged entities to “justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624.” eIDAS-compliant solutions should however be merely recognised as a preferred verification method, with obliged entities retaining the discretion to use equivalent remote tools where appropriate. Indeed, the introduced hierarchy privileging eIDAS, reinforced by the justification required under Article 7(4), is disproportionate and fall short of any risk-based principle. It should also be clarified that reliable and independent sources of information according to the criteria set out in Article 7 may replace any documents required for the verification of the identity of the person. This follows from Article 22(6)(a) AMLR which allows the use of such documents. It can occur that a lawyer cannot obtain some documents and in these cases, it should be possible to rely on other sources.

Name of the respondent	Question	Answer
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	12
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	With respect to Articles 11 and 12 regarding understanding the ownership and control structure of a customer, the amendments to Article 12 pursuant to which the threshold was raised from two layers to three layers and now requires more than one cumulative condition (rather than one only) to be met before a structure is treated as complex are welcomed. However we would like to point out: a) the presence of several layers does not necessarily result in a customer or an entity being considered as riskier or complex. The scope and extent of the information and supporting documentation, as the case may be, to be gathered with respect to each entity involved in the ownership structure of the customer should be determined on a risk-based approach; b) accordingly, the assessment of a given ownership structure should be done on a case-by-case basis, instead of being based on mandatory criteria, such as those provided under Article 12 of the draft RTS.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	13
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	With respect to Article 13 (information on senior managing officials – “SMOs”), it is sufficient to obtain the address of the registered office of the legal entity instead of the SMO’s residential address and country of residence. However, the article continues to require

Name of the respondent	Question	Answer
		collecting the same information for SMOs as for beneficial owners and verifying their identity "in the same way as they would for beneficial owners," which does not reflect the different risk profile of these two categories. Indeed, the ML/TF risk linked to a SMO is generally lower, as a SMO may be just an employee and does not normally have a personal financial interest in the transaction. As a result, the verification of the identity of SMOs should occur on a risk-based approach, taking into account their actual involvement in the transactions / services.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	5
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 5 RTS requires the collection of information on “all nationalities”, whereas Recital 3 stipulates that verification of one nationality is sufficient if a natural person declares multiple nationalities in good faith. This mitigation should be incorporated directly in Article 5 RTS instead of in the recitals (see also a comment in this regard above). It should be confirmed explicitly that “the natural person purporting to act on behalf of the customer”, as referred to in Article 5 RTS, does not include the legal representatives acting on behalf of a legal person (as mentioned in Article 22(b)(iii) AMLR)). If this term - “natural person purporting to act on behalf of the customer” - were to include legal representatives acting on behalf of a legal person, this would impose a significant and disproportionate administrative burden on obliged entities. In many cases, legal persons have

Name of the respondent	Question	Answer
		multiple representatives, which may also change frequently. Systematically obtaining and verifying also nationality information for all such representatives (particularly if this would be required in all cases and irrespective of risk) would go beyond what is reasonably necessary for AML/CFT purposes and is inconsistent with a risk-based approach of the RTS.
ÖRAK Österreichischer Rechtsanwaltskammertag (Austrian Bar)	How would you rate the proposals set out in the draft RTS overall?	Neutral
Ordre des Avocats du Barreau de Luxembourg	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The pillar of flexibility comes from a correctly worded art. 1, setting forth the principle of proportionality and the risk-based approach. The proposed RTS needs to put more weight of both principles and must be refined with the aim at providing the necessary flexibility. We would then propose the following revised text of Article 1. Article 1 - Proportionality and risk-based approach This Commission Delegated Regulation ('Regulation') shall be applied in line with proportionality principle and in coherence of the risk-based approach. The extent and the nature of the information to be obtained and the measures to be applied by obliged entities shall therefore be commensurate with the type and level of risk identified, so to and shall enable obliged entities to manage and mitigate that risk appropriately. We generally agree that the draft RTS could are in

Name of the respondent	Question	Answer
		principle applicable across the range of products and services provided by obligated entities, including across the legal profession, but only if substantially adapted to non-financial business models. For legal practices particularly small and sole practitioners, the principal concern is that cross sector RTS drafting may be implemented in a way that assumes financial institution operating models (dedicated compliance teams, specialist tooling, and highly standardised onboarding), which many legal practices could not provide in a resource efficient and proportionate manner due to their different type of activities and set-up.We also seek confirmation explicitly that listed information items (articles 3,4,5,& 6) are to be collected only to the extent necessary and in a manner proportional to risk and the stage of the legal matter. Where the RTS contemplates automated tools (e.g., screening) or remote verification safeguards, clarify in, for example, recitals that a controlled manual process may be acceptable for firms were justified by size/business model or by the AML-risks associated with a client or case, provided it is documented and consistently applied. Drafting proposals to preserve proportionality for legal services: Articles 7, 12, 18,

Name of the respondent	Question	Answer
		19(3) – see OAL's comments on particular provisions in the further section of the questionnaire. Article 22 if it stands as it is, will have a major impact on a very large part of lawyer's activities and therefore, it must be amended. The proposed Art 22 (a) makes the use of pooled accounts for lawyers impossible, as the prerequisite for applying simplified due diligence measures shall be that "the credit or financial institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit or financial institution". Moreover, this provision, Article poses major issues from the viewpoint of lawyer's LPP/PS. For more detailed comments on this specific provision see further section of the questionnaire.
Ordre des Avocats du Barreau de Luxembourg	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In principle, we agree that the draft provides for a risk-based approach as stipulated in Article 1 RTS. However, the risk-based approach requires some improvements, for example: 1) Several provisions provide that the obliged entity shall obtain information on "at

Name of the respondent	Question	Answer
		least one of the following" points. All these exhaustive lists should contain an additional point: "any information that the obliged entity deems useful to understand / obtain the required information" This would allow for more flexibility, as in particular situations, other information might be available or relevant, but which is not contained in the enumerative lists. 2) some provisions state that information shall be obtained "where necessary". The wording "where necessary" should be clarified and defined. Obtaining an information is necessary" where the obliged entity has established according to a risk-based assessment that obtaining the information is required to understand the occasional transaction or business relationship and the associated risks, is able to provide a better understanding of these risks and can be obtained with a reasonable effort". AMLA should also confirm a tiered approach to assessing reliable and independent sources, allowing small firms to apply standardized checks for commonly used sources with enhanced assessment only where defined risk triggers arise. Finally, AMLA should explicitly confirm that client information may be reused where it remains current and is appropriate to the assessed risk. This would support

Name of the respondent	Question	Answer
		proportionality, reduce duplication, and limit repeated client requests across multiple matters. Clarifications that would strengthen practical risk-based operation especially for small firms • Non-checklist clarification: AMLA should reinforce (for example, in recitals that lists of information/documents in the RTS are not intended to be applied as universal checklists, but proportionately under Article 1. • Re-use / avoid duplication: Recital 21 usefully recognises that information may already be available to the obliged entity and should be considered before requesting similar information again to avoid unnecessary duplication and reduce burden. AMLA should emphasise this point in implementation materials, as it is highly relevant to legal practices acting for repeat clients across multiple matters. See comments on specific provisions and effective application of risk-based approach in the further section of the questionnaire: Article 3, 6 par.3, 6 al.5, 7, 11 and 12, 13, 25 to 28.
Ordre des Avocats du Barreau de Luxembourg	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations	Article 5: The provision requires that information on all nationalities or, where

Name of the respondent	Question	Answer
	where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	applicable, the statelessness and refugee or subsidiary protection status shall be collected. However, national ID documents (such as passports or identity cards), which are examined for the purpose KYC/CDD only show one nationality (i.e. the nationality if the issuing state). Therefore, it is impossible to know if a client has other nationalities (e.g. dual citizenship); the obliged entity has no means to verify information on additional nationalities provided by the customer. Therefore, the requirement to collect information and verify all nationalities must be replaced by a requirement to record only the nationalities shown in the ID documents presented by the customer. In other words, verification obligations must be limited to what is objectively verifiable. Article 22: As already explained in the answer to question 1, Article 22 (a) RTS cannot be observed in most situations involving pooled accounts of lawyers. The OAL would like to point that the draft RTS, as it stands, is focused on the financial sector and therefore, it cannot be applied to the non-financial sector. It is not only overly ambitious in its approach, but it is also not tailored to the nature of the business of legal professionals. The non-financial sector, comprised in large part of

Name of the respondent	Question	Answer
		many small(er) entities that do not possess the same amount of resources to implement time-consuming administrative CDD-measures (not including the time it will take to study and comprehend those new rules). These heavy administrative burdens threaten to severely augment the cost of compliance for obliged entities, hampering access of citizens and businesses to their services. Legal professionals are only subject to AML obligations in specific circumstances defined by Article 3(3) of the AMLR. These are often limited, case-based, and triggered by particular client engagements. Therefore, the administrative structure and data capture logic proposed in Section 2 of the draft RTS — which appears designed for entities with ongoing client accounts, transaction volumes and continuous onboarding processes — does not align with the operational model of lawyers. A uniform application of these standards would impose disproportionate compliance burdens on lawyers and legal practices, especially sole practitioners or small offices, with no added benefit in terms of AML/CFT effectiveness. With respect to Article 5, and in particular the requirement to obtain information on "all nationalities": it should be noted that obliged

Name of the respondent	Question	Answer
		entities have no means of ascertaining with certainty whether a customer holds additional nationalities beyond those declared. Recital (3) provides that verifying one nationality declared in good faith will be sufficient, which creates an inconsistency with the “all nationalities” requirement With respect to Article 14 (identification and verification of beneficiaries of trusts and similar legal entities or arrangements), the CCBE suggests to redraft Article 13 (1) as follows (underlined and striked out): “For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities collect shall obtain from the trustee, legal entity or legal arrangement include: a. a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine whether individual beneficiaries are ascertainable and shall be treated as beneficial owners; and b. relevant documents to enable the obliged entity to establish that the description is correct and up-to-date on a risk-based approach." Moreover, it should be considered how in practice the commitment of Article 14(2) can be complied with by trusts. It is likely that trusts will refuse to take such

Name of the respondent	Question	Answer
		commitment to inform proactively the obliged entity in case of change in beneficiaries, or in case of beneficiaries previously identified by class or characteristics becoming ascertainable. It is therefore recommended having this control whenever a payment is requested to a beneficiary.
Ordre des Avocats du Barreau de Luxembourg	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose broad additional SDD categories for legal services. Instead, the legal sector is ready to work with AMLA in providing support for the legal profession particularly small and sole practitioners on applying existing SDD flexibilities consistently, including: • Article 24 (minimum information in low-risk situations): Clarify (via examples) how to document the minimum understanding of the purpose and intended nature of the business relationship in legal services appropriate terms, aligned to intended use, estimated value where applicable. • Article 21 (low risk BO/SMO identification and verification): Provide examples on how small firms can meet the two-step approach (identify from one source; verify from a different source) in common low-risk corporate client scenarios.

Name of the respondent	Question	Answer
		• Article 23 (updates in low risk situations): Provide practical change-trigger examples suitable for legal services to support reduced update frequency while remaining compliant. If AMLA considers any drafting change appropriate, a narrowly framed recital could usefully reiterate that SDD remains part of a complete CDD process and reduces depth/frequency proportionately, rather than creating a de facto exemption.
Ordre des Avocats du Barreau de Luxembourg	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Beneficial ownership verification and SMO fallback. The recitals emphasize that consultation of central registers is necessary but not sufficient, and that SMO identification is limited to cases where all means have been exhausted or doubts exist. Technology based tools expectations and proportionality. Article 7 requires remote solutions (where applicable) to meet specified safeguards and to be demonstrable to competent authorities; small firms may struggle with the cost and governance overhead of procuring, maintaining and evidencing such solutions. PEP and sanctions screening provisions also create pressure towards paid automated tools, even where manual checks may be proportionate for small firms. A possible

Name of the respondent	Question	Answer
		solution may be that AMLA should clarify what constitutes an acceptable manual check only model for small firms (governance, record-keeping, frequency), and what documentation is sufficient to evidence compliance when using third-party tools. Lastly, as previously commented, we believe that Section 2 of the draft RTS does not sufficiently differentiate between business models. Unlike financial institutions, lawyers do not operate very often continuous transactional relationships, but rather provide episodic legal advice and representation. Concepts such as "ongoing monitoring", "customer onboarding", or "distribution channels" have limited relevance to the legal profession. Therefore, we propose that the RTS explicitly allow Member States and self-regulatory bodies to develop sector-specific implementation guidance for legal professionals, aligned with AMLR but tailored to legal ethics, practice, and risks.
Ordre des Avocats du Barreau de Luxembourg	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3

Name of the respondent	Question	Answer
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	With respect to Article 3 (Information to be obtained in relation to addresses), the detailed information required under this Article (which applies to both the customer itself, the persons purporting to act on its behalf, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted) appears contradictory to the risk-based approach principle (e.g. when it comes to proxyholders or persons benefiting from the activity/transaction, regard could be had to reducing the amount of information relating to personal address, reducing it, on a risk-based approach, to the country of residence/nationality(ies) only). For proxyholders acting for a legal person customer, instead of asking the personal address, it could be considered to gather the information on the professional address only.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 5 RTS requires the collection of information on “all nationalities”, whereas Recital 3 stipulates that verification of one nationality is sufficient if a natural person declares multiple nationalities in good faith. This mitigation should be incorporated directly in Article 5 RTS instead of in the recitals. It should be confirmed explicitly that ‘the natural person purporting to act on behalf of the customer’, as referred to in Article 5 RTS, does not include the legal representatives acting on behalf of a legal person (as mentioned in Article 22(b)(iii) AMLR)). If the term “natural person purporting to act on behalf of the

Name of the respondent	Question	Answer
		customer" were to include legal representatives acting on behalf of a legal person, this would impose a significant and disproportionate administrative burden on obliged entities. In many cases, legal persons have multiple representatives, which may also change frequently. Systematically obtaining and verifying also nationality information for all such representatives (particularly if this would be required in all cases and irrespective of risk) would go beyond what is reasonably necessary for AML/CFT purposes and is inconsistent with a risk-based approach of the RTS.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	According to Article 6, par. 3, obliged entities shall take "reasonable steps" to ensure the authenticity of the documents collected for the purpose of identification and verification of the client. Therefore, it should be clarified in the considerations how the criterium of "reasonable steps" should be interpreted. It should clarify that "reasonable steps" do not imply for example technical or forensic verification of document authenticity beyond the capabilities of (non-financial) obliged entities. It should be specified that, for independent legal professionals, this obligation is limited to plausibility checks based on apparent validity and internal consistency of the documents provided. Lawyers lack the the tools, forensic expertise and institutional role required to conduct technical, forensic or investigative verification of such documents.

Name of the respondent	Question	Answer
		Art. 6 par. 4 requires obliged entities that they understand the content of foreign-language documents used for identification and verification purposes, without clarifying the acceptable level or method of translation. It should be clarified that the use of machine translations or non-certified translations is permissible where sufficient to understand the content for ML/TF purposes unless inaccuracies could materially affect the risk assessment. Across Article 6 RTS, the RTS should explicitly allow reliance on reliable and independent sources in line with Article 22(6)(a) AMLR, and provide non-exhaustive examples. Furthermore, the obligation to systematically obtain and verify documents for identification purposes should not be interpreted in a manner that conflicts with LPP/PS. Legal professionals may, in certain circumstances, be limited in what information or documents they may request or retain without infringing client rights or procedural safeguards. In face-to-face context, Article 6, al.5 requires systematic collection of the original ID document, or a certified copy thereof, or resorting to verification measures detailed by Article 7 for non face-to-face context (i.e. which, we understand, results in getting a copy of an ID document through eIDAS-compliant tools, or through other electronic tools meeting the conditions detailed by Article 7, §3-4). As previously noted, the requirement of collecting the original or (certified) copy of documents as well as the extensive conditions provided by Article 7, § 3-4 notably in terms of

Name of the respondent	Question	Answer
		technological features is not aligned with a risk-based approach and consequently creates unnecessary administrative burden and additional costs. More flexible approach could be upheld on a risk-based approach, e.g. in case of proxyholders of low risk customers (such as regulated or listed entities), relying on a simple letter detailing the minimum identification data should be sufficient. In other cases, a letter detailing the minimum identification data should be acceptable if issued by professionals being themselves subject to AML/KYC obligations and considered, on a risk-based approach, as reliable, such as, for instance, a notary, a qualified lawyer, a registered accountant or any other persons that are authorised as equivalent to a notary for document certification purposes. Reference should be made in Article 6(5) to 'where relevant the acquisition of information from reliable and independent sources', in accordance with Article 22(6)(a) AMLR, and it should be made clear that these means can be used instead of obtaining a passport or equivalent, in particular for beneficial owners and for natural persons purporting to act on behalf of a customer (see in this respect also the comment above under 5 on the scope of 'natural persons to act on behalf', e.g. when these natural persons are named in official documents such as excerpts from public registers, it is not clear what would be gained for AML/CTF purposes if verification would apply in accordance with article 6(5) RTS).

Name of the respondent	Question	Answer
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 7(1) establishes eIDAS-compliant electronic identification means as the primary verification method for non-face-to-face situations. Article 7(2) permits remote solutions only “in cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided.” Article 7(4) further requires obliged entities to “justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624.” eIDAS-compliant solutions should however be merely recognised as a preferred — rather than primary — verification method, with obliged entities retaining the discretion to use equivalent remote tools where appropriate. Indeed, the introduced hierarchy privileging eIDAS, reinforced by the justification required under Article 7(4), is disproportionate and fall short of any risk-based approach principle. It should be clarified that reliable and independent sources of information according to the criteria set out in Article 7 may replace any documents required for the verification of the identity of the person. This follows from Article 22(6)(a) AMLR which allows the use of such documents. It can occur that a lawyer cannot obtain some documents and in these cases, they should be able to rely on other sources. Article 7(3a) of the RTS should consistently cover both customers and persons purporting to act on behalf of the customer (in line with Article 22 (6) of the AMLR).

Name of the respondent	Question	Answer
		Requirements such as full recording of video sessions (disproportionate), time stamping, and confirmation that documents are “valid and up to date” should be framed as reasonable efforts, not technical guarantees. Proportionate alternatives (e.g. screenshots of video sessions or file notes) should be explicitly permitted. Especially to facilitate compliance by smaller law firms and to mitigate the administrative burden and (costs of) data storage.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	8
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 28 AMLR states that the RTS shall specify the reliable and independent sources of information that may be used to verify the identification data of natural or legal persons for the purposes of Article 22(6) and (7). Article 8 RTS does not fulfil the mandate of Article 28 AMLR, as it does not specify which sources may be used, only how they should be assessed. As already commented on Article 6 RTS, that Article does not seem to allow the use of other reliable and independent sources. The combination of Articles 6, 7 and 8 RTS leaves no room for risk-sensitive measures. The criterion referring to the “ease with which information can be forged” is unclear and unrealistic for obliged entities to verify.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	9

Name of the respondent	Question	Answer
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 22(3) AMLR on the use of virtual IBAN is applicable to credit institutions and financial institutions. Article 9 RTS refers to 'obliged entities' in general. This may lead to confusion and it is therefore suggested to change 'obliged entities' into 'credit institutions and financial institutions'.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	10
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Clarification is needed as to who qualifies as "persons authorised for certification purposes" (Article 10 (sub b iv) RTS). Art 10 (b): Alternatives as listed herein are practical, however, to be clarified how these can be used for verification purposes with respect to nationalities of the beneficial owner or if not, what other sources may be used for verification of the nationality/nationalities of the beneficial owner. Art 10 (b) (iii): suggestion to allow 'bank statements' (issued by credit or financial institutions as defined in Article 3, paragraphs (1) and (2), of Regulation (EU) 2024/1624) as third-party source. Bank statements are often used as (extra) source to verify information on natural persons.

Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	The requirement to obtain a "comprehensive understanding" (as included in 11 (1) RTS) goes beyond Article 20 AMLR and should be aligned with the AMLR wording (requiring (simple) understanding of the

Name of the respondent	Question	Answer
		ownership and control structure of the customer). Provisions requiring a “comprehensive understanding” (Art. 11 par. 1 RTS) of ownership and control structures and an assessment of their “economic, legal or other rationale” (Art. 11 par. 4 (b) RTS) transforming lawyers into de facto investigators or auditors of their own clients. It should be clarified that lawyers are not required to independently verify or substantively assess the economic legitimacy of client structures beyond identifying ML/TF risk indicators apparent in the course of the mandate. Article 11 (2b under i) RTS requires the collection of information on how control is expressed and exercised. To qualify as a beneficial owner, the possibility to exercise control is sufficient (see Article 53 AMLR), so in many cases there may not be information available on the exercise of control. Moreover, the ‘expression’ of control is not a term used in the AMLR and it remains unclear what is meant by it. Article 11 (2b under ii) RTS: please specify what information on the regulated market needs to be obtained. Article 11 (3d) RTS: typo - ‘shares of interest’ should be ‘shares or interest’.

Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Add a sentence confirming that the definition is a trigger, not a ceiling (i.e., other risk indicators may justify treating a structure as complex even if the

Name of the respondent	Question	Answer
		definition is not met). With respect to Articles 11 and 12 regarding understanding the ownership and control structure of a customer, OAL welcomes the amendments provided to Article 12 pursuant to which the threshold was raised from two layers to three layers and now requires more than one cumulative condition (rather than one only) to be met before a structure is treated as complex. However we would liked to make following comments: - the presence of several layers does not necessarily result in a customer or an entity being considered as riskier or complex. The scope and extent of the information and supporting documentation, as the case may be, to be gathered with respect to each entity involved in the ownership structure of the customer should be determined on a risk-based approach; - accordingly, the assessment of a given ownership structure should be done on a case-by-case basis, instead of being based on mandatory criteria, such as those provided under Article 12 of the draft RTS[AS1.1]. How are Article 12 RTS and Annex III AMLR related? What is the difference between complex corporate structures (article 12 RTS) and unusual or excessively complex corporate structures (Annex III AMLR) and why is this difference made? It would be better to stick to a risk-based assessment. For example: In (Dutch) corporate structures, 3 layers with a foundation (Stichting Administratiekantoor) is for example quite commonly used and not necessarily considered a complex structure. Art 12 (2): An organigram is not “additional

Name of the respondent	Question	Answer
		information" but typically the starting point of any CDD. Art 12 (3): Suggestion to delete this sub-paragraph: obliged entities should always take risk-sensitive measures to satisfy themselves that the information obtained is accurate.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	13
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	With respect to Article 13 (information on senior managing officials – "SMOs"), OAL welcomes the possibility newly provided to obtain the address of the registered office of the legal entity instead of the SMO's residential address and country of residence. However, the article continues to require collecting the same information for SMOs as for beneficial owners and verifying their identity "in the same way as they would for beneficial owners," which does not reflect the different risk profile of these two categories. Indeed, as previously commented, the ML/TF risk linked to a SMO is generally low as a SMO may be, and often is, simply an employee in an entity and does not normally have a personal financial interest in the transactions / services sought from the obliged entity, and/or may not have control by other means in the entity. It is important to focus on the real risk and stick to the follow the money principle. As a result, the verification of the identity of SMOs should occur on a risk-based approach, notably taking into account their actual involvement in the transactions / services. In addition to this it should be recognised that, in

Name of the respondent	Question	Answer
		practice, independent legal professionals often have no direct interaction with SMOs, who are not clients and may not be publicly registered. In low- and standard-risk cases, legal professionals should therefore be permitted to rely on information provided by the client, including corporate documentation or written representations, with verification or escalation required only where inconsistencies, implausibilities or risk indicators arise. Article 13 RTS (like Article 22 AMLR) lacks a (further clarifying) definition of senior managing official. We would suggest to limit this definition to the executive members of the management body. This comment is also linked to the point below with respect to verification measures - a broader definition of SMO (including not only the executive members but also managers responsible for day to day management) will often lead to very large groups of SMOs per legal entity - verifying their identity would lead to severe administrative burden and is not considered proportionate or feasible. Article 13 (b) RTS: Verification requirements for the identity of SMOs should not exceed the AMLR and should reflect their generally lower ML/TF risk compared to beneficial owners.
Ordre des Avocats du Barreau de Luxembourg	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	14
Ordre des Avocats du Barreau de Luxembourg	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 14(1)(b) RTS appears redundant in light of Article 76(2) AMLR.

Name of the respondent	Question	Answer
		Given the fact that it is not tehnically possible to add other comments (lack of space on the survey interface), the rest of the OAL comments on the other articles of the RTS are sent by pdf through the Luxembourg CSSF.
Ordre des Avocats du Barreau de Luxembourg	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Ordre des Avocats du Barreau de Luxembourg	Do you have any comments on the Annex in the draft RTS?	No
Ordre des Avocats du Barreau de Luxembourg	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Ordre des experts comptables	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Articles 20(1) and 25 of the Regulation (EU) 2024/1624 require obliged entities to understand the purpose and intended nature of the business relationship. In the draft RTS, this obligation is further operationalized under Article 18. Sections (b) (c) and (d) of this Article require professionals to obtain information on the estimated amount of envisaged activities, as well as the origin and destination of funds. To obtain this information, Article 18 provides the following options: “b) in relation to the estimated amount of the envisaged activities, at least one of the following information: i. the estimated amount of funds to be deposited; ii. the estimated amount of funds to be used in connection with the product offered or service provided; iii. information to understand the anticipated type and frequency of activities that are likely to be performed

Name of the respondent	Question	Answer
		during the business relationship or occasional transaction; iv. information to understand the anticipated number, size, volume, type and frequency of transactions that are likely to be performed during the business relationship or occasional transaction. (c) in relation to the source of funds, at least one of the following information to understand the activity that generated the funds and the means through which the customer's funds were transferred: i. employment income, including salary, wages, bonusses and other compensation from employment; ii. pension or retirement funds and government benefits including social benefits; iii. grants; iv. business revenue; v. capital provided by shareholders and intercompany funding; vi. loans and credit facilities; vii. savings and investments income; viii. inheritance, gifts, sales of assets and legal settlements. (d) in relation to the destination of funds, at least one of the following information: i. the expected types of recipient(s); ii. the jurisdiction where the transactions are to be received; iii. whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as

Name of the respondent	Question	Answer
		intermediary for the beneficiary." While this approach is appropriate for financial institutions and other obliged entities whose services involve the handling, transfer or safeguarding of customers' funds, its application to certain non-financial sector professional services raises practical concerns. Many services provided by non-financial obliged entities do not involve the movement, management or custody of customers' funds. In these situations, information about the origin or destination of funds or the estimated amount of transactions may simply not exist or may fall outside the scope of the professional relationship. For example, a professional service firm providing tax compliance services (like preparation and submission of a corporate tax return) may establish an ongoing professional relationship that does not involve the movement of funds. For this reason, it could be helpful if the RTS clarified that this information required under Article 18 (b) (c) and 18 (d) should be applicable only where services provided involve, or are expected to involve, the movement, management or transfer of funds or other assets.
Ordre des experts comptables	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify	Overall, we consider that the draft RTS broadly follow a risk-based approach (RBA). However, certain provisions on Section 2 relating to the analysis of corporate structures and, in particular, the identification of

Name of the respondent	Question	Answer
	the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	intermediate entities in the structure, may in practice lead to excessively burdensome or even unfeasible requirements, and could benefit from a more proportionate application of the RBA. In particular, the obligation under Article 11(3)(d) to identify “where applicable, the shares of interest held by each legal entity or legal arrangement, its sub-division, by class or type of shares and/or voting rights expressed as a percentage of the respective total” is overly broad. We believe this requirement should be limited to intermediate entities that exercise a meaningful degree of control, rather than capturing any form of participation irrespective of its relevance. This requirement, if not clarified, would in practice make it almost impossible to conduct “know your customer” checks on private equity investment structures for instance, where the number of intermediate entities is commonly very high. Similarly, Article 12 appears to classify a structure as “complex” whenever more than 2 of the conditions established in this Article are met, and there are three or more layers between the customer and the beneficial owner (which is quite usual). Among these conditions, the Article foresees the following: “a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers; and (b) the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU;(…)”. This approach is also too expansive, and both criteria

Name of the respondent	Question	Answer
		should be refined to focus on cases where the intermediate entity exerts control or significant influence over the customer (for example, by requiring that the entity in the layer has a participation of 25% or more over the customer). Otherwise, it could lead to the result, if literally applied, that for example a foundation having a 1% ownership over the customer, determines the structure to be considered as complex, or that an investment vehicle which is outside the EU holding a minority stake determines the qualification of the complex structure.
Ordre des experts comptables	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Regarding the Information to be collected for identification and verification purposes, Article 6(3) establishes in relation to official identification documents, mainly, that “Obliged entities shall take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person (…) are authentic and have not been forged or tampered with”. The reference to “reasonable steps” lacks sufficient clarity. While the RTS do not define this concept, the provision appears to imply an active obligation of the professional to implement measures aimed at detecting forgery. This raises concerns as to whether, in practice, it could lead to overly stringent expectations, such as systematically requiring certified copies or requiring professionals to deploy technical systems for fraud detection. Such requirements may not be feasible for all entities, particularly considering differences in size,

Name of the respondent	Question	Answer
		resources and risk exposure. For instance, those non-financial sector professionals which do not provide online services and generally meet their clients physically, are facing significantly lower risk in this area. In our view, this provision should either be reframed as a reactive obligation (namely to report without delay where there are indications that a document is false) or, if maintained as an active obligation, its should be specified what constitutes “reasonable steps”, ensuring that these are proportionate and aligned with a risk-based approach.
Ordre des experts comptables	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A
Ordre des experts comptables	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The concept of “any person purporting to act on behalf of the customer” referred to in Article 22(6) of Regulation (EU) 2024/1624 and in Articles 5, 16, 20(1)(a) of the RTS lacks sufficient clarity and should be further defined in these RTS. We have observed divergent interpretations in the market, ranging from broad approaches (capturing any person potentially able to act on behalf of the customer, like its legal representatives and proxies) to a more restrictive interpretation (limited to the individual effectively representing the customer

Name of the respondent	Question	Answer
		in the business relationship with the professional). This ambiguity has significant practical implications, as verification obligations extend to such persons. It is therefore essential to provide a definition to avoid inconsistent interpretations across Member States and divergent supervisory expectations. Likewise, the concept “without delay” in article 19(1)(c) should be further clarified/specified to ensure consistent supervisory expectations regarding the timing and frequency of PEP screening, especially the obligation to perform a screening whenever there is an update to the list of prominent public functions published pursuant to Article 43(5) of the Regulation (EU) 2024/1624.
Ordre des experts comptables	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ordre des experts comptables	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10
Ordre des experts comptables	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	This Article allows in paragraph (a) the verification of identity of the UBO(s) through “consulting public registers, other than the central registers”. In light of Recital 54 of Regulation (EU) 2024/1624, it can be inferred that “central registers” refer specifically to beneficial ownership registers. Would a contrario, commercial registers not be considered central registers? Furthermore, the same article allows in paragraph (b)

Name of the respondent	Question	Answer
		verification based on “information from the customer”, which is surprising given that this would not constitute and independent source. This raises the question of whether a UBO declaration issued and signed by the customer’s representatives would be considered a sufficient means of verification of the UBO(s)’ identity.

	procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
Ordre des experts comptables	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when	Not applicable/no information available

Name of the respondent	Question	Answer
	implementing the provisions of these draft RTS.: Recurrent costs	
Ordre des experts comptables	Please justify your answer to the previous question and provide evidence where possible.	NA
ORLEN	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not agree. In our view, in their current wording, both the draft RTS 28(1) and Regulation (EU) 2024/1624 do not provide sufficient flexibility to allow for their uniform and proportionate application across all sectors and business models. This lack of flexibility results in particular from the insufficient clarification of key concepts on which the personal and material scope of AML/CFT obligations depends. Consequently, this makes it difficult to assess the extent to which the specific obligations under RTS 28(1) should apply to particular products and services. First, the definition of a “financial institution” set out in Regulation (EU) 2024/1624 is not consistent with the definition contained in Directive 2013/36/EU (Article 3(1)(22)), which refers to Article 4(1)(26) of Regulation (EU) 575/2013 and includes the specification that the relevant activities constitute the entity’s “main activity”. The absence of an analogous criterion in Regulation (EU) 2024/1624 leads to an unjustified extension of the personal scope of AML/CFT provisions to entities that perform financial activities only on a marginal basis, which is inconsistent with the risk-based approach. Second, Regulation (EU) 2024/1624 does not contain a definition of a “customer”, even though this concept is fundamental to the application of both Regulation (EU) 2024/1624 and RTS 28(1). Article 19(6) of Regulation (EU) 2024/1624 refers only to selected sectors, while

Name of the respondent	Question	Answer
		Recital 11 of Regulation (EU) 2024/1624 indicates that intra-group activity and financial transactions between members of the same group are not transactions concluded with customers. At the same time, there is no definition of “financial activity”, “financial services” or “group”, which leads to significant legal uncertainty, particularly in the case of capital group structures whose intra-group activities are not covered by Regulation (EU) 2024/1624. In light of the above, we propose the following clarifications which, in our view, would increase the flexibility and proportionality of the application of RTS 28(1): 1. Supplementing the draft RTS 28(1) with a clarification of the concept of a “financial institution”, by indicating that, when assessing this status, the criterion of the entity’s main activity should be taken into account. Such a solution would be consistent with the approach adopted under MiFID II, which excludes certain types of activities from the obligation to obtain supervisory authorization, provided that they are carried out as ancillary activities and subject to the conditions laid down in the relevant provisions. 2. Supplementing the draft RTS 28(1) with a definition of the concept of a “customer”, understood as a person with whom an obliged entity establishes a business relationship or carries out an occasional transaction within the meaning of Regulation (EU) 2024/1624, insofar as such activity falls within the scope of that Regulation. At the same time, it should be specified that, in the context of intra-group activities, the

Name of the respondent	Question	Answer
		establishment of a business relationship or the execution of an occasional transaction does not constitute activity carried out vis-à-vis customers. Such activity therefore remains outside the scope of Regulation (EU) 2024/1624. 3. Supplementing the draft RTS 28(1) with a clarification of the concept of a “group”, by indicating that it encompasses all entities included in the consolidated financial statements of the parent undertaking, irrespective of the consolidation method applied, i.e. subsidiaries, jointly controlled entities and associates, as well as providing an explicit confirmation that Regulation (EU) 2024/1624 does not apply to activities covered by that Regulation where they are provided by members of a group to other members of the same group. This approach is consistent with Recital 11 of Regulation (EU) 2024/1624 and is further supported by the case law of the Court of Justice of the European Union (Case C-3/24), which indicates that AML/CFT provisions relate to services provided to external customers, and not to intra-group relationships.
ORLEN	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not agree. In its current wording, the draft RTS 28(1) does not fully implement the principle of proportionality with regard to the scope of information collected on senior managing officials (SMOs) for the purposes of identification and verification measures. The identification of SMOs results from Article 22 of Regulation (EU) 2024/1624 solely as a fallback measure where it is not possible to identify the beneficial owners. Therefore, the scope of data collected for SMOs should be limited to what is necessary for that purpose

Name of the respondent	Question	Answer
		and should not be equivalent to the scope of data determined for a beneficial owner. The AML system is based on proportionality, rather than on replicating an extensive process for every entity, particularly where the inherent risk is lower (SMOs are not beneficial owners). However, the use of the verb “should” rather than “shall” indicates an intentional intention to leave obliged entities a margin of discretion, which should be confirmed in RTS 28(1) or further clarified in order to avoid divergent interpretations. The scope of SMO data should be limited to registry data. In light of the above, we propose to clarify Recital 9 of the draft RTS 28(1) by indicating that, given that SMOs are not beneficial owners, for the purposes of identification and verification measures obliged entities should collect, in relation to SMOs, the scope of information disclosed in public registers. Given that recitals do not create normative provisions, it is also necessary to transfer from Recital 11 of the draft RTS 28(1 into the operative provision of the draft RTS 28(1) those provisions allowing for the replacement of an SMO’s residential address and country of residence with the address of the legal person.
ORLEN	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, such situations do exist. Due to the nature of the activities of certain obliged entities, in particular entities for which financial activity does not constitute their main line of business, access to the information required for customer due diligence purposes is often significantly limited. These entities do not have access to public registers, databases or external systems comparable to that available to licensed institutions,

Name of the respondent	Question	Answer
		such as banks or insurance undertakings, which benefit from dedicated tools and privileged access to regulated information. In practice, for undertakings operating in non-financial sectors (e.g. manufacturing or service sectors), access to external sources of information is marginal or non-existent, and the collection of data necessary to fulfil customer due diligence obligations is predominantly based on information provided directly by the customer. In such cases, the draft RTS 28(1) does not provide for sufficient alternative solutions allowing obligations to be fulfilled in a manner proportionate to the risk profile and the nature of the obliged entity's activities. Proposed alternative solutions: It would be appropriate to consider the introduction of alternative solutions based on the principle of proportionality, in particular by: -providing for separate, simplified standards for obliged entities whose access to information infrastructure is objectively limited, -allowing broader reliance on customer declarations as a primary source of information, subject to appropriate procedural safeguards. Such an approach would make it possible to maintain the effectiveness of the AML/CFT system while ensuring its proportionality and practical feasibility.
ORLEN	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures	Other simplified customer due diligence measures that should be reflected in the draft RTS 28(1), for example due to the associated lower money-laundering and terrorist-financing risk of these products and services,

Name of the respondent	Question	Answer
	should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	include in particular: 1.Supplementing the draft RTS 28(1) with a clarification of the meaning of the term “submission of a document” as used in Article 22(6)(a) of Regulation (EU) 2024/1624. It would be appropriate to clearly indicate that “submission” does not, as a rule, imply an obligation to retain a copy of an identity document. In light of the above, we propose clarifying Article 22(6)(a) of Regulation (EU) 2024/1624 by specifying that “submission” means enabling the obliged entity to obtain the data necessary for verification, and that submission does not entail an obligation to retain a copy of the document, unless required by the risk assessment or by specific legal provisions. 2.Supplementing the draft RTS 28(1) with a clarification of the obligations relating to the consideration of information on a customer’s relationships with other entities within a group, as referred to in Article 26(1) of Regulation (EU) 2024/1624. It would be appropriate to clarify that this obligation covers exclusively information concerning AML-relevant relationships, i.e. relationships connected with activities falling within the scope of Regulation (EU) 2024/1624, carried out by obliged entities or by third-country entities performing equivalent activities, and that are relevant for the assessment of ML/FT risk – in particular those relating to common customers of the parent undertaking and its subsidiaries. Extending such obligations to operational entities outside the AML regime would be unjustified and impracticable. In light of the above, we propose clarifying Article 26(1)

Name of the respondent	Question	Answer
		of Regulation (EU) 2024/1624 by specifying that, for the purposes of applying the third subparagraph of Article 26(1), the obligation to take into account information on other business relationships of the customer within the group applies exclusively to relationships connected with activities falling within the scope of Regulation (EU) 2024/1624. This obligation does not cover information relating to activities not covered by this Regulation. Only information relevant to the assessment of money-laundering and terrorist-financing risk and relating to common customers of the parent undertaking and its subsidiaries should be taken into account.
ORLEN	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Additional comments on the draft RTS 28(1) not addressed above: 1.With regard to Article 29 of the draft RTS 28(1), clarification is needed to ensure that the obligation to carry out sanctions screening also covers persons acting on behalf of the customer, without making this obligation conditional upon the prior formation of a suspicion of circumvention or evasion of restrictive financial measures. While the first paragraph constitutes a clarification (rather than an extension) of the provisions of Regulation (EU) 2024/1624, the second sentence represents an extension by introducing a new obligation. Irrespective of the above, the wording of Article 29 of the draft RTS 28(1) makes the obligation to determine whether persons acting on behalf of the customer are subject to targeted financial measures dependent on the obliged entity first having formed a suspicion of

Name of the respondent	Question	Answer
		circumvention or evasion of such measures. In practice, this is a non-functional approach, as a suspicion of circumvention can only arise after basic sanctions screening has been carried out. Clarifying this provision is consistent with market practice, operationally efficient, and reduces the risk of errors in the application of targeted financial sanctions. Sanctions risk requires the broadest possible scope of screening. Persons acting on behalf of the customer may in fact carry out activities of a proprietary or financial nature and should therefore be subject to the same checks as customers and beneficial owners. The concept of a "suspicion of circumvention" is overly vague and difficult to apply without prior verification. In light of the above, we propose clarifying Article 29 of the draft RTS 28(1) by specifying that obliged entities shall determine whether their customers, beneficial owners, as well as entities or persons exercising control or meeting the ownership conditions set out in Article 20(1)(d) of Regulation (EU) 2024/1624, or persons acting on behalf of the customer, are subject to targeted financial measures. 2.The draft RTS 28(1) should be supplemented with a definition of the term "legal representatives" referred to in Article 22(1)(b)(iii) of Regulation (EU) 2024/1624. The absence of a normative definition of the term "legal representatives" results in an inconsistent determination of the category of persons subject to identification obligations. In particular, it is unclear whether this term covers exclusively statutory representatives or also persons authorised to act on

Name of the respondent	Question	Answer
		behalf of a legal person. 3.The draft RTS 28(1) should be supplemented with a definition of the terms “persons holding shares” and “persons holding directorship position”, as referred to in Article 22(1)(b)(iv) of Regulation (EU) 2024/1624. In particular, it is necessary to explicitly exclude from this scope persons acting solely as representatives or proxies who execute instructions of the competent body. The term “persons holding shares” should be understood as the body entitled to exercise such rights, such as a management body. The term “persons holding shares” should not be understood as referring to persons acting as authorised representatives of the body entitled to exercise shareholder rights on the basis of powers of attorney or voting instructions. The term “directorship position” should be defined in the draft RTS 28(1), and it should be clarified that it refers exclusively to activities falling within the scope of Regulation (EU) 2024/1624. 4.The draft RTS 28(1) should be supplemented with a clear specification of the form and channel for reporting discrepancies to central registers of beneficial ownership. It would be appropriate to establish a uniform reporting template and to indicate the competent address or IT system for submitting such reports, as well as to introduce a requirement regarding the currency of the data by specifying a maximum permissible period for data collection of 12 months prior to the date on which such data are provided to

Name of the respondent	Question	Answer
		obliged entities in the course of applying customer due diligence measures referred to in Article 24(1) of Regulation (EU) 2024/1624. The proposed provisions currently do not set out detailed frameworks for reporting discrepancies to central registers, in particular with regard to defining a standard report template and identifying the appropriate reporting channel (address or IT system). The establishment of uniform frameworks would enhance legal certainty, facilitate the fulfilment of obligations, and improve data consistency at both national and EU level, thereby helping to avoid divergent practices among obliged entities and registry authorities.
ORLEN	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 3 of the draft RTS 28(1) We request clarification of the relationship between the concepts of an “address” and a “usual place of residence”. The absence of a clear distinction between the scope of these concepts may lead to divergent practices in the application of identification requirements by obliged entities. Regulation (EU) 2024/1624 uses the concept of a “usual place of residence”, but does not provide a definition of this term. At the same time, Article 3 of the draft RTS 28(1) specifies a detailed set of information relating to an “address”, which raises doubts as to:

Name of the respondent	Question	Answer
		-whether this scope should also apply to the “usual place of residence”, -whether these concepts should be interpreted separately or are in fact identical. In light of the above, we propose clarifying Article 3 of the draft RTS 28(1) by specifying that the usual place of residence means the actual place where a natural person usually lives, regardless of whether they have a permanent address of residence. The scope of information set out in Article 3 should apply only in cases where the usual place of residence is presented as a full address. In other cases, obliged entities should collect information on the country of habitual residence.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6(1) of the draft RTS 28(1) We request clarification of the catalogue of elements required for documents recognised as equivalent to an identity document or a passport by: -deleting the wording “and the signature of the document holder”, and -explicitly indicating that authenticity safeguards should be understood as standard safeguards used in identity documents. The signature of the document holder is not an element required under Article 22 of Regulation (EU) 2024/1624 and is not necessary from the perspective of identification or the assessment of money-laundering and terrorist-financing risk. The term “safeguards

Name of the respondent	Question	Answer
		ensuring authenticity" should be understood as standard security features prescribed for identity documents issued by EU Member States or third countries, such as holograms, optical elements, microprinting, a machine-readable zone, or an ICAO-compliant chip. This clarification will ensure uniform application of the provision and prevent the unjustified rejection of documents. In light of the above, we propose clarifying Article 6(1) of the draft RTS 28(1) by specifying that, for the purposes of verifying a person's identity in accordance with Article 22(6)(a) and Article 22(7)(a) of Regulation (EU) 2024/1624, a document shall be regarded as equivalent to an identity document or a passport where all of the following conditions are met: a) it has been issued by a state or public authority; b) it contains all given names and surnames and the date of birth of the holder; c) it contains information on the document's date of expiry and its number; d) it contains a facial image; e) it contains safeguards ensuring its authenticity, understood as standard security features provided for identity documents, in particular such as holograms, optical elements, microprinting, a machine-readable zone, or an ICAO-compliant chip.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7

Name of the respondent	Question	Answer
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 7(1) of the draft RTS 28(1) We request the introduction, in RTS 28(1), of a risk-based approach with regard to the mandatory application of electronic identification measures in non-face-to-face processes, including limiting the requirement to use means with a “substantial” or “high” level of assurance solely to cases involving an increased risk of money laundering and terrorist financing. The wording of Article 7(1) of the draft RTS 28(1) provides for an obligation to apply electronic identification means at a “substantial” or “high” level of assurance or qualified trust services in every case of identification carried out without face-to-face contact. This construction does not differentiate situations according to the level of money-laundering and terrorist-financing risk posed by the customer, which in practice may lead to excessive burdens for obliged entities and to disproportionate treatment of low-risk situations. An enhanced standard, in the form of the mandatory use of electronic identification means with a high level of assurance, should only be required for customers assessed as presenting an increased risk, while in other cases it should be acceptable to apply identification measures in accordance with Article 6 of the draft RTS 28(1). Such an approach would be consistent with the principle of proportionality and the risk-based approach underpinning both Regulation (EU) 2024/1624 and the AML/CFT framework as a whole. At the same time, it would allow for a higher level of security to be

Name of the respondent	Question	Answer
		maintained where actual risk exposure is greatest, without creating unnecessary barriers in low-risk cases.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	8
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 8 point (e) of the draft RTS 28(1) We request clarification of the scope of the criterion set out in Article 8(e) of the draft RTS 28(1) by explicitly linking it to the risk-based approach and to available, commonly recognised information. Article 8(e) of the draft RTS 28(1) requires obliged entities to assess “the ease with which the information or data provided relating to identity can be falsified.” This requirement raises practical and proportionality concerns, as assessing the susceptibility of a data source to falsification requires specialised knowledge in the fields of ICT security, cryptography, or document engineering. The majority of obliged entities do not possess either the technical expertise or the tools necessary to carry out such an analysis in a professional manner. As a result, a literal application of this provision may lead to non-uniform practices among obliged entities, arbitrary assessments carried out by staff without technical expertise, excessive regulatory liability for entities that are objectively unable to meet this criterion in a substantive manner, and a risk of shifting the burden of technological assessment onto institutions that lack the necessary resources and competencies. It is therefore appropriate to clarify in the draft RTS 28(1) that the requirement set out in Article 8(e) should be understood in a proportionate manner, i.e. within the

Name of the respondent	Question	Answer
		limits of the actual capabilities of the obliged entity and on the basis of available, reliable market information, rather than on the basis of the entity's own technical assessment.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 11(4) of the draft RTS 28(1) We request clarification of Article 11(4) of the draft RTS 28(1) by specifying that the requirement to be "satisfied" means carrying out an assessment based on objectively available information and documents. The wording is imprecise and may lead to divergent regulatory interpretations. Clarifying that such satisfaction should result from an assessment based on objectively available information and documents would enhance legal certainty and ensure consistent application of RTS 28(1) by obliged entities and supervisory authorities.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	18
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 18 point (a)(iv) of the draft RTS 28(1) We request clarification of the scope of the information required under point (iv) of the draft RTS 28(1) by limiting its relevance to relationships that are reasonably connected to the purpose and intended nature of the business relationship within the meaning of Regulation (EU) 2024/1624. With regard to point (iv) of the draft RTS 28(1), it is appropriate to clarify that information on additional

Name of the respondent	Question	Answer
		business relationships is relevant only where it has a reasonable connection with the assessment of the purpose of the business relationship within the meaning of Regulation (EU) 2024/1624, i.e. where such relationships relate to AML-relevant activities and may affect the money-laundering and terrorist-financing risk profile. Without such clarification, there is a risk of an overly expansive interpretation under which an obliged entity would be required to analyse all additional relationships of the customer within the group, including those that have no relevance whatsoever for AML/CFT purposes, such as relationships in the field of industrial, logistics, retail or purely operational activities. Such a broad approach does not follow from the objective of Regulation (EU) 2024/1624, which focuses on identifying the “purpose and intended nature” of the business relationship, would be disproportionate and risk-inadequate, would undermine the risk-based approach, and would lead to excessive and unjustified data processing in breach of the principle of data minimisation.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 18 points (e)(i–ii) and (iv) of the draft RTS 28(1) We request clarification of the scope of the information required under: -point (i) of RTS 28(1) by extending it to also cover the customer’s business activity; and -points (ii) and (iv) of RTS 28(1) by harmonising the understanding of the term “sector” in order to avoid

Name of the respondent	Question	Answer
		divergent interpretations of the scope of information to be collected. The scope of information specified in point (i) of the draft RTS 28(1) refers exclusively to the customer's "profession", which does not clearly cover situations where the customer conducts business activity in a form other than employment or the exercise of a profession sensu stricto. The lack of an explicit reference to business activity may lead to inconsistent determination of the scope of information collected for the purposes of assessing the customer's profile. In addition, the draft RTS 28(1) uses the term "sector" in points (ii) and (iv) in different contexts, without clearly indicating whether the same classification criterion is intended. In point (ii), the sector refers to the customer's activity, whereas in point (iv) it refers to the sector in which the customer operates as an obliged entity, which may suggest different meanings. The lack of terminological consistency in this respect may result in divergent interpretations and an excessive or inconsistent scope of information being collected.
ORLEN	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	30
ORLEN	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 30 point (a) of the draft RTS 28(1) We request clarification of Article 30(a) of the draft RTS 28(1) by explicitly specifying how the concept of "persons who exercise control or meet the ownership conditions" should be interpreted. The provision should clearly distinguish beneficial owners from other entities or persons exercising control, if such differentiation was

Name of the respondent	Question	Answer
		the intentional objective of Regulation (EU) 2024/1624 or the draft RTS 28(1). The current wording of the provision does not specify the scope of the concept of “persons who exercise control or meet the ownership conditions.” In the case of natural persons exercising control, this status as a rule coincides with the concept of a beneficial owner. The lack of a clear distinction may result in divergent identification practices.
ORLEN	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
ORLEN	Please specify which recital you refer to, and share your comments below.	Recital 5 of the draft RTS 28(1) We request that the indicative list of reliable and independent sources of information concerning customers that are not natural persons and trusts or similar legal arrangements be incorporated into the operative provisions of RTS 28(1). Given that recitals do not create normative rules, the list of examples of reliable and independent sources of information relating to customers that are not natural persons and to trusts or similar legal arrangements should be transferred from Recital 5 of the draft RTS 28(1) into the operative provisions of RTS 28(1) as an illustrative (non-exhaustive) list.
ORLEN	Do you have any comments on the Annex in the draft RTS?	No
ORLEN	How would you rate the proposals set out in the draft RTS overall?	Good
ORLEN	Please justify your answer to the previous question and provide evidence where possible.	-

Name of the respondent	Question	Answer
OSTTRA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes
OSTTRA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No Identification and verification of the person purporting to act on behalf of the customer: It has for many years been well-established that CDD requirements shall apply not only to customers but also to any person purporting to act on behalf of a customer. In the absence of any indication (whether in legislation or in guidelines) to the contrary, it is reasonable to take the view that a natural person exercising authority on behalf of a legal person would be purporting to act on behalf of that legal person. Taking such a view could also mean that an authorised signatory executing a contract for financial services (provided by an obliged entity) would be considered as someone purporting to act on behalf of the legal person entering into the said contract. If this is the case however, the proposed RTS on CDD give rise to an inconsistency in the information that shall be obtained in relation to addresses.

Name of the respondent	Question	Answer
		Article 22(1)(a)(iv) of Regulation (EU) 2024/1624 (the "Regulation") provides that an obliged entity shall obtain – for a customer or for any person purporting to act on behalf of a customer – "the usual place of residence or, if there is no fixed residential address with legitimate residence in the Union, the postal address at which the natural person can be reached and, where available the tax identification number". Article 22(2), second paragraph of the Regulation provides that if no natural persons are identified as beneficial owners, then an obliged entity shall verify the identity of all natural persons holding the positions of senior managing officials. While Article 13(a) of the proposed RTS provides that when verifying the identity of the senior managing officials, an obliged entity "may decide to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence", no such provision is made more broadly for persons purporting to act on behalf of the customer such as authorised signatories. As a result, it would be permissible for an obliged entity to obtain the address of the registered office in relation to senior managing officials, but at the same time, it would not be permissible to be obtain the address of the registered office in relation to an authorised signatory executing a contract on behalf of the legal

Name of the respondent	Question	Answer
		person entering into the said contract. On the contrary, the residential address of such an authorised signatory would have to be obtained. It seems that this may be an unintended consequence, since one would expect a greater degree of information to be obtained in relation to persons who occupy a more senior position with a legal person and thus exercise greater authority and control. If a legal person's registered address is considered adequate in relation to senior managing officials, such an address should also be considered adequate in relation to an authorised signatory who may occupy a less senior position and exercise a lesser degree of authority and control. This can be addressed by adding the following second paragraph to Article 16 of the draft RTS: "Where the person purporting to act on behalf of the customer as referred in Article 22 of Regulation (EU) 2024/1624 is a natural person acting in the capacity of an authorised signatory, obliged entities may decide to obtain the address of the registered office of the legal entity instead of the natural person's residential address and country of residence."
OSTTRA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	No

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
OSTTRA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Please see our response to Question 2 above.
OSTTRA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No
OSTTRA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
OSTTRA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
OSTTRA	Do you have any comments on the Annex in the draft RTS?	No
OSTTRA	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
OSTTRA	Would the implementation of the draft RTS generate any of the following additional costs beyond the	No significant additional costs

Name of the respondent	Question	Answer
	adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
OSTTRA	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of	No significant additional costs

Name of the respondent	Question	Answer
	Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
OSTTRA	Please justify your answer to the previous question and provide evidence where possible.	No significant additional costs
Paf Ålands Penningautomatförening	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not fully agree that the draft RTS as currently drafted can be applied uniformly across the range of products and services provided by obliged entities in the gambling sector. The proposals lack sufficient flexibility to accommodate the significant diversity in product risk profiles, customer interfaces and service channels. Key concerns include: - Remote and in-person services require different verification methods; the RTS does not adequately distinguish between them. - Verification of supplementary attributes such as nationality and place of birth should not be required

Name of the respondent	Question	Answer
		automatically once core identity has been verified under Article 22(6) of Regulation (EU) 2024/1624; rather, such verification should be determined on a risk-sensitive basis.
Paf Ålands Penningautomatförening	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While the draft RTS references the risk-based approach, several provisions are overly prescriptive and risk undermining its effective application in practice. Specific concerns include: - Article 5 mandates collection of all nationalities, which is burdensome, often technically unavailable through current eID infrastructure, and of limited AML value in low-risk scenarios. - Article 7 requires high-assurance eID for remote onboarding, which is impractical in markets without adequate eID infrastructure. - Articles 18 and 24 require detailed purpose-of-relationship information even where the purpose of the relationship is inherently self-evident, as is typically the case in gambling. For well-defined and regulated products or services such as gambling, the purpose and intended nature of the business relationship can typically be determined by reference to the product characteristics, the distribution channel and the applicable regulatory framework. A more explicit rule permitting obliged entities to presume those elements in such cases would strengthen the risk-based approach. The consistent application of “where necessary” throughout the RTS is also essential to preserve the intended flexibility.

Name of the respondent	Question	Answer
		We propose amending Article 18 to allow obliged entities to determine, and where appropriate presume, the purpose and intended nature of the relationship by reference to product and service characteristics, unless specific risk indicators or behavioural deviations require the collection of additional information. Articles 18 and 24 — Purpose and Intended Nature in Remote Gambling We agree that obliged entities should understand the purpose and intended nature of the business relationship. For mass-market remote gambling, however, this understanding can often be established more effectively through the nature of the product selected, the payment method used, channel restrictions, customer declarations, deposit and loss limits, and ongoing behavioural and transactional monitoring, rather than through extensive ex ante questionnaires in every case. AMLA should therefore clarify that, particularly in low-risk scenarios, obliged entities may rely on a combination of onboarding information and transactional or behavioural data to satisfy Articles 18 and 24. This would preserve the risk-based approach while reducing unnecessary friction for legitimate retail customers. Suggested drafting addition to Article 18: “When assessing the purpose and intended nature of the business relationship, obliged entities may, where appropriate and commensurate with the risk, rely on the nature of the product or service, the customer’s

Name of the respondent	Question	Answer
		selected product features, verified payment instruments, channel restrictions and ongoing transactional monitoring.”
Paf Ålands Penningautomatförening	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Question 3: Availability of Information for CDD Purposes The primary concern is not the availability of information per se, but its relevance and the practicality of verifying it. In the gambling sector, several specific challenges arise: Current digital identification solutions in most European countries do not capture nationality or place of birth, meaning their collection would require manual processes or document requests, imposing significant operational and customer-facing burdens. Source-of-funds information for low-value gambling transactions is unlikely to yield meaningful AML benefit and may divert compliance resources away from genuinely higher-risk scenarios. Without harmonized legal access to official data sources, digital identification processes cannot function effectively or consistently across sectors. We propose that the RTS allow delayed or simplified verification for low-risk, low-value transactions, permit alternative verification methods such as bank account ownership checks or credit bureau verification, and allow reliance on regulated payment providers’ KYC processes for source of funds purposes. Articles 5, 20, 32 and Annex I — Data Elements That Are Routinely Unavailable In remote consumer onboarding, some data elements

Name of the respondent	Question	Answer
		listed in Articles 5, 20, 32 and Annex I may not always be available from electronic identification means or other reliable digital sources used in practice, including place of birth, all nationalities, and certain address attributes. This creates operational challenges even where the customer's identity is otherwise strongly verified. These data points exist in national census databases, but obliged entities rarely have the legal access to collect or verify the information with this database, making the task of verifying nationality or place of birth a burdensome activity. We suggest that AMLA provide an explicit alternative solution for such situations. In low-risk cases, where the missing attribute is not material to the initial risk assessment and strong ongoing monitoring is in place, obliged entities should be permitted to collect and verify such missing attribute on a trigger-based basis, for example upon threshold events, material changes, suspicious activity, or periodic review.
Paf Ålands Penningautomatförening	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We support the inclusion of additional simplified due diligence measures but note that Section 5 in its current form is too abstract and insufficiently developed to enable precise proposals. In particular, it would be helpful if the RTS stated expressly that, in low-risk situations involving standardized, well-defined and regulated products or services, simplified due diligence may take into account the characteristics of the relevant sector, the onboarding framework and the applicable regulatory environment, provided that sufficient monitoring

Name of the respondent	Question	Answer
		remains in place. This would not create an exemption from CDD but would give more practical content to the concept of reduced scrutiny in regulated, lower-risk settings. Additionally, where the identity of a natural person has already been verified under Article 22(6) of Regulation (EU) 2024/1624, separate verification of supplementary attributes such as nationality and place of birth should only be required where relevant and proportionate given the customer's risk profile, or where necessary to comply with obligations relating to PEPs, targeted financial sanctions or other applicable requirements. Article 33 — Remediation of Existing Customers We support the risk-sensitive remediation of existing customers in Article 33. For large legacy customer bases in remote consumer businesses, however, it should be made explicit that remediation may be sequenced through risk-based triggers, such as re-engagement, higher-risk activity, material changes in customer data, threshold events, or scheduled periodic review. AMLA should clarify that obliged entities are not expected to interrupt or re-paper all existing low-risk customer relationships immediately where existing controls are sufficient to manage ML/TF risk pending remediation. This would better align the transition requirement with proportionality and operational feasibility. Article 27 — Recognizing Digital Evidence for Source of Funds / Source of Wealth

Name of the respondent	Question	Answer
		Article 27 should more clearly recognize digital forms of evidence that are common in remote consumer businesses. For licensed gambling operators, source of funds can often be assessed through a combination of same-name payment instrument controls, account ownership checks, reliable payment account data, transactional patterns and other digital records from independent or regulated sources. AMLA should clarify that the list in Article 27 is illustrative and non-exhaustive, and that reliable digital financial records may be used where they provide sufficient assurance of lawful origin. This would be consistent with the risk-based approach and would better reflect how customer due diligence is performed in digital business models.
Paf Ålands Penningautomatförening	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No objection is raised to the overall objective of the draft RTS. However, the draft would benefit from a clearer horizontal statement of proportionality to ensure that its requirements are applied in a sector-sensitive manner across all categories of obliged entities. As currently drafted, the RTS does not sufficiently reflect at the level of general principles that obliged entities operate under materially different business models, customer interfaces and regulatory environments. This creates a risk that provisions workable for credit institutions are interpreted too rigidly when applied to non-financial obliged entities such as gambling operators. Non-financial obliged entities generally perform a more indirect gatekeeper function and achieve equivalent AML/CFT outcomes

Name of the respondent	Question	Answer
		through means adapted to their specific context. We propose an amendment to Article 1 to include an express proportionality clause clarifying that measures must be proportionate to the nature of the activity, the way in which the customer relationship is established and managed, and the role of the obliged entity within the AML/CFT framework. For non-financial obliged entities, equivalent outcomes may be achieved through means adapted to the characteristics of the service and the applicable legal and regulatory environment.
Paf Ålands Penningautomatförening	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Paf Ålands Penningautomatförening	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Paf Ålands Penningautomatförening	Do you have any comments on the Annex in the draft RTS?	No
Paf Ålands Penningautomatförening	How would you rate the proposals set out in the draft RTS overall?	Neutral
Paf Ålands Penningautomatförening	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity.	Disruptive impact

Name of the respondent	Question	Answer
	Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs

	procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Paf Ålands Penningautomatförening	Please justify your answer to the previous question and provide evidence where possible.	Regarding nationality and POB data, existing customers might not provide data if providing data feel too cumbersome (e.g. uploading documents instead of electronic verification) and the loss of customers can cause a significant loss.
Participatiemaatschappij Vlaanderen (PMV)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We consider the current proposal to be too prescriptive and overreaching. The proposal for instance does not distinguish between services provided to consumers or to organisations, the differences in risk profiles and the related information needs. In our view there is also potential tension and conflict with the principles of data minimisation and purpose limitation under the General Data Protection Regulation.
Participatiemaatschappij Vlaanderen (PMV)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	We do not consider place of birth (Article 4) or nationality (Article 5) relevant for a risk-based approach. In addition, statelessness or refugee status are uncommon when dealing in a business-to-business context.

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	
Participatiemaatschappij Vlaanderen (PMV)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Belgian identity cards do not display a place of birth. Due to the nature of our business, we also have a limited number of clients, and for which place of birth or nationality are considered unnecessary for identification purposes, nor do we consider them for our risk assessment (as stated above).
Participatiemaatschappij Vlaanderen (PMV)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Please be aware that there is a discrepancy between Article 4 and Article 20. In the case of Article 4, where available the place should be collected. On the other hand, Article 20 as currently phrased, implies that the place of birth is a mandatory element of the simplified due diligence measures. Then again, as stated above, we question the relevance of the place of birth.
Participatiemaatschappij Vlaanderen (PMV)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-
Participatiemaatschappij Vlaanderen (PMV)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Participatiemaatschappij Vlaanderen (PMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	33
Participatiemaatschappij Vlaanderen (PMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Based on the current wording of Article 33 it is unclear 1. whether Article 33 resets the clock for evaluating existing customers' information (for instance, in our understanding information for existing high-risk customers would to be complete or brought in line with the AMLR requirements by 10 July 2028) 2. whether Article 33 provides a one-year transitional period for all business relationships and activities that have been out of scope prior to 10 July 2027 (especially taking into consideration that a legal basis for customer due diligence and relating processing of personal data may have been missing or insufficient prior to this date)
Participatiemaatschappij Vlaanderen (PMV)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Participatiemaatschappij Vlaanderen (PMV)	Do you have any comments on the Annex in the draft RTS?	No
Participatiemaatschappij Vlaanderen (PMV)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Participatiemaatschappij Vlaanderen (PMV)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at	Manageable impact

Name of the respondent	Question	Answer
	understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. Name of the respondent	Question	Answer
	Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Participatiemaatschappij Vlaanderen (PMV)	Please justify your answer to the previous question and provide evidence where possible.	Under the current proposal, remote onboarding will require the use and setup of specific identity verification tools. The implementation and continued use thereof will bring about both one-off implementation costs as well as recurrent costs which would typically range between 20-50k Euro per year. For low-volume, low-risk organisations such requirements are burdensome and disproportionate.
PayPal	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	PayPal partially agrees. The horizontal, principle-based design of the draft RTS is appropriate, and we support AMLA’s decision (Option B in the impact assessment) to adopt a single instrument with targeted sector-specific measures. However, several provisions do not currently provide sufficient flexibility to be applied consistently across PayPal’s range of products — which include consumer wallets, merchant accounts, payouts to small private sellers, prepaid e-money, BNPL, virtual cards,

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	business expense cards, and cryptoasset services. (i) Provisions where flexibility is insufficient Article 7 — Non-face-to-face verification As detailed in our response to Question 1, Article 7 effectively forces all PayPal customers — from a low-value casual prepaid e-money user to a complex multinational corporate customer — through the same eIDAS-or-document fallback path. This is incompatible with a risk-based approach across the diverse PayPal product set. The provision does not allow PayPal to use already-deployed reliable, data-based verification methods (e.g. micro-deposits from EEA-regulated funding accounts; reputable database-only verification for low-risk products) where these are appropriate to the risk profile of the product. In particular, the provision is unworkable for non-EU individuals requiring verification, for example non-EU beneficial owners. These individuals will not have access to an eIDAS-compliant electronic identification. Articles 11(4) and 12 — Ownership and control structure Many PayPal Business and Enterprise customers are members of legitimate multinational groups whose structures include UK, US, Swiss, Norwegian, Singaporean or Australian entities for entirely commercial reasons (e.g. listing requirements, tax-efficient holding structures, regional operating subsidiaries). Under Article 12(1)(b) as drafted, these

Name of the respondent	Question	Answer
		customers will mechanically be classified as “complex”, triggering EDD-style obligations that are not commensurate with their actual ML/TF risk. This is a significant proportionality concern at scale and will encourage de-risking of legitimate cross-border businesses. Article 18 — Purpose and intended nature The breadth of data points enumerated in Article 18 (purpose, intended use, additional relationships, estimated amounts, source-of-funds categories, destination of funds, occupation, sector, regulatory status, geographical presence, key stakeholders) cannot meaningfully be collected in real time at scale across PayPal’s consumer products, where onboarding completes in seconds. The current text risks being read as a mandatory exhaustive list rather than a non-exhaustive menu. Articles 29 – 30 — Sanctions screening Application of these provisions across PayPal’s product set, including cryptoasset services where available, is not workable in the absence of a risk-sensitive definition of “match” for digital wallet addresses and clearer expectations regarding transliteration, aliases, and screening of PPTAs/SMOs. (ii) Concrete drafting proposals Our concrete drafting proposals for each of the above provisions are set out under Question 1. In summary:

Name of the respondent	Question	Answer
		Article 7(2) and (4): permit risk-sensitive verification using remote solutions (including database-based methods) without mandating reliance on an identity document; replace “justify” with “explain” and allow categorical product/firm-level explanations. Article 18: clarify that the enumerated data points are non-exhaustive and applied on a risk-sensitive basis.
PayPal	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	PayPal supports the overarching principle in Article 1, which anchors the RTS in the risk-based approach. However, several provisions are insufficiently aligned with that principle and risk producing prescriptive, one-size-fits-all outcomes that crowd out genuine risk-based decision-making. The most material concerns are summarised below. (i) Provisions concerned Article 7 (non-face-to-face verification): This provision provides a fixed two-step waterfall (eIDAS → documentary fallback) rather than a genuine risk-based approach. The risks posed by a low-value, low-frequency consumer wallet are very different from those posed by a high-net-worth customer or a business onboarding for cross-border B2B payments. The same verification path should not be mandated across both, a true risk-based approach should include some flexibility commensurate to the risk posed. Article 11(4)(b) (economic/legal rationale of structures): imposes a substantive judgment on legitimacy of structures that goes beyond AMLR “understanding” and

Name of the respondent	Question	Answer
		lacks objective criteria. This approach risks producing inconsistent supervisory outcomes and undesired de-risking effects. Article 12 (complex structures): The inclusion of "any legal entity present at any of these layers is registered in jurisdictions outside the EU" is geography-based trigger rather than risk-based and will mechanically classify many low-risk multinational customers as "complex". Article 18 (purpose and intended nature): The specified list of data points read as exhaustive, rather than illustrative, and this runs counter to the proportionality emphasised in Recitals (1), (16) and (19). Articles 24 and 26 (low-risk obligations and EDD): certain low-risk obligations may go beyond what is necessary, and Article 26(2) as drafted, could be read as introducing implicit KYC obligations. Article 30 (sanctions screening): This article provides broad obligations and the absence of a definition of "match" (especially for digital wallet addresses) would drive deterministic screening expectations and false positives, diverting resources from identification of actual risk.
PayPal	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	Yes. Operating at scale across the EU consumer and merchant population, PayPal regularly encounters situations where required information is not available on the customer's identity document, is not recorded by national systems, or cannot reasonably be obtained

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	through eIDAS-only fallback. 1. Place-of-birth information not on the document (Articles 4, 6) Several EU and EEA identity documents (notably Luxembourg ID cards) do not record place of birth. Some non-EU passports record only the city or municipality, but not the country. Strictly applying Article 4 in these cases creates a discrepancy between system requirements and the underlying source documents, which can lead to onboarding rejections of legitimate customers. Proposed alternative: amend Article 4 (or the operative wording) to clarify that obliged entities are expected to collect, and where appropriate verify, place-of-birth information to the extent that such information appears on the identity document, passport or equivalent. Where neither country nor city of birth is provide on the face of the document, a customer's good-faith declaration of country of birth should be deemed sufficient. This aligns with Recital (3). 2. "All" nationalities (Article 5) Most national identity documents record only one nationality. Customer self-declaration of additional nationalities is, by definition, dependent on the customer; obliged entities cannot verify nationalities not declared in good faith. In addition, certain technical systems are not designed to record multiple nationalities, particularly for legacy onboarding flows. Proposed alternative: remove the word "all" from Article 5 (consistent with Article 22(1)(a)(iii) AMLR) and

Name of the respondent	Question	Answer
		explicitly reflect Recital (3) in the operative provision, confirming that verification of one nationality is sufficient where multiple nationalities are declared in good faith. 3. eIDAS-conformant identification means unavailable (Article 7) eIDAS-conformant electronic identification means at substantial or high assurance level are not, in practice, available for many legitimate PayPal customers, including: • non-EU residents lawfully accessing EU products and services (UK, Norwegian, Swiss, US travellers; non-EU SMEs onboarding for cross-border commerce); • EU residents in Member States where notified eID adoption is still limited; • vulnerable customers, refugees, asylum seekers, and homeless individuals. As currently drafted, Article 7(2)–(4) only permits a documentary remote-verification fallback. There is no recognised role for non-documentary data-based verification methods that already operate to high assurance levels in the EU market today. Proposed alternative: amend Article 7(2) as set out under Question 1 to permit reliable, risk-sensitive remote verification solutions — including (i) micro-deposit / penny-validation methods using funding accounts at EEA-regulated credit institutions, (ii) database verification using reliable credit, government and telecom sources, and (iii) third-party providers complying with EBA/GL/2022/15 — in addition to the documentary fallback, where these provide assurance

Name of the respondent	Question	Answer
		levels commensurate with ML/TF risk. 4. Refugees, vulnerable individuals, minors (Article 6) Documents issued in certain jurisdictions may not contain facial images, and birth certificates of minors do not contain facial images either. Recital (7) and Article 6(2) provide for “other credible means,” but in practice this concept is operationalised inconsistently across Member States. Proposed alternative: expand Recital (7) to provide additional practical examples of acceptable “other credible means” (e.g. reliance on guardians for minors, supporting documents from public authorities or recognised humanitarian organisations, social-security or health-system records). PayPal strongly supports the flexibility in Article 6(2) and asks AMLA to confirm that obliged entities can rely on such credible means without requiring “forensic-grade” document examination. 5. Beneficial-ownership information not in central registers Following the CJEU’s 2022 judgment in C-37/20 and C-601/20, public access to beneficial-ownership registers in many Member States has been restricted, and update lags in such registers (e.g. the Luxembourg RBE) remain. Article 10 reasonable measures cannot always be discharged solely through register consultation. Proposed alternative: confirm in Article 10 (or in the recitals) that obliged entities may rely on a combination of central-register information, customer-provided documentation (including organisational charts), and reputable third-party data services as reasonable measures, even where central-register information is

Name of the respondent	Question	Answer
		delayed or unavailable. Due to space constraints, further examples are submitted under "additional input".
PayPal	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A.
PayPal	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We support a harmonised, risk-based CDD framework that preserves proportionality and financial inclusion in line with Article 1 of the draft RTS and Recitals (1), (16) and (19). We encourage AMLA to ensure that the RTS remain firmly anchored in the risk-based approach described in Article 1 and Recital (1), avoid exhaustive checklists, and allow obliged entities to calibrate controls proportionately to customer, product and channel risk. This is particularly important for digital and remote onboarding, which are expressly recognised in Recitals (7), (13) and (24) as areas where flexibility and technological neutrality are needed. Given character constraints, additional specific input is submitted under "additional input".

Name of the respondent	Question	Answer
PayPal	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	14
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	In continuation of response to question 3: 6. Discretionary trust beneficiaries (Articles 14 – 15) The notion of “timely updates” for discretionary trusts and class beneficiaries is operationally unclear, particularly where trustees are not directly engaged with the obliged entity. Clarification is requested.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	In continuation of response to question 3: 7. Inconsistency in low-risk address requirements (Articles 3, 20, Annex I) Article 20 omits residential address for natural persons in low-risk situations, while Article 3, Annex I and Article 22(1)(a)(iv) AMLR all imply or require it. Where customers self-onboard for low-risk products without supplying a structured address, obliged entities cannot determine with certainty whether they are non-compliant under Article 22(1) AMLR / Annex I or compliant under the literal text of Article 20. Proposed alternative: align Article 20 expressly with

Name of the respondent	Question	Answer
		Article 3, the Annex and Article 22(1) AMLR, and clarify that, in low-risk situations, country and city of residence may be sufficient where this enables the customer to be identified and reached.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	2
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 2 – Information to be obtained in relation to names Article 2(i) requires obliged entities to obtain “all names and surnames that feature on the identity document, passport or equivalent.” We welcome the explicit limitation to names that feature on the identity document and recommend that AMLA clarify in the text or recitals that this does not require collection of middle names or other name based on the Art. 2 where these are not present on the underlying identification document, to avoid impracticable expectations. For legal entities and other organisations, Article 2(ii) rightly requires both the registered name and any trade name that differs from it, which is already consistent with market practice and existing regulatory expectations.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	3

Name of the respondent	Question	Answer
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 3 – Information to be obtained in relation to addresses Article 3 specifies the components of “address” for the purposes of Article 22(1) AMLR (country, city or nearest alternative, and where available postal code, street and building details). While we agree with the data elements, we recommend clarifying that verification should be aligned with information reasonably available on accepted documents and local address conventions.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	4
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 4 – Specification on the provision of the place of birth Article 4 requires obliged entities to collect at least the country of birth and, where the identity document provides additional information. In the absence of standardised ID documents in the EU, the country of birth is not always specified on the ID document; conversely, some Luxembourg ID cards do not record place of birth at all, while certain non-EU documents include only the city or municipality. To avoid discrepancies between system requirements and source documents, we suggest clarifying that obliged entities are expected to collect, and where appropriate verify, place-of-birth information to the extent that such information appears on the identity document, passport or equivalent. Where neither the country nor the city of

Name of the respondent	Question	Answer
		birth is on the document, a customer's good-faith declaration should be deemed sufficient.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	5
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 5 – Specification on nationalities Article 5 requires obliged entities to obtain information on "all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status" of the natural person. We are concerned that the wording could be read as requiring intrusive investigation beyond a customers good faith declaration and information available from the documents provided. We recommend that the word "all" be removed: Article 22(1)(a)(iii) AMLR refers only to "nationalities," and the additional "all" in the RTS exceeds the Level 1 mandate. Article 5 should also be aligned with Recital (3) of the draft RTS, which confirms that where a person holds multiple nationalities and declares them in good faith, verifying one nationality is sufficient. Recital (3) should be reflected in the operative provision so that supervisory expectations track the recital.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	6

Name of the respondent	Question	Answer
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 6 – Documents for the verification of identity Article 6(1) defines when a document is equivalent to an identity document or passport, including that it "contains all names and surnames" and the date of birth. Given that some official documents omit middle names, we suggest aligning Article 6(1)(b) with Article 2 by clarifying that for collection purposes the names and surnames that appear on the document is sufficient, and that a document with first and last name, but no middle name, still qualifies where other criteria are met. Article 6(2) provides flexibility for vulnerable customers (e.g. refugees, stateless persons) by allowing other documents and "other credible means" where data points are missing, in line with Recital (7). We strongly support this flexibility as essential to preventing de-risking and financial exclusion. We recommend that Recital (7) provide additional practical examples of "legitimate reasons" and "other credible means" to support harmonised supervisory expectations across Member States. Article 6(3) requires obliged entities to ensure that documents are "authentic and have not been forged or tampered with." We ask AMLA to clarify that compliance does not necessarily require specialised forensic technologies. Reasonable commercial measures (e.g. ID-document verification software with security-feature checks, machine-readable-zone validation,

Name of the respondent	Question	Answer
		optional NFC chip reads) should be sufficient where supported by the entity's risk assessment.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	7
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 7 (Non-face-to-face / remote verification) and Article 32 (Use of eID and trust services) We welcome AMLA's refinement of the provisions "on the verification measures conducted on a non-face-to-face basis" addressing remote onboarding. We support the aim of ensuring robust protection against identity fraud while enabling digital onboarding, in line with Article 22(6)–(7) AMLR and Article 32 of the draft RTS on electronic identification means. Article 32 and Recital (24) recognise that the use of electronic identification means and qualified trust services should be aligned with ML/TF risk. We recommend that AMLA explicitly confirm that remote onboarding tools compliant with EBA Guidelines on remote customer onboarding (EBA/GL/2022/15) remain acceptable alongside eIDAS solutions, provided they offer an assurance level commensurate with risk. Given the overall emphasis on proportionality and technological neutrality, we would strongly caution against interpreting Article 32 or Article 7 as making eIDAS/electronic ID the only long-term solution; the use of EUDIW will remain voluntary, so non-eIDAS solutions

Name of the respondent	Question	Answer
		should not be treated as merely temporary. We support the language in Article 1 (risk-based approach) and in Recitals (7), (13) and (24) that allows obliged entities to adapt verification measures to the size, nature and complexity of their business and risk exposure.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	25
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Recital (13) and Article 25 AMLR require obliged entities to understand the purpose and intended nature of business relationships and occasional transactions. The draft RTS Article 18 operationalises this by specifying information such as purpose, expected amounts and frequency. This is helpful but risks being read as exhaustive and mandatory in all cases. We recommend AMLA clarify (mirroring the EBA's former Articles 15–16 of the March 2025 draft) that the enumerated data points constitute a non-exhaustive menu to be applied on a risk-sensitive basis in line with Article 1, and that obliged entities may determine, based on their risk assessment, which subset of information is necessary to adequately understand the relationship. This avoids undermining the proportionality objective emphasised in Recitals (1), (16) and (19).

Name of the respondent	Question	Answer
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	19
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	PayPal supports AMLA's approach to PEP identification as set out in Recital (15) and Article 19. We agree that PEP screening should cover the customer, beneficial owners and the person on whose behalf or for whose benefit a transaction is carried out, consistent with Article 20(1)(h) AMLR and Recital (15). We support a model that combines automated screening with appropriate manual review, as reflected in Recital (15). We ask AMLA to clarify the expected re-screening triggers for existing customers and whether transaction beneficiaries (in particular for one-off occasional transactions) should themselves be screened against PEP lists.
PayPal	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	20
PayPal	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Regarding Article 20, we welcome the corresponding clarification Recitals (16)–(18), which confirm that simplified due diligence (SDD) is available in low-risk situations and that minimum identification in such cases should correspond to what is usually present in a passport or identity document. Consistent with Recital (17), the minimum identification requirements in the SDD article should not be interpreted as requiring middle names or additional

Name of the respondent	Question	Answer
		name elements where these are not present on the official document; this will ensure proportionality while maintaining sufficient verifiable information. Article 20 should be amended to reflect Recital (17). Recital (25) clarifies that the maximum 1- and 5-year periods for updating customer information for existing customers start from the application date of this Delegated Regulation. We strongly support this non-retroactive approach and recommend ensuring that any references to up-to-date information in the SDD article avoid wording such as “at all times,” which could be misread as requiring real-time verification even in low-risk contexts; instead, the text should stress risk-based periodic and event-driven reviews. Regarding article 22, we also welcome Recital (18), which supports specific SDD for pooled accounts held by certain obliged entities where ML/TF risk is low. Discrepancy regarding the residential address of natural persons. Article 20(1)(a) sets out the minimum information to be collected to identify a natural person in low-risk situations and lists names, place of birth, date of birth and nationality, but does not list the usual place of residence. By contrast: • Article 22(1), point (a)(iv) AMLR includes the usual place of residence within the standard customer identification information for natural persons; • Article 3 of the draft RTS prescribes the components

Name of the respondent	Question	Answer
		of an address (country, city, and where available postal code, street, building, apartment) for the purposes of Article 22(1) AMLR; • Annex I of the draft RTS lists residential-address attributes (resident_country, resident_state, resident_city, resident_postal_code, resident_street, resident_house_number, resident_address) as the attributes that electronic identification means and qualified trust services must feature in order to fulfil the requirements of Section 5 (i.e. SDD); • Article 20(1)(b)(iii) requires the address of the registered office for legal entities, creating an asymmetry with natural persons under the same low-risk regime. The combined effect is unclear: it is not evident whether (i) residential address is intentionally not required as part of the minimum identification dataset under Article 20, with eIDAS attributes in Annex I being merely indicative; or (ii) residential address is required by virtue of Article 22(1)(a)(iv) AMLR and the eIDAS attribute mapping, but Article 20 inadvertently omits it. We recommend that AMLA resolve this discrepancy expressly. PayPal's preferred approach is to confirm that, in low-risk situations, residential address may be obtained on a risk-sensitive basis and may be limited to the country and city where this is sufficient to identify and reach the customer (consistent with the "where available"

Name of the respondent	Question	Answer
		qualifier already used in Article 3(c)). At a minimum, AMLA should align Article 20, Article 3, the Annex and Article 22(1)(a)(iv) AMLR so that obliged entities and supervisors are not left to reconcile conflicting expectations.
PayPal	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
PayPal	Please specify which recital you refer to, and share your comments below.	We support the requirement, reflected in Recital (22) and the corresponding RTS articles 29 and 30 that obliged entities verify whether the customer or beneficial owner is subject to targeted financial sanctions as defined in Article 2(49) AMLR. Any references in that article to the names and identifiers used for screening should remain consistent with Article 2 and Article 6: obliged entities should be required to screen against the names and identifiers as captured on official documents, not hypothetical variants or middle names that are not available.
PayPal	Do you have any comments on the Annex in the draft RTS?	No
PayPal	How would you rate the proposals set out in the draft RTS overall?	Neutral
PayPal	Please justify your answer to the previous question and provide evidence where possible.	N/A.

Name of the respondent	Question	Answer
PGE Polska Grupa Energetyczna S.A.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Ad clause 13 of Recitals of RTS In the case of obliged entities carrying out a broad range of activities, only part of which falls within the scope of AML/CFT regulations, we kindly request clarification as to how services provided by such obliged entities to their clients should be treated where those services are provided either in conjunction with, or independently from, services that fall within the scope of AML/CFT requirements. In particular, RTS could clarify whether customer due diligence should be applied: a) exclusively in relation to those services that fall within the scope of the AML/CFT regime, or b) in accordance with the AMLR and the applicable RTS, customer due diligence should cover the customer's entire business relationship of the obliged entity, meaning that the obliged entity should apply due diligence measures also to services which do not fall within the scope of AML/CFT requirements, but are provided to the customer either in conjunction with or independently from services that are subject to the AML/CFT regime.
PGE Polska Grupa Energetyczna S.A.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Ad Article 10 of RTS Pursuant to Article 22(7) of the AMLR, the beneficial owner may be verified by applying the measures referred to in Article 22(6) of the AMLR, including electronic identification means meeting the requirements of Regulation (EU) No 910/2014 (eIDAS),

Name of the respondent	Question	Answer
		or by applying “reasonable measures”. At the same time, the scope of identification data of the beneficial owner, as referred to in Article 22(2) of the AMLR in conjunction with Article 62(1)(a) of the AMLR, includes the number of the identity document and the residential address, which are not data elements that are verified as part of the electronic identification mechanism itself (eIDAS / qualified electronic signature). In this context, we would kindly ask for confirmation as to whether, where the beneficial owner submits a declaration containing the required identification data, signed with a qualified electronic signature, the obliged entity may consider that: - the identity of the beneficial owner has been effectively verified by means of an electronic identification method compliant with eIDAS, and - data such as the identity document number and the residential address may be regarded as verified on the basis of such a declaration without the need to confirm them using additional documents or independent sources, provided that the risk assessment in the specific case does not justify the application of enhanced customer due diligence measures. How should an obliged entity properly document the verification of a qualified electronic signature? Pursuant to Article 22(6)(b) of the AMLR and Article 7(1) of the draft RTS, where an obliged entity uses a qualified electronic signature, the identity verification requirement in a non-face-to-face setting is, in principle,

Name of the respondent	Question	Answer
		deemed to be fulfilled, provided that the signature is properly verified. What does AMLA consider to constitute a “proper verification” of a qualified electronic signature, i.e. how should such verification be performed and documented by the obliged entity? For example, does confirming the validity of a qualified electronic signature using standard software (such as Adobe Acrobat) fall within the meaning of “proper verification of the signature” as referred to in the RTS? Ad Article 28 of RTS In accordance with Article 34(4)(d) of the AMLR and Article 28 of the draft RTS, obliged entities are required, in situations of increased risk, to obtain information on the purpose of intended or executed transactions and on their consistency with the business relationship. Does AMLA confirm that the obligations arising from Article 34(4)(d) of the AMLR, as further specified in Article 28 of the RTS, apply only in situations where, during the course of the business relationship, transactions occur that are atypical for a given customer profile, inconsistent, or otherwise give rise to increased ML/TF risk, thus requiring enhanced analysis under enhanced due diligence (EDD) measures, or should this obligation apply to all transactions of such a customer, including those that are typical?
PGE Polska Grupa Energetyczna S.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations	Ad Article 18 of RTS

Name of the respondent	Question	Answer
	where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 18 of the RTS provides that obliged entities shall obtain information on the purpose and intended nature of the business relationship “when necessary”. In this context, we kindly ask AMLA to clarify in which specific circumstances non-financial obliged entities are required to collect the information referred to in Article 18, i.e. when such collection should be considered “necessary”, and in which cases it is sufficient to rely on a customer’s declaration together with general information on the customer’s profile available in public databases. In particular, could AMLA clarify whether the information listed in Article 18 of the RTS may be: a) collected in the form of customer declarations, b) derived from existing operational data held by the obliged entity (e.g. type of contract, tariff applied, volume of consumption), c) determined on the basis of customer classification or segmentation, or whether obliged entities are instead expected to obtain such information by collecting customer transaction history statements. Furthermore, does AMLA confirm that Article 18 of the RTS does not introduce a general obligation to obtain documentary evidence supporting information on the purpose of the business relationship, the source of funds or the use of funds, where the obliged entity — in accordance with the risk-based approach — already has sufficient information to understand the nature and purpose of the business relationship? Finally, in the case of services provided by non-financial

Name of the respondent	Question	Answer
		obliged entities, would AMLA confirm that a general categorisation of the customer's source of funds (e.g. employment income or business income) is sufficient to meet the requirements of Article 18(c) of the RTS?
PGE Polska Grupa Energetyczna S.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	NA
PGE Polska Grupa Energetyczna S.A.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Ad Article 1 of RTS Provided that, under the AMLR, holdings carrying out mixed activities and having at least one subsidiary that qualifies as an obliged entity should themselves fall within the scope of the AMLR as obliged entities (as referred to in Recital 10 of the AMLR), we kindly request clarification of the following aspects: 1) What specific AML/CFT obligations apply to such holdings pursuant to the above provision? In particular, how should the term "holding" be understood in this context — does it refer to the entire group, including the parent company, or solely to a specific entity within the group? 2) What is the precise scope of business relationships, services, products, and categories of customers in respect of which such holdings are required to apply

Name of the respondent	Question	Answer
		customer due diligence (CDD) measures? Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	No significant additional costs
PGE Polska Grupa Energetyczna S.A.	Please justify your answer to the previous question and provide evidence where possible.	NA

Name of the respondent	Question	Answer
Philanthropy Europe Association (Philea) Legal Affairs Committee	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 27: Additional information on the source of funds, and source of wealth of the customer and of the beneficial owners The listing of additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, such as tax declarations and recent pay slips is not fit for board members and management body of foundations and NPOs (and even individual beneficiaries should they be considered BOs). Requesting tax and/or financial information from the members of the board of trustees will hinder the effective pursuit of the foundation's objectives, as no one will want to serve on the board and provide such information. As an alternative measure, it could be made a requirement to check the lists of sanctioned individuals for any matches before appointing a new member of the board. To ensure that the measure provided for by this article is grounded on proportionality and and the risk-based approach, and does not allow for indiscriminate sourcing of information, we ask for the Article to be lightly reworded as follows: `For the purposes of Article 34(4), point (c), of Regulation (EU) 2024/1624, obliged entities shall obtain such additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, that is necessary to satisfy them, in accordance with the risk based approach, that the source of funds or source of wealth is derived from lawful activities. Such information may include one or more of the

Philanthropy Europe Association (Philea) Legal Affairs Committee	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	• Article 12 - Understanding the ownership and control structure of the customer in the case of complex corporate structures: While we understand the desire to bring more transparency into complex corporate structures, we oppose the singling out of the involvement of a foundation in any of the layers as a condition for a complex corporate structure. As a matter of fact, there are a variety of different legal arrangements and legal entities that can be adopted to create complex corporate structures, and there is no evidence that foundations present a higher risk of misuse than other legal arrangements and legal entities. Consequently, these different types of legal arrangements and legal entities should either be listed all or there should be a general mention of legal arrangement or similar legal entities in any of the layers. In most civil law jurisdictions such as Spain, where foundations have no owner and beneficial ownership is a legal fiction established by the legislature—which assumes that the beneficial owner of the foundation is its board of trustees—this provision will not be consistent with the legal framework governing foundations under domestic law. We therefore ask for the proposed wording of Article 12.1 to be replaced with the following: ` 1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point

Name of the respondent	Question	Answer
		(b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where there are three or more layers between the customer and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers; […] • Article 18 - Identification of the purpose and intended nature of a business relationship or occasional transaction The obligation to collect information on beneficial owners, key stakeholders, business partners and associates (Article 18(e)(viii) of the draft RTS) involves the processing of personal data relating to individuals who are neither party to the business relationship nor informed of the processing. The legal basis and the modalities for fulfilling the transparency obligations under Articles 13 and 14 GDPR with respect to these third parties should be clarified in the RTS or in accompanying guidance. • Article 4 - Specification on the provision of the place of birth While we acknowledge that the AMLR establishes an obligation to collect information on customers' place of birth, we note that the underlying rationale for this requirement remains unclear. In particular, it is not evident how this data point contributes meaningfully to risk-based customer due diligence. Moreover, the systematic collection and use of place of birth data may

Name of the respondent	Question	Answer
		give rise to unintended consequences, including increased risks of discriminatory outcomes and financial exclusion. We therefore ask for further clarification on: the specific risk indicators that place of birth is intended to capture; and the circumstances under which this information should be considered relevant in a risk-based approach. In the absence of this, we ask for this requirement to be removed in its entirety. • Art. 25 sets out types of information an obliged entity should obtain on the customer in the context of enhanced due diligence measures. This includes information to assess the reputation of the customer and the beneficial owners. To avoid overly broad or subjective interpretations, and to mitigate the risk of unwarranted de-risking, we recommend clarifying that any assessment of “reputation” should be strictly limited to considerations relevant to ML/TF risks. First, we observe that `reputation` as a concept is vague and can lead to arbitrariness in its application. Moreover, we observe in practice that non-profit organisations (NPOs), particularly those with a more outspoken profile, including those working on human rights and environmental issues, are increasingly subject to smear campaigns and stigmatisation. Such external narratives, which may reflect political or societal disagreement rather than objective risk, should not be relied upon in customer due diligence assessments. Diverging views on an organisation’s mission or activities must not lead to financial exclusion. Clear guidance in this regard would help ensure that due

Name of the respondent	Question	Answer
		diligence remains risk-based, proportionate, based on objective criteria, and aligned with fundamental rights. Furthermore, this obligation may hinder, or even prevent, the fulfilment of the organisation's founding mission—something that the AML regulations themselves expressly seek to avoid—and a warning is issued regarding this risk.
Philanthropy Europe Association (Philea) Legal Affairs Committee	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	N/A
Philanthropy Europe Association (Philea) Legal Affairs Committee	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A
Philanthropy Europe Association (Philea) Legal Affairs Committee	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• Article 14 - Identification and verification of beneficiaries of trusts and similar legal entities or arrangements We consider that Article 14 should contain a reference to Article 59 (2) AMLR , which regulates the identification of a class of beneficiaries, to ensure

Name of the respondent	Question	Answer
		coordination between the two provisions and clarity on their application for obliged entities and supervising authorities. We suggest implementing this in the legal text as follows: `1. For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities shall obtain from the trustee, legal entity or legal arrangement include: (a) a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine whether individual beneficiaries are ascertainable and shall be treated as beneficial owners, in accordance with the conditions laid out by Article 59(2) on the identification of a class of beneficiaries: [...] • In the articles on identification of customers, we ask to include a principle “once identified, always identified” in the articles on identification of customers. If a customer has been properly identified and verified during onboarding, it should not be necessary to obtain a new identity document at a later stage when the document expires. • Recital 21now clarifies that the re-use of information is permissible. We suggest that this be also added in the legislative text as a binding provision. • We strongly recommend that AMLA publish a dedicated GDPR impact analysis of the draft RTS, developed in coordination with the European Data

Name of the respondent	Question	Answer
		Protection Board (EDPB), prior to their final adoption. This analysis should specifically address the following points: · Proportionality of data collection under Simplified Due Diligence (SDD): the breadth of information required under Articles 18 to 24 of the draft RTS — even in low-risk situations — raises concerns regarding compliance with the data minimisation principle under Article 5(1)(c) GDPR. A clear delineation of what constitutes strictly necessary data collection in SDD contexts should be established. · Processing of third-party data: the obligation to collect information on beneficial owners, key stakeholders, business partners and associates (Article 18(e)(viii) of the draft RTS) involves the processing of personal data relating to individuals who are neither party to the business relationship nor informed of the processing. The legal basis and the modalities for fulfilling the transparency obligations under Articles 13 and 14 GDPR with respect to these third parties should be clarified in the RTS or in accompanying guidance. · Automated PEP screening for stable, long-standing low-risk customers: the requirement for automated PEP screening (Article 19 of the draft RTS) involves the processing of data relating to political opinions, which constitutes a special category of personal data under Article 9 GDPR. While the legal basis under Article 9(2)(g) GDPR is available, its application must remain proportionate to the risk profile of the customer. We recommend that the RTS explicitly provide that, for customers with a stable low-risk profile and a long-

Name of the respondent	Question	Answer
		standing business relationship with no identified anomalies, a risk-based screening frequency — rather than a systematically high-frequency approach — is sufficient to meet both the AML/CFT requirements and the proportionality standard under GDPR. We note that, while the EDPB and the EDPS were consulted during the EBA's preparatory work, the draft RTS as published do not contain any explicit provision reconciling the data collection obligations with the requirements of Regulation (EU) 2016/679. Given that these RTS will apply directly across all Member States and to a broad range of obliged entities — including those newly subject to AML/CFT obligations — this gap represents a material legal risk that should be addressed before the final text is submitted to the European Commission for adoption. • Finally, we strongly recommend that a fundamental rights assessment of the Draft RTS carried out by the European Union Fundamental Rights Agency take place.
Philanthropy Europe Association (Philea) Legal Affairs Committee	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Philanthropy Europe Association (Philea) Legal Affairs Committee	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
PLANETE CSCA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	This draft should only apply to pure life insurance products and services. Sometimes life insurance guarantees are included into non-life insurance contracts, in this case it should be relevant to exclude these policies from the scope of the requirements. Generally speaking, we approve the proportionality and risk-based approach principles (article 1), but we regret the fact that section 2 regarding information to be collected does not reflect the aim of article 1. We understand that sections 2 and 4 apply to standard due diligence whereas requirements appear to be very detailed and tailored to enhanced due diligence. Regarding standard due diligence, requirements should be much more simplified, for example regarding the understanding of the ownership and control structure of the customer (articles 11 and 12). Furthermore, the regulation (EU) 2024/1624 on the prevention of the use of the financial system for the purposes of money laundering or terrorist financing regarding customer due diligence -cf articles 20, 21 and 22- is already very detailed and contain efficient requirements regarding identification and verification of the customer's identity. Under these circumstances, we consider that this draft regulation runs counter to: - the simplification process currently being pursued at the European level;

Name of the respondent	Question	Answer
		- the data minimization concept of GDPR. Finally, we would like to emphasize the very huge costs resulting from the implementation of this draft RTS; especially regarding electronic identification.
PLANETE CSCA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art.4 should be amended as follow: Article 4 The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name. Requirements provided in art.7 are totally disproportionated for small insurance distributors and will discourage them from using distance selling or marketing. It should be simplified as follow: Article 7 1.no change 2.In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person's identity document, passport or equivalent using robust remote solutions. 3.and 4.to be deleted Similarly, art.11 contains requirements impossible to achieve for small insurance intermediaries and a wording that could lead to misinterpretation. Furthermore, it is very difficult to understand differences between art.11 and art.12 that complexify the implementation of these requirements by obliged

Name of the respondent	Question	Answer
		entities. These 2 articles should be simplified and combined into 1 to facilitate a correct understanding of the ownership and control structure of the customer Article 11 1. Obliged entities shall take reasonable steps to ensure they obtain a comprehensive understanding of the ownership and control structure of the customer pursuant to Article 20(1) point (b) of Regulation (EU) 2024/1624. 2.to be deleted 2.With respect to the legal entities and to the extent that it is relevant, obliged entities shall take reasonable steps to obtain the following information [...]: 4.to be deleted Article 12 to be deleted Art.13 to be deleted: it appears to be useless as article 22.1 b) of AMLR 2024/1624 already provides for a legal entity the names of the legal representatives (iii) Art.19: we do not understand how an obliged entity could put in place in automated screening tools whereas there is no existing list of PEP? Article19 3.To comply with paragraphs 1 and 2, obliged entities shall put in place reasonable measures in order to identify Politically Exposed Persons. Simplification of art.20 and 21 : Article 20 1. In situations of low risk, obliged entities shall obtain

Name of the respondent	Question	Answer
		the following information to identify the customer and the person purporting to act on behalf of the customer: (a) for a natural person: i. all names and surnames; ii. place of birth; iii. date of birth; iv. nationalities of the natural person or their statelessness, refugee or subsidiary protection status. (b) for a legal entity and other organisations that have legal capacity under national law: i. the legal form; ii names of the legal representative of the legal entity iii. the registered name of the legal entity and its trade name where it differs from its registered name; iv. the address of the registered office; and v. where available, the registration number or tax identification number, or the legal entity identifier. 2. No change. Article 21: delete each occurence of "or senior managing officials" Art.25 and 26: from a practical point of view, we are wondering how obliged entities, especially small structures, will be able to evaluate/assess: -their own satisfaction that the information they hold is authentic, -the reputation of the customer and the beneficial owners. Art.27: it is absolutely unrealistic to extend the

Name of the respondent	Question	Answer
		requirements contained in this article to beneficial owners. From a practical/business point of view beneficial owners will be totally reluctant to inform obliged entities for example regarding their tax declarations. Furthermore, sometimes there is a very various number of beneficial owners. We propose, for legal entities, to limit the requirements to the legal representative of the legal entity Article 27 Occurences of "the beneficial owners" should be replaced by "the legal representative of the legal entity" a) : i and ii to be deleted. iii should become : any official income statements; h) : replace "of the beneficial owners" by the legal representative's" Art.29 we fully agree on the fact that obliged entities should establish whether their customers/BO are subject to targeted financial sanctions. But we do not understand the extension to the person acting on behalf of the customer: what does it mean for legal entities? We propose to delete the second sentence. Article 32: we do not understand the link between art.7 and 32. Art.32 and annex1 appear to be very complicated to achieve

Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The following submission takes the explicit perspective of the e-money sector's value chain, representing e-money issuers, distributors and merchants. The associations Prepaid Association of Germany e.V. (Prepaid Verband Deutschland e.V. – PVD), BrancheVereniging Cadeaukaarten Nederland (BVCNL), Electronic Money Association (EMA), European Payment Institutions Federation (EPIF), European Association of Payment Service Providers for Merchants (EPSM), EuroCommerce, Gift Card & Voucher Association (GCVA), Independent Retail Europe, Payments Innovation Forum (PIF) jointly comment on the proposed risk factors relating to the issuance of electronic money. Individual submissions from participating associations as response to the proposed RTS are to be viewed separately and remain unaffected

Name of the respondent	Question	Answer
		by this. Most comments are nonetheless also applicable to other non-bank payment business models, especially in relation to the use of a risk-based approach and the appropriate recognition of established risk-mitigating techniques. The signing associations welcome that the revised draft RTS includes important improvements compared to the first draft consulted on by the EBA. The current text provides greater legal clarity and enables a much more practical implementation for market participants and NCAs alike. This is essential to preserve proportionality and to avoid unintended restrictions on low-risk e-money products and their customers. In particular, we strongly support the clarification that the risk factors are not to be understood as cumulative requirements and that the intention is to provide a non-exhaustive list of potential risk factors, i.e. that supervisors may consider one or more of the proposed risk factors to determine the extent of the exemption. This allows NCAs to appropriately implement a risk-based approach and to take into account different and diverse business models of market participants, who tailor their risk-mitigating measures to their respective business models. The signing associations also welcome the clarification that NCAs shall consider the extent to which such proposed risk factors are implemented by the obliged entities, rather than applying a catalogue of binary yes-or-no criteria where each risk factor would need to be fulfilled in its entirety. NCAs are now better equipped to

Name of the respondent	Question	Answer
		consider different business models of e-money issuers in order to allow for the adequate application of the exemption for e-money in accordance with Article 19(7) AMLR. The criteria laid down in the Level 1 text are already strict and determine the low risk of the e-money product. It is therefore crucial that the risk factors defined in the RTS do not contradict or undermine the legal text. Otherwise, the RTS risk rendering the exemption provided for in the Level 1 text largely unworkable in practice. The e-money exemption offers an important opportunity for citizens to use low-risk products, such as e-money gift cards, without being subject to mandatory customer identification in advance. Both consumers and merchants therefore benefit significantly from the e-money exemption. Regarding the specific risk factors, we still see room for further improvement. In our view, some of the proposed criteria are not fully appropriate to determine the risk of an e-money product being misused for illicit purposes. For example, paragraphs (d) and (e) are similar to an out-of-scope exemption under the Payment Services Directive (Article 3(k)). For payment instruments that can only be used to purchase a very limited range of goods or services, Article 1(4) of Directive 2009/110/EC in conjunction with Article 3(k)(ii) of Directive (EU) 2015/2366 does not apply. Such products therefore do not fall under the e-money definition. However, the catalogue of proposed criteria applies to the simplified application of due diligence obligations for e-money. The proposal would mean that an exemption from the application of due diligence

Name of the respondent	Question	Answer
		obligations for e-money products would depend, inter alia, on the product not being e-money at all. In our view, this would run counter to the legislative intent expressed in Article 19(7) of Regulation (EU) 2024/1624.
Prepaid Verband Deutschland e.V. and other organisations	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In addition, the associations suggested adding further factors that would significantly contribute to mitigating potential ML/TF risks associated with the distribution of e-money products without prior customer identification, such as distribution monitoring, merchant monitoring or transaction monitoring. In its final guidance, the EBA declined to add such factors, arguing that these would focus on the e-money issuer rather than on the e-money instrument and would therefore fall outside the scope of its mandate under Article 28(1)(c) AMLR: “The EBA mandate under Article 28(1), point (c), AMLR explicitly indicates that the risk factors under Article 30 of the draft RTS should focus on the ‘electronic money instruments’ and not on the issuers of the e-money instrument. This request is therefore outside of the scope of the EBA’s mandate.” However, the proposed criterion in Article 31 point (i) is not consistent with this requirement that the risk factor should be related to the product and not to the issuer and its distribution infrastructure: “the extent to which distribution is limited to intermediaries that are themselves obliged entities applying customer due diligence measures and record-keeping requirements laid down in Regulation (EU) 2024/1624”

Name of the respondent	Question	Answer
		This criterion focuses on the distribution set-up of the e-money issuer and not on the e-money instrument. In the associations' view, the distribution of e-money via obliged entities is of no significant importance to reduce ML/TF risks in practice. The criterion should therefore be removed entirely. We would also like to refer to our joint response to the EBA consultation, as our comments on some of the underlying risk factors largely remain valid: https://prepaidverband.de/wp-content/uploads/Joint-Trade-Association-Feedback-on-EBA-RTS-e-money-risk-factors.pdf In summary, we therefore believe that the appropriate approach to looking at risk factors should consider both the electronic money instrument and the approaches adopted by the issuers of the e-money instrument and the distribution channels in their totality.
Prepaid Verband Deutschland e.V. and other organisations	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Point a Low thresholds are already imposed by the holding limits of the level 1 text. Thresholds should however not be lower as laid down in AMLR.

Name of the respondent	Question	Answer
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Point b we suggest to delete point b (the extent to which the issuer can verify that the funds originate from an account held and controlled solely or jointly by the customer at an EEA-regulated credit or financial institution) Rationale: The associations are opposed to a criterion that links the application of the e-money exemption to account-based funding. Also, this would in essence contradict the spirit of the level 1 text, which is supposed to also cover current e-money products that are in many cases acquired in exchange for cash. This is also in line with the legislators' idea that e-money is an electronic substitute for coins and banknotes (Directive 2009/110/EC, Recital 13).
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Point c: We suggest to delete point c (the extent to which the payment instrument is issued at a nominal or no charge) Rationale: The rationale behind the proposed measure is unclear. We do not understand the link between money laundering / terrorist financing and the instrument being issued at a nominal or no charge. If there is no

Name of the respondent	Question	Answer
		clear link to ML/TF, the proposed measure may be removed.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Point d We suggest to delete the words "and the range" in Point d (the nature and the range of the goods or services that can be acquired, including the level of risks associated with these goods and services); Rationale: The risk factors provided for in Article 31, points d) and e) refer to very similar criterion as applied to the Limited Network/Range Exclusion under PSD2. For payment instruments that can, e.g., only be used to purchase a very limited range of goods or services, Art. 1(4) of Directive 2009/110/EC in conjunction with Art. 3 let. k. ii. of Directive (EU) 2015/2366 does not apply. Such products therefore do not fall under the e-money definition. However, the catalogue of criteria proposed by the EBA applies to the simplified application of due diligence obligations for e-money. The EBA's proposal could mean that an exemption from the application of due diligence obligations for e-money products would depend, among other things, on the product not being e-money at all.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	31

Name of the respondent	Question	Answer
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Point e We suggest to delete point e (the extent to which the payment instrument is valid in one or multiple Member States and its issuer is regulated by a national or regional public authority for specific social or tax purposes to acquire specific goods or services from suppliers having a commercial agreement with the issuer; Rationale: Reference is made to the comments under point d).
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Point f (the extent to which the transactions through the electronic money instrument are executed by an obliged entity that applies customer due diligence measures and record- keeping requirements laid down in Regulation (EU) 2024/1624;) Comment: E-money transactions are always carried out by the issuer, i.e. by an ‘obliged entity’. This criterion is therefore already a legal obligation.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Point g We suggest to delete point g (the extent to which the payment instrument has a specific and limited duration

Name of the respondent	Question	Answer
		in which the payment instrument can be used). Rationale: We do not understand the rationale of this. E-money has extended rights of redemption in law. Applying a specific / limited duration to the use of the product does in our view not correspond to the ML/TF risk given that tight-knit ongoing monitoring is in place over the whole life-cycle of such a product. On the contrary, e-money issuers are well aware of the typical spending patterns of their products, which allow for identifying suspicious transactions. If such products were to be used outside the typical spending patterns, this would all the more allow for the identification of suspicious transactions.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Point h We suggest to change point h as following: "the extent to which the payment instrument is available through direct channels which may include the issuer or a network of service providers which have appropriate fraud measures in place;" Rationale: The associations suggest deleting “including electronic signature” and “anti-impersonation” because a verified e-signature would become a kind of KYC which would be a contradiction to the intention of the exemption

Name of the respondent	Question	Answer
		according to Art. 19 (7).
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Point i We suggest to delete point i (the extent to which distribution is limited to intermediaries that are themselves obliged entities applying customer due diligence measures and record-keeping requirements laid down in Regulation (EU) 2024/1624); Rationale: The associations propose deleting the criterion according to which the distribution of e-money by obliged entities is a risk-reducing factor. In the associations' view, the distribution of e-money via obliged entities is of no significant importance in practice. Against this background, this criterion is not suitable for differentiating between low-risk cases and other cases. Secondly, Article 19(7) of Regulation (EU) 2024/1624 provides that certain due diligence obligations may be waived under certain conditions. In the opinion of the associations, this would also apply if the distribution were to be carried out by obliged entities. The non-application of due diligence obligations by an obliged entity does not lead to a lower risk than the non-application of due diligence obligations by a non-obligated person. In both cases, the corresponding due diligence obligations are not

Name of the respondent	Question	Answer
		applied so that, in the opinion of the associations, there is no different consequence from a risk perspective.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Point j: (the extent to which the payment instrument has a limited geographical distribution) Comment: Payment instruments may be made available outside of the Union, for example, because they are designed to be used by the holder when they are visiting the Union. There should be no reason to limit such availability in those countries that have equivalent AML laws in place, such as the UK and Switzerland.
Prepaid Verband Deutschland e.V. and other organisations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	31
Prepaid Verband Deutschland e.V. and other organisations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Point k We suggest to amend point k as following: "(k) the extent to which the issuer applies adequate technological tools, such as geo-fencing and IP tracking, to monitor access to the payment instrument from, transfers to or receiving funds from countries that are not EU Member States nor EEA countries, in accordance with the applicable laws." Rationale: The associations suggest a clarification that the measures for geo-fencing and IP tracking should be in line with the applicable laws. Both geo-fencing and IP

Name of the respondent	Question	Answer
		tracking are subject to legislative restrictions (in particular under Regulation (EU) 2018/302 and Regulation (EU) 2016/679). In the opinion of the associations, a low risk should also be possible if the respective obliged entity complies with these restrictions. We suggest to add the following points: "l. The extent to which the issuer has measures in place that allow for an effective monitoring of the distribution channels of the e-money product in order to detect and prevent suspicious activities." Rationale: The associations suggest adding distribution monitoring as another risk-mitigating measure to demonstrate the low-risk nature of an e-money product. Distribution monitoring refers to the real-time oversight and analysis of the distribution and usage patterns of e-money products across various channels, particularly those involving third-party distributors, agents, or program managers. Its primary aim is to detect, deter, and prevent suspicious activity that could indicate money laundering, terrorist financing, or misuse of the product. Effective distribution monitoring for AML/CTF purposes involves real-time surveillance of transaction activity across all distribution channels to detect unusual patterns, volumes, or behaviours. This includes channel-level analysis to identify anomalies among distributors, monitoring geographic

Name of the respondent	Question	Answer
		risk exposure, applying threshold and velocity controls, and continuously assessing distributor risk profiles. Alerts should feed into case management systems for timely investigation, and findings should be used to recalibrate monitoring rules and inform distributor oversight. "m. The extent to which the issuer has measures in place that allow for an effective monitoring of the merchants that accept payments via the e-money product in order to detect and prevent suspicious activities." Rationale The associations suggest adding merchant monitoring as another risk-mitigating measure to demonstrate the low-risk nature of an e-money product.Merchant monitoring refers to the real-time oversight of merchants that accept payments via e-money products, with the goal of identifying and addressing activity that may indicate money laundering, terrorist financing, or other illicit use of the payment infrastructure. This control is especially important where merchants are onboarded or managed by third parties or operate in higher-risk sectors or geographies. Effective merchant monitoring for AML/CTF purposes involves real-time surveillance of transaction flows to and through merchants, focusing on detecting unusual patterns such as spikes in transaction volume, rapid settlement cycles, or activity inconsistent with the merchant's profile or industry norms. Key elements

Name of the respondent	Question	Answer
		include merchant-level analysis to flag deviations from expected behaviour, monitoring for exposure to high-risk jurisdictions or sectors, application of threshold and velocity controls, and ongoing risk scoring of merchants based on their activity. Alerts should be escalated through case management systems for timely review, and the insights gained should feed into merchant due diligence, risk mitigation actions, and ongoing monitoring rules calibration. "n. The extent to which the issuer has measures in place that allow for the identification of suspicious transaction patterns and behavioural profiling and allows for disabling the payment instrument in case a suspicious activity pattern is detected. Re-activation of the product can only be done by the issuer Rationale The associations suggest adding risk-mitigating measures that allow for the detection of suspicious transaction patterns and the automatic deactivation of the e-money product if such patterns occur. The re-activation of the e-money product requires prior interaction with the issuer "o. The extent to which the issuer has adequate technological safeguards in place. Such measures could include device fingerprinting and IP address tracking to detect suspicious activity or the use of velocity checks (e.g., number of transactions in a short period)."

Name of the respondent	Question	Answer
		Rationale: Technological safeguards ensure an effective fight against ML/TF and should therefore be added to the list of risk-mitigating measures
Prepaid Verband Deutschland e.V. and other organisations	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
PwC	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Sector-specific characteristics are not sufficiently taken into account. For exam-ple, certain obligations (e.g. extensive beneficial ownership research) also affect professions subject to confidentiality obligations in a way that may conflict with national professional and criminal law. The current draft lacks exceptions or clar-ifications in this regard, which leads to tensions between EU KYC requirements and national professional secrecy rules. It should be taken into account that breaches of professional confidentiality may have criminal consequences. Exist-ing uncertainties are therefore not acceptable for obliged entities.
PwC	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We acknowledge that the draft incorporates a number of risk-based elements. However, we also identify several provisions that hinder a consistent risk-based application. In particular, some requirements are currently overly generalised (e.g. regarding the treatment of complex structures or the equal treatment of all senior managers as beneficial owners), thereby detracting from a proper focus on relevant risks. Adjustments should be made to ensure that the full spectrum of risks, from low to high, is adequately reflected. An effective risk-based approach requires that obliged entities calibrate the intensity of their measures according to the individual risk. If all customers are treated equally regardless of risk profile, this principle is undermined. Furthermore the purpose of collecting extensive identification data (e.g. all nationalities, trade names,

Name of the respondent	Question	Answer
		and full names) should be clarified, in particular whether such information is intended to be used solely for identification or also for risk profiling purposes (e.g. where certain nationalities may impact the AML risk assessment). In line with the risk-based approach, additional or more intrusive data collection and controls should be limited to enhanced due diligence situations. Also, the requirement to collect the same level of information for the executor appears disproportionate, especially in the context of statutory audit engagements where the executor typically has no impact on the AML risk assessment. In such cases, identification alone should be sufficient.
PwC	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are several practical situations in which the KYC information required under the draft is not regularly available, without the RTS providing alternative solutions. Article 10(2)(b) of the draft lists possible independent sources for identifying beneficial owners, including land registers, population registers, and tax registers. In practice, obliged entities in many Member States (e.g. Germany) do not have access to such registers. Referencing these sources creates expectations that cannot be fulfilled in practice and therefore does not constitute a viable alternative. Furthermore, with regard to Recital 6 on the reliability

Name of the respondent	Question	Answer
		and validity of public sources, further clarification would be helpful to enhance legal certainty and practical applicability. In particular, it could be explicit-ly specified that information obtained from official registers and institutions such as chambers of commerce (e.g. extracts or certificates issued by a chamber of commerce) qualifies as a reliable and valid source.
PwC	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Article 13 of the draft requires that, when identifying "Senior Managing Officials", essentially the same extensive personal data must be collected and verified as for actual beneficial owners. This equal treatment applies across all risk scenarios and does not allow for any simplifications, even in low-risk cases, thereby undermining the risk-based approach embedded in Regulation (EU) 2024/1624. The only limited simplification is that, instead of the private residential address of the Senior Managing Official, the registered office address of the legal entity may be used (cf. Article 13 and Recital 11). No further simplifications are provided. This strict equivalence between Senior Managing Officials and beneficial owners is inconsistent with the underlying rationale expressed in the recitals of both the Regulation and the RTS. Recital 9 of the RTS explicitly states: "While SMOs are not beneficial owners, …". Likewise, Recital 125 of Regulation (EU) 2024/1624 clarifies that members of senior management are to be

Name of the respondent	Question	Answer
		identified only in specific cases and do not constitute beneficial owners. The European legislator thus clearly recognises that Senior Managing Officials are only identified on a subsidiary basis where no actual beneficial owner can be determined. It is therefore not clear why Article 13 nevertheless imposes identical identification and verification requirements as for beneficial owners. This results in a significant additional administrative burden without any evident added value for AML purposes. It also remains unclear which Senior Managing Officials and how many must be identified. Depending on the legal form, the number may be substantial and even exceed one hundred individuals. This lacks proportionality. It should therefore be clarified that only those Senior Managing Officials who exercise significant influence or hold key positions (e.g. CEO, CFO, COO) need to be identified. Furthermore, the ML/TF risk does not change depending on whether three, five, 50 or 100 individuals are identified. It should also be taken into account that Senior Managing Officials recorded in German registers have already undergone identification. A repeated identification is therefore neither effective nor necessary.
PwC	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	We don't have additional comments.

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	
PwC	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The draft introduces an additional requirement to collect the “trade name”. This goes beyond the wording of Article 22(1)(b) of Regulation (EU) 2024/1624. Trade names are not standardised everywhere and are often not documented in registers or official documents. As a result, they are difficult to obtain and rarely verifiable through reliable and independent sources. Furthermore, capturing additional name variations leads to a significantly higher number of false positives during screening. These must then be manually reviewed and filtered out, which consumes time and resources. This reduces capacity for handling genuinely high-risk cases.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 5 requires obliged entities to obtain sufficient information to ensure that they are aware of all nationalities a customer may have.

Name of the respondent	Question	Answer
		This obligation is hardly practicable, as obliged entities do not have access to databases that would allow them to achieve such certainty. Identity documents such as passports or ID cards usually only indicate a single nationality. We therefore propose the following wording for Article 5: “For the purposes of Article 22(1)(a)(iii) of Regulation (EU) 2024/1624, obliged entities shall take reasonable and risk-based measures to obtain the necessary information on the customer’s nationality. As a general rule, obliged entities may rely on information provided by the customer and on information contained in official identity documents submitted, unless there are indications of additional nationalities.” It would be also helpful to clarify, under Recital 3, which sources can be used, how to choose a nationality if someone has more than one, and whether full verification is always required or if a plausibility check is sufficient when verification is not possible.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	With regard to Article 6(3), it should be considered whether the requirement to verify that documents “are authentic and have not been forged or tampered with”

Name of the respondent	Question	Answer
		should be applied in a risk-based manner. In particular, such enhanced verification measures may be more appropriate in higher-risk scenarios, taking into account the significant costs associated with specialised verification tools. In lower-risk cases, where robust identification methods are used (such as qualified electronic signatures), simplified approaches could be envisaged.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The effective prioritisation of eIDAS-compliant identification methods relegates established and security-tested alternatives—particularly video identification procedures—to a secondary fallback option. This does not adequately reflect current market realities, as eIDAS-based solutions are not yet widely available or broadly accepted in many Member States. Particularly problematic is the requirement that alternative remote identification methods may only be used where eIDAS-compliant solutions are “not available or cannot reasonably be expected to be provided”. These vague legal terms create significant legal uncertainty. Obliged entities would be required to assess and document, on a case-by-case basis, whether these conditions are met, and would also bear the burden of proof. This results in complex individual assessments, additional documentation requirements, and a disproportionate administrative burden,

Name of the respondent	Question	Answer
		significantly hindering efficient onboarding processes. Moreover, certain customer groups would effectively be excluded from the market. Specific categories of customers—such as third-country nationals, cross-border clients, or users of older devices—often do not have access to eIDAS systems. Granting a de facto priority to eIDAS-based solutions may therefore lead to these groups being excluded from digital onboarding, even though alternative methods provide a comparable level of security. In summary, the draft results in video identification procedures and other non-eIDAS-compliant solutions no longer being treated as equally permissible alternatives. Instead, they may only be used where no eIDAS solution is available and are subject to additional verification, justification, and documentation requirements. As a result, these methods no longer constitute equivalent alternatives, and established onboarding processes that have proven effective in practice are placed under significant regulatory pressure. Against this background, the draft should be amended to ensure that alternative remote identification methods continue to be recognised as equivalent without requiring additional justification, provided that they: ensure a comparable level of security; and

Name of the respondent	Question	Answer
		are applied in accordance with the risk-based approach. Such clarification would enhance legal certainty, reduce administrative burdens, support digital business models, and at the same time ensure that the objectives of anti-money laundering are achieved effectively and proportionately. It would be helpful to clarify whether remote identification is only required for the person providing the information (e.g. the declarant) and, if different, the person acting on behalf of the client (executor). In particular, it should be confirmed that this does not apply to all beneficial owners, especially where there are multiple UBOs.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Although Article 10 of the current draft further specifies the “reasonable measures” for verifying the beneficial owner pursuant to Article 22(7)(b), significant legal uncertainty remains as to the required scope of verification. In particular, it is unclear whether obliged entities are required to verify all data collected without exception. Such an interpretation would be inconsistent with the risk-based approach and the principle of proportionality, as a comprehensive verification of all data points would not provide any discernible added value for effective anti-money laundering efforts.

Name of the respondent	Question	Answer
		Furthermore, the requirements relating to the confirmation of documents by an “independent professional” require further clarification. The draft does not specify the criteria for independence, nor does it clarify whether this concept also encompasses internal roles within the customer’s organisation, such as a company secretary. In addition, the term “confirm” is not clearly defined. To enable legally certain implementation, the final version of the RTS should define these terms clearly and supplement them with practical examples.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	12
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	We welcome the efforts to clarify the conditions under which an ownership and control structure pursuant to Article 11 of the draft Regulatory Technical Standards should be considered “complex”. However, we would like to raise the following concerns and suggestions regarding the scope, practical applicability, and implications of the current definition. Under the draft, a corporate structure is considered “complex” where there are three or more ownership layers between the customer and the beneficial owner, and where the structure additionally includes a legal arrangement such as a foundation, trust, or similar structure, with all intermediary legal entities being registered outside the European Union.

Name of the respondent	Question	Answer
		This rigid definition deviates from the risk-based approach. Obliged entities should be able to define, within their own internal policies, which criteria qualify a structure as “complex” within the context of their specific business model. A classification as “complex” should therefore only be made where, in addition to the number of layers, at least one further risk indicator is present, for example where the customer is unable to plausibly explain the economic rationale of the structure. The draft further requires obliged entities to take “risk-based measures” to satisfy themselves that the information obtained is accurate. However, it remains unclear what конкрет expectations are placed on obliged entities in this regard. Additional guidance from AMLA is therefore required to clarify which risk-based measures should be considered sufficient in typical scenarios. Furthermore, the question arises as to how a sound economic rationale is to be assessed in practice. Private equity structures in particular often span multiple jurisdictions and reflect their respective legal and regulatory specificities. Such structures are common market practice, even if their rationale cannot easily be assessed in each individual case. It would therefore be helpful to clarify that customary structures may be regarded as economically justified.

Name of the respondent	Question	Answer
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	13
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	AMLA is tasked with establishing a harmonised definition of the term “Senior Managing Officials” across the European Union. Only through such standardisation can it fulfil its core mandate: ensuring a consistent application of the new Anti-Money Laundering Regulation across the Union and preventing its practical implementation from fragmenting again into national approaches within Member States. Article 22(2) of Regulation (EU) 2024/1624 requires the identification of all Senior Managing Officials in cases where no beneficial owner can be identified. However, it does not provide a uniform definition of this term. In particular, it remains unclear whether the broader definition of “senior management” under Article 2(1)(40) of Regulation (EU) 2024/1624 is applicable, or whether the more specific provision relating to “members of senior management” in Article 63(4) of the same Regulation is decisive. It is equally unclear whether only members of the highest management body (e.g. management board or executive management) are to be identified, or whether this requirement also extends to lower levels of management. Against this background, a clear definition and accompanying guidance from AMLA appear urgently necessary, particularly as these delineation issues are

Name of the respondent	Question	Answer
		being discussed intensively and controversially in Germany. This has already resulted in diverging legal interpretations at the national level and a significant lack of consistency in application. While SMOs are not beneficial owners, it should be clarified that they are only to be identified where no beneficial owner can be determined or where doubts remain, in line with Regulation (EU) 2024/1624. Furthermore, the obligation to identify and register beneficial owners lies with the client legal entity. Obliged entities should rely on this information and focus on verification, rather than duplicating identification requirements.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	16
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	The concept of a person “purporting to act on behalf of the customer” is already known from the 4th and 5th Anti-Money Laundering Directives. It has been incorporated into Article 22(1) of Regulation (EU) 2024/1624 as well as into the present RTS draft. However, neither the Regulation nor the draft RTS provides a binding interpretation of this concept. In the course of the national transposition of the preceding directives, at least four different approaches have emerged as to which persons fall within the scope of this concept. The current draft does not address this issue and lacks the necessary clarifications. As the

Name of the respondent	Question	Answer
		interpretative guidance previously provided by national supervisory authorities will no longer apply, this creates significant legal uncertainty for obliged entities. Without a binding definition by AMLA, there is a risk of divergent application across the EU. This would be contrary to the objective of a “Single Rulebook” and harmonised supervision. We support the position of other market participants advocating for a narrow interpretation. In our view, a broad interpretation that also encompasses internal employees of a company is not appropriate. Large corporate clients often have numerous authorised signatories. In addition, employees act under internal instructions, and their actions are directly attributable to the legal entity. If obliged entities were required to carry out additional identity checks for each authorised employee of a customer, this would tie up valuable resources in purely administrative processes. These resources would then be unavailable to compliance functions for more relevant tasks, such as analysing complex ownership structures or monitoring suspicious transaction patterns, where they could be deployed far more effectively in combating financial crime. In the interest of risk-based and efficient anti-money laundering, the interpretation should therefore, as already suggested by some market participants, be consistently limited to external third parties. We

Name of the respondent	Question	Answer
		explicitly support this approach. This includes external individuals acting on behalf of the customer on the basis of a specific power of attorney (e.g. agents). These external actors pose a higher risk, as they are not subject to the customer's internal control and instruction mechanisms. With regard to Recital 12, it should be clarified whether the verification of powers of representation is required only for the person acting on behalf of the customer in the specific transaction (e.g. the person signing the engagement letter), rather than for all individuals who are generally granted representation powers at the level of the legal entity (such as the Chairman of the Board, CEO, or General Manager). In addition, it would be helpful to clarify whether information contained in official sources, such as chamber of commerce or commercial register extracts, may be considered reliable for the purposes of verifying such powers of representation.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	18
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	For the activities of a legal auditor, the requirement to assess the purpose and intended nature of the business relationship is generally already addressed through the engagement letter. With regard to source and destination of funds, this requirement does not appear directly applicable to the payment of audit fees. Instead, any assessment of

Name of the respondent	Question	Answer
		financial flows is more appropriately carried out within the scope of the audit, focusing on material aspects of the client's business activities.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	19
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 19 requires ongoing monitoring of PEP status, including the use of automated screening tools. This may be challenging in practice, as such tools can be expensive and are not always reliable (e.g. delayed results or outdated PEP classifications). It may also slow down internal approval processes for new engagements.
PwC	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	29
PwC	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Under the current draft of Article 29, obliged entities are required to screen all intermediary entities within an ownership chain, provided that these entities hold an ownership interest of at least 25%. In practice, this leads to a significant administrative burden, particularly in complex, international group structures. In many cases, numerous holding companies or special purpose vehicles are interposed between the direct contractual counterparty and the ultimate beneficial owner (UBO). The mandatory individual screening of each entity holding at least 25% results in a disproportionate volume of false-positive matches.

Name of the respondent	Question	Answer
		The manual review of these matches requires substantial human resources and reduces the efficiency of compliance functions, thereby making it more difficult to identify actual risks. To improve efficiency, screening efforts should be focused on entities that effectively exercise material ownership or control. Furthermore Obliged entities are required to verify that clients, beneficial owners (UBOs), and, where applicable, the executor are not subject to targeted financial sanctions, including through ongoing screening (beyond onboarding), such as in the case of list updates, and taking into account name variations and transliterations. In this context, there may be a non-negligible impact due to the increasing number of individuals subject to monitoring, resulting from: (i) the broader identification of UBOs, including both control-based and ownership-based UBOs (cf. Recital 108 of Regulation (EU) 2024/1624); and (ii) the increased number of residual UBOs (Senior Managing Officials), taking into account their actual powers. This may lead to a higher volume of potential matches, including false positives, which must be reviewed on an ongoing basis, also in the context of sanctions screening.

Name of the respondent	Question	Answer
PwC	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
PwC	Please specify which recital you refer to, and share your comments below.	8. With regard to Recital 8, facilitating access to beneficial ownership registers across Member States would be highly beneficial, particularly for foreign entities. In practice, obliged entities are increasingly required to verify whether foreign companies are registered in an EU beneficial ownership register. However, while initiatives such as BORIS aim to interconnect national registers, access remains fragmented in practice, with differing access conditions and limited interoperability. As a result, obliged entities face significant challenges in obtaining and comparing information across jurisdictions. Improving and standardising cross-border access would enhance the reliability of beneficial ownership information and support more effective customer due diligence, particularly in complex cross-border structures.
PwC	Do you have any comments on the Annex in the draft RTS?	No
PwC	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
PwC	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624	Manageable impact

Name of the respondent	Question	Answer
	(customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Name of the respondent	Question	Answer
	implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
PwC	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the RTS will lead to significant costs, as it entails a substantial expansion of data collection, identification, and verification requirements. In particular, enhanced requirements for identifying beneficial owners, as well as the inclusion of additional persons (e.g. Senior Managing Officials), will significantly increase the level of review effort. Furthermore, additional data points and expanded screening obligations are expected to result in a considerable increase in alerts, particularly false positives, which will require manual review and therefore additional staffing resources. Further cost drivers include increased documentation and justification requirements, necessary adjustments to IT systems and processes, as well as legal uncertainties that in practice lead to a more

Name of the respondent	Question	Answer
		conservative and resource-intensive implementation. Overall, a significant increase in ongoing operational costs is expected.
QUICKSIGN	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	QuickSign Response: Partial agreement. While we support the harmonization of customer due diligence (CDD) measures, we believe that Article 7 (2) and (3) regarding non-face-to-face verification lack the necessary technical precision. To ensure legal certainty and high security across the Union, QuickSign advocates for the explicit inclusion of a reference to the ETSI TS 119 461 (Extended Level of Identity Proofing - LoIP) standard. This standard, already mandated as a reference under eIDAS v2 and Commission Implementing Regulation (EU) 2025/1566, provides a rigorous framework for biometric controls, Liveness Detection (PAD), and Injection Attack Detection (IAD). We propose that any identity verification service certified as "Extended LoIP" by an accredited Conformity Assessment Body (CAB) should benefit from a presumption of conformity with the requirements set out in Article 7.
QUICKSIGN	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	QuickSign Response: Yes, provided that the Single Market principles are strictly upheld to prevent market fragmentation and distortion of competition. QuickSign highlights two critical areas where the RTS must ensure a level playing field: Cross-border Recognition of CABs: A certificate of

Name of the respondent	Question	Answer
		conformity to ETSI TS 119 461 issued by an accredited CAB in any EU Member State must be recognized and accepted by all national competent authorities and obliged entities across the Union. A trust service provider certified in one part of Europe must be able to serve banks in any other part of Europe under the exact same technical and legal conditions. Prevention of "Gold-Plating" and Infrastructure Barriers: We strongly oppose any national regulatory body imposing local requirements that apply only to "national" identity documents or specific local verification methods. Furthermore, regulatory bodies should not be allowed to restrict the use of secure infrastructure, such as Cloud services, based on national preferences, provided they comply with EU-wide standards (e.g., GDPR). Allowing such local deviations would create immediate distortions of competition and prevent the emergence of pan-European digital identity solutions.
QUICKSIGN	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	QuickSign Response: Yes, but only if the RTS leverage existing high-security certification frameworks. The risk-based approach is most effective when obliged entities can rely on solutions audited for "High Attack Potential" resistance, such as the Extended LoIP level of ETSI TS 119 461. By explicitly validating the use of certified automated technologies (biometrics, AI-driven fraud detection), AMLA allows obliged entities to shift from a formalistic "check-the-box" document collection to a security-driven approach that effectively mitigates

Name of the respondent	Question	Answer
		the risks of deepfakes and sophisticated identity theft in digital environments.
QUICKSIGN	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	QuickSign Response: Yes, particularly in cross-border scenarios where traditional physical evidence (e.g., paper-based utility bills for proof of address) is often unavailable or unreliable for remote verification. Proposed Solution: The RTS should explicitly recognize the use of Qualified Electronic Attestations of Attributes (QEAA) and the verification of data through Authentic Sources (via APIs) as high-reliability alternatives. These methods, supported by the ETSI TS 119 461 framework, allow for the validation of customer attributes directly from official registries, offering a much higher level of assurance than scanned copies of physical documents.
QUICKSIGN	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	QuickSign Response: The use of an identity verification service or an Electronic Identification (eID) means reaching a "High" Level of Assurance (LoA), such as an Extended LoIP certified process, should automatically trigger Simplified Due Diligence (SDD) measures. When a customer's identity is verified through a process compliant with Regulation (EU) 2025/1566, the risk of identity fraud is technically minimized to the highest possible extent. Consequently, QuickSign proposes that for such customers, the verification of secondary attributes (e.g., occupation, source of funds for low-risk products) should be simplified or deemed satisfied if those attributes were already validated against reliable sources during the initial certified onboarding process. This would streamline the customer experience and

Name of the respondent	Question	Answer
		foster the digital Single Market without compromising the integrity of the AML/CFT framework.
QUICKSIGN	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

QUICKSIGN	Do you have any comments on the Annex in the draft RTS?	No
QUICKSIGN	How would you rate the proposals set out in the draft RTS overall?	Neutral
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	A RealTransfer – Instituição de Pagamento, S.A. concorda genericamente com os objetivos do projeto de RTS e reconhece a importância de harmonizar os requisitos de Customer Due Diligence (CDD) na União Europeia. Contudo, consideramos que determinadas disposições do projeto de RTS não oferecem ainda flexibilidade suficiente para acomodar adequadamente o modelo de negócio das instituições de pagamento que prestam serviços de remessa de fundos e operações cambiais sem manutenção de contas de pagamento ou relações contínuas de depósito. Proposta de clarificação: Neste contexto, sugerimos que o RTS reforce de forma mais explícita o princípio da proporcionalidade, em linha com o artigo 7.º do AMLR, reconhecendo as diferenças estruturais entre instituições de crédito e instituições de pagamento. Relativamente às situações non face-to-face, recomendamos clarificar que a execução remota de

Name of the respondent	Question	Answer
		operações após uma identificação presencial válida não deve ser automaticamente considerada uma situação de onboarding não presencial. Quanto à recolha de dados adicionais de identificação, como local de nascimento ou múltiplas nacionalidades, sugerimos que estes elementos sejam exigidos apenas quando: (i) estejam disponíveis em fontes fiáveis e independentes; ou (ii) sejam justificados pelo perfil de risco do cliente. No que respeita à Simplified Due Diligence (SDD), consideramos importante clarificar que a simplificação pode aplicar-se à extensão documental, frequência de atualização e intensidade da monitorização contínua, sem comprometer os elementos essenciais de identificação. Por fim, sugerimos que o RTS reconheça que fontes públicas oficiais possam beneficiar de uma presunção de fiabilidade, evitando avaliações excessivamente detalhadas caso a caso. Estas clarificações contribuiriam para maior proporcionalidade, segurança jurídica e aplicação consistente da abordagem baseada no risco pelas instituições de pagamento.
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	A RealTransfer – Instituição de Pagamento, S.A. apoia o objetivo de assegurar uma abordagem baseada no risco consistente entre as diferentes entidades obrigadas. Contudo, consideramos que determinadas disposições do projeto de RTS podem limitar, na prática, a aplicação efetiva do princípio da proporcionalidade, particularmente na aplicação prática de medidas proporcionais em situações de menor risco. Em

Name of the respondent	Question	Answer
		particular, consideramos que seria apropriado introduzir maior flexibilidade relativamente à recolha de dados adicionais de identificação e à aplicação prática de medidas de Simplified Due Diligence (SDD). Relativamente à recolha de dados adicionais de identificação, como local de nascimento ou múltiplas nacionalidades, a redação atual poderá conduzir à recolha sistemática de informação que nem sempre está disponível em documentos oficiais de identificação e que pode não ser proporcional em situações de menor risco. Esta abordagem permitiria uma aplicação mais eficaz do princípio da abordagem baseada no risco, evitando simultaneamente encargos operacionais desproporcionais. Proposta de clarificação: No que respeita à Simplified Due Diligence (SDD), consideramos que o RTS deveria reconhecer de forma mais clara que a simplificação pode aplicar-se não apenas à atualização de dados do cliente, mas também à extensão da documentação recolhida e à intensidade das medidas de monitorização contínua em situações de baixo risco. Sem esta clarificação, existe o risco de a SDD se tornar operacionalmente demasiado semelhante à diligência normal, reduzindo a eficácia da abordagem baseada no risco prevista no AMLR. Estas clarificações contribuiriam para uma implementação mais proporcional e operacionalmente eficaz das obrigações PBC/FT.
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes	Sim. 	of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	situações em que determinadas informações previstas no projeto de RTS não estão rotineiramente disponíveis através de documentos oficiais ou fontes independentes fiáveis. Em particular, verificam-se dificuldades práticas relativamente à recolha de determinados dados adicionais de identificação, como: →local de nascimento; →múltiplas nacionalidades; e →determinados elementos relacionados com estruturas de beneficiário efetivo em clientes empresariais estrangeiros. No caso de clientes particulares, muitos documentos oficiais de identificação emitidos por países terceiros não incluem local de nascimento ou informação completa sobre múltiplas nacionalidades. Em operações de remessa de baixo valor e menor risco, a indisponibilidade desses elementos nem sempre permite obter informações de fontes alternativas fiáveis num prazo operacional razoável. No caso de clientes empresariais estrangeiros, existem situações em que os registos de beneficiário efetivo: →não estão publicamente disponíveis; →não se encontram atualizados; ou →apresentam limitações de acesso em determinadas jurisdições de países terceiros. Nestes casos, o projeto de RTS não clarifica suficientemente quais as medidas alternativas aceitáveis quando, apesar de terem sido utilizados meios razoáveis, determinadas informações não podem ser obtidas.

Name of the respondent	Question	Answer
		Proposta de clarificação: Neste contexto, sugerimos que o RTS reconheça expressamente que, quando determinados dados não estejam razoavelmente disponíveis: (i) as entidades obrigadas possam basear-se em documentação e fontes alternativas fiáveis; (ii) seja permitida uma abordagem proporcional baseada no risco; e (iii) a impossibilidade de obtenção de determinados elementos não implique automaticamente a impossibilidade de estabelecer ou manter a relação de negócio, desde que o risco seja adequadamente mitigado. Tal clarificação contribuiria para maior segurança jurídica e para uma aplicação mais proporcional e operacionalmente viável dos requisitos de CDD pelas instituições de pagamento.
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	A RealTransfer – Instituição de Pagamento, S.A. considera que o projeto de RTS poderia clarificar de forma mais explícita a aplicação prática de medidas de Simplified Due Diligence (SDD) a serviços de pagamento e remessa de menor risco, particularmente em situações em que as instituições não mantêm contas de pagamento ou relações contínuas de depósito. Proposta de clarificação: Em particular, consideramos que o RTS poderia reconhecer expressamente que, em situações comprovadamente de baixo risco, as medidas simplificadas podem incluir: →redução da frequência de atualização de dados do

Name of the respondent	Question	Answer
		cliente; →redução da intensidade das medidas de monitorização contínua; e →possibilidade de utilização de dados de identificação previamente verificados em operações repetidas de baixo risco. Tal clarificação contribuiria para uma aplicação mais proporcional das obrigações PBC/FT, preservando simultaneamente a eficácia da abordagem baseada no risco prevista no AMLR.
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A RealTransfer – Instituição de Pagamento, S.A. saúda a clarificação introduzida relativamente ao tratamento de "linked transactions". Proposta de clarificação: Contudo, considerando a realidade operacional das instituições de pagamento que processam elevados volumes de operações de remessa de baixo valor, entendemos que o RTS beneficiaria de clarificação adicional no sentido de que: →a identificação de transações ligadas deve basear-se na informação razoavelmente disponível à entidade obrigada; e →as entidades obrigadas não devem ser obrigadas a realizar diligências investigatórias adicionais exclusivamente para identificar potenciais ligações entre operações. Tal clarificação contribuiria para maior segurança jurídica e para uma aplicação mais proporcional das obrigações PBC/FT.

	implementing the provisions of these draft RTS.: Recurrent costs	
REALTRANSFER – INSTITUIÇÃO DE PAGAMENTO, S.A.	Please justify your answer to the previous question and provide evidence where possible.	Atualmente, não é possível à RealTransfer - Instituição de Pagamento, S.A. quantificar de forma objetiva e fiável os custos adicionais específicos associados à implementação do presente projeto de RTS, para além dos ajustamentos já previstos no âmbito da adaptação aos requisitos estabelecidos no Capítulo III do Regulamento (UE) 2024/1624. Esta limitação decorre, sobretudo, do facto de ainda se encontrarem em fase de avaliação interna diversos elementos relevantes para a implementação prática das medidas previstas, nomeadamente o respetivo impacto operacional, os requisitos técnicos definitivos, o nível de adaptação dos sistemas existentes, bem como a necessidade de eventual reforço de recursos humanos especializados e de soluções tecnológicas de suporte. Adicionalmente, a estimativa rigorosa destes custos depende de fatores que permanecem, nesta fase, sujeitos a clarificação regulamentar e a decisões de implementação a nível institucional, incluindo a definição de metodologias, processos operacionais, integrações tecnológicas e requisitos de monitorização contínua. Não obstante, é expectável que a implementação do RTS possa implicar custos adicionais, quer de natureza pontual, associados à revisão de políticas e procedimentos, parametrização de sistemas, formação e apoio técnico especializado, quer de natureza recorrente, relacionados com monitorização, manutenção tecnológica, atualização de controlos e afetação adicional de recursos operacionais e de conformidade. A RealTransfer continuará a

Name of the respondent	Question	Answer
		acompanhar a evolução do enquadramento regulamentar e procederá à avaliação detalhada dos impactos financeiros e operacionais numa fase posterior, quando existirem condições suficientes para uma estimativa fundamentada e proporcional.
Reply SE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Issue: We fully support anchoring to eIDAS/QTS. However, in several Member States, consumer adoption and cross border availability of eIDAS “substantial/high” remains uneven, which could inadvertently penalise compliant remote channels. The “justify why not eIDAS/QTS” requirement could become a recurring formalism. Proposition: -Add a recital clarifying that market availability/adoption of eIDAS/QTS and customer accessibility constitute valid grounds to use compliant remote solutions under Art. 7(2). -In Art. 7(4), allow a standardised justification template approved by the competent authority to avoid duplicative case by case narratives. Issue: Where vIBANs are assigned by a technical service provider rather than the account holding bank, the FI may not have all attributes unless contractually mandated Proposition: Clarify that obtaining the data “from the issuing/assigning entity” is acceptable and encourage contract clauses to ensure data hand back. Issue: The definition (≥3 layers and >1 listed condition) is helpful, but nominee involvement or non-EU layers alone can present elevated risks even with two layers.

Name of the respondent	Question	Answer
		Conversely, some multinational treasury structures have >3 layers but are transparent with clear economic rationale Proposition: Allow a risk override: FIs may treat a structure as "complex" even if the formal test is not met (based on risk indicators). Also clarify that credible economic rationale with strong transparency may de escalate measures notwithstanding layer count. Issue: "Without undue delay" for obtaining final investor data is vague and causes contracting friction Proposition: Define a non binding benchmark (e.g., "within 2 business days" for standard cases; immediate when a triggering event occurs such as STR context, sanctions alert, or supervisory request). Art. 30: TFS screening Issue: Mandating automated screening is appropriate, but many TFS lists include script variants/transliterations; the RTS could acknowledge fuzzy matching tuning to minimise both false positives and the risk of over blocking Proposition: Add guidance that matching logic should be risk sensitive, support multi script transliteration, and be calibrated with documented quality metrics (precision/recall thresholds) subject to supervisory review.
Reply SE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT	It is broadly applicable across retail, SME, corporate, wealth, and markets businesses. The RTS leave room to scale measures by risk. Two areas would benefit from

Name of the respondent	Question	Answer
	requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	explicit flexibility : remote verification (see Q1(1)) and CIU “undue delay” benchmark (Q1(3)) Propositions: As in Q1, add (i) a recital and a justification template for Art. 7; (ii) a non binding SLA note for Art. 17. If applicable (payments/embedded finance): For BaaS/vIBAN setups, clarify that the obliged entity in the customer relationship can rely on contractual undertakings to obtain vIBAN data elements from the technical provider (Art. 9)
Reply SE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We consider that Articles 25 and 26, as currently drafted, may permit an unduly selective approach to enhanced due diligence in higher-risk scenarios and therefore may not ensure a sufficiently consistent and effective minimum standard. In particular, the repeated use of the wording “one or more” in these provisions allows obliged entities to obtain only a limited subset of the additional information listed, even where the level of risk would justify a more comprehensive approach. In our view, this risks weakening the effectiveness and harmonized application of the risk-based approach. Article 25: In addition to the previously mentioned changes, we propose specifying the types or sources of additional information that obliged entities shall review for the purpose of Article 25. Drafting proposals: 1. For the purposes of Article 34(4), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain one or more all of the following additional information

Name of the respondent	Question	Answer
		that will allow them to: […] 2. For the purposes of the first subparagraph, obliged entities shall review at least the following types or sources of additional information: a) for the purpose of verifying the authenticity and accuracy of the information held on the customer, the beneficial owners or the ownership and control structure of the customer other than a natural person, information from official public registers or certified corporate documents; b) for the purpose of assessing the reputation of the customer and the beneficial owners, adverse media screening; c) for the purpose of identifying and assessing in a comprehensive way ML/TF risks associated with the customer, the beneficial owners or any close relationships known to the obliged entity or that are publicly known, information on ownership and control structures and, where the customer or its beneficial owners are linked to multiple jurisdictions, a documented assessment of exposure to each relevant jurisdiction. Article 26: 1. For the purposes of Article 34(4), point (b), of Regulation (EU) 2024/1624, obliged entities shall obtain one or more all of the following additional information on the intended nature of the business relationship that will allow them to: Article 27: As currently drafted, Article 27 provides that obliged

Name of the respondent	Question	Answer
		entities “may” obtain additional information on the source of funds and source of wealth of the customer and of the beneficial owners. In our view, this wording makes the collection of such information discretionary in circumstances where enhanced scrutiny is required, which may undermine consistent application of AML/CFT controls. Replacing “may” with “must” would convert the collection of additional information from a discretionary measure into a mandatory obligation. This would better support a risk-based approach by ensuring that, in enhanced due diligence scenarios, obliged entities consistently obtain the evidence necessary to assess whether the source of funds and source of wealth derive from lawful activities. In our view, this would promote greater legal certainty, supervisory consistency, and more effective mitigation of higher ML/TF risks. Concrete drafting proposal: 1. For the purposes of Article 34(4), point (c), of Regulation (EU) 2024/1624, obliged entities shall obtain such additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, that will satisfy them that the source of funds or source of wealth is derived from lawful activities. Such information may must include one or more of the following: […] AR Position: Yes as the RTS consistently require risk sensitive scaling (e.g., Art. 1, Art. 11–12, Art. 18, Art. 23, Art. 25–28). The SDD section preserves AMLR Art. 33 flexibility without creating de facto exemptions. The

Name of the respondent	Question	Answer
		EDD document lists are examples, not rigid checklists, which supports proportionality. Proposition (to reinforce RBA): • In Art. 19(3) (PEP tools) and Art. 30(a) (TFS automation), add a short line that calibration and frequency must be "commensurate with product/channel/country/customer risk," and that manual only screening is acceptable only where documented RBA shows very low complexity/volume and is approved by compliance
Reply SE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We could think of two recurring cases meriting explicit recognition: 1. Corporate directors' residential addresses (SMOs/BOs). Multinational corporates often cannot furnish residential addresses for senior officers due to internal privacy policies. Art. 13 already permits using registered office for SMOs; we suggest the RTS explicitly allow this also when individuals are BOs solely due to control functions, provided other robust identifiers are captured 2. Remote onboarding in cross border retail where customers do not have eIDAS capable IDs. The RTS allow remote alternatives (Art. 7(2)–(4)), but an explicit acknowledgment of cross border eID coverage gaps as an acceptable rationale would remove uncertainty (as per Q1(1) Proposition) Alternative solution Propositions: • Extend Art. 13's address flexibility to BOs in specific, justified scenarios with compensating controls (e.g., proof of role appointment, verified corporate

Name of the respondent	Question	Answer
		email/phone, and secondary identifiers). • Add an eID availability recital to Art. 7.
Reply SE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We respect AMLA's view that AMLR Art. 33 already provides ample SDD levers and that adding more could look like exemptions. That said, to reduce friction without diluting control, we would consider: 1. Low value, low velocity savings/investment products (e.g., government savings bonds, children's savings): permit tiered verification where full documentary verification can be deferred slightly beyond the standard 60 day window if funds originate exclusively from an EU regulated account in the same name and transaction caps are in place (mirrors e money risk mitigants) 2. Intra group corporate accounts for cash pooling (EU headquartered groups with audited accounts): allow reduced periodicity of ownership/control refresh under SDD where group structures are publicly disclosed, no high risk indicators exist 3. external audit confirms no material ownership change 4. Digital identity reuse: where an FI verified a natural person to eIDAS "substantial/high" within the last 24 months, allow SDD to reuse those attributes without fresh documentary capture, subject to negative news/PEP/TFS deltas. (This is consistent with Art. 32(2) and avoids duplication).
Reply SE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Reply SE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Reply SE	Do you have any comments on the Annex in the draft RTS?	No

Revolut	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We see additional clarity is needed in the outlined articles below to ensure the RTS achieve their objective as proportionate, practicable, and aligned with the risk-based approach as set out in AMLR. [Further articles are discussed under the Additional Input section to account for character limit] Overall, The RTS should affirm that firms do not need to re-verify identity data that is already reliably sourced, previously verified and still current (specifically where currently provided ID document has not expired). It must be clarified that firms aren't required to independently validate every piece of customer data that is required to be collected, especially for details like addresses that may be difficult to verify in certain jurisdictions where such information is not readily available on primary ID documents. To prevent inconsistent application across Member States, more precise guidance is required regarding who is authorized to certify documents. The RTS should formally endorse the use of reputable public records, registries, and existing data to prevent redundant processes and reduce customer friction. We

Name of the respondent	Question	Answer
		believe AMLA should encourage the standardisation of government databases across EU Member States to improve ease and accuracy of sourcing independent and reliable identity data for electronic verification purposes. In particular, we wish to highlight our concerns regarding Article 7: Electronic verification of identity documents, typically via an independent and reliable government or authorised data source is not in of itself a distinct control to independently validate that the person providing the identity document is the person they claim to be; which typically requires additional biometric checks eg. live selfie comparison with ID facial image, biometric/NFC passport check. As echoed by industry responses elsewhere, the RTS as drafted do not provide a meaningful alternative to electronic identification means that are compliant with Regulation (EU) No 910/2014 (Art. 22 (6)(b) AMLR) and instead could potentially undermine the Risk-Based Approach by being too prescriptive. We therefore recommend allowing obliged entities to apply different levels of remote identification controls based on customer risk. For lower-risk customers, this could include liveness detection selfies, document upload with automated verification, personal data verification with public registers, NFC biometric data verification and facial biometrics matched to ID photos, which are already widely accepted and technologically mature. End-to-end encrypted video chat could be limited to

Name of the respondent	Question	Answer
		high-risk customers or where simplified measures are insufficient, rather than applying it as a blanket requirement. Ideally, the RTS should not be overly prescriptive, allowing room to adapt in the ongoing 'arms race' with identity fraudsters. We believe these changes would ensure continued regulatory compliance while supporting frictionless and scalable digital onboarding, consistent with both technological innovation and the risk-based principle underpinning European and global AML frameworks. Proposed Resolution: Art 7(2). In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall verify the natural person's identity using remote solutions that meet the conditions set out in paragraphs 3 and 4. Art 7 (3) (a) controls to ensure that, where an identity document, passport or equivalent is used, the natural person presenting the customer's identity document, passport or equivalent is the actual person on the picture of the document (ie. is the person they claim to be); Art 7(4) 4. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with this Article and they shall also be able to explain either by reference to the customer or the obliged entity's policies, why the customer was not verified

Name of the respondent	Question	Answer
		through the means referred to under Article 22(6) of Regulation (EU)2024/1624.
Revolut	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We fully support AMLA's commitment to risk-based due diligence, however the proposed RTS as currently drafted include overly prescriptive mandates. Such rules-based provisions could limit the flexibility necessary for institutions to effectively manage specific risks. In particular, we would draw your attention to the following provisions: Article 7 (Verification): Current expectations could be misread as requiring verification of all customer data points, regardless of actual risk. Articles 10–13 (Complex Structures): The use of undefined terms like "organigram" may create a default expectation for Enhanced Due Diligence (EDD) based solely on structural complexity. Article 19 (EDD Triggers): The mandate to apply EDD "without delay" after any change in circumstances lacks a materiality threshold. This could lead to excessive re-assessments or premature account restrictions. Articles 25–28 (Source of Wealth/Funds): Requiring firms to be "satisfied" without defining clear thresholds may result in inconsistent supervisory standards. Risks of a Process-Driven Approach If these provisions remain as drafted, firms may prioritize standardized checklists over risk-based

Name of the respondent	Question	Answer
		judgment, leading to: Redundant CDD efforts. Increased friction for customers, particularly in low-risk scenarios. The diversion of critical resources away from high-risk threats. To prevent this, the RTS must clearly distinguish between minimum baseline requirements and risk-driven enhancements, as well as differentiate between data collection versus verification (especially for SoW/SoF). Recommended Improvements Article 7: Specify that verification is risk-based and proportionate, particularly for digital or non-face-to-face onboarding, rather than a universal requirement for all data. Articles 10–13: Confirm that complexity alone does not trigger EDD and define the specific purpose of an “organigram.” Article 19: Establish a materiality threshold for EDD triggers and allow firms to leverage existing customer knowledge Articles 25–28: Define a “reasonable standard” for being satisfied with SoW/SoF data and ensure these requirements remain scalable. General: Explicitly state that firms should not duplicate previously verified information unless there is a specific, risk-based reason to do so.

Name of the respondent	Question	Answer
Revolut	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Although the draft RTS seeks to unify customer due diligence (CDD) data collection, certain details are often unavailable in real-world scenarios, especially when dealing with various customer profiles and international jurisdictions. A lack of built-in flexibility could lead to onboarding bottlenecks, a poor customer experience, and uneven regulatory enforcement. Scenarios where the information may be lacking or unavailable Challenges in Verifying Address (Article 7) In many jurisdictions, independent sources for address verification are unreliable or unavailable. This issue primarily affects: Lack of Infrastructure: Regions without centralized address registries. Lack of Documentation: Customers without traditional proofs, such as utility bills. In particular for tenants and transient workers/expatriates who may not have utility bills in their own name depending on tenancy arrangements. In addition is the issue of multi-lingual documents requiring translation and interpretation, and many documents being available only via email/pdf or screenshots and not hard copy proofs. Document Limitations: Primary IDs (e.g., passports or EU IDs) that do not list a current residential address, and/or where an address may be present (eg. drivers licence) may not be current. In these instances, strict independent verification is

Name of the respondent	Question	Answer
		often unfeasible or provides no regulatory value. Proposed Solution The AMLA should permit firms to use flexible, alternative verification methods, such as: Self-declarations validated by other verified data points (eg. google maps location confirmation). Digital identity solutions and reliable electronic data sources. Risk-based acceptance of partial verification when appropriate. Source of Wealth (SoW) and Source of Funds (SoF) (Articles 25–28) Obtaining SoW and SoF information is often challenging, especially regarding: Legacy Portfolios: Long-standing customers whose historical data predates current standards. Jurisdictional Barriers: Regions with low transparency or poor documentation standards. Without clear parameters, the requirement for firms to be "satisfied" with this information risks inconsistent regulatory interpretation. Proposed Solution: AMLA should: Define Proportionality: Clarify that firms may rely on reasonable evidence rather than exhaustive documentation. Provide support for acceptance of customer declared information, subject to making further enquiries where transaction behaviour deviates from such baseline self-declared information. Validate Diverse Inputs: Recognize customer explanations, transaction patterns, and existing relationship history as legitimate evidence. This is

Name of the respondent	Question	Answer
		particularly beneficial for full banking customer relationships where all primary income is received into the account. Standardize Risk Levels: Provide specific guidance on evidence requirements for high-risk scenarios. Tiered Verification: Distinguish between lower-risk cases (where customer-declared data suffices) and higher-risk cases (requiring full collection and verification). Beneficial Ownership and Complex Structures (Articles 10–13) Securing complete, verified beneficial ownership data is often difficult when: Ownership hierarchies extend across multiple jurisdictions. Official company registries are missing, unreliable, or incomplete. Legal vehicles, such as trusts, contain discretionary or non-fixed beneficiaries. In addition, a clear definition of senior managing official would add clarity and therefore would advocate for having to identify the legal representative of the company as available in the public register. Proposed Solution: AMLA should: Confirm that firms can use the best available information, such as customer-provided data validated by reasonable checks. Acknowledge the authority of central registers where they exist to avoid redundant verification. Define expectations for cases where full transparency remains unattainable despite exhaustive efforts.

Name of the respondent	Question	Answer
		Pooled and Omnibus Structures (Articles 17 & 22) For collective investment undertakings (CIUs), pooled accounts, and similar vehicles, firms generally lack visibility into underlying investors. Mandatory identification of all individual participants is operationally impractical. Proposed Solution: The AMLA should explicitly state that when reliance conditions are satisfied, firms may rely on regulated intermediaries rather than identifying and verifying every underlying investor. Our overall recommendation is that AMLA explicitly acknowledge within the RTS that: Certain CDD information is not universally accessible across all jurisdictions and customer categories. Firms should be allowed to utilize alternative data sources and methodologies through a risk-based framework and subject to the firm's stated sanctions risk appetite. Missing data points should not automatically block or terminate a business relationship if the associated risks are effectively mitigated.
Revolut	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Support for Simplified Due Diligence (SDD) We support AMLA's goal of ensuring SDD is correctly applied in low-risk contexts. However, the draft RTS requires more explicit practical guidance, fulfilling AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624. Specifically, the RTS should better recognize situations where ML/TF risks are naturally mitigated by existing transparency, regulatory supervision, or specific product traits.

Name of the respondent	Question	Answer
		Scenarios Justifying Further Simplification Public Entities and Listed Companies: Organizations already subject to stringent disclosure and governance oversight. Regulated Financial Institutions: Entities under equivalent AML/CFT regimes where redundant due diligence offers little extra protection. Intra-group Relationships: Customers belonging to the same regulated group and managed under consolidated supervision. Established Interbank Frameworks: Systems like SWIFT RMA where controls and due diligence are natively integrated. Standardized Low-Risk Products: Retail offerings where the relationship's nature is clear and risk indicators are absent. Low-Risk Customers: Existing customers who have a well established (eg. multi-product), long term (eg. >2-years), proven business relationship with the firm and have negligible previous ML risk concerns (eg. no prior ML or fraud risk alerts or reporting). Proposed Simplified Measures Information Limits: Collecting less data when reliable sources already provide sufficient information. Reduced Verification: Lowering the requirement for independent verification when alternative transparency mechanisms exist. Control Reliance: Utilizing existing market, group, or regulatory controls instead of duplicating efforts. Adjusted Monitoring: Decreasing the frequency or intensity of ongoing oversight for low-risk profiles.

Name of the respondent	Question	Answer
		Drafting Recommendation “For customers, products, or services with demonstrably low ML/TF risk and sufficient regulatory oversight, obliged entities may implement simplified due diligence. This includes reduced data collection, verification, and/or monitoring, provided these measures are supported by a risk-based justification.” Rationale Harmonization: Improves consistency across all Member States. Efficiency: Minimizes redundant operational burdens. Risk-Based Focus: Enables firms to redirect resources toward high-risk areas, aligning with the core objectives of the AML framework.
Revolut	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Further to points elaborated elsewhere in this response, the following sections require further clarity to ensure the RTS is implemented consistently and proportionately. Article 7 – Scope of Verification We note that the current drafted RTS lacks a clear distinction between data that must be collected and data that requires independent verification. An interpretation requiring verification of every data point would exceed a risk-based approach and create significant operational hurdles. Proposed Solution: Clarify that not all collected information requires independent verification and that verification efforts should remain risk-based and proportionate. Articles 10–13 – Complex Structures and the

Name of the respondent	Question	Answer
		"Organigram" The RTS references an "organigram" without defining its intended purpose or the required level of granularity. Proposed Solution: Provide a formal definition of "organigram" and confirm that structural complexity does not automatically mandate Enhanced Due Diligence (EDD), and to include clarity on the information required on the legal form to include name and registration number. Article 19 – Trigger for Enhanced Due Diligence The mandate to apply EDD measures "without delay" currently lacks a materiality threshold. Proposed Solution: Introduce a time-bound materiality threshold and permit firms to leverage existing customer knowledge when assessing the need for EDD Articles 25–28 – Threshold for "Satisfaction" The RTS requires firms to be "satisfied" with information but fails to define the benchmark for this standard. Proposed Solution: Establish guidance on what constitutes a "reasonable standard" and allow for the use of diverse, mixed evidence sources, and our strong suggestion should be that "satisfied" should be in the context that firms are satisfied that the ML risk has been reduced or eliminated. Article 33 – Interaction with Level 2 Measures The RTS currently fails to address how it interacts with other Level 2 regulatory measures. Proposed Solution: Align implementation timelines and ensure the framework avoids triggering repetitive remediation cycles.

Name of the respondent	Question	Answer
		General – Adherence to Level 1 Mandate There is a concern that the RTS may inadvertently expand the scope of the Level 1 Regulation. Proposed Solution: Confirm that the RTS is intended to specify—not extend—Level 1 requirements, while reinforcing the primacy of the risk-based approach.
Revolut	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Revolut	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Revolut	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 2 We support the collection and verification of full legal names, including all middle names, for individuals. However, for legal entities, there is an absence of an EU-wide definition of trade name. This could lead to variances between Member States and where availability is dependent on a local register of a company. In several jurisdictions, this element is not subject to a mandatory form of registration, which renders its verification unfeasible. Proposed Resolution: Clarification is required in Article 2 to specify Trade Name when available in an official register.

Name of the respondent	Question	Answer
Revolut	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Revolut	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 4 As has been articulated in previous consultations and as noted in feedback on the Recitals, we believe clarification is required as there is an absence of uniformity across Member States on the information provided in identification documents, and where 'place of birth' is not always included. We believe such a provision to provide 'place of birth' should only be mandatory for non-citizens/non-residents who would otherwise be required to use their passport as the primary ID. In other instances it should be optional unless otherwise readily available on the identification documentation provided. Proposed Resolution: Suggest provision under Article 4 to clarify that data relating to place of birth is collected on a declarative basis but verification requirement is limited to information present on the ID documentation.
Revolut	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Revolut	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 5 We recognise this provision is based on Art. 22 (I)(a)(iii) AMLRs, however we are concerned that the RTS as drafted goes beyond the Level 1 text by referring to "all nationalities" where the AMLR refers to "nationalities". Furthermore, we see potential conflict between this Article and the Recitals: Recital 3 RTS states "Where a

Name of the respondent	Question	Answer
		person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient.” Proposed Resolution: Remove reference to “all” nationalities from Art 5 and reflect wording of Recital 3 for example “Obliged entities should allow customers to declare more than one nationality. Where a person holds multiple nationalities and declares them in good faith, verifying one nationality should be sufficient.”
Revolut	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	18
Revolut	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 18 and Article 24 The current drafting presents a potential tension between regulatory compliance and the actual spirit of risk-based monitoring. The phrasing "at least one of the following" creates a loophole where firms are incentivised to collect the most easily accessible data point rather than the most meaningful one. This shifts the focus from risk mitigation to administrative completion, potentially leaving significant blind spots in the customer profile. Collecting a single "valid" piece of data merely to satisfy a technical requirement offers no tangible benefit if that data lacks relevance to the customer’s actual risk profile. Without a requirement for relevance, firms may hold data that fulfils the letter of the law but fails to support effective transaction monitoring or suspicious activity detection. By listing specific data points as "options," the draft risks being too narrow for complex cases and too burdensome for simple ones. It fails to account for the

Name of the respondent	Question	Answer
		diversity of business models where the "envisaged activity" might require a multi-faceted baseline rather than a single, isolated attribute. Proposed Resolution: Firms may decide the necessary level of data to be collected and/or verified to satisfy establishing the customers baseline purpose and nature of business relationship, from which to assess deviations against to inform their transaction monitoring controls.
Revolut	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	20
Revolut	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 20 The current drafting of this article creates a "regulatory donut hole" by failing to define the specific evidentiary requirements for the Standard (Medium) risk category. By focusing heavily on the "floor" for Simplified Due Diligence (SDD)—such as allowing the collection of address data without verification—and the "ceiling" for Enhanced Due Diligence (EDD)—which mandates deep dives into the Source of Wealth and senior management approval—as drafted, the Article leaves the vast majority of customers in an undefined middle ground. Without a clear "Standard CDD" benchmark, this proposed wording poses a significant operational challenge: firms are left without a precise understanding of what constitutes the necessary "extra" information or verification intensity required to elevate a customer from a Low-risk profile to a Medium-risk one without inadvertently triggering the full weight of EDD. Without explicit guidance on where simple self-

Name of the respondent	Question	Answer
		declaration ends and independent documentary verification begins for standard customers, the RTS risks inconsistent application and "compliance creep," where firms default to burdensome EDD measures simply to avoid regulatory ambiguity.
Revolut	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Revolut	Please specify which recital you refer to, and share your comments below.	While we respect the Recitals are not independently binding, we believe it is imperative that clarifications are required to ensure the effective functioning of the RTS given their purpose to state the intent of the RTS and their interpretative value. We therefore see the following as requiring clarification and amendments to ensure the effective operation of the RTS: Recital 3 - The requirement to provide both Nationality and Place of Birth could potentially prohibit a large citizen/resident population from using more readily available identity documentation such as drivers licence and would otherwise enforce a requirement to request Passport as the only eligible identity document. We propose that such data be collected and verified only for foreign passport holders. Recital 12 additional clarity is required here given the role of legal guardians, or representatives acting on behalf of, both children and adult lives. If this is intended for minors it should be explicitly stated. However if intended to include adults with legal guardians, or representatives acting on behalf of adults

Name of the respondent	Question	Answer
		(eg. carers or family representatives of disabled individuals) there is a practical difficulty in assessing this in onboarding where provisions for vulnerable customers already exist.
Revolut	How would you rate the proposals set out in the draft RTS overall?	Neutral
Revolut	Please justify your answer to the previous question and provide evidence where possible.	We note that the draft RTS may lead to additional costs where they introduce requirements that go beyond, or are more prescriptive than, Chapter III AMLR. Furthermore, we see additional clarity is needed in the outlined articles below to ensure the RTS achieve their objective as proportionate, practicable, and aligned with the risk-based approach as set out in AMLR. We stress the need for sufficient proportionality and risk relevance in the RTS to avoid unnecessary additional costs. Overall, The RTS should affirm that firms do not need to re-verify identity data that is already reliably sourced, previously verified and still current (specifically where currently provided ID document has not expired). It must be clarified that firms aren't required to independently validate every piece of customer data that is required to be collected, especially for details like addresses that may be difficult to verify in certain jurisdictions where such information is not readily available on primary ID documents. To prevent inconsistent application across Member States, more precise guidance is required regarding who is authorized to certify documents.

Name of the respondent	Question	Answer
		The RTS should formally endorse the use of reputable public records, registries, and existing data to prevent redundant processes and reduce customer friction. We believe AMLA should encourage the standardisation of government databases across EU Member States to improve ease and accuracy of sourcing independent and reliable identity data for electronic verification purposes.
Royal Netherlands Institute of Chartered Accountants (NBA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We support the objective of establishing harmonised Customer Due Diligence requirements across Member States to increase consistency and effectiveness in combating money laundering and terrorist financing ('AML/CFT'). Overall, we view the adjustments to the draft RTS on CDD positively. However, we face several practical implementation challenges, as described below. Provisions not fit for non-financial sector: We have observed that the draft RTS are primarily designed for the financial sector, managing ongoing financial transactions. The draft RTS are less suitable for the professional services sector, particularly for small and medium-sized entities. In our view, the draft RTS would benefit from incorporating sectoral differentiation and proportionality. This would result in standards that are practical, effective and aligned with the realities of entities in the non-financial sector. Examples include: - Article 18(c) and 18(d) require information on the source and destination of funds, which is largely

Name of the respondent	Question	Answer
		transactional in nature. Accountants collect this information to understand sources of funds and wealth as part of their CDD process, but the text in the draft RTS appears more focused on specific transactions rather than the broader context of client background knowledge. - Article 28 requires information on the rationale for intended or executed transactions and their consistency with the business relationship as part of enhanced due diligence measures. These measures are challenging to interpret when providing services, as the focus is on transactions. We propose including sector-specific flexibility by adding “where relevant”. This would facilitate a proportional and practical approach across all sectors. Timing We are concerned about the timelines. The Regulation comes into force on 10 July 2027, yet many level 2 and 3 regulations have not been published (for consultation). This delay poses a risk to proper implementation. Without these level 2 and 3 regulation, obliged entities cannot prepare properly for the implementation. However, obliged entities do need time to be able to prepare their organisations for the implementation. It is therefore essential that level 2 and 3 regulation are made available on short notice, or that a grace period is granted to allow obliged entities to adjust to the new legislation. • We refer to the Accountancy Europe publication on the 7 principles for AML RTS development, which states:

Name of the respondent	Question	Answer
		"RTS should be published well before they take effect to give obliged entities and supervisors sufficient time to prepare for compliance. A structured transitional framework defining the timeline, sequence, and duration of implementation steps should be established by AMLA and the European Commission."
Royal Netherlands Institute of Chartered Accountants (NBA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art 5 – Details on nationalities Aside from directly inquiring with the customer, there does not seem to be a proportionate method for acquiring information on an individual's second nationality. Consequently, 'obtaining necessary information' in this context appears difficult to implement. We recommend clarifying that, for additional nationalities, obliged entities may rely on a customer declaration, unless specific risk indicators warrant further information, in which case reasonable measures should be applied. Art 6 – Identity verification document The requirement appears disproportionate and not fully aligned with the underlying ML/TF risk. For example, the requirement for obliged entities to verify the authenticity of all identity documents (Art 6(3)) is difficult to implement in practice, given limited access to detection tools and varying reliability of documents depending on their type and issuing authority. Moreover, auditing standards prescribe that authenticity is an attribute related to the reliability of information that the auditor may consider. If indicators suggest a document may not be authentic, auditors must investigate further, but are not required to perform procedures specifically aimed at detecting such

Name of the respondent	Question	Answer
		issues (ISA 240 Revised paragraph 22, A34 and A35). We therefore recommend amending the RTS to state: “If obliged entities identify conditions that cause them to believe that a document may not be authentic, they shall take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Art 22(6), point (a) and Art 22(7), point (a) of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with.” Art 12 - Complex structures We are concerned that certain requirements may still not fully align with a truly risk-based approach and could lead to excessive administrative burdens. Art. A ‘complex structure’ classification might apply to many standard international group structures. We propose incorporating a risk-based evaluation by obliged entities and suggest to implement a risk based assessment. Art 13 - Information on SMOs Requiring the same set of information for SMOs as for UBOs seems excessive, given that there are often far more board members than UBOs. Since SMOs are not beneficial owners (BO), they generally have a different (lower) risk profile than actual BO.We advise a proportionate and risk based application of due diligence measures for SMOs. Therefore, we propose to supplement Art 27 by clarifying that this requirement does not apply to SMOs identified as BO. Furthermore, due to the lower risk profile for SMOs identified as BO, as explained, we suggest adding reasonable measures for SMOs in Art 10 RTS on

Name of the respondent	Question	Answer
		reasonable measures for verification of the identity of the BO. This may include, where appropriate, verifying the identity of the SMO using reliable and independent sources such as extracts of trade registers, or other publicly available information submitted to competent authorities. Art 14 – Identification and verification of beneficiaries of trusts and similar legal entities or arrangements Paragraph 2 imposes an unrealistic obligation by requiring obliged entities “to ensure” timely updates, which is outside their control. We propose replacing this with “make a reasonable effort to ensure”. Art 30 (a) (iii) Screening requirements The current wording in Art 30 subparagraph (a)(iii) implies that obliged entities must have knowledge of 'any other names, aliases, (…)', which is not feasible. The requirement should instead reflect that obliged entities can only verify information obtained whilst performing (E)CDD against lists of targeted financial sanctions. Art 30 (c) (iii) - Screening requirements The current wording of Art. 30(c)(iii) treats changes in residence, nationality, or business operations as automatically “significant”, which is disproportionate and limits a risk-based approach. We propose clarifying that such changes are only significant where they may impact designation as a listed person, body, or entity. Art 30 (d) - Screening requirements “without undue delay” Art 30(d) is unclear on whether it requires timely updating of sanctions lists or immediate re-screening, and “without undue delay” may be disproportionate for

Name of the respondent	Question	Answer
		low-risk customers. We suggest the RTS explicitly allows for a risk-based approach to the frequency of re-screening, taking into account the risk profile of the customer and the nature of the business relationship. Effective date: The RTS does not specify its application date. We recommend aligning it with Regulation (EU) 2024/1624 (10 July 2027) and explicitly including this date in Art 33. Inconsistencies Annex 1 RTS includes address details as mandatory attributes, which conflicts with Art 3 RTS where these are required only "where available." We propose aligning Annex 1 accordingly.
Royal Netherlands Institute of Chartered Accountants (NBA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 4 – Specification of the provision of the place of birth Article 4 states the information on place of birth shall consist of at least the country name. However, this information may not always be available on official identity documents, which sometimes only include the city of birth. Moreover, under eIDAS (Implementing regulation - EU - 2024/2977 - EN - EUR-Lex (europa.eu)), only one of the two data points - place or country of birth - is required to fulfil the mandatory "place of birth" data requirements. The mandatory person identification data for the natural person in relation to birth place is defined as: "The country as an alpha-2 country code as specified in ISO 3166-1, or the state, province, district, or local area or the municipality, city, town, or village where the user to whom the person identification data relates was

Name of the respondent	Question	Answer
		born." Therefore, we suggest amending Article 4 of the CDD RTS as follows: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of the country as an alpha-2 country code specified in ISO 3166-1, or the state, province, district, or local area, or the municipality, city, town, or village where the customer to whom the personal identification data relates was born. Should the identity document, passport or equivalent of the customer provide additional information on place of birth, such information shall be collected."
Royal Netherlands Institute of Chartered Accountants (NBA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In general, we propose that the RTS incorporate a simplified due diligence provision. This would allow obliged entities, in low-risk situation, to rely primarily on at least one reliable independent source, such as a national companies registry or central UBO register, to fulfill UBO (and SMO) verification requirements. This approach would eliminate the need for additional proof of identity, directly from the UBO, unless specific risk indicators are present.
Royal Netherlands Institute of Chartered Accountants (NBA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We do not have any additional comments.

Name of the respondent	Question	Answer
Royal Netherlands Institute of Chartered Accountants (NBA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Royal Netherlands Institute of Chartered Accountants (NBA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Royal Netherlands Institute of Chartered Accountants (NBA)	Do you have any comments on the Annex in the draft RTS?	No
Royal Netherlands Institute of Chartered Accountants (NBA)	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Salv Tech	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree that the proposals in the draft RTS can be applied across the range of products and services. The framework establishes a comprehensive and proportionate approach to CDD that is appropriately flexible across sectors. We offer one targeted observation from the perspective of an operator of an AMLR Article 75 information-sharing partnership. Articles 18 and 19 (Ongoing monitoring) set out detailed requirements for keeping CDD information up to date, monitoring transactions, and reassessing ML/TF risk upon material changes in circumstances. These provisions are sound. However, they are drafted entirely from the perspective of an individual obliged entity acting alone. They do not address the increasingly important role of inter-institutional intelligence sharing in strengthening ongoing monitoring — as enabled by AMLR Article 75 (information-sharing partnerships, applicable from 10 July 2027).

Name of the respondent	Question	Answer
		In practice, a critical trigger for CDD reassessment under Article 18(3) is when an institution learns that its customer has been flagged as suspicious by another institution. This intelligence gap is one of the most exploited weaknesses in the EU AML framework — criminals move between institutions knowing that no single entity sees the full picture. Article 75 partnerships, operated through secure platforms with appropriate data protection safeguards, directly address this gap. We suggest the RTS could benefit from a recital or interpretive note acknowledging that information received through Article 75 partnerships constitutes a valid trigger for the CDD reassessment and risk re-evaluation obligations in Articles 18(3) and 18(4). This would not require changes to the operative text but would provide clarity for obliged entities preparing to operationalise Article 75 alongside their CDD obligations. We make this observation from practical experience. Salv operates Bridge, a secure intelligence-sharing platform used by financial institutions across the EU. We hold an EU member state-issued KYC Utility provider licence (the first in Europe), SOC 2 Type II certification, and ISO 27001 accreditation. Our operational data shows that shared intelligence materially improves both the timeliness and quality of CDD decisions — the median time from one institution detecting a suspicious entity to another institution querying it is 9 days, and

Name of the respondent	Question	Answer
		20% of entities queried have already been flagged by a different participant.
Salv Tech	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We broadly agree that the proposals allow for the effective application of a risk-based approach. We highlight two specific areas where the risk-based framework could be strengthened through recognition of collaborative intelligence mechanisms. First, Article 18(3) requires obliged entities to reassess the ML/TF risk associated with a business relationship when there is a "material change in the circumstances of the customer." The provision lists examples of such material changes but is silent on external intelligence triggers — specifically, where an obliged entity receives information through an Article 75 partnership indicating that its customer has been flagged by another institution. This is one of the strongest possible signals of material change and should be treated as a clear trigger for CDD reassessment. We recommend that AMLA clarify — whether in the RTS text or in guidance — that intelligence received through Article 75 partnerships constitutes a relevant material change for the purposes of Article 18(3). Second, regarding Article 22 (Enhanced due diligence): the risk-based approach requires that higher-risk situations receive enhanced scrutiny. The most dangerous ML/TF risks often span multiple institutions, where a criminal network operates accounts across several banks and no single institution sees enough to identify the full scheme. Collaborative intelligence

Name of the respondent	Question	Answer
		strengthens the risk-based approach by enabling institutions to calibrate their CDD measures based on a more complete risk picture. From operational experience: within Salv Bridge, 20% of suspicious entities queried have already been flagged by other participants — meaning that without information sharing, institutions would conduct CDD in isolation, unable to calibrate their measures to the true risk level. The median detection-to-query time of 9 days shows that shared intelligence enables timely risk reassessment. Our sanctions screening module resolves false-positive requests 100-150x faster than bilateral methods, with 75% resolved within one hour — directly supporting proportionate and timely sanctions screening decisions. We believe the risk-based approach in the draft RTS is fundamentally sound. Our suggestion is to ensure it explicitly accommodates the collaborative intelligence mechanisms that AMLR Article 75 establishes, so obliged entities can confidently integrate shared intelligence into their risk-based CDD processes.
Salv Tech	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. We identify two concrete situations where CDD-relevant information is routinely unavailable to individual obliged entities, and where collaborative mechanisms provide a practical solution. Situation 1: Suspicious activity at other institutions. When an obliged entity conducts ongoing monitoring under Articles 18-19, it has no visibility into whether its

Name of the respondent	Question	Answer
		customer is simultaneously the subject of suspicious activity reports, internal investigations, or adverse findings at other financial institutions. This is a structural information gap, not a matter of insufficient diligence. A customer who has been exited by one bank for money laundering concerns can open an account at another bank, and the onboarding institution has no way of knowing about the prior exit. This is one of the most exploited vulnerabilities in the EU AML framework. AMLR Article 75 directly addresses this gap by enabling information-sharing partnerships among obliged entities. Through secure platforms with appropriate safeguards, institutions can share intelligence about suspicious entities — enabling the receiving institution to incorporate this into its CDD processes, particularly the ongoing monitoring and risk reassessment obligations under Articles 18-19. Operational evidence: Salv Bridge currently facilitates this exchange among EU financial institutions. Our data shows a median 9-day lag between one institution detecting a suspicious entity and another institution querying the same entity — demonstrating that these customers move rapidly between institutions, and that shared intelligence closes a real and recurring information gap. Situation 2: Sanctions screening false-positive resolution. The consultation paper (Section 3.2)

Name of the respondent	Question	Answer
		acknowledges the relationship between CDD and restrictive measures screening. When an obliged entity identifies a potential sanctions match, it must determine whether the match is a true positive or false positive. The information needed — such as whether the flagged individual is the designated person or shares a similar name — is often held by other institutions that have already investigated the same alert. Without a mechanism for exchanging this, each institution independently investigates every alert, often reaching the same conclusion as predecessors. Through Salv Bridge's sanctions module, institutions exchange requests for information about potential matches 100-150x faster than bilateral channels, with one in four requests resolved in under 5 minutes and 75% within one hour. We propose that the RTS or accompanying guidance explicitly recognise that Article 75 partnerships constitute a valid solution for situations where CDD-relevant information is unavailable to an individual institution but exists within the broader financial system.
Salv Tech	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	We suggest one area where simplified due diligence measures could be strengthened, consistent with the risk-based approach. Where an obliged entity participates in an Article 75 information-sharing partnership and has access to collaborative intelligence confirming that a customer

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	presents consistently low ML/TF risk across multiple institutions, this should be recognised as a factor supporting the application of simplified due diligence under Articles 20-21. The rationale: SDD is appropriate where the ML/TF risk is demonstrably lower. A customer whose risk profile is corroborated across multiple institutions — none of which have flagged suspicious activity — presents a lower risk than one assessed in isolation by a single entity. Collaborative intelligence adds an independent data point to the risk assessment, strengthening the basis for SDD. This does not mean participation in an information-sharing partnership should automatically qualify a relationship for SDD. The individual entity's own risk assessment remains paramount. However, the absence of adverse intelligence across multiple institutions is a relevant indicator that should be available as one factor in the SDD decision framework. We acknowledge this is a forward-looking suggestion. Article 75 partnerships are still being established, and operational data on their impact on risk calibration is accumulating. However, as these partnerships mature and AMLA develops supervisory experience, we encourage AMLA to consider how collaborative intelligence can support proportionate CDD — including the conditions under which it may inform SDD decisions.

Name of the respondent	Question	Answer
		Operational context: Salv Bridge currently processes intelligence queries across EU financial institutions. Our data shows that 20% of entities queried in the suspicious entity sharing module have been flagged by at least one other participant. For the remaining 80%, the absence of adverse intelligence across multiple institutions provides additional confidence in the risk assessment — a signal currently unavailable to institutions operating in isolation, and that could support SDD decisions for qualifying relationships.
Salv Tech	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We offer one additional observation on the cross-sector applicability of the ongoing monitoring provisions. The ongoing monitoring requirements in Articles 18 and 19 apply uniformly to all obliged entities, regardless of sector. This is correct. However, the practical ability of different types of obliged entities to fulfil these obligations varies significantly depending on the information available to them. A large universal bank with diversified customer relationships has access to richer transaction and behavioural data than a specialist payment institution or a smaller credit institution. Information-sharing partnerships under Article 75 help to level this playing field. When a smaller institution participates in a collaborative intelligence-sharing arrangement, it gains access to signals that would otherwise only be available to larger institutions with broader customer bases. This supports the RTS objective of consistent CDD application across the range of products and services, particularly for the ongoing

Name of the respondent	Question	Answer
		monitoring obligations. We suggest that when AMLA develops supplementary guidance for the application of these RTS provisions, it explicitly considers how Article 75 partnerships can support smaller and specialist obliged entities in meeting the ongoing monitoring standards in Articles 18-19 with the same rigour as larger institutions. Salv Technologies welcomes AMLA's work on these draft RTS and the public consultation process. We would be pleased to share detailed operational data from Salv Bridge with AMLA to support evidence-based policy development in this area. Please contact taavi@salv.com for further discussion.
Salv Tech	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Salv Tech	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	18
Salv Tech	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 18(3) — Ongoing monitoring and reassessment triggers. Article 18(3) requires obliged entities to reassess the ML/TF risk of a business relationship when there is a material change in the customer's circumstances. The examples listed (change in behaviour, change in beneficial ownership, new adverse media) are appropriate but focus exclusively on information available to the individual obliged entity.

Name of the respondent	Question	Answer
		We recommend adding explicit recognition that intelligence received through an AMLR Article 75 information-sharing partnership — indicating that a customer has been flagged as suspicious by another obliged entity — constitutes a material change in circumstances for the purposes of this paragraph. This is, in practice, among the strongest risk signals available and directly relevant to the reassessment obligation. Similarly, Article 18(4) lists events that should trigger a review of CDD information. We suggest that receipt of adverse intelligence through an Article 75 partnership be explicitly included among these triggers. This clarification relates to legal certainty. Obliged entities preparing to operationalise Article 75 partnerships (applicable from 10 July 2027) need clarity that integrating shared intelligence into their ongoing monitoring processes is consistent with, and encouraged by, the CDD RTS framework. Proposed drafting addition to Article 18(3): after the existing examples, add "or where the obliged entity receives information through an information-sharing partnership established under Article 75 of Regulation (EU) 2024/1624 indicating that the customer has been identified as presenting a higher ML/TF risk by another participating obliged entity."

Name of the respondent	Question	Answer
Salv Tech	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Salv Tech	Do you have any comments on the Annex in the draft RTS?	No
Salv Tech	How would you rate the proposals set out in the draft RTS overall?	Good
Schroders Investment Management (Europe) SA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not agree, for the following reasons: Within the wider financial services ecosystem, asset management differs materially from other sectors (e.g. banking), notably in fund distribution models and the frequent absence of a direct relationship between asset managers and end investors. AMLA should reflect these structural specificities, consistent with market practice and FATF standards. Amendments to Article 17 of the draft RTS on CDD are needed. While Article 17 includes some tailored rules for collective investment undertakings and their managers, it still effectively favours a systematic “look-through” to the client base of regulated intermediaries. This does not adequately reflect the asset management model, fails to build on existing industry solutions, and does not accommodate the diversity of successful EU business models. It is also inconsistent with the EU’s risk-based approach and is unlikely to provide meaningful additional ML/TF risk mitigation. Instead, it would increase data collection burdens and disrupt established distribution arrangements, undermining efficient EU fund distribution channels.

Name of the respondent	Question	Answer
		This would likely reduce the attractiveness of established EU fund structures (particularly UCITS) in the EU and internationally, harming the competitiveness of the EU financial sector at a time when strengthening global standing is strategically important. It would also cut across current EU policy objectives to support retail participation in capital markets, financial inclusion, and the uptake of savings and investment products. Crucially, Article 17 as drafted conflicts with the "FATF Guidance on the Risk-Based Approach for the Securities Sector (2018)", which recognises that, in typical cross-border securities correspondent/distribution arrangements, the underlying customers of the regulated intermediary are not considered customers of the correspondent, and CDD on those underlying customers is not expected (responsibility lies with the intermediary). The RTS nevertheless reintroduces a systematic look-through expectation, despite robust oversight at intermediary level. As drafted, Article 17 therefore departs from international standards and longstanding supervisory practice, creating legal and operational uncertainty and weakening the consistency of the EU framework with FATF standards. Rather than improving effectiveness, it risks duplicating safeguards and imposing disproportionate obligations that do not align with the actual risk profile of these relationships, contrary to proportionality and risk sensitivity principles.

Name of the respondent	Question	Answer
		Additionally, we propose that the condition under point (a) explicitly recognises the robustness of group-wide AML/CFT frameworks applied by international financial groups, which may meet or exceed EU standards even where local regimes are less developed. Without this, relationships with such entities could be inappropriately penalised. Schroders participated in EFAMA's working group and considered ALFI's draft response in preparing this input. The below proposed wording for Article 17 is intended to address the misalignment with FATF standards identified in the current form of the draft RTS, to avoid systematic look through obligations in intermediated distribution models, and to ensure that CDD requirements for collective investment undertakings remain proportionate, risk based and operationally workable: "When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 subject to the following conditions: (a) the credit institution or financial institution is subject directly or through group policies to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are no less robust

Name of the respondent	Question	Answer
		than those stipulated by Regulation (EU) 2024/1624, or has implemented an equivalent AML/CFT program; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risk associated with the relationship with the credit or financial institution is not high; and (d) the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive AML controls including CDD measures to its own customers which can be the final investors and its customers' beneficial owners."
Schroders Investment Management (Europe) SA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No. Please see the changes proposed above to Article 17 along with our rationale in our answer to Question 1.
Schroders Investment Management (Europe) SA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	No. Please see the changes proposed above to Article 17 along with our rationale in our answer to Question 1.
Schroders Investment Management (Europe) SA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures	With regard to Article 13 on information on senior managing officials ("SMOs"), we advocate for a risk-based approach with regard to the verification of the SMOs' identity, as we do not consider them as posing

Name of the respondent	Question	Answer
	should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	the same risks as the beneficial owners. Moreover, SMOs typically perform executive functions within the legal entity and, as a result, are already subject to a high degree of scrutiny. Their identities are generally verified on multiple occasions in the course of interactions with various public authorities, such as tax authorities or national company registers. For the same reasons, key identifying information relating to these individuals is usually readily available from reliable and independent sources, as referred to in Article 22(6)(a) of the AMLR. Against this background, applying the same information collection and verification requirements to SMOs as those applicable to beneficial owners does not appear justified. Article 63(4)(b) of the AMLR specifies that the information to be obtained on SMOs should be equivalent to that required under Article 62(1), second subparagraph, point (a). It does not refer to the full set of data required for beneficial owner identification under Article 62. Importantly, the notion of “equivalent” information should not be interpreted as requiring “the same” information or verification measures. Such overly burdensome requirements could have broader negative consequences, including discouraging international groups from engaging with EU financial institutions. We propose the following changes in Article 13:

Name of the respondent	Question	Answer
		"In relation to senior managing officials as referred to in Article 22(2) second subparagraph of Regulation (EU) 2024/1624, obliged entities shall: a. collect information for identification purposes. Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence; b. verify the identity of senior managing officials using a risk-based approach." Alternatively, we propose that the solutions provided under Art. 21 of the Draft RTS apply to SMOs in all circumstances and not only low-risk situations.
Schroders Investment Management (Europe) SA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No comments.
Schroders Investment Management (Europe) SA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

	implementing the provisions of these draft RTS.: Recurrent costs	
Schroders Investment Management (Europe) SA	Please justify your answer to the previous question and provide evidence where possible.	see our responses to questions 1 and 4 in particular
SIA ERNST & YOUNG BALTIC	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	SIA ERNST & YOUNG BALTIC (hereinafter, EY) partially agrees that the draft RTS can be applied across a range of obliged entities. However, in their current form, the proposals do not provide sufficient flexibility for non-financial professional service providers, including audit firms. (i) Insufficient flexibility While the RTS aim to be sector-neutral, a number of provisions appear calibrated to transactional business models typical of financial institutions and do not adequately reflect the nature of audit and advisory services. Audit and assurance engagements are: - non-transactional, and primarily retrospective in nature; - independent, with no involvement in client decision-making or execution of transactions; - conducted within strict ethical and independence frameworks, limiting access to and reliance on certain types of information. In practice: - Requirements to collect detailed identity data (including full passport-level data) even where qualified electronic identification is used are disproportionate. - Verification expectations assume availability of tools and databases (e.g. document authenticity checks) that are not accessible to audit firms.

Name of the respondent	Question	Answer
		- Transaction-focused information (e.g. source/destination of funds) lacks relevance in audit contexts. This results in a “one-size-fits-all” framework that risks imposing disproportionate burden without corresponding risk mitigation. (ii) Proposed drafting improvements EY recommends: - Explicit proportionality clause for non-financial sectors: clarify that requirements shall be applied in light of the nature of services (transactional vs non-transactional). - Recognition of non-transactional services: introduce wording such as “where relevant to the service provided” for transaction-related data points (e.g. Article 18). - Acceptance of qualified electronic identification: clarify that high-assurance eID solutions may replace collection of full identity datasets in low- to medium-risk scenarios. - Limitation to accessible verification sources: specify that obliged entities should rely on sources reasonably available to them, without implying use of proprietary tools or commercial databases.
SIA ERNST & YOUNG BALTIC	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EY does not fully agree that the draft RTS enable an effective application of the risk-based approach. (i) Provisions of concern While the RTS reference proportionality, several provisions introduce de facto prescriptive requirements: - Uniform data collection requirements, irrespective of risk level;

Name of the respondent	Question	Answer
		- Extensive verification expectations, even where risk is low and information is unavailable; - Continuous screening expectations (e.g. PEP monitoring) requiring automated or systematic checks that are not feasible for audit firms. In practice: - Audit firms do not have automated tools to continuously screen UBOs for PEP status changes, and manual periodic screening is not scalable. - Requirements around ongoing monitoring are not aligned with services that are episodic and non-transactional. This risks shifting from a risk-based approach to a formalistic compliance model. (ii) Proposed drafting improvements EY recommends: - Strengthen risk-based language throughout RTS clearly allow adjustment of scope, depth, and frequency of CDD measures based on risk. - Differentiate baseline vs enhanced requirements ensure detailed measures apply only where justified by specific risk indicators. - Allow flexibility in monitoring frequency remove ongoing screening requirements (including PEP checks) for professional services firms. For auditors, while providing historical data assurance service, ensure that CDD measures are proportionate to the nature of the engagement - Limit operational expectations avoid implicit assumptions that all obliged entities have access to automated screening tools.

Name of the respondent	Question	Answer
		These changes would ensure that the RTS enable — rather than constrain — effective risk-based implementation.
SIA ERNST & YOUNG BALTIC	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes — in the context of audit firms, there are multiple situations where required information is routinely unavailable and no workable alternative is provided. Examples - Qualified electronic identification Even where a high-assurance e-signature is used, RTS still require collection of full identity datasets, making the process duplicative. - Verification of identity documents Audit firms do not have access to tools to verify authenticity or detect forged documents. - Beneficial ownership and SMO data o Identification of UBOs in complex multinational structures can be uncertain; o Where no UBO exists, identification of all SMOs may result in dozens of individuals, making full verification unrealistic. - Source of funds / wealth information Requests for tax returns or pay slips for UBOs or SMOs are often not obtainable and not relevant in audit engagements. Proposed alternative solutions - Allow reliance on official registers and client declarations, supplemented by risk-based checks. - Introduce a “reasonable efforts” standard, rather than absolute completeness. - Limit SMO verification to selected individuals based on risk, not all members.

Name of the respondent	Question	Answer
		- Explicitly allow use of existing audit knowledge and engagement understanding. - Permit documented justification where data cannot be obtained, without automatic high-risk classification. These adjustments would ensure operational feasibility while maintaining AML/CFT safeguards.
SIA ERNST & YOUNG BALTIC	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EY considers that additional simplified due diligence measures should be included to reflect the lower ML/TF risk associated with audit and similar professional services. Proposed measures - Reliance on public registers for UBO/SMO verification verification via one reliable official source should be sufficient in low-risk cases. - Simplified treatment of SMOs allow reliance on corporate records (e.g. company register extracts) without requiring full identity documentation. - Recognition of non-transactional professional services explicitly allow Simplified DD where: o no transactions are executed or controlled; o services are analytical or assurance-based. - Reduced monitoring requirements allow less frequent updates and screening where risk remains stable. - Use of internal knowledge and prior CDD within the firm or network especially where safeguards and controls are in place. These measures would align the RTS with the principle that simplified due diligence reduces the extent, but not the existence, of CDD obligations.

Name of the respondent	Question	Answer
SIA ERNST & YOUNG BALTIC	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Misalignment with non-financial sector realities The RTS remain heavily influenced by financial sector business models and do not sufficiently reflect the nature of audit services, which are independent, non-transactional, and limited in access to client information. 2. Operational feasibility concerns Certain requirements — particularly around: - continuous PEP screening, - source of wealth verification, - verification of all SMOs — are not feasible in practice and may not meaningfully enhance AML/CFT outcomes. 3. Over-reliance on unavailable or unclear sources References to “reliable and independent sources” and commercial providers lack clarity and may create uncertainty and inconsistent application. 4. Risk of disproportionate burden without added value In many audit engagements, enhanced data collection would not improve risk detection but would significantly increase administrative workload. 5. Need for clearer definitions Further clarity is required for: - SMO scope and expectations; - “significant change” triggering updates; - acceptable verification sources and methods. 6. Implementation and practical application EY supports the objective of harmonisation, but stresses the importance of: - proportionality;

Name of the respondent	Question	Answer
		- clarity; - alignment with existing professional frameworks.

Name of the respondent	Question	Answer
	implementing the provisions of these draft RTS.: Recurrent costs	
SIA ERNST & YOUNG BALTIC	Please justify your answer to the previous question and provide evidence where possible.	The draft RTS are expected to result in additional costs. One-off implementation costs related to policy updates and staff training are considered manageable. However, recurrent costs are expected to be disruptive, as the draft RTS introduce ongoing verification and monitoring expectations that are not proportionate to the non-transactional and episodic nature of audit engagements. The resulting operational burden would arise primarily from the prescriptive nature of the draft RTS rather than from underlying ML/TF risk considerations.
Signicat AS	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Signicat is one of Europe's leading providers of identity-related services, not least for KYC purposes for financial services and other services subject to AMLR. Comment on Article 7(1) Signicat strongly supports the explicit reference to electronic identification means and relevant trust services meeting the requirements of Regulation (EU) No 910/2014 (eIDAS) as primary means of identification. Relevant trust service in practice means qualified electronic signature (QES). Article 7(1) should be amended to explicitly mention European Digital Identity Wallets as identification means, alongside electronic identification means. Signicat strongly supports allowed use of identification means at assurance level "substantial". This assurance

Name of the respondent	Question	Answer
		level is in Signicat's experience sufficient for AML purposes. Many Member States have national infrastructures at level substantial and use this today for AML purposes. That practice is not causing problems, while a raise to only allow assurance level "high" would cause severe problems to these Member States. Comment on Article 7(2) Signicat supports the reference to remote use of identity documents as the fallback mechanism when eIDAS identification means are not practically available. We however point to the fact that remote use of identity documents in this context can be used in two ways: 1. Directly to prove identity towards the obliged entity. 2. To prove identity for the issuing of a qualified certificate with subsequent use of QES. Case 2 will follow the requirements of the ETSI TS 119 461 standard, see below. If used this way, the effect will be that a "relevant qualified trust service" is used in accordance with Article 7(1). Comment on Article 7(4) in light of Article 7(3) With specific reference to Article 7(4), and the detailed safeguards listed in Article 7(3), we second the proposal of the European Signature Dialog to have Article 7(4) explicitly refer to compliance with established European standards to demonstrate compliance with the Article 7(3) requirements. In practice, this will be the ETSI TS 119 461 standard for identity proofing for trust services, which is referred today by the EBA Guidelines on the

Name of the respondent	Question	Answer
		use of Remote Customer Onboarding Solutions (EBA/GL/2022/15), which already provide an important supervisory benchmark in this area. Regarding the EBA Guidelines, we know that identity providers today are audited against ETSI TS 119 461 to prove that they comply with the requirements of these Guidelines. In particular, ETSI TS 119 461: 1. Provides auditable requirements for remote identity proofing; 2. Aligns with eIDAS assurance principles; 3. Supports both a Baseline Level of Identity Proofing (LoIP) and an Extended LoIP, allowing obliged entities to calibrate controls in line with their risk assessment and risk appetite. Recognising ETSI TS 119 461 would ensure consistency with the EBA Guidelines and provide competent authorities with a clear and objective benchmark for ex-post supervisory assessment. If an explicit reference to the ETSI standard is considered not appropriate for the RTS, a reference to use of recognized European standards for identity verification can implicitly provide clarity. We second the proposed amendment to Article 7(4) from the European Signature Dialog: "Obliged entities using remote solutions shall be able to

Name of the respondent	Question	Answer
		demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article. Such compliance may be demonstrated, inter alia, through adherence to recognised European technical standards that ensure equivalent safeguards and assurance levels, as defined in Regulation (EU) 910/2014 for trust service. They shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624." This amendment would: 1. Preserve technological neutrality and outcome-based regulation; 2. Strengthen legal certainty for obliged entities; 3. Facilitate supervisory convergence across Member States; 4. Ensure continuity with the EBA Guidelines on Remote Customer Onboarding (EBA/GL/2022/15), which already acknowledge use of European standards for remote identity proofing.
Signicat AS	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Agree
Signicat AS	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations	No comment

Signicat AS	How would you rate the proposals set out in the draft RTS overall?	Good
Slovenská komora daňových poradcov	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Navrhované ustanovenia nezohľadňujú dostatočne špecifiká nefinančných profesií, najmä daňových poradcov, ktorých služby majú často projektový, jednorazový alebo nepravidelný charakter. Na rozdiel od finančných inštitúcií daňoví poradcovia spravidla nedisponujú priebežným prístupom k transakčným údajom klienta ani možnosťou kontinuálneho monitorovania transakcií a finančných tokov. Aplikácia rovnakých požiadaviek na všetky typy služieb preto vedie k neprimeranej administratívnej záťaži bez zodpovedajúceho prínosu z hľadiska riadenia AML rizík.
Slovenská komora daňových poradcov	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Za problematické považujeme najmä ustanovenia, ktoré formulujú požiadavky príliš všeobecne alebo naopak príliš striktne, bez dostatočného priestoru na zohľadnenie povahy služby a dostupnosti informácií (najmä v častiach týkajúcich sa pochopenia vlastníckej štruktúry, zdroja financií). Tieto ustanovenia môžu viesť k formalistickému prístupu namiesto skutočne rizikovo orientovaného hodnotenia.
Slovenská komora daňových poradcov	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Áno, z pohľadu daňového poradcu existujú situácie, keď informácie požadované na účely náležitej starostlivosti o klienta nie sú bežne dostupné a návrh RTS neposkytuje dostatočne jasné alternatívne riešenia.

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Pri zahraničných štruktúrach alebo zložitejších vlastníckych reťazcoch daňový poradca často nedisponuje úplnými alebo overiteľnými údajmi a spravidla nemá prístup k bankovým výpisom alebo iným primárnym dôkazom (zahraničným registrom) a je odkázaný na vyhlásenia klienta. Pri jednorazových alebo projektových službách klient nemusí vedieť alebo nechce poskytnúť detailné informácie o budúcich alebo minulých transakciách.
Slovenská komora daňových poradcov	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Áno, považujeme za vhodné doplniť do návrhu RTS ďalšie opatrenia zjednodušenej náležitej starostlivosti najmä s ohľadom na nefinančné povinné osoby, ako sú daňoví poradcovia, pri poskytovaní štandardných nízkorizikových a poradenských služieb.
Slovenská komora daňových poradcov	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Povinnosť „komplexného pochopenia" štruktúry je pri poskytovaní štandardných nízkorizikových a poradenských služieb neprimeraná a pri poradenstve s cudzím prvkom je ťažko uskutočniteľná.
Slovenská komora daňových poradcov	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Society for Trusts and Estate Practitioners (Malta)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific	STEP Malta does not consider that the draft RTS provide sufficient flexibility to be applied across the full range of products and services offered by obliged entities, particularly within the DNFBP sector. The drafting appears to be based on an implicit assumption of uniformity in business models, operational capacity and

Name of the respondent	Question	Answer
	measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	access to client transactional data, which does not reflect the reality of how different obliged entities operate in practice. A number of services provided by DNFBPs are inherently non-transactional in nature. For example, the provision of registered office, company secretarial, trustee or advisory services may not involve the execution of transactions by the obliged entity or access to the client's banking or payment flows. In such cases, obligations relating to transaction monitoring, as reflected in the RTS, are not practically operable. Obliged entities do not have access to underlying transaction data and therefore cannot meaningfully assess transactions against the client's profile. Applying such requirements indiscriminately risks creating obligations that are incapable of being fulfilled and which do not enhance the effectiveness of AML/CFT controls. More broadly, DNFBPs operate across highly diverse service models, involving varying degrees of control over client assets, differing levels of engagement with client activity, and materially different ML/TF risk profiles. Even within a single category (such as legal or accounting services), the range of activities varies significantly. A uniform horizontal framework, without sufficient calibration, risks imposing disproportionate compliance obligations, particularly on smaller or medium-sized firms, without a corresponding benefit in risk mitigation. STEP Malta therefore considers that the RTS should more clearly embed proportionality by explicitly linking

Name of the respondent	Question	Answer
		the nature, extent and intensity of CDD measures to the specific service being provided, the delivery channel, and the level of ML/TF risk identified. This could be achieved by incorporating clearer distinctions between transactional and non-transactional services, and by including practical examples illustrating how obligations may be adapted in DNFBP contexts. In addition, the RTS should explicitly distinguish between regulated and unregulated trustees. Where a trustee is duly licensed and subject to AML/CFT supervision within the Union or in an equivalent jurisdiction, its role, authority and verification should be capable of being confirmed through regulatory registers and formal declarations. Requiring additional third-party certification in such cases creates duplication of controls and imposes unnecessary administrative burdens without a corresponding gain in reliability or independence of information.
Society for Trusts and Estate Practitioners (Malta)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While STEP Malta supports the objective of promoting consistency and a harmonised framework across the Union, the draft RTS, in their current form, do not fully allow for the effective application of a genuine risk-based approach in line with the principles of Regulation (EU) 2024/1624. Although references are made to proportionality, the substantive provisions remain highly prescriptive and limit the ability of obliged entities to calibrate their approach based on risk. This is particularly evident in provisions relating to trusts and similar legal arrangements. The RTS do not adequately distinguish between regulated and unregulated trustees and appear to require repeated

Name of the respondent	Question	Answer
		identification and verification measures for trustees, even where such trustees are already subject to AML/CFT supervision, licensing requirements, and ongoing regulatory oversight. This results in duplication of controls without a corresponding reduction in ML/TF risk and diverts compliance resources away from higher-risk elements of the structure, such as source of wealth, settlors, or complex control arrangements. STEP Malta proposes that, where a trustee is regulated and licensed within the Union or an equivalent jurisdiction, obliged entities should be permitted to rely on publicly available regulatory information and on formal declarations issued by the trustee confirming its role and the essential elements of the trust structure. Such declarations should be recognised as reliable and independent sources of information without requiring additional third-party certification. A broader concern arises from the use of indeterminate formulations such as “reasonable measures”, “where necessary”, and “risk-sensitive basis”, which are not accompanied by clear thresholds or guidance as to when obligations are mandatory or discretionary. This may lead to divergent interpretations across Member States and inconsistent supervisory expectations. Specific provisions raise proportionality concerns. For example, Article 18 appears to encourage the collection of information explaining the rationale for establishing a business relationship, even where this is self-evident from the nature of the service or dictated by legal requirements. Article 30 may be interpreted as requiring broad screening of digital wallet addresses

Name of the respondent	Question	Answer
		irrespective of relevance to the service, and Article 21 may create duplication by requiring consultation of additional sources beyond those already used in verification. Article 4 requires granular place-of-birth data which may not add meaningful value for risk assessment. STEP Malta considers that further clarification is required to distinguish between minimum mandatory requirements and those capable of adjustment based on risk. A “comply or explain” framework could be considered, whereby obliged entities may depart from prescriptive requirements where justified by documented risk assessment, subject to appropriate governance and supervisory review.
Society for Trusts and Estate Practitioners (Malta)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	STEP Malta notes that, in a number of DNFBP business models, the information envisaged under the draft RTS for customer due diligence purposes is not routinely available to the obliged entity, and the current framework does not sufficiently provide for alternative approaches in such scenarios. This is particularly relevant in the context of services such as registered office, corporate administration and certain trustee or advisory services, where the obliged entity does not carry out transactions on behalf of the client and does not have access to the client’s financial flows. In such cases, requirements relating to source of funds verification or ongoing transaction monitoring may not be practically achievable, as the necessary information is simply not within the knowledge or control of the service provider. Absent explicit flexibility, obliged entities risk being placed in a position of

Name of the respondent	Question	Answer
		technical non-compliance despite having taken all reasonable steps within the confines of their role. Similar challenges arise in the context of complex group structures. Where enhanced due diligence is triggered by external risk factors (for example sanctions exposure or dual-use concerns), it may be necessary to obtain information relating to entities within the wider group which are not party to the contractual relationship. In practice, customers may not have the legal authority or practical ability to obtain certified identification and verification documentation from such entities, particularly across jurisdictions. In such cases, the required information may be objectively unobtainable despite proportionate efforts. STEP Malta therefore recommends that the RTS explicitly recognise circumstances in which relevant information cannot reasonably be obtained and provide for proportionate alternative measures or justified exceptions, where the obliged entity can demonstrate that it has taken all reasonable and appropriate steps. More broadly, STEP Malta notes the significant duplication of CDD processes across multiple obliged entities, particularly in cross-border and professional services contexts. The same information is often collected, verified and refreshed multiple times by different parties, leading to inefficiencies without enhancing AML/CFT outcomes. In this regard, consideration could be given at Union level to the development of a centralised or federated CDD depositary, subject to appropriate safeguards, enabling obliged entities to access and rely on

Name of the respondent	Question	Answer
		previously verified information. Such an approach could improve efficiency, data consistency and supervisory transparency, while preserving the responsibility of each obliged entity to assess and manage ML/TF risk.
Society for Trusts and Estate Practitioners (Malta)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	STEP Malta considers that the draft RTS could further enhance proportionality and practical effectiveness by explicitly recognising additional scenarios in which simplified due diligence (SDD) measures are appropriate, reflecting situations which consistently present lower ML/TF risk when subject to appropriate safeguards and documented risk assessment. In current supervisory practice, including under national frameworks, a number of customer types and service contexts are considered to present lower residual risk. Explicitly reflecting such scenarios within the RTS would improve legal certainty, promote supervisory convergence, and better align the framework with the risk-based approach underpinning Regulation (EU) 2024/1624. Examples include: Regulated or supervised entities: where the customer is itself an obliged entity subject to AML/CFT supervision within the Union or an equivalent jurisdiction, reliance on publicly available regulatory information and reduced frequency of updates should be permitted. Public authorities and public bodies: where ownership, control and funding are transparent and subject to public accountability. Listed companies: where disclosure obligations ensure transparency of ownership and control structures.

Name of the respondent	Question	Answer
		Regulated collective investment schemes and nominee structures: where layered regulatory oversight and AML controls already apply. Low-risk professional service relationships: involving simple ownership structures, EU-based customers, no connection to high-risk jurisdictions, and limited transactional exposure. In such cases, simplified measures could include reduced depth of verification, reliance on public registers, and lower frequency of CDD updates, while maintaining ongoing monitoring requirements. Explicitly incorporating such scenarios in the RTS would support a more proportionate and risk-sensitive framework, reduce unnecessary compliance burdens (particularly for DNFBPs), and ensure that resources are focused on higher-risk areas.
Society for Trusts and Estate Practitioners (Malta)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	STEP Malta welcomes the objective of harmonisation but notes that certain aspects of the RTS may create legal uncertainty or operational challenges, particularly due to misalignment with established legal concepts and insufficient clarity in drafting. A key concern relates to terminology used in relation to trusts. Concepts such as “objects of powers” and “default takers” do not align with recognised trust law terminology and may lead to inconsistent interpretation across jurisdictions. The drafting appears to conflate distinct legal concepts, including the distinction between powers and discretion, and may incorrectly suggest that benefits arise from trustee inaction, which is inconsistent with fiduciary principles.

Name of the respondent	Question	Answer
		Greater clarity is required to ensure consistent application. In particular, the RTS should clarify what constitutes “sufficient information” for verification purposes. Given that trustee deliberations are confidential as a matter of principle, a trustee declaration confirming beneficiaries and relevant trust details should be explicitly recognised as sufficient, particularly where the trustee is regulated. More generally, terms such as “relevant documents” should be defined more precisely, and the drafting should accurately reflect that trusts are legal arrangements rather than legal entities. Where regulated trustees act purely in a professional capacity, there should be no requirement to identify their own beneficial owners. Certain recitals also require clarification. Recital 13 should clarify whether the information referred to in Article 18 forms part of baseline CDD requirements or is only required where further understanding is necessary. References to “low risk” should be aligned with the concept of “not high risk”, and terminology such as “audit acceptance process” should be clarified. Finally, STEP Malta considers that the horizontal nature of the RTS may not sufficiently reflect the operational realities of non-financial obliged entities. Consideration could be given to a more tailored or sector-specific approach, ensuring that uniform standards are preserved while allowing for proportionate implementation across different business models.

Name of the respondent	Question	Answer
Society for Trusts and Estate Practitioners (Malta)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Society for Trusts and Estate Practitioners (Malta)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	14
Society for Trusts and Estate Practitioners (Malta)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	While we acknowledge the intention to align the RTS with terminology already used in the AMLR, we are concerned that certain concepts introduced or redefined may create legal uncertainty and inconsistent application. This is particularly the case where terminology departs from established trust law meaning. Trust law terminology – misalignment The terms “objects of powers” and “default takers” do not reflect generally accepted trust law concepts and may therefore generate ambiguity. Although interpretative RTS guidance cannot amend the AMLR, clarification is needed to ensure consistent application across Member States. A fundamental distinction exists in trust law between discretionary beneficiaries and objects of powers. A trustee exercising discretion is under a duty to consider its exercise, whereas a power may or may not be exercised at the trustee’s choice. The Regulation appears to blur this distinction, which risks interpretative confusion. The definition of “objects of powers” appears to correspond in substance to discretionary beneficiaries. However, the definition is imprecise: in a discretionary trust, all members of the class are beneficiaries, and the

Name of the respondent	Question	Answer
		trustee does not “select beneficiaries” but exercises discretion in their favour. This is a key legal principle. Similarly, the concept of “default takers” is not appropriate in this context. In discretionary trusts, benefits arise from trustee decision-making, not from trustee inaction. The notion of benefit arising from inactivity is inconsistent with fiduciary principles and may incorrectly suggest breach of duty. In trust law, “default takers” typically refer to express fallback provisions, not discretionary structures. Conflation of legal concepts The reference to “power of discretion” incorrectly combines two distinct concepts. Powers may or may not be exercised, whereas discretion requires consideration of exercise. The wording in Article 15(2)(b) is therefore misleading and should be revised. Furthermore, the phrase in Article 154(2)(b), “appointed one or more beneficiaries from amongst the objects of power”, is incorrect. Furthermore, in trust law, “appointment” is not the correct term to refer to the distribution of a benefit to a beneficiary. The term ‘appointment’ refers to the exercise of a power of appointment over property, not to the designation of beneficiaries themselves. Where individuals are added as beneficiaries (from amongst objects of a power), it is typically via a power of addition. If a class of discretionary beneficiaries already exists, no appointment is necessary— - the trustee simply exercises discretion to make a distribution. Need for clarity in drafting Greater clarity is required on what constitutes

Name of the respondent	Question	Answer
		“sufficient information” regarding trustee decisions. Given that trustee deliberations are generally confidential in trust law (for reasons explained above), a trustee declaration confirming beneficiaries and/or exercise of discretion should be accepted as sufficient, especially where the trustee is regulated. The term “relevant documents” in Article 14(1)(b) is also too vague and should be specified more precisely. Foundations and legal arrangements The RTS should explicitly refer to foundations where relevant, to avoid uncertainty. In addition, the phrase “trusts and similar legal entities or arrangements” is misleading, as trusts are not legal entities. A more accurate formulation would distinguish trusts as legal arrangements. Customer definition – trusts and foundations For trusts, trustees should be treated as the customer for third-party obliged entities. Where multiple trustees exist, each should be assessed individually. Where trustees are regulated corporate entities, there should be no requirement to identify shareholders or UBOs, provided licensing and supervision are confirmed. The focus should remain on settlors, beneficiaries, and protectors. For foundations, the foundation itself should be treated as the customer. Risk-based approach – corporate trustees Where trustees are licensed in reputable jurisdictions, obliged entities should be allowed to adopt a risk-based approach to beneficial ownership verification, limited to confirming regulatory status where no higher risks are

Name of the respondent	Question	Answer
		present. Beneficial ownership clarification Beneficial ownership in AML/CFT law extends beyond beneficiaries to include settlors, trustees, protectors, and controllers. Accordingly, beneficiaries cannot automatically be equated with beneficial owners. The differing nature of beneficiary interests further reinforces the need for clarity, as some beneficiaries may never benefit.
Society for Trusts and Estate Practitioners (Malta)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	22
Society for Trusts and Estate Practitioners (Malta)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 22 of the Regulation should clarify what constitutes “sufficient information” for verification purposes. Trustee deliberations are confidential in trust law (as otherwise trustee decisions could be second guessed by beneficiaries making it impossible in practice for trustees to administer trusts) – and this is standard trust law and practice, and a trustee declaration should be explicitly recognised as sufficient evidence, particularly for regulated trustees. Finally, linking beneficiary verification to whether beneficiaries qualify as beneficial owners is conceptually incorrect and risks misapplication, given that the two concepts are not interchangeable.
Society for Trusts and Estate Practitioners (Malta)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
Society for Trusts and Estate Practitioners (Malta)	Please specify which recital you refer to, and share your comments below.	(a) Recital 13 Recital 13 provides that obliged entities should obtain the specified information “in situations where they need further information in order to be satisfied that they understand the purpose and intended nature of the business relationship or occasional transaction.” The current wording suggests that the information contemplated by the RTS is only required where additional clarification is needed, rather than as a standard CDD requirement. In our view, this may not reflect the intended interpretation of Article 18. The information outlined in Article 18 appears intended to form part of the baseline CDD requirements applicable in all cases, rather than being conditional upon the obliged entity requiring further clarification. If this interpretation is correct, the recital should be revised to more accurately reflect the mandatory nature of the information requirements. Conversely, if the intention is that Article 18 only applies where additional understanding is necessary, then this limitation should be expressly reflected in the wording of Article 18 itself in order to avoid uncertainty. (b) Recital 14 In our view references to “low or standard risk” should be replaced with the formulation “not high risk”. (a) Recital 15 This recital addresses PEP screening obligations applicable to customers, beneficial owners and persons on whose behalf or for whose benefit a transaction is undertaken. In line with our comments regarding Recital 14, we believe clarification should be included to

Name of the respondent	Question	Answer
		confirm that these screening obligations would not extend to the scenarios contemplated under Recital 14 where the relationship has been assessed as presenting a “not high” risk level and the conditions of Article 17 are fulfilled. (b) Recital 21 The recital refers to an “audit acceptance process”, although the meaning and intended scope of this term are unclear in the context of the RTS. We would therefore suggest revisiting this terminology to improve clarity and avoid interpretative uncertainty. Finally, the penultimate sentence refers to “beneficial ownership” where, in our view, the intended reference should instead be to the “business relationship”.
Society for Trusts and Estate Practitioners (Malta)	Do you have any comments on the Annex in the draft RTS?	Yes
Society for Trusts and Estate Practitioners (Malta)	Please share your comments below.	CSP Trustee 5. Accompanying documents, page 35, Policy issue 1: Applicability and proportionality to the financial and non-financial sectors From the perspective of the non financial sector, we consider that a separate, standalone RTS for non financial obliged entities would better reflect operational realities and enhance proportionality without undermining AML/CFT effectiveness. While core CDD principles under Regulation (EU) 2024/1624 are common across sectors, their practical application differs significantly. Financial institutions

Name of the respondent	Question	Answer
		generally operate transaction based models supported by automated systems and mature compliance infrastructures. By contrast, non financial obliged entities—such as company service providers, legal professionals, tax advisors and real estate agents—typically operate episodic, advisory or project based business models, rely more heavily on professional judgement, and often lack transactional oversight or leverage over third parties connected to the customer. In this context, horizontally drafted RTS—although formally risk based—may still result in interpretative uncertainty, increased compliance burden and supervisory divergence for non financial obliged entities, particularly for newly in scope sectors or smaller firms. Dedicated RTS would preserve uniform AML/CFT standards while allowing CDD requirements to be operationalised in a way that is clearer, more proportionate, and better aligned with the structural constraints of non financial business models, reducing uncertainty and the need for extensive interpretative guidance. We therefore invite AMLA to reconsider whether, either within this RTS or through a future regulatory initiative, a separate regulatory instrument for non financial obliged entities would better balance harmonisation with genuine operational proportionality, while maintaining a high and consistent level of AML/CFT protection across the Union.

Name of the respondent	Question	Answer
Society for Trusts and Estate Practitioners (Malta)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Society for Trusts and Estate Practitioners (Malta)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Society for Trusts and Estate Practitioners (Malta)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624	Disruptive impact

Spelbranschens Riksorganisation	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Member 1: The RTS does not provide sufficient flexibility for the diversity of gambling products and services. Key issues include: One-off, low-value transactions are treated the same as ongoing financial relationships; Remote vs. in-person services require different verification methods; Product risk profiles vary significantly (e.g. online betting vs. land-based casinos vs. lotteries); Some provisions (e.g. Article 16 on representation) are not

Name of the respondent	Question	Answer
		applicable to gambling contexts. What we propose: ✓ Threshold-based CDD triggers for low-value transactions. ✓ Explicit allowance for different verification methods based on service channel. ✓ Sector-specific guidance or recitals acknowledging gambling sector characteristics. ✓ Proportionality in applying automated tools and ongoing monitoring. Member 2: The RTS should reflect proportionality under Article 1 by explicitly allowing obliged entities to take into account existing controls, including prior customer identification, full transaction traceability and ongoing monitoring capabilities. Member 3: Furthermore, the draft RTS would benefit from additional flexibility as regards the verification of supplementary identity attributes, in particular nationality and place of birth. Rationale While all relevant identity attributes should be collected, the draft RTS should clarify more expressly that separate verification of those attributes is not required automatically in all cases where the customer's core identity has already been verified in accordance

Name of the respondent	Question	Answer
		with Article 22(6) of Regulation (EU) 2024/1624. Instead, the need for separate verification should be determined on a risk-sensitive basis. AMLA should clarify in the RTS that, while all identity attributes must be collected, separate verification of nationality and place of birth should not be required automatically solely because those attributes are not evidenced on the primary identity document, where the customer's primary identity attributes have already been verified in accordance with Article 22(6) of Regulation (EU) 2024/1624. Instead, the need for separate verification of those supplementary attributes should be determined on a risk-sensitive basis. This would better reflect the AMLR and the draft RTS, which require customer due diligence measures to be proportionate in scope, intensity and frequency to the ML/TF risk associated with the customer, the business relationship or the occasional transaction. The draft RTS already recognizes that not all government-issued identity documents contain information on nationality or place of birth and that such information may therefore need to be obtained from other sources. It also states that, where a person holds multiple nationalities and declares them in good faith, verifying one nationality is sufficient. This supports the principle that not every identity attribute must always be subject to the same degree of verification, provided that the customer's core identity has been reliably established.

Name of the respondent	Question	Answer
		For many obliged entities, particularly in the non-financial sector, a requirement to separately verify nationality and place of birth in all cases may be disproportionate and operationally burdensome, without generating a commensurate AML/CFT benefit. The legal environment in which the obliged entity operates should also be considered. For example, Swedish gambling operators may only provide gambling services to customers with permanent residency in Sweden. In some Member States, including Sweden, such information is often not available through ordinary national identity documentation and may require the customer to provide a passport or an official population register extract. Where the obliged entity has already verified the customer's identity and has no reason to doubt the plausibility or consistency of nationality or place of birth as declared by the customer, automatic separate verification should not be required. AMLA should consider adding a short provision in Section 2 to clarify how missing identity attributes should be treated where the identity of a natural person has already been verified in accordance with Article 22(6) of Regulation (EU) 2024/1624. Please see section 3 for drafting proposal on new article.
Spelbranschens Riksorganisation	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify	Member 1: While the RTS references the risk-based approach, several provisions are overly prescriptive and limit

Name of the respondent	Question	Answer
	the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	flexibility. For example: • Art. 5 mandates collection of all nationalities • Art. 7 requires high-assurance eID for remote onboarding • Art. 19(3) implies automated PEP screening is mandatory • Art. 18 & 24 require detailed purpose-of-relationship information even when purpose is obvious • Art 30, as irrelevant screening customers at onboarding/prior a business relationship (a 2K EUR deposit has been made) as commented and indicated in the other RTS draft doc We recommend revising these provisions to: • Allow simplified measures for low-risk scenarios • Permit alternative verification methods where eID is unavailable • Enable manual PEP screening for small operators • Accept generalised purpose statements for gambling services Member 2: In addition, the risk-based approach and its effectiveness depends on consistent application of 'where necessary', ensuring that flexibility is preserved and not replaced by implicit expectations of routine data collection. Member 3:

Name of the respondent	Question	Answer
		Furthermore, the draft RTS supports a risk-based approach in principle, but overall, the RTS does not yet provide sufficient operational clarity to ensure that this approach can function effectively in practice. Rationale For well-defined and non-complex regulated products or services, the purpose and intended nature of the relationship can often be understood primarily from the characteristics of the product or service, the distribution channel and the legal or regulatory framework within which it is offered. This is particularly the case within the gambling and betting sector where it is seldom likely that the customer has a clear idea when it comes to the purpose and nature of the relationship when setting up a gambling or betting account. It is instead the actual behavior and pattern which provides ground for ongoing due diligence and business relationship monitoring against the entity's business risk assessment. In such cases, requiring additional information from each customer as a matter of course would often introduce operational friction without materially improving AML/CFT outcomes. A more explicit rule allowing obliged entities to determine, and where appropriate presume, those elements in such cases would therefore strengthen the risk-based approach rather than dilute it. Please see section 3 for drafting proposal (article 18 amended).
Spelbranschens Riksorganisation	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations	Member 1:

Name of the respondent	Question	Answer
	where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are situations where alternative solutions is needed. Examples include: • Online customers in jurisdictions without eID infrastructure • Low-value transactions where source of funds information is not feasible to collect Member 2: The key issue is not availability of information but its relevance. For example, requiring source-of-funds information for low-value gambling transactions is unlikely to provide meaningful AML value and may dilute focus from higher-risk scenarios. CDD requirements should therefore be strictly risk-driven and not applied routinely where risk is demonstrably low. We propose: • Allowing delayed or simplified verification for low-risk, low-value transactions • Accepting alternative verification methods (e.g. bank account ownership, credit bureau checks) • Permitting reliance on regulated payment providers' KYC for source of funds Member 3: Furthermore, see comments to question 2. The issue lies in the verification of the information collected.

Name of the respondent	Question	Answer
Spelbranschens Riksorganisation	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Member 3: The main difficulty in identifying additional simplified due diligence measures is that Section 5 is currently too weakly developed and insufficiently detailed to make such proposals with a sufficient degree of precision. Rationale The consultation paper explains that AMLA considered whether additional simplified due diligence measures should be specified beyond those already listed in Article 33 AMLR, but concluded that, at this stage, it had not identified opportunities to do so without creating exemptions from the AMLR. At the same time, the consultation paper states that Article 33 AMLR is already sufficiently flexible to enable a range of simplified measures in low-risk scenarios. That combination leaves Section 5 relatively abstract and makes it difficult to determine which further measures would most usefully be added to the RTS. This difficulty is enhanced by the fact that, more generally, there is still limited concrete guidance at EU or national level on how simplified due diligence is expected to operate in practice. In the absence of more developed examples or clearer operational parameters in Section 5 itself, it is not easy to identify with confidence which additional measures are missing and how they should be framed. Where the identity of a natural person has already been

Name of the respondent	Question	Answer
		verified in accordance with Article 22(6) of Regulation (EU) 2024/1624, separate verification of supplementary identity attributes, including nationality and place of birth, should only be required where this is relevant and proportionate in light of the customer's risk profile, or necessary to ensure compliance with obligations relating to politically exposed persons, targeted financial sanctions, or other applicable legal or supervisory requirements. This would be consistent with the consultation paper's repeated emphasis on proportionality, flexibility and the need for the RTS to work across both financial and non-financial obliged entities. It would also respond to the same practical concern identified elsewhere in the draft, including in relation to Article 24, namely that lower-risk measures need to be operationally workable for well-defined and regulated service models. In particular, it would be helpful to state that, in low-risk situations involving standardized, well defined and regulated products or services, simplified due diligence may take account of the characteristics of the relevant sector, the product or service, the onboarding framework, the distribution model and the applicable regulatory environment, provided that sufficient monitoring remains in place. This would not create an exemption from customer due diligence but would give more practical content to the concept of reduced scrutiny in genuinely lower-risk, regulated settings. Please see section 3 for drafting proposal on new article in section 5.

Name of the respondent	Question	Answer
		Member 2: In addition, electronic identification schemes aligned with eIDAS should be explicitly recognised. National solutions such as Swedish BankID should be accepted where they meet 'substantial' or 'high' assurance levels, supporting both harmonisation and operational efficiency.
Spelbranschens Riksorganisation	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Member 3: No objection is raised to the overall objective of the draft RTS. However, the draft would benefit from a clearer horizontal statement of principle to ensure that its requirements are applied in a proportionate and sector-sensitive manner across all categories of obliged entities. Rationale The consultation paper explains that the draft RTS are intended to be proportionate, risk-based and workable across both the financial and the non-financial sectors. At the same time, the current draft does not sufficiently reflect, at the level of general principles, that obliged entities operate under materially different business models, customer interfaces, service structures and regulatory environments. This creates a risk that provisions which may be workable in one sector are interpreted too rigidly in another.

Name of the respondent	Question	Answer
		A clearer overarching provision would therefore be helpful to ensure that the requirements in the RTS are interpreted in a way that reflects the nature of the activity, and the product and its complexity, in the way in which the customer relationship is established and managed and the role of the obliged entity within the AML/CFT framework. This would be consistent with the broader structure of Regulation (EU) 2024/1624, which is based on proportionality and on a risk-based approach to customer due diligence. This point is particularly relevant for non-financial obliged entities. Credit institutions and other financial institutions occupy a distinct position because of their central role in the financial system and the nature of the services they provide. Non-financial obliged entities generally perform a more indirect gatekeeper function and often operate in regulated environments that differ significantly from those of financial institutions. Equivalent AML/CFT outcomes may therefore need to be achieved through means adapted to the nature of the service and the applicable legal and regulatory framework. This broader concern is also illustrated by specific provisions such as Article 24, which in its current form appears insufficiently adapted to business models involving well-defined and standardized products or services. Although that issue is addressed more specifically in response to Question 2, it also demonstrates the need for a clearer statement of

Name of the respondent	Question	Answer
		principle at the level of the RTS as a whole. Please see section 3 for drafting proposal (Article 1, amendment) Member 2: In addition, existing information held within the same entity or group should be reused to avoid duplication of data collection and unnecessary operational burden.
Spelbranschens Riksorganisation	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Member 3: Section 1: General principles Article 1 (amended) – Proportionality and risk-based approach “When applying the requirements set out in this Regulation, obliged entities shall ensure that the measures taken are proportionate to the nature of the activity, the way in which the customer relationship is established and managed, and the role of the obliged entity within the AML/CFT framework. In the case of non-financial obliged entities, equivalent outcomes may be achieved through means adapted to the characteristics of the service and the applicable legal and regulatory framework.”

Name of the respondent	Question	Answer
		Such an addition would improve legal certainty, reduce the risk of inconsistent supervisory expectations and better reflect the stated objective that the RTS should function across both financial and non-financial sectors.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	comments refer to art 4, 6 & 20 Member 1: Place of birth: Same applies as commented re article 5, this type of information is not currently available in the e-verification solutions today. Art 20, SDD, has also a requirement for obtaining place of birth, should be especially irrelevant in these cases. These are often unavailable or irrelevant for risk assessment. Viable alternative could be to make collection of places of birth risk-based or optional. Member 4: In a context where customer identification is conducted almost entirely through digital means, legal constraints prevent the digital collection of certain data points, such as nationality and place of birth. As a result, the gambling sector is placed in a position where it would be required to collect and verify this information through manual processes, including requesting copies

Name of the respondent	Question	Answer
		of identity documents from customers. This would represent a significant operational and customer-facing burden for the sector, undermining the objective of efficient and secure digital customer due diligence. If such data is to be collected and verified digitally, it is essential that all obliged entities are granted equal and sufficient legal access to the relevant data sources. Without harmonised access rights, digital identification processes cannot function effectively or consistently across sectors.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Member 1: Article 5 – Collection of all nationalities: We believe it is unnecessary for low-risk customers, burdensome and eventually even of limited AML value. In some markets this is not relevant in any risk scenario and it could be seen as discriminatory. Also to note is that with the current e-id verification in most European countries users are not logging these type of details. The question is, will there be any changes to the local e verification solutions so that this type of required information can be collected without manual reach out to customer? If not, then manual collection of this information," all nationalities" might be misleading and serve no purpose from an AML perspective. In terms of possible alternatives, it could be to require only primary nationality unless risk factors justify collecting more.

Name of the respondent	Question	Answer
		The RTS does not appear to fully accommodate widely used and reliable national identification solutions that do not rely on traditional identity documents.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	6
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	comments refer to art 6 & 7 Member 1: Identity verification: The issue for the sector here is that high-assurance eID and document standards are impractical for many operators. What could be proposed is to allow risk-based alternatives such as credit bureau checks or bank verification.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	9
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Member 1 Article 9 c: Some requirements appear difficult to operationalize in practice. For example, Article 9(c) requires information that may not be accessible to obliged entities in non-financial sectors, as such data is typically held by banks or payment service providers and is not shared.) We were wondering if Article 9(c) is even applicable to non financial obliged entities?

Name of the respondent	Question	Answer
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	18
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	comments refer to art 18 & 24 Member 1: Articles 18(e) & 24 – Purpose of relationship: The article do not appear fully adapted to all sectors. In the online gambling sector, the purpose of the relationship is inherently clear—namely participation in games for entertainment. Requiring additional granular information in all cases does not necessarily enhance risk understanding and may lead to the collection of information with limited relevance for ML/TF risk assessment. We would like to highlight that it has been proven that supervisory authorities wish operators to analyse information at onboarding to fully understand the purpose and nature of the business relationship. Moreover, requirement to ask more questions will end the registration process and turn the player to the black market where no questions are asked. If more questions are to be analysed at customer onboarding, they should be specified. The issue here is being overly detailed for gambling and the purpose is self-evident. We have seen in many cases that AML supervisory authorities do not think that it is. A certain level of expected gambling pattern is expected to obtain for operators to be able to assess the risk with the new registered customer. We would suggest that it

Name of the respondent	Question	Answer
		is clarified what questions are expected to be asked for our specific sector. Shall info on what type of games are to be played, for what amounts, why...? Too many detailed questions could send the customer away from completing registration and might not be taken seriously. Questions on deposit limits are not set with much thought or financial consideration. We could suggest to instead allow generalised purpose (e.g. "entertainment") unless risk factors require more detail. Member 3: An amendment would make Article 18 more operational, better align it with the proportionality principle and with Articles 25 and 33 of Regulation (EU) 2024/1624, and improve the effective application of a genuinely risk-based approach. Article 18 (amended): "For business relationships involving well-defined and regulated products or services, obliged entities may determine, and where appropriate presume, the purpose and intended nature of the relationship primarily by reference to the characteristics of the product or service requested, the distribution channel and the contractual or regulatory framework, unless specific risk indicators or behavioral deviations require the collection of additional information."

Name of the respondent	Question	Answer
		If AMLA does not consider it appropriate that the same practical approach applies across all obliged entities, the draft RTS should at least provide for differentiated applications to DNFBPs. This would reflect the proportionality principle and the risk-based nature of the AML/CFT framework. DNFBPs generally do not occupy the same position in the financial system as credit institutions and other financial institutions, and their customer due diligence processes are often shaped by materially different business models, distribution channels and legal environments. The RTS should therefore clarify that, when applied to DNFBPs, the requirements must be interpreted and operationalized in a manner that is proportionate to the nature of the activity and the sector-specific risk profile.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	19
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Member 1: 19 (3) Automated PEP screening: Imposes tech burden on small operators. A possible alternative could be to permit manual or hybrid screening based on risk and scale.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	2

Name of the respondent	Question	Answer
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	This comment refers to Section 2 and a proposed new article. Member 3: Section 2: Information to be collected for identification and verification purposes Article x (new): Minimum requirements for customer verification “Where the identity of a natural person has already been verified in accordance with Article 22(6) of Regulation (EU) 2024/1624, separate verification of supplementary identity attributes, including nationality and place of birth, should only be required where this is relevant and proportionate in light of the customer’s risk profile, or necessary to ensure compliance with obligations relating to politically exposed persons, targeted financial sanctions, or other applicable legal or supervisory requirements.” If AMLA does not consider it appropriate that the same practical approach applies across all obliged entities, the draft RTS should at least provide for differentiated applications to DNFBPs. This would reflect the proportionality principle and the risk-based nature of the AML/CFT framework. DNFBPs generally do not occupy the same position in the financial system as credit institutions and other financial institutions, and their customer due diligence processes

Name of the respondent	Question	Answer
		are often shaped by materially different business models, distribution channels and legal environments. The RTS should therefore clarify that, when applied to DNFBPs, the requirements must be interpreted and operationalized in a manner that is proportionate to the nature of the activity and the nature of sector.
Spelbranschens Riksorganisation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	5
Spelbranschens Riksorganisation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	This comment refers to Section 5 and a proposed new article. Member 3: Section 5: Simplified Due Diligence measures Article x (new): Clarifying recital or interpretative provision regarding the application of Section 5 “When applying simplified due diligence measures in low-risk situations, obliged entities may consider the characteristics of the relevant sector, including whether the product or service is standardized or well defined and subject to a detailed legal or supervisory framework. In such cases, and subject to the obliged entity’s risk assessment, the purpose and intended nature of the relationship, and the extent of any additional information required, may, where appropriate, be determined by reference to the product or service, the distribution channel, the onboarding framework and the applicable regulatory environment,

Name of the respondent	Question	Answer
		provided that sufficient monitoring remains in place to detect unusual or suspicious activity." If AMLA does not consider it appropriate to introduce additional sector-specific simplified due diligence measures at this stage, it would still be helpful to state expressly that Section 5 is intended to allow sector-sensitive application, including for regulated non-financial sectors, where equivalent AML/CFT outcomes can be achieved through proportionate measures adapted to the service model and legal environment. That would improve legal certainty and make it easier for stakeholders to propose further refinements to simplified due diligence in a more targeted and evidence-based manner.
Spelbranschens Riksorganisation	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Spelbranschens Riksorganisation	Do you have any comments on the Annex in the draft RTS?	No
Spelbranschens Riksorganisation	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Spelbranschens Riksorganisation	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of	Disruptive impact

Športna loterija in igre na srečo, d. d., Dunajska cesta 22, 1000 Ljubljana	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Športna loterija prireja igre na srečo na podlagi koncesije Vlade Republike Slovenije in deluje v strogo reguliranem okvirju. Spletni igralni sistem, na katerem se prirejajo igre na srečo, vključno s športnimi stavami, je on-line povezan v informacijski sistem nadzornega organa, kar nadzornemu organu omogoča, da se nadzor izvaja 24/7/365. Igre prireja samo na teritoriju Republike Slovenije. Po slovenski zakonodaje se igre, ki jih prireja, štejejo za klasične igre na srečo, ki jih v Sloveniji lahko prirejata samo dve loteriji. Ker se za posamezno igro lahko dodeli samo ena koncesija, je Športna loterija v Sloveniji edini legalni prireditelj športnih stav. Športna loterija je bila s strani MONEYVAL v okviru ocenjevanja spoštovanja AML zakonodajev, ki so ga ocenjevalci izvajali v Sloveniji, že večkrat neposredno prevarjena in vedno je bilo ugotovljeno, da so ukrepi in postopki pri prirejanju iger, ki jih prireja Športna loterija, ustrezni, primerni in zadostni. Na podlagi ocene tveganja, ki jo je izvedel pristojni

Name of the respondent	Question	Answer
		nacionalni organ (Finančna uprava Republike Slovenije) v sodelovanju z Uradom Republike Slovenije za preprečevanje pranja denarja, je bila Športna loterija skladno z veljavno AML zakonodajo deloma izvzeta iz ukrepov, ki se nanašajo na naloge in obveznosti iz drugega odstavka 17. člena ZPPDFT-2. Poleg navedenega je lastna Ocena tveganja zavezanca in ocena tveganja stranke za pranje denarja in financiranja terorizma, ki se posodablja pred vsako uvedbo novega produkta, generalno pa na vsaki dve leti, pokazala, da je tveganje za pranje denarja pri prirejanju športnih stav in spletnih iger, ki jih prireja Športna loterija, nizko tako na nivoju iger na srečo kot tudi na nivoju strank - igralcev, za financiranje terorizma pa je popolnoma nerelevantno. Ker so se dosedanji ukrepi izkazali za primerne in zadostne in ker se nacionalna zakonodaja na področju prirejanja iger na srečo ni v ničemer spremenila, predlagamo, da je prirejanje športnih stav in spletnih klasičnih iger na srečo v Sloveniji še naprej izvzeto v obsegu kot do sedaj. Kakršna koli širitev obsega skrbnega pregleda strank ob sklepanju poslovnega razmerja bi lahko pomenila odliv igralcev od legalnega prireditelja k ilegalnim prireditelјem iger na srečo.
Športna loterija in igre na srečo, d. d., Dunajska cesta 22, 1000 Ljubljana	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Ukrepi bodo učinkoviti, če se bodo dosledno izvajali pri vseh ponudnikih iger na srečo za primerljive igre in primerljiv način prirejanja. Pri čemer je treba opozoriti, da je treba dosledno preprečevati igranje pri nelegalnih prireditelјih iger na srečo.

Name of the respondent	Question	Answer
	services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	kraven på kundkännedom enligt AMLR. Vi delar i huvudsak de principer som presenteras i utkastet till RTS, särskilt betoningen på en riskbaserad ansats och proportionalitet. Vi anser dock att vissa delar av förslaget behöver förtydligas för att säkerställa en praktiskt fungerande tillämpning för rapporteringspliktiga verksamheter, särskilt inom icke-finansiella sektorer såsom redovisnings- och lönekonsultverksamhet. RTS bör tydligare ange att ansvariga enheter får använda information som redan finns tillgänglig i verksamheten, förutsatt att informationen är aktuell och tillförlitlig.[VM1.1] Det behövs konkret vägledning och en samordning på EU nivå för hur verksamhetsutövarna kan söka uppgifter om tex verklig huvudman när denne finns i ett annat medlemsland. Uppgifter om vilka register som finns att tillgå bör tillhandahållas.
Srf konsulterna AB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Srf konsulterna bedömer att förslagen i huvudsak kan tillämpas inom redovisnings- och lönekonsultverksamhet. Samtidigt vill vi lyfta behovet av ytterligare flexibilitet och sektorsanpassning. Redovisnings- och lönekonsulter har i huvudsak små och medelstora företag som kunder, relativt enkla företagsstrukturer, långvariga kundrelationer och löpande insyn i kundens ekonomiska verksamhet. Mot denna bakgrund anser Srf konsulterna att dessa faktorer bör beaktas vid tillämpningen av regelverket, särskilt vid bedömningen av omfattning och intensitet av kundkännedomsåtgärder, för att säkerställa en

Name of the respondent	Question	Answer
		proportionerlig och riskbaserad tillämpning. Vägledningen bör kompletteras med sektorsspecifika exempel eller förtydliganden, särskilt för icke-finansiella-sektorn.
Srf konsulterna AB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Srf konsulterna anser att utkastet i huvudsak möjliggör en riskbaserad tillämpning. Det finns dock en risk att vissa bestämmelser i praktiken uppfattas som standardiserade krav, vilket kan motverka den flexibilitet som är central för ett effektivt riskbaserat arbetssätt. Utformningen av förordningen och dess krav är i flera delar på en för övergripande nivå för den mindre verksamhetsutövaren. För att regelverket ska få avsedd effekt avseende det riskbaserade förhållningssättet krävs en konkret sektorsspecifik vägledning med praktiska exempel som beaktar sektorernas unika förutsättningar och riskfaktorer.
Srf konsulterna AB	4. Stellantis Group	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NO. We suggest targeted guidance or Q&As for the automotive sector to clarify expectations and reduce unnecessary administrative burden. About CDD, when selling a car, it means that the data underneath shall be kept actual and verified/updated from time to time? (either 1 or 5 years – both do not really make sense). It would be welcome the confirmation that CDD is only required for single car transaction above 250k €.
Stellantis Group	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	Yes, simplification is possible by providing clear, practical examples of CDD measures suitable for low-risk, non-financial businesses. The RTS could also clarify when simplified due diligence is appropriate and reduce documentation requirements for low-value, low-risk transactions typical in our sector.

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	Further clarification is needed on how the risk based approach should operate in multi party transaction structures, such as those involving independent dealers or regulated financial intermediaries as mentioned in prior comments.
Stellantis Group	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The diversity and operational realities of the automotive sector, including the predominance of low-risk transactions and established customer relationships, are not fully reflected. We recommend that the RTS acknowledge these factors and allow for streamlined CDD processes for routine, low-risk sales. We also operate in the luxury business selling watches, we understand here the relevant threshold is 10K EUR. We propose that in case of transactions that occur in shops, we may rely on the AML due diligence performed by the financial entities that have issued the credit cards by verifying that the name on the credit card matches with the one on clients' ID (and not be obliged to have clients to provide answers to a questionnaire and/or copies of other documents). We have concerns on the feasibility of verification of Beneficial Owners via eIDAS as per EU Regulation 910/2014, especially for non-EU subjects (most likely a dealer in some lesser structured country will not be able to have its BO electronically verified). Infact, preamble 66 states that "Where such electronic identification is not available to a customer, for example due to the nature of their residence status in a given Member State or their residence in a third country, verification should take place through relevant qualified trust services"; we need to clarify the meaning of that,

Name of the respondent	Question	Answer
		whether in absence of a reliable electronic tool, it is necessary to utilize notary publics or similar.
Stellantis Group	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We welcome commitment to technological neutrality and harmonization. To further reduce burden, we suggest ongoing dialogue with non-financial sector representatives and the issuance of sector-specific interpretative guidance as new challenges arise. This will help ensure proportionate and effective compliance without unnecessary disruption to our business. Our proposal is as follows: 1) Direct clients: due diligence is performed in full only on direct clients (clients that purchase directly from us); 2) Indirect clients: a. for clients who purchase from independent third parties (dealers) due diligence is performed by the dealer itself, based on guidelines provided by OEMs to them, b. due diligence is performed by OEMs, on a risk based way, proceeding to an enhanced due diligence only on indirect clients that have residence/domicile in risky countries (from an AML perspective); c. on indirect clients that have residence/domicile in non- risky countries, data (name, surname, residence, date of birth) are run through an automated professional tool that searches matches against sanctions/AML lists, convictions, adverse media. è For indirect clients purchasing through independent dealers, the "simplified" due diligence at manufacturer level should be permitted where the dealer is itself an obliged entity and performs enhanced CDD on the end customer.

Name of the respondent	Question	Answer
		3) Furthermore, manufacturer will provide our worldwide dealers network with an AML framework that includes draft of AML policies that they shall apply, suggestions on an automated search tool to be purchased/used by them.
Stellantis Group	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We generally support the harmonized, risk-based approach. However, we request further clarification and simplification for non-financial sector obliged entities, especially regarding the practical application of CDD measures. Provisions should explicitly allow for proportionality and flexibility, considering our lower ML/TF risk profile compared to financial institutions. We propose more concrete examples and sector-specific guidance for non-financial entities to reduce interpretative costs and compliance uncertainty (especially having in mind points 20, 60 and 62 of preamble of AMLR). In addition, from an implementation perspective, greater reliance on simplified due diligence and alternative evidentiary measures should be more explicitly embedded in the RTS for non financial sectors. In particular, where transactions are conducted through regulated payment channels (e.g. captive financial services entities), the RTS should clearly allow obliged entities to take account of the AML controls already performed by such intermediaries, rather than requiring duplicative information collection from customers. Explicit drafting recognizing the legitimacy of such reliance would better reflect the operational reality of many non financial business models. We also need guidance on preamble 10, to clarify

Name of the respondent	Question	Answer
	implementing the provisions of these draft RTS.: Recurrent costs	
Stellantis Group	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS would entail additional costs compared to those required under Chapter III of Regulation (EU) 2024/1624, in particular in terms of: – adaptation of information systems, – standardisation of processes at Group level, – increased documentation and traceability requirements, and – the need for dedicated resources to ensure ongoing management. For industrial groups characterised by ERP and CRM systems that were not originally designed for AML purposes, such measures require dedicated IT developments and application-level integrations. The high level of detail required by the RTS entails: – an increase in verification, documentation and periodic update activities; – greater interaction between operational and control functions; – longer execution times for certain business operations. Even while acknowledging the harmonisation objective pursued by the RTS, it should be noted that for non-financial industrial groups the main impact does not lie in new substantive obligations, but rather in the additional costs arising from their operational,

Name of the respondent	Question	Answer
		organisational and technological implementation. An approach that takes due account of proportionality and of the different nature of obliged entities could help reduce unnecessary burdens without undermining the effectiveness of the AML/CFT framework.
Stripe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Stripe supports the overall policy intent of AMLR and the goal of increasingly harmonised AML standards across Europe, and believes that AMLA should seek to ensure that the RTS promote and support a future-proof and technology-neutral interpretation of the AMLR. Stripe is concerned that certain aspects of the RTS risk narrowing the verification requirements set forth within the AMLR in a manner that might restrict innovation in a manner contrary to AMLA's stated intention to ensure that the draft RTS continue to allow flexibility. Non-Face-to-Face Verification (RTS Article 7) Specifically, RTS Article 7 (regarding non-face-to-face-verification) is currently overly restrictive and too reliant on the provision by individual customers of identity documents where we feel the relevant provision of the AMLR (Article 22(6)) leaves greater scope for reliance on an "equivalent" to an ID document, or alternative measures, to be applied. In this context it is important to note that it is now possible (and common practice among businesses such as Stripe) for information provided by a customer to be augmented with information available from reliable third party sources and other signals that can be

Name of the respondent	Question	Answer
		collected in real time during the onboarding process (including geographic indicators, online presence, etc.). These inputs can be ingested and validated holistically in a manner that allows for a better understanding to be obtained of a customer's identity and profile (and therefore potential financial crime risk) at a lower cost (which may be appropriate in the context of certain products), while also improving the experience for the customer. Over dependence on the submission of identity documents by users risks reducing the scope for further innovation in new identity verification measures and processes – to date, a notable strength of EU firms in comparison to peers in other regions – at a time when greater innovation and development in this space is possible now more than ever before. Further, the eIDAS scheme and framework is not yet fully realised and rolled out across the EU. As such, while Stripe is supportive of eIDAS being an option for verification, we are concerned that forcing reliance on this scheme at this point in time risks creating issues of inequality of access between different Member States, which would further exacerbate issues arising from the challenges with accessing reliable company and beneficial ownership registers on a cross-border basis during the rollout of the BORIS database. Stripe believes the RTS should be amended to provide additional information on what might constitute a sufficient "equivalent" under AMLR Article 22(6), which could include verification methods and approaches that consider a range of inputs holistically, including those

Name of the respondent	Question	Answer
		that are not directly provided by the customer during onboarding but can be collected and reviewed by the firm as part of CDD. The RTS should also explicitly recognise that in some circumstances a combination of customer-declared and implicit, programmatically collected data is a valid and proportionate basis for CDD, and that formal document verification is not required as a universal step in all cases. Relatedly, we do not believe that the AMLR requires firms to “justify” why any individual customer could not be verified by means set forth in Article 22(6) AMLR. This requirement would likely impose a significant additional administrative burden without an obvious benefit for the management of financial crime risks. It is a requirement that seems to have been introduced by the language of the RTS and should be removed. Collection of Customer Information (RTS Articles 4 and 5) RTS Article 5 appears to exceed the scope of the AMLR since AMLR Article 22(1)(a)(iii) refers to "nationalities", whereas RTS Article 5 frames this as information regarding "all nationalities". This language risks shifting this requirement from a straightforward collection requirement, whereby customers might provide information about more than one nationality they hold, to a quasi verification requirement, whereby firms might need to verify with their users that they have identified all of their nationalities during onboarding.

Name of the respondent	Question	Answer
		The wording in the RTS should be aligned with the AMLR. RTS Article 5 is also potentially misaligned with RTS Recital 3, which references customers being required only to declare their multiple nationalities “in good faith”. This could cause confusion and should be removed. In the context of RTS Article 4, Stripe would welcome AMLA confirming by adding a Recital to the RTS that where a birth location field is blank, illegible, or inconsistently formatted, the collection obligation is satisfied by recording what is available from an identification document.
Stripe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Stripe considers the draft RTS to be generally supportive of a risk-based approach; however, we have concerns that certain provisions risk limiting the ability of firms to apply judgment upon which effective application of a risk-based framework depends. Specifically: Purpose and Intended Nature of a Business Relationship (RTS Article 18) Stripe considers the criteria set forth in RTS Article 18 concerning assessment of the purpose and intended nature of a business relationship to be sensible and proportionate overall, noting that that the “as appropriate” language in AMLR Article 20(1)(c) and the "where necessary" language in RTS Article 18 make it sufficiently clear that there is flexibility to consider such criteria in a risk-based manner in relation to the specific

Name of the respondent	Question	Answer
		circumstances. However, we note that some of the information listed under Article 18, particularly around estimated funds, anticipated transaction size, and expected activity, or destination of funds, often will not be meaningful information to collect as part of CDD for all firms in the same way it might be for a traditional bank. This would be the case for Stripe, where many users are new startup businesses that do not have a clear sense of the annual turnover they can expect to generate in the first year of operation or how quickly they might be capable of scaling up. In such cases, a declaration predicting turnover during onboarding may likely turn out not to be accurate or reliable but this inaccuracy does not necessarily equate to elevated financial crime risk. Stripe believes that in such circumstances other forms of benchmarking that do not rely on user input information (e.g., sector benchmarking against similar companies, forecasts based on price of goods sold, and other data) prove more reliable and can be utilised alongside ongoing monitoring, which generates objective behavioural data against which customer activity can be benchmarked in real time, are more effective risk controls. As such, we would be in favour of the RTS explicitly recognising – in either an operative provision or an additional recital – that firms should consider what information might be relevant to meeting the

Name of the respondent	Question	Answer
		requirement of AMLR Article 20(1)(c) in the context of the application of a risk-based approach specific to their own particular business, and that in some cases alternative methods to those outlined in Article 18 might be appropriate. Enhanced Due Diligence (RTS Articles 26(1)(b) and (c)) The same challenge noted above in relation to Article 18 applies to RTS Articles 26(1)(b) and (c), which reference forward-looking assessments of destination of funds and anticipated transactional activity. Where a customer has not yet established a transaction profile at the point of onboarding, these assessments are unlikely to be reliable. While we note that RTS Article 26(1)(a) already provides an avenue to confirm the intended nature of a business relationship through other information, Stripe would welcome a recital being added to the RTS confirming that in some circumstances it is appropriate to rely on sources other than customer-provided forecasts for the purposes of Articles 26(1)(b) and (c), including real-time data and sectoral benchmarking. Simplified Due Diligence (RTS Article 21(2)) RTS Article 21(2) requires that two alternative sources of information be used to identify and to verify a beneficial owner or senior managing official in a low risk situation. Stripe believes this hard requirement is

Name of the respondent	Question	Answer
		unnecessary and that there will be circumstances where a single piece of information will be capable of both identifying and verifying the identity of a beneficial owner / senior managing official and that this requirement should not always be necessary in the specific context of low risk situations. This might be the case, for example, where an official register includes a periodic identity verification requirement for beneficial owners or managing officials listed therein. In such a case it would be reasonable for a firm to rely on that register for both purposes in a low risk situation.
Stripe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are four situations where information required under the draft RTS is routinely unavailable, unreliable or challenging to obtain, and where the RTS provides no sufficient alternative solution. Three of these areas have already been referenced above: eIDAS availability (RTS Article 7) and place of birth information (RTS Article 4), which are referenced in our answer to Question 1 above, and forward-looking customer declarations (RTS Article 18) as mentioned in our answer to Question 2. The other – and arguably most significant – area that presents a continuing challenge is the accessibility of reliable beneficial ownership information on a cross-border basis within the EEA. Cross-Border Beneficial Ownership Verification (RTS Articles 10 to 12) A fundamental constraint with respect to beneficial ownership verification relates not to the regulatory standards or requirements but to practical challenges

Name of the respondent	Question	Answer
		presented by the absence of fully functioning, interoperable UBO registers that can be accessed on a cross-border basis between all Member States. BORIS was designated as the interconnection solution; and to date its delivery has been slower and less consistent than the important compliance obligations that depend on it. While we note RTS Article 10 refers to firms accessing registers “to the extent that these are accessible to obliged entitles”, we remind AMLA of the ongoing challenge that lack of consistent cross-border accessibility to beneficial ownership registers presents within Europe and hope that AMLA will seek to use its power and influence to push for swift and widespread adoption and implementation of BORIS given its importance to adherence to the requirements of the AMLR and RTS. Stripe also considers that the requirement at RTS Article 11(4)(b) — that obliged entities be "satisfied that" there is "an economic, legal or other rationale behind the structure" of an entity they have cause to consider, appears to exceed the requirement under AMLR Article 20(1)(b) to know who a beneficial owner is and understand the ownership and control structure and presents a significant challenge with respect to information reasonably available to assess this. The RTS language risks converting an identification obligation into a requirement to assess and validate the rationale for the entity's structural choices. This imposes a meaningfully higher compliance burden and introduces a subjective assessment likely to generate inconsistent

Name of the respondent	Question	Answer
		interpretations between Member States, undermining the harmonisation the AMLR is intended to establish. Stripe recommends that Article 11(4)(b) be revised to align with AMLR Article 20(1)(b), removing the requirement to assess the rationale behind ownership structures.
Stripe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Stripe considers the simplified due diligence provisions in AMLR Article 33 to be appropriate and that the information outlined in the RTS are supportive of the flexibility of the AMLR in this regard with one exception: RTS Article 21(2). This provision requires that two alternative sources of information be used to identify and to verify a beneficial owner or senior managing official in a low risk situation. Stripe believes this hard requirement is unnecessary and that there will be circumstances where a single piece of information will be capable of both identifying and verifying the identity of a beneficial owner / senior managing official and that this requirement should not always be necessary in the specific context of low risk situations. This might be the case, for example, where an official register includes a periodic identity verification requirement for beneficial owners or managing officials listed therein. In such a case it would be reasonable for a firm to rely on that register for both purposes in a low risk situation.
Stripe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	PEP Identification and Screening (Article 19) The provisions on PEP identification and screening set forth in RTS Article 19 are consistent with effective PEP

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	risk management in line with the AMLR and with Stripe's belief that PEP status should drive EDD proportionate to the overall risk profile of the individual PEP and should not function as a de-risking trigger. With that in mind, Stripe proposes that the RTS should confirm in the form of an operative provision or a recital that, absent particular risk signals, PEPs should be permitted to continue to transact during the EDD completion period, provided that a risk-proportionate monitoring framework is applied during the review period and the EDD is completed within a defined reasonable timeframe. A blanket prohibition on transacting pending EDD completion would be a disproportionate step to apply in cases relating to lower-risk PEP profiles and would function as a de-risking mechanism that undermines the application of a risk-based approach.

Stripe	Please justify your answer to the previous question and provide evidence where possible.	While we support the overarching goal of a harmonised AML framework which reduces cross-border complexity, we remain deeply concerned that the current draft—specifically Article 7—shifts from a Risk-Based Approach to a Prescriptive Technical Approach. Our neutral rating reflects a balance between the strategic benefits of the "Single Rulebook" and the significant disruption to user experience and operational continuity Key concerns: Disruption to Onboarding: Article 7, as currently drafted, introduces rigid technical requirements for Non-Face-to-Face identification that could fundamentally disrupt the seamless onboarding

Name of the respondent	Question	Answer
		experience users expect in a modern digital economy. Risk of Exclusion: Excessive or prescriptive friction often serves as a barrier to entry. If the RTS mandates specific, cumbersome technical steps that do not account for modern user behavior or device accessibility, it risks inadvertently excluding legitimate users from the digital financial ecosystem. Erosion of Technology Neutrality: By prescribing specific technical attributes rather than focusing on the level of assurance achieved, the RTS may stifle the use of innovative verification methods that are currently highly effective at detecting fraud while maintaining a low-friction user experience.
Suomen Tilintarkastajat ry	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Overall, the draft RTS on Customer Due Diligence (CDD) guidance appears to be more prescriptive and rule-oriented rather than focused on a risk-based approach. Furthermore, the definition of low-risk situation remains subject to interpretation and this might lead to inconsistences. • Further comments on the draft RTS on CDD: • Article 6 and 7 - The language on verification procedures for electronic identification inface-to-face and remote interactions needs clarification.

Name of the respondent	Question	Answer
		• Article 12 - Complex corporate structure – The proposed definition could result in an increased, in some situations unnecessary, work load in onboarding clients if no risk based consideration can be applied. • Article 13 - Applying identical identification requirements to senior managing officials as those for beneficial owners appears to be an overly stringent approach. Furthermore, the definition of senior managing officials would benefit from additional clarification to clearly specify who should be regarded as Senior Managing Officials in this context. Currently, local legislation states more specifically who should be consider as a senior managing official if the beneficial owner cannot be identified.

Sveriges Advokatsamfund (the Swedish Bar Association)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, not fully. The SBA does not agree that the proposals can be applied equally well across the full range of services offered by Swedish law firms. Several provisions appear to have been drafted primarily with financial-sector, account-based or payments-based business models in mind. This is most visible in Article 18, Article 24, and the enhanced due diligence provisions dealing with expected transaction patterns, destination of funds and consistency of transactions with the business relationship. In legal practice, many mandates are one-off or stage-based. At onboarding, the law firm may know the purpose of the mandate, the client, the broad

Name of the respondent	Question	Answer
		transaction type and relevant jurisdictions, but not yet the final transaction value, final counterparties, exact destination of funds or full frequency and volume of transactions. In many matters, the law firm is advising on a transaction rather than handling the transaction itself. The SBA refers to its response to Section 3 (Additional substantive input) for specific drafting proposals on Articles 18, 23 and 33. In addition, AMLA should include a legal-services-specific clarification, or separate sectoral provisions, stating that for legal and other professional services mandates, information on estimated amounts, frequency, transaction volume, source of funds and destination of funds should be obtained only to the extent it is relevant, available and necessary to understand the ML/TF risk of the specific mandate. The RTS should also recognise that law firms should not be subject to the same operational expectations as financial entities where they do not handle funds flows or customer transactions in the same way. Furthermore, the SBA considers that the term "where necessary", which recurs throughout the RTS, should be clarified and defined. Information should be regarded as "necessary" where the obliged entity has established, on the basis of a risk-based assessment, that obtaining the information is required to understand the business relationship or occasional transaction and the associated risks, is capable of providing a better

Name of the respondent	Question	Answer
		understanding of those risks, and can be obtained with reasonable effort. Without such clarification, the term risks being interpreted either too broadly, resulting in disproportionate information collection, or too narrowly, undermining the effectiveness of CDD measures. In addition, the SBA notes that several provisions require the obliged entity to obtain "at least one of the following" items from an exhaustive list. All such lists should include an additional open-ended item permitting the obliged entity to obtain any other information that it deems useful to understand or obtain the required information. This would allow for greater flexibility, as in particular situations other information may be available or relevant that is not contained in the enumerated lists. Finally, the SBA considers that AMLA should reinforce, for example in the recitals, that lists of information and documents in the RTS are not intended to be applied as universal checklists, but are to be applied proportionately in accordance with Article 1 of the RTS. This clarification is particularly important for non-financial obliged entities, including law firms, where the nature and scope of the engagement may render certain listed items irrelevant or unobtainable.
Sveriges Advokatsamfund (the Swedish Bar Association)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify	The SBA does not fully agree. The draft RTS is intended to support a risk-based approach, but it does not yet do so effectively for legal services unless the text is more clearly calibrated to the way law firms operate. The SBA

Name of the respondent	Question	Answer
	the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	raises the following specific concerns, which collectively demonstrate that the risk-based approach in its current form is not sufficiently adapted to the conditions of legal practice. A practical challenge not addressed by the RTS is that legal mandates within the scope of AML/CFT are often time-sensitive. Law firms already perform client due diligence before accepting an engagement, but the process required under the RTS is substantially more extensive than current requirements, including in-depth verification of ownership structures, beneficial owners and source of funds. Clients approach a law firm ahead of an imminent closing, an urgent incorporation or a time-critical transaction structuring, and expect immediate legal assistance. The expanded CDD process risks making this impossible in practice, potentially forcing law firms to decline engagements not because the client is suspected of money laundering, but solely because the firm cannot complete all required checks in time. The RTS provides no guidance on how obliged entities in the non-financial sector should manage this situation, and the SBA considers that AMLA should expressly address how the CDD process is to be applied where it cannot be fully completed within the timeframe of the specific engagement. Drafting proposal: AMLA should expressly address, in the recitals or in a dedicated provision, how the CDD process is to be applied where it cannot be fully completed within the timeframe of the specific engagement, and clarify that a risk-based, staged

Name of the respondent	Question	Answer
		approach to CDD completion is permissible for non-financial obliged entities where the nature of the mandate so requires. Articles 25 and 27 — EDD reputation and source of assets: For law firms, reputation assessment may conflict with professional secrecy vis-à-vis other clients. Furthermore, a client's involvement in legal proceedings is often the very reason they seek legal assistance; attributing a "poor" reputation to elevated ML/TF risk risks impeding access to legal representation. Article 27's requirement to verify that assets derive from lawful activity is unclear in relation to the lawyer's entitlement, under professional ethics, to rely on client-provided information without independent verification. The relationship between the aforementioned professional entitlement and the obligation contained in Article 27 should be addressed and clarified. Drafting proposal: Add recital language to Articles 25 and 27 acknowledging that reputation assessment must respect the constitutional right to legal representation, and that lawyers are entitled to rely on client information absent specific objective grounds for doubt. Article 30 — Manual screening for targeted financial sanctions: The SBA considers that Article 30 should make even clearer that manual screening remains acceptable where proportionate for smaller or lower-volume non-financial obliged entities, including law firms. The current formulation does not provide sufficient certainty as to when manual-only checks are

Name of the respondent	Question	Answer
		justified. Drafting proposal: Amend Article 30 to expressly confirm that manual-only screening is permitted where proportionate to the size, business model, complexity or nature of the obliged entity's business, and specify that this includes law firms with a limited client base and low transaction volume. Articles 18, 24, 27 and 28 — Information requirements designed around payment flows: The SBA considers that Articles 18, 24, 27 and 28 should make clear that information requirements designed around payment flows or transactional monitoring are not to be applied to law firms in the same manner as to financial entities where the mandate is advisory in nature. Where a law firm is providing legal advice and is not operating accounts or processing customer transactions, the operational expectations under these provisions should be lower and differently framed than those applicable to financial entities. Drafting proposal: Amend or supplement Articles 18, 24, 27 and 28 to clarify that information requirements concerning expected transaction patterns, destination of funds, source of funds and consistency of transactions with the business relationship apply to law firms only to the extent relevant and proportionate to the advisory nature of the mandate, and that law firms providing legal advice without handling client funds or operating accounts are not subject to the same operational expectations as financial entities.

Name of the respondent	Question	Answer
Sveriges Advokatsamfund (the Swedish Bar Association)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Kindly note that the reply below is an abbreviated version of our complete response. We will submit our complete response by PDF copy. There are several situations where information required by the draft RTS is not routinely available at onboarding, and the draft provides no adequate alternative. Example 1 — M&A, financing and real estate The final purchaser, financing mix, transaction value or destination of funds may not be fixed at onboarding. Proposed solution: Allow collection of an indicative value range, expected transaction type and relevant jurisdictions at onboarding, with an obligation to update before signing or closing. Example 2 — Fund structures The RTS does not clarify what information is required regarding limited partners, or when reliance on the fund manager's own AML process is permitted. Proposed solution: Insert a provision permitting reliance on a fund's own AML/CDD process where the fund is AML/CFT-supervised in an EU Member State or equivalent third country, subject to risk-based conditions. Example 3a — Foreign legal entities Personal verification material for senior managing officials of foreign entities may be difficult to obtain promptly, even where the entity itself can be verified from reliable official sources. Proposed solution: Allow reliance on official company extracts, certificates of incumbency or

Name of the respondent	Question	Answer
		equivalent reliable professional sources on a risk-sensitive basis. Example 3b — Alternative verification sources Article 22(6)(a) AMLR permits reliance on reliable and independent sources meeting the Article 7 RTS criteria, but this is not reflected in the operative articles. Where standard documents are unavailable or cannot be authenticated, no alternative is provided. Proposed solution: Add a provision in the operative articles confirming that sources meeting Article 7 criteria may replace any document otherwise required, in particular where standard documents are unobtainable. Example 4 — Non-face-to-face onboarding and eIDAS No universal EU solution exists at "substantial" or "high" assurance level; the EU Digital Identity Wallet is not yet operational, and national solutions such as BankID are unavailable to foreign clients. Such systems may also conflict with professional secrecy and GDPR obligations. Proposed solution: For persons habitually resident outside the EU/EEA, allow alternative remote solutions without requiring proof that eIDAS-compliant verification was impossible. Permit reliance on a government-issued document combined with confirmation from a regulated professional in the client's country of residence. Example 5 — Legal professional privilege A law firm may hold CDD-relevant information subject to professional secrecy in relation to another client. The RTS provides

Name of the respondent	Question	Answer
		no guidance. Proposed solution: Clarify that such information shall not be regarded as available for CDD purposes. Example 6 — "Exhausted all possible means" threshold The threshold is unclear for law firms lacking investigation departments. Proposed solution: Specify that the following steps, if unsuccessful, constitute exhaustion: (i) consulting the beneficial ownership register; (ii) consulting at least one other relevant public register; (iii) a written request to the client; and (iv) consulting a reputable commercial data service. Example 7 — Document authenticity under Article 6(3) Article 6(3) requires "reasonable steps" to verify document authenticity, but the standard is not calibrated to non-financial obliged entities such as law firms. Drafting proposal: Clarify in Article 6(3) or the recitals that the standard is assessed in light of the obliged entity's type, size and risk level, in line with Article 1 RTS and Article 20(2) AMLR, and that for law firms, reasonable steps consist of checking outward credibility, comparing against public registers and flagging obvious inconsistencies, without forensic verification.
Sveriges Advokatsamfund (the Swedish Bar Association)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	The SBA notes that Article 33 AMLR already provides broad scope for simplified measures in low-risk scenarios, and welcomes AMLA's position that further simplified measures should not create exceptions to AMLR obligations. However, the SBA notes the absence of guidance on which types of legal engagements

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	typically constitute low-risk scenarios justifying simplified measures, and requests that AMLA provide concrete examples of mandates within the non-financial sector that, given the nature of the engagement and client characteristics, typically fall within a low-risk scenario. Where a law firm provides advisory-only legal services to a low-risk client and the mandate does not involve holding or transferring client funds, operating accounts, assisting in the execution of a transfer of assets, or the creation of opaque ownership or control structures, the obliged entity should be permitted to apply simplified CDD. In those circumstances, the information collected may be limited to: (i) the identity of the client; (ii) the nature and purpose of the mandate; and (iii) where relevant, an indicative transaction value or value range. Source of funds, destination of funds and expected transaction patterns should only be obtained where there is a specific risk indicator or where those elements are integral to the mandate. Law firms providing pure advisory services do not operate in the same manner as financial entities, and where client funds are managed entirely by regulated credit institutions, the ML/TF risk associated with the legal engagement is substantially lower. The RTS should clarify how SDD measures are to be applied where the client is a public authority or publicly owned company, or a listed financial institution already subject to extensive regulation and supervision. Recital

Name of the respondent	Question	Answer
		127 AMLR states that it is proportionate to exempt certain entities from the obligation to identify their beneficial owners, and Annex II's express inclusion of public administrations and listed companies as lower-risk factors confirms that the regulatory framework recognises the lower risk profile of these categories. The RTS should specify that, in these situations, the obliged entity may be entitled to apply SDD with regard to the identification of beneficial owners — for example, by providing that for public authorities it is sufficient to identify the legal representatives without conducting a full investigation of the democratic control structure, and that for listed financial institutions it is sufficient to rely on the publicly available ownership information disclosed pursuant to applicable stock exchange rules. The SBA considers that Article 24(c) should be clarified to confirm that source of funds information is not a standard element of simplified due diligence, but should be obtained only where specifically justified on the basis of a risk-based assessment. In its current formulation, the "where necessary" qualifier in Article 24(c) risks being interpreted as a default requirement rather than a genuinely risk-sensitive one. For law firms providing advisory-only services in low-risk scenarios, source of funds information should be required only where there is a specific risk indicator or where the source of funds is integral to the mandate.
Sveriges Advokatsamfund (the Swedish Bar Association)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Kindly note that the reply below is abbreviated. We will submit our complete response by PDF.

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The SBA notes that the draft RTS has been designed predominantly with financial institutions in mind, insufficiently addressing issues essential for a harmonised interpretation of the AMLR in relation to lawyers and law firms. The SBA advocates for supplementary RTS specifically tailored to the legal profession, addressing inter alia the scope of Article 3(3)(b) AMLR and the exemption applicable to lawyers when determining the legal position of their client or when defending or representing their client in judicial proceedings. At a minimum, AMLA should commit to issuing comprehensive sector-specific guidance for the legal profession prior to the AMLR application date. Law firms outside the EU face different and less far-reaching requirements, creating a risk of distorted competition particularly on the international transactions market. AMLA should ensure CDD requirements do not impose disproportionate burdens on EU-based law firms relative to non-EU competitors. 1. RTS language is more stringent than the AMLR: Several provisions impose more stringent obligations than the AMLR: whereas the AMLR uses "where necessary", "may include" or "proportionate to the higher risks identified", the RTS uses "shall obtain" or "shall at least", rendering optional or risk-sensitive measures effectively compulsory. In particular, Article 11(1) requires a "comprehensive understanding" of the ownership and control structure, whereas Article 20(1)(b) AMLR requires only an "understanding" — a

Name of the respondent	Question	Answer
		higher standard not supported by the empowerment in Article 28(1) AMLR. Further examples appear in Articles 10, 15, 16, 24, 25, 26 and 27 of the RTS. Drafting proposal: Include a statement that the RTS is not intended to exceed the scope of the AMLR, and revise the identified articles to align with AMLR proportionality provisions. 2. Legal professional privilege — Article 22 (pooled accounts): Article 22 poses major issues from the viewpoint of legal professional privilege, protected under Article 8 ECHR and Article 7 of the Charter. Requiring lawyers, regardless of their risk level, to immediately and at all times provide information to credit institutions on mere request constitutes a disproportionate interference with this privilege. Client consent does not resolve the underlying conflict of principle — it shifts the burden onto the client and risks normalising the erosion of professional secrecy. Article 22 also undermines lawyers' independence: where supervision is entrusted to self-regulatory bodies, credit institutions should not assess a lawyer's CDD measures. Drafting proposal: Amend Article 22 to provide that the obligation does not apply to information covered by legal professional privilege, and that bar associations are the appropriate authority to assess a lawyer's CDD procedures. 3. Article 30(c)(ii) — Targeted financial sanctions screening: Article 30(c)(ii) cannot be applied to the non-financial sector. It requires all obliged entities to screen customers upon new designations pursuant to Article 26(4) AMLR; however, Article 26(4) AMLR clearly limits

Name of the respondent	Question	Answer
		this requirement to credit and financial institutions. Drafting proposal: Add to Article 30(c)(ii): "The obligation under this point applies only to credit institutions and financial institutions as defined in Article 3(1) and (2) of Regulation (EU) 2024/1624." 4. Reuse of previously collected information: The possibility of reusing information already collected in connection with a law firm's internal engagement assessment is of great practical significance but appears only in the consultation paper and should be incorporated in the operative articles to provide a clear legal basis. Drafting proposal: Insert a provision stating that where an obliged entity in the non-financial sector has already collected information relevant for CDD purposes in connection with an internal engagement assessment or conflict-of-interest check, it may use such information without re-collecting it, provided the information is sufficiently recent and complete. 5. Automated screening tools — cost and access: If an obligation to use automated screening tools is imposed, it would be disproportionate, in light of Directive (EU) 2018/958 on proportionality testing, to expect professionals to bear the cost. The EU should develop and provide access to automated screening tools free of charge. 6. Systematic treatment of professional secrecy: The RTS lacks provisions addressing the interplay between CDD obligations and the lawyer's duty of professional secrecy. This conflict arises across several provisions and is not sufficiently addressed in the AMLR. AMLA should

Name of the respondent	Question	Answer
		systematically address this conflict in the final regulation to ensure a framework that is legally certain, predictable and compatible with fundamental legal principles, including Article 8 ECHR and Article 7 of the Charter.
Sveriges Advokatsamfund (the Swedish Bar Association)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 5 (specification on nationalities): Contrary to the purpose and other articles of the RTS, Article 5 does not provide any guidance on what information could suffice. The SBA considers that, for the legal sector, this Article should either be deleted, leaving it up to the obliged entities to decide what information would suffice, or further guidance should be provided on what constitutes a sufficient determination of a client's nationality for CDD purposes. Drafting proposal: Amend or delete Article 5 to either provide concrete guidance on what information suffices for the determination of a client's nationality for CDD purposes, or leave the determination to obliged entities in light of the risk profile of the client. Furthermore, as a general note, the SBA notes that several provisions appear to have been drafted primarily with financial-sector, account-based or payments-based business models in mind and do not

Name of the respondent	Question	Answer
		adequately reflect the advisory and matter-based nature of legal services. The SBA considers that the RTS should contain an express provision, or recital, stating that for independent legal professionals the extent of information to be collected must reflect the advisory and matter-based nature of the mandate and the fact that law firms do not typically handle client transactions in the same manner as financial entities.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6(4) (understanding foreign-language documents): The RTS requires obliged entities to ensure that they understand the content of documents in a foreign language. The SBA considers that it should be clarified that translations by reliable sources, including automated translation services, are acceptable for this purpose. The quality of automated translation is today sufficient to understand identity and corporate documents, and a requirement for certified translations would constitute an outdated and unnecessary administrative burden, particularly for law firms with international clients. Drafting proposal: Amend Article 6(4) to clarify that obliged entities may rely on translations by reliable sources, including automated translation services, to satisfy the requirement to understand the content of foreign-language documents, and that certified translations are not required.

Name of the respondent	Question	Answer
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 7(4) (non-face-to-face verification): There is currently no universal EU solution for electronic identification at the "substantial" or "high" assurance level. The EU Digital Identity Wallet is not yet operational and it is uncertain whether it will be fully implemented by the AMLR application date. National solutions such as BankID in Sweden are not available to foreign clients. Law firms with international clients from, for example, the United States or other non-EU countries routinely face situations where the client lacks access to such identification means. Furthermore, the requirement to implement and use approved remote identification systems may entail sharing client information with third-party providers, which may conflict with the lawyer's duty of professional secrecy. It is also unclear what is required of law firms to justify why the client could not be verified through the means referred to in Article 22(6) AMLR where the client genuinely lacks access to approved identification means. The SBA further refers to its response to Question 4 for additional detail on this issue. Drafting proposal: Amend Article 7(4) to replace the requirement to justify why the customer "could not be verified" through the means in Article 22(6) with a requirement to justify why the chosen remote method is appropriate and proportionate in light of the risk and the circumstances of the customer, and clarify that

Name of the respondent	Question	Answer
		alternative remote solutions are always permitted for clients habitually resident outside the EU/EEA.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	12
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Articles 11 and 12 (ownership and control structures): Article 12(1) defines a complex corporate structure as existing where there are three or more layers between the customer and the beneficial owner and more than one of the listed additional conditions is met. Structures with three or more layers are common in several contexts, including fund structures and international corporate acquisitions. The three-layer rule risks classifying a disproportionately large number of commercially motivated structures as complex. The formal requirement triggered by a complex classification is limited — primarily an obligation to obtain an organisation chart — but the indirect consequence chain is problematic: the three-layer rule classifies the structure as complex, and Annex III point 1(f) AMLR requires the obliged entity to assess whether the ownership structure is "unusual or excessively complex given the customer's business". If that assessment is negative, a high-risk variable is activated which may ultimately lead to EDD. The distinction between "complex" within the meaning of Article 12 and "excessively complex" within the meaning of Annex III is difficult to maintain in practice, and the three-layer rule causes this question to arise systematically for virtually all medium-sized and larger corporate groups.

Name of the respondent	Question	Answer
		Drafting proposal: Amend Article 12(1) to replace the three-layer formal threshold with a holistic risk assessment, or issue targeted guidance clarifying that multi-layered corporate structures common in commercial legal practice do not automatically trigger treatment as a complex structure.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	13
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 13 (senior managing officials): The SBA considers that it should be clarified that verification of senior managing officials may be performed on a risk-sensitive basis using reliable company registers, official extracts and equivalent corporate records, especially for foreign legal entities where full personal documentation is not readily obtainable at onboarding. Drafting proposal: Clarify that verification of senior managing officials under Article 13 may be performed on a risk-sensitive basis using reliable company registers, official extracts and equivalent corporate records, in particular for foreign legal entities where full personal documentation is not readily obtainable at onboarding.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	16
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 16 (verification of authority): In practice, particularly in the non-financial sector, it is normal for the person representing a client vis-à-vis the obliged

Name of the respondent	Question	Answer
		entity not to hold a formal written power of attorney, but to act by virtue of their organisational position, such as general counsel, CFO or operational manager, under positional authority. This form of authority is not based on a specific power-of-attorney document, but on the actual position within the organisation in combination with law or trade usage. The SBA considers that it should further be clarified whether AMLA considers that persons acting under positional authority on behalf of a legal entity that is the customer must be identified in accordance with all requirements of Article 22(1)(a). Such a requirement would be unnecessarily far-reaching and disproportionate. Drafting proposal: Clarify in recital 12 that the requirement to verify the existence and extent of authority under Article 16 can be satisfied by documenting the contact person's name, title and organisational position, with formal documentation required only where specific risk indicators justify it.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 18 (purpose, intended nature, source and destination of funds): Article 18(a)(i) requires obliged entities to obtain information on 'the reason the customer has requested the obliged entities' products or services'. In legal practice, many mandates are one-off or stage-based. At onboarding, the law firm may know the purpose of the mandate, the client, the broad transaction type and relevant jurisdictions, but not yet

Name of the respondent	Question	Answer
		the final transaction value, final counterparties, exact destination of funds or full frequency and volume of transactions. For law firms, the purpose of an engagement is in most cases already self-evident from its nature: an instruction to assist with a corporate or real estate acquisition defines in itself both the purpose and the economic rationale. Requiring law firms to formally obtain and document this information, including the reason a client selected them, risks becoming an administrative formality without real added value, and imposes an unverifiable and disproportionate obligation that serves no meaningful AML/CFT purpose. For law firms providing purely advisory services and not handling client funds directly, requiring parallel information on source and destination of funds is disproportionate, in particular where funds are channelled through credit institutions that are themselves subject to equivalent CDD obligations. Drafting proposal: AMLA should include a legal-services-specific clarification stating that for legal and other professional services mandates, information on estimated amounts, frequency, transaction volume, source of funds and destination of funds should be obtained only to the extent it is relevant, available and necessary to understand the ML/TF risk of the specific mandate. In particular: (a) where the purpose of the engagement is evident from its nature, the obliged entity should be permitted to document this without posing separate questions to the client, and the requirement in Article 18(a)(i) to establish why the

Name of the respondent	Question	Answer
		customer has chosen the specific obliged entity should be deleted or reformulated as unverifiable and serving no clear AML/CFT purpose; and (b) the requirements in Article 18(c)–(d) on source and destination of funds should apply proportionately to whether the obliged entity actually handles client funds, and should be reduced or inapplicable where the mandate solely concerns legal advice and funds are channelled through credit institutions subject to equivalent CDD obligations.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	19
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 19(3) (identification of politically exposed persons): Article 19(3) requires obliged entities to put in place automated screening tools and measures, or a combination of automated screening tools and manual checks, unless the size, business model, complexity or nature of the business justifies the use of manual checks only. The SBA notes three concerns. First, it is unclear which criteria determine whether the exception for manual-only checks applies. For smaller law firms with a limited client base, automated screening tools entail disproportionate implementation costs relative to the lower risk level. Second, automated screening tools in practice require sharing client information with third-party providers, which may conflict with the lawyer's duty of professional secrecy and the ethical rules governing the handling of client information. Third, automated screening of client data may constitute processing of personal data, including sensitive data on political exposure, requiring a legal basis and fulfilment

Name of the respondent	Question	Answer
		of information obligations under the GDPR. The RTS provides no guidance on how these requirements interact with the screening obligation. Drafting proposal: Amend Article 19(3) to specify concrete criteria for when manual-only checks are sufficient, with the obliged entity's turnover, number of employees, client volume and transaction frequency as relevant factors, and address the interaction with GDPR and professional secrecy obligations.
Sveriges Advokatsamfund (the Swedish Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	23
Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Articles 23 and 33 (information updates and dormant relationships): For law firms with a large number of dormant or sporadic client relationships, it is unclear whether such relationships must be treated as active business relationships requiring regular updating, or whether they may be treated as concluded. A law firm with a large base of dormant relationships could incur disproportionate administrative costs updating information on clients who are no longer active. Drafting proposal: Add a recital or article clarifying the treatment of dormant client relationships for information update purposes, including whether such relationships may be treated as concluded in AML/CFT terms.

Sveriges Advokatsamfund (the Swedish Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Please see our comments with respect to Article 23, above.
Sveriges Advokatsamfund (the Swedish Bar Association)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Sveriges Advokatsamfund (the Swedish Bar Association)	Do you have any comments on the Annex in the draft RTS?	No
Sveriges Advokatsamfund (the Swedish Bar Association)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Swedish Art & Antiques Dealers Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	While the principles of customer due diligence are broadly supported, several provisions do not reflect the practical realities of the art market, where galleries, dealers, and auction houses are often micro-businesses or small enterprises with one or a few employees. Some obligations can be nearly impossible or impose disproportionate administrative burdens, making compliance operationally challenging. While Article 24 appropriately introduces flexibility for simplified due diligence in low-risk situations, further clarification would be useful to ensure proportionate application in non-financial sectors such as the art market. More broadly, certain organisational and governance requirements under Regulation (EU) 2024/1624 raise similar proportionality concerns for micro and small entities.

Name of the respondent	Question	Answer
Swedish Art & Antiques Dealers Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree that the draft RTS can be applied across the range of products and services of art market OE:s. The sector is characterized by a single, goods transaction-based model, unlike the broader range assumed in the RTS.
Swedish Art & Antiques Dealers Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The RTS refer to proportionality, but several provisions do not sufficiently reflect the realities of the art market, which is predominantly composed of micro-businesses with limited resources. Targeted adjustments are needed to ensure that compliance is both effective and proportionate.
Swedish Art & Antiques Dealers Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In order to better align due diligence requirements with the low-risk of many transactions in the sector, we propose the following additional simplified due diligence measures. 1. New provision: Standing customer profile for repeat occasional low-risk customers within the scope of the Regulation The inclusion of such a provision would ensure that due diligence measures remain proportionate and risk-based, while taking into account the specific characteristics of the cultural goods market. 2. We also recommend the introduction of a sector-specific provision, because the draft RTS does not sufficiently target the risk-based approach in the context of cultural goods, in particular by failing to

Name of the respondent	Question	Answer
		provide for the application of simplified due diligence in clearly defined low-risk scenarios. New provision – Simplified due diligence in the cultural goods sector In determining whether a low degree of ML/TF risk exists in accordance with Article 33 of Regulation (EU) 2024/1624, obliged entities trading in cultural goods shall be able to take into account the following factors, in addition to the factors listed in Annex II of the Regulation: (a) a low level of risk associated with the customer; (b) lower value transactions; (c) transactions that demonstrate no complexity and are consistent with usual market practices in the sector; (d) the customer is established or resident in a jurisdiction assessed as presenting a low level of money laundering and terrorist financing risk; and (e) transactions where funds are channelled through accounts held with credit or financial institutions subject to EEA supervision.
Swedish Art & Antiques Dealers Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Defining the “customer” in the sale of artworks – particularly where several intermediaries are involved. We support the need for clarification but consider that the current framework does not adequately reflect how transactions are structured in the art market. In practice, transactions sometimes involve several intermediaries acting in a chain between seller and buyer. Under the current wording, there is a significant risk that multiple parties in the chain would be required to conduct customer due diligence on the same end-client.

Name of the respondent	Question	Answer
		This would lead to: • duplication of identical AML checks • unnecessary administrative burden • and, importantly, the forced disclosure of commercially sensitive client relationships between competitors In the art market, client relationships are a core asset. Requiring intermediaries to identify and disclose their underlying clients beyond what is strictly necessary would undermine legitimate business practices without delivering additional AML value. We therefore support a clearer and more proportionate approach whereby each obliged entity performs customer due diligence only on the party with whom it has a direct financial relationship (i.e. the entity from which it receives payment or to which it makes payment). Such an approach would: • avoid duplication • preserve commercial confidentiality • and maintain effective AML controls at the appropriate level in the transaction chain Without this clarification, there is a significant risk of inconsistent interpretation across Member States, leading to legal uncertainty and ineffective implementation.
Swedish Art & Antiques Dealers Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Swedish Art & Antiques Dealers Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Swedish Art & Antiques Dealers Association	Do you have any comments on the Annex in the draft RTS?	No
Swedish Art & Antiques Dealers Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Swedish Art & Antiques Dealers Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when	Disruptive impact

SYMEV	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	SYMEV does not fully agree that the draft RTS can be applied across the range of products and services of art market obliged entities. The sector is characterized by a single, goods transaction-based model, unlike the

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	broader range assumed in the RTS. Situations commonly encountered in the art market have not been addressed, including: (i) For situations where several professional intermediaries are involved in a chain between a seller and buyer of an item of cultural property the term "customer" and the parties on whom customer due diligence is to be performed have not been addressed. SYMEV proposes that each obliged entity intermediary be under an obligation to carry out customer due diligence on the entity next to them in the chain – that is to say (i) the persons or entities from and to whom they receive or make payment for goods, and (ii) the persons or entities from whom they receive (but not to whom they pay) a fee for services. Proposal: Proposed definition for incorporation in the CDD RTS: The "customer" of an obliged entity acting as seller, buyer or intermediary in a transaction involving an object is the party from whom the obliged entity receives payment, or to whom it makes payment in respect of the object, or the party that directly remunerates the obliged entity for services connected with that transaction. (ii) The differing definitions of obliged entities for cultural goods and high-value goods, particularly in relation to financial thresholds and business relationships create overlapping and potentially conflicting obligations that the RTS does not resolve. The definition of obliged entities for cultural goods is

Name of the respondent	Question	Answer
		rightly based on entities carrying out transactions above a financial threshold combined with the concept of a business relationship; however, these elements do not sit comfortably together in a market that is predominantly transaction-based. This gives rise to a clear inconsistency with the definition applicable to persons selling high-value goods, which is framed using materially different language and regulatory logic. As many cultural goods also fall within the scope of the high-value goods definition, this results in an overlap of regimes and the imposition of potentially conflicting obligations that require clarification and resolution. (iii) Article 23 requires CDD to be carried out before an occasional transaction, but provides no specific guidance for the cultural or high-value goods sectors, creating a risk of inconsistent interpretation across Member States. In practice, it is not always possible to conduct CDD before a transaction is initiated in auction sales where buyers may act quickly or not ultimately purchase. The Regulation should therefore clarify that, for goods, CDD must be completed before the transaction is finalised—i.e. before the transfer of ownership or release of the goods. Proposed new Article – Timing of the verification of the customer and beneficial owner identity In the case of transactions involving cultural goods and high-value goods in order to comply with the timing requirements pursuant to Article 23(1) of Regulation (EU) 2024/1624, obliged entities shall be permitted to agree to a transaction before complying with the

Name of the respondent	Question	Answer
		verification of the identity of the customer, the beneficial owner, and of any persons pursuant to Article 20(1), points (h) and (i) of Regulation (EU) 2024/1624, but shall have completed this verification before conclusion of the transaction and before the goods are in the possession of the customer.
SYMEV	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While the RTS refer to proportionality, several provisions (notably Articles 10–15, 18, 19, 23 and 24) do not sufficiently reflect the operational realities of the art market, which is predominantly composed of micro-businesses with limited resources. Targeted adjustments are needed to ensure that compliance is both effective and proportionate. (See responses in the Additional Substantive Input section, including per-article comments and Question 1).
SYMEV	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art market businesses are predominantly small galleries, dealers, and auction houses, often with 2–3 employees. Occasionally, clients operate through agents, complex corporate structures, trusts, or offshore entities. In these cases, obtaining full information on beneficial ownership, source of funds, or client identity can be routinely unavailable or disproportionately costly, due to legal, cultural, or confidentiality constraints. For example: Proposed alternative solutions (short summaries): Verification options for micro and small businesses ● Article 7: Instead of requiring official time stamping, allow for dated electronic or paper records documenting verification.

Name of the respondent	Question	Answer
		"Where technical time-stamping is not available, obliged entities may maintain secure dated electronic or paper records documenting verification, in a manner that is auditable by competent authorities." ● Article 10-15: We do not currently propose a direct solution to the burdensome requirements on beneficial ownership and control structure research but suggest in our additional comments a phased approach to developing a trusted infrastructure, including an operational helpdesk, certified AML service providers, and structured reliance mechanisms. ● Articles 18 and 24: Financial verifications are best carried out by banks/financial institution. Participants in the art market are not well-placed to carry out financial scrutiny of customers, so where the RTS requires financial checks, it should be the financial institutions which provide the funds that are responsible for scrutinizing the source of them, relieving art market participants of obligations outside their control and skill set. Instead, art market obliged entities should be able to rely on observable conditions such as: ● the transaction is consistent with the known profile of the customer, including the nature and scale of their expected economic activity; ● payments are executed through credit institutions or financial institutions that are subject to Union law or equivalent anti-money laundering and counter-terrorist financing requirements; and ● no factors giving rise to suspicion or heightened risk

Name of the respondent	Question	Answer
		have been identified in relation to the customer, the transaction, or the source of funds. ● Article 19(3): Taking into account that some businesses do not operate automated systems and may not be able to verify changes 'without delay' following updates to PEP lists as required under Article 19(2)(a), we request clarification along the following lines: "For obliged entities relying on manual systems, risk-sensitive frequency may be satisfied through: a. event-driven review (e.g. new transaction, change in client behaviour) b. periodic but non-systematic checks based on business judgment c. transaction-triggered reassessment rather than calendar-based screening" ● Article 23: Disproportionate burden of updating customer identification data in the absence of transactions or client engagement over a five-year period. Amendment proposal- Article 23(2)(a): additional "Where no transaction has occurred for a continuous period of five years, the business relationship may be treated as inactive for AML purposes and closed in customer due diligence records, with no further need for monitoring and with due diligence required upon any future reactivation". These measures would provide practical, proportionate solutions while ensuring that compliance responsibility and liability are allocated to entities with the resources and oversight to manage such obligations effectively

Name of the respondent	Question	Answer
		and thereby protecting small art market obliged entities from undue regulatory risk.
SYMEV	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In order to better align due diligence requirements with the low-risk and episodic nature of many transactions in the sector, we propose the following additional simplified due diligence measures. 1. New provision: Standing customer profile for repeat occasional low-risk customers within the scope of the Regulation The inclusion of such a provision would ensure that due diligence measures remain proportionate and risk-based, while taking into account the specific characteristics of the cultural goods market. Obliged entities should be permitted establish a standing customer profile for customers with whom they are in a business relationship, following initial verification in low-risk relationships, with no requirement for re-onboarding or repeated data collection for subsequent transactions, unless triggered by identified risk indicators or material changes in customer circumstances. 2. SYMEV recommends the introduction of a sector-specific provision, because the draft RTS does not sufficiently operationalise the risk-based approach in the context of cultural goods, in particular by failing to provide for the application of simplified due diligence in clearly defined low-risk scenarios. New provision – Simplified due diligence in the cultural goods sector In determining whether a low degree of ML/TF risk

Name of the respondent	Question	Answer
		exists in accordance with Article 33 of Regulation (EU) 2024/1624, obliged entities trading in cultural goods shall be able to take into account the following factors, in addition to the factors listed in Annex II of the Regulation: (a) a low level of risk associated with the customer; (b) lower value transactions; (c) transactions that demonstrate no complexity and are consistent with usual market practices in the sector; (d) the customer is established or resident in a jurisdiction assessed as presenting a low level of money laundering and terrorist financing risk; and (e) transactions where funds are channelled through accounts held with credit or financial institutions subject to EEA supervision.
SYMEV	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We realise that our comments in answer to this question are not directly in scope of the Articles of the RTS, but we do believe that they reflect the needs of our sector, which comprises mainly micro-businesses and small owner-managed businesses. AMLA Infrastructure proposal AMLA should develop a unified EU framework enabling micro-businesses, including art market participants, to meet CDD obligations through trusted infrastructure, combining an operational helpdesk, certified AML service providers, and structured reliance mechanisms. This framework could be implemented in phases to ensure legal clarity, operational readiness, and scalable adoption.

Name of the respondent	Question	Answer
		Phase 1 – Guidance and Operational Support ● Establish an AMLA helpdesk to bridge regulation and practice ● Provide practical interpretation of AML/CFT obligations ● Issue guidance on risk-based decision-making and escalation ● Clarify supervisory expectations and correct use of AML tools Phase 2 – Certification Framework ● Define EU-wide minimum standards for AML/CDD service provider certification, audit, and accreditation ● Align standards with existing EU and international frameworks ● Establish supervisory oversight of accredited providers Phase 3 – Structured Reliance Mechanism ● Enable formal reliance on certified third-party AML/CDD providers and obliged entities ● Introduce standards to which the certified providers would need to adhere in order to obtain certification, including: o Written confirmation of compliance and absence of red flags o Maintain confidentiality and data protection safeguards o Audit-ready record keeping o Establish a central EU register of approved providers

Name of the respondent	Question	Answer
		Phase 4 – Allocation of Responsibility ● Clarify that responsibility for AML checks rests with certified providers or performing obliged entities ● Ensure micro-businesses are not disproportionately exposed when relying on approved infrastructure Outcome A phased approach would progressively build trusted AML infrastructure, reduce duplication, improve legal certainty, and ensure consistent AML/CFT compliance across the EU while maintaining high standards and operational feasibility for micro-businesses.

Syndicat des Négociants d'Art (SNA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a	Pour l'essentiel, les RTS proposées s'appliquent indifféremment aux assujettis des secteurs financier et non financier. Elles s'appliquent ainsi à des Très Petites Entreprises (TPE) du secteur non financier, au même titre qu'à des banques systémiques opérant dans le monde, de sorte que les exigences contiennent une dysmétrie préjudiciable aux plus petits assujettis. Le texte des RTS débute pourtant bien en rappelant

Name of the respondent	Question	Answer
	specific sector or service should not be taken into consideration if they do not impact your sector.	(article 1) que le Règlement d'application veille à respecter le principe de proportionnalité affirmé aux articles 10 (1) et 11 (3) de l'AMLR, sans jamais déduire un contenu opérationnel différenciant, selon que l'assujetti est une TPE du secteur de l'art (ex : une galerie) ou une banque systémique mondiale. Au-delà de la centaine de pages de l'AMLR qu'un assujetti TPE aura des difficultés à appréhender, il doit en outre intégrer un contenu opérationnel très fourni qui invite le marchand d'art à une démarche très intrusive dans un secteur où la moindre susceptibilité de l'acquéreur le détourne de l'acte d'achat. Le SNA ne perçoit pas pourquoi les RTS n'intègrent ce principe de proportionnalité : • sur le recueil et la copie de la pièce d'identité de la contrepartie (articles 6 à 8 des RTS) ; en pratique, cette pièce d'identité est systématiquement présentée à l'occasion d'un achat lors d'un salon ou dans une galerie mais lorsqu'elle n'est pas disponible au moment de l'achat, elle peut parfois être communiquée a posteriori par des systèmes de messagerie ; le marchand d'art TPE n'a pas les moyens humains, techniques et financiers d'entreprendre d'adosser la réception à distance de cette pièce d'identité d'un niveau substantiel ou élevé au sens du Règlement eIDAS ; cette disposition du RTS doit offrir cette flexibilité d'une rencontre en face à face suivie d'une transmission à distance des éléments d'identité de la contrepartie sans passer par des niveaux substantiel ou élevé au sens du Règlement eIDAS ;

Name of the respondent	Question	Answer
		• sur la vérification des bénéficiaires effectifs (articles 10 à 15 des RTS) ; s'il est assez facile à une galerie française de s'enregistrer sur le registre français des bénéficiaires effectifs, il ne peut pas être raisonnablement attendu une telle démarche pour les 26 autres registres nationaux des bénéficiaires effectifs (un grand nombre de ces registres nationaux a d'ailleurs mis en œuvre des stratégies menant à rejeter les inscriptions d'assujettis qui ne sont pas des nationaux) et encore moins auprès des registres de bénéficiaires effectifs dans le monde, qui ne sont jamais accessibles pour une TPE (moyens humains, techniques et financiers limités) ; si l'abonnement à des bases de données privées et payantes est exigé pour cette phase de vérification, à tout le moins pour les cas de vigilance renforcée, les RTS doivent l'écrire ! • le sujet des personnes politiquement exposées (PPE) (article 19 des RTS) est un sujet complexe dans la mesure où une TPE est particulièrement incapable de vérifier par elle-même l'affirmation de la contrepartie sur son appartenance à cette catégorie de PPE, particulièrement dans un contexte hors UE ; dans ce cadre, les RTS devraient plus clairement dire qu'elles commandent aux assujettis, particulièrement dans les situations de vigilance renforcée ou au-delà de certains seuils de transaction à définir en fonction de la classification des risques, de s'abonner à une base de données payante est attendu pour entreprendre cette vérification.

Name of the respondent	Question	Answer
		• La granularité des informations sur la vigilance renforcée (EDD) contenue aux articles 25 à 28 des RTS est telle qu'elle nie le principe de proportionnalité visé à l'article 1 des mêmes RTS ; en outre la liste d'informations attendues à l'article 27 n'est absolument pas en ligne avec les pratiques du secteur de l'art ; • La constatation que les RTS (articles 19 et 29 et 30) exigent une vérification systématique de la base de données des contreparties de l'assujetti du secteur de l'art, sans distinguer selon que cette exigence concerne les relations d'affaires et/ou les clients occasionnels est assez déroutante ; non seulement l'exigence générale viole le principe de proportionnalité mais il n'y a pas lieu de savoir si un client occasionnel d'« hier » figure « aujourd'hui » ou « demain » sur une liste de sanctions, sauf à ce que ce client sollicite à nouveau le marchand d'art. C'est ici nier que cette vérification systématique représente un coût marginal plus important pour une TPE que pour une grande banque systémique ; c'est donner un avantage aux grands acteurs et attaquer les petits acteurs ; est-ce cela le principe de proportionnalité dont l'AMLA est censée trouver les implications opérationnelles ?
Syndicat des Négociants d'Art (SNA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	Si les RTS reprennent bien l'approche fondée sur les risques en distinguant ce qui relève des vigilances simplifiées, standards, complémentaires ou renforcées, nous ne pouvons que constater que les RTS manquent de s'adapter au secteur non financier et notamment du secteur de l'art en évoquant des informations qui ne

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	sont pas pertinentes. Mais surtout, comme indiqué dans notre réponse à la question 1, les RTS manquent de trouver un prolongement opérationnel au principe de proportionnalité. Tout se passe comme si la charge administrative attendue pour les TPE du secteur de l'art allait devenir telle qu'elle assurera à ces acteurs d'être respectivement sanctionnés par leurs commissions des sanctions nationales, à défaut de disposer des moyens humains, techniques et financiers pour mettre en place des exigences qui sont essentiellement taillées pour de grandes entreprises. Tout se passe comme si l'AMLA œuvrait à l'extinction des plus petits acteurs. Les dispositions les plus concernées sont celles visées dans la réponse à la question 1.
Syndicat des Négociants d'Art (SNA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Le marché de l'art sur les transactions supérieures à 10.000€ implique très souvent des acheteurs étrangers et hors UE (qu'ils soient clients occasionnels ou des relations d'affaires). Dans ce cadre, trouver des informations sur les bénéficiaires effectifs (de personnes morales), vérifier le statut de personne politiquement exposée des clients personnes physiques ou représentants légaux ou bénéficiaires effectifs de personnes morales et obtenir des informations publiques visant à crédibiliser leur stature financière relève souvent de la gageure pour le marchand d'art du gré à gré, dont la marge est déjà réduite pour quelqu'un qui prend des risques importants sur un marché

Name of the respondent	Question	Answer
		fluctuant, par rapport à un marché des enchères en plein essor et dont la prise de risque est quasiment nulle. Si l'AMLA ne comprend pas que les marchands d'art TPE n'ont pas les moyens de la conformité attendue des RTS, c'est qu'elle s'accommode de la disparition prochaine de ce marché du gré à gré, notamment (mais pas seulement) à cause des sujets de conformité. Les lignes directrices françaises sur le marché de l'art aiment à dire que le marchand d'art doit s'enregistrer sur le registre français des bénéficiaires effectifs pour vérifier les bénéficiaires effectifs des contreparties personnes morales, en omettant de reconnaître que dans la vraie vie, les acquéreurs à identifier sont situés en Asie ou aux Etats-Unis et que le registre français des bénéficiaires effectifs n'a aucune utilité en la matière, sans parler de la difficulté à se connecter via une unique interface pour avoir accès à tous les registres nationaux.
Syndicat des Négociants d'Art (SNA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	De nombreuses galeries de notre syndicat vivent de la relation spéciale qu'elles nouent avec un groupe de relations d'affaires anciennes et stables, composé de collectionneurs qui n'ont d'autre souhait que de dépenser leur fortune dans des œuvres d'art qu'ils (i) achètent plus par amour pour l'œuvre que pour l'investissement, ou (ii) les vendent lorsque leur appétit pour ces œuvres s'est estompé. Cette conception est totalement absente des RTS, qui

Name of the respondent	Question	Answer
		considèrent qu'une transaction répond nécessairement à une justification économique alors que la réalité est toute autre et que la réglementation sur la lutte anti-blanchiment mériterait d'être plus attentive aux réalités du marché. Les marchands d'art de notre syndicat aspirent à ce que les RTS reconnaissent que le marché de l'art n'est pas qu'un marché pour blanchisseurs et que la classification des risques de chaque marchand peut justifier de catégoriser certaines relations d'affaires sous une vigilance simplifiée, sans avoir à entreprendre des vérifications qui ne sont que coûteuses et inutiles, pour une clientèle étrangère au blanchiment d'argent. La réglementation telle qu'elle est aujourd'hui représentée par les RTS donne toujours plus l'image d'une LCB-FT qui vise à établir des procédures qui ennuient les bons marchands et leurs clients collectionneurs, à cause d'une minorité de blanchisseurs et de leurs complices les mauvais marchands. Plus les règles (RTS) sont précises, moins le marchand d'art œuvre à ce qui fonde son amour pour l'art et moins il est efficace pour lutter contre le blanchiment.
Syndicat des Négociants d'Art (SNA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Un des grands enjeux de la LCB-FT dans le secteur de l'art est d'établir que la provenance d'un virement ou d'une carte de paiement émane bien de l'acheteur qui se présente pour acheter une œuvre d'art. Malheureusement, le secteur financier ne concourt pas

Name of the respondent	Question	Answer
		avec le marchand d'art pour l'aider à y voir plus clair sur cette provenance. Les RTS non plus puisqu'elles valident la pratique de l'IBAN virtuel (article 9) sans requérir à l'établissement financier de partager l'information sur la provenance réelle et le titulaire du compte sous-jacent. Il est ainsi fréquent que le marchand d'art ne puisse établir la provenance des fonds, ou vérifier l'affirmation du client. Le marchand d'art étant démuni, il ne comprend pas en quoi il devrait encourir une responsabilité pénale, disciplinaire et civile sur un sujet de provenance qu'il ne peut de lui-même maîtriser. Rien dans les RTS (ex : Article 31) n'invitent le secteur financier à partager avec les assujettis du secteur non financier les informations essentielles au travail du marchand d'art, qui doit s'organiser pour obtenir de son banquier qu'il veuille bien l'éclairer, quand il le veut bien, sachant que tout le monde sait qu'un assujetti TPE n'obtiendra jamais rien d'une banque systémique. Le problème est le même pour les cartes de paiement émises sur des comptes de monnaie électronique ou des comptes de crypto actifs. Rien dans le terminal de paiement mis à disposition par le banquier ne permet de connaître l'origine des fonds sur des flux de paiements toujours plus tokénisés.
Syndicat des Négociants d'Art (SNA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Szerencsejatek Zrt - Hungarian National Lottery	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	1) Data collected during customer due diligence Section 1, Article 3 of the draft RTS requires, among others, the collection of the following data: in the case of the address, the full country name, settlement name, postal code and other identifying data; in the case of the place of birth, at least the name of the country and all other data contained in the identification document. Currently, our Company collects the city of birth data as part of customer due diligence, as most identification documents contain data on this (and not on country of birth). Will it be necessary to collect data on country of birth instead? Annex I, Paragraph (a) of the draft RTS requires, among others, the collection of data such as the 'national identification number' and the 'personal administrative number' (the latter where available). We need guidance on exactly what data can be interpreted as such? 2) The issue of player facial identification Question related to Section 2, Article 7, Paragraph 1., Section 2, Article 7, Paragraph 2. and Section 2, Article 7, Paragraph 3. (a) of the Draft RTS: Our company currently checks player identification documents by querying official public registers operated at ministerial level (personal data and address register, central travel document register, road transport permit register).

Name of the respondent	Question	Answer
		However, the referenced regulations can also be interpreted in such a way that if our Company cannot verify the data on the identification document by querying the public register, we should use an IT solution that allows the player's facial image to be sent for comparison. A practice of (primary identification by querying a public register can be sufficient to comply with the requirements of the AMLR and the draft RTS, or it is necessary in all cases to examine whether the person intends to register whose identification document is used for registration. A related question is that according to Section 2, Article 7, Paragraph 4. of the Draft RTS, Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article and they shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624. We need guidance on the implementation of the referenced certificate, and on the question of what the content and purpose of the certificate is in the case that the verification (customer due diligence) of the player fails as set out in Article 7, Paragraph 4. of the draft RTS: in such case, once the verification has been completed, can the player participate in the game, or does the fact of the failure of the due diligence exclude the players

Name of the respondent	Question	Answer
		enter to the game, also together with the fact of the certificate? In the latter case, what is the actual purpose of the certificate if the player cannot enter the game? 3) Application of Regulation (EU) 910/2014 Question related to Chapter III, Article 22, Paragraph (6) of the AMLR and Section 2, Article 7, Paragraph 1. of the Draft RTS: Our Company currently applies customer due diligence in accordance with Article 22, Paragraph (6) a) of the AMLR, however, an interpretation issue arises whether the draft RTS does not primarily order the application of the solution in accordance with Article 22, Paragraph (6) a) of the AMLR, despite the fact that the AMLR allows for the alternative application of solutions a) and b). We need guidance on the question of what customer due diligence tools our Company must use to comply with the requirements of the AMLR and the draft RTS, and if we need to comply with the requirements of Regulation (EU) No 910/2014, what technological solution we can use to enable this.

	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	RTS should avoid interpretations that would make ordinary over-the-counter and transaction-based services impracticable where the ML/TF risk does not justify such measures. We do not repeat our detailed comments in this field, as they are set out under the questions to which they most directly relate.
Tavid AS	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree that the RTS, as currently drafted, allow for effective application of the risk-based approach in all transaction-based business models. 1) Our concern relates in particular to draft RTS Article 30, point (c)(ii), on screening customers against targeted financial sanctions lists following changes to those lists. Regular screening of a customer base is appropriate where an obliged entity maintains accounts, wallets, funds, assets or another ongoing relationship through which a customer may transact without renewed interaction and renewed checks. The same approach is disproportionate where the business model is limited to occasional transactions and the customer cannot initiate a further transaction without a new interaction with the obliged entity. In such a model, the relevant control point is the initiation or execution of a new transaction, at which point sanctions screening can be performed before the service is provided. We propose that Article 30 be clarified as follows: "For obliged entities whose business model is transaction-based and who do not maintain accounts, wallets, funds or assets for the customer and do not enable the

Name of the respondent	Question	Answer
		customer to initiate transactions without renewed interaction with the obliged entity, the obligation to screen customers following changes to targeted financial sanctions lists shall apply to customers in respect of whom a transaction is being initiated or carried out. It shall not require recurrent screening of historical customers." This clarification would preserve sanctions effectiveness while aligning the obligation with the actual risk and operational structure of transaction-based services. 2) We have concerns regarding the requirement in Article 4 of the draft RTS to collect the customer's place of birth at a detailed level, such as the city, town or village, where available. In our view, the requirement should be limited to the country of birth. Requiring the collection of a more granular place of birth raises concerns under the data minimisation principle set out in Article 5(1)(c) GDPR, according to which personal data must be adequate, relevant and limited to what is necessary in relation to the purposes for which they are processed. While the country of birth may, in principle, have relevance for AML/CFT risk assessment, it is unclear what additional AML/CFT value is provided by collecting the city, town or village of birth. We do not consider that such detailed information materially improves the assessment of customer risk, the detection of suspicious

Name of the respondent	Question	Answer
		activity, or the application of customer due diligence measures. The collection of such data therefore appears disproportionate where it is not linked to a clear and demonstrable AML/CFT purpose. The requirement would also create practical operational difficulties. Many obliged entities do not collect detailed place-of-birth data as part of their ordinary onboarding or transaction processes, particularly where this information is not shown on identity documents issued by certain Member States. If the RTS requires such data to be collected only “where available”, obliged entities may nevertheless need to create separate processes, system fields, retention rules and staff instructions for exceptional cases where the data happens to be available for one customer, while it is not generally collected for others. This creates complexity without a corresponding risk-management benefit. We therefore propose that Article 4 of the draft RTS should clarify that the place of birth requirement is limited to the country of birth. Alternatively, the RTS should state that more detailed place-of-birth information, such as city, town or village, is not required to be collected, verified or retained unless the obliged entity determines, on a risk-sensitive basis, that such information is necessary in the specific case.
Tavid AS	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	There are important situations where information that might be understood as requiring verification is unavailable, or where verification would require disproportionate additional documentation. The issue

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	concerns both customer identity verification and beneficial-owner verification. As currently drafted, the AMLR and the draft RTS do not clearly state whether all relevant identification attributes must be independently verified, or whether it is sufficient to verify identity of a natural person based on a passport, national identity document or equivalent reliable source. To avoid uncertainty, the RTS should expressly address this distinction. For natural-person customers, draft RTS Article 6 should clarify that verification of identity means verifying that the person is the person identified by the reliable document or source used for verification. It should not, by default, require separate documentary verification of every identification attribute collected under the AMLR. In practice, verification data for some attributes may simply be unavailable. For example, place of birth may not be shown on identity documents issued by certain Member States, for example, Latvia. Similarly, usual place of residence is not always shown on a passport or national identity document, and reliable address-verification sources are not uniformly available to obliged entities across Member States. The problem is particularly acute in over-the-counter transactions. Requiring customers to provide separate address evidence, such as a utility bill, tax certificate or bank statement, would be burdensome and disproportionate. It is also operationally unrealistic for occasional over-the-counter transactions: a customer

Name of the respondent	Question	Answer
		cannot reasonably be expected to carry documentary evidence of residence in addition to an identity document. This is especially important because AMLR Article 22(4) requires the customer to be identified and verified in cash transactions above EUR 3,000. If this were interpreted as requiring independent documentary verification of every collected attribute, compliance would in many cases be practically impossible at the point of service. We propose that Article 6 be supplemented as follows: "For the purposes of this Article, verification of the identity of a natural person shall mean verification, on the basis of a document or source referred to in this Article, that the person is the person identified by that document or source. Where identification attributes are not contained in the document or source used to verify identity, the obliged entity may collect them from the customer or another available source." The same clarification is needed for beneficial owners under draft RTS Article 10. Beneficial-owner due diligence involves different steps: collecting beneficial-owner identification data (AMLR Article 62 (1)(a)), verifying the identity of the beneficial owner to the extent reasonably possible, and verifying the ownership or control link by which the person qualifies as beneficial owner. Central beneficial-ownership registers may assist with the ownership or control link, but they cannot be used to verify every attribute of the beneficial owner, such as residential address, place of birth or

Name of the respondent	Question	Answer
		identity-document number. We propose that Article 10 clarify that reasonable measures to verify a beneficial owner do not require independent verification of every beneficial-owner identification attribute unless required by enhanced due diligence, inconsistency, suspicion or the ML/TF risk of the case.
Tavid AS	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose a separate additional simplified due diligence measure in this field. Instead, we propose the targeted clarifications set out in our responses to Questions 2 and 3. Those clarifications would allow the existing CDD framework to be applied proportionately to lower-risk, transaction-based and over-the-counter services without reducing the effectiveness of AML/CFT controls.
Tavid AS	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We kindly request clarification of the interaction between Article 80 of Regulation (EU) 2024/1624 and currency exchange services. Article 80(1) AMLR is worded broadly. It applies to "persons trading in goods or providing services" and provides that such persons may accept or make a payment in cash only up to an amount of EUR 10,000, or the equivalent in national or foreign currency, whether the transaction is carried out in a single operation or in several operations which appear to be linked. On the basis of the wording "persons trading in goods or providing services", we interpret that currency exchange services are covered by the cash-payment

Name of the respondent	Question	Answer
		limit. Currency exchange is a service provided to customers, and a currency exchange office may accept cash and make cash payments when one currency is exchanged for another. Therefore, unless a specific exclusion applies, the current wording appears to prohibit currency exchange transactions above EUR 10,000 where the transaction is carried out as a cash-to-cash currency exchange. If this is the intended outcome, it should be stated clearly because it has a material operational impact on professional currency exchange service providers. If this is not the intended outcome, we kindly request AMLA to clarify, in the RTS, accompanying guidance or through an appropriate referral to the Commission, that Article 80 is not intended to prohibit currency exchange services above EUR 10,000 when carried out by obliged entities subject to AML/CFT and CDD obligations. Kindly note that the uncertainty described above is also supported by the fact that certain Member States already have cash-payment limitation rules in place, but have made clear exceptions for currency exchange services. For example, Denmark has a general limitation of DKK 15,000 for cash payments, while currency exchange services are specifically excluded. Similarly, Bulgaria has a limitation on cash payments of approximately EUR 5,112, while currency exchange services are excluded from that limitation. In the absence of clarification, obliged entities providing

Name of the respondent	Question	Answer
		currency exchange services may be required to interpret the words “persons trading in goods or providing services” as covering currency exchange services, with the consequence that cash-to-cash currency exchange transactions of EUR 10,000 or more would be prohibited. A harmonised clarification is necessary to avoid divergent national interpretations, inconsistent supervisory expectations and legal uncertainty for currency exchange service providers operating across Member States.
Tavid AS	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Tavid AS	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	29
Tavid AS	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	AMLR Articles 29, 30 and 31 refer to business relationships or occasional transactions involving natural or legal persons "from" a relevant third country. For natural persons, the meaning of "from" is unclear. It may refer to residence, nationality, place of business or activity, place of birth, or another connecting factor. Without clarification, obliged entities and competent authorities may apply different standards across Member States, which would undermine harmonisation and create uncertainty in customer risk assessment. For the purposes of applying enhanced due diligence measures linked to a third country, a natural person should be regarded as being “from” a third country only where that person is resident in, or holds the nationality

Name of the respondent	Question	Answer
		of, that third country. Place of birth should not, by itself, constitute a sufficient connecting factor for determining that a natural person is “from” that third country. This would preserve the risk-based approach while ensuring that the concept of a person "from" a third country is applied consistently and proportionately across Member States.
Tavid AS	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Tavid AS	Do you have any comments on the Annex in the draft RTS?	No
Tavid AS	How would you rate the proposals set out in the draft RTS overall?	Good
Tavid AS	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup	No significant additional costs

The Association of Financial Markets in Europe - AFME	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	This question is not applicable to AFME as a trade association.
The Association of Financial Markets in Europe - AFME	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Proportionality and risk-based approach AFME welcomed the EBA's earlier introduction of Article 1, which clearly establishes the risk-based approach as the overarching principle of the RTS and its implementation. In this context, AFME understands that all provisions of the RTS are intended to be applied in a manner that is proportionate to the level of ML/TF risk, and that obliged entities should be permitted to exercise appropriate judgement in calibrating their controls accordingly. Supervisory expectations and practices should likewise reflect this principle, with assessments of compliance taking into account the risk profile of the customer, product and activity in

Name of the respondent	Question	Answer
		question. The com-ments below are therefore intended to support the consistent and effective operationalisation of the risk-based approach across the RTS. AFME members note that, across multiple provisions of the draft RTS, Member States currently apply incon-sistent supervisory expectations, including in relation to what constitutes 'equivalent' documentation and ac-ceptable verification methods. This fragmentation risks undermining the risk based and proportionate applica-tion of the RTS and creates operational complexity for cross border groups. AFME therefore supports AMLA in facilitating a harmonised approach across the Union and urges AMLA to work closely with National Compe-tent Authorities to ensure consistent supervisory expectations and outcomes in the application of these RTS. We set out in the relevant boxes our thoughts on amendments to Recitals and Articles proposed by AMLA, as well as further amendments suggested by AFME members for AMLA to consider. GENERAL COMMENTS Clarification of the certification requirements for a document Throughout the RTS, there are multiple references to the 'certification' of documents. AFME members would

Name of the respondent	Question	Answer
		welcome clarification on whether the same requirements apply to all documents and whether the same persons may perform the certification, or if different requirements apply depending on the type of document or the cat-egory of persons to be identified. We note that: • Recital 5 states that, for documents relating to non-natural persons, these can be 'certified' by an 'in-dependent professional or a public authority.' • Article 6 refers to a 'certified copy' of an identity document, passport, or equivalent for the purpose of identifying a natural person. • Article 10 (b) (iv) requires that documents confirming the identity of the beneficial owner be 'certified by persons that are authorised for document certification purposes.' If the three cases are intended to have different requirements for certification, AFME members would welcome confirmation of which 'professionals' are in scope, how obliged entities should determine whether they are sufficiently 'independent' or 'authorised for document certification purposes,' and whether there are any spe-cific requirements for the certification of copies of identity documents. We also propose that other obliged enti-ties are considered persons authorised for document certification purposes. Furthermore, we note that, for certification purposes, a 'professional' may be either external or internal to an

Name of the respondent	Question	Answer
		organisation. This could include an external individual, such as a notary, or an internal individual who is able to certify independently, such as in-house legal counsel. In recognition of our member firms' global operating models, this may also extend to roles such as a company or corporate secretary. The 'number of the identity document' collected for beneficial ownership information While the AMLR requires collecting a broad range of customer data as detailed in Articles 22 (1), 22 (2) and 62 (1) (a) AMLR, the core purpose of the verification framework (Articles 20, 22 (6), 22 (7) AMLR) is to establish and confirm the identity of the customer and, when necessary, the beneficial owner. This means using reliable independent sources to verify the key identity details and truly understand the ownership structure. Therefore, our verification efforts should concentrate primarily on essential identity elements, such as name, date of birth, and place or country of residence. Collecting many data points is necessary, but requiring each one to be veri-fied with the same rigorous standard as core identity details would be excessive and inconsistent with a risk-based approach.
The Association of Financial Markets in Europe - AFME	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	This question is not applicable to AFME as a trade association.

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
The Association of Financial Markets in Europe - AFME	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Simplified Due Diligence Non-exhaustive nature of Article 33 Article 33 AMLR permits obliged entities to apply simplified due diligence (SDD) where a business relation-ship or transaction presents a lower degree of risk, based on the factors set out in Annexes II and III. Members welcome SDD as an important tool to enable a more efficient allocation of resources, allowing greater focus on higher-risk situations while applying proportionate measures in lower-risk cases. In practice, obliged entities should be able to apply a simplified approach across all lower-risk business rela-tionships or transactions. AFME therefore requests confirmation that Article 33 AMLR is not exhaustive in its prescribed measures, and that obliged entities may, in addition to those set out by AMLA, apply measures that are proportionate to the nature and size of the counterparty and to the risks identified. Such an approach would support the effective operation of a risk-based framework and enable resources to be directed where they are most needed. Challenge of making use of simplified due diligence in practice The application of simplified due diligence (SDD) can be

Name of the respondent	Question	Answer
		challenging, as the processes, assessments, and documentation required to justify its use to auditors and supervisors are often more onerous than continuing to apply standard CDD. This creates a disincentive for obliged entities to apply SDD, even in lower-risk scenarios, and may lead to an erosion of the risk-based approach envisaged by the AMLR. AFME therefore requests that AMLA clarify that the proportionate use of SDD is consistent with supervisory expectations, would support the effective and proportionate application of a risk-based approach, and should not require such a level of justification that proves to be more burdensome than the use of standard CDD in lower-risk situations. In the PDF version of our submission, we include a table setting out current SDD possibilities to continue under the AMLR. We also call for extending SDD to pension products. We advocate for the judicious application of sectoral simplified measures to pension products, consistent with the treatment of pooled accounts as per our request above. This would extend to employer-sponsored/financed pension schemes, including those originating from jurisdictions not specified in Articles 29-31 AMLR, and all company pension schemes, regardless of their sponsorship. The rationale for this lies in the inherent low ML/TF risk associated with these

Name of the respondent	Question	Answer
		offerings, coupled with their existing comprehensive national regulatory oversight.
The Association of Financial Markets in Europe - AFME	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We offer comment on the specific articles and recitals in the appropriate boxes which follow. We explain our points more fully in the PDF version of our submission, circulated to the relevant stakeholders and published on the AFME website.
The Association of Financial Markets in Europe - AFME	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 22 (1) (a) (ii) AMLR requires obliged entities to obtain the 'place and full date of birth' for relevant natural persons. In its discussion of the changes made following consultation on its first draft of the RTS, the EBA recognised there is limited utility in interpreting 'place' to include 'city' when recording details of the birth of certain clas-ses of persons, and the costs of doing so would likely outweigh any benefits obtained. As such, it clarified that 'place' should be interpreted to include 'at least the country of birth' (emphasis in the EBA original), and need not include 'city'. For beneficial owners, current due diligence practice is to collect the country of residence but not the city. While the jurisdiction in which a beneficial owner is resident is recognised as a legitimate indicator of potential ML/TF risk, the individual city of residence within a particular country is unlikely to affect in any

Name of the respondent	Question	Answer
		material way the ML/TF risk posed. Consequently, the value added by collecting the city of residence for due diligence as-sessment of beneficial owners is limited. Given this limited value added, and the analogous recognition by the EBA that the interpretation of 'place' to include city for other classes of persons is a cost without a benefit, we request that the obligation to collect 'city, or its nearest alternative' in Article 3 (b) be removed for beneficial owners, or, if AMLA does not wish to delete entirely, that the reference to 'city' be moved to and combined with (c), such that it would be collected 'where available'.
The Association of Financial Markets in Europe - AFME	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	AFME members note that the addition of the word 'act' in Article 6 (5) does not in itself raise significant con-cerns. We note the practical efficiency benefit in permitting non-face-to-face measures (like eID or EUDI Wal-lets) to be used in face-to-face contexts to complete verification within seconds. We welcome measures which promote the adoption of digital solutions in all verification scenarios. Members have however identified operational uncertainty arising from the interaction between Article 6 (3) and the practical processes used to obtain and verify identity documents.

Name of the respondent	Question	Answer
		In practice, institutions are exploring a range of solutions to address these challenges, including the use of digi-tal verification technologies or external service providers capable of validating machine-readable identity doc-uments. However, members emphasise that clear and consistent supervisory expectations are necessary to en-sure that such approaches are recognised across the EU as fulfilling the requirements of Article 6. AFME members would welcome clarification that the verification requirement is limited to confirming the identity of the relevant natural person, and therefore only extends to those data points necessary for that pur-pose, and does not extend to additional information that is not required to establish identity. AFME members consider that this reflects the intent of the co-legislators, as set out in Recital 4. To this end, we suggest the addition of the following paragraphs: 8. Verification pursuant to this paragraph shall be limited to the data necessary to verify the identity of the natural person concerned, and therefore only extends to those data points necessary for that purpose (i.e., full name, date of birth, country of residence). Verification does not extend to the verifi-cation of additional data that is that is not required to establish identity.

Name of the respondent	Question	Answer
		9. Obliged entities shall not be required to re-verify data that has already been verified (including in accordance with the applicable legal framework in force prior to entry into force of this RTS) unless there is a specific reason to doubt the accuracy of the original information. This applies to Articles 6 and 7.
The Association of Financial Markets in Europe - AFME	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	AFME members note AMLA's editing of what is now Article 7 (3) (e) inserts 'valid and…' immediately before 'up-to-date'. It is not clear what this insertion is intended to signify, or whether AMLA intends there to be a distinction between the two (which the use of both may imply). AFME members would welcome clarification that the verification requirement focuses on confirming the identity of the relevant natural person in non-face-to-face situations and does not impose any requirement (such as a requirement to re-verify any previously col-lected data where no substantive change has occurred) beyond this purpose. Furthermore, AFME members note that currently, Members States apply an inconsistent approach to their ex-pectations in this area, specifically in respect of 'equivalent' documentation, and we support AMLA in facilitat-ing a harmonised, proportionate and risk-based approach across the Union. We urge AMLA to work with

Name of the respondent	Question	Answer
		Na-tional Competent Authorities to ensure consistent application of supervisory expectations.
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	AFME members welcome the adoption of a risk-sensitive approach, recognising the importance of proportion-ate measures when assessing ownership and control structures. Members note that the wording is technology neutral, allowing obliged entities to apply manual, automated, or AI-supported processes in carrying out such assessments. Members would welcome confirmation that the term 'assess' is intended in the context of propor-tionality and risk-based principles, permitting firms to utilise technology-supported assessment solutions, pro-vided that outcomes are appropriate and satisfy supervisory expectations.
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	AFME members note the overarching principles of proportionality and following a risk-based approach now set out in Article 1. With these in mind, AFME members request AMLA to clarify that the presence of non-EU entities should only be relevant where those jurisdictions present heightened ML/TF risk. Criterion 1 (b) should refer to high-risk third countries as defined in the AML Regulation, rather than to all non-EU jurisdictions.
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	AFME members reiterate their concern regarding the current scope and practical interpretation of 'senior man-aging official' (SMO) under Article 63 AMLR. The Level 1 definition extends beyond members of the management body in its management function to 'natu-

Name of the respondent	Question	Answer
		ral persons who exercise executive functions […] and are responsible, and accountable to the management body, for the day-to-day management' of the entity. In practice, this supplementary clause remains insufficiently precise and risks being interpreted too broadly, potentially capturing multiple layers of senior employees below the formal management body. AFME under-stands this clause to operate as a fallback, for example where there is no clearly identifiable management body, which would be consistent with a proportionate, risk-based approach. Members note that, as a result, the collection of SMO data under Article 13 may become disproportionate, par-ticularly for wholesale institutions operating complex group structures. Overly broad interpretations would significantly increase the number of individuals subject to identification, verification, and ongoing CDD obli-gations, without delivering a commensurate improvement in ML/TF risk mitigation. AFME recognises that AMLA's mandate under the RTS is limited and that substantive amendments to the Lev-el 1 definition would need to be addressed by the co-legislators. Nevertheless, members consider it important to emphasise the operational challenges and risks of inconsistent interpretation across Member States. In the absence of legislative amendment, AFME

Name of the respondent	Question	Answer
		encourages AMLA to issue Level 3 guidance to provide su-pervisory clarity on the practical scope of the SMO concept. Such guidance could help ensure a proportionate and harmonised approach until the Level 1 framework is revisited, reducing the risk of inconsistent reporting to transparency registers and avoiding undue operational burden for obliged entities.
The Association of Financial Markets in Europe - AFME	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	17
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Established distribution models and Level 1 framework The RTS appear to insufficiently distinguish between the principal fund distribution models operating within the EU. In particular: • under the register model, the CIU maintains a direct relationship with the investor and performs CDD accordingly. • under the intermediated (CSD) model, the CIU maintains a business relationship with a financial in-termediary (distributor), while the distributor maintains the business relationship with the underlying investors. In the latter case, consistent with Article 2(19) AMLR, the CIU does not have a business relationship with the underlying investors. Accordingly, the AMLR framework does not require the CIU to identify and verify those investors directly, provided that appropriate reliance is placed on the intermediary.

Name of the respondent	Question	Answer
		Article 17, read together with Recital 14, risks blurring this distinction by implicitly extending identification expectations to underlying investors even in the absence of a direct business relationship. This would consti-tute a material departure from the Level 1 framework. Article 17 conditions reliance on the intermediary on a number of cumulative criteria, including that the rela-tionship is assessed as 'low or standard risk'. AFME considers that this condition is unduly restrictive and not aligned with a genuinely risk-based approach. In particular, a 'high risk' classification may arise from a range of factors – including product features, distribu-tion channels or jurisdictional elements – that do not, in themselves, indicate deficiencies in the intermediary's AML/CFT framework. As currently drafted, the provision risks creating a binary outcome whereby reliance is effectively precluded in a wide range of legitimate scenarios, irrespective of the robustness of the intermedi-ary's CDD processes. This would, in turn, undermine reliance frameworks that are well-established, contractual-ly governed, and subject to supervisory oversight. Where the conditions for reliance are not met, Article 17 would require CIUs to identify and verify underlying investors.

Name of the respondent	Question	Answer
		AFME considers that this would raise significant operational and proportionality concerns. In many cases, CIUs would be required to perform CDD on a potentially very large number of underlying investors who have al-ready been subject to full CDD by the intermediary. This would result in duplication of controls, contrary to the principle of proportionality in Article 1 of the draft RTS and the broader risk-based approach underpinning the AMLR. In practice, CIUs may not have access to the necessary information, particularly where intermediaries are located outside the EU or where commercial considerations limit information sharing between competing entities. Even where reliance is permitted, the requirement to obtain information on underlying investors 'without un-due delay' would necessitate the establishment of complex legal and technical frameworks for data sharing, with associated cost and feasibility implications. Taken together, these elements risk: • disrupting well-functioning and widely used distribution models in the Union; • reducing the attractiveness of certain distribution channels; • and creating unintended competitive distortions between market participants. These effects would not be justified by a corresponding enhancement in AML/CFT effectiveness, given that underlying investors are already subject to CDD at the

Name of the respondent	Question	Answer
		level of the intermediary. Proposed approach AFME considers that the current drafting should be reconsidered to ensure alignment with the Level 1 frame-work and to preserve the effectiveness of existing distribution models. Two alternative approaches could be considered: • Option 1 – Deletion Delete Article 17 and Recital 14 in their entirety. The AMLR already provides a clear framework for the identification of customers and reliance on third parties. In the absence of a direct business relationship between the CIU and underlying investors, ex-tending identification requirements to those investors is not supported by Article 20(1)(h) AMLR. • Option 2 – Targeted revision If Article 17 is retained, AFME recommends limiting the conditions for reliance to those necessary to ensure the robustness of the intermediary's AML/CFT framework. In particular: • the condition relating to the risk classification of the relationship ('low or standard risk') should be removed. • greater emphasis should be placed on whether the intermediary: o is subject to AML/CFT obligations equivalent to those in the AMLR; and

Name of the respondent	Question	Answer
		o applies effective, risk-sensitive CDD measures to its own customers. This would better reflect existing market practices and ensure that reliance is assessed on the basis of the quality of the intermediary's AML framework, rather than the CIU's overall risk rating of the rela-tionship.
The Association of Financial Markets in Europe - AFME	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	20
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	AFME members note that, in practice, the application of simplified due diligence (SDD) can be challenging, as the processes, assessments, and documentation required to justify its use to auditors and supervisors are often more onerous than continuing to apply standard CDD. This creates a disincentive for obliged entities to apply SDD, even in lower-risk scenarios, and may lead to an erosion of the risk-based approach envisaged by the AMLR. AFME therefore requests that AMLA clarify that the proportionate use of SDD is consistent with supervisory expectations, facilitates the effective and proportionate application of a risk-based approach, and should not require such a level of justification that proves to be more burdensome than the use of standard CDD in lower-risk situations.
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	AFME members note that Article 22 (a) requires account holders to be obliged entities in order to fall within scope of this provision. This may have the unintended consequence that certain types of pooled accounts –

Name of the respondent	Question	Answer
		such as rent deposit accounts or school class accounts – which are currently subject to SDD would fall outside of scope. Members consider that this would not support an efficient and effective allocation of resource and is unlikely to reflect the intention of the co-legislators. AFME has noted elsewhere that the measures set out in Article 33 (1) AMLR and in Section 5 of the draft RTS should be understood as illustrative rather than exhaustive. Given that no regulatory framework can anticipate all possible customer types, account structures, or risk scenarios, it is important that obliged entities retain the ability to apply appropriate, risk-based measures according to the circumstances of the situation at hand. With this in mind, AFME requests that AMLA clarify this point to ensure that low-risk account types currently subject to SDD may continue to be treated as such, and that a proportionate, risk-based approach can be applied to analogous accounts and situations that may arise in future. With regard to the requirement that credit institutions must be satisfied that the account holder will provide funds 'immediately' – we have also noted previously that if taken literally, this provision would be close to impossible to fulfil. We therefore suggest that it be amended to 'promptly' or 'without undue delay' to

Name of the respondent	Question	Answer
		ensure a shared understanding of the limits of practical applicability.
The Association of Financial Markets in Europe - AFME	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	AFME members strongly support EU and AMLA efforts to design and implement an effective and efficient EU AML/CFT regime. Members welcome the efforts of the EBA and AMLA to clarify the timelines for the treatment of customers and business relationships entered into prior to the entry into force of the AML Regulation and associated technical standards. However, industry is concerned that delays in finalising the RTS, without corresponding adjustments to their entry into force, may result in rules being developed under compressed timelines, without sufficient opportunity to fully assess their implications, and may leave insufficient time for obliged entities to implement the necessary systems and controls. Several authorities have referred to the need for 'proportionate' and 'appropriate' supervision in the initial years of application. While this is welcome, it may give rise to differing interpretations across Member States, particularly for entities subject primarily to national supervision and only indirectly to AMLA oversight. In this context, AFME requests that AMLA recognise the limited timeframe available to industry to develop and implement systems and controls, and that supervisors across Member States adopt both high standards and a

Name of the respondent	Question	Answer
		proportionate, pragmatic approach during the implementation phase as obliged entities work to meet the new requirements. The public and private sectors are partners in the fight against financial crime. By working together in a spirit of ambition and good faith, we can maximise the effectiveness of the EU AML package and strengthen the pre-vention of money laundering and terrorist financing, both within Europe, and beyond. Lastly, AFME notes that Article 33 still refers in the second paragraph to 'publication date' rather than 'appli-cation date' as the starting point. We assume AMLA means 'application date' (as mentioned in the Recital 25) and would be grateful if this could be confirmed in Article 33.
The Association of Financial Markets in Europe - AFME	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
The Association of Financial Markets in Europe - AFME	Please specify which recital you refer to, and share your comments below.	Recital 10 AFME welcomes the clarification that identification of senior managing officials (SMOs) should occur only where all possible means of identifying the beneficial owner have been exhausted, or where doubts remain regarding beneficial ownership. AFME members nevertheless continue to face significant uncertainty regarding the practical interpretation of the SMO concept. The Level 1

Name of the respondent	Question	Answer
		definition risks an overly expansive interpretation extending beyond formal management body members to multiple layers of operational management, particularly in complex wholesale structures. This could significantly increase CDD obligations without a commensurate ML/TF benefit. Members also note that the interaction between the 25% beneficial ownership threshold and the SMO fallback mechanism may cause SMO identification to become routine rather than exceptional in many legitimate wholesale structures, including listed companies, fund structures and SPVs. AFME further notes that Article 13 requires substantially the same identification and verification information for SMOs as for beneficial owners, potentially creating significant operational burdens for large corporate groups. AFME recognises that the SMO definition is established at Level 1. However, pending any legislative amendment, members request Level 3 supervisory guidance on the practical interpretation of the SMO concept, including the meaning of 'doubts' regarding beneficial ownership and the interaction with the AMLR tipping-off safeguard. Such guidance would support consistent and proportionate implementation across Member States. Recital 12 AFME welcomes the clarification that persons purporting to act (PPTAs) should be understood as persons exercising a formal power of representation on behalf of the customer.

Name of the respondent	Question	Answer
		This distinction is particularly important for wholesale banking models, where operational staff may interact with obliged entities without holding formal authority. Capturing such persons would create disproportionate identification and verification obligations without corresponding ML/TF benefit. Members also note the importance of this clarification for reporting frameworks such as BARIS. Without confirmation that only persons with legally conferred authority are captured, obliged entities risk excessive and unnecessary reporting obligations. AFME therefore requests confirmation that the PPTA concept applies solely to persons exercising legally conferred authority, and not to persons acting merely in the course of their professional duties. If this clarification cannot be provided at Level 2, AFME requests Level 3 guidance to support consistent implementation. Recital 14 AFME welcomes the clarification regarding the circumstances in which collective investment undertakings (CIUs) may rely on intermediary institutions for identification and verification of final investors. Members note that similar operational considerations may also arise in sell-side contexts involving brokers and other regulated intermediaries interacting with CIUs. A proportionate, risk-based approach could allow reliance on regulated intermediaries without systematically obtaining underlying investor details, provided information can be obtained without undue delay if

Name of the respondent	Question	Answer
		required. AFME notes that this approach is broadly consistent with existing regulatory practice, including BaFin guidance recognising the practical challenges associated with identifying final investors in complex fund structures. AFME does not propose detailed sell-side provisions within this RTS. However, signalling that a consistent, risk-based approach may apply across both buy-side and sell-side intermediary arrangements would support proportionate implementation and reduce operational uncertainty. Recital 21 AFME welcomes Recital 21, which recognises that information already held within a group may contribute to meeting AML/CFT requirements and reduce unnecessary duplication. Members consider this principle particularly important for cross-border financial groups. AFME notes that AMLA has now published separate draft RTS on group-wide requirements and welcomes the fact that these RTS address information sharing within groups, including in relation to third-country branches and subsidiaries. Members emphasise the importance of alignment between the CDD RTS and the group-wide requirements RTS, including with respect to data protection, confidentiality and legal restrictions on information sharing across jurisdictions. AFME also requests clarification regarding the recital's reference to understanding 'the purpose and intended

Name of the respondent	Question	Answer
		nature of the beneficial ownership or occasional transaction'. Members query whether 'business relationship' would be more appropriate in the context of ongoing due diligence obligations. We explain our thoughts on the recitals more fully in the PDF version of the response, noting that we are limited to 5000 characters by AMLA's web form.
The Association of Financial Markets in Europe - AFME	Do you have any comments on the Annex in the draft RTS?	No
The Association of Financial Markets in Europe - AFME	How would you rate the proposals set out in the draft RTS overall?	Neutral
The Association of Financial Markets in Europe - AFME	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may	Not applicable/no information available

Name of the respondent	Question	Answer
The Danish Association of Chartered Estate Agents (DE)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In our opnion it will be possible, in most cases to apply the proposed regulation. We kindly request that due consideration be given to our comments set out below.
The Danish Association of Chartered Estate Agents (DE)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 5. Regarding article 5 it should be clarified that, for jurisdictions maintaining a centralised digital register of undertakings, an extract from such register, or information obtained therefrom, should be regarded as sufficient evidence of incorporation. It will not in all cases be possible to obtain documentation dating back to the time of incorporation, including for associations and other entities that do not qualify as undertakings. For such entities, it should be considered sufficient that their incorporation and legal status are demonstrated by their registration in a central register. Art. 7. Article 7,4 requires that, in all cases where remote verification solutions are used, a justification must be provided explaining why the collection of physical identification documents is not possible. DE considers this requirement to be unduly restrictive,

Name of the respondent	Question	Answer
		as remote verification constitutes a standard, secure, and widely accepted method of identification. The provision should therefore allow for a risk-based approach without requiring justification in every instance.
The Danish Association of Chartered Estate Agents (DE)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art. 18 It is not clear under article 25 (2024/1624) when the obtaining of information is to be considered "necessary". This concept is decisive for determining the scope of this regulation's article 18,1,c. Furthermore, the meaning of the term "funds" remains unclear, particularly in the context of transactions involving immovable property. If article 18,1,c is interpreted such that an element from all listed categories must be fulfilled cumulatively, the provision does not provide sufficient flexibility for obliged entities, especially in the non-financial sector, which neither possess nor should be expected to possess detailed knowledge of their customers' private financial circumstances. For real estate agents, who are expected to assess the origin of funds for both sellers and buyers; for sellers, it should be sufficient to establish how (as in what type of transaction) the property was originally acquired; for buyers, it should be sufficient to ascertain whether a

Name of the respondent	Question	Answer
		mortgage credit institution is involved in the intended financing.
The Danish Association of Chartered Estate Agents (DE)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Art. 21. In Denmark—and likely in several other Member States—there is a strong tradition of associations. This results in the existence of numerous small and often non-professional entities, including membership-based associations and informal interest communities. Within the real estate sector, this typically includes owners' associations, housing cooperatives, landowners' associations and similar entities, often managed by private individuals and without a commercial purpose. These entities will frequently be classified as low-risk and may consist of such a large number of members that the concept of beneficial ownership becomes difficult to apply in its traditional sense. For this category of legal entities no management body is often registered in the central business register; and the customer itself is frequently the only available source of information concerning beneficial owners. Accordingly, any requirement to obtain information from one source and verify it against an independent source may prove both impracticable and disproportionate in low-risk situations. DE therefore recommends that Article 21,2 be amended to clarify that, where an obliged entity has obtained

Name of the respondent	Question	Answer
		information pursuant to Article 21,1,b and considers such information to be satisfactory and sufficient, additional verification should not be required.
The Danish Association of Chartered Estate Agents (DE)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	DE would welcome it if the regulation could address the specific situation where the customer is a deceased person represented by heirs or other representatives. In such cases, obtaining additional information relating to the deceased (e.g. domicile or address) is not meaningful. Instead, due diligence should focus solely on the individuals representing and making decisions on behalf of the estate. Art. 6. Regarding article 6 It is unclear how obliged entities are expected to ascertain that an identity document, as a rule, contains all given names and surnames of an individual, and how this should be verified prior to the use of such document for verification purposes. Art. 19. It is not clear under the proposed Article 19 when an individual may be considered to be “known to be” a close associate of a politically exposed person (PEP). If it is intended that obliged entities must actively investigate such relationships, this should be clearly and explicitly stated, including the expected level of inquiry. Furthermore, Article 19,3 should clarify under what circumstances the size, business model, complexity, or nature of an obliges entity may justify reliance solely on

Name of the respondent	Question	Answer
		manual controls, as well as what documentation, if any, the entity is required to maintain in this regard. Art.33 Article 33 should address situations where customers, prior to the entry into force of the Regulation, have been treated as business relationships and thereby subject to ongoing due diligence, but where, following its entry into force, they would instead be classified as involving a single occasional real estate transaction.
The Danish Association of Chartered Estate Agents (DE)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
The Danish Association of Chartered Estate Agents (DE)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

The European Association of Corporate Treasurers (EACT)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	N/A
The European Association of Corporate Treasurers (EACT)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The European Association of Corporate Treasurers (EACT) welcomes the intention to further harmonise Customer Due Diligence (CDD) requirements across the EU, as the current lack of harmonization in the area represents a key remaining barrier to the EU Single Market for coporates. A single set of CDD/KYC requirements and practices across the EU would facilitate the management of corporate banking relationships, minimise unnecessary duplications and costs, and decrease account opening times, without compromising effective anti-money laundering (AML) checks. This would significantly reduce the burden on the EU's 'real economy' corporates

Name of the respondent	Question	Answer
		operating across the internal market, in line with the EU's objectives. EACT therefore supports a more prescriptive approach to the harmonization of CDD/KYC requirements and practices across the EU. All financial institutions should require from legal entities the submission of standard information in a standardised format when assessing business customers for AML purposes, independently from the member state in which they are located. Ultimately, this should serve as starting point for the future establishment of an EU "AML passport" for corporates, which would substantially reduce the regulatory burden on EU corporates, without increasing AML risks. In more detail, EACT calls for: 1. A single EU-wide set of information meaning that all banks, in every EU member state, should be required to collect and verify the same core data points in a standardised format on their corporate customers. 2. The establishment of an EU "AML passport" for corporates, meaning that once a company has successfully completed KYC with one EU-regulated bank, it should receive a 'certificate' ('AML passport') on which other EU banks should be able to rely on without re-running the onboarding process.
The European Association of Corporate Treasurers (EACT)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	N/A

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
The European Association of Corporate Treasurers (EACT)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A
The European Association of Corporate Treasurers (EACT)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The European Association of Corporate Treasurers (EACT) welcomes the explicit inclusion of the Legal Entity Identifier (LEI) as part of the information to be collected for customer due diligence purposes. As an interoperable standard, the LEI facilitates counterparty verification mechanisms and reduces the need to use jurisdiction-specific identifiers, in turn facilitating administrative processes for companies operating cross-border. As a machine-readable standard, the LEI facilitates internal workflow processes for corporate treasurers – diminishing the issues that come into play with manual reconciliation of data.
The European Association of Corporate Treasurers (EACT)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
The European Association of Corporate Treasurers (EACT)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
The European Association of Corporate Treasurers (EACT)	Do you have any comments on the Annex in the draft RTS?	No
The European Association of Corporate Treasurers (EACT)	How would you rate the proposals set out in the draft RTS overall?	Neutral
The European Fintech Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The European FinTech Association (EFA) does not fully agree that the proposals set out in the draft RTS can be applied consistently across the full range of products and services offered by obliged entities, in particular those operating digital, cross-border, and innovation-driven business models. While we strongly support AMLA's objective of harmonisation, several provisions, as currently drafted, lack sufficient flexibility and risk sensitivity to accommodate the diversity of fintech services and customer profiles. (i) While the RTS aim at harmonisation, several provisions are overly prescriptive and insufficiently adaptable to diverse fintech business models: Articles 4 and 5 (place of birth; "all nationalities"): The requirement to collect place of birth and "all nationalities" introduces ambiguity and operational burden without a clear risk-based justification. In particular, the framing of "all nationalities" risks being interpreted as a verification obligation, despite the absence of any centralised source against which such information can be confirmed. This is compounded by inconsistency with Recital 3, which refers to customer

Name of the respondent	Question	Answer
		declarations made “in good faith”. In addition, focusing on multiple nationalities provides no benefits compared to more reliable indicators. Prioritizing a customer's primary residence and their center of economic interest ensures a more balanced and insightful approach. Article 7 (non face to face verification): The provision appears to prioritise traditional document-based verification and does not sufficiently reflect the broader set of verification tools envisaged under AMLR Article 22(6). In this context, EFA emphasises that identity verification is an area of rapid technological development, where firms increasingly rely on: trusted third-party data sources, behavioural and device-based signals, real-time analytics. Further, the eIDAS framework is not yet fully realised or consistently rolled out across the EU. While EFA supports eIDAS as a verification option, premature or implicit reliance on this framework risks: creating inequality of access between Member States, exacerbating existing challenges in accessing company and beneficial ownership information across borders, particularly during the parallel rollout of the BORIS system, imposing additional compliance costs, and constraining innovation in digital identity solutions. Article 11 (ownership structures): The requirement for obliged entities to be “satisfied” as to the economic or legal rationale of ownership structures goes beyond AMLR requirements and introduces a subjective and potentially inconsistent standard, particularly in cross-

Name of the respondent	Question	Answer
		border contexts. Article 18 (purpose and nature of the relationship):The provision assumes that forward-looking customer-provided information (e.g. expected turnover, transaction patterns) is both available and reliable. This is often not the case for early-stage or rapidly scaling businesses, which are common in the fintech ecosystem. Taken together, these provisions risk undermining proportionality and creating a compliance framework that is difficult to apply uniformly across different business models. (ii) EFA proposes the following adjustments: Articles 4 & 5 Clarify that (i) obliged entities may rely on reasonable best efforts and collect information only where readily available, without an obligation to verify completeness (e.g. “all nationalities”) and (ii) verification of one single nationality is sufficient. Drafting suggestions:: “Obliged entities shall collect available information as provided by the customer in good faith and shall not be required to verify exhaustiveness where no reliable source exists. In particular, where the customer holds multiple nationalities, the obliged entity may verify only one single nationality of those declared in good faith by the customer. In addition, collection of place of birth is satisfied where information is readily available from identification documents, without requiring remediation of missing or inconsistent fields”.

Name of the respondent	Question	Answer
		Article 7 Explicitly allow equivalent and alternative verification methods, including third-party data, digital identity solutions, and behavioural signals. Drafting suggestions: “verification by means of reliable and independent sources, including digital identity frameworks (such as eIDAS where available), trusted third-party data, and other technology-enabled methods, commensurate with the level of risk”. “reliance on specific EU-wide infrastructures should not be required where these are not yet fully operational or accessible across Member States” Article 11 Remove or amend the requirement to assess the “economic or legal rationale” of ownership structures, limiting the obligation to understanding ownership and control, in line with AMLR Article 20(1)(b). Article 18 Clarify that alternative methods (e.g. benchmarking, monitoring) may substitute customer estimates.
The European Fintech Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EFA does not fully agree that the RTS sufficiently enables an effective risk-based approach. (i) Provisions of concern Article 7: applies similar verification expectations across all risk categories (SDD, CDD, EDD), limiting proportionality. Article 21(2): requires two independent sources even in low-risk scenarios. Articles 4, 5, 11: impose blanket obligations not clearly

Name of the respondent	Question	Answer
		linked to risk. Article 26(1)(b)-(c): relies on forward-looking customer information that may be unreliable but is treated as necessary. (ii) Proposed drafting improvements Introduce an explicit horizontal clause: “Obliged entities shall determine the extent and depth of CDD measures based on the level of ML/TF risk identified.” Article 7: Differentiate requirements across SDD/CDD/EDD, allowing simplified measures where risk is demonstrably low. Article 21(2): Replace the “two sources” requirement with: “…one or more reliable and independent sources, as appropriate to the risk level.” Article 26: Obliged entities may rely on objective data sources, including transaction monitoring and external datasets, rather than solely on customer-provided forecasts. These amendments would restore the centrality of the risk-based approach and better align the RTS with AMLR principles.
The European Fintech Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Yes, EFA identifies multiple recurring situations where required information is not available or not reliable, and the RTS do not provide adequate alternatives. Examples Start-ups and early-stage businesses No reliable estimates of turnover, transaction volumes,

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	or counterparties. Customer declarations are speculative and not indicative of ML/TF risk. Beneficial ownership information Limited or inconsistent access to interconnected UBO registers across Member States. Delays and fragmentation in systems such as BORIS, reduce reliability and timeliness. Nationality and place of birth No authoritative or comprehensive source exists to verify “all nationalities”. Identity documents frequently contain incomplete or inconsistent place-of-birth data. Tax Identification Number (TIN) and National Identification Number (NIN) There is ambiguity regarding when these identifiers must be collected, particularly for natural persons under simplified due diligence (SDD) Recital (17) suggests minimum identification requirements based on typical ID document data; however, NINs are not consistently included across EU identity documents Section 5 (SDD requirements) does not explicitly require TIN or NIN. Conversely, AMLR Article 22(1)(iii) requires TIN “where available” and NIN “where applicable,” and this is reiterated in the RTS Annex. These inconsistent references create legal uncertainty and risk divergent supervisory expectations. Estimated value of transactions and source of funds

Name of the respondent	Question	Answer
		(SoF) Under Article 24, obliged entities must understand the estimated value of transactions (where applicable) the source of funds (where necessary) However, it is unclear when these elements are required in low-risk (SDD) scenarios, creating ambiguity in implementation In practice, such forward-looking information is often unavailable, unreliable, or disproportionate to the risk in low-risk relationships. Challenges in Verifying Address (Article 7) In many jurisdictions, independent sources for address verification are unreliable or unavailable. This issue primarily affects: Lack of Infrastructure: Regions without centralized address registries. Lack of Documentation: Customers without traditional proofs, such as utility bills. In particular for tenants and transient workers/expatriates who may not have utility bills in their own name depending on tenancy arrangements. In addition is the issue of multi-lingual documents requiring translation and interpretation, and many documents being available only via email/pdf or screenshots and not hard copy proofs. Document Limitations: Primary IDs (e.g., passports or EU IDs) that do not list a current residential address, and/or where an address may be present (eg. drivers licence) may not be current. In these instances, strict independent verification is

Name of the respondent	Question	Answer
		often unfeasible or provides no regulatory value. Proposed solutions Clarify timing and conditionality of data collection Introduce explicit guidance distinguishing mandatory vs conditional data points (e.g. TIN/NIN) risk-based triggers for collecting transaction value and SoF information Drafting suggestions: “Obliged entities shall collect additional identification data, including tax identification numbers and national identification numbers, only where such information is available, applicable, and proportionate to the level of ML/TF risk identified. The absence of such identifiers shall not, in itself, prevent the application of simplified due diligence measures.” Clarify application of Article 24 in SDD contexts Drafting suggestion: “In the context of simplified due diligence, obliged entities shall determine, on a risk-sensitive basis, whether obtaining information on the estimated value of transactions or the source of funds is necessary. Such information shall not be required where the ML/TF risk is demonstrably low and sufficient understanding can be achieved through alternative means”. Allow alternative risk assessment tools, including: Sectoral benchmarking Real-time transaction monitoring Third-party data aggregation Introduce fallback provision: “Where required information is not reasonably available

Name of the respondent	Question	Answer
		or cannot be verified using reliable and independent sources, obliged entities may rely on alternative measures, including ongoing monitoring, sectoral benchmarking, and data-driven risk assessment tools, provided that these achieve an equivalent level of assurance." In parallel, AMLA should emphasise the importance of improving public data infrastructure, particularly for UBO registers. To address the challenges in Verifying Address (Article 7), the AMLA should permit firms to use flexible, alternative verification methods, such as Self-declarations validated by other verified data points (eg. google maps location confirmation). Digital identity solutions and reliable electronic data sources. Risk-based acceptance of partial verification when appropriate.
The European Fintech Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EFA considers that additional SDD measures should be explicitly recognised in the RTS for low-risk fintech use cases, consistent with AMLA's mandate under Article 28(1). Proposed additions (a) Low-risk acquiring services Scope: Services are provided to micro- or low-volume merchants Transactions are linked to genuine commercial activity funds are settled exclusively to accounts in the EU or

Name of the respondent	Question	Answer
		FATF-equivalent jurisdictions. Proposed measure: Reduced CDD requirements reflecting the traceability and closed-loop nature of funds. (b) Ancillary wallet services Where wallets: are strictly limited in functionality, serve only to facilitate acquiring services, do not operate as independent financial products. Proposed measure: Treatment as ancillary services, eligible for simplified due diligence (c) Reliance on verified public registers Where official registers: include identity verification mechanisms are regularly updated and reliable Proposed measure Allow reliance on a single source for both identification and verification in low-risk scenarios.
The European Fintech Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	(a) FATF equivalence and third country operations The RTS should more explicitly recognise that: third countries with FATF-equivalent regimes may apply different but equally robust approaches; obliged entities operating in such jurisdictions should be permitted to rely on local requirements, where these achieve broadly equivalent outcomes.

Name of the respondent	Question	Answer
		Failure to do so risks (i) legal conflicts, (ii) operational inefficiencies, (iii) competitive disadvantages for EU-based groups (b) Virtual IBANs EFA welcomes the RTS alignment with the AMLR in recognising virtual IBANs as identifiers rather than accounts. However, AMLA should: clearly signal that national measures exceeding AMLR requirements are not appropriate; reaffirm the risk-based treatment of virtual IBANs. This is essential to (i) preserve Single Market integrity, (ii) support passporting, (iii) address persistent IBAN discrimination. (c) Scope of Verification We note that the current drafted RTS lacks a clear distinction between data that must be collected and data that requires independent verification. An interpretation requiring verification of every data point would exceed a risk-based approach and create significant operational hurdles. We therefore propose to clarify that not all collected information requires independent verification and that verification efforts should remain risk-based and proportionate. (c) PEP treatment EFA supports the RTS approach to PEP identification but recommends clarification that:

Name of the respondent	Question	Answer
		PEPs may continue to transact during the EDD process, subject to appropriate monitoring and completion within a reasonable timeframe. A blanket restriction would (i) constitute disproportionate de-risking, (ii) undermine financial inclusion, (iii) conflict with a risk-based approach. (d) Data availability and infrastructure EFA reiterates that effective implementation of CDD obligations depends on the availability of reliable data, particularly: interoperable UBO registers, consistent cross-border access. We strongly recommend AMLA to: support the accelerated rollout of BORIS, promote harmonisation of public data sources. (e) Technology neutrality Finally, EFA strongly recommends that the RTS include an explicit recital confirming that: obliged entities may rely on innovative, technology-enabled verification and risk assessment methods, provided these are reliable and proportionate. This is essential to (i) maintain EU leadership in digital finance, (ii) ensure the framework remains future-proof.
The European Fintech Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
The European Fintech Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	22

Name of the respondent	Question	Answer
The European Fintech Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The European FinTech Association (EFA) does not fully agree with the proposals set out in the draft RTS with reference to simplified measures with respect to pooled accounts (Article 22). (i) Provisions of concern While we support the RTS's objective to clarify the conditions enabling the application of simplified due diligence to pooled accounts, Article 22 presents several issues. In more detail: Article 22 (a): "Immediately" is not defined in the RTS or the AMLR. In a digital environment, a supervisor might interpret this as "real-time API access," whereas an operational reality might involve a longer retrieval window for older archived files. In this context, "Immediately" is highly subjective and creates significant legal uncertainty for obliged entities. It creates a risk of technical non-compliance if an obliged entity cannot prove "instant" access to its supervisor. Article 22 (c): This provision establishes as a condition that the account holder must be "effectively supervised for compliance with obligations as provided for in point (b)". The issue is that there is no clarity as to what "effectively supervised" means. Like the term "satisfied," this is a subjective standard that is not defined in the AMLR or the RTS. Therefore, there is no legal certainty on how an obliged entity (or the account holder itself) shall prove effective supervision. This leaves it to the discretion of the obliged entity and

Name of the respondent	Question	Answer
		its local auditor to judge whether the supervisor provides "effective" oversight. A supervisor in one Member State might consider the supervisory practices of another Member State to be insufficient, leading to the rejection of the simplified due diligence (SDD) measures entirely. If "effective supervision" cannot be objectively verified, obliged entities will likely default to full CDD to avoid regulatory risk, rendering the simplification in Article 22 not usable in practice. Article 22 (d): The requirement that the ML/TF risk must be "low" is inconsistent with the threshold established in Article 17(1)(c) for Collective Investment Undertakings, which allows for simplified measures in "low or standard" risk scenarios. Both provisions address fundamentally similar structures where an intermediary manages third-party funds. Restricting Article 22 to "low" risk relationships creates an unlevel playing field and imposes a disproportionate burden on obliged entities. It forces them to justify a "low" risk categorization for entities that are already subject to robust EU supervision and CDD requirements. This subjectivity will lead to a fragmented application of the standards, as different supervisors will have varying expectations for what constitutes "low" risk in a cross-border context. Article 22 (e): Another condition for the application of art. 22 is that the obliged entity must be satisfied that the account holder applied robust and risk-sensitive due diligence measures. However, the terms "satisfied" and "robust" are highly

Name of the respondent	Question	Answer
		subjective and do not provide the legal certainty required for a harmonized AML/CFT framework. This provision risks creating an unsustainable administrative burden for both credit institutions and the account holders (in such a scenario). Without clear, Union-wide standards for what constitutes "satisfaction," there is a significant risk that credit institutions will default to full, redundant CDD to mitigate potential supervisory criticism, thereby rendering the simplified measures for pooled accounts ineffective. To achieve the AMLA's objective of operational efficiency and harmonisation, the RTS should specify objective evidence that an obliged entity can use to meet this requirement. This should leverage existing institutional safeguards, such as independent audits or the status of being a regulated obliged entity within the Union. (ii) Proposed drafting improvements To address these concerns, EFA proposes the following adjustments: Article 22 (a): "(a) the credit institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, without undue delay after such request has been made by the credit institution;" Article 22 (c): "(c) the account holder is subject to supervision by a supervisory authority as defined in Article 2(1), point (46), of Regulation (EU) 2024/1624,

Name of the respondent	Question	Answer
		or, in the case of a third country, is subject to equivalent supervision by a competent authority." Article 22 (d): remove such a requirement; or "(d) the ML/TF risk associated with the business relationship is low or standard;" Article 22 (e): "(e) the credit institution obtains evidence that the account holder applies customer due diligence measures in compliance with Regulation (EU) 2024/1624. Such evidence may include independent AML audit reports or certifications."
The European Fintech Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
The European Fintech Association	Please specify which recital you refer to, and share your comments below.	Recital (17): which suggests minimum identification requirements based on typical ID document data; however, NINs are not consistently included across EU identity documents
The European Fintech Association	Do you have any comments on the Annex in the draft RTS?	No
The European Fintech Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
The European Fintech Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. The European Lotteries	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Generally, The European Lotteries Association (EL) considers that the RTS should be proportionate, operationally workable and genuinely risk-based. From our perspective, it is also crucial that it is consistent with the AML/CFT risk profile of lotteries as reflected in the latest supranational risk assessment of the European Commission, which assigns lotteries a residual risk level 2. To that end, we believe that the RTS would benefit from a clearer and more consistent articulation of both risk based and proportionate approach. This is particularly important for non-financial sectors such as gambling. In this sector, risk is primarily identified through behavioural and transactional patterns rather than static customer information alone. Accordingly, CDD measures should therefore be calibrated based on: (1) product characteristics (e.g. low-stakes lottery vs higher-risk games); (2) customer profile; and (3) observed activity and transaction patterns. This may include indicators of suspicious behaviour, fraud or abuse of services, which are typically reflected in

Name of the respondent	Question	Answer
		customer profile and activity analysis. Proportionality also requires that the RTS reflect sector-specific characteristics, as the lottery sector has operational and risk features that differ significantly from other financial and economic sectors. This specificity should be reflected in the RTS or - at minimum - explicitly acknowledged in its application. In line with Article 26 of Regulation 2024/1624, the RTS should also ensure that CDD obligations remain operationally feasible, particularly for operators with large customer bases and high transaction volumes. Certain requirements may be difficult to apply in fast-paced gambling environments, especially in the context of occasional or real-time transactions. A risk-based approach to ongoing CDD is therefore essential. Customer information should be updated according to risk level and on an event-driven basis where relevant risk indicators arise. Overly prescriptive or frequent re-verification requirements risk creating unnecessary operational burden and customer friction without improving AML effectiveness. Drafting suggestions: Article 1: “This Commission Delegated Regulation (‘Regulation’) shall be applied in line with the risk-based approach and the principle of proportionality.” Throughout the RTS, it should also be clarified that CDD obligations apply “where necessary”, based on the risk profile of the customer, product and transaction. Clarify that ongoing CDD should be risk-

Name of the respondent	Question	Answer
		sensitive and event-driven, rather than based on systematic or uniform review cycles.
The European Lotteries	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EL considers that Questions 2 and 3 are closely interrelated and therefore provides a consolidated response. Generally, EL considers that greater flexibility would be necessary to ensure an effective and proportionate application of the risk-based approach in the gambling sector. Purpose and Nature of the Relationship In the gambling sector, the purpose of the customer relationship is generally self-evident, namely participation in entertainment activities. Systematically requiring customers to explicitly state the purpose and intended nature of their activity would therefore be disproportionate and of limited AML value. Recital 13 of the draft RTS already provides sufficient guidance for the application of Article 18. However, it would be useful to clarify in Article 18 that - for low-risk customers - the purpose and nature of the relationship may be inferred from the product and the customer's behaviour, in line with a risk-based approach. Source of Funds and Enhanced Due Diligence The distinction between standard and enhanced due diligence should be more clearly reflected in the RTS. Detailed source of funds information is primarily relevant in higher-risk situations and may be difficult to obtain or disproportionate in low-risk, high-volume

Name of the respondent	Question	Answer
		contexts. The RTS should therefore clarify that such information is to be collected and verified as part of enhanced due diligence - or where risk indicators justify it - rather than as a systematic requirement. Furthermore, for standard due diligence, general self-declared information (e.g. “salary” in response to KYC questions) should be considered sufficient without supporting documentation, ensuring proportionality while reserving deeper checks for higher-risk cases. “Information Available” Greater flexibility would be beneficial in certain areas. For example, the requirement in Article 4 that identification data “shall consist of at least the country name” may not always be practicable, as some official documents only indicate the place of birth (e.g. ID cards in the Netherlands). Allowing either the country or place of birth would provide a workable and equally reliable alternative. Customer Identification and Verification Strong electronic identification solutions - including those under Regulation (EU) No 910/2014 (eIDAS) - provide a high level of assurance but remain unevenly available and adopted across Member States. Exclusive reliance on such tools could therefore limit access to regulated services. While Article 7 already accommodates situations where eIDAS solutions are unavailable, the recitals should explicitly confirm that alternative remote verification methods may be used where they meet RTS conditions. More broadly, the use

Name of the respondent	Question	Answer
		of electronic identification should remain subject to availability, customer uptake and a proportionate cost-benefit assessment. Their integration can involve significant cost and technical complexity, particularly where additional safeguards such as liveness checks are required. These measures may also increase customer friction and reduce accessibility. In non-essential sectors such as gambling, this may have material commercial impacts without corresponding AML benefits in low-risk scenarios. A proportionate, risk-based approach should therefore allow alternative reliable verification methods, without imposing systematic additional requirements in all non-face-to-face cases. Operational Realities in Specific Risk Areas (e.g. PEPs) Requirements relating to politically exposed persons (PEPs) may present challenges in fast-paced gambling environments, particularly for occasional or real-time transactions. While robust PEP identification and enhanced measures are supported, they should be applied proportionately, taking into account risk and operational context. Many gambling services - especially in land-based or retail settings - involve high transaction volumes, limited interaction time and no pre-established business relationship. In such cases, conducting full PEP screening at each transaction may be technically complex and disproportionate. The RTS should therefore clarify that enhanced measures are to be applied where justified by risk, considering the nature and context of the transaction. A distinction should be made between higher-risk scenarios (e.g.

Name of the respondent	Question	Answer
		account-based online gambling, high-value or repeated transactions) and lower-risk scenarios (e.g. low-stakes or occasional play), where more flexible approaches — such as threshold-based triggers, ex post monitoring and checks at payout — may be appropriate.
The European Lotteries	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	EL considers that Questions 2 and 3 are closely interrelated and therefore provides a consolidated response. Generally, EL considers that greater flexibility would be necessary to ensure an effective and proportionate application of the risk-based approach in the gambling sector. Purpose and Nature of the Relationship In the gambling sector, the purpose of the customer relationship is generally self-evident, namely participation in entertainment activities. Systematically requiring customers to explicitly state the purpose and intended nature of their activity would therefore be disproportionate and of limited AML value. Recital 13 of the draft RTS already provides sufficient guidance for the application of Article 18. However, it would be useful to clarify in Article 18 that - for low-risk customers - the purpose and nature of the relationship may be inferred from the product and the customer's behaviour, in line with a risk-based approach. Source of Funds and Enhanced Due Diligence The distinction between standard and enhanced due diligence should be more clearly reflected in the RTS.

Name of the respondent	Question	Answer
		Detailed source of funds information is primarily relevant in higher-risk situations and may be difficult to obtain or disproportionate in low-risk, high-volume contexts. The RTS should therefore clarify that such information is to be collected and verified as part of enhanced due diligence - or where risk indicators justify it - rather than as a systematic requirement. Furthermore, for standard due diligence, general self-declared information (e.g. “salary” in response to KYC questions) should be considered sufficient without supporting documentation, ensuring proportionality while reserving deeper checks for higher-risk cases. “Information Available” Greater flexibility would be beneficial in certain areas. In such cases, conducting full PEP screening at each transaction may be technically complex and disproportionate. The RTS should therefore clarify that enhanced measures are to

Name of the respondent	Question	Answer
		be applied where justified by risk, considering the nature and context of the transaction. A distinction should be made between higher-risk scenarios (e.g. account-based online gambling, high-value or repeated transactions) and lower-risk scenarios (e.g. low-stakes or occasional play), where more flexible approaches — such as threshold-based triggers, ex post monitoring and checks at payout — may be appropriate.
The European Lotteries	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The RTS would benefit from a clearer recognition of simplified due diligence for low-risk gambling products and customers. EL suggests that the recitals - with respect to Articles 20 to 24 - explicitly state that all simplified measures must remain proportionate to the nature and size of the business and to the specific lower-risk factors identified, in line with Article 33(1) of Regulation (EU) 2024/1624. EL further proposes to include in Recital 18 - and reflect in the RTS - a second category of service eligible for simplified due diligence: services provided by state-owned or state-licensed lottery operators (where not exempted by a Member State under Article 4 of Regulation (EU) 2024/1624), provided that the ML/TF risk of the specific service is assessed as low on the basis of the national risk assessment. Given the low-risk nature of lottery products under national definitions, the application of simplified due diligence would be proportionate and would help avoid unnecessary administrative burden, while maintaining appropriate safeguards, including controls in cases of suspicious

Name of the respondent	Question	Answer
		activity. In such low-risk scenarios, the RTS could explicitly clarify that simplified measures may include, e.g. reduced data collection at onboarding, the deferral of requests for additional information unless risk indicators emerge and less frequent review cycles.
The European Lotteries	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Overall, EL supports the objective of establishing an effective CDD framework. For the gambling sector, its effectiveness will depend on maintaining: (1) proportionality in the application of measures; (2) sufficient flexibility to reflect operational realities; and (3) a genuinely risk-based approach. The clarifications suggested above aim to ensure that the RTS remains effective in mitigating AML risks, while also being practical to implement and adaptable across different gambling models and Member States. EL would also like to stress that gambling remains a national competence and products, customer behaviour and operational realities differ significantly across Member States and across gambling verticals. This is particularly relevant for lotteries as low-risk gambling products, which are characterised by a very large customer base, predominantly low-value transactions and outcomes based entirely on chance.
The European Lotteries	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
The Luxembourg Alternative Administrators Association (L3A)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	As an organisation, we recognise that the draft Regulatory Technical Standards (RTS) under Regulation (EU) 2024/1624 represent a clear shift from principles-based guidance towards enforceable and granular operational standards, while remaining formally anchored in a risk-based approach. In practice, the RTS raise the minimum compliance baseline even in lower-risk situations, significantly reduce discretionary interpretation particularly in areas such as complex structures and intermediated distribution models and place a strong emphasis on evidence, auditability and the explicit justification of decisions. We also acknowledge that supervisory expectations are increasingly focused not on whether policies formally refer to a “risk-based approach”, but on whether risk assessments and outcomes are defensible, consistent and demonstrable in practice. Against this background, this consultation response broadly supports the objectives of the RTS, notably their ambition to enhance harmonisation, legal certainty and the overall effectiveness of the EU AML/CFT framework. The RTS constitute an important step toward greater convergence of supervisory expectations across Member States. At the same time, we identify scope for targeted refinements to ensure that the requirements are applied in a genuinely risk-sensitive, proportionate and operationally workable manner, particularly in the context of the investment fund industry, institutional investors and intermediated or omnibus distribution

Name of the respondent	Question	Answer
		models. Our comments therefore focus on clarifying key concepts that are central to consistent application (such as “undue delay”, “immediately” and “complex structures”), avoiding mechanical or purely structural interpretations, and ensuring appropriate differentiation where individuals are identified by default rather than through ownership or control (notably senior managing officials and PEPs in institutional contexts). We also emphasise the importance of limited flexibility where justified by risk, explicit recognition of existing regulated reliance frameworks, and alignment with data-minimisation principles, with the objective of strengthening AML/CFT outcomes without creating unnecessary operational burden or encouraging unintended de-risking.
The Luxembourg Alternative Administrators Association (L3A)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We broadly agree that the draft RTS support the effective application of a risk-based approach to AML/CFT. However, we consider that certain provisions particularly Article 12, as well as Articles 17 and 22 require further clarification and adjustment to ensure legal certainty, proportionality, and operational feasibility, in line with the objectives of Regulation (EU) 2024/1624. Article 12 “Complex” Ownership and Control Structures With respect to Article 12, we believe the RTS lack sufficient clarity on the criteria for determining when an ownership or control structure should be considered “complex.” It remains unclear whether complexity should be assessed primarily on the basis of formal

Name of the respondent	Question	Answer
		structural indicators (such as the number of layers or jurisdictions) or on a broader, qualitative and risk-based assessment. In particular, greater clarity is needed regarding the concept of a “layer.” As currently drafted, each legal entity in an ownership chain could be treated as a separate layer, which risks leading to overly formalistic outcomes that do not accurately reflect ML/TF risk. We consider that the presence of multiple legal entities alone should not automatically qualify a structure as complex. Certain entity types should not, in principle, be regarded as complex, including regulated financial institutions, entities within the same group subject to consolidated supervision, and entities subject to transparency and reporting obligations where ultimate ownership and control can be readily identified. Without clearer guidance, the RTS risk inconsistent interpretation and application across obliged entities and supervisory authorities. Undue Delay We have significant concerns regarding the use of the term “undue delay” in Articles 17 and 22. As currently drafted, the concept is insufficiently precise and creates material legal and operational uncertainty. Its open-ended nature is likely to result in divergent interpretations across obliged entities and inconsistent supervisory expectations, particularly in cross-border contexts. To ensure harmonisation and legal certainty, we strongly recommend that the RTS define “undue delay”

Name of the respondent	Question	Answer
		by reference to clear, objective, and measurable timeframes (for example, a fixed number of business hours or days). In the absence of such clarification, obliged entities face heightened compliance risk and uncertainty. Impact on the Investment Fund Industry and Omnibus Account Structures The practical application of the “without undue delay” requirement raises particular concerns for the investment fund industry, especially in the context of omnibus account structures. In these models, underlying investors are already subject to customer due diligence performed by intermediaries that are themselves obliged entities, supervised for AML/CFT purposes, and operating under EU or equivalent regulatory frameworks. Requiring systematic and immediate access to underlying investor documentation in such cases leads to a duplication of AML/CFT controls with little or no additional risk mitigation benefit. From an operational perspective, the expectation to retrieve and transmit underlying investor documentation in high-volume distribution environments imposes a significant and often disproportionate burden. This is especially the case where intermediaries are based in the EU or in jurisdictions with AML/CFT regimes equivalent to Regulation (EU) 2024/1624, where reliance on existing due diligence should be presumed, subject to appropriate safeguards. Need for a More Explicitly Risk-Based Calibration Overall, we consider that the current drafting risks

Name of the respondent	Question	Answer
		imposing a one-size-fits-all obligation that does not sufficiently take into account the risk profile of the investment, the nature and regulatory status of the intermediary, or the effectiveness of the AML/CFT framework to which that intermediary is subject. This approach is not fully aligned with the risk-based principles underpinning the EU AML/CFT framework. We therefore strongly advocate for a calibrated, risk-based adjustment of the RTS, including: a clear and binding definition of “undue delay” based on fixed and measurable timelines; and the introduction of a materiality threshold at the level of the investment, below which the systematic provision of underlying investor documentation would not be required. Under such an approach, documentation relating to the final investor should be required without undue delay and upon request only where a defined investment threshold is met (for example, 10%) or where specific risk indicators are present. These adjustments would keep due diligence proportionate, avoid duplicative checks by supervised intermediaries, and ensure the framework remains practical in high-volume distribution. Without them, the RTS risk imposing excessive obligations that could undermine efficiency and the credibility of the risk-based approach.
The Luxembourg Alternative Administrators Association (L3A)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes	The RTS largely codifies and harmonises existing supervisory expectations rather than introducing materially new obligations. However, it significantly

Name of the respondent	Question	Answer
	of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	reinforces expectations regarding the depth, evidentiary quality, and robustness of customer due diligence. Across several provisions, the RTS would benefit from clearer operational guidance and a more explicit anchoring in the risk-based approach to avoid inconsistent interpretation and disproportionate compliance outcomes across Member States. Article 25 - While the objectives of Article 25 are acknowledged, the provision lacks sufficient clarity on acceptable sources and verification practices for CDD. This creates legal and operational uncertainty for obliged entities, particularly in cross-border contexts. It should be made explicit that CDD is not limited to documentation obtained directly from the customer. Instead, it may—and in many cases should—be substantiated through independent, reliable, and verifiable external sources. These should explicitly include official registers (such as company and beneficial ownership registers), reputable commercial databases and screening tools, adverse media and open-source intelligence (OSINT), and other credible third-party information providers meeting appropriate quality and reliability standards. Such clarification is essential to ensure alignment with the risk-based approach, which relies on triangulating multiple independent sources to validate identity and assess ML/TF risk. Explicitly recognising these sources would enhance the quality and defensibility of CDD, while reducing unnecessary operational burden. Without guidance, there is a risk of overly conservative or divergent practices that undermine harmonisation and

Name of the respondent	Question	Answer
		effective risk management. Article 19 - The RTS classifies senior officials of state-owned entities as PEPs. While legally correct, its mechanical application in the investment fund context leads to disproportionate outcomes. In institutional fund structures, state-owned entities often invest as regulated, transparent institutional investors. Where no natural person can be identified as a beneficial owner, senior managing officials (SMOs) are identified by default, resulting in their automatic classification as PEPs solely due to their function. This systematically triggers enhanced due diligence (EDD) and high-risk classifications, regardless of the actual risk. This approach conflates formal legal status with real ML/TF or corruption risk and is misaligned with risk-based principles. In cases involving institutional investments by state-owned entities subject to robust governance and oversight—often within the EU or equivalent jurisdictions—the incremental risk is limited. The RTS should therefore distinguish clearly between: PEP classifications arising purely from institutional investment structures where SMOs are identified by default; and PEPs acting in a personal capacity, directly or through personal investment vehicles. In the former case, the RTS should allow a calibrated, risk-based approach where EDD and high-risk classification are applied only if additional risk factors are present. In the latter, existing EDD requirements should continue to apply in full. Without this distinction, the RTS imposes a one-size-fits-all approach that undermines proportionality and creates unnecessary

Name of the respondent	Question	Answer
		operational burdens. Article 13-Where no beneficial owner can be identified through ownership or control, obliged entities must identify senior managing officials (SMOs). However, the RTS appears to require information for SMOs broadly equivalent to that required for beneficial owners identified through ownership, which is neither proportionate nor conceptually appropriate. SMOs are identified as a fallback mechanism, not because they exercise ownership or ultimate control. Requiring systematically equivalent personal data—such as proof of residence or tax identification numbers (TINs)—creates an excessive compliance burden without clear risk-mitigation benefits. A clear distinction should therefore be made between: information requirements for beneficial owners identified through ownership or control; and information required for SMOs identified by default. For SMOs, core identification and screening information (name, date of birth, function, sanctions and PEP screening) should generally suffice. Additional data should only be collected where justified by specific risk factors or identification uncertainties. This approach would ensure proportionality, support data-minimisation principles, and focus resources on information that meaningfully contributes to ML/TF risk assessment. Those targeted revisions are needed to strengthen legal certainty, reinforce proportionality, and ensure consistent application of a risk-based AML/CFT framework. Without these adjustments, the RTS risk creating overly conservative practices,

Name of the respondent	Question	Answer
		operational inefficiencies, and inconsistent supervisory outcomes.
The Luxembourg Alternative Administrators Association (L3A)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Article 20 constitutes a positive and timely initiative to harmonise minimum customer identification requirements in low-risk scenarios across Member States, with the aim of enhancing consistency and preventing overly permissive practices that could undermine AML/CFT effectiveness. However, in its current form, the provision raises a number of substantive conceptual and operational concerns that, if left unaddressed, are likely to result in fragmented interpretation and inconsistent implementation. First, the scope of persons subject to identification remains insufficiently clear. In particular, the treatment of legal representatives of legal entities is not explicitly addressed. This omission creates ambiguity as to whether such individuals fall within the minimum identification requirements, and risks divergent practices across jurisdictions. We therefore strongly recommend that the article be amended to explicitly clarify the categories of persons in scope, including the treatment of legal representatives. More fundamentally, the current drafting appears to conflate the classification of a relationship as "low risk" with automatic eligibility for simplified due diligence (SDD). This approach is conceptually flawed. Low-risk situations are not homogeneous and should not be treated as a binary category. The absence of a more granular articulation risks encouraging a mechanical application of SDD, contrary to the graduated and risk-sensitive nature of the EU AML/CFT framework. We

Name of the respondent	Question	Answer
		therefore urge that Article 20 be revised to clearly distinguish between: • the identification of low-risk scenarios; and • the conditions under which simplified due diligence measures may be appropriately applied. In addition, Article 20 is limited to initial identification and does not address ongoing monitoring or periodic review in low-risk relationships. This omission is significant, as it leaves a critical component of the AML/CFT lifecycle undefined and creates scope for inconsistent supervisory expectations and operational practices. Clarification should be introduced to ensure that ongoing monitoring obligations remain risk-based and proportionate, but nevertheless clearly articulated. From an operational perspective, the requirement to collect a uniform set of identification data does not sufficiently account for cross-border constraints. Certain data elements are not consistently available or accessible across jurisdictions. In its current form, the article risks imposing requirements that are, in practice, not always feasible to fulfil. We therefore strongly advocate for the explicit introduction of flexibility allowing the use of equivalent or alternative data where standard information cannot reasonably be obtained, provided that the overall identification objective is met. Furthermore, the absence of differentiation between customer categories particularly regulated or institutional entities is a material shortcoming. Applying a uniform minimum dataset to entities that are already subject to robust transparency, disclosure, and supervisory frameworks (including those established

Name of the respondent	Question	Answer
		within the EU or in jurisdictions with equivalent AML/CFT regimes) is disproportionate and inconsistent with a risk-based approach. The article should therefore be amended to allow for calibrated requirements that reflect the nature, regulatory status, and risk profile of the customer. We also note the lack of clarity regarding the interaction between remote onboarding practices and eligibility for simplified due diligence in low-risk contexts. Given the increasing reliance on digital onboarding channels, this is a critical gap that should be addressed to ensure both legal certainty and operational consistency. In light of the above, we strongly urge a targeted revision of Article 20 to: • explicitly clarify the scope of persons subject to identification; • introduce a clear conceptual distinction between low-risk classification and SDD eligibility; • incorporate guidance on ongoing monitoring and periodic review; • allow for the use of equivalent data where standard information is not reasonably available; and • differentiate requirements based on customer type, particularly for regulated and institutional entities subject to EU or equivalent AML/CFT frameworks. Absent such amendments, Article 20 risks imposing a rigid, one-size-fits-all framework that is not operationally workable and is misaligned with the core principles of proportionality and risk sensitivity underpinning the EU AML/CFT regime.

Name of the respondent	Question	Answer
The Luxembourg Alternative Administrators Association (L3A)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We emphasize that both the regulation and the RTS are narrowly confined to Client Due Diligence, leaving due diligence on other counterparties and underlying assets materially underdeveloped in the current text. This constitutes a significant gap. In light of our expertise, we firmly urge that due diligence obligations be expressly broadened to encompass underlying assets and all relevant counterparties, and that such requirements be embedded as a core, non-optional component of the obligations imposed on obliged entities.
The Luxembourg Alternative Administrators Association (L3A)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
The Luxembourg Alternative Administrators Association (L3A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
The Luxembourg Alternative Administrators Association (L3A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We acknowledge that, under the proposed RTS, the collection of official identification documentation is required as a general rule, with no explicit recognition of alternative identification methods. While we support the objective of ensuring a high level of assurance regarding the identity of natural persons, the current approach is overly rigid and insufficiently reflective of operational realities. Based on supervisory and practical experience, the systematic collection of official identification documents can, in certain cases, prove disproportionately burdensome or even unworkable. This is particularly evident with respect to specific categories of individuals most notably U.S. persons where access to, or

Name of the respondent	Question	Answer
		willingness to provide, standard identification documentation is frequently constrained. The absence of any permissible alternative in such situations risks creating unnecessary barriers to compliance without delivering a commensurate increase in risk mitigation. Against this background, we strongly urge that the RTS be amended to introduce a narrowly defined and strictly controlled flexibility, allowing obliged entities to identify a natural person in duly justified cases where official identification documents cannot be obtained. In line with our proposal, this should explicitly permit reliance on reliable, independent, and publicly available sources, provided these enable the obliged entity to reasonably and credibly establish the identity of the individual concerned. Such flexibility must, however, be accompanied by robust safeguards and clearly articulated conditions. In particular, the amended article should expressly require that obliged entities ensure that: • the information collected can be unambiguously linked to the individual concerned; • the overall identification framework achieves a level of assurance equivalent, to the extent possible, to that provided by official documentation; and • the risks of identity theft, impersonation, or misidentification are effectively mitigated through enhanced and risk-sensitive verification measures where appropriate. We therefore call for a targeted revision of the current article to incorporate this approach. Properly calibrated, this adjustment would materially improve the

Name of the respondent	Question	Answer
		proportionality and operational feasibility of the RTS, while fully preserving indeed reinforcing its core objective of robust, reliable, and risk-based customer due diligence.
The Luxembourg Alternative Administrators Association (L3A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	27
The Luxembourg Alternative Administrators Association (L3A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 27 represents a constructive step toward harmonising expectations regarding the assessment of source of funds (SoF) and source of wealth (SoW), and its objective of strengthening consistency and robustness in this area is fully supported. Given the central role of SoF and SoW in mitigating ML/TF risks, greater convergence is indeed desirable. However, in its current form, the provision raises material concerns relating to scope, proportionality, evidentiary expectations, and operational feasibility, which if not addressed risk driving overly formalistic and inconsistent implementation across obliged entities. The articulation between the SoF of a legal entity and the SoW of its beneficial owners remains insufficiently defined. The current drafting risks encouraging a mechanical and cumulative application of both assessments, irrespective of context. This is neither conceptually sound nor operationally proportionate. The RTS should explicitly clarify that the depth and focus of the assessment must be context-driven, taking into account: • the nature and activity of the legal entity; • the purpose and size of the transaction; and

Name of the respondent	Question	Answer
		• the extent to which the entity itself provides a transparent and credible explanation of the origin of funds. Absent such clarification, obliged entities may be compelled to systematically investigate beneficial owners' wealth even where the SoF of the entity is clear, verified, and sufficient to mitigate ML/TF risk—resulting in unnecessary duplication and excessive data collection. Second, the evidentiary framework set out in Article 27 lacks sufficient critical guidance. While the inclusion of a non-exhaustive list of documents is helpful, it risks being interpreted as a de facto checklist, encouraging a document-driven approach rather than a risk-based assessment. This is particularly problematic given that: • certain listed documents are not consistently available across jurisdictions; and • some commonly used documents (e.g. bank statements) may provide limited or superficial assurance as to the lawful origin of funds. We therefore strongly recommend that the RTS explicitly recognise that the probative value of documentation varies, and that the assessment should prioritise credibility, consistency, and plausibility over the mere collection of documents. More fundamentally, Article 27 does not sufficiently embed the principle of proportionality, which is a cornerstone of the EU AML/CFT framework. In practice, the level of verification should be calibrated to: • the risk profile of the customer and beneficial owner; • the nature and purpose of the relationship or

Name of the respondent	Question	Answer
		transaction; and • the amounts involved. A uniform expectation of extensive documentary evidence—even in low-risk or low-value scenarios—would create a significant and unjustified operational burden, particularly in cross-border contexts, without delivering a commensurate increase in risk mitigation. In this respect, the notion of "satisfying" the obliged entity that funds derive from lawful activities requires further clarification. As currently drafted, it may be interpreted as requiring a quasi-absolute level of proof, which is neither realistic nor aligned with a risk-based approach. The RTS should explicitly confirm that, particularly in lower-risk scenarios, a reasonable level of assurance—based on plausibility checks, consistency with the customer's profile, and corroboration from reliable sources—is sufficient. Additional clarification is also needed on several key operational aspects, including: • the distinction between SoF and SoW, which should not be blurred or applied cumulatively by default; • the timing of the assessment, including the ability to adopt a staged or progressive approach where appropriate; and • the acceptability of alternative or equivalent information sources, particularly in international contexts where standard documentation may not be उपलब्ध or clients may be reluctant to share sensitive personal data. Explicit recognition of such flexibility is essential to ensure that the framework remains internationally

Name of the respondent	Question	Answer
		workable and does not inadvertently incentivize de-risking or exclusion of legitimate customers. In light of the above, we strongly urge that Article 27 be revised to: • clarify the interaction and respective scope of SoF and SoW assessments; • emphasise a risk-based, non-mechanical approach to evidence gathering; • explicitly embed the principle of proportionality; • define “sufficient assurance” in a manner consistent with practical AML/CFT application; and • recognise the use of alternative and equivalent sources of information. Absent these adjustments, the current drafting risks fostering a rigid, document-centric and operationally burdensome framework that is misaligned with the risk-based principles it seeks to promote, and which may ultimately undermine both effectiveness and consistency in AML/CFT implementation.
The Luxembourg Alternative Administrators Association (L3A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	30
The Luxembourg Alternative Administrators Association (L3A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We understand that the RTS does not mandate the systematic application of a four-eyes principle in the screening process, and we agree that the primary objective should be to ensure a robust, effective, and well-controlled screening framework, rather than prescribing rigid organisational arrangements. However, in its current form, the RTS lacks sufficient precision regarding the scope of persons and entities subject to screening, which creates a material risk of

Name of the respondent	Question	Answer
		inconsistent implementation and overly conservative practices across obliged entities. In particular, further clarification is required as to how screening obligations should be applied across different categories, including: • senior managing officials (SMOs) of customers and counterparties; • intermediary entities involved in the business relationship or transaction chain; and • SMOs of such intermediary entities, where relevant. Absent explicit guidance, obliged entities are likely to adopt divergent interpretations, with some applying overly broad and resource-intensive screening perimeters extending systematically to multiple layers of intermediaries and associated individuals without a clear risk-based justification. This not only generates significant operational burden, but also risks diluting the effectiveness of screening by overloading systems with low-value alerts. We therefore strongly recommend that the RTS be amended to clearly define the expected screening perimeter, explicitly linking it to a risk-based assessment. In particular, it should clarify: • which categories of persons and entities are systematically in scope; • which categories should be screened only where justified by risk indicators; and • how far along the chain of intermediaries screening obligations are expected to extend. Such clarification is essential to ensure that screening efforts remain targeted, meaningful, and proportionate,

Name of the respondent	Question	Answer
		rather than becoming a purely formalistic exercise. At the same time, we strongly support maintaining operational flexibility for obliged entities in designing their screening frameworks, including the organisation of controls and escalation mechanisms. Imposing systematic requirements such as a mandatory four-eyes principle in all cases would be disproportionate and misaligned with the diversity of business models and risk exposures across the market. In this regard, the RTS should strike a clearer balance by: • preserving discretion for obliged entities to calibrate their screening workflows according to their size, complexity, and risk profile; while • providing more granular and explicit expectations as to the scope of screening obligations. Without such clarification, the current drafting risks encouraging overly expansive and operationally burdensome screening practices, particularly in complex or intermediary-driven structures, without delivering a commensurate enhancement in AML/CFT effectiveness. We therefore call for a targeted revision of the RTS to explicitly delineate the screening perimeter in a manner that is risk-based, proportionate, and operationally sustainable, while ensuring consistent application across obliged entities.
The Luxembourg Alternative Administrators Association (L3A)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

The Norwegian Bar Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	In this response, we refer to the consultation response submitted by the Council of Bars and Law Societies of Europe (CCBE), through its AML Committee. We also refer to the Norwegian Bar Associations’ response to

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	the EBA public consultation on the draft RTS under Article 28 (1) of the AMLR on customer due diligence, published around June 2025. As a preliminary remark, we would underline that the draft RTS is primarily tailored to the financial sector and should therefore be adapted to reflect the legal sector's need for flexibility and risk-based measures. We also concur with the following statement from the CCBE's response: "(…) For legal practices particularly small and sole practitioners the principal concern is that cross sector RTS drafting may be implemented in a way that assumes financial institution operating models (dedicated compliance teams, specialist tooling, and highly standardised onboarding), which many legal practices could not provide in a resource efficient and proportionate manner due to their different type of activities and set-up." Below, we set out comments on specific provisions of the draft RTS that should be adjusted to enable flexible, risk-based CDD/KYC in the legal sector. The Norwegian Bar Association welcomes the improvement to article 4, as the provision now only requires the obliged entity to collect "at least the country name". As noted in our previous response to the public consultation, Norwegian passports do not include information on the holder's city of birth.

Name of the respondent	Question	Answer
		With regard to article 5 and the specification concerning nationalities, we would like to emphasize that the requirement to “obtain information on all other nationalities (…)” is unclear. The duties of obliged entities under this provision should be specified. In general, reliance on the customer’s self-declaration on this point should be sufficient. We also note that there is currently no public register that holds authoritative information on all nationalities for Norwegian citizens. Furthermore, the identity documents examined for KYC/CDD purposes show only one nationality, namely that of the issuing state. It is therefore not possible to determine from such documents alone whether a client holds other nationalities (dual citizenship). In article 8, it would be beneficial for the non-financial sector if the relevant supervisory authorities were mandated to publish a list of data sources that qualify as “reliable and independent”. This would assist law firms by enabling them to focus their resources on those sources. The same applies to Article 10 and the phrase “other reliable national systems”, where it should be clarified which systems are considered acceptable by the supervisory authorities—for example, whether national company registries may be relied upon. In general, the provisions in Articles 11 and 12 on understanding the customer’s ownership and control structure appear difficult to implement for small law firms. Article 11 contains detailed “shall” requirements

Name of the respondent	Question	Answer
		regarding the information to be obtained and assessed on ownership and control. While the categories of information listed are relevant, it is questionable whether it is appropriate to impose these as mandatory "shall" obligations on the non-financial sector, rather than adopting a more risk-based and proportionate approach. Furthermore, The Norwegian Bar Association would also emphasise that the RTS itself, or at least the recitals, should make clear that where the RTS envisage automated tools (e.g. screening) or safeguards for remote verification, a controlled manual process may be acceptable where justified by a firm's size or business model, or by the AML risks associated with the relevant client or matter, provided that the process is documented and applied consistently. If Article 22 remains in its current form, it will affect lawyers' activities and should therefore be amended. Proposed Article 22(a) lays down several cumulative conditions for banks to apply simplified due diligence in relation to lawyers' pooled (client) accounts. One such condition is that, as a prerequisite for applying simplified due diligence measures, "the credit or financial institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit or financial institution". This

Name of the respondent	Question	Answer
		requirement raises serious concerns from the perspective of lawyers' legal professional privilege/professional secrecy (LPP/PS). We therefore recommend exempting lawyers from the obligation set out in Article 22(a).
The Norwegian Bar Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The Norwegian Bar Association acknowledges the adjustments made by AMLA in order to incorporate the risk-based approach. However, the risk-based approach requires some improvements, for example: 1) Several provisions provide that the obliged entity shall obtain information on "at least one of the following" points. All these exhaustive lists should contain an additional point: "any information that the obliged entity deems useful to understand / obtain the required information". This would allow for more flexibility, as in particular situations, other information might be available or relevant, but which is not contained in the enumerative lists. We also note that the phrase "the following information, where relevant" would better align with the risk-based approach. 2) Some provisions state that information shall be obtained "where necessary". The phrase "where necessary" should be clarified and defined. Information should be considered necessary where the obliged entity determines, on the basis of a risk-based assessment, that obtaining the information is required to understand the occasional transaction or business relationship and the associated risks, when the necessary information is capable of providing a good

Name of the respondent	Question	Answer
		understanding of those risks, and can be obtained with reasonable effort. We also refer to the response from CCBE for further comments.
The Norwegian Bar Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We refer to the comments on article 5 under question 2.1 above, and comments regarding article 22 below under question 2.5. We also refer to the response from CCBE for further comments.
The Norwegian Bar Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We refer to the response from CCBE for further comments. In addition, the legal sector (including the Norwegian Bar Association) is ready to work with AMLA and relevant Norwegian supervisors in providing support for the legal profession, particularly small firms and sole practitioners, on applying existing SDD flexibilities consistently.
The Norwegian Bar Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Introduction This response was prepared by one of the Norwegian Bar Association's committees, an expert group on AML matters. The group consists of seven experienced lawyers who work with AML regulations daily. The purpose of the expert group is to help strengthen the Norwegian Bar Association's efforts to increase

Name of the respondent	Question	Answer
		lawyers' awareness of anti-money laundering issues and to ensure lawyers' compliance with anti-money laundering regulations. The expert group also contributes with consultation responses and maintains contact with Norwegian authorities on anti-money laundering issues. The Norwegian Bar Association is the professional body and interest group for lawyers and associate lawyers in Norway. Together with its members and elected officers, the Bar Association endeavors to ensure that Norwegian lawyers meet high professional and ethical standards and enjoy good framework conditions. The Bar Association makes extensive efforts to promote due process protection and the principles of the rule of law, and it is the most important arena for its members' engagement in criminal justice issues and the development of the law. The Bar Association is concerned with developing good systems and solutions that can help lawyers in their day-to-day practice. We provide advice on an individual basis about establishing and running a legal practice and about relevant changes to the regulatory framework. More than 400 lawyers serve as elected officers of the Norwegian Bar Association. They find the association to be an effective, influential and pleasant arena for their engagement. Many of them sit on various committees, where they represent a professional resource and point of reference for the rest of the legal profession. The

Name of the respondent	Question	Answer
		Norwegian Bar Association also issues between 60 and 80 consultation submissions every year, thereby making its mark on future legislation. When reading the consultation report, it may be useful to bear in mind that Norway has law firms ranging from very small to large, ranging from one to several hundred employees, and with a wide range of clients. On an overall and general basis, many of the proposed measures would be difficult to implement for small law firms, and we therefore advise against their adoption. Such implementation would not be proportionate. 2. Specific Comments With respect to Article 18, it appears that several of the provisions expand the current requirements. It should be clarified whether points (a)–(d) are all mandatory. We believe that the gathering of this data should be risk-based, and that the introductory sentence must include an additional qualifier such as “where relevant” and/or “based on a risk-based approach”. In Article 19, the requirements applicable to firms considered sufficiently small to rely on manual processes appear unclear. Without further guidance from the supervisory authorities on which firms may rely on manual checks, small and medium-sized firms are likely to face increased compliance costs. Many law firms may be reluctant to conclude that they meet the criteria for manual checks and may therefore

Name of the respondent	Question	Answer
		implement costly automated checks instead. Article 22 raises the same questions as today's provisions on client accounts: • What kind of accounts are considered "pooled accounts"? • What happens when pooled accounts mean that the client relationship is not considered low risk – must the underlying clients always be identified? We also note that the provision imposes an obligation that is impossible to fulfil, in light of lawyers' duties of professional secrecy under national law. The obligation to protect professional secrecy is enshrined in Article 8 of the European Convention on Human Rights. We refer to the response from CCBE for further comments on this article. With respect to Articles 25, 26 and 28, which relate to enhanced due diligence measures, we note that these articles have been amended to require only at least one of the listed items to be gathered or assessed, whereas the EBA draft initially required all such items to be gathered or assessed. While we welcome this update as better reflecting the risk-based approach, we remain of the view that imposing any such measures on obliged entities prevents them from applying their own risk-based assessment on a case-by-case basis and risks turning compliance into a "tick-the-box" exercise.

Name of the respondent	Question	Answer
		We particularly agree with CCBE on the comments regarding Article 30(a), which deals with targeted financial sanctions. As mentioned earlier, many small law firms will have infrastructural challenges in complying with some of the requirements of the RTS. For the sake of clarity, the provision should expressly state that firms and companies meeting the relevant conditions may rely solely on manual checks and are not required to implement automated checks. We also refer to the CCBE response on this point, to which we agree.
The Norwegian Bar Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

The Swedish Financial Technology Association - SweFinTech	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	n/a
The Swedish Financial Technology Association - SweFinTech	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	n/a
The Swedish Financial Technology Association - SweFinTech	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a
The Swedish Financial Technology Association - SweFinTech	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	Article 19(6) AMLR clarifies that where a PISP serves a merchant (the payee) for the purpose of providing PIS, the relevant customer for CDD purposes is the merchant. As per our letter to AMLA of October 1st, 2025 significant regulatory uncertainty and different

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	interpretations of PISPs' responsibilities remains across Member States, which has led to inefficiencies and an unlevel playing field and need to be harmonised throughout the EU. The RTS shall clarify that the CDD obligations of PISPs serving merchants apply to the merchant only (not to the payer) and that the obligation to conduct CDD on the merchant only also applies when a PISP, in addition to providing PIS, also collects the initiated payments. Article 5. We suggest amending it change to "For the purposes of article 22(1)(a) point (iii) of Regulation (EU) 2024/1624, obliged entities shall obtain necessary information about the nationality or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. Such information could be obtained from the customer or through other independent and reliable sources." due to that there is no any reliable way to obtain information about the existence of multiple nationalities. Flexibility to use of other independent and reliable sources shall be allowed. The proposed wording also more closely aligns with the AMLR as it uses the term "nationalities" rather than "any other nationalities the customer may have", the latter which may be construed as having a wider meaning. If not amended, a clarification is needed as to how obliged entities should satisfy themselves that they know of all nationalities. Recital 3. Further clarification is needed on how the

Name of the respondent	Question	Answer
		entities are expected to verify such information in practice, e.g. to clarify if obliged entities can rely on third-party sources, e.g. national authorities or available registries. Further, we welcome the clarification that, where a person holds multiple nationalities and declares them in good faith, verification of one nationality is sufficient. However, please clarify what constitutes a declaration "in good faith", how obliged entities should assess and document this in practice and what sources and verification methods are considered acceptable in such case. Article 7(2). We suggest amending to "As an alternative to the solution described in paragraph 1, obliged entities may acquire the customer's identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3 and 4 of this Article. Such solutions shall be commensurate to the size, nature and complexity of the obliged entity's business and its exposure to ML/TF risks". Making the use of the solution in 7(2) dependent on the solution in 7(1) not being available or reasonably expected to be provided will lead to uncertainty in terms of when the solution in 7(2) can be applied, e.g. would it be allowed where there isa solution that meets the requirements in 7(1) but it has low availability/limited operating hours, is very expensive to use (for the obliged entity or the customer), is not set up technically in a way that is compatible with the obliged entities services etc.? It also raises questions on timing as the implementation of a new identification solution is often a very time-consuming process for an institute requiring updates of

Name of the respondent	Question	Answer
		internal policies, updates of the AML/CTF general risk assessment, update of the model used for customer risk classification, vendor assessments, NPAPs, DPIAs etc. Also, a clarification of the criteria that the obliged entities are expected to apply to justify that a customer could not be verified through the means in article 22(6) AMLR is needed, i.e. should it be based on certain indicators and and how such justification shall be documented. Article 25 (b) reg. assessing the reputation - a clarification is needed as to what measures are deemed eligible/sufficient to assess the reputation. For example, it can be specified as follows "enable the obliged entity to assess the reputation of the customer and the beneficial owner by for example means of adverse media or [similar/ other available means];" It is also necessary to clarify what is meant by "reputation". The word "reputation" can be interpreted widely, and we see that there is a risk that this leads to arbitrary judgements by the obliged entities, which in turn may lead to discrimination and off-boarding of customers. Article 12(1). There are many ownership structures where there are two or more layers between the customer and the beneficial owner and this does not necessarily adds complexity. We suggest simplifying the parameters to allow a more risk-based approach.
The Swedish Financial Technology Association - SweFinTech	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
The Swedish Investment Fund Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Swedish Investment Fund Association (SIFA), representing nearly 50 member companies managing approximately 90 percent of fund savings in Sweden, supports the efforts to strengthen the EU AML/CFT framework by enhancing harmonisation of rules across Member States. With that in mind, significant concerns need to be raised with the way the specificities of the collective investment undertakings' (CIUs) sector were addressed under Art. 17. Within the broader financial ecosystem, the asset management industry operates under fundamentally different conditions than the banking sector, particularly with regard to distribution models and the absence of direct relationships with underlying investors. These specificities should be recognised in line with established market practice and FATF standards. Art. 17 introduces a look-through requirement on intermediaries' client base that fails to reflect the structural characteristics of the asset management sector and departs from the risk-based approach underpinning the EU AML/CFT framework. In the Swedish market, distributors act independently and are solely responsible for conducting CDD on their customers. There is no legal relationship between the fund management company and the underlying investor; instead, the distributor acts in its own name and is registered in the shareholder register. Fund managers routinely verify that distributors maintain

Name of the respondent	Question	Answer
		appropriate AML procedures. This model enables a high level of retail participation and provides cost-efficient access to a broad range of funds. The Swedish fund market—characterised by high household participation, strong competition and comparatively low costs—is frequently highlighted at EU level as a successful model for broad and efficient access to low-cost investment products. Key to the success is that banks offer an open architecture meaning that they market both funds managed within the own group and funds managed by their competitors. The Swedish legislation has supported this development by allowing nominee registration of distributors without any right for the fund manager to have access to the distributor's client register. This has been a prerequisite for the emergence of the Swedish retail fund market. Banks are for obvious reasons not willing to reveal their clients register to competitors. Requiring disclosure of such information to fund managers would fundamentally undermine the current distribution model. Requiring distributors to provide client-level data is also not proportionate for AML/CFT reasons. As distributors are the only parties with direct access to and knowledge of the customer, transferring such information would not enable more effective or meaningful due diligence. The proposal would thus add significant operational complexity without improving AML/CFT outcomes.

Name of the respondent	Question	Answer
		The market impact of the proposal would be considerable. It would impose a substantial administrative burden on both distributors and fund managers, requiring new systems, contractual arrangements and ongoing data handling processes. At the same time, it will drive intermediaries towards limiting their distribution to in-house funds. This would reduce competition, limit the range of funds available to retail investors and materially diminish consumer choice. Such an outcome would weaken the attractiveness of EU investment funds, particularly UCITS, and run counter to key EU policy objectives, including increasing retail participation and advancing the Savings and Investments Union. It would also undermine a well-functioning market structure like the Swedish one that EU institutions have repeatedly highlighted as a success story. Furthermore, distributors are bound by GDPR and banking secrecy rules, requiring them to safeguard customer information. Experience from PSD2 demonstrates that liability risks may remain even where data sharing is lawful, which may further discourage disclosure. While some jurisdictions already require transparency of client registers for AML purposes, this is typically managed through contractual arrangements restricting disclosure where incompatible with national law. Such arrangements are administratively burdensome and illustrate the practical difficulties of

Name of the respondent	Question	Answer
		implementing such requirements. The current wording of Recital 14 does not sufficiently mitigate these concerns. Given its interpretative nature, it cannot override the binding obligations in Art. 17 nor address the structural shortcomings of the proposal. CDD responsibilities must remain with the distributor, as the only party with a direct customer relationship and the ability to perform effective due diligence. Art. 17 should therefore be revised.
The Swedish Investment Fund Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	SIFA finds that the draft RTS on CDD highly limits the possibility to apply a risk-based approach to customer due diligence (CDD). While we understand and support the need for more harmonised efforts in the area of AML/CFT measures across the EU, the risk-based approach remains the core principle of the framework. As mentioned in recital 29 of AMLR: “In line with the risk-based approach of this Regulation, those policies, procedures and controls should be proportionate to the nature of the business, including its risks and complexity, and the size of the obliged entity and respond to the risks of money laundering and terrorist financing that the entity faces, including, for crypto-asset service providers, transactions with self-hosted wallets.” This clearly acknowledges the need to apply the risk-based approach both at the level of a particular obliged entity and at the level of a specific sector. It is therefore important to fully recognise these sector-specific circumstances. A direct reference to a risk-based approach won’t however be sufficient if it is

Name of the respondent	Question	Answer
		followed by overly detailed and prescriptive rules. Moreover, we believe that Art. 28(1)(b) and 33(1)(e) of the AMLR have been subject to overly restrictive interpretation, which has significantly limited the possibility to identify and define simplified measures for specific sectors. Particularly, we believe that some of the proposed rules are not possible to apply to the asset management sector.
The Swedish Investment Fund Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In Sweden, credit institutions and investment firms are licensed by the Financial Supervisory Authority to be registered in the shareholder register in their own name (nominee registration). As a result, the distributor is the legal customer of the fund management company and bears full responsibility for conducting customer due diligence. The marketing of funds through these distributors is structured in the same way as stock trading. Recent changes to AIFMD and UCITS clarified that in such instances, the intermediary would not be acting on the manager's behalf, and rules on delegation would not apply. This is why, according to Swedish law, fund management companies have no legal right to access distributors' customer registers. This limitation is not incidental but constitutes a fundamental legal and structural prerequisite for the development of the Swedish fund market, which is characterised by high levels of retail participation, strong competition and cost efficiency. Swedish legislation deliberately separates the roles of distributors and fund managers,

Name of the respondent	Question	Answer
		including by restricting access to underlying investor data. The identity of underlying investors constitutes a core commercial asset for the distributor, protected by law. Against this background, distributors will, for both legal and commercial reasons, not accept any requirement to share their customer registers with fund managers. Should such an obligation be imposed, distributors are likely to respond by restricting their distribution to funds managed within their own group. This would fundamentally alter the current market structure and undermine the broad and open distribution model that has been central to the success of the Swedish fund market. Moreover, to the extent that concerns relate to third-country distribution, these should be addressed through targeted measures in that specific context rather than by imposing additional burdens on the entire European distribution system. A general approach risks disproportionately affecting well-functioning domestic and intra-EU distribution models without effectively addressing the underlying issue. The FATF has long acknowledged that funds typically sell units/shares through other financial institutions, making those institutions the funds' customers, and leaving the funds without direct knowledge of intermediaries' underlying investors. In that sense, funds are also similar to cross-border correspondent

Name of the respondent	Question	Answer
		relationships, and the FATF Recommendations do not require the correspondent securities providers to conduct CDD on the customers of their respondent institutions. The requirements proposed in Art. 17 will not deliver meaningful AML/CFT benefits. Distributors are the only parties with a direct customer relationship and already perform the relevant due diligence in accordance with applicable rules. Requiring fund managers to obtain information on the identity of underlying clients would merely duplicate existing controls without improving the effectiveness of AML/CFT measures. Moreover, fund managers are neither the appropriate nor the effective actors to conduct CDD on underlying clients, as they have no direct business relationship with them.
The Swedish Investment Fund Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N.a.
The Swedish Investment Fund Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	To address the specificities of the CIUs sector, the practical functioning and the diversity of the asset management industry, as described under responses to Questions 1 and 3 above, need to be fully recognised. Therefore, we believe that under Art. 17 of the draft RTS, CIUs should be allowed to fulfil the requirements of

Name of the respondent	Question	Answer
		the entire Art. 20(1) AMLR by relying on credit or financial institutions and without requiring them to provide information on their customers, provided that conditions under points (a) to (d) are met. Only in this way, a harmonised AML/CFT approach could be established for the asset management industry, which would take into account the diversity of distribution models and ways in which subscriptions to funds are allowed in a particular Member State or outside the EU. We are also of the opinion that Art. 17 has to fully reflect the fund industry's mitigated ML/TF risk and refer to instances where the risk associated with the relationship is “not high”. Within the AML/CFT terminology, the adjective “standard” is typically used to describe the type of CDD measures rather than the level of ML/TF risk associated with a relationship. The reference to the level of risk that is “not high” would be more in line with the current practices of AML/CFT risk-based approach. Taking this into account, we would suggest the following amendments to Art. 17 of the draft RTS on CDD: “When shares or units of a collective investment undertaking are sold through another credit institution or financial institution, the collective investment undertaking may fulfil the requirement under Article

Name of the respondent	Question	Answer
		20(1) of Regulation (EU) 2024/1624 if it is satisfied that: (a) the credit institution or financial institution is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risk associated with the relationship with the credit institution or financial institution is not high; and (d) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners."
The Swedish Investment Fund Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
The Swedish Investment Fund Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
The Swedish Investment Fund Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 5 of the draft RTS on CDD requires that obliged entities shall obtain information "all nationalities." This obligation is very impractical given that obliged entities do not have access to any database that will give them such satisfaction and identification documents, such as passports or IDs, only inform about the nationality of one country. Therefore, we would propose the following wording for Art. 5 of the draft RTS on CDD:

Name of the respondent	Question	Answer
		"For the purposes of Article 22(1), point (a) (iii), of Regulation (EU) 2024/1624 obliged entities shall take reasonable measures to obtain information about any other nationalities or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted."
The Swedish Investment Fund Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
The Swedish Investment Fund Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	SIFA believes that paragraph 5 of Art. 6, which requires that the obliged entity be provided with “identity document, passport or equivalent, or a certified copy thereof (…)” is excessive and does not allow the obliged entities to apply a risk-based approach. It is also not in line with provisions of the AMLR, which in Art. 22(6)(a) do not include the requirement of only originals or certified copies to be provided. Instead, it refers to “the submission of an identity document, passport or equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer”, which we believe gives much more room for the obliged entities to decide on how this submission and acquisition will take place, in accordance with the identified level of ML/TF risk. From a retail customer perspective, the obligation to

Name of the respondent	Question	Answer
		provide an original document or certified copy will highly increase the costs borne by the customers, as they will be the ones who would have to acquire and provide such a copy for themselves, their beneficial owners or persons purporting to act on their behalf. This will be even more challenging for customers from third countries. Our understanding is that the AML Package aimed to enhance the security of the system, and not disincentivise customers from using services provided by the EU financial sector. Such an approach would contradict the EU efforts to encourage retail investors to use financial products in the EU and the recent works of the FATF in its consultation on Updated FATF Guidance on AML/CFT measures and financial inclusion, that underscore the importance of financial inclusion. According to FATF, it is an essential element of the AML/CFT system as it "enhances financial sector transparency and integrity by increasing the reach and effectiveness of AML/CFT measures that help keep criminals out of the financial system and facilitate law enforcement investigations". The FATF highlights also the importance of a risk-based approach, as "applying overly cautious, non-proportionate AML/CFT safeguards when providing financial services and products can exclude legitimate consumers and entities from the regulated financial system (…)". Moreover, a risk-based approach must be applied when

Name of the respondent	Question	Answer
		collecting IDs to avoid unnecessary costs and burden. The effort and focus of obtaining IDs in original and/or certified form should be required only in case of inconsistencies or doubts about the customer's actual identity. Therefore, we would propose the following changes in Art. 6(5) of the draft RTS: "For the purpose of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities shall gather from these persons or from other reliable sources, an identity document, passport or equivalent or, in a a non-face-to-face situation, act in accordance with Article 7."
The Swedish Investment Fund Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	12
The Swedish Investment Fund Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The proposed provisions of Art. 12 of the Draft RTS on CDD would result in the vast majority of ownership structures being treated as complex, as multinational companies and medium/large financial entities typically have multiple layers of ownership, and in the majority of cases, in different jurisdictions. We do not believe this was intended by the AML Package, and again would not be in line with the level of ML/TF risk posed by those structures. In fact, due to the vast majority of structures being recognised as complex, it could make it easier for those truly complex to be less visible. Therefore, we do not believe that Art. 11 is in line with

Name of the respondent	Question	Answer
		the principle of a risk-based approach. It also doesn't leave room for a different approach to entities with a clearly lower ML/TF risk, due to the highly regulated industry in which they operate (e.g., financial institutions) or the fact that they are publicly listed companies. Firstly, the proposed number of "three or more layers between the customer and the beneficial owner" is disproportionately low. In the case of the asset management industry, there can be multiple layers of entities in the intermediary chain; however, as they would all generally be regulated financial entities, the ML/TF risk posed would remain low. Therefore, not only should the number of layers that would be considered as indicating a complex structure be left for the decision of the obliged entity, according to its risk-based analysis, but also the fact that those are regulated financial entities should exempt the structure from being treated as complex. Furthermore, the proposed conditions, if applied separately, also don't justify treating such structures as complex. Therefore, we would propose the following wording for Art. 12(1) of the draft RTS on CDD: "To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where there are multiple layers

Name of the respondent	Question	Answer
		between the customer and the beneficial owner and, in addition, more than one of the following conditions are met; a. there is a legal arrangement or a similar legal entity such as fundation in any of the layers; b. the customer and any legal arrangements present at any of these layers are registered in jurisdictions outside the EU; c. there are nominee shareholders or nominee directors involved in the structure; or d. the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification. ”
The Swedish Investment Fund Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	13
The Swedish Investment Fund Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	SIFA wants to highlight that the level of ML/TF risk that can be associated with SMOs is not the same as the potential risk that could be associated with beneficial owners (BOs). Firstly, the SMOs, unlike the BOs, do not hold ownership interest over the company and do not control it through that ownership or via other means. If they did, they would have to be identified as BOs. Instead, and according to Art. 63(4) of AMLR, their details are being provided in cases where it was not possible to identify BOs or their identification is uncertain. Secondly, as these are persons who exercise executive functions within the legal entity, their identity has already been verified multiple times, as they would usually have to perform actions vis-à-vis multiple national authorities, such as tax or national registers.

Name of the respondent	Question	Answer
		Due to the same reasons, their important details are usually available through reliable and independent sources of information, mentioned under Art. 22(6)(a) of AMLR. Therefore, it does not seem justified to require the same set of information and verification rules for SMOs as for BOs. According to Art. 63(4)(b) of AMLR the details that are to be collected on SMOs are to be equivalent to those required under Art. 62(1), second subparagraph, point (a). It does not refer to all the information listed for BOs' identification under Art. 62, moreover, the article clearly refers to “equivalent” information, which does not mean “the same”. Therefore, we would propose the following changes in Art. 13 of the Draft RTS on CDD: “In relation to senior managing officials as referred to in Article 22(2) second subparagraph of Regulation (EU) 2024/1624, obliged entities shall: a. collect information for identification purposes. Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; and b. verify the identity of senior managing officials in the same way as they would for beneficial owners using risk-sensitive measures.”

Name of the respondent	Question	Answer
The Swedish Investment Fund Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
The Swedish Investment Fund Association	Please specify which recital you refer to, and share your comments below.	SIFA strongly urges AMLA to revise Recital 14 in order to properly reflect the differentiated identification of the customer in multi-party distribution structures, as recognised by both FATF and the EBA together with our comments shared under response to question 5 in section 2 of this questionnaire. Across different segments of the financial industry, as well as across products offered by the same institutions, the identification of the "customer" is not uniform. This is particularly evident in structures involving multiple parties, where a simplistic or overly rigid interpretation risks misrepresenting the underlying business relationship. In the investment funds sector, intermediaries are frequently the entities with which the fund maintains the business relationship and is therefore, in many cases, regarded as the customer. The FATF explicitly recognises this in its Guidance for a Risk-Based Approach for the Securities Sector, stating that "depending on how the investment fund is sold, with whom the business relationship is established, or who is registered in the fund's share/unit register, the investment fund may be required to treat either the underlying investor or the intermediary as its customer."

Name of the respondent	Question	Answer
		This position is also reflected in the EBA's ML/TF Risk Factors Guidelines, which acknowledge that risks may be mitigated where "the customer is a firm subject to AML/CFT requirements that are not less robust than those required by Directive (EU) 2015/849." SIFA considers this recognition essential. It reflects the operational realities of the investment funds sector and ensures that AML/CFT obligations are applied in a manner that is both risk-based and proportionate. Omitting or diluting this approach would risk undermining consistent application across Member States.
The Swedish Investment Fund Association	Do you have any comments on the Annex in the draft RTS?	No
The Swedish Investment Fund Association	How would you rate the proposals set out in the draft RTS overall?	Inadequate

	subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
The Swedish Trade Association for Online Gambling (BOS)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	BOS supports the objective of improving consistency and harmonisation across the EU AML/CFT framework. At the same time, certain provisions relating to customer identification and verification in non-face-to-face situations may not provide sufficient flexibility across different sectors and operational models. In particular, Article 7 should preserve the flexibility envisaged under Article 22(6) AMLR, which recognises both document-based verification and electronic identification methods as valid means of verification. As currently drafted, Article 7 may be interpreted as establishing a hierarchy where eIDAS-based solutions are treated as the default approach, while other reliable methods are treated as fallback options. BOS supports the development and use of robust European digital identity solutions. However, there is currently no universally available and fully interoperable EU-wide digital identity framework. In the interim, the RTS should recognise that reliable national and private-sector onboarding solutions can provide equivalent assurance. The Swedish experience, where Bank-ID is widely used for secure digital identification, illustrates the importance of allowing technologically neutral and risk-based solutions that achieve the same AML/CFT

Name of the respondent	Question	Answer
		objective. BOS therefore encourages AMLA to clarify that obliged entities may use a range of reliable and independent verification methods, provided they achieve an appropriate level of assurance and are supported by proportionate controls. This would better support innovation, practical implementation and the risk-based approach.
The Swedish Trade Association for Online Gambling (BOS)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	BOS supports the objective of ensuring that customer due diligence obligations are applied in a risk-based and proportionate manner. However, certain provisions in the draft RTS may be interpreted too rigidly in practice and may not fully reflect the operational realities of all sectors and business models. In particular, some requirements concerning the purpose and intended nature of the business relationship may not be equally meaningful across all sectors. In the online gambling sector, the purpose of the relationship is generally clear: participation in gambling services for entertainment. At the same time, additional clarity regarding supervisory expectations in this area would be beneficial, particularly regarding the type and level of information expected to be collected in lower-risk gambling relationships. Similarly, requiring customers to provide detailed upfront estimates of expected activity, transaction

Name of the respondent	Question	Answer
		volumes or spending may have limited practical value. Customer behaviour in online gambling can vary significantly over time and is often influenced by personal circumstances, sporting events, campaigns or winnings. In such cases, ongoing behavioural monitoring and dynamic transaction analysis may provide a more accurate and risk-sensitive basis for AML/CFT controls than static onboarding estimates. BOS therefore encourages AMLA to clarify that obliged entities may satisfy these requirements through proportionate and sector-appropriate approaches, including risk-based ranges, behavioural categories or product-based use profiles where precise estimates are not meaningful.
The Swedish Trade Association for Online Gambling (BOS)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. Certain information required under the draft RTS may not always be routinely available through commonly used digital onboarding tools or may not materially improve AML/CFT risk understanding in lower-risk situations. This may include, for example, information such as all nationalities or place of birth, which may not always be accessible through widely used electronic identification solutions and may not be equally relevant across all risk scenarios. Where reliable digital identification solutions are used, traditional identity documents may not always be collected or necessary. The RTS should therefore avoid creating an expectation to collect and store additional

Name of the respondent	Question	Answer
		documents where equivalent assurance has already been achieved through secure digital identification. BOS also considers that information requirements should be limited to information that is reasonably accessible, relevant from a risk perspective and operationally feasible to collect. This is particularly important in high-volume digital environments, where disproportionate data collection may increase cost and complexity without improving AML/CFT outcomes.
The Swedish Trade Association for Online Gambling (BOS)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	BOS welcomes AMLA's recognition of simplified due diligence and supports a proportionate approach in lower-risk situations. Further clarification would be useful on how simplified due diligence may be applied in high-volume, lower-risk digital environments. This could include situations where customers use regulated and traceable payment methods, such as account-to-account payments via banks or mobile payment solutions such as Swish, and where the customer relationship does not present indicators of higher risk. In such cases, simplified measures should allow obliged entities to rely, where legally and operationally feasible, on information already obtained through regulated channels, including regulated payment providers, and on trigger-based updates rather than repeated periodic re-collection of unchanged data. Trigger events, changes in customer circumstances,

Name of the respondent	Question	Answer
		unusual activity and behavioural indicators may provide a more risk-sensitive basis for updating CDD information than routine refresh cycles alone.
The Swedish Trade Association for Online Gambling (BOS)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	BOS supports AMLA's overall objective of enhancing harmonisation and legal certainty. At the same time, the final RTS should ensure that proportionality, technological neutrality and operational feasibility are fully preserved. A key principle should be that the framework focuses on the level of assurance and risk mitigation achieved, rather than implicitly privileging specific technological tools or onboarding models. This is particularly important for digital-first sectors and for Member States where secure national identification and payment solutions are already well established. BOS also considers that additional clarity on the distinction between source of funds and source of wealth would support consistent application. In particular, the RTS should clarify when one or both concepts are expected to be applied, and how proportionality should be assessed in higher-risk situations. Overall, BOS supports AMLA's work and the objective of strengthening consistency and legal certainty across the EU AML/CFT framework. The framework should remain technology-neutral, risk-based and focused on equivalent assurance outcomes while avoiding disproportionate operational burdens.

Name of the respondent	Question	Answer
The Swedish Trade Association for Online Gambling (BOS)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
The Swedish Trade Association for Online Gambling (BOS)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
The Swedish Trade Association for Online Gambling (BOS)	Do you have any comments on the Annex in the draft RTS?	No
The Swedish Trade Association for Online Gambling (BOS)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
The Swedish Trade Association for Online Gambling (BOS)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time	Manageable impact

The Wolfsberg Group	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and	No answer

Name of the respondent	Question	Answer
	services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
The Wolfsberg Group	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The Wolfsberg Group welcomes AMLA's focus on a risk based approach. To ensure effective application and avoid undermining harmonisation across Member States, further clarity is needed in several areas: Recital 12 / Article 16 – "Person purporting to act" A key concern is the lack of clarity around the definition of a "person purporting to act on behalf of the customer," which risks divergent interpretations. These range from external legal representatives (e.g. agents with power of attorney) to internal employees (e.g. account operators). The Group recommends limiting this concept to external third parties acting under a formal power of representation (e.g. agent, proxy), as implied by references to "power of representation," but requiring explicit confirmation. The focus should be on persons with formal authority who actively engage with the obliged entity, not internal employees or all persons with general representation rights. Extending the scope to all employees would be disproportionate and not risk sensitive. Clarifying that such persons are outside the customer's sphere would allow resources to focus on

Name of the respondent	Question	Answer
		higher ML/TF risks. In this context, verifying the extent of representation (Article 16) is appropriate. Suggested definition: legal representatives of natural persons, and for legal persons, any non employee authorised via contractual mandate or formal proxy. If RTS28 cannot clarify this, AMLA should address it in Level 3 guidance. Article 6 – Verification scope / “once identified, always identified” The Group believes further clarity is needed on KYC verification. While AMLR requires comprehensive data collection, verification should focus on establishing identity (customer and beneficial owner), supported by Articles 20, 22 and 62 AMLR. Verification should confirm core identity elements from reliable sources, not require exhaustive verification of every data point. For example, an ID document may establish identity even if certain details (e.g. address) are missing, without triggering further verification. Confirmation is also needed that the principle “once identified, always identified” applies—i.e. a verified identity does not require re verification solely due to document expiry. Article 6(6) RTS28 should not impose mandatory acceptance of electronic identification in face to face situations. This would exceed Regulation (EU) 2024/1183 (eIDAS), which only mandates acceptance of the EUDI Wallet in online contexts from December 2027. RTS28 should clarify that acceptance remains optional from the eIDAS application date or, if later, the

Name of the respondent	Question	Answer
		RTS28 application date. The term “electronic” identification should also be removed to avoid limiting methods, ensuring alternatives such as qualified trust services remain available. Articles 10 and 21 – Simplified due diligence (SDD) The RTS does not sufficiently clarify how SDD applies to the identification and verification of beneficial owners. Article 21 largely mirrors the measures under Article 10, limiting its added value in low risk situations. As currently drafted, the provision is difficult to apply in a meaningful and operationally effective manner, and it remains unclear how obliged entities can in practice rely on it to implement genuinely simplified identification and verification of beneficial owners. Article 12 – Complex structures The current drafting risks a one size fits all approach, undermining risk based application. Defining complexity based on any non EU registration is too broad, as this is common for international firms. Instead, references should align with the European Commission lists in AMLR Articles 29–31. Article 13 – Senior Managing Officials (SMOs) Clarification is needed on the definition of SMOs under Article 63(4)(b) AMLR, particularly the distinction between (i) executive management body members and (ii) persons exercising executive functions accountable for day to day management.

Name of the respondent	Question	Answer
		We propose a hierarchical interpretation: • Primary focus on executive members where they exist; due diligence should focus exclusively on these individuals where a legal entity has a formally constituted management body with executive members; • Supplementary identification of other executive function holders where no formal executive body exists or additional individuals hold ultimate operational responsibility. This approach supports effective and targeted CDD and consistency for transparency register reporting. Further clarification in RTS28 or Level 3 guidance is essential to ensure harmonised implementation.
The Wolfsberg Group	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In general, the Wolfsberg Group is concerned that the highly prescriptive Level 1 framework, with limited flexibility for a risk based approach, will increase administrative and operational burdens through the multiplication of required data points. This risks shifting focus away from genuinely material financial crime risks and may lead to AML/CFT frameworks becoming overly focused on static data collection rather than dynamic, risk driven processes integrated across financial crime controls. Legal entities governed by public law (Article 65 AMLR) A key challenge arises in relation to entities covered by Article 65 AMLR. While certain listed companies and public bodies are exempt from Articles 63 and 64, Recital 127 clarifies that beneficial owners must still be identified. In practice, obtaining such information—

Name of the respondent	Question	Answer
		particularly for public bodies—will be challenging, as there is typically no natural person who ultimately owns or controls the entity. Identifying senior managing officials (SMOs) may instead lead to politicians or public officials, for whom obtaining the required information is difficult. Clarification is also needed on whether this regime applies only to EU public bodies or also to non EU equivalents. Article 17 RTS28 – Collective Investment Undertakings (CIUs) The Group has concerns regarding Article 17 RTS28 in the context of differing fund distribution models in Europe: • Register model (e.g. Ireland): a direct relationship exists between the CIU and the investor; the CIU performs CDD. • CSD/intermediated model (e.g. France, Nordics): the CIU's relationship is with a distributor/intermediary, which in turn has the relationship with investors. There is no direct CIU–investor relationship; the distributor applies CDD and the CIU relies on it based on contractual arrangements. Under AMLR definitions, a business relationship exists between CIU and distributor, and between distributor and investor—but not between CIU and underlying investors. The CIU cannot directly access or interact with those investors and relies on the distributor's AML controls.

Name of the respondent	Question	Answer
		While Article 17 aims to provide a pragmatic solution, its current wording risks undermining these models: • Lack of proportionality: Where reliance conditions are not met, CIUs would need to identify and verify large numbers of investors already subject to full CDD by the distributor. This would be duplicative and inconsistent with the proportionality principle in Article 1 RTS28. Furthermore, reliance conditions in RTS28 are overly restrictive, as they require cumulative criteria and timely access to underlying investor data without sufficient flexibility to tailor this to the specific risks involved. In particular, limiting reliance to distributors assessed as low or standard risk is problematic, as institutional risk ratings are driven by multiple factors and do not necessarily reflect the quality of a distributor's AML framework. As a result, especially for large financial institutions, otherwise robust distributors may be excluded purely due to their overall risk profile. • Operational challenges in accessing investor data: Reliance requires timely access to underlying investor data, implying secure legal and technical arrangements and complex IT infrastructure. In practice, such data is not routinely shared. Distributors and asset managers may compete for investor relationships, particularly outside the EU, making consistent information sharing unlikely. • Market impact and competitiveness: Distributors not qualifying as low/standard risk may be excluded, reducing their attractiveness and potentially affecting competition and market structure in the EU.

Name of the respondent	Question	Answer
		Proposed approach We propose simplifying Article 17 by limiting conditions primarily to assessing the distributor's regulatory status and AML framework (current condition d)) and adding a requirement that the CIU be satisfied that the distributor will provide relevant information upon request. This assessment should be based on regulation in the EU or an equivalent jurisdiction, or an independent review of the AML framework, rather than overall risk rating. This reflects current market practice and supports a proportionate, risk based approach.
The Wolfsberg Group	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We welcome the opportunity to propose additional SDD measures. Please note that these measures are not new, but are practiced already within the EU: • Pooled Accounts held by an obliged entity: We welcome the sectoral simplified measures with respect to pooled accounts in Article 22 RTS28. However, in practice, there are various additional forms of low-risk pooled and individual escrow accounts not necessarily involving obliged entities. Examples include collective and single rental deposit accounts, escrow accounts of bailiffs, debt collection agencies, insolvency administrators, and accounts for school classes, and all notaries, lawyers and other legal professions that do not perform activities listed within Article 3 (3) lit. b AMLR. We request (i) NOT limit Article 22 to pooled accounts, and (ii) extend the account holders also to non-obliged entities in line with currently existing practices (re. escrow accounts for all lawyers, escrow accounts where the trustor has legally no authority to dispose of the

Name of the respondent	Question	Answer
		funds that are administered in the escrow account, e.g. insolvency cases, compulsory administration, execution of a will, escrow accounts in other low risk cases where the account holder is no obliged entity, e.g. collective rent deposit accounts, debt collection, accounts for school classes, etc). One additional request with respect to Article 22 RTS28 would be to exchange “immediately” in (a) with either "promptly" or "without undue delay". This change better reflects operational realities and established standards, including the BaFin Interpretation and Application Guidance, which supports a risk-based approach to supplying beneficial owner lists when requested. • Public Companies Listed on a Stock Exchange (including majority-owned subsidiaries of such companies) and Countries and Governmental Bodies, Legal Entities under Public Law: Under question 4 we addressed the challenge of obtaining the required information for these categories of customers. This challenge is a result of Recital 127 and Article 65 AMLR providing a basis for exempting public companies listed on a regulated market (including majority-owned subsidiaries of such companies) from extensive Beneficial Owner (BO) identification due to their inherent transparency. The Group sees merit in this exemption, but suggests under a risk-based approach adding a sectoral simplified measure for all public companies listed on a stock exchange measure (including majority-owned subsidiaries of such companies) and countries, governmental bodies and

Name of the respondent	Question	Answer
		legal entities under public law fulfilling the requirements stipulated in Article 20 (1) point (b) AMLR. The requirement to identify and verify beneficial owners of such entities would not support the fight against ML/TF. • Pension Products: The Group recommends pension products to be considered for sectoral simplified measures similar to the measures for pooled accounts. This should include employer-sponsored/financed pension schemes in jurisdictions not referred to in Articles 29-31 AMLR, and company pension schemes regardless of sponsorship. These products are subject to specific national regulatory requirements with a low ML/TF risk profile. However, clarification supporting a risk-based approach is required for: The General Possibility to Apply SDD Measures Beyond a Fixed Catalogue: AMLR Article 33 allows obliged entities to apply specific simplified due diligence measures "where, taking into account the risk factors set out in Annexes II and III, the business relationship or transaction present a low degree of risk." This flexibility indicates that obliged entities should be able to propose and apply SDD measures beyond a rigid catalogue provided such proposals are justified by, and proportionate to, the identified low risks. At the same time, this should not be understood as a complete waiver of Article 20 (1) AMLR; rather a holistic and risk based application of SDD would promote consistency, reduce unnecessary administrative burden in genuinely low cases, and enable a more targeted

Name of the respondent	Question	Answer
		allocation of resources to higher-risk areas, thereby strengthening the overall effectiveness of the AML/CFT framework.
The Wolfsberg Group	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The Group agrees with the majority of the proposals and has focused its key concerns above under questions 2 and 4, in support of establishing a true risk-based approach. We also welcome the additional clarification provided in relation to Article 33 of this RTS28, which further acknowledges the efforts required by the industry to implement the EU AML Package. However, we would like to reiterate the importance of the timely finalisation of RTS28. Effective implementation depends on clarity around the applicable requirements, certainly in view of required IT system updates. We note that the timelines set out in the Single Programme Document have already been adjusted and we are therefore concerned about when conclusive and finalised texts can be expected from the European Commission. In this context, we ask for a further recognition of the limited time available to implement these standards. This should be taken into account when determining the effective date of the Level 2 measures, and if no adjustment to the effective date is envisaged, that at least a proportionate approach to EU supervision across the Member States is adopted during the implementation phase.

Name of the respondent	Question	Answer
		Finally, to remove any remaining ambiguity, Article 33 still refers to “publication date”; we assume this is intended to mean the “application date,” in line with Recital 25 of RTS28, and would welcome confirmation of this point.
The Wolfsberg Group	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
The Wolfsberg Group	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
The Wolfsberg Group	Do you have any comments on the Annex in the draft RTS?	No
The Wolfsberg Group	How would you rate the proposals set out in the draft RTS overall?	Good
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	The proposed RTS attempt to reconcile two inherently distinct in their nature goals, i.e. harmonization of CDD measures applied by obliged entities across Member States on the one hand, and a risk-based approach (RBA) on the other. While we acknowledge the

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	importance of both aims, as data protection scholars, we would like to bring to AMLA's attention the importance of respecting two crucial data protection principles, namely the principle of purpose limitation and data minimization enshrined in Article 5 of the GDPR. These principles demand limitation of the processing of personal data to what is adequate, relevant and necessary in relation to the specified, explicit and legitimate purposes for which data is processed. The choice of the "one-size-fits-all" approach, whilst suitable to facilitate harmonisation entails a risk of infringing the fundamental right to the protection of personal data, as it may lead to the processing of personal data beyond what is permitted under the GDPR. Therefore, we favour a stronger RBA due to its flexibility and, consequently, proportionality of data processing. We would like to propose at a minimum an inclusion of a recital stipulating that "[i]n applying the RTS specifying the information and requirements necessary for the performance of customer due diligence measures, obliged entities take account of the principle of proportionality, fundamental right to the protection of personal data and obligations arising from Regulation (EU) 2016/679 of the European Parliament and of the Council".
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	As data protection scholars, we would like to draw AMLA's attention to the principle of data accuracy formulated in Article 6(1)(d) GDPR. In our view, in cases where data is unavailable (partly or in their entirety), it should be possible to supplement the customer

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	information by an annotation of the reasons why some data may be missing or incomplete. Annotations should be voluntary and must not affect negatively concerned individuals. Articles 3, 4 and 5 of the draft RTS provide some leeway to the obliged entities allowing them to accept that some data points may not be available (e.g. postal code, street name etc. in Article 3; or details regarding place of birth in Article 4). Article 5 of the draft RTS provides an obligation to obtain information on all nationalities and does not account for situations where the customer may be willing to provide a reason for having a dual- or multi-nationality, as well as the information on when and circumstances under which a new or additional nationality has been obtained or given up. Considering that in the global AML/CFT policy the information about the country of origin (inherently linked with one's nationality) plays a vital role in the assessment of risk, which, in turn, may considerably affect certain individuals, we would like to propose to AMLA to consider supplementing Article 5 with an obligation to record any additional information shared in this respect by the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. Provision of such additional information must be voluntary and help the obliged entity "understand the nationality", as referred to in Recital 3 to the RTS, without having any negative impact on the customer's risk assessment and overall outcome of the performance of customer due diligence.

Name of the respondent	Question	Answer
		Adding similar annotations should be possible for information referred to in Article 3 and 4 of the draft RTS. In all cases, it must be made clear to the customer that the provision of any additional explanation is voluntary will not incur any negative consequences. In view of the above, AMLA may consider adding one provision jointly expanding Articles 3, 4 and 5.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	NA
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would like to once more emphasise our concerns regarding compliance of the draft RTS with the fundamental right to the protection of personal data and principles established by the GDPR and encourage AMLA to take our suggestions into account.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2

Name of the respondent	Question	Answer
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	This comment concerns multiple provisions: Art. 2(1), Art. 4, Art. 6 (1),(2)&(5), Art. 7(2),(3) All the provisions use the formulation “identity document, passport or equivalent”, which we find ambiguous and inconsistent with Recitals 3 and 7. The formulation implies that passport or ‘equivalent’ may be an alternative to the identity document. While there is no legal definition of identity document under the EU law, for the reasons of consistency, we propose to draw, for instance, on the Asylum and Migration Glossary of the European Migration Network (EMN) published by the European Commission, which provides the following definition for the term identity document: “A document issued by a State authority to an individual for providing evidence of the identity of that individual.” (see: https://ec.europa.eu/assets/home/emn-glossary/glossary.html?letters=i&detail=identity+document). In view of the above, Art. 2(1), Art. 4, and Art. 7(2),(3) should be revised by replacing “identity document, passport or equivalent” with “identity document, such as identity card, passport or equivalent”. In addition, for legal certainty, in these provisions, the word “equivalent” could be followed by a cross reference to Article 6 - “…equivalent, as referred to in Article 6(1) and (2)”. Additionally, a relevant recital could be added to explain what the equivalent could be. Art. 6(1) should provide “For the purposes of verifying the identity of the natural person in accordance with Article 22(6), point (a), and Article 22(7), point (a), of Regulation (EU) 2024/1624, a document shall be considered equivalent to an identity document, such as

Name of the respondent	Question	Answer
		identity card or passport if it meets all of the following conditions: (…)"
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	This comment concerns: Art. 6(2) In the sentence "If the document provided does not include information stipulated in the points of the first subparagraph, obliged entities shall use other credible means to obtain this information", AMLA could consider adding an explicit reference to the RBA and leave room to the obliged entities to decide on whether to accept documents, which do not meet the standards of identity documents or equivalents referred to in Article 6(1). The revised part of the provision could be as follows: "If the document provided does not include information stipulated in the points of the first subparagraph, obliged entities shall be permitted to use other credible means to obtain this information on a risk-sensitive basis." This comment concerns: Art. 6(5) The scope of this paragraph and its relation to Art. 6(1) are unclear. To be consistent with other subparagraphs of Article 6, the provision should either specify which indent of Article 22(6) of Regulation (EU) 2024/1624 it refers to (we assume it refers to Article 22(6)(a), but it should be made explicit to warrant a coherent interpretation). Should the discussed provision indeed refer to Article 22(6)(a) of Regulation (EU) 2024/1624, a

Name of the respondent	Question	Answer
		possibility of merging it with Article 6(1) could be considered, as, otherwise, it may appear superfluous. Finally, the word “act” could be replaced with a “verification measure obtained” in accordance with Article 7.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	8
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We recommend that AMLA specifies what the term “source of information” articulated in Article 8 refers to. In the current wording, it is unclear whether it relates to the “information sources” per Article 7(3) of the draft RTS or any other origins of information, possibly including “equivalent” means of identification. Alternatively, one can understand that the term used in Article 8 provides interpretation to the term “reliable and independent sources of information” used in Article 22(6)(a) of Regulation (EU) 2024/1624. In case of the latter, we recommend to explicitly refer to Article 22(6)(a) of Regulation (EU) 2024/1624. AMLA should consider adding a relevant clarifying recital.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	19
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	This comment concerns Art. 19(3) The current formulation of Article 19(3) – “automated screening tools and measures, or a combination of automated screening tools and manual checks” implies an alternative, suggesting that that the obliged entities may choose between “automated screening tools and

Name of the respondent	Question	Answer
		measures" or "combination of automated screening tools and manual checks". Considering possible detrimental consequences of the sole application of automated tools and measures, we recommend revising the provision by including the obligation to verify the outcome produced by any of such technology by a human in every case, where it can lead to a decision affecting individuals.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	25
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	This comment concerns multiple provisions: Art. 25, 26(1), 28 All three provisions stipulate that the obliged entities "shall obtain one or more of the following additional information", while no such information are listed. The wording should be adjusted by providing a catalogue of additional information (an equivalent to e.g. Article 26(2)) and stating that additional information shall be obtained in order to allow the obliged entity to achieve certain purpose (e.g. in Art. 25 - "(a) be satisfied that (…)").
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	27
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	This comment concerns: Art. 27(g) and (h) In the age of deepfakes and misinformation, the sources of information indicated in Article 27(g) and (h) entail substantial risk to the possibly concerned customers. We propose to either remove letters (g) and (h) from

Name of the respondent	Question	Answer
		Article 27 or to require obliged entities to apply necessary safeguards when taking account of such sources of information. In the latter case, we propose to add a following paragraph: “When collecting information referred to in Article 27[1](g) and (h), obliged entities shall exercise utmost caution in verifying their authenticity.” Should this solution be accepted, the word “authentic” in Article 27(g) could be removed.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	30
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	In our view, the use of automated screening tools or solutions provided by Art. 30(1) requires adding relevant safeguards to protect individuals from possibly detrimental effects of the use of automated screening tools or solutions. We propose to add letter (e) stating that: “Obliged entities shall ensure that no decision affecting any individual is made solely on the basis of the outcomes produced by the automated screening tools or solutions referred to in paragraph (a).” Adding a relevant recital revoking the importance of protecting fundamental rights and freedoms of individuals should be considered as well.
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	Do you have any comments on the Annex in the draft RTS?	No
Tilburg Institute for Law, Technology, and Society (TILT), Tilburg University	How would you rate the proposals set out in the draft RTS overall?	Neutral
Tink AB	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Tink AB supports AMLA's objective of promoting a harmonized, risk-based and proportionate framework for customer due diligence across the EU. We also recognize the importance of ensuring that the draft RTS can be applied consistently across a wide range of products and services. However, we do not fully agree that the proposals, as currently drafted, provide sufficient flexibility for all obliged entities. In particular, the RTS are drafted to apply across a wide range of obliged entities, which means that several provisions appear to be framed primarily with account-holding and fund-custody models in mind. For Payment Initiation Service Providers (PISPs), which do not onboard payers, do not hold payment accounts and do not have custody of funds, the absence of explicit model-specific clarification creates a risk that CDD requirements are applied in a manner not aligned with the nature of the service. While the RTS do not explicitly require payer or end-user CDD for PISPs, the lack of clarity means that such requirements could be inferred in practice.

Name of the respondent	Question	Answer
		In practice, this could result in expectations for PISPs to collect or verify payer information that they do not have access to by design, or to duplicate controls already performed by account-servicing payment service providers. We therefore believe that additional clarification regarding the application of CDD requirements to PISP services would improve flexibility and help ensure proportionate and predictable implementation across different business models.
Tink AB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Tink AB agrees that a genuinely risk-based approach is fundamental to effective AML/CFT compliance, and the draft RTS appropriately emphasise this principle in several places. That said, in the absence of explicit clarification for certain non-bank business models, there is a risk that the framework is applied in a more formalistic or checklist-driven manner in practice. This risk is particularly relevant for PISPs. Extending CDD expectations to include payer identification would not materially improve AML/CFT outcomes, given that payer CDD is already performed by the account-servicing payment service provider (ASPSP). Such duplication would increase operational burden without addressing a corresponding ML/TF risk. This risk arises in particular in relation to the provisions

Name of the respondent	Question	Answer
		in Chapter II of the draft RTS specifying the information to be collected for the customer identification and verification purposes, which, if applied without model-specific clarification, risk being interpreted as extending to payer identification for PISP services. Clarifying how the risk-based approach should be applied to PISP services would therefore reinforce AMLA's objectives and help ensure that proportionality is achieved in practice, not only in principle.
Tink AB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. For PISP services, certain information that could be interpreted as required under the draft RTS is not routinely available by design. PISPs do not establish customer relationships with payers, do not onboard payers, and do not have access to the underlying payment accounts. Payer identification and verification are performed by the account serving payment service provider (ASPSP), which holds the account and executes the payment transaction. As a technical service, a PISP facilitates the initiation of a payment between the payer's bank and the merchant, without controlling the account, holding funds, or maintaining an ongoing relationship with the payer. As a result, PISPs neither collect nor retain payer identification data as part of providing the service. This reflects the lower ML/TF risk profile of PISP services, which do not involve fund custody or ongoing

Name of the respondent	Question	Answer
		customer relationships with the payer, and where key AML controls sit with the account-servicing payment service provider. In this context, requiring PISPs to collect or verify payer information would not be feasible without fundamentally changing the nature of the service and would result in duplication of controls already performed by the ASPSP. Clear confirmation, in line with Article 19 (5) (d) and Recital 62 of the AML Regulation, that customer due diligence obligations for PISP services apply to the merchant and not to the payer is therefor necessary to ensure that the framework remains practical and proportionate.
Tink AB	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Tink AB believes that services such as payment initiation present a lower ML/TF risk profile due to the limited role of PISPs, the absence of fund custody and ongoing payer relationships, and the fact that the core AML risks are managed by the ASPSP. Further clarification on the availability of simplified approaches for such services would support consistent and predictable application across the EU and help avoid continued divergence in national supervisory practice. This would also align with the forthcoming AML Regulation, which further differentiates between AIS, PIS and account-holding payment services, and supports AMLA's mandate to promote harmonization and proportionality.

Name of the respondent	Question	Answer
Tink AB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Tink AB would like to highlight the importance of clarity in the interaction between the draft RTS and the forthcoming AML Regulation. While the draft RTS are intended to support consistent implementation of AML/CFT requirements, any remaining ambiguities, particularly non-bank business models such as AIS and PIS, risk being addressed through divergent national supervisory practices. This would be contrary to AMLA's mandate to promote harmonization and reduce fragmentation across the EU. Further clarification in the RTS would help ensure that the framework remains future-proof and aligned with the direction set by the AML Regulation, including the differentiated treatment of AIS and PIS. Clear articulation of how CDD requirements apply to these models would support consistent and predictable supervision, while preserving a genuinely risk-based and proportionate approach. We believe such clarification would strengthen the effectiveness of the RTS and support AMLA's broader objectives in establishing a harmonised EU AML/CFT framework.
Tink AB	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Tink AB	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
Tink AB	Do you have any comments on the Annex in the draft RTS?	No
Tink AB	How would you rate the proposals set out in the draft RTS overall?	Good
Tink AB	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Tink AB	Would the implementation of the draft RTS generate any of the following additional costs beyond the	No significant additional costs

Name of the respondent	Question	Answer
	adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Tink AB	Please justify your answer to the previous question and provide evidence where possible.	The draft RTS are, overall, well aligned with the objectives of the AML Regulation. For PISP services, however, clearer model-specific guidance is needed to avoid misapplication in practice. If applied proportionately and in line with the AMLR, the RTS are not expected to result in significant additional recurring costs for PISPs. Any one-off impacts would be

Name of the respondent	Question	Answer
		limited to manageable adjustments, such as clarifying internal policies or procedures, and would primarily arise in situations where additional clarification is required to ensure consistent supervisory application across Member States.
TMF Fund Management S.A. (Fund management company part of TMF Group)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We recognize that the draft Regulatory Technical Standards under Regulation (EU) 2024/1624 represent a clear shift from principles-based guidance towards enforceable and granular operational standards, while remaining formally anchored in a risk-based approach.
TMF Fund Management S.A. (Fund management company part of TMF Group)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We partially agree, as certain items are missing, given that reliance on intermediaries was neither included in the review nor covered by the Standard. The assessment of intermediaries has a direct impact on the client's risk profile. Our comments therefore focus on clarifying key concepts that are central to consistent application (such as "undue delay", "immediately" and "complex structures"), avoiding mechanical or purely structural interpretations, and ensuring appropriate differentiation where individuals are identified by default rather than through ownership or control (notably senior managing officials and PEPs in institutional contexts). We also emphasize the importance of limited flexibility

Name of the respondent	Question	Answer
		where justified by risk, explicit recognition of existing regulated reliance frameworks, and alignment with data-minimization principles, with the objective of strengthening AML/CFT outcomes without creating unnecessary operational burden or encouraging unintended de-risking.
TMF Fund Management S.A. (Fund management company part of TMF Group)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The establishment of a business relationship is not permitted in cases where due diligence documentation cannot be obtained.
TMF Fund Management S.A. (Fund management company part of TMF Group)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We note that where no beneficial owner is identified through ownership or control, obliged entities must identify senior managing officials (SMOs). However, treating SMOs as equivalent to beneficial owners in terms of data collection is neither proportionate nor aligned with their role as a fallback mechanism, and may create an undue compliance burden without meaningful ML/TF risk mitigation benefits.
TMF Fund Management S.A. (Fund management company part of TMF Group)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would like to emphasize that both the Regulation and the RTS are narrowly focused on Client Due Diligence, while due diligence relating to other counterparties and underlying assets remains materially underdeveloped in the current text. This represents a significant gap. Based on our experience, we strongly recommend that due diligence obligations be explicitly expanded to cover underlying assets and all relevant

Name of the respondent	Question	Answer
		counterparties, and that such requirements be established as a core, mandatory component of the obligations applicable to obliged entities.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We acknowledge that, under the proposed RTS, the collection of official identification documentation is required as a general rule, with no explicit recognition of alternative identification methods. While we support the objective of ensuring a high level of assurance regarding the identity of natural persons, the current approach is overly rigid and insufficiently reflective of operational realities. Based on supervisory and practical experience, the systematic collection of official identification documents can, in certain cases, prove disproportionately burdensome or even unworkable. This is particularly evident with respect to specific categories of individuals most notably U.S. persons where access to, or willingness to provide, standard identification documentation is frequently constrained. The absence of any permissible alternative in such situations risks creating unnecessary barriers to compliance without delivering a commensurate increase in risk mitigation. Against this background, we strongly urge that the RTS be amended to introduce a narrowly defined and strictly controlled flexibility, allowing obliged entities to identify a natural person in duly justified cases where official identification documents cannot be obtained. In line with our proposal, this should explicitly permit reliance

Name of the respondent	Question	Answer
		on reliable, independent, and publicly available sources, provided these enable the obliged entity to reasonably and credibly establish the identity of the individual concerned. Such flexibility must, however, be accompanied by robust safeguards and clearly articulated conditions. In particular, the amended article should expressly require that obliged entities ensure that: • the information collected can be unambiguously linked to the individual concerned; • the overall identification framework achieves a level of assurance equivalent, to the extent possible, to that provided by official documentation; and • the risks of identity theft, impersonation, or misidentification are effectively mitigated through enhanced and risk-sensitive verification measures where appropriate. We therefore call for a targeted revision of the current article to incorporate this approach. Properly calibrated, this adjustment would materially improve the proportionality and operational feasibility of the RTS, while fully preserving indeed reinforcing its core objective of robust, reliable, and risk-based customer due diligence.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	12
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We seek clarification on the criteria used to determine when an ownership or control structure should be deemed “complex” for the purposes of the RTS. As

Name of the respondent	Question	Answer
		currently framed, the notion of complexity lacks sufficient precision, creating a risk of divergent interpretations and inconsistent supervisory outcomes. In particular, it remains unclear whether complexity is intended to be assessed primarily on the basis of structural metrics such as the number of layers or jurisdictions involved or whether a broader set of qualitative and risk-based factors should be determinative. By way of illustration, a fully integrated European corporate structure comprising multiple layers of entities established exclusively within the EU could, under a purely structural reading, be classified as "complex," despite benefiting from a high degree of transparency, regulatory oversight, and group integration. Conversely, structures involving fewer layers but incorporating non-EU entities—or entities established in higher-risk jurisdictions might not necessarily be captured under the same approach. This asymmetry suggests that a purely formal or jurisdictional test would be both over-inclusive and under-inclusive, and therefore not aligned with the underlying risk-based logic of the framework. In our view, the RTS should be amended to explicitly define "complex structures" through a risk-based and multi-factorial assessment. Complexity should not be inferred from structural features alone, but rather evaluated holistically, taking into account, inter alia: • the transparency of the structure and the ease with which beneficial ownership can be identified and verified;

Name of the respondent	Question	Answer
		• the nature, regulatory status, and supervisory environment of the entities involved; • the degree of operational and legal integration within a corporate or group framework; and • any additional ML/TF risk indicators identified in the course of the due diligence process. Importantly, the RTS should clarify that complexity, in and of itself, is not a proxy for elevated ML/TF risk, but rather one factor among several that must be assessed in combination. In practice, the overall risk profile of a structure is driven by the interaction between structural characteristics and other risk elements, and this should be explicitly reflected in the drafting. We also request specific clarification regarding the treatment of nominee shareholders. Nominee arrangements should not be deemed complex per se, particularly in sectors such as the investment fund industry where such structures are widespread and operate within well-defined contractual, regulatory, and disclosure frameworks. Where beneficial ownership can be clearly, reliably, and independently established, the mere presence of nominee shareholders should not trigger a classification of complexity. In light of the above, we strongly urge that the relevant article be revised to incorporate a clear, risk-based definition of “complex structures,” supported by illustrative criteria or guidance. This would enhance legal certainty, promote consistent application across obliged entities, and ensure full alignment with the risk-

Name of the respondent	Question	Answer
		based approach underpinning the EU AML/CFT framework.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We understand that, where no natural person can be identified as a beneficial owner through ownership or control, obliged entities are required to identify and verify the senior managing officials (SMOs) of the entity. We also note that the RTS appears to envisage, for SMOs, a level of information broadly equivalent to that required for beneficial owners identified through ownership. However, we consider this approach to be neither proportionate nor aligned with the underlying rationale of the SMO concept. SMOs are identified as a fallback mechanism, not as individuals exercising ownership or ultimate control. Imposing a systematically equivalent level of data collection therefore risks creating an unjustified and excessive compliance burden, without a commensurate benefit in terms of ML/TF risk mitigation. In particular, we question the necessity of requiring certain categories of personal data such as proof of residence and tax identification numbers (TINs) in all cases involving SMOs. In many instances, such information does not materially enhance transparency, nor does it meaningfully contribute to the assessment of the entity's ML/TF risk profile. In our view, the RTS should be amended to introduce a

Name of the respondent	Question	Answer
		clear and explicit differentiation between the information requirements applicable to: • beneficial owners identified through ownership or control; and • SMOs identified as a default or proxy. For SMOs, the collection of core identification and screening data such as name, date of birth, function, and relevant sanctions/PEP screening information should generally be considered sufficient. Additional data points, including TIN and proof of residence, should only be required where justified by specific risk factors or where necessary to resolve identification uncertainties. We therefore strongly urge that the relevant article be revised to reflect a proportionate, risk-based approach, explicitly limiting the scope of personal data collected for SMOs to what is necessary and relevant. This would ensure alignment with the principle of data minimization, reduce unnecessary operational burdens, and maintain a clear focus on information that genuinely contributes to effective ML/TF risk assessment. Absent such clarification, the current drafting risks blurring the conceptual distinction between beneficial ownership and fallback identification mechanisms, leading to inconsistent implementation and disproportionate data collection practices across obliged entities.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	17

Name of the respondent	Question	Answer
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We are of the view that the notion of “undue delay,” as currently formulated in the RTS, is insufficiently precise and creates material legal and operational uncertainty. In its present form, it is inherently open to interpretation, which will inevitably lead to divergent applications across obliged entities and inconsistent supervisory expectations. This lack of clarity is not tenable in a framework that is intended to ensure harmonized and effective AML/CFT implementation. We therefore strongly urge that the RTS be amended to define “undue delay” through clear, objective, and measurable timeframes (e.g. a specified number of business hours or days, such as 72 business hours). Absent such specification, obliged entities will be exposed to conflicting interpretations and undue compliance risk, particularly in cross-border contexts. Beyond this definitional issue, the practical application of this requirement in the investment fund industry especially in the context of omnibus account structures raises significant concerns. In such models, underlying investors are already subject to customer due diligence by intermediaries that qualify as obliged entities, are subject to AML/CFT supervision, and operate under EU or equivalent regulatory frameworks. Requiring systematic and immediate access to underlying investor documentation in these circumstances results in a clear duplication of controls, with limited or no incremental risk mitigation benefit. From an operational standpoint, the expectation to retrieve, verify, and transmit underlying investor documentation “without undue delay” in high-volume

Name of the respondent	Question	Answer
		distribution environments imposes a substantial and, in many cases, disproportionate burden. This is particularly acute where intermediaries are located in the EU or in jurisdictions with AML/CFT frameworks demonstrably equivalent to that established under Regulation (EU) 2024/1624. In such cases, the presumption should be that robust due diligence has already been performed, and that reliance subject to appropriate safeguards is justified. Against this background, we consider that the current drafting is not aligned with the risk-based approach underpinning the EU AML/CFT framework. It effectively imposes a one-size-fits-all obligation, irrespective of the risk profile of the investment, the nature of the intermediary, or the quality of the AML/CFT framework to which that intermediary is subject. We therefore strongly advocate for a calibrated and explicitly risk-based adjustment of the RTS, combining: • A clear and binding definition of “undue delay” based on fixed, measurable timelines; and • The introduction of a materiality threshold at the level of the investment, below which the systematic provision of underlying investor documentation would not be required. Under such an approach, documentation on the final investor should only be required without undue delay and upon request where the investment reaches or exceeds a defined threshold (e.g. 10%), or where specific risk indicators are present. This would ensure that: • due diligence efforts are proportionate to the actual

Name of the respondent	Question	Answer
		ML/TF risk associated with the investment; • unnecessary duplication of AML/CFT controls is avoided where equivalent due diligence has already been conducted by a supervised intermediary; and • the framework remains operationally feasible in practice, particularly in high-volume fund distribution models. In the absence of such adjustments, the RTS risks imposing excessive and impractical operational requirements that are not commensurate with the risks involved, thereby undermining both efficiency and the credibility of the risk-based approach. We therefore call for a targeted revision of the relevant provisions to explicitly incorporate these elements and to ensure alignment with both regulatory objectives and market realities.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	19
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Under the RTS, individuals holding senior positions within state-owned entities qualify as politically exposed persons (PEPs). While we fully acknowledge this legal classification, its mechanical application in the context of the investment fund industry gives rise to disproportionate and, in certain cases, unjustified outcomes. In fund structures, state-owned entities frequently act as institutional investors and are themselves subject to robust customer due diligence. Where no natural person can be identified as a beneficial owner through

Name of the respondent	Question	Answer
		ownership or control, obliged entities are required by design to identify senior managing officials (SMOs) as a fallback. As a direct consequence, these individuals are automatically classified as PEPs solely by virtue of their function, not due to any ownership, control, or personal involvement in the investment. Under the current drafting, this automatic classification systematically triggers enhanced due diligence (EDD) measures and a higher inherent risk rating. We consider this approach to be overly rigid and misaligned with the risk-based principles underpinning the EU AML/CFT framework. It conflates a formal legal status with an actual risk profile, without adequately considering the specific context in which the relationship arises. In cases where: • the investor is a state-owned entity acting strictly in an institutional capacity; • the investment is made through a well-established, transparent, and professionally managed structure; and • the entity is subject to comprehensive governance, audit, and public oversight frameworks, often within the EU or in jurisdictions with equivalent AML/CFT regimes, the incremental ML/TF or corruption risk associated with identifying SMOs as PEPs is, in practice, limited. Imposing a systematic high-risk classification and full EDD in such scenarios results in a disproportionate compliance burden, encourages unnecessary de-risking, and diverts resources away from genuinely higher-risk situations. We therefore strongly urge that the RTS be amended to introduce a clear and explicit differentiation between:

Name of the respondent	Question	Answer
		• PEP classifications arising purely from institutional investment structures, where SMOs are identified as beneficial owners by default; and • PEP situations involving individuals acting in a personal capacity, whether directly or through personal investment vehicles. In the former case, the RTS should explicitly allow obliged entities to apply a calibrated, risk-based approach, under which the mere identification of an SMO as a PEP does not automatically trigger a high-risk classification or the full set of EDD measures. Instead, additional risk factors should be required to justify such escalation. Conversely, in the latter case where the individual invests personally the application of enhanced due diligence and a higher risk classification remains fully warranted and should continue to apply without qualification. Absent such clarification, the current framework effectively imposes a one-size-fits-all treatment that fails to distinguish between fundamentally different risk scenarios. This not only undermines proportionality but also creates significant operational burdens for obliged entities, particularly in high-volume fund distribution models involving institutional investors subject to EU or equivalent AML/CFT standards. A targeted revision of the RTS to reflect this distinction would enhance legal certainty, ensure alignment with the risk-based approach, and preserve the effectiveness and credibility of the PEP regime, while avoiding

Name of the respondent	Question	Answer
		unnecessary friction in legitimate institutional investment flows.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	20
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 20 constitutes a positive and timely initiative to harmonise minimum customer identification requirements in low-risk scenarios across Member States, with the aim of enhancing consistency and preventing overly permissive practices that could undermine AML/CFT effectiveness. However, in its current form, the provision raises a number of substantive conceptual and operational concerns that, if left unaddressed, are likely to result in fragmented interpretation and inconsistent implementation. First, the scope of persons subject to identification remains insufficiently clear. In particular, the treatment of legal representatives of legal entities is not explicitly addressed. This omission creates ambiguity as to whether such individuals fall within the minimum identification requirements, and risks divergent practices across jurisdictions. We therefore strongly recommend that the article be amended to explicitly clarify the categories of persons in scope, including the treatment of legal representatives. More fundamentally, the current drafting appears to conflate the classification of a relationship as “low risk” with automatic eligibility for simplified due diligence (SDD). This approach is conceptually flawed. Low-risk situations are not homogeneous and should not be

Name of the respondent	Question	Answer
		treated as a binary category. The absence of a more granular articulation risks encouraging a mechanical application of SDD, contrary to the graduated and risk-sensitive nature of the EU AML/CFT framework. We therefore urge that Article 20 be revised to clearly distinguish between: • the identification of low-risk scenarios; and • the conditions under which simplified due diligence measures may be appropriately applied. In addition, Article 20 is limited to initial identification and does not address ongoing monitoring or periodic review in low-risk relationships. This omission is significant, as it leaves a critical component of the AML/CFT lifecycle undefined and creates scope for inconsistent supervisory expectations and operational practices. Clarification should be introduced to ensure that ongoing monitoring obligations remain risk-based and proportionate, but nevertheless clearly articulated. From an operational perspective, the requirement to collect a uniform set of identification data does not sufficiently account for cross-border constraints. Certain data elements are not consistently available or accessible across jurisdictions. In its current form, the article risks imposing requirements that are, in practice, not always feasible to fulfil. We therefore strongly advocate for the explicit introduction of flexibility allowing the use of equivalent or alternative data where standard information cannot reasonably be obtained, provided that the overall identification objective is met. Furthermore, the absence of differentiation between customer categories particularly regulated or

Name of the respondent	Question	Answer
		institutional entities is a material shortcoming. Applying a uniform minimum dataset to entities that are already subject to robust transparency, disclosure, and supervisory frameworks (including those established within the EU or in jurisdictions with equivalent AML/CFT regimes) is disproportionate and inconsistent with a risk-based approach. The article should therefore be amended to allow for calibrated requirements that reflect the nature, regulatory status, and risk profile of the customer. We also note the lack of clarity regarding the interaction between remote onboarding practices and eligibility for simplified due diligence in low-risk contexts. Given the increasing reliance on digital onboarding channels, this is a critical gap that should be addressed to ensure both legal certainty and operational consistency. In light of the above, we strongly urge a targeted revision of Article 20 to: • explicitly clarify the scope of persons subject to identification; • introduce a clear conceptual distinction between low-risk classification and SDD eligibility; • incorporate guidance on ongoing monitoring and periodic review; • allow for the use of equivalent data where standard information is not reasonably available; and • differentiate requirements based on customer type, particularly for regulated and institutional entities subject to EU or equivalent AML/CFT frameworks. Absent such amendments, Article 20 risks imposing a rigid, one-size-fits-all framework that is not

Name of the respondent	Question	Answer
		operationally workable and is misaligned with the core principles of proportionality and risk sensitivity underpinning the EU AML/CFT regime.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	22
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	With regard to Article 22 of Regulation (EU) 2024/1624, we consider that the requirement for obliged entities to obtain customer due diligence (CDD) information and documentation from the account holder “immediately upon request” is insufficiently defined and gives rise to significant legal uncertainty and operational risk. In its current form, the notion of “immediately” is inherently ambiguous and highly susceptible to divergent interpretation across Member States and supervisory authorities. This lack of precision is incompatible with the objective of harmonisation and exposes obliged entities to inconsistent expectations and potential supervisory challenge. We therefore strongly urge that the RTS be amended to replace or clarify “immediately” through the introduction of objective, measurable, and proportionate timeframes (e.g. a defined number of business days), calibrated to the nature, scale, and complexity of the business relationship. Absent such clarification, the provision is not operationally workable in a cross-border context. These concerns are particularly acute in the context of pooled (omnibus) account structures, which are widely used in the investment fund industry. In such arrangements, the account holder may administer a

Name of the respondent	Question	Answer
		large and dynamic population of underlying investors. Imposing an expectation of systematic and immediate availability of CDD documentation for all underlying clients irrespective of their materiality or risk profile creates a substantial operational burden, requiring constant data retrieval, reconciliation, and transmission processes that are neither proportionate nor risk-sensitive. Crucially, this approach disregards the fact that, in many cases, the account holder is itself an obliged entity, subject to AML/CFT requirements equivalent to those set out in Regulation (EU) 2024/1624, operating under effective supervision, and already applying robust and risk-based CDD measures to its clients and their beneficial owners. In such circumstances, the RTS should explicitly recognise the legitimacy of reliance on these frameworks, rather than effectively duplicating due diligence obligations without demonstrable added value. We therefore strongly advocate that the RTS be amended to introduce a clearly articulated, risk-based and materiality-driven approach in the context of pooled accounts. In particular, it should provide that: • obliged entities ensure immediate (or time-bound) access to CDD information and documentation for underlying clients representing a material share of the pooled account (e.g. above a defined threshold); and • access to documentation for other underlying clients is ensured on a risk-triggered basis, including upon competent authority request, the emergence of risk indicators, or other supervisory considerations.

Name of the respondent	Question	Answer
		Such an approach would: • align the requirement with the risk-based principle underpinning the EU AML/CFT framework; • avoid unnecessary and resource-intensive duplication of CDD where equivalent due diligence has already been performed by a supervised intermediary within the EU or in a jurisdiction with an equivalent framework; and • significantly reduce the operational burden associated with large-scale, high-volume fund distribution models, without weakening the effectiveness of AML/CFT safeguards. In the absence of these adjustments, the current drafting risks imposing disproportionate and, in practice, unworkable obligations, particularly in cross-border and intermediary-driven distribution chains. We therefore call for a targeted revision of the RTS to introduce clear timing parameters and to explicitly embed a risk-based, proportionate approach reflecting the realities of pooled account structures and reliance on regulated intermediaries.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	25
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Overall, the RTS provision appears to constitute a codification and harmonisation of existing supervisory expectations rather than a substantive extension of obligations. That said, it clearly reinforces expectations regarding the depth, robustness, and evidentiary substantiation of customer due diligence (CDD) files. In its current form, however, it lacks sufficient operational

Name of the respondent	Question	Answer
		guidance, which may lead to inconsistent interpretation and uneven supervisory outcomes across Member States. In this context, we strongly recommend that the RTS be amended to include non-exhaustive but explicit examples of acceptable sources and verification practices. Without such clarification, obliged entities remain exposed to uncertainty as to what constitutes adequate and defensible CDD evidence, particularly in cross-border scenarios. More specifically, the RTS should clearly state that CDD assessments are not limited to documentation obtained directly from the customer, but may and in many cases should be substantiated through independent, reliable, and verifiable external sources. These should explicitly include: • official registers (e.g. UBO registers, company registries); • reputable commercial databases and screening tools; • adverse media and open-source intelligence (OSINT); and • other credible third-party information providers subject to appropriate quality and reliability standards. This clarification is not merely helpful but necessary to ensure alignment with the risk-based approach, which fundamentally relies on the triangulation of information from multiple independent sources to validate identity, assess reputation, and detect potential ML/TF risks. A restrictive or documentation-centric interpretation focused solely on customer provided information would be both operationally inefficient and conceptually

Name of the respondent	Question	Answer
		inconsistent with established AML/CFT principles. Furthermore, explicitly recognising the use of such sources would reduce unnecessary operational burden, particularly in cases where equivalent or superior information is already available through reliable public or third-party channels, and would enhance the overall quality and defensibility of CDD assessments. We therefore strongly urge that the RTS be revised to incorporate this clarification. Absent such guidance, there is a material risk that obliged entities adopt overly conservative or divergent practices, undermining both harmonisation objectives and the effective application of a genuinely risk-based framework.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	27
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 27 represents a constructive step toward harmonizing expectations regarding the assessment of source of funds (SoF) and source of wealth (SoW), and its objective of strengthening consistency and robustness in this area is fully supported. Given the central role of SoF and SoW in mitigating ML/TF risks, greater convergence is indeed desirable. However, in its current form, the provision raises material concerns relating to scope, proportionality, evidentiary expectations, and operational feasibility, which if not addressed risk driving overly formalistic and inconsistent implementation across obliged entities. First, the articulation between the SoF of a legal entity and the SoW of its beneficial owners remains

Name of the respondent	Question	Answer
		insufficiently defined. The current drafting risks encouraging a mechanical and cumulative application of both assessments, irrespective of context. This is neither conceptually sound nor operationally proportionate. The RTS should explicitly clarify that the depth and focus of the assessment must be context-driven, taking into account: • the nature and activity of the legal entity; • the purpose and size of the transaction; and • the extent to which the entity itself provides a transparent and credible explanation of the origin of funds. Absent such clarification, obliged entities may be compelled to systematically investigate beneficial owners' wealth even where the SoF of the entity is clear, verified, and sufficient to mitigate ML/TF risk—resulting in unnecessary duplication and excessive data collection. Second, the evidentiary framework set out in Article 27 lacks sufficient critical guidance. While the inclusion of a non-exhaustive list of documents is helpful, it risks being interpreted as a de facto checklist, encouraging a document-driven approach rather than a risk-based assessment. This is particularly problematic given that: • certain listed documents are not consistently available across jurisdictions; and • some commonly used documents (e.g. bank statements) may provide limited or superficial assurance as to the lawful origin of funds. We therefore strongly recommend that the RTS explicitly recognize that the probative value of

Name of the respondent	Question	Answer
		documentation varies, and that the assessment should prioritize credibility, consistency, and plausibility over the mere collection of documents. More fundamentally, Article 27 does not sufficiently embed the principle of proportionality, which is a cornerstone of the EU AML/CFT framework. In practice, the level of verification should be calibrated to: • the risk profile of the customer and beneficial owner; • the nature and purpose of the relationship or transaction; and • the amounts involved. A uniform expectation of extensive documentary evidence—even in low-risk or low-value scenarios—would create a significant and unjustified operational burden, particularly in cross-border contexts, without delivering a commensurate increase in risk mitigation. In this respect, the notion of “satisfying” the obliged entity that funds derive from lawful activities requires further clarification. As currently drafted, it may be interpreted as requiring a quasi-absolute level of proof, which is neither realistic nor aligned with a risk-based approach. The RTS should explicitly confirm that, particularly in lower-risk scenarios, a reasonable level of assurance—based on plausibility checks, consistency with the customer’s profile, and corroboration from reliable sources—is sufficient. Additional clarification is also needed on several key operational aspects, including: • the distinction between SoF and SoW, which should not be blurred or applied cumulatively by default; • the timing of the assessment, including the ability to

Name of the respondent	Question	Answer
		adopt a staged or progressive approach where appropriate; and • the acceptability of alternative or equivalent information sources, particularly in international contexts where standard documentation may not be उपलब्ध or clients may be reluctant to share sensitive personal data. Explicit recognition of such flexibility is essential to ensure that the framework remains internationally workable and does not inadvertently incentivize de-risking or exclusion of legitimate customers. In light of the above, we strongly urge that Article 27 be revised to: • clarify the interaction and respective scope of SoF and SoW assessments; • emphasize a risk-based, non-mechanical approach to evidence gathering; • explicitly embed the principle of proportionality; • define “sufficient assurance” in a manner consistent with practical AML/CFT application; and • recognize the use of alternative and equivalent sources of information. Absent these adjustments, the current drafting risks fostering a rigid, document-centric and operationally burdensome framework that is misaligned with the risk-based principles it seeks to promote, and which may ultimately undermine both effectiveness and consistency in AML/CFT implementation.
TMF Fund Management S.A. (Fund management company part of TMF Group)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

TMF Fund Management S.A. (Fund management company part of TMF Group)	How would you rate the proposals set out in the draft RTS overall?	Good
TMF Fund Management S.A. (Fund management company part of TMF Group)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when	No significant additional costs

Name of the respondent	Question	Answer
	implementing the provisions of these draft RTS.: One-off implementation costs	
TMF Fund Management S.A. (Fund management company part of TMF Group)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	No significant additional costs
TMF Fund Management S.A. (Fund management company part of TMF Group)	Please justify your answer to the previous question and provide evidence where possible.	The due diligence procedures implemented under Luxembourg AML/CFT legislation are fully aligned with the RTS requirements, consequently, no additional measures are required under the RTS.

Name of the respondent	Question	Answer
TMF Luxembourg S.A.,	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, however we would like to make a proposal regarding Art 10(b). In the first place, Art 10 refers to reasonable measures for verification of the beneficial owner referred to in Art 22(7), point (b) of the Regulation (EU) 2024/1624, including, in point (a) the consultation of public registers, other than the central registers, or other reliable national systems that contain the information necessary to verity the identity of the beneficial owner, or person on whose behalf or for the benefit of whom the transaction is being carried out, to the extent that those are accessible to obliged entities. In practice, such registers (i.e. land register) are not always accessible to the obliged entities, but they are accessible to the customer. After Art 10(a), Art 10(b) refers to information collected from the customer or other sources, including various examples. From the description we understand that the list is not exhaustive. However, we would recommend including in that list also the registers pointed out in Art 10(a), as those could be provided by the client. We recommend including in Art 10(b), as a 5th source of information, the following: v) extracts from public registers, other than the central registers, or other reliable national systems that contain the information necessary to verify the identity of the beneficial owner, or the person on whose behalf or for the benefit of whom the transaction or activity is

Name of the respondent	Question	Answer
		being carried out, such as the residence register, tax register, passport database and the land register, provided by the customer.
TMF Luxembourg S.A.,	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art 6(3) mentions the following: "Obliged entities shall take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with." When it comes about verifying that the identity document, passport or equivalent, not every obliged entity has the same resources to do so. For example, TCSP are usually smaller than credit institutions, and identity document, passport or equivalent are verified by employees. To ensure that those documents are valid, it is common to request their certification in a specific timeframe. However, it is not mandatory to have such certifications, leaving up to the obliged entity to decide for which type of clients such certification is required. For example, the obliged entity can decide, on a risk-based approach, to request certified true copies for high risk and medium risk clients, while simple copies for low risk clients. Art 6(3) does not provide a definition of "reasonable steps", nor gives examples on how to verify that the identity document, passport or equivalent have not been forged or tamped with, leaving the assessment up to the obliged entity. We believe that such assessment shall be done on a

Name of the respondent	Question	Answer
		risk-based approach, as for higher risk clients the requirements to ensure that the identity document, passport or equivalent have not been forged or tamped should be higher than for lower risk clients. Hence, we recommend rephrasing Art 6(3) as below, in order to clarify that the reasonable steps shall be done on a risk-based approach. “Obliged entities shall take, on a risk-based approach, reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with.” In relation to our previous reasoning, we disagree that Art 6(5) can allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements. As mentioned above, certified copies are not mandatory in every case, and obliged entities may opt for a risk-based approach in which only higher risk clients are requested for certified copies of identity document, passport or equivalent. Art 6(5) does not leave margin for a risk-based approach as it requires for certified copies for all clients, regardless of their risk. We recommend rephrasing Art 6(5) as below, in order allow entities to collect certified copies of identity

Name of the respondent	Question	Answer
		document, passport or equivalent, on a risk-based approach. “For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or, on a risk-based approach, a certified copy thereof, or act in accordance with Article 7.”
TMF Luxembourg S.A.,	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art 11(2)(b) requires that, for the purpose of understanding the ownership and control structure of the customer, in situations where the customer’s ownership and control structure contains more than one legal entity or legal arrangement, obliged entities shall take risk-sensitive measures to obtain and assess, where applicable, information on the regulated market on which the securities are listed, in case a legal entity at an intermediate level of the ownership and control structure has its securities listed on a regulated market, and the number and percentage of shares listed if not all the legal entity’s securities are listed on a regulated market. As a TCSP, we identify and verify on a risk-based approach, all the entities at an intermediate level of the ownership and control structure. If any of those has securities listed on a regulated market, we obtain information on the regulated market on which those securities are listed and assess the market. However, we believe that in practice is challenging to obtain the percentage of shares listed on such regulated market

Name of the respondent	Question	Answer
		because in order to obtain the information we might need to reach out to the customer, and sometimes the customer itself does not have access to the information requested, and therefore it needs to contact the entity at an intermediate level whose securities are listed on a regulated market. This process might challenge the collection of such information.
TMF Luxembourg S.A.,	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a
TMF Luxembourg S.A.,	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	n/a
TMF Luxembourg S.A.,	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
TMF Luxembourg S.A.,	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
TMF Luxembourg S.A.,	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
TMF Luxembourg S.A.,	How would you rate the proposals set out in the draft RTS overall?	Good
TMF Luxembourg S.A.,	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
TMF Luxembourg S.A.,	Please justify your answer to the previous question and provide evidence where possible.	Luxembourg already requires obliged entities to comply with most of the requirements of the draft RTS, therefore, there will be costs regarding policies and procedures updates, staff training, enhancing controls, updating checklists, etc., but costs would not have such impact as in other EU jurisdictions. However, small entities would suffer more costs because they do not have the same amount human resources in Compliance and AML/CFT as other bigger

Name of the respondent	Question	Answer
		entities (i.e. credit institutions), which ultimately will be the ones suffering the costs.
TransferGo Lithuania UAB	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No. The draft RTS cannot be applied consistently to a digital remittance business model without a number of targeted clarifications. In the absence of those clarifications, several provisions can be read in ways that are structurally incompatible with the risk profile of standard remittance transactions, misaligned with eIDAS as it operates in practice, or open to divergent supervisory interpretation that would prevent a uniform cross-border compliance model from functioning. The following few areas require both explanation and concrete drafting proposals. 1. Address verification standard (Article 3). Article 3 lists address elements in a format that can be read as requiring individual collection and verification of each data point in all cases. Residential address is not typically present in identity documents. For a material share of remittance customers, including migrants, refugees and third-country nationals, address data cannot be verified against official sources because relevant registers either do not exist or are locally accessible only in origin countries. Drafting proposal: Clarify in the recital and in Article 3 that the listed elements standardise the format of address data where collected, and do not introduce a freestanding obligation to collect and verify each element in all cases. Confirm expressly that verification of address through risk-based consistency checks, including IP geolocation, mobile number country code and identity document issuing country alignment, constitutes a proportionate

Name of the respondent	Question	Answer
		and compliant approach under Article 22(7) AMLR. 2. Remote verification and eIDAS data availability (Article 7 and Annex I). Current problem: Article 7, read with Annex I, conditions compliant remote verification on eIDAS means that deliver the full AMLR Article 22(1) data set. In practice, the eIDAS minimum data set contains only four mandatory attributes; place of birth, nationality, address and document number are optional and can inconsistently be implemented across Member States. Digital remittance providers onboarding customers remotely from third countries cannot rely on eIDAS means alone to meet Article 22(1). In addition, Article 7(4) requires obliged entities to be able to justify not using eIDAS-compliant means, but provides no guidance on what justification is sufficient, creating a risk of divergent supervisory expectations across Member States. Drafting proposal: Clarify in Article 7 or its recital that where eIDAS means do not deliver the full Article 22(1) data set, obliged entities may obtain missing attributes through customer self-declaration, without any obligation to verify those attributes through additional independent sources in standard-risk situations. Confirm that a customer's documented choice of an alternative compliant verification method constitutes sufficient justification under Article 7(4). Align Annex I to make explicit that optional attributes may be obtained through other proportionate means where the EUDI solution does not provide them. 3. Beneficial ownership verification (Article 10 and Article 11). Article 10(b)(iv) requires documents

Name of the respondent	Question	Answer
		identifying beneficial owners to be certified by persons authorised for document certification purposes. In common-law jurisdictions, including the United States, Canada and Australia, notarisation certifies the authenticity of a signature rather than the accuracy of document content. A strict reading of Article 10(b)(iv) renders beneficial ownership verification through customer-provided documentation effectively impossible for entities from those jurisdictions, irrespective of the risk level of the relationship. Article 11(4)(b) separately requires obliged entities to be satisfied that there is an economic, legal or other rationale behind the ownership structure, a substantive assessment that falls outside the typical competence of compliance staff and is disproportionate where no elevated risk indicators are present. Drafting proposal: Remove or qualify the certification requirement in Article 10(b)(iv) so that it applies on a risk-sensitive basis in accordance with Article 22(7) AMLR, and does not apply as a blanket requirement in standard-risk situations. Clarify in the recital to Article 11 that the assessment under Article 11(4)(b) is intended to identify structures that lack any plausible legitimate purpose, and is not a requirement to validate the underlying commercial or legal rationale of registered structures where no risk indicators are present. Additional article-level comments are provided separately in the dedicated article comment section of this consultation.
TransferGo Lithuania UAB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based	No, not in full. While the draft RTS preserves the risk-based approach as a stated principle, several operative

Name of the respondent	Question	Answer
	approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	provisions impose uniform obligations that apply regardless of the risk level of the underlying transaction or customer relationship. For a digital remittance provider whose customer base consists predominantly of retail individuals conducting low-value cross-border transfers, this creates a material and unjustified disproportionality between compliance burden and actual ML/TF risk. The provisions of concern, and the corresponding drafting proposals, are set out below. The main concerns regarding collection of address (Article 3), identification (Article 7 and Annex I (remote verification and eIDAS data gap) or Article 10(b)(iv) (beneficial ownership certification) listed above in reply of Question 1. Additionally, Article 21(2) can be read as requiring consultation of multiple sources even in low-risk situations, which defeats the purpose of simplified measures. Commercial database providers that resell central register data do not constitute genuinely independent sources; cross-referencing their output against the same register already consulted adds no verification value. Thus, we suggest to clarify in Article 21 that, in low-risk situations, retrieval from a central register combined with customer confirmation of the data satisfies the identification and verification requirement, without any additional obligation to consult sources that derive their data from the same register. Additional article-level comments are provided separately in the dedicated article comment section of this consultation.

Name of the respondent	Question	Answer
TransferGo Lithuania UAB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. Remittance providers, as obliged entities whose services are delivered exclusively through digital channels to a predominantly retail customer base with frequent cross-border and third-country connections, routinely encounter situations in which information required under the draft RTS is structurally unavailable. The unavailability is not exceptional; it is inherent to the nature and customer profile of this business model. The draft RTS does not currently provide a workable alternative pathway for any of the four situations described below. 1. A significant proportion of remittance customers are migrants, refugees or third-country nationals whose residential address is not recorded in any centrally accessible register. In many origin countries relevant to remittance corridors, address registers either do not exist or are maintained only at local level and are not accessible to EU-based obliged entities. Collection of a address is possible while verification of that address against register source is structurally hard or nearly impossible for this customer segment. Proposed clarification to confirm in Article 3 and its recital that the listed address elements standardise data format where collected, and that verification on a risk-sensitive basis through consistency checks, including IP geolocation, identity document issuing country alignment and mobile number country code, satisfies the requirement under Article 22(7) AMLR. 2. We onboard customers remotely using the identity documents those customers hold. Many identity documents may not contain place of birth, nationality or

Name of the respondent	Question	Answer
		address, and the eIDAS minimum data set does not require those attributes either. In a typical cross-border remittance onboarding flow, neither the customer's document nor an eIDAS-compliant electronic identification means will deliver the full Article 22(1) AMLR data set, yet the draft RTS does not specify what an obliged entity should do in this circumstance. Therefore, it should be beneficial to confirm in Article 7 and Annex I that where identity documents or eIDAS means do not contain all required attributes, obliged entities may obtain missing data through customer self-declaration in standard-risk situations, without any additional independent verification obligation for those specific attributes. 3. Article 4 requires collection of any place-of-birth detail present on the identity document beyond the country name. In practice, identity documents issued across remittance corridors are highly inconsistent and some carry a city, some carry a region, some carry neither, and transliteration standards vary considerably. Where city-of-birth data is present, its ML/TF value is limited given that city names are recorded differently across document types (if they are at all). Thus, the obligation to collect and retain this data point creates compliance cost without corresponding risk-reduction benefit since for systematic collection, there is a need for technological adjustments in the systems. Therefore, it would be beneficial to confirm in Article 4 that country of birth alone satisfies the requirement, and that collection of further place-of-birth detail is discretionary and should be applied only where the

Name of the respondent	Question	Answer
		obliged entity determines it serves a specific compliance purpose, such as resolving an inconclusive sanctions screening result. 4. Once again we want to stress that for corporate customers incorporated in common-law jurisdictions, notarisation certifies the authenticity of a signature on a document rather than the accuracy of the document's content. Obtaining certified documents in the sense intended by Article 10(b)(iv) is therefore structurally impossible for these customers, regardless of their risk profile. A strict reading of Article 10(b)(iv) would restrict obliged entities from relying on customer-provided documentation in standard-risk cases, producing an outcome inconsistent with Article 22(7) AMLR. Please confirm that the certification requirement in Article 10(b)(iv) applies on a risk-sensitive basis and does not constitute a blanket requirement in standard-risk situations. Risk-proportionate alternatives, including reliance on customer-provided documentation in conjunction with public register data, should be explicitly recognised as sufficient in the absence of elevated risk indicators.
TransferGo Lithuania UAB	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We consider that additional simplified due diligence measures are warranted for digital remittance services on the basis of their demonstrably lower ML/TF risk profile. Digital remittance transactions are characterised by low individual transaction values, a high degree of transaction transparency through the Funds Transfer Regulation framework, a clearly identified purpose (personal cross-border transfers, typically family remittances), a regulated payer and a traceable

Name of the respondent	Question	Answer
		beneficiary account or payment channel. These characteristics provide a strong evidential basis for proportionate SDD measures under Article 28(1) of Regulation (EU) 2024/1624. Three specific measures are proposed: 1. Pre-fill of identification and beneficial ownership data from registers, with customer confirmation (Article 21 or new SDD article). In digital remittance onboarding, obliged entities retrieve identity and beneficial ownership data from central registers, business registers or other reliable national sources, and present that data to the customer for confirmation. This approach reduces manual data entry, improves accuracy and supports a proportionate digital onboarding journey. It is currently uncertain whether customer confirmation of pre-filled register data constitutes information "provided by the customer" within Articles 21(1)(b) and 21(2), which creates legal risk for obliged entities that have built compliant onboarding systems on this basis. Proposed drafting (Article 21 or a new SDD article): "Where obliged entities retrieve information referred to in Article 22(1) of Regulation (EU) 2024/1624, or information on beneficial owners or senior managing officials, from central registers, business or company registers, or other reliable national sources, the obliged entity may present that information to the customer for confirmation. Where the customer confirms the information, that confirmation may be treated as information provided by the customer for the purposes of identification under this RTS."

Name of the respondent	Question	Answer
		2. Single reliable source sufficient in low-risk situations (Article 21). Article 21(2) can be read as requiring consultation of multiple sources even in low-risk situations, which undermines the purpose of simplified measures. In practice, commercial data providers commonly used as a second source resell data drawn from the same central register already consulted and do not constitute genuinely independent sources. Requiring consultation of a non-independent source imposes administrative cost with no corresponding AML benefit. Proposed drafting (amendment to Article 21(2)): "In situations of low risk, retrieval of information from a central register, business register or company register, combined with confirmation by the customer of the accuracy of that information, shall be sufficient to satisfy the identification and verification requirements of this Article, without any obligation to consult additional sources where those sources derive their data from the same register." 3. Risk-based address verification as a recognised SDD measure (Article 3 or a new SDD article). For retail remittance customers, address verification through official sources is frequently unavailable, as described in our response to Question 3. Consistency-based checks, including IP geolocation, identity document issuing country and mobile number country code, are the operative verification standard in this segment and are proportionate to the low ML/TF risk of individual retail remittance transactions. Their recognition as a compliant SDD measure would provide legal certainty

Name of the respondent	Question	Answer
		and support inclusive onboarding of customers who are migrants or third-country nationals.
TransferGo Lithuania UAB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The following observations address points not covered in the preceding responses and refer to specific articles of the draft RTS. Article 7(4) requires obliged entities to be able to justify why a customer could not be verified through eIDAS-compliant means, but does not specify what standard of justification is sufficient or how competent authorities will assess it. This creates a risk of divergent supervisory expectations across Member States that would be particularly damaging for digital remittance providers operating cross-border. Proposed solution: confirm in Article 7(4) or its recital that a documented customer choice between compliant verification methods, where all options meet AMLR requirements, constitutes sufficient justification and does not require a separate assessment by the obliged entity. Article 11(4)(b) requires obliged entities to be satisfied that there is an economic, legal or other rationale behind the ownership and control structure. This obligation is highly subjective, falls outside the typical competence of compliance staff, and could lead to inconsistent supervisory expectations across Member States. Many customers do not commission formal legal opinions on their structuring choices, and obliged entities cannot reasonably be expected to second-guess registered structures that present no elevated risk indicators. So it would be beneficial to clarify in the recital to Article 11 that point (b) is intended to identify structures that lack any plausible legitimate purpose,

Name of the respondent	Question	Answer
		and is not a requirement to validate the underlying commercial or legal rationale of registered structures where no higher-risk indicators are present. Article 19(2)(c) as currently drafted can be read as requiring re-screening without delay on any change to a PEP dataset. Unlike targeted financial sanctions lists, PEP datasets are maintained by commercial vendors with no single authoritative EU source and are continuously updated for reasons unrelated to genuine PEP status changes, including spelling corrections, record mergers and reclassification between tiers. Applying the same re-screening trigger used for sanctions designations to PEP dataset changes would generate disproportionate alert volumes with no corresponding ML/TF benefit. Proposed solution: amend Article 19(2)(c) to provide that re-screening in connection with PEP data is conducted with a risk-sensitive frequency, and that obliged entities establish procedures to distinguish material PEP status changes from routine data quality corrections. Article 26(1)(a) requires obliged entities to be satisfied that the information they hold is "authentic and accurate." The term "authentic" is appropriate in the context of physical documents but is not well suited to the assessment of information about the intended nature of a business relationship, where the operative standard is credibility and consistency with the institution's knowledge of the customer. Proposed solution: replace "authentic and accurate" in Article 26(1)(a) with "credible and in line with the institution's knowledge of the customer," which is already the

Name of the respondent	Question	Answer
		formulation used in Article 28(a) of the same RTS and better reflects the substantive assessment required. Article 33 (transitional regime): two operational uncertainties. First, where a high-risk customer was last subject to enhanced due diligence shortly before the AMLR application date of 10 July 2027, it is unclear whether the first AMLR-compliant review is due on the anniversary of the last review or by 10 July 2028. Interpretation (ii), that Article 26(2) AMLR applies prospectively with the first AMLR-compliant review due by 10 July 2028, is more workable and should be confirmed. Second, it is unclear whether obliged entities may continue to rely on pre-AMLR customer risk classifications during the transitional period to prioritise the order of file remediation. Confirmation that this is permissible, with the AMLR-compliant assessment triggered at the point of remediation rather than on the application date for the whole portfolio, would prevent a disproportionate cliff-edge implementation burden.
TransferGo Lithuania UAB	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We understand that the intention of the AMLR was to leave obliged entities discretion to determine which address-related data are relevant to collect and, accordingly, to verify under Article 22(6) of Regulation (EU) 2024/1624. However, the current wording of

Name of the respondent	Question	Answer
		Article 3 of the draft RTS appears to expand the required address data points and may be interpreted as requiring obliged entities to collect and verify each of those individual elements in all cases. This could create an unnecessary administrative and operational burden for obliged entities. We suspect this is not the intended outcome of the RTS, and that the purpose of further specifying the "address" field was rather to promote convergence and consistency in data format, where such information is collected, rather than to broaden the scope of mandatory collection and verification requirements. To avoid creating new substantive obligations beyond those set out in the AMLR, we suggest clarifying in the RTS that these address elements are intended only to standardise the format and content of address information where collected, and should not be understood as requiring obliged entities to collect and verify every listed data point in all cases. In practice, obliged entities in digital environments verify address through consistency checks: IP geolocation matching, mobile phone country-code consistency, identity document issuing country alignment, and payment instrument cross-referencing. These methods are proportionate and already in widespread use by regulated digital service providers. The RTS should explicitly confirm that such consistency-based approaches satisfy the address verification requirement, so that existing compliant onboarding models are not inadvertently displaced. This point is particularly important for migrants, refugees and third-

Name of the respondent	Question	Answer
		country nationals, who may not be recorded in any state register and whose address cannot be verified against official sources. In many origin countries relevant to remittance corridors, address registers either do not exist or are accessible only locally. Confirmation that risk-based consistency checks satisfy the verification obligation is therefore essential for inclusive and proportionate implementation.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 7 requires clarification on three points that are of direct operational importance. On the primary question of which identification tools qualify as compliant, the provision as drafted creates ambiguity that was not present in the underlying Level 1 text. Regulation (EU) 2024/1624 Article 22(6)(b) designates two routes to identity verification of equal standing: notified electronic identification schemes and qualified trust services, both subject to the applicable eIDAS assurance thresholds. Neither is subordinate to the other. The draft RTS, however, structures Article 7 in a way that could lead supervisory authorities in some Member States to read EUDI Wallet possession as a prerequisite before alternatives become permissible, with Article 7(2) then acting as a derogation rather than a parallel pathway. This reading would narrow the scope of compliant verification methods beyond what the AMLR permits, and AMLA is invited to address this in the recitals or operative text. Specifically, two points of confirmation are needed: that a qualified trust service

Name of the respondent	Question	Answer
		provider solution meeting the relevant assurance standard satisfies Article 7(1) as a standalone first-line method, and that a customer who does not hold an EUDI Wallet has not thereby caused the obliged entity to leave the Article 7(1) regime. On the second point, once the above is established, Article 7(2) should be read as a genuine last-resort provision confined to scenarios where no eIDAS-compatible option is technically operable at the time of onboarding, not as a catch-all for any case where the EUDI Wallet specifically is not used. A recital clarifying this would close the interpretive gap. On the third point, the phrase "able to justify" in Article 7(4) assigns to competent authorities an assessment function without prescribing the criteria by which that assessment is to be made. This is a significant source of legal uncertainty for payment service providers operating across multiple Member States, each of which may apply a different threshold for what counts as adequate justification. The practical question that needs answering is straightforward: where a customer is presented with several compliant verification options and selects one, does that selection, properly recorded by the obliged entity, satisfy the justification requirement without further analysis? An affirmative answer would resolve the uncertainty for the large majority of cases encountered in practice.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	9

Name of the respondent	Question	Answer
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Three aspects of Article 9 and Article 22(3) AMLR require clarification. 1) Timing and trigger of the 5 working days obligation. It is not entirely clear whether the obligation to provide information "without delay and in any case within 5 working days" is triggered only upon a specific request from the servicing institution, or whether the issuance of a virtual IBAN itself could be interpreted as giving rise to a proactive standing obligation. The phrase "within 5 working days of it requesting that information" in AMLR Article 22(3) strongly supports a request-based trigger. We ask AMLA to confirm this reading explicitly to prevent operational drift toward quasi-reporting obligations that are not intended. 2) Divergence between AMLR and RTS wording. AMLR Article 22(3) requires obliged entities to "obtain information to identify and verify the identity" of the virtual IBAN user, whereas Article 9 of the draft RTS requires them to "obtain and verify" such information. This divergence carries substantive implications: the AMLR formulation permits reliance on information provided by third parties, while the RTS formulation could be read as imposing an independent verification obligation that goes beyond the Level 1 text. The RTS should retain the AMLR wording to avoid inadvertently extending Level 1 obligations. c) Allocation of reporting responsibilities under AMLD6. It is not clear whether the obligation to report virtual IBAN-related data to centralised registers rests with the institution issuing the virtual IBAN, the institution servicing the underlying account, or both depending on

Name of the respondent	Question	Answer
		the data element. Without clarity, there is a material risk of duplicative reporting on the one hand, or of regulatory gaps arising from each party assuming the other is responsible on the other. d) Content of Article 9(c) and operational data availability. It is unclear what Article 9(c) requires beyond the KYC data already covered in point (a) and the virtual IBAN identifier covered in point (b). More fundamentally, the draft RTS appears to assume that the servicing institution holds real-time end-customer data it does not currently possess. The existing framework operates on a request basis, which is inconsistent with a standing-access model. AMLA is invited to confirm that Article 9 operates on a request basis only, consistent with the "within 5 working days" language, and that no proactive or real-time data-sharing obligation is implied.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We would appreciate clarification from AMLA on three aspects of Article 10: 1. Article 10(b) and the risk-based approach: certified copies should not be required in all cases. Article 22(7), second subparagraph, AMLR explicitly allows obliged entities to apply verification measures on a risk-sensitive basis: "Obliged entities shall determine the extent of the information to be consulted, having regard to the risks posed by the occasional transaction or the business relationship and the beneficial owner, including risks relating to the ownership structure." The

Name of the respondent	Question	Answer
		wording of Article 10(b) may, however, be read as introducing more prescriptive requirements that could limit the discretion of obliged entities to apply verification measures proportionately to risk. In particular, Article 10(b)(iv) appears to imply that documents from a legal entity or legal arrangement identifying the beneficial owner should be certified by authorised persons. A strict reading could effectively require certified copies in all cases, including standard-risk situations. This would create significant operational and administrative challenges, particularly given the requirement in Article 62(1) AMLR to collect the beneficial owner's identity document number, which in some Member States or third countries is not accessible through public registers and may only be available through copies of identity documents. We would therefore welcome clarification that Article 10(b) (iv) is not to be interpreted as requiring certified copies in all circumstances, and that obliged entities may determine the appropriate level of verification evidence in line with the risk-based approach in Article 22(7) AMLR. 2. Reliance on Article 10 for non-EU customers pending submission to the central register. We would also appreciate clarification whether obliged entities may rely on the measures set out in Article 10 where a customer is registered outside the Union but has not yet submitted beneficial ownership information to the relevant central register of a Member State. This is relevant both at onboarding and during ongoing

Name of the respondent	Question	Answer
		business relationships. Article 67(1) AMLR requires legal entities created outside the Union, as well as trustees of express trusts (or persons in equivalent positions in similar legal arrangements) administered, residing or established outside the Union, to submit beneficial ownership information pursuant to Article 62 to the central register of the Member State when entering into a business relationship. Article 24 AMLR addresses the reporting of discrepancies in beneficial ownership registers, but does not expressly state that an obliged entity must refrain from establishing or continuing a business relationship solely because the information has not yet been recorded in, or aligned with, the central register. On that basis, our understanding is that alternative verification measures may be applied until the central register is duly updated. We would therefore appreciate AMLA confirming whether, in such circumstances, reliance on Article 10 remains permissible, provided that the obliged entity has obtained and verified the relevant beneficial ownership information through other appropriate means. If such reliance is not considered permissible, we would appreciate this being stated explicitly, in the interest of convergence and consistent application across obliged entities and Member States. 3. Non-EEA jurisdictions and RTS v1 comparison. The practical effect of Article 10(b)(iv) is most acute for customers from jurisdictions where notarisation certifies the authenticity of a signature, not the

Name of the respondent	Question	Answer
		accuracy of document content, the United States, Canada and Australia are frequently cited examples. A strict reading of Article 10(b)(iv) would render BO verification for entities from these jurisdictions effectively impossible through the customer-provided document route. The first version of the EBA RTS was more flexible, referring to documents "certified by an independent professional or sources using a combination of public and private records", a formulation that accommodated non-EU legal systems. We invite AMLA to adopt similarly flexible wording that does not presuppose a single legal tradition.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In practice, the assessment of an economic or legal rationale behind a corporate structure is highly subjective and falls outside the typical competence of compliance staff. Many customers do not commission formal legal or tax opinions on their structuring choices, and obliged entities cannot reasonably be expected to second-guess legitimate registered structures simply because their economic rationale is not self-evident. Requiring a substantive assessment of the rationale could therefore lead to (i) inconsistent supervisory expectations, and (ii) operational pressure to refuse legitimate customers whose structures are unusual but not problematic from an ML/TF perspective. We suggest that AMLA either:

Name of the respondent	Question	Answer
		(i) limit the application of point (b) to risk-sensitive cases (e.g. by adding "on a risk-sensitive basis" or "where there are indicators of higher risk") consistent with the risk-based approach under Article 22(7) AMLR; or (ii) clarify in the recitals that the assessment under point (b) is intended to identify structures that lack any plausible legitimate purpose and is not intended to require obliged entities to validate the underlying tax, legal or commercial reasons for a customer's structure.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	19
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	The obligations in Article 19(2), point (c), as currently drafted, implicitly assume that PEP datasets are structurally equivalent to EU targeted financial sanctions lists, in the sense that dataset changes constitute discrete, authoritative legal events that unambiguously signal a change in a subject's designation status. This assumption does not hold for PEP data and, if interpreted literally, would impose an operational burden with no proportionate AML benefit. PEP datasets used by obliged entities across the EU differ fundamentally from sanctions lists in three respects. First, they are maintained by commercial data vendors with no single authoritative EU source, each applying different coverage scope, update methodology and data quality standards. Second, they are continuously modified for reasons unrelated to genuine PEP status changes, including spelling corrections, source reference updates, record mergers and

Name of the respondent	Question	Answer
		reclassification between PEP tiers or categories. Third, they are inconsistent across Member States as to which public functions qualify as prominent, meaning that a change in one vendor's dataset may reflect a national definitional difference rather than any material change in a subject's status. Triggering re-screening without delay on any dataset change, as point (c) could be read to require, would generate a continuous stream of operationally irrelevant screening events, create disproportionate alert volumes and divert compliance resources away from genuine risk without any corresponding improvement in PEP identification outcomes. No current EU market practice operates at this standard, and no supervisory guidance to date has required it. Proposed redraft of paragraph 2, point (c): (c) with a risk-sensitive frequency, taking into account the update cadence and nature of the PEP data sources used, in cases of changes and amendments to the list of prominent public functions; where obliged entities shall establish internal procedures to distinguish material designation events from routine data quality corrections in their screening data sources.

TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	For the purpose of supporting efficient and consistent implementation of Article 21, we kindly request AMLA to clarify whether the provisions of this Article allow obliged entities to pre-fill beneficial ownership or senior

Name of the respondent	Question	Answer
		managing official information using data obtained from central registers, business registers, or company registers, and subsequently request the customer to confirm the accuracy of that information. In practice, many obliged entities rely on automated retrieval of information from official registers, which is then presented to the customer during onboarding for review and confirmation. This approach reduces manual data entry, improves data accuracy, and aligns with digital onboarding processes, while still ensuring that the customer confirms the correctness of the information. However, it is currently unclear whether such a pre-fill and confirmation mechanism would be considered compliant with the requirement in Article 21(1)(b) and 21 (2) that confirmation by customer of pre-filled data may be treated as “information provided by the customer”. To provide legal certainty and support digitalised compliance processes, we suggest considering the following clarification in the drafting of the Article or its recital: “Where obliged entities retrieve information from central registers, business registers, or other reliable sources for the purpose of identifying beneficial owners or senior managing officials, such information may be presented to the customer for confirmation.” Such clarification would support efficient digital onboarding practices, while remaining fully consistent

Name of the respondent	Question	Answer
		with the risk-based approach and the objectives of the AMLR. Additionally, Article 21(2) as currently drafted appears to require consultation of multiple sources even in low-risk situations, defeating the purpose of the simplified measures regime. The commercial data providers most commonly used as a second source resell data retrieved from the same central register already consulted, and do not constitute genuinely independent sources. We ask AMLA to clarify that, in low-risk situations, central register retrieval combined with customer confirmation satisfies the Article 21 requirement without an additional obligation to consult sources derived from the same register.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	22
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	We would appreciate clarification from AMLA on how Article 22 (sectoral simplified measures with respect to pooled accounts) is intended to interact with Article 9 (virtual IBANs). In some business models, an account opened by an obliged entity that itself issues virtual IBANs to its end customers could be characterised as a pooled account in the sense of Article 22. If that interpretation were correct, the condition in Article 22(d) (that the ML/TF risk associated with the business relationship is low) would be very difficult, if not impossible, to satisfy in practice for vIBAN-issuing relationships, and the Article 22 simplified measures would be effectively unavailable in this segment. It would be helpful for AMLA to confirm:

Name of the respondent	Question	Answer
		(i) whether vIBAN-issuing relationships fall within the scope of Article 22 or are governed exclusively by Article 9; and (ii) if both articles can apply, the criteria that obliged entities should use to determine which regime applies and how to avoid duplicative or conflicting due diligence expectations. Without this clarification, there is a risk of inconsistent application across Member States and of obliged entities being unable to rely on Article 22 in legitimate pooled-account contexts unrelated to vIBAN issuance.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	26
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	We would suggest a minor refinement to the wording of Article 26(1)(a). The current formulation refers to the obliged entity being "satisfied that the information they hold is authentic and accurate". The notion of "authentic" information is more typically used in the context of physical documents (e.g. authenticity of a passport) rather than in the context of information about the intended nature of a business relationship. We would suggest replacing "authentic and accurate" with "credible and in line with the institution's knowledge of the customer", which is more consistent with the formulation already used in Article 28(a) of the same RTS and better reflects the substantive assessment the obliged entity is expected to perform under EDD. This change would also promote internal

Name of the respondent	Question	Answer
		consistency within the RTS without weakening the underlying obligation.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	32
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	We kindly ask you to clarify how Article 32, including Annex I, should apply to the verification of beneficial owners. It appears that Article 32 does not expressly refer to Article 22(7)(a) of the AMLR as a means of verifying beneficial owner data and does not fully reflect the beneficial owner information required under Article 62(1) of the AMLR. For example, Annex I does not explicitly mention the requirement to provide the number of the identification document. We would also kindly ask you to clarify the application of Article 32(3), in particular the extent to which other means may be used for the verification of beneficial owner data where the relevant attributes are not available through the electronic identification means or qualified trust services. In this context, it would be helpful to confirm whether obliged entities may rely on the means referred to in Article 22(7)(b) of the AMLR and the corresponding provisions of the RTS.
TransferGo Lithuania UAB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	33
TransferGo Lithuania UAB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 33 of the draft RTS leaves three questions unanswered that have material consequences for how obliged entities plan and resource their transition programmes. Each is addressed in turn.

Name of the respondent	Question	Answer
		The first concerns the trigger date for the initial AMLR-compliant ongoing enhanced due diligence review of high-risk customers already on the books. Article 26(2) AMLR establishes a one-year cycle, but the interaction of that cycle with the application date of 10 July 2027 is ambiguous. If the cycle is read as running from the most recent prior review, a customer whose file was last reviewed in June 2026 would require an AMLR-compliant review by June 2027, before the regulation even applies. That outcome is difficult to reconcile with the transitional logic of Article 33, which is designed to phase in compliance obligations rather than accelerate them. The more coherent reading treats 10 July 2027 as the earliest point from which the annual clock begins to run for all existing high-risk customers, with the first AMLR-compliant review therefore due no later than 10 July 2028. AMLA is invited to confirm this interpretation in the recitals or operative text, as the alternative creates an effective compliance deadline that precedes the regulation's own application date. The second question goes to risk model continuity during the transition. On 10 July 2027, most obliged entities will be operating risk scoring systems built under the pre-AMLR framework, which will not yet fully reflect the data inputs and methodology envisaged by the AMLR and this RTS. Article 33 permits the orderly remediation of existing customer files but says nothing about whether the risk classifications generated by legacy models remain valid for the purpose of sequencing that remediation. Two confirmations would resolve this: first, that pre-AMLR risk classifications may

Name of the respondent	Question	Answer
		lawfully be used to determine which customer files are remediated first; and second, that the obligation to produce an AMLR-compliant risk assessment for a given customer arises at the moment that customer's file enters the remediation workflow, not simultaneously across the entire portfolio at application date. Absent this, the practical effect is to require a fully compliant risk model to be operational before the transitional period begins, which renders the transitional period largely redundant. The third question is about the sequencing principle itself. Article 33 references the Article 26(2) AMLR periods but does not state that higher-risk customers should be remediated first. This should be confirmed, and obliged entities should be expected to record the criteria governing the order in which files are processed, whether by risk tier, product type, geographic exposure or other relevant factors. Supervisory consistency across Member States depends on this expectation being set out clearly at the level of the RTS rather than left to divergent national guidance.
TransferGo Lithuania UAB	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
TransferGo Lithuania UAB	Do you have any comments on the Annex in the draft RTS?	Yes
TransferGo Lithuania UAB	Please share your comments below.	Annex I lists a range of attributes that electronic identification means and qualified trust services must be capable of providing, but does not address what happens when a Member State's EUDI implementation covers only the mandatory subset of those attributes.

Name of the respondent	Question	Answer
		This is not a hypothetical scenario: national rollouts of the EUDI Wallet are expected to vary significantly in which optional attributes they include, at least in the near term. The result is that an obliged entity relying exclusively on the EUDI solution in a given Member State may be structurally unable to obtain certain Annex I attributes through that channel, without any fault on its part and without any guidance in the RTS on what it should do instead. Two questions arise from this gap. The first is whether Article 32(3) is intended to cover precisely this situation, and if so, whether reliance on it is automatic or requires some prior determination by the obliged entity that the EUDI solution is insufficient. The second is whether the obligation to obtain optional Annex I attributes at all varies with the risk profile of the customer, or whether it applies uniformly regardless of the level of due diligence required. A workable resolution would be to state explicitly in Annex I or its accompanying recital that attributes designated as optional in the Annex may be obtained through any proportionate means available to the obliged entity where the EUDI solution does not cover them, with the choice of means left to the obliged entity's own risk-based assessment of what is appropriate in the circumstances.
TransferGo Lithuania UAB	How would you rate the proposals set out in the draft RTS overall?	Neutral

Name of the respondent	Question	Answer
	understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
TransferGo Lithuania UAB	Please justify your answer to the previous question and provide evidence where possible.	The more detailed comments were already provided in the main part of the questionnaire. The impact will be significant because there will be a need for systematic changes in the systems and this has quite a signifficant impact resource (time as well as cost) wise.
Traton SE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The RTS proposals are largely not considered sufficiently tailored to the products and services of the goods trading sector. The requirements are strongly oriented towards banking type processes, which typically do not exist in trading activities. In particular, it should be clearly stated that purely ancillary or service related activities are not automatically brought within the scope of the obligations.

Name of the respondent	Question	Answer
Traton SE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS only partially enables an effective risk based approach, as it often presupposes ongoing customer relationships and continuous information flows. For the trading sector, greater emphasis should be placed on object and payment related risk indicators and on the involvement of regulated financial institutions.
Traton SE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, certain customer due diligence information, in particular regarding the source of funds or third party payers, is frequently not available in a verifiable form. The draft RTS does not currently provide sufficient alternative or plausibility based approaches for such situations, especially in the case of fully bank or leasing financed transactions.
Traton SE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The RTS should explicitly provide for additional simplified due diligence measures, in particular where payments are fully account based and processed via supervised EU credit or leasing institutions, as well as through increased use of appropriate external registers for identifying beneficial owners.
Traton SE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	A practical and legally certain implementation requires clear delineations, standardised implementation guidance and workable identification solutions. In particular, the terms "regular" and "principal" trading in

	supported by evidence. Where necessary, comments should also include a proposed solution.	high value goods should be clearly defined in order to avoid legal uncertainty.
Traton SE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Traton SE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Traton SE	Do you have any comments on the Annex in the draft RTS?	No
Traton SE	How would you rate the proposals set out in the draft RTS overall?	Neutral
Trident Trust Company (Cyprus) Limited	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Overall, we agree that the draft RTS can be applied across the range of services provided by our obliged entity. The RTS establishes a harmonised and risk-based framework that is, in principle, suitable for application across both financial and non-financial obliged entities, including DNFBPs. However, from a DNFBP perspective, certain provisions would benefit from clarification to ensure proportionate application across non-financial business models. (i) Areas where flexibility may be insufficient: • Certain provisions rely on structural indicators (e.g. nominee director involvement) without sufficient differentiation based on regulatory oversight or economic rationale. (ii) Proposed clarifications: • Clarify that nominee arrangements should be assessed in light of the regulatory status and jurisdiction of the service provider involved.

Name of the respondent	Question	Answer
		• Clarify that TCSP will consider complex structure a structure with three or more layers to which the TCSP does not provide services (and thus such layers are not its customers) Rationale: These targeted clarifications would enhance proportionality and legal certainty for DNFBPs while preserving the effectiveness and harmonised application of the risk-based approach.
Trident Trust Company (Cyprus) Limited	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree that the RTS as currently formulated, consistently allows for the effective application of a risk based approach (RBA). While the RTS references proportionality and risk sensitivity, certain provisions rely on prescriptive criteria that may lead to risk mis calibration, particularly for DNFBPs. i) Provisions concerned • Article 12 – Complex structures From a perspective of a TCSP who manages and controls several corporate entities within a multilayer structure i.e. several entities within the structure are its customers, it should be clarified that the TCSP will treat as complex corporate structure a structure with three or more layers to which the TCSP does not provide services (and thus such layers are not its customers). The inclusion of nominee shareholders and directors as automatic indicators of complexity does not sufficiently distinguish between regulated, transparent arrangements (e.g. EEA regulated TCSPs) and unregulated. This approach risks treating well governed structures as inherently high risk, contrary to the RBA.

Name of the respondent	Question	Answer
		Similarly, the use of legal arrangements such as trusts for family succession purposes, where trustee services are provided by EEA-regulated TCSPs, including those that may be members of the Society of Trust and Estate Practitioners (STEP) and adhere to established best practices, is not differentiated. Article 12 1 (b) is also contrary to a RBA and the concept of "equivalent jurisdictions" as it indicates that a customer and any legal entity registered in jurisdictions outside the EU are of higher risk. Moreover an EU regulated TCSP who acts and provides services to an EU legal person and a non-EU legal person will treat and apply same measures and controls to both the EU and the non-EU customer. • Article 22 – 3rd country equivalence References to 3rd countries with AML regimes that are “no less robust” than the EU framework lack an objective determination mechanism. This introduces discretion and inconsistent application across obliged entities, undermining harmonised, risk based decision making ii) Proposed clarifications & rationale • Article 12 (a) and (c) Clarify that nominee arrangements should be assessed in light of the regulatory status, jurisdiction and transparency of the service provider involved, rather than treated as an inherent risk factor. This would better align risk assessment with actual ML exposure and economic substance.

Name of the respondent	Question	Answer
		Specifically, nominee arrangements provided by TCSPs should be differentiated based on: • Whether the TCSP is established within or outside the EEA and • Whether it is subject to a robust licensing and regulatory framework TCSPs operating in mature regulatory regimes often provide additional safeguards rather than heightened risk. Treating all nominee arrangements uniformly contradicts the principles of proportionality, simplification, objectivity and most critically the RBA. Moreover, the reference to nominee directors appears unnecessary. Directors, irrespective of how appointed, remain subject to fiduciary duties and legal accountability. If the intent is to distinguish between TCSP appointed directors and others, it should be acknowledged that TCSP appointed directors are typically supported by the professional infrastructure of the licensed and regulated TCSP, whereas non TCSP directors may, in practice, pose higher governance risk. The current framing introduces an unjustified bias against TCSPs. Additionally, the provision of nominee directors by a TCSP should not be treated as a high-risk indicator by the TCSP, given the TCSP's deep operational insight and advance visibility over client decisions.

Name of the respondent	Question	Answer
		A similar segregation can take place for legal arrangements like Trusts where the Trustee is an EEA licensed and regulated TCSP, that is also a STEP member and follows best practices. • Article 22 Mandate AMLA or the EU Commission to assess and publish a list of 3rd countries considered equivalent ("no less robust"), similar to the EU high risk 3rd country list. This would support consistent, risk based application and reduce discretionary divergence. Rationale: These targeted clarifications would strengthen the practical effectiveness of the RBA by focusing supervisory and compliance efforts on substantive risk drivers rather than structural or formal indicators, while enhancing consistency, proportionality and legal certainty across obliged entities.
Trident Trust Company (Cyprus) Limited	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	No. Considering the nature, size, risk profile and complexity of our business, we do not encounter situations where the information required for customer due diligence under the draft RTS is routinely unavailable. In practice, where challenges arise in obtaining certain information at the outset, these are typically case-specific and can be addressed through the application of existing risk-based measures, including

Name of the respondent	Question	Answer
		the use of alternative reliable sources, enhanced due diligence and phased or conditional onboarding, as already prescribed under Regulation (EU) 2024/1624 and the draft RTS. We consider that the draft RTS, when applied in conjunction with the overarching risk-based approach and proportionality principles embedded in the AMLR, provide sufficient flexibility to address exceptional or temporary data limitations without requiring additional alternative mechanisms. Accordingly, no further amendments or alternative solutions are proposed in this respect.
Trident Trust Company (Cyprus) Limited	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose the inclusion of additional simplified due diligence measures beyond those already noted in Regulation (EU) 2024/1624 and further specified in the draft RTS. In our view, the existing framework, particularly Article 33 of Regulation (EU) 2024/1624 and Section 5 of the draft RTS already provide sufficient flexibility for obliged entities to apply proportionate simplified measures in low risk scenarios, while ensuring that all core elements of customer due diligence are preserved. We therefore consider that the current drafting appropriately balances proportionality, risk sensitivity and the need for harmonised application across sectors and Member States. Accordingly, no additional drafting proposals are recommended in this respect.
Trident Trust Company (Cyprus) Limited	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	Yes. We have the following additional observations, which are relevant to the effective and proportionate

Name of the respondent	Question	Answer
	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	application of the draft RTS and have not been fully addressed in the preceding responses. Article 2 – Names and identification attributes Observation: Article 2 requires obliged entities to obtain all names and surnames that appear on official identification documents. While the absence of a middle name should not prevent onboarding, where middle names are available, they can materially enhance identification and verification accuracy, particularly in cases involving common names. Rationale: From practical experience, middle names significantly reduce false positives and misidentification risk (e.g. in cases such as “Andreas Andreou” or “John Smith”), especially when screening against PEP and sanctions lists. Proposed solution: Clarify in Article 2 (or accompanying recitals) that, while not mandatory, the collection and use of middle names where available is encouraged as a good practice to strengthen identification and screening outcomes, consistent with the risk-based approach. . Article 18(e)(iii) – Regulated / obliged entity status Observation: Article 18(e)(iii) refers to whether the customer’s business activity or occupation is regulated. However, the provision does not explicitly clarify that this includes obliged entities within the meaning of Regulation (EU) 2024/1624.

Name of the respondent	Question	Answer
		Rationale: Being an obliged entity implies that the customer operates within a defined AML/CFT framework, including governance requirements, accountability mechanisms and the appointment of compliance functions. This materially affects the ML/TF risk assessment and the obliged entity's understanding of the purpose and intended nature of the business relationship. In addition, there is a substantive difference between EU-regulated obliged entities and entities subject to less mature or non-equivalent (less robust than the EU) regulatory regimes, which is not sufficiently reflected in the current drafting. Proposed solution: Amend or clarify Article 18(e)(iii) to explicitly state that references to "regulated" activities include obliged entities and to allow differentiation between EU-regulated and obliged entities and entities subject to less robust supervisory frameworks. This would support a more accurate and proportionate assessment of risk when determining the purpose and intended nature of the business relationship, in line with the risk-based approach. Overall rationale: These targeted clarifications would enhance legal certainty, reduce unnecessary operational burden and strengthen the effective application of the risk-based approach, while remaining fully aligned with AMLA's mandate and the objectives of Regulation (EU)

		2024/1624.
Trident Trust Company (Cyprus) Limited	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Trident Trust Company (Cyprus) Limited	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Trident Trust Company (Cyprus) Limited	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	There is an inconsistency between Article 3 and Annex I regarding the minimum address attributes to be collected. Specifically, the attribute “State” is included as a minimum requirement in Annex I but is not reflected in the requirements of Article 3. In addition, Article 3(c) allows for the inclusion of post office boxes as part of address information. Rationale: This inconsistency is not aligned with the principles of harmonisation and simplification, as it may lead to divergent interpretations and uneven application across obliged entities. Furthermore, the acceptance of post office boxes materially weakens traceability and is inconsistent with international best practices, as PO boxes are commonly used to obscure the actual location of natural or legal persons and may facilitate anonymity. Proposed solution: To ensure consistency and legal clarity, either the “State” attribute should be removed from Annex I or explicitly incorporated into the requirements of Article 3. In addition, references to post office boxes should be removed from Article 3, with address requirements

Name of the respondent	Question	Answer
		limited to physical locations that enable effective identification and verification.
Trident Trust Company (Cyprus) Limited	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Trident Trust Company (Cyprus) Limited	Please justify your answer to the previous question and provide evidence where possible.	Our AML/CFT control framework is largely aligned with the proposed CDD requirements set out in the draft RTS
Trustmoore	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	Articles 14 and 15 set out detailed requirements for identifying and verifying beneficiaries of trusts and similar legal arrangements. However, it is unclear whether these requirements apply only when a trust is

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	the direct customer, or also where a trust forms part of a customer's ownership or control structure (e.g. as a shareholder). In ownership-chain scenarios, obliged entities may have limited or indirect access to the required information, particularly in cross-border cases. Greater clarity is therefore needed on the scope and proportional application of these requirements, taking into account accessibility of information and the risk-based approach.
Trustmoore	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 10(b)(iv) allows beneficial owner verification based on documents certified by "persons authorised for document certification purposes," but neither the RTS nor a cross-reference to national law defines this term. As a result, its scope will depend on divergent national practices, undermining the AMLR's harmonisation objective and creating uncertainty for cross-border obliged entities as to the reliability of such documents. We suggest clarifying in Article 10(b)(iv) the minimum criteria for qualifying certifiers (e.g. legally protected professional status, registration with a publicly verifiable professional body, and/or independence from the customer). We also propose that AMLA explicitly specifies which standard applies where national certification regimes differ: whether the rules of the certifier's jurisdiction or those of the obliged entity should govern acceptance of certified documents. The proposed definition of "complex corporate

Name of the respondent	Question	Answer
		structure" under Article 12 requires at least three layers between the customer and the beneficial owner, in addition to one or more specified risk factors. This may exclude inherently high-risk structures that fall below this threshold, such as foundations or trusts directly owning a customer entity (i.e. with fewer than three layers). Despite having fewer layers, such arrangements can still present significant opacity, particularly where ownership and control are separated or roles are unclear. As drafted, these cases would not qualify as "complex structures," potentially leading to inconsistent application of enhanced scrutiny and undermining the risk-based approach. At the same time, Art. 12(1) risks over□capturing low□risk institutional investment structures. Art. 12(1) defines a complex structure as three or more layers plus at least one additional factor. Institutional investors, such as fund□of□funds, pension funds and family offices, commonly invest through intermediate holding entities for legitimate legal, regulatory or tax reasons. This layered structuring is an inherent feature of institutional investment activity and is not, in itself, indicative of opacity or elevated ML/TF risk. When combined with non□EU incorporation of the investing entity (factor b), a significant proportion of institutional investor commitments would automatically qualify as "complex," irrespective of actual transparency. This produces a disproportionate outcome that is inconsistent with the risk□based approach underpinning the RTS. We suggest introducing flexibility, allowing obliged entities to classify a structure as complex based on

Name of the respondent	Question	Answer
		qualitative risk indicators (e.g. opacity, separation of ownership and control, limited transparency), even where the three‑layer threshold is not met. We also suggest, clarifying that multi‑layered institutional fund structures should not automatically be deemed complex where layers arise from the nature of the investment vehicle and transparency is otherwise sufficient. Article 18(c) does not explicitly cover proceeds from the realisation of prior investments. The closest category, “savings and investments income” (vii), appears geared toward recurring income and does not clearly capture one off capital events such as investment exits, carried interest distributions or returns of capital—common source of funds scenarios in the private equity and venture capital sector. This creates ambiguity and undermines consistent, supervisory defensible classification. We suggest clarifing whether Art. 18(c)(vii) includes one off capital realisations or is limited to recurring investment income. If limited, we suggest adding an explicit category for proceeds from the sale or realisation of investments or financial instruments to support consistent application. Articles 29 and 30(a) require screening of customers, beneficial owners, and entities or persons exercising ownership or control under Art. 20(1)(d) AMLR, but do not specify how far this obligation extends up the ownership chain. In complex fund structures with

Name of the respondent	Question	Answer
		multiple intermediate holding entities, it is unclear whether screening is limited to the immediate controlling layer or applies to all intermediate entities up to the ultimate beneficial owner, creating scope for divergent supervisory expectations. We suggest clarifying the scope of the screening obligation under Art. 29 jo. Art. 30(a), including whether it applies only to the direct controlling layer or extends to all intermediate entities in the ownership chain, taking into account proportionality and the risk□based approach.
Trustmoore	3. 	implementing the provisions of these draft RTS.: Recurrent costs	
Trustmoore	Please justify your answer to the previous question and provide evidence where possible.	Our existing framework is already largely compliant with the requirements set out in the RTS. Therefore, no significant additional costs are expected to be incurred.
UBIK - Croatian Association for Blockchain and Cryptocurrency	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Croatian Association for Blockchain and Cryptocurrencies (UBIK) supports a harmonised EU framework for customer due diligence under the AMLR, and recognises eIDAS-based identification as one of useful modalities for remote onboarding. However, UBIK strongly believes that this modality should sit alongside other equally robust solutions and should not be elevated to a single overarching pathway through which all others must pass. The framing of Article 7 raises this concern in three layers. First, paragraph 1 anchors eIDAS as the default through the binding "shall" formulation. Second, paragraph 2 admits alternative solutions only on a narrow exception – when eIDAS is "not available, or cannot reasonably be expected to be provided". Third, paragraph 4 adds a per-customer duty to demonstrate why eIDAS could not be used. Read together, these layers convert eIDAS from one of several recognised tools into a presumptive obligation, with everything else cast as a fallback. The result departs from the two pillars on which EU remote-onboarding policy has been built – proportionality to actual risk, i.e. risk-based approach, and neutrality between technologies of comparable assurance. The framing also proceeds on the basis of an eIDAS landscape that does not yet exist. Verification, biometric

Name of the respondent	Question	Answer
		assurance and ML/TF detection capabilities have evolved rapidly since the original RTS exercise, while eIDAS uptake and pan-European interoperability have advanced more cautiously. The European Digital Identity framework took effect only in May 2024, and Member States are required to make at least one EU Digital Identity Wallet available by the end of 2026 — a window of only a few months before the AMLR begins to apply on 10 July 2027. A binding Level 2 instrument should not be calibrated against a future state that, by all reasonable projections, will not be in place when the obligation crystallises. The implications for crypto-asset service providers (CASPs), entering the AMLR's scope for the first time through the MiCA/AMLR architecture, are particularly sharp. CASP onboarding is overwhelmingly remote, frequently cross-border, and serves a customer mix in which a meaningful share will not have a usable eIDAS at the point of onboarding — third-country nationals lawfully resident in the EU, mobile workers, persons resident in a Member State other than the one issuing their eID, and customers from jurisdictions where wallet rollout or trust service uptake remains limited. A regime built on eIDAS-by-default would therefore land disproportionately on CASPs and the customers they serve. UBIK puts forward the following recalibration of Article 7, which preserves eIDAS as a recognised high-assurance option without locking it in as the sole route: Suggested wording of Article 7: (1) Obliged entities may [not "shall"] use electronic

Name of the respondent	Question	Answer
		identification means meeting the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels "substantial" or "high", or relevant qualified trust services as set out in that Regulation. (2) In addition, especially where the solution under paragraph 1 is not available or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person's identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3 and 4. (3) [paragraph 3 unchanged] (4) Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions used comply with this Article. [The per-customer justification under Article 22(6) of Regulation (EU) 2024/1624 should be deleted.] UBIK further propose a review clause inserted as a new final article of the RTS in order to preserve the EU policy direction without locking the binding text around current unrealistic assumptions which will for sure impose costs neither proportionate to the risk reduction achieved nor consistent with the EU simplification agenda. New final article — Review clause: By [date], AMLA shall, in cooperation with the Commission, review the application of Article 7 in light of the maturity and pan-European interoperability of electronic identification means under Regulation (EU) No 910/2014, and submit a report accompanied, where appropriate, by proposals to amend this Regulation.

Name of the respondent	Question	Answer
UBIK - Croatian Association for Blockchain and Cryptocurrency	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Building on our answer to Question 1, UBIK considers that the eIDAS-by-default architecture of Article 7 is difficult to reconcile with a genuinely risk-based AML/CFT framework. The risk-based approach assumes that obliged entities calibrate their controls against the actual ML/TF risk presented by a customer, choosing among proportionate measures of equivalent assurance. Article 7 reverses that logic: by anchoring eIDAS through "shall" and conditioning the use of any other solution on a per-customer demonstration under paragraph 4, the draft converts identity verification into a fixed sequence rather than a risk-sensitive choice. Several solutions that today perform at, or above, eIDAS assurance levels would consequently be sidelined regardless of their actual risk performance — including AI/ML-based identity verification and the various national means already supervised across the Union. The crypto-asset sector has been a particularly active adopter of advanced verification technology, including liveness and deepfake detection, document authenticity checks, behavioural biometrics, and real-time anomaly detection. Under the present drafting, all of these would be treated as fallback options for the simple reason that they are not eIDAS, irrespective of how well they identify and screen the customer. This sits awkwardly with Article 22(6) AMLR, which expressly recognises both document-based and electronic identification as valid modalities. A Level 2 instrument should give effect to that flexibility, not narrow it; this is particularly important where the narrowing has the practical effect of disabling a risk-

Name of the respondent	Question	Answer
		based determination at onboarding. A separate but connected point: eIDAS is built to confirm who a person is. It is not built to detect whether that person is a victim of identity theft, a money mule, acting under coercion, or whether the identity itself has been synthetically generated through AI tooling. Those are precisely the questions that contemporary verification stacks - many developed by the crypto-asset and broader fintech industry in response to recent threats - are designed to answer. Mandating eIDAS as primary, while pushing those capabilities into a justified-fallback box, narrows rather than broadens the risk-relevant information available at onboarding. It also bakes a specific technological choice into the AML/CFT framework at a moment when the threat landscape - generative AI and deepfake-driven fraud in particular - is moving faster than any single technology can keep up with. Technological neutrality is essential precisely for this reason. UBIK accordingly endorses the recalibration of Article 7 set out under Question 1, including the proposed review clause. Together, those amendments realign Level 2 with Article 22(6) AMLR, restore the role of the risk-based approach, and place compliant remote-onboarding solutions on an equal footing.
UBIK - Croatian Association for Blockchain and Cryptocurrency	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	For crypto-asset service providers (CASPs), eIDAS-based identification means cannot reliably be assumed to be available across the customer base, and the draft RTS does not provide a workable alternative. The CASP business model is, by its nature, remote-first

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	and cross-border. The customer base typically encompasses a meaningful share of users for whom an eIDAS-compliant means will not be available at the point of onboarding — among them: a) third-country nationals lawfully resident in the EU; b) mobile workers and migrants residing outside the Member State that issued their eID; c) users from Member States where the EU Digital Identity Wallet rollout or qualified trust service uptake is delayed or limited; d) younger users without an eID, and older users with a more modest digital footprint. An eIDAS-only default sits uneasily with the EU's financial-inclusion objectives and would have a disproportionate impact on the crypto-asset sector given its remote-first, cross-border profile. A further consequence is the emergence of a dual-stack burden. Because eIDAS is not universally adopted across the Union, a separate compliant onboarding pathway will be required for every customer who lacks a usable eIDAS means. Even where the customer does present eIDAS, if the means in question does not surface all attributes required by Annex I, an additional fallback for non-face-to-face onboarding will still be needed to complete the data set. The cumulative effect is a parallel infrastructure that is disproportionate to the risk being addressed and that weighs particularly heavily on CASPs and other newly in-scope obliged entities, whose technical and compliance resources are inherently more limited. The way forward UBIK proposes is set out under

Name of the respondent	Question	Answer
		Question 1: a recalibration of Article 7 that places eIDAS-based solutions alongside other compliant remote solutions meeting Article 7(3)–(4), supplemented by a review clause that allows the regime to evolve as eIDAS matures into a genuinely cross-border default.
UBIK - Croatian Association for Blockchain and Cryptocurrency	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	UBIK has chosen to focus its submission on Article 7 and the way it frames remote identity verification. AMLA's mandate under Article 28(1) AMLR extends to simplified due diligence measures more broadly, and UBIK's view is that the most consequential simplification AMLA can deliver in this round - measured by its effect on the proportionate application of CDD across the obliged entity population - is the recalibration of Article 7 itself. Three elements of the current Article 7 work against the simplification logic that Article 28(1) is meant to advance: the binding "shall" in paragraph 1, which mandates a single primary modality; the per-customer justification requirement in paragraph 4, which adds a procedural layer to every onboarding that does not rely on eIDAS; and the absence of a review mechanism, which leaves the regime calibrated to assumptions that may not hold by the time it begins to apply. Reframing paragraph 1 around "may", removing the per-customer justification under paragraph 4, and adding the review clause set out under Question 1 would together represent a meaningful and immediate simplification of the framework. For crypto-asset service providers, this is the simplification with the most tangible practical effect. A

Name of the respondent	Question	Answer
		recalibrated Article 7 along the lines proposed would let CASPs apply proportionate, risk-based identity verification consistent with the approach currently existing with the traditional participants of the financial system, and without the dual-stack burden and the supervisory uncertainty that the current Article 7 framing would otherwise produce.
UBIK - Croatian Association for Blockchain and Cryptocurrency	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	UBIK would like to underline a cross-cutting observation that runs through its submission. Each of the article-specific concerns raised under Questions 1–4 ultimately turns on the same point: the implementing standards must give effect to the flexibility that the AML Regulation has expressly built into Level 1 - in particular the recognition of both document-based and electronic identification as valid modalities under Article 22(6) AMLR. UBIK would welcome a recital in the RTS that affirms this directly, asking obliged entities and competent authorities to apply the standards in line with the risk-based and technology-neutral approach the AML Regulation already operationalises. Such a recital would offer a stable interpretative anchor over the lifetime of the RTS and reduce the risk of fragmented national interpretation. Closely related, the outcome-based and technology-neutral framework, that has governed remote customer onboarding across the EU financial sector since 2022 should sit alongside Article 7, not be displaced by it. Recognising the two together would safeguard technological neutrality, support European competitiveness in the crypto-asset and wider

Name of the respondent	Question	Answer
		payments-innovation space, and ensure that the measure goes no further than is necessary to meet the AML/CFT objective.
UBIK - Croatian Association for Blockchain and Cryptocurrency	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
UBIK - Croatian Association for Blockchain and Cryptocurrency	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
UBIK - Croatian Association for Blockchain and Cryptocurrency	Do you have any comments on the Annex in the draft RTS?	No
UBIK - Croatian Association for Blockchain and Cryptocurrency	How would you rate the proposals set out in the draft RTS overall?	Inadequate
UFBJOP	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The UFBJOP does not consider that the proposals set out in the draft RTS can be fully and appropriately applied to all products and services within the sector, particularly in the case of specific activities such as after-sales services. In the jewellery and watch sector, a significant share of customer interactions relates to after-sales services, such as repairs, resizing, or the replacement of straps or batteries, including for products under warranty. These activities are not comparable to purchase transactions and generally do not present a significant risk in terms of money laundering or terrorist financing.

Name of the respondent	Question	Answer
		However, as currently drafted, the RTS do not clearly specify to what extent such situations should be subject to customer due diligence requirements, in particular regarding the understanding of the nature and purpose of the relationship or transaction (Article 18). This lack of clarity may lead to an overly broad application of CDD obligations to very low-risk situations.
UFBJOP	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The UFBJOP considers that the proposals set out in this draft RTS, taken as a whole, provide a relevant basis for the application of a risk-based approach to AML/CFT. The emphasis on proportionality and on the need to adapt due diligence measures to the level of risk is particularly welcome and appears consistent with the principles of the European framework.
UFBJOP	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The UFBJOP identifies several situations in which certain information required under the draft RTS may be difficult to obtain in practice, particularly in the context of retail activities largely based on occasional transactions. In particular, the collection of information on the customer's source of funds represents a major operational challenge. In the jewellery sector, customer interactions are often one-off, of short duration, and do not necessarily form part of an established business relationship. In this context, it is generally difficult, and in some cases impossible, to systematically obtain reliable and verifiable information on the source of funds, especially

Name of the respondent	Question	Answer
		for transactions of moderate value or presenting a low-risk profile.
UFBJOP	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	NA
UFBJOP	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? UK Finance	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Overall, UK Finance and its members partially agree with the proposals set out in the draft RTS. The revised drafting demonstrates progress in aligning with the Level 1 text and introduces greater flexibility in certain areas. However, there remain several provisions where further clarification or adjustment would be beneficial to ensure proportionality, legal certainty, and consistent implementation, in particular we draw attention to the Persons Purporting to Act (PPTA) and ID&V in relation to Senior Managing Officials (SMOs). We have provided an outline of the key industry concerns to the draft articles below: Recitals

Name of the respondent	Question	Answer
		We welcome the new Recital 12 which confirms business practice and introduces the issue of power of representation. However, we note that this could be further expanded with a clarification as to when power of representation would trigger ID&V, especially when seen in relation with the Persons Purporting to Act (PPTA) clause in Article 16 RTS. Article 13 We would like to raise the issue of implications of an overly broad interpretation of ID&V requirements when it comes to SMOs, i.e., if all authorised signatories are to be considered in scope. Members wish to underline the practical difficulties created by divergent interpretations across Member States. Such divergence gives rise to legal uncertainty, increases operational complexity, and may result in inconsistent approaches to reporting. Pending any legislative revision of the Level 1 framework, members encourage AMLA to consider issuing Level 3 guidance on the practical application and scope of the SMO concept. Clarification of this kind would help promote a more consistent and proportionate supervisory approach, reduce the risk of divergent reporting to transparency registers, and alleviate unnecessary operational burdens for obliged entities. Article 16 We continue to suggest amending the definition of a "person purporting to act" as such: ''Legal representative(s) (e.g., legal guardians) of a

Name of the respondent	Question	Answer
		natural person in situations where the customer is unable to act on their own behalf and any individual authorised to act on behalf of a legal person pursuant to a proxy agreement or power of attorney.'' If AMLA cannot provide this clarity at Level 2 and the inclusion of the definition is required at Level 1, we request that AMLA provide Level 3 supervisory guidance to harmonise interpretation and support proportionate implementation. Article 6 We welcome the expansion of the relevant provisions, in particular, the inclusion of natural persons on whose behalf or for whose benefit a transaction or activity is being carried out. We do however, express a concern for a need to exclude firm's employees from the definition of PPTA, as well as the current drafting suggesting that there are different certification requirements/standards for document certification: • Recital 5: Non-natural person documents may be certified by an independent professional or a public authority. • Article 6: Certified copy of an identity document/passport for natural person identification. • Article 10(b)(iv): Beneficial owner identity documents certified by persons authorized for document certification. We would welcome clarification on whether the same requirements apply to all documents and whether the same persons may perform the certification, or if different requirements apply depending on the type of

Name of the respondent	Question	Answer
		document or the category of persons to be identified. If these are intended to differ, then further clarity is needed to identify which “professionals” qualify and how to assess “independence”; how obliged entities determine who is “authorized for document certification.”; and any specific requirements for certifying copies of identity documents. Article 1 While the objective of convergence and proportionality is acknowledged, the RTS does not consistently reflect the scope and intent of the AMLR. There is a risk that certain requirements extend beyond Level 1 obligations, potentially creating additional and disproportionate burdens for obliged entities operating both within and outside the EU. We therefore propose to further align Article 1 explicitly with the AMLR by clarifying that the RTS should not introduce obligations that go beyond Level 1 requirements, and by reinforcing proportionality where entities operate cross border. We also remain concerned, that supervisory expectations under the draft RTS continue to vary across Member States, including in relation to equivalent documentation and acceptable verification methods. This fragmentation risks undermining consistent, proportionate application of the RTS and creates unnecessary complexity for cross-border groups. We therefore encourage AMLA, in cooperation with National Competent Authorities, to promote a

Name of the respondent	Question	Answer
		more harmonised and convergent approach across the Union.
UK Finance	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The proposals can generally be applied across a broad range of products and services. However, in some areas the RTS does not provide sufficient flexibility to reflect differences in customer types, delivery channels, and business models: Complex ownership structures (Articles 11 and 12) The indicators used to define “complex corporate structures”, such as the number of layers or non EU registration, may not always be appropriate for certain business lines (e.g. wholesale banking), where multi layered structures are common and not inherently higher risk. We therefore propose that AMLA should refine the indicators to focus more explicitly on transparency and ML/TF risk, rather than structural features alone, and clarify that additional measures should only apply where justified by risk.
UK Finance	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Our members collectively state that there are situations where certain information may not be routinely available, and that the RTS does not always provide sufficiently clear alternative solutions: Occupation and business activity information (Article 18) While the RTS introduces broad scope requirements to

Name of the respondent	Question	Answer
		obtain information relating to occupation or business activity, it is unclear what level of detail is required. Our understanding of Article 18, in particular point (e), is that it is intended to require the collection of one relevant criterion, rather than all categories of information listed. We are concerned that the introduction of occupation information within Article 18 may be interpreted as an expectation to obtain detailed personal information in all cases, which may not always be feasible or proportionate and could result in customer impact where individuals are unwilling to provide such information. The lack of clarity regarding the required level of detail also creates uncertainty as to whether high level information would be sufficient, which may lead to inconsistent application across obliged entities. We suggest that AMLA clarify what information is expected to satisfy the occupation element, and what sources of information is to be expected, allowing obliged entities to select the most relevant information depending on the customer profile Complex structures documentation (Article 12) The removal of a mandatory requirement to obtain an organigram in all cases is welcomed. However, further clarity would help ensure consistency in determining when additional documentation is necessary. Therefore, we note that AMLA should explicitly confirm that additional information should only be obtained where necessary to address identified ML/TF risks.

Name of the respondent	Question	Answer
UK Finance	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We note that given AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624, further simplified due diligence measures could be considered for products and services associated with demonstrably lower ML/TF risk. Low risk pooled accounts (Article 22) Further clarity would be welcome to confirm that reliance on account holders that are obliged entities is appropriate, where those entities apply robust and risk sensitive CDD measures, and that correspondent banking relationships fall outside the scope of Article 20(1)(h) AMLR.
UK Finance	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We have determined that the draft RTS partially supports the effective application of a risk based approach. In several areas, the revised drafting introduces helpful flexibility; however, some provisions would benefit from clearer articulation of how proportionality should be applied: Article 8 (Risk sensitive measures) The absence of guidance on how to calibrate measures across different risk profiles may lead to divergent supervisory expectations. Articles 11 and 12 (Ownership and control structures) We noted that the RTS would benefit from clearer differentiation between inherently complex structures and those that are common but transparent and well understood. Therefore, we request that AMLA should emphasise transparency and economic rationale as the primary risk drivers, rather than structural complexity

Name of the respondent	Question	Answer
		alone. Article 7 (Non face to face verification) The amendment to Article 7(4), aligning it with Article 22(6) of Regulation (EU) 2024/1624, is welcomed and addresses prior advocacy. However, further clarity would be beneficial regarding the use of electronic identification: • There are continued concerns on the drafting of Art.7 and more generally the interpretation of Art.22(6) AMLR under the draft CDD RTS. Further clarity would be welcome on the application of other remote verification solutions by obliged entities to comply with the requirements of Art. 22(6) AMLR and Art. 7 CDD RTS. • Art 7(1) CDD RTS appears to infer a primacy requirement that obliged entities must first use eIDAS identification means to comply with Art. 22(6) AMLR. Under Art. 7(2) CDD RTS the only exception to this is where such solutions are “not available, or cannot reasonably be expected to be provided..”. • Further clarity is needed within Article 7 to specify that electronic identification means meeting eIDAS requirements with ‘substantial’ or ‘high’ assurance levels may be used on a risk sensitive basis, consistent with the Level 1 text. • We would encourage AMLA to refer to the UK’s digital ID published guidance, which provides an overview of the UK’s approach to digital identities and the attributes trust framework. It would be beneficial for alignment across UK and EU policy frameworks to ensure that there is streamlined to compliance with digital ID

Name of the respondent	Question	Answer
		implementation. • We would welcome AMLA to potentially consider revising Art.7(1) and (2) of the draft CDD RTS requirements better align ensure consistency with the Level 1 text requirements under Art.22(6) AMLR and the principle of technology neutrality. The following suggested draft amendments to Art.7 (1): o To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-face situations obliged entities shall: (i) use electronic identification means which meet the requirements of Regulation (EU) No 910/2014 and have assurance levels 'substantial' or 'high' where the customer has voluntarily requested for these to be used. (ii) where solutions described in (i) are not available, have not been volunteered, or cannot reasonably be expected to be provided, use remote solutions that meet the requirements outlined under paragraph 3 and 4 of this article to obtain the natural person's identity document, passport or equivalent.
UK Finance	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
UK Finance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	8
UK Finance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	While the factors listed provide a useful framework, the RTS does not sufficiently explain how "risk sensitive

Name of the respondent	Question	Answer
		measures" should be applied in practice, creating a risk of inconsistent interpretation across obliged entities.
UK Finance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	10
UK Finance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We would like to re-iterate the following concerns industry has with regards to Article 10 and verification of the beneficial owner: • The requirement to include the "number of the identity document" in the information collected on the beneficial owner pursuant to AMLR Article 62(1)(a), that is applicable to obliged entities via AMLR Article 22(2), should be implemented in a way that does not unduly impair obliged entities' ability to verify and cross check beneficial ownership information and does not result in an undue volume of discrepancy reports to the central register. • AMLR Article 62(1)(a) requires ID document numbers for beneficial owners, but not for natural person customers — creating a verification gap for obliged entities that do not hold customers' ID numbers. • "Reasonable measures" under RTS Article 10(b)(iii)–(iv) may be insufficient, and no public source exists to validate ID numbers — risking a de facto identity-document verification requirement, contrary to AMLR Article 22(7)(b). • Potential for overwhelming discrepancy reporting volumes - ID numbers change upon renewal or replacement, triggering frequent, non–risk-based discrepancy reports. • We therefore propose the following clarifications:

Name of the respondent	Question	Answer
		o Permit reliance on a simple declaration of the ID document number by the beneficial owner or reliable third parties. o Exclude the ID document number from verification requirements. o Exclude the ID document number from discrepancy reporting for beneficial ownership information
UK Finance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	22
UK Finance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Although no changes have been made following our previous industry feedback, we suggest that further clarification could be provided to confirm that reliance on account holders that are obliged entities is appropriate where those entities apply robust and risk sensitive CDD measures, and that correspondent banking relationships fall outside the scope of Article 20(1)(h) AMLR.
UK Finance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	33
UK Finance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Whilst we welcome the explicit clarity on the uplift of existing customers, considering the delays anticipated, we request that obliged entities are given 5 years to uplift (with higher risk customers uplifted as a priority taking a RBA) without the 1 year deadline.
UK Finance	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
UK Finance	Please specify which recital you refer to, and share your comments below.	Our response to question one highlights our comments on the recitals.
UK Finance	Do you have any comments on the Annex in the draft RTS?	Yes
UK Finance	Please share your comments below.	Further Observations: Art. 22(6) AMLR, as the level 1 text, provides obliged entities a choice of means for obtaining information, documents and data necessary for CDD verification purposes by either: "(a) submission of ID documents and/ or acquisition of information from reliable and independent sources either directly or provided by the customer, or (b) use of electronic identification means which meet the requirements of Regulation (EU) No 910/2014 and have assurance levels 'substantial' or 'high'." As presented under the level 1 text this is an either/ or option for obliged entities to determine the best approach to complying with Art. 22(6) AMLR. Art.22(6)(a) is intended to be technology neutral, in line with the expectations of Recital 74 AMLR, and therefore does not prohibit obliged entities from deploying remote solutions to comply with this provision in non-face-to-face scenarios. Previous industry responses to the EBA consultation on the draft CDD RTS outlined that FI's/CI's currently deploy a range of remote identity verification solutions which are compliant with EBA Guidelines on the use of

Name of the respondent	Question	Answer
		Remote Customer Onboarding Solutions under Article 13(1) of Directive (EU) 2015/849. These remote solutions can require customers to submit reproductions of original ID documents/ information/ data for non-face-to-face CDD verification purposes. Where these solutions meet the safeguarding requirements noted under Art. 7(3) draft CDD RTS then these should be considered as fully complying the level 1 text verification requirements under Article 22(6)(a) AMLR. Art. 5f(2) Regulation (EU) No 910/2014 notes that banking/ financial services (as private relying parties) can only accept EU ID Wallets where these are provided at the voluntary request of the user. Given the voluntary aspect in relation to EU ID Wallets, in cases where these are not volunteered in a non-face to face scenario obliged entities will be required to apply other remote verification solutions for the purposes of complying with Art 22(6) AMLR. In this scenario our interpretation of Art. 7(2) CDD RTS would consider this as meeting the 'cannot reasonably be expected to be provided' requirement. We would welcome further clarity from AMLA if Art. 7(2) CDD RTS is intended to cover this scenario.
UK Finance	How would you rate the proposals set out in the draft RTS overall?	Neutral
UN.A.FI. – Unione Affidatari Fiduciari	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	**[Risposta: NO]** UNAFI — Unione Nazionale Affidatari Fiduciari, associazione rappresentativa dei trustee italiani — rileva

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	che il draft RTS non offre sufficiente flessibilità per i trust e gli assetti fiduciari. Quattro carenze specifiche: (i) Il draft RTS non distingue tra le diverse categorie di beneficiari di trust, che sono profondamente eterogenee sotto il profilo del diritto soggettivo e non possono essere assoggettate al medesimo regime di raccolta di dati personali. L'art. 60 AMLR sottende almeno quattro categorie radicalmente diverse: beneficiari con diritti certi quesiti ("vested"), che hanno un rapporto giuridico costituito con il trustee; beneficiari con diritti condizionati, la cui aspettativa dipende dall'avverarsi di una condizione; beneficiari potenziali e objects of a power, che non hanno alcun rapporto giuridico con il trust e nella grande maggioranza dei casi ignorano persino di essere stati designati; beneficiari di default, la cui designazione è residuale e subordinata all'omissione di un atto del trustee. Queste categorie non sono equivalenti né sul piano giuridico né sul piano del rischio AML/CFT: l'applicazione uniforme di identici obblighi di raccolta a tutte le categorie produce inevitabilmente raccolta sproporzionata ed eccessiva di dati personali, in violazione dei principi di necessarietà e minimizzazione del GDPR. Questa eterogeneità sarà sviluppata nelle osservazioni specifiche agli artt. 14 e 15. (ii) L'art. 12 qualifica come "struttura complessa" quella con tre o più livelli tra il cliente e il titolare effettivo, più almeno una condizione aggiuntiva. Questa soglia è strutturalmente inadeguata per i trust: la struttura

Name of the respondent	Question	Answer
		trilaterale disponente–trustee–beneficiario costituisce già di per sé una catena a tre parti, pur non essendo necessariamente complessa ai fini del rischio AML/CFT. L'applicazione automatica dell'EDD a tutte le strutture trust formalmente tri-livello — indipendentemente dal profilo di rischio effettivo — viola il principio di proporzionalità (art. 52(1) Carta UE) e l'approccio basato sul rischio FATF. Un trust con trustee professionale vigilato da autorità UE, disponente identificato e beneficiari noti è strutturalmente semplice ai fini del rischio: l'EDD costituirebbe una misura sproporzionata. (iii) Le proposte non distinguono tra trustee professionali vigilati da autorità competenti in Stati UE — soggetti obbligati ai sensi dell'art. 3(3)(l) AMLR che applicano già la CDD completa — e trustee operanti in giurisdizioni non cooperative. Questa distinzione è fondamentale per una valutazione proporzionata del rischio. (iv) Gli artt. 20–24 sulle misure semplificate non contengono alcuna previsione specifica per i trust, nonostante i trust a basso rischio (trustee vigilato UE, beneficiari identificati, beni in UE/SEE, nessun indicatore di rischio) presentino profili che giustificano chiaramente misure SDD. PROPOSTE REDAZIONALI: (a) Art. 12: sostituire o affiancare la soglia quantitativa con criteri qualitativi di rischio per i trust: presenza di opacità strutturale non giustificata economicamente; coinvolgimento di

Name of the respondent	Question	Answer
		giurisdizioni ad alto rischio; impossibilità concreta e non causalmente giustificata di identificare i beneficiari effettivi. (b) Artt. 20–24: inserire criteri SDD espliciti per i trust a basso rischio: trustee professionale vigilato UE o equivalente; beneficiari già identificati e verificati; beni in giurisdizioni non ad alto rischio; nessun indicatore concreto ML/FT. In presenza di tutti questi elementi, i soggetti obbligati applicano misure SDD analoghe a quelle previste per gli OIC dall'art. 17.
UN.A.FI. – Unione Affidatari Fiduciari	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	**[Risposta: NO]** UNAFI identifica due carenze strutturali. **1. ASSENZA DI SDD PER TRUST A BASSO RISCHIO — RISCHIO DERISKING (artt. 20–24)** L'assenza di qualsiasi previsione SDD specifica per i trust crea un vuoto che porta i soggetti obbligati — in particolare le banche — ad applicare sistematicamente CDD standard o rafforzata a tutti i trust indipendentemente dal profilo di rischio effettivo. Questo fenomeno — il derisking — costituisce: (a) una violazione del principio di proporzionalità: l'applicazione uniforme delle misure più onerose è dettata dalla comodità operativa e non dal rischio effettivo; (b) un ostacolo all'accesso ai servizi finanziari per trust e beneficiari legittimi, con effetti negativi sulla pianificazione patrimoniale familiare e sulla protezione di soggetti vulnerabili (minori, incapaci, anziani); (c) una distorsione dell'approccio basato sul rischio: il GEPD ha

Name of the respondent	Question	Answer
		rilevato che il derisking può essere controproducente, spostando il rischio verso canali meno regolamentati (Opinion 5/2020). PROPOSTA: inserire criteri SDD espliciti per i trust a basso rischio, con misure analoghe a quelle previste per gli OIC dall'art. 17 (v. D1 e D4). **2. ASSENZA DI MECCANISMO DI RELIANCE PER IL TRUSTEE PROFESSIONALE (analogia art. 17)** L'art. 17 consente a un OIC di affidarsi all'intermediario per la CDD sugli investitori finali. Non esiste un meccanismo analogo per i trust con trustee professionali vigilati. Il trustee professionale, in quanto soggetto obbligato ai sensi dell'art. 3(3)(l) AMLR, applica già la CDD completa su disponenti, beneficiari e tutte le parti. Quando un istituto finanziario mantiene conti intestati al trust, ri-applicare la CDD sugli stessi soggetti già verificati dal trustee comporta: (a) raccolta ridondante di dati personali, in violazione del principio di minimizzazione dei dati (art. 5(1)(c) GDPR); (b) oneri operativi aggiuntivi senza alcun beneficio in termini di prevenzione ML/FT; (c) duplicazione non giustificata in contrasto con la Guidance FATF per i TCSP (2019), che prevede espressamente meccanismi di reliance quando il trustee è a sua volta soggetto obbligato vigilato. PROPOSTA: inserire una disposizione che estenda il meccanismo di reliance dell'art. 17 ai rapporti tra istituti finanziari e trust amministrati da trustee professionali vigilati, a condizione che: (a) il trustee sia soggetto obbligato ex art. 3(3)(l) AMLR vigilato in UE o

Name of the respondent	Question	Answer
		giurisdizione equivalente; (b) il rapporto sia classificato a rischio basso o standard; (c) il trustee si impegni a fornire le informazioni CDD su richiesta senza ritardo.
UN.A.FI. – Unione Affidatari Fiduciari	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	**[Risposta: SÌ]** UNAFI identifica una situazione in cui l'identificazione individuale richiesta dall'art. 15 è non solo difficile ma legalmente impossibile in conformità al GDPR: quella degli objects of a power (potenziali beneficiari discrezionali) e dei default takers nei trust discrezionali. **IL PROBLEMA FONDAMENTALE: INCONSAPEVOLEZZA STRUTTURALE** In un trust discrezionale, gli objects of a power sono soggetti che il disponente ha indicato come potenziali destinatari futuri di distribuzioni, rimessi alla scelta discrezionale del trustee, senza che tali soggetti abbiano alcuna consapevolezza di questa designazione. A differenza del beneficiario già determinato, l'object of a power: non sa di essere indicato come potenziale beneficiario nell'atto istitutivo o in qualsiasi altro documento del trust; non ha mai espresso alcun assenso — né esplicito né implicito — al trattamento dei propri dati da parte del trustee o del soggetto obbligato; non ha alcuna aspettativa giuridicamente tutelata, potendo il trustee esercitare la propria discrezionalità in favore di altri; non è in grado di esercitare i propri diritti GDPR perché ignora l'esistenza stessa del trattamento che lo riguarda.

Name of the respondent	Question	Answer
		Questa situazione determina tre profili di incompatibilità GDPR che il draft RTS non affronta: (i) ASSENZA DI BASE GIURIDICA (art. 6 GDPR): raccogliere dati di soggetti senza alcun rapporto giuridico attuale con il trust non è "necessario": il rischio AML/CFT è meramente ipotetico. Il GEPD ha avvertito contro trattamenti basati su rischi ipotetici non documentati (Opinion 12/2021). (ii) IMPOSSIBILITÀ DI INFORMATIVA (art. 14 GDPR): i dati provengono dall'atto istitutivo, mai dall'interessato. L'obbligo di fornire l'informativa entro un mese è strutturalmente impossibile da adempiere senza rivelare al potenziale beneficiario l'esistenza del trust — il che può violare la volontà di riservatezza del disponente, ledere i diritti degli altri beneficiari, ed è materialmente impossibile quando la classe è indeterminata (es. "gli enti che si occupino di soggetti deboli su un determinato territorio che il trustee individuerà a sua insindacabile discrezionalità"). (iii) VIOLAZIONE DI CORRETTEZZA E TRASPARENZA (art. 5(1)(a) GDPR): trattare i dati di chi non sa di essere interessato dal trattamento è per definizione non trasparente. SOLUZIONE PROPOSTA — DOPPIO PASSAGGIO: l'identificazione individuale è legittima solo al completamento di due fasi: (1) Notifica: il trustee

Name of the respondent	Question	Answer
		informa formalmente l'interessato della propria potenziale posizione nel trust, adempiendo contestualmente all'informativa ex art. 14 GDPR; (2) Accettazione: l'interessato dichiara la propria intenzione di beneficiare della designazione. Solo a questo punto l'object of a power diviene beneficiario con diritti quesiti soggetto ad obbligo di identificazione. Fino ad allora il soggetto obbligato si limita a raccogliere informazioni strutturali non identificative sulla categoria astratta e sui criteri di esercizio del potere discrezionale.
UN.A.FI. – Unione Affidatari Fiduciari	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	UNAFI propone un framework CDD differenziato per profilo di rischio dei trust, in linea con il principio GEPD "situazioni a minor rischio giustificano procedure meno invasive" (Opinion 5/2020) e con la Guidance FATF per i TCSP (2019). **LIVELLO 1 — TRUST A BASSO RISCHIO (SDD):** Condizioni (tutte): (a) trustee professionale vigilato in Stato UE o con standard equivalenti ex art. 24 AMLR; (b) beneficiari già identificati e verificati dal trustee; (c) beni in giurisdizioni non ad alto rischio; (d) nessun indicatore concreto ML/FT. Misure: descrizione della classe + nome/cognome se già designati; atto di trust certificato o equivalente dichiarazione del trustee; riesame biennale o a eventi significativi. **LIVELLO 2 — TRUST A RISCHIO MEDIO-STANDARD (CDD standard):** Condizioni: trust che non soddisfano tutti i criteri del Livello 1 ma senza indicatori elevati. Misure: identità dei beneficiari già determinati; sola

Name of the respondent	Question	Answer
		descrizione della classe per i non ancora determinati; atto di trust + dichiarazione disponente + almeno una fonte ulteriore; riesame annuale o a eventi significativi. **LIVELLO 3 — TRUST AD ALTO RISCHIO (EDD):** Condizioni: coinvolgimento di giurisdizioni ad alto rischio o non cooperative; opacità strutturale concreta; coinvolgimento di PEP; indicatori di sospetto. Misure: identità completa dei beneficiari determinati; massima informazione disponibile sugli objects of a power (nel rispetto dei limiti GDPR di cui alla D3); documentazione probatoria estesa ex art. 27 RTS; riesame continuo. PRECISAZIONE FONDAMENTALE: In tutti i casi il trustee deve essere in grado di produrre, su richiesta dell'autorità competente, le informazioni complete sui beneficiari con posizioni quesite ("vested") nel più breve tempo possibile ("timely access" ex R.25 FATF e art. 22(7) AMLR), senza che ciò implichi la raccolta e conservazione sistematica preventiva di tali informazioni.
UN.A.FI. – Unione Affidatari Fiduciari	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	**1. CGUE C-37/20: LA PROFILAZIONE DEI BENEFICIARI DI TRUST È QUALITATIVAMENTE PIÙ INVASIVA DI QUELLA DEI SOCI SOCIETARI** La Grande Sezione della Corte di Giustizia UE in C-37/20 e C-601/20 (22 novembre 2022) ha dichiarato invalida la disposizione della 5AMLD sull'accesso pubblico ai registri BO, statuendo che tale accesso viola gli artt. 7 e 8 della Carta in modo né strettamente necessario né proporzionato. L'applicazione di questi principi agli

Name of the respondent	Question	Answer
		obblighi CDD sui trust è un'applicazione a fortiori: l'interferenza con i diritti fondamentali dei beneficiari di trust è strutturalmente e qualitativamente più grave di quella rilevata per i soci societari. La sentenza C-37/20 ha censurato l'accesso al pubblico ai dati patrimoniali dei soci in quanto suscettibile di una indebita profilazione patrimoniale. Ma l'accesso ai dati dei beneficiari di un trust non si limita a rivelare informazioni patrimoniali: rivela la vita privata, familiare, sessuale e sanitaria delle persone coinvolte. Si consideri un caso paradigmatico: un disponente istituisce un trust che prevede il mantenimento del tenore di vita del proprio compagno di vita da sempre, da sempre tenuto segreto; l'assistenza medica e psicologica ai propri figli che abbiano superato i settant'anni e che il trustee ritenga ne abbiano bisogno; il sostentamento dei nipoti e pronipoti per gli studi post-universitari che il trustee ritenga meritevoli e bisognosi. I dati dei titolari effettivi di questo trust rivelano: — Vita sessuale: l'orientamento sessuale del disponente (convivente more uxorio dello stesso sesso mai dichiarato pubblicamente), categoria speciale ex art. 9 GDPR; — Rapporti di filiazione: l'esistenza di figli o discendenti legittimi, ma anche illegittimi o non riconosciuti, di relazioni extramatrimoniali, strutture familiari non conformi al nucleo dichiarato; — Stato di salute: le condizioni presenti o future dei beneficiari designati per le clausole di assistenza medica

Name of the respondent	Question	Answer
		e psicologica, dati sanitari ex art. 9 GDPR; — Reti familiari private: una rete di parentela allargata inclusi soggetti che non si conoscono tra loro e non sanno di essere collegati dal vincolo fiduciario. L'accesso ai dati dei titolari effettivi di un trust profila i rapporti tra tutti i titolari effettivi, compresi quelli sconosciuti agli stessi interessati, creando un effetto di sorveglianza retroattiva e prospettica su nuclei familiari privati. Diversamente dal socio societario — che ha liberamente scelto di partecipare alla vita economica pubblica — il beneficiario di un trust non ha scelto il proprio status, può non essere ancora nato alla costituzione del trust e non ha partecipato ad alcun rapporto commerciale o pubblico. Per i beneficiari di trust non è ravvisabile alcun consenso al trattamento dei dati, né diretto ed espresso né implicito. Gli obblighi CDD che incidono su tali dati devono pertanto superare un test di proporzionalità ancora più rigoroso rispetto a quello applicato ai soci societari. Gli artt. 14 e 15 dell'RTS non affrontano questa dimensione qualitativa e si limitano a criteri quantitativi di identificazione, risultando strutturalmente inadeguati. **2. CAUSE PENDENTI C-684/24 E C-685/24** Queste criticità sono al centro delle cause riunite pendenti avanti alla CGUE (udienza orale già tenuta), che investono: (i) eterogeneità e indeterminatezza delle categorie di beneficiari soggetti a CDD; (ii) assenza di meccanismi di tutela per le categorie vulnerabili; (iii)

Name of the respondent	Question	Answer
		compatibilità con gli artt. 7, 8 e 52(1) della Carta. L'esito potrebbe incidere sulla validità delle disposizioni del Regolamento (UE) 2024/1624 che fondano gli obblighi CDD sui beneficiari dei trust, e conseguentemente sulla base giuridica degli RTS in consultazione. Si raccomanda ad AMLA di formulare gli obblighi CDD per i beneficiari discrezionali e potenziali in modo compatibile con qualsiasi esito del giudizio, ovvero di inserire clausole di revisione automatica in caso di pronuncia che incida sulla base normativa degli stessi.
UN.A.FI. – Unione Affidatari Fiduciari	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	11
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	L'art. 11(3)(c) richiede l'identificazione della giurisdizione della legge regolatrice del trust. UNAFI ritiene che tale identificazione debba avvenire secondo i criteri della Convenzione dell'Aja del 1° luglio 1985 sulla legge applicabile ai trust e sul loro riconoscimento (Italia: l. 364/1989, in vigore dal 1° gennaio 1992), e in particolare degli artt. 6 e 7, che individuano come legge applicabile quella scelta espressamente dal costituente nell'atto istitutivo, ovvero, in assenza, quella con cui il trust presenta i collegamenti più stretti. Ai fini degli obblighi CDD e della valutazione del rischio occorre distinguere due concetti: (a) LEGGE REGOLATRICE (artt. 6–7 Convenzione): la

Name of the respondent	Question	Answer
		giurisdizione rilevante è quella indicata nell'atto istitutivo o determinata per collegamento più stretto — non necessariamente la residenza del trustee o il luogo di custodia degli asset. (b) GIURISDIZIONE DI AMMINISTRAZIONE: quella in cui il trustee risiede o in cui si svolgono concretamente le attività di gestione. Questa costituisce il parametro corretto per la valutazione del rischio AML/CFT: è in quella giurisdizione che operano i presidi AML/CFT applicabili al trustee come soggetto obbligato. Il livello di rischio deve essere calibrato in funzione: (i) della presenza nelle liste FATF delle giurisdizioni ad alto rischio o sotto monitoraggio rafforzato; (ii) dell'adeguatezza del framework AML/CFT; (iii) dell'efficacia della cooperazione internazionale (GAFILAT, MONEYVAL, EGMONT Group). Un trust amministrato da un trustee professionale vigilato in uno Stato UE — pienamente soggetto all'AMLR e alla supervisione AMLA — deve essere considerato a rischio strutturalmente inferiore rispetto a un trust amministrato in giurisdizioni non cooperative. PROPOSTA REDAZIONALE art. 11(3)(c): specificare che (a) la giurisdizione della legge regolatrice si identifica ex artt. 6–7 Convenzione dell'Aja; (b) ai fini della valutazione del rischio, il soggetto obbligato identifica altresì la giurisdizione di amministrazione del trust; (c) il rischio è presunto inferiore quando il trustee è vigilato in Stato UE o con standard equivalenti ex art. 24 AMLR,

Name of the respondent	Question	Answer
		ed è presunto elevato quando opera in giurisdizioni nelle liste FATF ex art. 23 AMLR.
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	12
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	L'art. 12 qualifica come struttura complessa quella con tre o più livelli tra il cliente e il titolare effettivo, più almeno una condizione aggiuntiva. Applicata ai trust, questa soglia è strutturalmente sproporzionata. La struttura trilaterale disponente–trustee–beneficiario costituisce già di per sé una catena a tre parti. Tuttavia questa struttura — in particolare quando il trustee è un professionista vigilato in uno Stato UE, il disponente è identificato e i beneficiari sono noti — non è complessa dal punto di vista del rischio AML/CFT. L'applicazione automatica dell'EDD per il solo fatto della struttura formalmente tri-livello viola il principio di proporzionalità (artt. 7, 8 e 52(1) Carta UE; CGUE C-37/20; approccio basato sul rischio FATF). PROPOSTA REDAZIONALE: sostituire o affiancare il criterio quantitativo con criteri qualitativi di rischio specifici per i trust: (a) presenza di elementi di opacità strutturale non giustificati economicamente; (b) coinvolgimento di giurisdizioni ad alto rischio o non cooperative; (c) impossibilità concreta e non causalmente giustificata di identificare i beneficiari effettivi. Un trust con trustee professionale vigilato UE, disponente identificato e beneficiari noti non deve

Name of the respondent	Question	Answer
		essere automaticamente soggetto alle misure EDD per strutture complesse, indipendentemente dal numero formale di livelli strutturali.
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	14
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	L'art. 14 non distingue tra le diverse categorie di beneficiari, producendo un effetto di livellamento che porta i soggetti obbligati ad applicare le misure più estese a tutte le categorie in via cautelativa. Ne risulta una raccolta sistematica di dati di soggetti che non hanno alcun rapporto attuale con il trust. L'art. 60 AMLR sottende categorie profondamente eterogenee che non sono equivalenti né giuridicamente né dal punto di vista del rischio AML/CFT: — Beneficiari con diritti certi quesiti ("vested"): hanno un rapporto giuridico costituito con il trustee; la raccolta dei loro dati è giustificata da un'obbligazione esistente e da un rischio AML/CFT concretamente valutabile. — Beneficiari con diritti condizionati: vantano un'aspettativa qualificata dipendente dall'avverarsi di una condizione; il rischio AML/CFT è parziale e prospettico; la raccolta dei dati deve essere proporzionata non alla probabilità astratta di avveramento, ma all'avveramento stesso. — Beneficiari potenziali e objects of a power: non hanno alcun rapporto giuridico costituito con il trust; il

Name of the respondent	Question	Answer
		rischio AML/CFT che rappresentano è meramente ipotetico; nella grande maggioranza dei casi non sanno nemmeno di essere indicati come potenziali destinatari di future distribuzioni. Non vi è alcuna base giuridica nel GDPR per raccogliere i loro dati identificativi in via anticipatoria. — Beneficiari di default: si trovano nella posizione più lontana da qualsiasi rapporto giuridico attuale; la loro designazione è residuale, eventuale e subordinata all'omissione di un atto del trustee. Raccogliere i loro dati senza che si sia verificata tale omissione è privo di qualsiasi giustificazione proporzionata ai sensi del GDPR. Si noti altresì che la poliedricità dei trust può manifestare posizioni che, pur beneficiarie, non rilevano in alcun modo ai fini AML/CFT (si pensi a un trust benefico di mensa per i poveri). PROPOSTA REDAZIONALE art. 14(1): aggiungere clausola esplicita: "L'identificazione individuale dei beneficiari è obbligatoria esclusivamente quando essi siano già determinati ed abbiano diritti quesiti (vested) o stiano per ricevere una distribuzione dal trust. Le informazioni raccolte sono trattate in conformità al GDPR e conservate per il periodo strettamente necessario ex art. 56 AMLR. La raccolta è limitata alle informazioni di cui all'art. 22(1) AMLR." L'RTS definitivo deve inoltre distinguere esplicitamente tra: (a) vested o condizionati: CDD standard o SDD proporzionata ed identificazione, per i secondi, solo all'avveramento della condizione; (b)

Name of the respondent	Question	Answer
		objects of a power: sole informazioni strutturali di categoria, nessun dato identificativo fino al doppio passaggio notifica+accettazione; (c) default takers: nessun obbligo fino all'avveramento della condizione.
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	15
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	L'art. 15, richiedendo la raccolta di informazioni sugli objects of a power e sui default takers, presenta ove interpretato estensivamente profili di incompatibilità radicale con il GDPR che il draft RTS non affronta. TRE PROFILI DI INCOMPATIBILITÀ: (i) ASSENZA DI BASE GIURIDICA (art. 6 GDPR): L'art. 6(1)(c) consente il trattamento necessario per adempiere un obbligo legale, ma perché questa base sia applicabile il trattamento deve essere effettivamente "necessario". Raccogliere dati di soggetti senza alcun rapporto giuridico con il trust non è necessario ai fini della prevenzione del riciclaggio nel momento della raccolta: il rischio AML/CFT è meramente ipotetico e futuro. Il GEPD ha espressamente avvertito contro trattamenti basati su rischi ipotetici non documentati (Opinion 12/2021). (ii) IMPOSSIBILITÀ DI INFORMATIVA (art. 14 GDPR): quando i dati non sono raccolti direttamente dall'interessato — come per gli objects of a power, i cui dati provengono dall'atto istitutivo o da dichiarazioni del

Name of the respondent	Question	Answer
		disponente, mai dall'interessato stesso — il titolare è obbligato a fornire l'informativa entro un mese dalla raccolta ex art. 14(3)(a) GDPR. Questo obbligo è strutturalmente impossibile da adempiere senza rivelare al potenziale beneficiario l'esistenza del trust — il che può violare la volontà di riservatezza del disponente, ledere i diritti degli altri beneficiari già determinati, ed è materialmente impossibile per classi indeterminate. In ogni caso si crea un paradosso: per rispettare il GDPR bisognerebbe rivelare l'esistenza del trust, ma questa rivelazione anticipa necessariamente la comunicazione formale che il soggetto può ricevere solo all'esercizio del potere discrezionale. (iii) VIOLAZIONE DI CORRETTEZZA E TRASPARENZA (art. 5(1)(a) GDPR): trattare i dati di chi non sa di essere interessato dal trattamento è per definizione non trasparente. Un object of a power che ignora la propria designazione non può ragionevolmente attendersi che i propri dati siano trattati da un trustee che non conosce. PROPOSTE REDAZIONALI: (1) L'art. 15 deve riconoscere esplicitamente che gli objects of a power non hanno consapevolezza della propria designazione e non hanno prestato né possono prestare alcun assenso al trattamento dei loro dati. (2) Qualsiasi trattamento di dati identificativi personali è escluso fino al completamento del doppio passaggio: (a) notifica formale con contestuale informativa ex art. 14 GDPR; (b) dichiarazione di accettazione dell'interessato. La base giuridica ex art. 6(1)(c) GDPR diventa applicabile

Name of the respondent	Question	Answer
		solo dopo entrambe le fasi, non anticipatoriamente. (3) Il soggetto obbligato, prima della raccolta dei dati identificativi, si assicura che il trustee abbia adempiuto all'obbligo di informativa verso il beneficiario ex art. 14 GDPR. (4) L'obbligo di monitoraggio ex art. 15(2) può essere assolto mediante dichiarazione periodica del trustee, da acquisire almeno ogni due anni o a ogni operazione rilevante, attestante se il potere discrezionale sia stato esercitato e con quali effetti sulla composizione della classe dei beneficiari.
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	17
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	L'art. 17 consente a un OIC di affidarsi all'intermediario per la CDD sugli investitori finali a condizione che siano soddisfatte specifiche garanzie (supervisione AML/CFT equivalente, rischio basso o standard, CDD robusta applicata). Non esiste un meccanismo analogo per i trust con trustee professionali vigilati. Il trustee professionale, in quanto soggetto obbligato ex art. 3(3)(l) AMLR, applica già la CDD completa su disponenti, beneficiari e tutte le parti del trust. Quando un istituto finanziario intrattiene rapporti con un conto intestato al trust, applicare nuovamente CDD completa sugli stessi soggetti già verificati dal trustee comporta: (a) raccolta reiterata e non necessaria di dati personali, in violazione del principio di minimizzazione dei dati (art. 5(1)(c) GDPR); (b) aggravio dei costi operativi per il trustee e i beneficiari, che devono fornire più volte le

Name of the respondent	Question	Answer
		stesse informazioni a soggetti diversi senza alcun beneficio aggiuntivo in termini di prevenzione ML/FT; (c) duplicazione non giustificata degli obblighi, in contrasto con la Guidance FATF per i TCSP (2019), che prevede espressamente meccanismi di reliance quando il trustee è a sua volta soggetto obbligato vigilato. PROPOSTA REDAZIONALE: inserire una disposizione che estenda il meccanismo di reliance dell'art. 17 ai rapporti tra istituti finanziari e trust amministrati da trustee professionali vigilati, alle condizioni seguenti: (a) il trustee è soggetto obbligato ex art. 3(3)(l) AMLR, vigilato da autorità competente in UE o Stato con standard equivalenti; (b) il rischio del rapporto è classificato come basso o standard; (c) il trustee si impegna a fornire le informazioni CDD sui beneficiari su richiesta senza ritardo. Questo meccanismo evita la duplicazione della raccolta dei dati personali ed è coerente con il principio di minimizzazione del GDPR.
UN.A.FI. – Unione Affidatari Fiduciari	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	20
UN.A.FI. – Unione Affidatari Fiduciari	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Gli artt. 20–24 disciplinano le misure di CDD semplificate per i contesti a basso rischio, ma non contengono alcuna previsione specifica per i trust e gli assetti fiduciari. Nella pratica, le banche e gli altri soggetti obbligati applicano sistematicamente a tutti i trust le misure di CDD standard o addirittura rafforzata, indipendentemente dal profilo di rischio effettivo. Questo fenomeno — il derisking — viola il principio di

Name of the respondent	Question	Answer
		proporzionalità, ostacola l'accesso ai servizi finanziari da parte di trust e beneficiari legittimi (inclusi soggetti vulnerabili: minori, incapaci, anziani) e distorce l'approccio basato sul rischio, come rilevato dal GEPD (Opinion 5/2020): "less risky situations justify less intrusive procedures." La Guidance FATF per i TCSP (2019) prevede espressamente misure CDD differenziate (SDD/standard/EDD) per i trustee professionali in quanto soggetti obbligati. Il draft RTS non recepisce questo principio. PROPOSTA REDAZIONALE: inserire criteri espliciti per l'applicazione delle SDD nei rapporti con trust a basso rischio. Criteri proposti (tutti devono essere soddisfatti): (a) trustee professionale vigilato da autorità competente in Stato UE o con standard AML/CFT equivalenti ex art. 24 AMLR; (b) beneficiari già identificati e verificati dal trustee; (c) beni del trust localizzati in giurisdizioni non ad alto rischio; (d) nessun indicatore concreto di rischio ML/FT. In presenza di tutti questi elementi, i soggetti obbligati possono applicare misure SDD analoghe a quelle previste per gli OIC dall'art. 17 dell'RTS: descrizione della classe dei beneficiari + nome/cognome se già designati; atto di trust certificato o equivalente dichiarazione del trustee; riesame biennale o a eventi significativi. In tutti i casi il trustee deve essere in grado di produrre,

Name of the respondent	Question	Answer
		su richiesta dell'autorità competente, le informazioni complete sui beneficiari nel più breve tempo possibile ("timely access" ex R.25 FATF e art. 22(7) AMLR), senza che ciò implichi la raccolta e conservazione sistematica preventiva di tali informazioni.

Vastgoed Nederland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Vastgoed Nederland does not fully agree that the proposals set out in the draft RTS can be effectively applied across the full range of products and services provided by real estate agents. The draft RTS appear to be largely designed from the perspective of financial institutions and do not sufficiently reflect the operational realities of the real estate sector. Real estate agents act primarily as intermediaries in transaction-based activities and do not hold client funds, maintain payment accounts, or generally engage in long-term financial relationships with customers. Applying the same standards across fundamentally different sectors risks creating disproportionate obligations and unnecessary administrative burdens. In particular, the proposals do not provide sufficient flexibility regarding: ongoing monitoring obligations; source of funds and source of wealth verification;

Name of the respondent	Question	Answer
		beneficial ownership investigations; and expectations regarding the availability of customer information. Real estate agents often have limited access to financial information and rely heavily on information provided voluntarily by clients, public registers, banks, and notaries. The RTS should better reflect this limited role. The RTS should therefore explicitly distinguish between: relationship-based sectors, such as banking; and transaction-based sectors, such as real estate. For the real estate sector, the RTS should clarify that: customer due diligence obligations should primarily focus on the individual transaction; ongoing monitoring requirements should only apply where there is an actual continuing business relationship; reliance on banks and notaries should be expressly permitted; and obligations should be limited to information reasonably accessible to the obliged entity. Vastgoed Nederland proposes adding wording clarifying that obliged entities in transaction-based sectors should apply measures “commensurate with the nature and duration of the business relationship and the level of control exercised over the transaction and financial

Name of the respondent	Question	Answer
		flows.” Such clarification would improve proportionality and operational feasibility without undermining AML/CFT objectives.
Vastgoed Nederland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Vastgoed Nederland does not fully agree that the draft RTS allow for the effective application of a genuinely risk-based approach. Although the RTS repeatedly refer to proportionality and risk sensitivity, many provisions are drafted in a highly prescriptive manner and may in practice be interpreted as mandatory minimum requirements regardless of actual risk exposure. This is particularly problematic for the real estate sector, where: transactions are often one-off in nature; agents have limited access to financial information; agents do not control payment flows; and banks and notaries already perform substantial AML/CFT controls. The provisions concerning: source of wealth; source of funds; beneficial ownership; ongoing monitoring; and enhanced due diligence

Name of the respondent	Question	Answer
		risk creating a checklist-driven compliance framework rather than a genuinely risk-based system. Vastgoed Nederland believes the RTS should more clearly state that: the extent of due diligence measures must depend on the specific ML/TF risk identified; listed measures are indicative and not automatically required in all cases; and obliged entities may adapt or limit measures where justified by documented risk assessments. In addition, the RTS should explicitly recognise reliance on AML/CFT checks already performed by regulated third parties, particularly banks and civil-law notaries involved in real estate transactions. For low-risk residential transactions involving natural persons within the EU and regulated financial institutions, simplified approaches should be explicitly encouraged unless concrete risk indicators are present. Without stronger safeguards for proportionality, the RTS risk imposing excessive compliance burdens on SMEs in the real estate sector without materially improving AML/CFT effectiveness.
Vastgoed Nederland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Yes. Considering the nature, size, and operational structure of the real estate sector, there are multiple situations in which the information required under the draft RTS is routinely unavailable to real estate agents.

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Examples include: source of wealth documentation for private individuals; complex beneficial ownership structures involving foreign entities; information relating to trusts or layered corporate arrangements; detailed explanations regarding origin of assets; and broader financial transaction histories. Real estate agents generally do not have access to banking information, tax records, or financial databases and are dependent on information voluntarily provided by clients or publicly available registers. In many cases, clients are unwilling to provide highly sensitive financial documentation to real estate intermediaries. Agents also lack legal authority to compel disclosure. This is particularly problematic in cross-border transactions involving foreign entities or clients from jurisdictions with limited transparency. The RTS currently do not provide sufficient alternative solutions where such information cannot reasonably be obtained. Vastgoed Nederland therefore proposes:

Name of the respondent	Question	Answer
		introducing a clear “best efforts” standard; explicitly allowing reliance on official registers, customer declarations, banks, and notaries; limiting obligations to information reasonably accessible to the obliged entity; and clarifying that inability to obtain certain information despite reasonable efforts should not automatically prevent completion of the transaction. For the real estate sector, it is essential that the RTS recognise the practical limitations faced by intermediaries that do not control financial flows or possess investigative powers.
Vastgoed Nederland	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Vastgoed Nederland believes that additional simplified due diligence (SDD) measures should be included in the draft RTS for the real estate sector. Many real estate transactions present relatively low ML/TF risk, particularly where: the transaction involves natural persons; the transaction takes place within a single EU Member State; payment flows are handled through regulated EU financial institutions; civil-law notaries are involved; and the transaction concerns standard residential property. For such situations, the RTS should explicitly permit: reduced source of wealth requirements;

Name of the respondent	Question	Answer
		reliance on identification already performed by banks or notaries; simplified beneficial ownership verification; and reduced ongoing monitoring obligations. Vastgoed Nederland proposes adding a provision stating that simplified due diligence should generally be considered appropriate for standard residential real estate transactions involving regulated financial institutions and no identified high-risk factors. In addition, the RTS should clarify that the presence of multiple regulated parties within the transaction chain should be considered a mitigating factor when determining the appropriate level of due diligence. A broader and clearer SDD framework would significantly improve proportionality and reduce unnecessary compliance costs while maintaining effective AML/CFT safeguards.
Vastgoed Nederland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Vastgoed Nederland would like to raise several additional observations regarding the draft RTS. First, the RTS should more clearly recognise the limited role of real estate agents within the AML/CFT framework. Real estate professionals act as intermediaries and should not be treated as equivalent to financial institutions with direct control over customer assets and payment flows. Second, the RTS should avoid creating overlapping or

Name of the respondent	Question	Answer
		duplicative obligations where other regulated parties — particularly banks and notaries — already conduct substantial AML/CFT checks. Greater recognition of reliance mechanisms is essential to avoid unnecessary administrative burdens and legal uncertainty. Third, additional clarification is needed regarding: the distinction between one-off transactions and ongoing business relationships; expectations regarding ongoing monitoring in transaction-based sectors; and the practical limits of customer information gathering. Fourth, the RTS should provide stronger safeguards against disproportionate supervisory interpretations. Without clearer wording, there is a significant risk that flexible provisions will in practice be treated as mandatory checklists. Finally, the RTS should better reflect the structure of the European real estate sector, which consists predominantly of SMEs with limited compliance capacity. Excessively burdensome requirements risk increasing costs, delaying transactions, and reducing market accessibility without delivering corresponding AML/CFT benefits. Vastgoed Nederland therefore urges AMLA to revise the RTS to ensure that they remain proportionate,

Name of the respondent	Question	Answer

Name of the respondent	Question	Answer
VBNL | Dutch Association of Crypto-Asset Service Provider	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	VBNL acknowledges that the draft RTS provides a broadly applicable, risk-based framework and supports the horizontal approach chosen by AMLA. The following concerns are raised. Source of wealth: crypto-native wealth profiles (Art. 27) The prescribed list of EDD source-of-wealth documentation reflects traditional financial activity and does not account for customers whose wealth derives from crypto-asseet activities such as mining, protocol participation, or appreciation of early holdings. Article 27(h) may in principle accommodate on-chain evidence, but the absence of explicit recognition creates legal uncertainty for CASPs and risks divergent supervisory expectations across Member States. Proposed addition to Art. 27: "(i) in relation to crypto-asset activities: blockchain transaction records, on-chain wallet history, or written confirmations from a crypto-asset service provider subject to AMLR or with equivalent rules in third-countries, providing a high degree of reassurance that the assets are of lawful origin." Identity verification (Art. 7) The RTS prioritises physical documents and eIDAS-compliant digital IDs. CASPs may serve customers from jurisdictions where eIDAS is unavailable, and increasingly encounter customers using decentralised identifiers (DIDs). The RTS lacks an equivalence framework for cryptographic proofs as a primary

Name of the respondent	Question	Answer
		verification source. Proposed addition to Art. 7: "Electronic identification means based on cryptographic proofs, including decentralised identifiers and verifiable credentials, shall be considered equivalent to eIDAS-compliant means where the obliged entity can demonstrate that the assurance level achieved is equivalent to 'substantial' or 'high' under Regulation (EU) No 910/2014." Art. 7(2) permits use of remote solutions as a fallback where eIDAS substantial/high assurance means "is not available, or cannot reasonably be expected to be provided." This threshold is central to the practical operation of the article, yet the draft RTS does not define or illustrate what either condition means in practice. Without further clarification, obliged entities cannot determine with confidence when they are permitted to use the fallback, and supervisors may apply divergent standards across Member States. VBNL invites AMLA to clarify the scope of Art. 7(2) by providing criteria or non-exhaustive examples of circumstances satisfying each condition. Entry into force (Art. 33) Art. 33 provides that the Regulation enters into force on the twentieth day following publication in the Official Journal and applies from a date yet to be determined. VBNL notes that this leaves the application date disconnected from the broader AMLR timeline, creating

Name of the respondent	Question	Answer
		uncertainty for obliged entities that are simultaneously preparing for AMLR application. VBNL invites AMLA to align the application date of the RTS with the application date of Regulation (EU) 2024/1624, so that obliged entities are subject to a coherent and simultaneous set of obligations from the outset, avoiding a transitional gap in which the RTS either precedes or lags the Level 1 requirements it implements. Proposed amendment to Art. 33: "It shall apply from the date of application of Regulation (EU) 2024/1624, or on the twentieth day following its publication in the Official Journal, whichever is later."
VBNL | Dutch Association of Crypto-Asset Service Provider	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	VBNL supports the risk-based approach underlying the draft RTS and acknowledges its broad applicability. The following refinements are requested. CDD in multi-product environments The draft RTS applies CDD at the level of the overall business relationship, which provides a consistent and workable baseline. However, this approach may not fully reflect the operational reality of CASPs that offer multiple distinct services — such as custody, fiat on/off-ramps, spot trading, staking, derivatives, and API access — within a single customer relationship. Each of these services can present a materially different ML/TF risk profile, and the ability to apply CDD measures in a more granular, risk-sensitive way within a single relationship

Name of the respondent	Question	Answer
		would enhance practical implementation and better align with the overarching risk-based approach of the AMLR. VBNL acknowledges that the AMLR requires ongoing monitoring to cover all products and services offered within a business relationship, and does not suggest that any service should fall outside the scope of CDD. Rather, VBNL encourages AMLA to consider providing explicit clarification that obliged entities may calibrate the intensity of CDD measures to the specific risk profile of individual products or services within a relationship, provided the overall CDD framework remains comprehensive and covers the relationship in its entirety. Such clarification would reduce supervisory uncertainty and support consistent, proportionate implementation across the sector. Proposed addition to Art. 1: "Where an obliged entity provides multiple products or services within a single business relationship, it may apply CDD measures in a differentiated manner, calibrated to the specific ML/TF risk profile of each product or service, provided that the overall CDD framework covers the entirety of the relationship and that no product or servie falls outside of scope of the obliged entity's monitoring obligations." Dynamic transaction profiles (Art. 18(b)) The emphasis on estimated amount of envisaged activities is difficult to apply where customer activity is inherently variable and market-driven, as is typical for

Name of the respondent	Question	Answer
		retail-focussed crypto-asset service providers. Proposed addition to Art. 18(b): "In environments characterised by high-frequency and/or variable activities, obliged entities may establish expected activity ranges rather than fixed anticipated numbers, size, volume and frequency, and shall update these on a risk-sensitive basis using transaction monitoring outputs." Source of crypto funds and wealth (Art. 27) As set out under Question 1, the list does not adequately cover crypto-native wealth. VBNL refers to the proposed amendment to Art. 27 above, which applies equally here.
VBNL | Dutch Association of Crypto-Asset Service Provider	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The draft RTS partially supports a risk-based approach, but the following provisions impose uniform obligations irrespective of risk profile. Place of birth (Art. 4) Art. 4 requires collection of at least the country of birth, plus any additional place-of-birth detail present in the identity document. In practice, different document types and national differences contain varying levels of detail, leading to inconsistencies between institutions. Under the Transfer of Funds Regulation, such inconsistencies already generate cumbersome false positives in transaction monitoring and may cause transactions to be incorrectly delayed. The incremental risk-mitigation value of sub-country place-of-birth data beyond the country level is limited where the country is already known.

Name of the respondent	Question	Answer
		Proposed amendment to Art. 4: "The information on place of birth shall consist of the country name. Obliged entities shall not be required to collect granular place-of-birth data beyond the country level where such data does not materially contribute to the risk assessment of the customer." Nationalities (Art. 5) The requirement to identify all nationalities is practically unverifiable. An identity document verify the issuing state's nationality but cannot confirm or deny additional ones, making this obligation dependent on customer self-declaration without meaningful assurance value. Proposed amendment to Art. 5: "Obliged entities may rely on customer self-declaration for the purposes of collecting nationality information. Verification of one nationality shall be sufficient to satisfy the requirements of Article 22(1)(a)(iii) of Regulation (EU) 2024/1624." Virtual IBAN account dates (Art. 9(c)) Art. 9(c) requires the dates on which the associated account was opened and closed. The RTS does not clarify whether these must be obtained from the issuing institution. For CASPs, obtaining account-level dates from third-party banks is operationally unrealistic and does not materially reduce identification or verification risk. VBNL strongly disagrees with this requirement in its

Name of the respondent	Question	Answer
		entirety. The opening and closing dates of an associated bank or payment account do not mitigate any identifiable ML/TF risk in the context of virtual IBAN verification - they are administrative data points that say nothing about the legitimacy of the account holder, the origin of funds, or the risk profile of the customer. The requirement therefore fails the basic proportionality test: it imposes a real operational burden - particularly for CASPs who cannot readily obtain this information from third-party issuing institutions - without delivering any meaningful AML/CFT benefit in return. VBNL urges AMLA to reconsider whether this requirement should be retained at all. Should AMLA nonetheless consider it necessary to retain the requirement, VBNL proposes the following amendment to ensure it is at minimum operationally workable: Proposed amendment to Art. 9(c): "The dates on which the associated bank or payment account was opened and, where applicable, closed. This information may be obtained from the customer or derived from available transaction metadata."
VBNL | Dutch Association of Crypto-Asset Service Provider	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example	The following situations present structural unavailability of required information with no workable alternative offered in the draft RTS. Place of birth (Art. 4)

Name of the respondent	Question	Answer
	because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	As noted under Question 3, the requirement to collect all place-of-birth details present in an identity document results in data that is structurally inconsistent across document types and jurisdictions. No alternative is offered for situations where documents contain either no sub-country data or incompatible formats. VBNL refers to the proposed amendment to Art. 4 under Question 3. All nationalities (Art. 5) The requirement to collect all nationalities a customer holds cannot be independently verified using standard identity documents. No alternative is offered for cases where a second or further nationality exists but is not evidenced in any document the customer can provide. VBNL refers to the proposed amendment to Art. 5 under Question 3. Access to local registers when passporting (Art. 10) Article 10 requires obliged entities to consult public registers as part of the verification of legal entity customers and their ownership structures. This requirement assumes that obliged entities have meaningful access to the relevant registers in the Member State where the customer is incorporated or registered. In practice, this assumption does not hold for CASPs operating cross-border through passporting of their MiCAR authorisation. A CASP authorised in one Member State and passporting its services into other Member

Name of the respondent	Question	Answer
		States will frequently need to verify legal entity customers incorporated in those host Member States. Access to local registers in host Member States is inconsistent across the EU: many national registers require local language navigation, impose access fees, require local entity registration to obtain full access, or provide only partial information in formats accessible to foreign obliged entities. Some registers are effectively inaccessible to entities without a local establishment. This creates a structural unavailability problem that is directly linked to the passporting model that MiCAR explicitly enables and encourages. A CASP cannot be simultaneously required to operate cross-border without local establishment under MiCAR and to access local registers that are in practice only accessible to locally established entities. The RTS offers no alternative pathway for this scenario. VBNL urges AMLA to engage with the operators of national registers across Member States to ensure that cross-border access is available on equivalent terms to all MiCAR-authorised CASPs regardless of their Member State of establishment, and to consider whether a centralised EU-level register access point would structurally resolve this issue for the single market as a whole.
VBNL | Dutch Association of Crypto-Asset Service Provider	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Single-source verification for beneficial owners in low-risk situations (Art. 21) Art. 21 requires identification from one source and

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	verification from a separate second source. In low-risk situations where identification was performed using an inherently reliable source such as a central or business register, the mandatory two-source requirement introduces disproportionate process steps without meaningful additional risk mitigation. Proposed amendment to Art. 21(2): "By way of derogation, in situations of low risk where identification was performed using a central register or business register referred to in paragraph 1(a), the obliged entity may satisfy the verification requirement using information already obtained from that same register, provided it is satisfied that the register is up to date and the information is sufficient to confirm the identity of the beneficial owner or senior managing official."

Verband Internationaler Banken in Deutschland e. V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	The Association of International Banks in Germany (VIB) represents the interest of different categories of obliged entities acc. to AMLR within the financial sector: • credit institutions: CRR credit institutions with parent

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	undertaking outside of Germany, as well as branches established in Germany by EEA CRR credit institutions and (bank) branches established in Germany by third country banks; • investment firms: IFR investment firms with parent undertaking outside of Germany, as well as branches established in Germany by EEA IFR investment firms; • and other financial services institutions and respective branches thereof. In general, while you correctly emphasize that provisions explicitly confined to a particular sector or service should not be considered if they do not pertain to your sector, it will be exceedingly difficult to apply the RTS both accurately and practicably where numerous rules require assessing a single, sector-specific scope of application (e.g., for credit institutions, for insurers). While we acknowledge the principle that provisions explicitly scoped to specific sectors or services should not apply where they do not impact a particular entity's operations, we cannot fully agree that the current draft RTS achieves a level of universal applicability without significant operational friction. Our concern lies in the structural complexity of the draft. While the intention to create a harmonized set of standards is commendable, the current drafting – as set out before – relies heavily on a fragmented approach where numerous provisions require a case-by-case determination of their singular applicability based on the specific license type. Bearing

Name of the respondent	Question	Answer
		in mind that a principal objective of the renewed consultation phase on the RTS for CDD was to ensure that the perspective of the non financial sector is duly taken into account, it cannot be ruled out that further individual provisions may be introduced to cover certain groups of obliged entities of the non-financial sector. However, if every specific exception and particularity of the non financial sector is incorporated into the general framework, the result will become opaque and unmanageable. Considering all this, it might be the only workable solution to introduce dedicated special parts tailored to defined groups of obliged entities or to particular categories of businesses/transactions.
Verband Internationaler Banken in Deutschland e. V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The RTS seeks to provide sufficient operational flexibility to allow for a truly risk-based interpretation of the requirements, taking into account the wide variety of business models covered by the obligations and the corresponding risks they face. Even within banking, numerous distinct business models exist—each operating as a regulated credit institution—so uniform treatment is often inappropriate. Where obliged entities are required to take “risk-sensitive measures” under the proposed rules, many provisions nonetheless couple that obligation with prescriptive checklists or mandatory minimum information sets. Combining a purportedly risk sensitive duty with fixed, rule based information requirements

Name of the respondent	Question	Answer
		tends to narrow operational discretion and steers firms toward a tick box compliance mentality. The result is an approach that reads as one size fits all and formulaic rather than enabling proportionate, evidence based responses tailored to each institution's actual risk landscape.
Verband Internationaler Banken in Deutschland e. V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, based on the obliged entities' business models, size or operational practice, there are situations where the information required by the draft RTS for customer due diligence is routinely unavailable and no practical alternative is provided. Below we give concrete examples and propose feasible, risk sensitive solutions. 1) Place of birth missing from EU driving licences • Issue: An EU Member State driving licence is recognised as an equivalent identity document under Article 22(6) AMLR and Article 6 RTS, but it typically does not record the holder's country or place of birth, as required by Article 4 RTS. • Practical consequence: Firms cannot obtain authoritative documentary evidence of place/country of birth from these licences and must therefore ask the individual directly. That creates reliance on self declared data and introduces verification gaps where documentary corroboration is not available. Proposed solution: • Allow other documents to declare place/country of birth to be accepted where the presented identity document legitimately lacks that field, provided the obliged entity documents the source of the document

Name of the respondent	Question	Answer
		and records this in line with its risk assessment. • Permit besides the use of alternative corroborating evidence where available (e.g., passport, national ID card, birth certificate, or certified public records) as a higher confidence option also self declaration of place/country of birth for low risk cases. 2) Nationality not recorded or verifiable from certain ID documents • Issue: Some accepted identity documents do not state nationality, yet Article 4 RTS requires nationality. This again forces firms to rely on the individual's self statement without a documentary cross check. • Practical consequence: Routine reliance on customer-supplied nationality increases administrative friction and may produce inconsistent verification standards across obliged entities. Proposed solution: • Allow nationality to be self declared when not present on the primary identity document, subject to a risk based approach: accept the self declaration for low risk cases and require documentary corroboration only where the entity's risk assessment indicates higher risk. • Where feasible, permit electronic checks against reliable public registries or sanctioned list screening services as an alternative verification method. 3) "Once identified, always identified" — need for clarity on re identification • Issue: After a (natural or legal) person has been identified, their core identity does not change (only

Name of the respondent	Question	Answer
		document validity, document number, or name may change). The draft framework could be read as implying periodic re identification or routine reassessment under Article 26(2) AMLR, even where no change in risk or circumstances exists. That would impose unnecessary administrative burden without commensurate benefit. • Practical consequence: Obliged entities may be required to repeat full identification processes periodically, causing customer friction, operational strain and inconsistent application across firms. Proposed solution: • Explicitly state that, for the purposes of ongoing CDD, once a natural person's identity has been satisfactorily established, that identity remains valid unless there are specific, risk based indicators of change (e.g., suspicion of fraud, change in ownership/control, material changes in customer profile, or document expiry where re presentation is needed). • Clarify that routine periodic re identification is not required as a matter of course; instead, require periodic review of the customer's risk profile and targeted verification measures where the review indicates elevated or changed risk.
Verband Internationaler Banken in Deutschland e. V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	In line with Article 28(1) of Regulation (EU) 2024/1624 and taking into account the products and services offered by obliged entities, simplified due diligence (SDD) measures should be genuinely proportionate, operationally practicable and underpinned by clear, risk based criteria. The draft RTS should therefore include targeted SDD options for clearly defined low risk products and customer types, together with

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	streamlined documentation requirements and explicit safeguards to prevent misuse. The current approach has several shortcomings that necessitate a reevaluation of the underlying rationale: • Disproportionate documentation burden: The current expectation to document the rationale for every SDD decision has become operationally excessive. Individual case by case paperwork is time consuming and diverts resources from higher risk activity. • Operational Challenge: Given that documenting SDD can be more resource-intensive than standard CDD, firms often find it practical to default to standard measures, which may unintentionally impact the principles of proportionality and efficiency. • Limited practical benefit vs. classification risk: The incremental AML/CTF benefit of SDD in many well scoped low risk scenarios is small compared with the risk and cost of misclassification; this deters firms from applying legitimate SDD where it would be appropriate. To restore proportionality and incentivise genuine risk based treatment, the RTS should adopt clear, objective SDD categories, allow recordkeeping at portfolio level where justified, and set out minimum safeguards: 1. Low value, low frequency retail payment products • Drafting proposal (example wording): o "For low value retail payment products, where the cumulative incoming value does not exceed a certain threshold dependent of the respective business over a rolling 12 month period and single transaction value does not exceed another certain threshold dependent

Name of the respondent	Question	Answer
		of the respective business, obliged entities may apply simplified customer due diligence measures limited to verification of name and one additional identifier. Where these thresholds are used, obliged entities may apply portfolio level documentation of the risk rationale and controls, rather than case by case narrative justification." Rationale: Low monetary value and predictable, low turnover profiles materially reduce ML/TF exposure; portfolio documentation preserves auditability while reducing per customer burden. 2. Public authorities, listed corporates and regulated financial counterparties • Drafting proposal: o "Where the counterparty is (a) a public authority within EU/EEA, (b) an entity listed on a regulated market in the EU or EEA, or (c) a supervised financial institution established in the EU or EEA and subject to the EU legislation entailing the AML/CFT safeguards, obliged entities may apply simplified due diligence limited to verification of legal status and confirmation of supervisory oversight; verification of beneficial ownership may be carried out proportionately in line with the public-disclosure regime applicable to that entity in the EU or EEA. • Rationale: High transparency and regulatory oversight lower the need for full scale CDD; a proportionate approach reduces duplication. 3. Low risk cross border remittances with trusted partners • Drafting proposal:

Name of the respondent	Question	Answer
		o "For correspondent or remittance flows routed through duly licensed and supervised counterparties with demonstrable controls, obliged entities may rely on the counterparty's CDD and apply SDD for the retail originator where transaction values are below specified thresholds and channels are proven to be low risk." • Rationale: Reliance on trusted counterparties and low transaction values reduce ML/TF exposure. • Further hint: In the context of correspondent banking relationships, the responsibility for conducting Customer Due Diligence (CDD) measures shall lie exclusively with the institution that maintains the account, commonly referred to as the account-holding bank. It is imperative to clarify that the correspondent bank account holder itself is not required to, nor should it, perform the primary CDD procedures for the underlying account. This regulatory approach ensures that the entity with the direct contractual relationship and operational control over the account assumes full accountability for verifying the identity of its customers and assessing associated risks. • Further hint: In addition, we recommend inserting a dedicated section on correspondent banking business and explicit recognition of established market standards, such as the Wolfsberg Questionnaire, that would support harmonization and consistency. In this regard, it might be useful to adapt to the special guideline to correspondent banking of the EBA Guidelines on Risk Factors.

Name of the respondent	Question	Answer
Verband Internationaler Banken in Deutschland e. V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Numerous provisions of the draft Regulatory Technical Standards (RTS) use the term “the customer” as the primary point of reference, which, unless otherwise specified, appears to encompass both natural and legal persons. In this context, we invite AMLA to verify, across all Articles, whether this understanding is intended and consistently reflected throughout the text. Furthermore, the provisions concerning the identification of persons purporting to act on behalf of the customer are clarified in Article 16, which specifies that obliged entities are required to collect such information “in addition to the information to be collected pursuant to the relevant provisions of Section 2.” However, certain distinctions remain within Section 2 itself, notably in Articles 5 and 6, where persons purporting to act on behalf of the customer are already explicitly referred to. Against this background, AMLA may wish to assess whether it would be more appropriate to introduce, at the beginning of Section 2, a general clarification concerning the identification requirements applicable to persons acting on behalf of the customer. Furthermore, we propose that the RTS provide a more granular definition of the expression "person purporting to act on behalf of the customer," complementing the existing definition derived from the Anti-Money Laundering Directive (AMLD). Currently, this terminology has been subject to divergent interpretations across Member States, leading to regulatory fragmentation. To address this, the scope of this term should be strictly limited to external third

Name of the respondent	Question	Answer
		parties acting under a formal mandate, such as via a power of attorney. Greater precision in this regard is essential to enhance legal certainty and to ensure a consistent interpretation and application of the framework across all stakeholders, including competent authorities, auditors, and obliged entities. Specifically within the institutional sector, extending identification and verification obligations to employees of the customer who merely support the onboarding process or sign contractual documents on behalf of the legal entity is neither proportionate nor risk-effective. As a legal entity can only act through natural persons, requiring the full identification and verification of internal signatories or authorized staff does not mitigate additional Anti-Money Laundering/Counter-Terrorist Financing (AML/CTF) risks. Instead, such an approach would generate an unnecessary administrative burden for both the customers and the financial institutions. Conversely, the identification and verification of external third parties—such as external law firms or proxies acting on behalf of the customer and representing them vis-à-vis the financial institution—constitutes a meaningful risk mitigant. Limiting the rigorous application of these measures to such external actors would ensure full alignment with the fundamental risk-based approach enshrined in EU law.
Verband Internationaler Banken in Deutschland e. V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 2, paragraph 2 The current draft stipulates that for legal entities, both the registered name and one single trade or commercial name must be recorded. However, in practical operation, it is frequently the case that a legal entity utilizes multiple trade names, variations, or aliases for commercial purposes. This reality mirrors the complexities encountered in the context of the SEPA "name check" mechanism regarding the verification of payees, where the existence of multiple valid trading names can create discrepancies in automated validation processes. To ensure the proportionality and operational feasibility of the proposed measures, it is necessary to clarify that the mandatory recording obligation applies strictly to one primary trade or commercial name. The registration of any additional trade names, variations, or aliases utilized by the legal entity should be considered voluntary. This distinction prevents the imposition of an undue administrative burden on obliged entities while maintaining the integrity of the customer identification process. It allows financial institutions to capture the essential identifier required for verification without mandating the exhaustive cataloging of every commercial variation, thereby aligning with the risk-based approach and ensuring consistency with existing payment verification frameworks.

Name of the respondent	Question	Answer
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6 Article 6, Paragraph 5 of the draft Regulatory Technical Standards (RTS) explicitly references the possibility of accepting a certified copy of an identification document provided by "that person," which we understand to refer to the individual whose identity is subject to verification. From a substantive perspective, this provision is sound and aligns with the principle of direct customer interaction. However, a critical interpretative question arises regarding the permissibility of alternative channels for obtaining such certified copies. Specifically, it remains unclear whether the framework allows for the reliance on a certified copy retrieved or issued by another obliged entity that has already executed its own Customer Due Diligence (CDD) measures in full compliance with the Anti-Money Laundering Regulation (AMLR). Confirming the admissibility of this approach would significantly enhance operational efficiency, facilitate cross-border cooperation, and fully leverage the principle of reliance without compromising the integrity of the verification process.
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7

Name of the respondent	Question	Answer
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 7 The draft RTS appropriately prioritises eIDAS-compliant solutions, in particular the European Digital Identity Wallet (EUDI Wallet), as these provide a harmonised and high-assurance standard across the Union. At the same time, Article 7(2) recognises that not all customers are able to access such solutions, notably non-EU residents, expatriates or vulnerable persons. The possibility to rely on alternative remote identification and verification methods under strict conditions is therefore welcome, as it ensures that legitimate customers are not excluded where eIDAS-compliant credentials are unavailable. However, the current drafting appears to be predominantly tailored to retail banking relationships and implicitly assumes that the customer is a natural person. This does not adequately reflect the realities of wholesale and corporate banking, where financial institutions generally maintain long-standing relationships with legal entity customers through dedicated relationship managers who are regularly in contact with the customer and possess extensive knowledge of both the legal entity and the individuals acting on its behalf. Against this background, restricting the available identification and verification methods for natural persons connected to a legal entity customer does not necessarily mitigate identity fraud risks. Rather, it may create disproportionate operational and administrative burdens, particularly where beneficial owners or other relevant individuals are located outside the Union and eIDAS-compliant solutions are not

Name of the respondent	Question	Answer
		available. In particular, established identification methods that have been used in certain Member States for many years without material supervisory concerns — such as video identification procedures in Germany — should remain permissible under the RTS. In addition, it should be clarified how the RTS will interact with the existing Guidelines on the use of remote customer onboarding solutions under Article 13(1) of Directive (EU) 2015/849 dated 22 November 2022 (EBA/GL/2022/15), which will continue to apply to the financial sector under the AMLR framework from 10 July 2027. AMLA should therefore provide further guidance on the relationship between Article 7 of the RTS and the EBA Guidelines in order to ensure legal certainty and supervisory consistency, especially with regards to cases in which – after 10 July 2027 – obliged entities rely on capabilities to access EUDI Wallets through a service provider: what specific requirements and safeguards should be observed to ensure compliance with the EUDI Regulation, particularly as regards data protection, operational resilience, contractual arrangements and oversight of third-party providers? Furhermore, for counterparties established outside the EU, in circumstances where eIDAS-compliant means of identification or verification are not available, it would be helpful to clarify the criteria according to which the fallback mechanism set out in Article 7(2) is to be applied. In particular, it would be useful to specify whether the applicability of that fallback depends on

		objective unavailability, legal impossibility, or other conditions, and how such conditions are to be assessed in practice.
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 10 The reference to 'utility bills' as an example of 'third-party sources' in the context of identifying the beneficial owner under Article 10 of the draft RTS is unhelpful in the context of wholesale banking. Given the nature of wholesale banking business and the profile of wholesale banking customers, it is not realistic to expect wholesale banks to obtain utility bills (or similar documents) from UBOs (or SMOs). We recognise the challenges faced by the AMLA and NCAs in drafting regulation intended to apply across all sectors. Nevertheless, regulatory requirements must remain realistic, proportionate, and fit for purpose for the sectors concerned.
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	29
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 29 Art. 29 is to be supplied with this sentence 2: "For credit institutions, those obligations shall be without prejudice to any additional screening obligations laid down in Article 5d of Regulation (EU) No 260/2012, including the obligation of payment service providers falling within

Name of the respondent	Question	Answer
		the scope of that Regulation to carry out at least daily and event-triggered checks of their customers against the relevant Union restrictive measures lists." Rationale: The additional sentence clarifies the relationship between the general sanctions-screening obligations under the AML framework and the specific screening regime established under Article 5d of Regulation (EU) No 260/2012 because of instant credit transfer processing. It ensures legal certainty by making explicit that the AML-related screening requirements do not replace, limit or exhaust the separate obligations applicable to payment service providers under the SEPA framework. The clarification also reduces the risk of interpretative inconsistencies regarding the coexistence of customer-based screening obligations and the specific at least daily screening mechanism introduced for the processing of instant payments.
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	27
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 27 Proposal: Amendment to Art. 27 of the RTS for the application of Enhanced Due Diligence measure "source of wealth" in the Context of Correspondent Banking Relationships Where a credit institution enters into or maintains a correspondent banking relationship, the application of enhanced due diligence measures shall be calibrated to reflect the specific nature of the counterparty as a regulated financial institution. In this context,

Name of the respondent	Question	Answer
		competent authorities and obliged entities shall have regard to the fact that concepts developed for the assessment of natural persons, including the determination of source of wealth and source of funds, are not appropriate for application to regulated financial institutions, whose financial position is derived from diversified commercial activities, regulated funding structures, and ongoing prudential supervision, as evidenced by audited financial statements and supervisory assessments. This should be clarified.
Verband Internationaler Banken in Deutschland e. V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	33
Verband Internationaler Banken in Deutschland e. V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 33 The RTS shall enter into force on the twentieth day following that of its publication as Delegated Regulation in the Official Journal of the European Union. It may reasonably be assumed that this will occur towards the end of 2026 or in early 2027. This timing is significant because the implementation provision in Article 33, second sentence, directly refers to the publication date of the Delegated Regulation. Specifically, where a customer entered into a business relationship before the publication date of the RTS, the relevant documents, data, and information relating to that customer must be aligned with the requirements of both the RTS and the AMLR (“actualization” or “refresh”) on a risk-sensitive basis, and in any event no later than within the time periods set out in Article 26(2) AMLR.

Name of the respondent	Question	Answer
		Accordingly, the RTS effectively defines “standing customers” by reference to a point in time prior to 10 July 2027. Against this background, AMLA should clarify whether, for customers onboarded after publication of the RTS in the Official Journal of the European Union but before 10 July 2027, the AMLR refresh periods are intended to run immediately from the date of their onboarding, rather than only from 10 July 2027, as appears to be the case for customers onboarded before publication of the RTS in the Official Journal; and if this is the case, AMLA should give guidance how obliged entities shall implement AMLR and RTS CDD standards for actualization before the implementation date of AMLR, for example, regarding the intended nature of a business relationship.

Verband Internationaler Banken in Deutschland e. V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in	Not applicable/no information available

Name of the respondent	Question	Answer
	understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
Verband Internationaler Banken in Deutschland e. V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup	Not applicable/no information available

Name of the respondent	Question	Answer
	efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Verenigde Betaal Instellingen Nederland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Partially agree. The draft RTS are conceptually applicable across obliged entities but are insufficiently calibrated to payment institution and e money institution business models. In particular, they do not provide adequate flexibility for: • low value, high volume payment transactions, • indirect or intermediated customer relationships (e.g. acquirers, payment facilitators, platforms), • environments with structurally limited access to end user data. Why the current proposals lack flexibility (a) Bank centric assumptions The RTS implicitly assume direct customer relationships and broad access to identity and source of funds information. This does not reflect many PSP models where: • the contractual customer is the merchant, not the payer; and • risk mitigation is achieved primarily through merchant onboarding and transaction monitoring. (b) Uniform data expectations

Name of the respondent	Question	Answer
		Mandatory minimum datasets are applied across materially different use cases (e.g. merchants, one off payers, wallet users), resulting in disproportionate data collection for low risk payment services. (c) Intermediated payment chains not operationalised The RTS do not sufficiently address distribution models of prepaid or gift cards, marketplaces, platforms and aggregators, nor clarify the allocation of CDD responsibilities and the use of reliance. Proposed RTS drafting (examples) “Obliged entities providing payment services shall apply customer due diligence measures proportionate to their role in the transaction chain, including whether they act as issuer, acquirer, payment facilitator, platform or intermediary.” “Obliged entities may apply reduced CDD datasets where the payment service does not involve an ongoing relationship with the payer and where ML/TF risks are effectively mitigated through transaction monitoring and product design.”
Verenigde Betaal Instellingen Nederland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Partially agree. While the RTS formally endorse the risk based approach, their prescriptive nature materially constrains its effective application in practice for PSPs and EMIs. Key constraints (a) Mandatory minimum datasets Even in low risk scenarios and where simplified due diligence would be appropriate, the RTS require fixed data points, encouraging “tick box compliance”. (b) Prescriptive EDD requirements

Name of the respondent	Question	Answer
		Uniform expectations regarding source of wealth and source of funds are not always feasible for SMEs, micro merchants or platform participants. (c) Fixed refresh cycles Time based review cycles override risk triggered monitoring logic, despite payment institutions' reliance on continuous transaction monitoring. Proposed RTS drafting "Obliged entities may determine the extent, depth and frequency of CDD measures based on documented ML/TF risks, provided that the outcomes of such measures are demonstrably effective." "Where specific information cannot be obtained, equivalent risk mitigating measures, including transaction monitoring, limits or restricted functionality, may be applied." "Periodic customer reviews may be replaced or complemented by continuous monitoring systems where these provide equivalent or greater risk mitigation."
Verenigde Betaal Instellingen Nederland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes – frequently in payment institution and e money business models. Examples 1. Acquiring (payer side) The PSP or EMI does not have access to payer identity or source of funds data, only to transaction metadata. 2. Marketplaces and platforms Individual sellers or micro entrepreneurs may lack easily verifiable UBO or income data.

Name of the respondent	Question	Answer
		3. Cross border and emerging markets Limited reliability of registries and digital identity frameworks. 4. Low value prepaid instruments and wallets Users are unwilling to provide full identity data, while ML/TF risk is mitigated through strict limits. 5. Issuing an e-money wallet or an account to a person who is stateless, or has refugee or subsidiary protection These persons should be able to use alternative and clearly stated documents as proof of the identity. Proposed alternatives Functional equivalence principle “Where standard CDD information is unavailable, obliged entities may rely on alternative, risk mitigating measures such as transaction limits, behavioural monitoring, or restricted functionality.” Reliance on regulated payment chain participants “Obliged entities may rely on CDD performed by other regulated entities in the payment chain where legally permissible.” Risk based thresholds Allow simplified onboarding below defined transaction or volume thresholds. Acceptance of aternative documents in case of refugees Allow documents like such as birth certificates, tax receipts, social security cards, employee cards and the like, to prove their identity. The requirements of Article 27 of The 1951 Refugee Convention would also be satisfied if a refugee possesses a valid travel document

Name of the respondent	Question	Answer
		other than a Convention Travel Document, such as an aliens passport issued by another State.
Verenigde Betaal Instellingen Nederland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The current SDD options are too narrow for payment sector realities. Proposed additional SDD categories 1. Low value payment instruments Prepaid cards and e money wallets with strict transaction and balance limits. 2. Payment only services Services involving no stored value and no ongoing account relationship. 3. Regulated merchant categories Public authorities, listed companies, regulated EU entities. 4. Low turnover platform sellers Small scale or gig economy participants. Proposed RTS drafting "Simplified due diligence may be applied where strict transactional, balance and product design limits effectively mitigate ML/TF risks, without prejudice to ongoing monitoring obligations."
Verenigde Betaal Instellingen Nederland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Key observations • Interaction with PSD2 / PSD3: risk of duplicative or inconsistent definitions of "customer" and "user". • Data protection (GDPR): RTS insufficiently reflect the data minimisation principle. • Operational feasibility: assumptions of bank like KYC infrastructures do not reflect API first PSP environments.

Name of the respondent	Question	Answer
		• Unclear allocation of responsibilities within the payment chain (issuer vs acquirer vs platform). Recommendation Introduce a role based obligations framework, explicitly linking CDD requirements to the position and risk exposure of the obliged entity within the payment chain.
Verenigde Betaal Instellingen Nederland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Verenigde Betaal Instellingen Nederland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Verenigde Betaal Instellingen Nederland	Please specify which recital you refer to, and share your comments below.	Final overall position ☑ The objectives of harmonisation and effectiveness are supported. ⚠ The draft RTS remain overly bank centric for payment institutions and e money institutions. ❗ Without targeted calibration, there is a material risk of over compliance without commensurate AML/CFT benefit. Key recommendation Introduce a PSP and EMI specific calibration layer within the RTS, based on: • role based obligations, • proportional data requirements,
Verenigde Betaal Instellingen Nederland	Do you have any comments on the Annex in the draft RTS?	Yes

Name of the respondent	Question	Answer
Verenigde Betaal Instellingen Nederland	Please share your comments below.	5.1 Draft impact assessment with cost-benefit analysis Summary of cost impact for PSPs and EMIs One off costs • IT and KYC system redesign, data model expansion, integrations: approx. €2m–€10m+ (mid size PSP/EMI). • Policy, governance and risk framework rewrites: €50k–€250k. • Customer remediation, re KYC and termination of relation: €5–€50 per customer/business relation. Recurring costs • Increased operational KYC workload (estimated +20–50%). • Additional data providers and monitoring tooling. • Indirect revenue impact due to customer friction and merchant attrition. Conclusion on costs Without sector specific calibration, implementation costs risk being disproportionate to the incremental ML/TF risk reduction achieved.
Verenigde Betaal Instellingen Nederland	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Verenigde Betaal Instellingen Nederland	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of	Disruptive impact

Name of the respondent	Question	Answer
	Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs

Vergunde Nederlandse Online Kansspelaanbieders	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not consider that the RTS can be applied across online gambling products without sufficient flexibility to reflect sector-specific risks and customer behaviour. Horizontal requirements are based on predictable transaction behaviour, estimated volumes and account usage, which do not reflect the inherently dynamic, game-driven nature of online gambling activity. This limits their suitability for a risk-based application in this sector. We therefore recommend ensuring that the RTS allows for sufficient flexibility in its application, so that obliged entities can apply the requirements in a manner that is consistent with a risk-based and proportionate approach, taking into account sector-specific characteristics and customer behaviour.
Vergunde Nederlandse Online Kansspelaanbieders	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based	The RTS do not fully enable an effective risk-based and proportionate approach for online gambling.

Name of the respondent	Question	Answer
	approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While a risk-based principle is acknowledged, the operational framework remains largely influenced by financial-sector risk indicators, which do not adequately reflect the sector-specific risk profile of online gambling. In this context, risks are primarily driven by behavioural patterns, gameplay dynamics, payment methods, and product usage profiles rather than account structuring. It is therefore important that the RTS allows sufficient flexibility for obliged entities to apply a genuinely risk-based approach, taking into account sector-specific risk drivers.
Vergunde Nederlandse Online Kansspelaanbieders	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are structural limitations in the availability of certain CDD information in the context of online gambling, and the draft RTS do not always provide workable alternatives. With regard to Article 4, the requirement that the place of birth “shall consist of at least the country name” may not be operationally feasible in all cases, as official identity documents in several Member States do not systematically include the country of birth. For example, Dutch passports and identity cards generally indicate only the place of birth, without specifying the country. To ensure consistency with national identity documents and to support a proportionate and practicable implementation of the RTS, we suggest allowing obliged entities to record either the country of birth or the place of birth, depending on the information available in the official document presented.

Name of the respondent	Question	Answer
		Furthermore, requirements under Articles 6, 7 and 18 assume that detailed identity, activity and financial data are consistently available and meaningful. In practice, this is not the case. - In identity verification, reliance on document-based assumptions does not reflect widespread use of reliable digital solutions or the absence of universal eIDAS coverage. - In relation to the purpose and intended nature of the business relationship, the objective is inherently clear in online gambling (entertainment participation), making additional granular requirements of limited added value. - Ex ante estimates of transaction volumes or spending are not reliable due to highly variable, seasonal and event-driven customer behaviour. - With regard to Article 24 and the provisions relating to source of funds, we suggest clarifying that source of funds assessments should primarily be required in the context of enhanced due diligence (EDD) or where specific risk indicators are present. As currently drafted, it is unclear whether source of funds requirements also apply in low-risk situations, which may lead to disproportionate application and divergent interpretations among obliged entities. The RTS should allow for more flexible, risk-based methods, including:

Name of the respondent	Question	Answer
		- recognition of reliable and independent verification methods alongside eIDAS ; - reliance on behavioural and product-based profiling rather than ex ante forecasts; - and for source of funds, the distinction between standard and enhanced due diligence should be more reflected to ensure a proportionate approach.
Vergunde Nederlandse Online Kansspelaanbieders	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The RTS do not sufficiently reflect lower-risk characteristics of certain online gambling scenarios. In particular, AMLA's conclusion that no additional SDD measures are necessary does not fully take into account that online gambling operators do not hold customer funds or provide payment accounts. This creates structural limitations in applying a fully proportionate SDD framework to the sector. For low-risk online gambling activity, the RTS should explicitly recognise the possibility to apply simplified due diligence (SDD) measures in line with the risk-based approach. In such cases, SDD could be performed on the basis of limited customer data, less frequent reviews, and the collection of additional information only where relevant risk indicators or triggering events arise. Additional simplified measures should be available where ML/TF risk is demonstrably low, including situations where: - customer activity is low value and low complexity; - regulated payment methods are used; and - no indicators of higher risk are present.

Name of the respondent	Question	Answer
		The RTS should also recognise that in online gambling the purpose of the relationship (entertainment participation) is inherently clear, making extensive additional information requirements of limited added value in low-risk scenarios. More generally, SDD should better reflect high-volume, low-value digital environments. A purely periodic review model is often insufficient, as relevant risk changes are more effectively identified through: - trigger events; - behavioural indicators; and - unusual activity monitoring. For low-risk relationships, updates of CDD information should therefore be based on such risk triggers rather than systematic periodic re-collection where no relevant change has occurred. Overall, it is important that the RTS allows sufficient flexibility for obliged entities to apply simplified due diligence in a manner that is risk-based and proportionate, taking into account sector-specific characteristics and the nature of the services provided. We therefore recommend that the RTS: - explicitly recognise the possibility for obliged entities to apply simplified due diligence measures in low-risk online gambling scenarios in a risk-based and proportionate manner;

Name of the respondent	Question	Answer
		- allow for proportionate CDD measures that take into account the specific characteristics of the sector, the nature of the services provided, and high-volume digital business models; and - support dynamic, trigger-based updating of customer due diligence information.
Vergunde Nederlandse Online Kansspelaanbieders	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The framework provides a solid basis, but its application may present practical challenges for certain non-financial and digital sectors, such as online gambling. Any further clarification should preserve sufficient flexibility for obliged entities to apply customer due diligence measures in a proportionate and risk-based manner, taking into account sector-specific characteristics. A key overarching concern is that the RTS largely operationalise AMLR concepts through a financial-sector framework, requiring online gambling operators to apply requirements that are not directly aligned with their business model. This is particularly evident in areas such as identity verification and CDD requirements on the purpose of the relationship, where the relevance and availability of information varies significantly across sectors. We therefore consider it important that the RTS explicitly recognise online gambling as a non-financial service sector with distinct AML/CFT risk drivers, including behavioural and product-based risks. This could be reflected in a horizontal recital, with an explicit

Name of the respondent	Question	Answer
		acknowledgement that sector-specific guidance may be developed where appropriate. In addition, it remains essential that the RTS are applied in a technology-neutral and risk-based manner, allowing the use of different identification solutions where they provide a comparable level of assurance. This is particularly important given the absence of a fully harmonised EU-wide digital identity framework. Overall, it is important that the RTS allows sufficient flexibility to enable obliged entities to implement the requirements in a risk-based and proportionate manner, taking into account sector-specific characteristics. We therefore recommend that AMLA: - explicitly recognise online gambling as a non-financial sector with distinct AML/CFT risk drivers, requiring a proportionate and risk based application of requirements; - reflect this in a horizontal recital, ensuring sufficient clarity for consistent application while preserving scope for sector-specific circumstances and proportionate application; - ensure technological neutrality and risk-based application of requirements; and - limit requirements to proportionate and risk-relevant information. Finally, the previous version of the assessment of content started with the following question: “Do you

Name of the respondent	Question	Answer
		agree with the proposals set out in these draft RTS? If you do not agree, please specify." For completeness, please also find below the response to that question. The proposals are not fully applicable in all cases within the Dutch practice, in particular for online gambling. First, the proposals are based on eIDAS as the primary solution, whereas in the Netherlands national and bank-based solutions such as DigiD and iDIN are widely used in practice. These are not always eIDAS-compliant or suitable for cross-border use. This results in Dutch entities having to operate multiple systems in parallel, leading to additional costs and complexity without a proportionate reduction in risk. The RTS should therefore explicitly allow other solutions or make the eIDAS not mandatory. Second, the RTS appears primarily designed for banking and account-based financial service models and does not sufficiently reflect the operational reality of online gambling. Online gambling is fundamentally a gameplay-based service, characterised by frequent, low-value and behaviour-driven interactions, with distinct AML/CFT risk drivers compared to traditional financial services. Applying financial-sector assumptions in this context risks disproportionate outcomes and may undermine the effective application of a risk-based approach.

Name of the respondent	Question	Answer
		Against this background, it is important that the RTS recognises the specific characteristics of the online gambling sector and ensures that obliged entities can implement AMLR concepts in a manner that is both risk-based and proportionate, allowing sufficient flexibility to reflect sector-specific risks and customer behaviour. Third, the current wording of Article 7 risks positioning eIDAS as the de facto standard, thereby limiting the flexibility intended under the AMLR. In addition, certain data requirements (such as place of birth or full nationality history) are not always available through digital identification tools and are not always necessary from a risk-based perspective. We therefore recommend that the RTS: - ensure that the RTS is technology-neutral and allows for reliable and independent verification methods alongside eIDAS; - explicitly recognise that online gambling has its own operational and CDD logic, which differs from banking services; - ensure that CDD and data requirements are proportionate and risk-based; - avoid making eIDAS the de facto exclusive standard for digital onboarding.

VGRD GmbH	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	The RTS proposals are largely not considered sufficiently tailored to the products and services of the automotive and goods trading sector. The requirements are strongly oriented towards banking type processes, which

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	typically do not exist in trading activities. In particular, it should be clearly stated that purely ancillary or service related activities are not automatically brought within the scope of the obligations.
VGRD GmbH	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS only partially enables an effective risk based approach, as it often presupposes ongoing customer relationships and continuous information flows. For the trading sector, greater emphasis should be placed on object and payment related risk indicators and on the involvement of regulated financial institutions.
VGRD GmbH	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, certain customer due diligence information, in particular regarding the source of funds or third party payers, is frequently not available in a verifiable form. The draft RTS does not currently provide sufficient alternative or plausibility based approaches for such situations, especially in the case of fully bank or leasing financed transactions.
VGRD GmbH	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting	The RTS should explicitly provide for additional simplified due diligence measures, in particular where payments are fully account based and processed via supervised EU credit or leasing institutions, as well as through increased use of appropriate external registers for identifying beneficial owners.

Name of the respondent	Question	Answer
	proposals and rationale for the specific measures you would propose.	
VGRD GmbH	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A practical and legally certain implementation requires clear delineations, standardised implementation guidance and workable identification solutions. In particular, the terms “regular” and “principal” trading in high value goods should be clearly defined in order to avoid legal uncertainty.
VGRD GmbH	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
VGRD GmbH	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
VGRD GmbH	Do you have any comments on the Annex in the draft RTS?	No
VGRD GmbH	How would you rate the proposals set out in the draft RTS overall?	Neutral
VNO NCW & MKB-Nederland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	a) Artikel 18, Doel en aard van de relatie De informatie-eisen zijn zeer uitgebreid. Voor de niet-financiële sector vragen wij om differentiatie naar risicoprofiel en type dienstverlening. Voor financiële instellingen geldt dat doel en aard bij standaardproducten (spaarrekening, schadeverzekering, lopende rekening) feitelijk uit het product zelf zijn af te leiden; Recital 13 erkent dit, artikel 18 niet. Voorstel: bij standaard-CDD in niet-hoge risicosituaties mag worden vertrouwd op informatie inherent beschikbaar uit het gekozen product, en op reeds beschikbare informatie uit reguliere dienstverlening. d) Artikel 7, Non-face-to-face verificatie

Name of the respondent	Question	Answer
		De safeguards in artikel 7(3) zijn cumulatief geformuleerd en laten weinig ruimte voor risicogebaseerde toepassing — zwaar voor entiteiten zonder eigen technische infrastructuur en voor klantgroepen (waaronder minderjarigen) zonder eIDAS-identiteit. Voorstel: voeg aan paragraaf 3 toe dat de safeguards proportioneel mogen worden toegepast aan het ML/TF-risico. Sta tot eIDAS 2.0 breed operationeel is bestaande nationale of bewezen markt-oplossingen toe. Wij zien uitdagingen bij de toepassing op het brede scala aan producten en diensten, zowel in de niet-financiële sector als in de financiële sector: ● Vastgoedsector: Het verzamelen van informatie over de bron van middelen (Art. 18(c)) kan worden beperkt door het feit dat de makelaar niet de partij is die de financiële transactie afhandelt, dit loopt via de notaris en de bank. Er is risico op duplicatie van CDD-inspanningen. ● Autohandel en handelaren in goederen: Voor transacties boven de drempelbedragen moeten dealers CDD toepassen, maar de informatie over bedrijfsactiviteiten en verwachte transactiepatronen (Art. 18(a)(e)) is niet altijd relevant bij eenmalige aankopen. ● Accountants en belastingadviseurs: Deze beroepsgroepen beschikken doorgaans al over uitgebreide klantinformatie vanuit hun reguliere dienstverlening. De RTS zou moeten erkennen dat reeds beschikbare informatie gebruikt mag worden zonder duplicatie. ● Banken en verzekeraars bij standaardproducten: Voor

Name of the respondent	Question	Answer
		dagelijkse bankproducten en standaardverzekeringen aan natuurlijke personen met een laag risico is het doel en de aard van de relatie doorgaans af te leiden uit het product zelf. De RTS zou moeten toestaan dat in die gevallen kan worden vertrouwd op de inherent beschikbare informatie, zonder additionele klantuitvraag. Dit sluit aan bij Recital 13 van de RTS en bij artikel 33(1)(c) AMLR. ● Notariële en advocaten-derdenrekeningen (Art. 22): Nederlandse derdenrekeningen van notarissen en advocaten (kwaliteitsrekeningen, stichting derdengelden) passen niet in de logica van artikel 22. De rekeninghouder kan wegens beroepsgeheim niet onmiddellijk informatie over onderliggende cliënten leveren aan de bank. Deze rekeningen zouden expliciet moeten worden uitgezonderd. Het beroepsgeheim van notarissen en advocaten geldt onverkort, ook bij activiteiten die binnen de reikwijdte van artikel 3(3)(b) AMLR vallen. De bestaande Nederlandse waarborgen — toezicht door het BFT op notarissen en door de dekens op advocaten — borgen dat deze beroepsgroepen hun eigen AML-verplichtingen uitvoeren. Voorstel: voeg een algemene bepaling toe die bevestigt dat informatie die de meldingsplichtige entiteit reeds beschikbaar heeft vanuit haar reguliere dienstverlening, mag worden gebruikt ter voldoening aan de CDD-verplichtingen zonder aanvullende dataverzameling. Beperk de reikwijdte van artikel 22 expliciet zodat kwaliteitsrekeningen van notarissen en advocaten,

Name of the respondent	Question	Answer
		alsmede correspondent banking-relaties, er niet onder vallen.
VNO NCW & MKB-Nederland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	b) Artikel 19, PEP-screening Voor kleine MKB-ondernemers met beperkte klantaantallen moet handmatige controle als volwaardig alternatief gelden; de huidige formulering ("unless… justifies the use of manual checks only") is te vaag. Artikel 19(2)(b) verplicht "zonder vertraging" op te treden bij elke wijziging in CDD-data — voor bestaande klanten met bekend transactieprofiel is een proportionele benadering beter. Voorstel: kwantitatieve criteria voor handmatige PEP-controles (bijv. minder dan 100 actieve klantrelaties), en risicogebaseerde modulering voor bestaande klanten. c) Artikelen 25-28, Enhanced Due Diligence De EDD-maatregelen zijn uitgebreid. Artikel 26(2) over "key customers, contracts, business partners and associates" dreigt te worden uitgelegd als CDD op de klanten van de klant — een derde-graads-CDD buiten de AML/CFT-reikwijdte. Begrippen in artikel 28 ("use of assets representing higher ML/TF risks"; "higher risks in respect of the parties involved") behoeven uitleg. Voorstel: schrap artikel 26(2) of begrens het tot gevallen met aanwijsbare ML/TF-indicatie; verhelder de kernbegrippen in artikel 28. e) Artikelen 11-12, Eigendoms- en controlestructuren De automatische kwalificatie van structuren met meer dan drie tussenlagen als "complex" is one-size-fits-all; een kwalitatieve risicobeoordeling is geboden. De informatieplicht over tussenliggende entiteiten zonder

Name of the respondent	Question	Answer
		zakelijke relatie gaat verder dan artikel 62(1)(d) AMLR. Voor Nederland is essentieel dat Nederlandse stichtingen niet worden gelijkgesteld aan express trusts (notificatie onder artikel 57(3) AMLR); “such as a foundation in any of the layers” schept verwarring. Voorstel: vervang de drie-lagen-regel door een risicotoets; bevestig dat “complex” niet automatisch EDD triggert; sluit Nederlandse stichtingen uit van het trust-begrip. De risicogebaseerde aanpak is als principe stevig verankerd in artikel 1, maar de uitwerking in specifieke artikelen is prescriptiever dan noodzakelijk: Artikelen 3-5 (identificatie): De gedetailleerde lijst van te verzamelen informatie (alle namen, geboorteplaats, geboortedatum, nationaliteiten, adres) laat weinig ruimte voor een risicogebaseerde benadering bij de standaard-CDD. Artikel 4, Geboorteplaats: De verplichting om de geboorteplaats te verkrijgen met ten minste de landnaam is ambigu omdat niet alle identiteitsdocumenten zowel stad als land vermelden. Het zou voldoende moeten zijn om één van beide datapunten te verkrijgen. Artikel 5, Nationaliteiten: Een zelfverklaring van de klant zou moeten volstaan; aanvullende nationaliteiten hoeven alleen te worden uitgevraagd bij een specifieke aanleiding. Alleen de primaire nationaliteit hoeft te worden geverifieerd. Het systematisch uitvragen van alle nationaliteiten leidt tot (gevoelens van) discriminatie en moet in de RTS of de begeleidende guidance worden geadresseerd.

Name of the respondent	Question	Answer
		Artikel 6, Verificatie: Het principe "once verified, always verified" zou moeten worden bevestigd: een nieuwe identiteitsverificatie is niet nodig enkel omdat het oorspronkelijke document is verlopen. Verificatie dient zich te beperken tot namen en geboortedatum; aanvullende datapunten vragen geen aparte verificatie. Ook proportionele verificatie voor vaste klanten van een lokale ondernemer moet mogelijk blijven. Terminologie (Art. 23): Gebruik consistente terminologie. "Low degree of risk", "low risk" en "non-high risk" zouden niet door elkaar gebruikt moeten worden. Voorstel: versterk de verbinding tussen het proportionaliteitsbeginsel in artikel 1 en de specifieke artikelen door in elke sectie expliciet ruimte op te nemen voor risicogebaseerde modulering; leg in artikel 4 en 5 vast dat één locatie-datapunt respectievelijk de zelfverklaring voor nationaliteiten volstaat; en bevestig "once verified, always verified" in artikel 6.
VNO NCW & MKB-Nederland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	f) Artikelen 13 en 21, Senior Managing Officials SMO's zijn een terugvalmaatregel wanneer geen UBO kan worden geïdentificeerd; zij zijn geen risicobron op zichzelf. Hetzelfde niveau van identificatie en verificatie eisen als voor UBO's, inclusief alle nationaliteiten en geboorteplaats, is disproportioneel. Voor niet-hoge-risicogevallen volstaat een handelsregisteruittreksel. Voorstel: verduidelijk dit in artikelen 13 en 21; beperk SMO op klantniveau tot leden van het statutaire bestuur (CEO, CFO); sta toe dat in grensoverschrijdende situaties zonder betrouwbaar register op de meest betrouwbare

Name of the respondent	Question	Answer
		beschikbare informatie wordt vertrouwd. g) Artikel 16, Persoon die pretendeert namens de klant te handelen De verplichting om bestaan en reikwijdte van vertegenwoordigingsbevoegdheid te verifiëren mist precisie en dreigt te worden uitgelegd dat álle personen met algemene vertegenwoordigingsbevoegdheid worden geïdentificeerd — inclusief operationele contactpersonen of houders van een bedrijfsbetaalkaart. Het voorbeeld in Recital 12 (geboorteakte of voogdijbesluit) is voor minderjarigen in Nederland onwerkbaar. Voorstel: beperk de verplichting tot personen die actief namens de klant de relatie aangaan; herformuleer Recital 12. Ja, wij identificeren de volgende situaties: ● UBO-informatie bij buitenlandse entiteiten: Voor het MKB dat incidenteel zakendoet met buitenlandse bedrijven, maar ook voor financiële instellingen met internationale klantstructuren, is het identificeren en verifiëren van uiteindelijk belanghebbenden (Art. 9-14) bijzonder lastig. Niet alle Lidstaten hebben een functionerend UBO-register, en de kwaliteit van beschikbare informatie varieert sterk. ● Bron van middelen bij contante transacties: Bij contante transacties boven de drempel (bijvoorbeeld €3.000 bij handelaren in goederen) is het verkrijgen van betrouwbare informatie over de bron van middelen (Art. 18(c)) praktisch onmogelijk. De klant kan verklaren, maar verificatie is niet uitvoerbaar. ● Complexe eigendomsstructuren: MKB-ondernemers missen de expertise en middelen om complexe

Name of the respondent	Question	Answer
		eigendomsstructuren (Art. 12-13) te doorgronden. Dit is voorbehouden aan gespecialiseerde compliancefuncties bij financiële instellingen, maar ook daar leveren de driedubbele eisen onder artikelen 11-12 operationele problemen op. ● Informatie over begunstigden van trusts (Art. 14/15): Bij discretionaire trusts en trusts met nog niet-geïdentificeerde begunstigden is de meldingsplichtige entiteit vrijwel volledig afhankelijk van de trustee. De RTS zou moeten bevestigen dat een kopie of uittreksel van de trustakte, gecombineerd met een schriftelijke bevestiging van de trustee dat nog geen begunstigde is aangewezen en geen uitkeringen zijn gedaan, volstaat als "sufficient information". Voorstel: voeg een bepaling toe die meldingsplichtige entiteiten toestaat om, wanneer informatie redelijkerwijs niet beschikbaar is ondanks inspanningen te goeder trouw, de ondernomen stappen te documenteren en de relatie voort te zetten onder aanvullende monitoring. Neem in de RTS of begeleidende guidance concrete voorbeelden op van wat in trust-situaties en bij complexe structuren redelijkerwijs kan worden verlangd. Dit voorkomt de-risking van legitieme klanten.
VNO NCW & MKB-Nederland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	Wij adviseren aanvullende SDD-maatregelen voor de volgende situaties: ● Beursgenoteerde ondernemingen, publiekrechtelijke lichamen en overheidsgelieerde entiteiten: Conform Recital 127 AMLR zijn transparantie en toezicht bij deze categorieën reeds op een vergelijkbaar niveau

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	georganiseerd. Wij bepleiten dat meldingsplichtige entiteiten voor deze categorieën worden vrijgesteld van de UBO-identificatieplicht en dat SDD expliciet wordt toegestaan. Dit is MKB-werkbaar én vermindert operationele lasten bij financiële instellingen. ● Doel en aard inferen uit het product: In niet-hoge risicosituaties zou de informatie over doel en aard van de relatie moeten kunnen worden afgeleid uit het door de klant gekozen product, en zou de identificatie-informatie beperkt kunnen blijven tot één brondocument. ● Laagwaardige, reguliere zakelijke transacties: Voor meldingsplichtige entiteiten die routinematig laagwaardige transacties verwerken (garagebedrijven, kleinhandel) zou een verdere vereenvoudiging van de identificatie-eisen passend zijn wanneer het risico aantoonbaar laag is. ● Transacties binnen gereguleerde ketens: Wanneer zowel de meldingsplichtige entiteit als de klant onder AML/CFT-toezicht staan (bijvoorbeeld accountant - financiële instelling), zou wederzijdse SDD automatisch van toepassing moeten zijn, vergelijkbaar met Artikel 22 voor gepoolde rekeningen.
VNO NCW & MKB-Nederland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	a) Artikel 33, Inwerkingtreding en overgangsbepalingen Wij waarderen de duidelijke scheiding tussen inwerkingtreding en toepassingsdatum. Tegelijkertijd is de termijn van één jaar voor het bijwerken van documenten, data en informatie over bestaande high-riskklanten onder artikel 26(2)(a) AMLR voor veel meldingsplichtige entiteiten niet haalbaar. De scope van

Name of the respondent	Question	Answer
		de update is aanzienlijk, wordt risicogebaseerd uitgevoerd en is afhankelijk van de beschikbaarheid van alle onderliggende RTS'en, met name Art. 20(3), 26(5) en 42 AMLR. Tot die zijn gepubliceerd kunnen entiteiten hun processen, systemen en trainingen niet definitief inrichten. Ook de UBO-registers worden pas vanaf 2027 door rechtspersonen bijgewerkt. Meldingsplichtige entiteiten willen voorkomen dat klantdossiers meermaals moeten worden bijgewerkt of dat onnodig discrepantiemeldingen worden gedaan zolang de registers nog niet up-to-date zijn. Voorstel: verleng de overgangstermijn voor high-riskklanten tot na de publicatie van alle relevante RTS'en en begeleidende guidelines, en in ieder geval tot ná de toepassingsdatum van de AMLR zelf. Bevestig dat de grace period van vijf jaar onder artikel 33 ook geldt voor niet-hoge-risicoklanten onder standaard-CDD (niet alleen voor SDD). Introduceer een grandfathering-regel voor langdurige zakelijke relaties waarvoor documentatie over bron van middelen of bron van vermogen nooit eerder werd verlangd. Resolveer tevens de discrepantie tussen artikel 33 (dat naar "publicatie" verwijst) en Recital 23 (dat naar "date of application" verwijst): een Level 2-tekst kan geen werking hebben vóór de onderliggende Level 1-regeling van toepassing is. b) Vroegtijdige dataverzameling onder de AVG Wij vragen AMLA te bevestigen dat meldingsplichtige entiteiten mogen beginnen met het verzamelen en actualiseren van documenten, data en informatie in lijn

Name of the respondent	Question	Answer
		met de AMLR en deze RTS vóór de toepassingsdatum, voor zover de vereisten voldoende duidelijk zijn, en dat deze vroegtijdige dataverzameling gedragen wordt door een gerechtvaardigd belang onder de AVG. Zonder deze bevestiging ontstaat rechtsonzekerheid en wordt een gefaseerde implementatie praktisch onmogelijk. c) Sanctiescreening (Art. 29-30) De reikwijdte van de screeningdata is ten opzichte van EBA/GL/2024/15 uitgebreid (onder meer naar "all the names and surnames", wallet-adressen, handelsnamen en aliassen). De rationale daarvoor is niet toegelicht. Voor meldingsplichtige entiteiten buiten de crypto-sector zijn wallet-adressen niet beschikbaar. Wij bepleiten de formulering "where available to the obliged entity" toe te voegen en de scope waar mogelijk in lijn te brengen met de bestaande EBA-guidance. Verduidelijk tevens dat sanctiescreening van SMO's niet vereist is, nu de SMO geen UBO is en de activa van de klant niet gelieerd zijn aan de SMO. d) Ongoing due diligence (Art. 23) Wij verzoeken om bevestiging dat effectieve geautomatiseerde monitoring volstaat om te voldoen aan de doorlopende due diligence bij niet-hoge-risicoklanten, zonder actieve periodieke klantuitvraag in afwezigheid van risicotriggers. Klantgegevens moeten als correct worden beschouwd totdat er concrete redenen zijn om aan de juistheid te twijfelen. e) De-risking en MKB-impact In Nederland ondervinden ondernemers in als hoger risico gepercipieerde sectoren al moeite met het verkrijgen van een zakelijke bankrekening. Te

Name of the respondent	Question	Answer
		prescriptieve CDD-eisen vergroten dit de-risking-risico. Implementatiekosten (screeningtools, training, systeemaanpassingen) zijn voor klein MKB onevenredig zwaar. Voorstel: benadruk dat CDD-maatregelen niet mogen leiden tot categorische uitsluiting van klantsegmenten — individuele risicobeoordeling heeft voorrang. Voer een MKB-impactanalyse uit en stimuleer betaalbare sectortools. f) Samenloop NIS2/Cbw en DORA Naast AVG (sub b) raakt deze RTS aan NIS2/Cyberbeveiligingswet en DORA, die parallel worden geïmplementeerd. Technische infrastructuur en dataverzameling kunnen overlappen of botsen. Voorstel: adresseer deze samenloop expliciet, zodat meldingsplichtige entiteiten het spanningsveld niet alleen hoeven oplossen. g) Omvang en complexiteit De RTS bevat 33 artikelen plus annex. Voor grote financiële instellingen beheersbaar; voor MKB-poortwachters die nieuw zijn (vastgoedmakelaars, autohandelaren, juweliers, kleine accountantskantoren) een aanzienlijke leerinspanning. Voorstel: AMLA stelt sectorspecifieke leeswijzers beschikbaar. h) Proportionaliteit over de volle breedte Kleine ondernemers in de niet-financiële sector missen vaak de systemen voor gedetailleerde CDD-processen. Voor grotere MKB-bedrijven en financiële instellingen is het vraagstuk dat criteria niet tot ongerichte verplichtingen over complete klantbestanden mogen leiden. Versterk de verbinding tussen artikel 1 en de specifieke artikelen door in elke sectie te verwijzen naar

Name of the respondent	Question	Answer
		aanpassing van de intensiteit aan risicoprofiel, omvang en middelen.
VNO NCW & MKB-Nederland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
VNO NCW & MKB-Nederland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
VNO NCW & MKB-Nederland	Please specify which recital you refer to, and share your comments below.	Recital 12 — Vertegenwoordiging van minderjarigen (proportionaliteit / uitvoerbaarheid) Het in Recital 12 genoemde voorbeeld van een geboorteakte of gerechtelijk voogdijbesluit als standaardbewijs voor vertegenwoordiging bij minderjarigen is in de Nederlandse praktijk niet werkbaar: ouders hebben geboorteaktes niet standaard in bezit en moeten deze tegen kosten opvragen bij de gemeente. Dit creëert onnodige drempels voor reguliere dienstverlening aan gezinnen en is disproportioneel ten opzichte van het beoogde AML/CFT-doel. Voorstel: herformuleer Recital 12 zodat de geboorteakte uitdrukkelijk niet als verplichte standaard geldt. Meldingsplichtige entiteiten moeten kunnen vertrouwen op proportionele alternatieven (zoals identificatie van de wettelijk vertegenwoordiger gecombineerd met een verklaring) en op informatie die zij redelijkerwijs uit hun reguliere dienstverlening kunnen verkrijgen. Recital 13 — Reeds beschikbare informatie (rechtszekerheid)

Name of the respondent	Question	Answer
		Recital 13 erkent het beginsel dat informatie die reeds bij de meldingsplichtige entiteit beschikbaar is voldoende kan zijn om doel en aard van de relatie te begrijpen. Artikel 18 reflecteert dit beginsel echter niet; daardoor blijft onduidelijk of het ook normatieve werking heeft. Dit raakt de rechtszekerheid en leidt tot onnodige uitvraag bij standaardproducten in lage-risicosituaties. Voorstel: vertaal het beginsel van Recital 13 expliciet door naar artikel 18 met een bepaling dat bij standaard-CDD in niet-hoge risicosituaties mag worden vertrouwd op informatie inherent aanwezig in het gekozen product en op reeds beschikbare informatie uit de reguliere dienstverlening, zonder aanvullende dataverzameling. Recital 23 — Toepassingsdatum versus publicatiedatum (rechtszekerheid) Er bestaat een discrepantie tussen artikel 33, dat verwijst naar "publication" als startpunt van de overgangsperiode, en Recital 23, dat verwijst naar "date of application". Een Level 2-instrument kan rechtens geen werking hebben voordat het onderliggende Level 1-instrument (de AMLR) van toepassing is. Voorstel: harmoniseer artikel 33 en Recital 23 ten gunste van "date of application", zodat de overgangsperiode aanvangt op het moment dat de AMLR daadwerkelijk werking krijgt en meldingsplichtige entiteiten zich op een rechtens werkend kader kunnen voorbereiden.
VNO NCW & MKB-Nederland	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
VNO NCW & MKB-Nederland	How would you rate the proposals set out in the draft RTS overall?	Neutral
VNO NCW & MKB-Nederland	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available
VNO NCW & MKB-Nederland	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624	Not applicable/no information available

Name of the respondent	Question	Answer
	(customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Volkswagen Aktiengesellschaft	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The RTS proposals are largely not considered sufficiently tailored to the products and services of the automotive and goods-trading sector. The requirements are strongly oriented towards banking-type processes, which typically do not exist in trading activities. In particular, it should be clearly stated that purely ancillary or service-related activities are not automatically brought within the scope of the obligations.

Name of the respondent	Question	Answer
Volkswagen Aktiengesellschaft	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS only partially enables an effective risk-based approach, as it often presupposes ongoing customer relationships and continuous information flows. For the trading sector, greater emphasis should be placed on object- and payment-related risk indicators and on the involvement of regulated financial institutions.
Volkswagen Aktiengesellschaft	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, certain customer due-diligence information, in particular regarding the source of funds or third-party payers, is frequently not available in a verifiable form. The draft RTS does not currently provide sufficient alternative or plausibility-based approaches for such situations, especially in the case of fully bank- or leasing-financed transactions.
Volkswagen Aktiengesellschaft	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The RTS should explicitly provide for additional simplified due-diligence measures, in particular where payments are fully account-based and processed via supervised EU credit or leasing institutions, as well as through increased use of appropriate external registers for identifying beneficial owners.
Volkswagen Aktiengesellschaft	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A practical and legally certain implementation requires clear delineations, standardised implementation guidance and workable identification solutions. In particular, the terms "regular" and "principal" trading in high-value goods should be clearly defined in order to avoid legal uncertainty.

WebID Solutions GmbH	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Views on non-face-to-face verification (Article 7) and on electronic identification means and qualified trust services (Article 32 and Annex I) 1. Fallback construction conflicts with technological neutrality (Article 7(1) and (2)) Article 7(1) establishes eIDAS-compliant electronic identification means (LoA substantial/high) and qualified trust services as the exclusive primary standard. Article 7(2) permits video identification only where the primary solution "is not available, or cannot reasonably be expected to be provided." This hierarchy reflects regulatory origin — eIDAS vs. non-eIDAS — rather than demonstrated security equivalence. A hybrid video identification procedure certified under ETSI TS 119 461 V2.1.1, Use Case 9.2.2.3 (Extended Level of Identity Proofing), incorporating automated document validation, biometric face verification, presentation attack detection (PAD), and injection attack detection (IAD), achieves a security level equivalent to eIDAS LoA substantial. Its fallback

Name of the respondent	Question	Answer
		treatment is inconsistent with AMLA's stated commitment to technological neutrality (Consultation Paper, Section 3.2). Proposal — new Article 7(1a): "Obliged entities may alternatively use remote identity proofing solutions independently certified by an accredited conformity assessment body to comply with the Extended Level of Identity Proofing as defined in ETSI TS 119 461 for the attended remote identity proofing use case. Such solutions shall meet the requirements of Article 22(6) AMLR on an equal footing with paragraph 1; the conditions of paragraph 2 shall not apply." 2. Undefined fallback conditions risk regulatory fragmentation (Article 7(2)) The phrase "cannot reasonably be expected to be provided" is undefined and will be applied inconsistently across Member States, undermining maximum harmonisation. Customers without access to primary solutions include citizens of Member States lacking a notified eID system, third-country nationals, those without the required technical equipment, and vulnerable groups for whom eIDAS-based procedures present a disproportionate access barrier. Proposal: Supplement Article 7(2) with a non-exhaustive positive list of applicable circumstances covering at minimum the four categories above. 3. Per-transaction documentation in Article 7(4) is

Name of the respondent	Question	Answer
		disproportionate Requiring obliged entities to demonstrate individually, per customer, both solution compliance and primary-means unavailability is operationally unworkable at scale and inconsistent with the risk-based approach under Article 1. Proposal: Two-level structure: (a) one-off system-level certification demonstration to the competent authority; (b) transaction-level documentation only where specific elevated ML/TF risk indicators are present. 4. QTSP-commissioned certified IPSPs should qualify under Article 7(1) Identity proofing service providers certified under ETSI TS 119 461 Annex C and acting as subcontractors to QTSPs are functionally part of qualified trust service delivery, yet are not explicitly recognised as such. This creates legal uncertainty as to whether such services meet Article 7(1) or merely Article 7(2). Proposal: AMLA should clarify that an identity proofing service certified under ETSI TS 119 461 Annex C and provided under QTSP responsibility constitutes a "relevant qualified trust service" within the meaning of Article 22(6)(b) AMLR and meets Article 7(1) directly. 5. Structural incompatibility between QES certificate attributes and standard CDD (Article 32(1) and Annex I) Annex I requires residential address as a mandatory attribute for standard CDD. Qualified certificates for

Name of the respondent	Question	Answer
		electronic signatures under ETSI EN 319 412 do not mandatorily contain this attribute; it is routinely omitted for GDPR data minimisation reasons. Consequently, QES certificates cannot fully satisfy standard CDD requirements and must be supplemented under Article 32(3), significantly reducing the practical utility of qualified trust services as identification instruments and potentially disincentivising their use. Proposal: Either (a) remove the residential address from Annex I mandatory attributes for standard CDD, retaining it only for enhanced due diligence; or (b) clarify that the address may be sourced from a supplementary source reliably linked to the certified identity, without requiring a full renewed identification procedure under Article 22(6) AMLR.
WebID Solutions GmbH	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	no, please see response to question 1
WebID Solutions GmbH	3. Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do	Wirtschaftskammer Österreich (Austrian Federal Economic Chamber; EU-Transparency regis-ter-No. 10405322962-08) represents Austrian businesses, both in the financial and the non-financial sector.

Name of the respondent	Question	Answer
	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Complex corporate structures (Article 12) Article 12 provides for that an ownership and control structure is to be considered a complex corporate structure where there are three or more layers between the customer and the beneficial owner, and more than one of the conditions listed in paragraph 1 is met. Whilst the requirement that there must be more than three levels and more than one ap-plicable criterion represents an improvement on earlier drafts, the thresholds remain rel-atively low and there are interpretive questions regarding Article 12(1)(d) and how this could be applied in practice. The rule-based nature of Article 12 can significantly increase the operational burden, particularly if it also triggers other enhanced due diligence measures. The AMLR does not require that a regulatory technical standard shall specify the con-cept of 'complex corporate structure'. Therefore, it is not legally necessary for defining this concept in the draft RTS. Although the classification as complex corporate structure per se does not lead automatically to enhanced CDD measures there are still requirements for the collection of data in relation to complex corporate structures for the purpose of the RTS under Article 40(2) AMLD6 and Article 12(7) AMLAR (inherent risk). It is unclear what weighting this data

Name of the respondent	Question	Answer
		point will have in the assessment of undertakings, and there is considerable concern that the sheer number of customers which are legal entities with complex corporate structure will be as-sessed as increasing risk and this will impact the risk profile of the undertakings. There is also concern that, despite the current clear distinction between the terms, an analogy will be drawn in supervisory practice, with the result that customers with a com-plex corporate structure (Article 12) should be treated as customers with an excessively complex ownership structure (Annex III AMLR). Recommendation: We would suggest to remove the definition of complex corporate structures. If this is not possible we would suggest the removal of lit d) of the draft proposal for Article 12 and would welcome clarification, how the relationship between “complex structures” referred to in Article 12 should be considered in conjunction with Annex III(1)(f) of the AMLR. How do the two relate to each other?
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Specific comments of the insurance sector Politically exposed persons (PEP) (Article 19) The requirements listed under Article 19 are to be followed regardless of the risk profile of the activity conducted. Regarding the insurance sector specifically,

Name of the respondent	Question	Answer
		it imposes a dispro-portionate burden for obliged entities when providing low-risk life insurance products such as pure risk insurance policies or private and occupational pension schemes. For customers who buy exclusively life insurance products for which simplified due dili-gence measures can be applied due to the product characteristics, a balanced considera-tion of the risk factors should be possible. For instance, it is not understandable that a customer who has taken out a term life in-surance as collateral for their mortgage loan paying a monthly premium of only EUR 25 represents a high risk solely because of their PEP status. There is no surrender value, and the benefit is only due in case of death. However, because of the high risk, the customer has to be monitored annually and is required to submit all the documentation regarding the source of their funds only for EUR 25 monthly premium payments. This creates dis-proportionate burden for insurance undertakings in terms of screening and onerous ongo-ing reviews when the products are low-risk for ML/TF purposes. Recommendation: If the product characteristics of a life insurance product implies a low ML/TF risk, it should be possible to give priority to product-specific over customer-specific risk factors (PEP characteristics) when assessing the risk in order to have a proportionate approach to AML.

Name of the respondent	Question	Answer
		Regarding Class 3 investment firms that only advise clients and transfer orders a duplica-tion of CDD and transaction monitoring would not be necessary, a co-ordination with the custodian/depositary bank when it comes to transaction monitoring should be sufficient. Update of Customer Information (Recital 23, Article 23) Article 23 of the draft RTS provides that customer information should be updated maxi-mum every 1 or 5 years respectively, depending on the risk profile of the customer. In practice this will result in a mandatory update-frequency (5 years) also for the mass port-folio of low-risk life insurance customers, regardless of that Article 33 (1)(b) ALMR ex-plicitly allows obliged entities to reduce the frequency of updates in these cases. Such an update-frequency is in contradiction to the “risk-based approach”, obliged (life insur-ance) entities should follow to mitigate the risks of AML / TF risks Implementing customer information update every 5 years for low-risk life insurance con-tracts seems excessive considering: • the core principles of the risk-based approach • the low inherent and residual ML/TF risk of such a customer-portfolio • the long duration of insurance contracts • the absence of occasional transactions • the low number of customer contacts • and the absence of leverage over customers.

Name of the respondent	Question	Answer
		Consequently, this frequency is deemed as inappropriate for low-risk life insurance con-tracts. • Life insurance is based on a comprehensive contractual agreement. The amount and frequency of premium payments, additional payments, benefits, and surren-ders, as well as the term of the contract, are specified in the contract. • Payments are generally made via bank accounts (often by direct debit), which are also subject to comprehensive provisions to prevent ML/TF, and not in cash. • Payouts are made upon the occurrence of the insured event (survival or death). Prior to payout, the contractually specified beneficiaries are checked according to the existing legislation. • During the term of the contract, no payments are made to the policyholder, ex-cept in the case of (lifetime) pension insurance. In the case of single-premium in-surance products, no further payments are made by the policyholder. A life insur-ance contract is not comparable to an account on which transactions with differ-ent objectives and purposes take place. • Early surrender is possible under insurance law, but may result in losses, particu-larly in the early years, due to the business model. In addition, in Austria, early termination of single premium products may result in significant tax disad-vantages.

Name of the respondent	Question	Answer
		Recommendation: Customer updates every 5 years for low-risk scenarios would lead to a high bureaucratic burden and costs for insurance companies without adding any value in terms of money laundering prevention. So, the update-frequency of low-risk customers should be based on the “trigger of event” of payout or when contract changes arise, not on a rigid period of 5 years.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	see answer to 2
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	General remarks on Simplified Due Diligence Non-exhaustive nature of Article 33 AMLR Article 33 AMLR permits obliged entities to apply simplified due diligence (SDD) where a busi-ness relationship or transaction presents a lower degree of risk, based on the factors set out in Annexes II and III. Members welcome SDD as an important tool to enable a more efficient allocation of resources, allowing greater focus on higher-risk situations while applying pro-portionate measures in lower-risk cases.

Name of the respondent	Question	Answer
		In practice, obliged entities should be able to apply a simplified approach across all lower-risk business relationships or transactions. We therefore request confirmation that Article 33 AMLR is not exhaustive in its prescribed measures, and that obliged entities may, in addition to those set out by AMLA, apply measures that are proportionate to the nature and size of the counterparty and to the risks identified. Such an approach would support the effective operation of a risk-based framework and enable resources to be directed where they are most needed. Challenge of making use of simplified due diligence in practice The application of simplified due diligence (SDD) can be challenging, as the processes, as-sessments, and documentation required to justify its use to auditors and supervisors are of-ten more onerous than continuing to apply standard CDD. This creates a disincentive for obliged entities to apply SDD, even in lower-risk scenarios, and may lead to an erosion of the risk-based approach envisaged by the AMLR. We therefore request AMLA to clarify that the proportionate use of SDD is consistent with supervisory expectations, fosters a more intelligent use of resource to better combat money laundering and terrorist financing, and should not require such a level of justification that proves to be more burdensome than the use of standard CDD in lower-risk situations.

Name of the respondent	Question	Answer
		The following constellations e.g. are currently deemed as SDD scenarios which we propose should be included. They reflect approaches currently taken in national law in certain mem-ber states and should remain possible also under AMLR. • Legal entities governed by public law (e.g. public authorities) • Public companies listed on a stock exchange and subject to disclosure requirements, as well as majority-owned subsidiaries of such companies • Pooled accounts for school classes Specific comments of the insurance sector Sector-specific simplified Customer Due Diligence Measures for Life Insurance Products: For the insurance sector there should be sector-specific simplified due diligence measures included in the RTS at least for the following life insurance product types: pure risk life in-surance products, occupational pension products, private pension products and life insurance contracts with low premium payments where the ML/TF risk is considered low. Recommendation: It should be possible to apply the following simplified due diligence measures:

Name of the respondent	Question	Answer
		• When the product characteristics result in a low ML/TF risk, it should be possible to give priority to product-specific over customer specific risk factors (e.g., PEP characteris-tics) when assessing the risk. • Event-driven updates of customer information for low-risk situations should be possi-ble (Article 23). If a periodic customer update would be required, it should be possible to exceed the five-year period mentioned in article 26(2), point (b) of the AMLR. • The minimum information to be collected for the customer identification in low-risk situa-tions should include the type of information in a passport or identity document (Article 20 should explicitly reflect Recital 16, instead of including a detailed list of information simi-lar to the standard due diligence requirements). • In addition, by way of derogation from general due diligence requirements, it should be possible to verify the customers identity on the basis of other documents, data or infor-mation that originate from a credible and independent source. This may include the presentation of a civil service ID card issued by a public sector institution or authority, or an electricity bill which shows the name of the person requiring identification. The obliga-tion to obtain and verify trade names when they differ from registered names should also be removed. • It should be sufficient, in situations of low risk, for the

Name of the respondent	Question	Answer
		obliged entity to consult the cen-tral register for identification as well as for verification of beneficial owners. That would also ensure a distinction between standard due diligence measures and simplified ones. Since it is an official register that has been introduced in the framework of AML/CTF reg-ulation, obliged entities should be able to fully rely on the information contained in the central register (Article 21).
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	see comments
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The risk-based approach is an important principle of the AMLR and AMLD. By including it in Article 1, “Proportionality and risk-based approach,” as a general principle, its importance has been recognized, and it is thus unambiguously established as a general guiding principle for the interpretation of the RTS. It can therefore be clearly assumed that Article 1 of the RTS on CDD, in accordance with the principle repeatedly

Name of the respondent	Question	Answer
		established in Regulation (EU) 2024/1624 as a directly applicable legal norm, can and must continue to be used by obligated entities as a fundamental basis for the practical application of due diligence obligations and must always be consulted in matters of interpretation. The same applies to the principle of proportion-ality.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	2
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 2(ii) Here is no legal definition concerning the trade name and a clarification is needed that a review of the commercial register is sufficient in order to comply with Article 2.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	3
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 22(1)(a)(ii) AMLR requires obliged entities to obtain the 'place and full date of birth' for relevant natural persons. In its discussion of the changes made following consultation on its first draft of the RTS, the EBA recognised there is limited utility in interpreting 'place' to include 'city' when recording details of the birth of certain classes of persons, and the costs of doing so would likely out-weigh any benefits obtained. As such, it clarified that 'place' should be interpreted to in-clude 'at least the country of birth' (emphasis in the EBA original) and need not include 'city'.

Name of the respondent	Question	Answer
		For beneficial owners, current due diligence practice is to collect the country of residence but not the city. While the jurisdiction in which a beneficial owner is resident is recognised as a legitimate indicator of potential ML/TF risk, the individual city of residence within a particu-lar country is unlikely to affect in any material way the ML/TF risk posed. Consequently, the value added by collecting the city of residence for due diligence assessment of beneficial owners is limited. Given this limited value added, and the analogous recognition by the EBA that the interpreta-tion of 'place' to include city for other classes of persons is a cost without a benefit, we request that the obligation to collect 'city, or its nearest alternative' in Article 3(b) be removed for beneficial owners, or, if AMLA does not wish to delete entirely, that the refer-ence to 'city' be moved to and combined with (c), such that it would be collected 'where available'.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	5
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We advocate clarifying what information may be obtained through customer questioning (for example, nationality is not a requirement under Article 6 of the RTS on CDD). Obtain information and verify information: A

Name of the respondent	Question	Answer
		clarification is required as to which information may be obtained through customer inquiry. For example, nationality is not a requirement under Article 6 - Documents for the verification of identity - of the RTS on CDD. Therefore also e.g. a driving licence, which does not show the nationality, should be sufficient for iden-tification, depending on the business or activity. Article 5 uses the term “obtain information” and should therefore specify that, in practice, such information may be collected through direct ques-tioning of the customer.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	6
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The addition of the word ‘act’ in Article 6(5) does not in itself raise significant concerns. We note the practical efficiency benefit in permitting non-face-to-face measures (like eID or EUDI Wallets) to be used in face-to-face contexts to complete verification within seconds. We welcome measures which promote the adoption of digital solutions in all verification scenari-os. Members have however identified operational uncertainty arising from the interaction be-tween Article 6(3) and the practical processes used to obtain and verify identity documents. In practice, institutions are exploring a range of solutions to address these challenges, includ-ing the use of digital verification technologies or external service

Name of the respondent	Question	Answer
		providers capable of vali-dating machine-readable identity documents. However, members emphasise that clear and consistent supervisory expectations are necessary to ensure that such approaches are recog-nised across the EU as fulfilling the requirements of Article 6. We would welcome clarification that the verification requirement is limited to confirming the identity of the relevant natural person, and therefore only extends to those data points nec-essary for that purpose and does not extend to additional information that is not required to establish identity. We consider that this reflects the intent of the co-legislators, as set out in Recital 4.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	7
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	In Article 7(3)(e) it is not clear what the insertion 'valid and …' immediately before 'up-to-date' is intended to mean, or whether AMLA intends there to be a distinction between the two (which the use of both may imply). We would welcome clarification that the verification requirement focuses on confirming the identity of the relevant natural person in non-face-to-face situations and does not impose any requirement (such as a requirement to re-verify any previously collected data where no substantive change has occurred) beyond this

Name of the respondent	Question	Answer
		purpose. Furthermore, we would like to note that currently, Members States apply an inconsistent ap-proach to their expectations in this area, specifically in respect of 'equivalent' documenta-tion, and we support AMLA in facilitating a harmonised, proportionate and risk-based ap-proach across the Union. We urge AMLA to work with National Competent Authorities to en-sure consistent application of supervisory expectations.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	9
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	We would appreciate a more detailed description of the obligations. Article 9 does not cur-rently make it sufficiently clear whose identity has to be verified (besides the customer's identity also the identity of the person the vIBAN is used for?).
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	12
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	We welcome the adoption of a risk-sensitive approach, recognising the importance of propor-tionate measures when assessing ownership and control structures. Members note that the wording is technology neutral, allowing obliged entities to apply manual, automated, or AI- supported processes in carrying out such assessments. Members would welcome confirmation that the term 'assess' is intended in the context of proportionality and

Name of the respondent	Question	Answer
		risk-based principles, permitting firms to utilise technology-supported assessment solutions, provided that outcomes are appropriate and satisfy supervisory expectations. With regard to the risk-based approach and the principle of proportionality the presence of non-EU entities should only be relevant where those jurisdictions present heightened ML/TF risk. Criterion 1 (b) should refer to high-risk third countries as defined in the AML Regulation, rather than to all non-EU jurisdictions.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	13
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	We are concerned regarding the current scope and practical interpretation of ‘senior manag-ing official’ (SMO) under Article 63 AMLR. The Level 1 definition extends beyond members of the management body in its management function to ‘natural persons who exercise executive functions […] and are responsible, and accountable to the management body, for the day-to-day management’ of the entity. In practice, this supplementary clause remains insufficiently precise and risks being interpret-ed too broadly, potentially capturing multiple layers of senior employees below the formal management body. This clause seems to operate as a fallback, for example where there is no clearly identifiable management

Name of the respondent	Question	Answer
		body, which would be consistent with a proportionate, risk-based approach. As a result, the collection of SMO data under Article 13 may become disproportionate, partic-ularly for wholesale institutions operating complex group structures. Overly broad interpreta-tions would significantly increase the number of individuals subject to identification, verifica-tion, and ongoing CDD obligations, without delivering a commensurate improvement in ML/TF risk mitigation. AMLA's mandate under the RTS is limited and substantive amendments to the Level 1 defini-tion would need to be addressed by the co-legislators. Nevertheless, members consider it important to emphasise the operational challenges and risks of inconsistent interpretation across Member States. In the absence of legislative amendment, we encourage AMLA to issue Level 3 guidance to provide supervisory clarity on the practical scope of the SMO concept. Such guidance could help ensure a proportionate and harmonised approach until the Level 1 framework is revisit-ed, reducing the risk of inconsistent reporting to transparency registers and avoiding undue operational burden for obliged entities.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	17

Name of the respondent	Question	Answer
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 17 imposes unrealistic AML obligations on CIUs and custodian banks without direct in-vestor relationships. It goes beyond AMLR by creating an upstream AML obligation that is in-compatible with established market practice and therefore should be amended to explicitly exclude publicly offered funds from end investor identification by CIUs and custodian banks. Article 17 of the draft RTS on CDD can and should, from a legal perspective, only be under-stood as a provision designed to facilitate situations in which the management company or the CIU is already subject to a primary CDD obligation towards the investor in question. Therefore, it should be formulated as a mere facilitative provision. A general look-through approach would not be appropriate from a risk-based perspective and would often be impossible in practice. The current draft RTS should be amended to remove the clearly stated obligations regarding the identification and verification of the end investors of a public fund, or to include a provi-sion stating that these obligations do not apply to public funds. However, a merely risk-based qualification in Recital 14 is not sufficient for that purpose. So long as the operative wording of Art 17 creates the impression that the CIU must secure the availability of identification data relating to underlying investors, the systemic

Name of the respondent	Question	Answer
		misunderstanding remains. What is re-quired, therefore, is a clarification in the directly binding text of Art 17 itself, and not mere-ly in the recitals. Therefore, the scope of the current Art 17 should be amended to clarify that it applies exclusively where a CIU or management company has a direct CDD obligation due to direct investor contact. Any wording that could be interpreted as imposing such obli-gations indirectly should be removed. Intermediary institutions already perform effective AML and CDD measures for fund investors. The idea of intermediaries acting as qualified third parties for CIUs remains, at present, operationally and legally unrealistic and might have da-ta protection and liability concerns. Conversely, Art. 17 should expressly not apply to those retail public funds that are distributed exclusively through credit institutions or financial institutions and in which the CIU has no direct AML-relevant business relationship with the end investor. In summary, Art. 17 should be understood and designed as a limited, risk-based relief provi-sion for CIUs, and not as the basis for a general look-through approach to end investors in intermediary-based retail fund structures. Such a clarification would be more consistent with Union law and would provide significantly greater legal certainty in practice. It would also prevent the RTS from unintentionally impairing market structures in Member States without generating any corresponding AML/CFT added value.

Name of the respondent	Question	Answer
		Certain tasks like investment management can be delegated by management companies, Class 3 investment firms to which these tasks can be delegated should not be required to ex-ercise CDD and transaction monitoring since they have no direct contact with the persons and entities investing in these funds. The delegation should not constitute a group relationship.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	18
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	We would welcome a more detailed clarification as to which information on the purpose and intended nature is to be obtained in the case of a business relationship and which information is to be obtained in the case of an occasional transaction. In the first sentence of Art 18 the term “where necessary” gives wide room for interpretation. We suggest to add “where nec-essary and taking the nature of the business into account”. Examples: Article 18(a) “economic rationale of the occasional transaction” is not generally applicable to gambling activities and not always to the purchase of high value goods. Article 18(b) gambling activities by customers are often spontaneous. Article 18(d) “destination of funds” is not relevant for some activities of obliged entities.

Name of the respondent	Question	Answer
		The remarks are also relevant for the proposed Art 24.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please specify which recital you refer to, and share your comments below.	Recital 10 We support the intention to ensure that the identification of SMOs remains a measure of last resort. There is still significant uncertainty regarding the practical interpretation of the SMO concept itself. The Level 1 text defines SMOs as follows: '[f]or the purpose of this paragraph, 'senior man-aging officials' means the natural persons who are the executive members of the manage-ment body, as well as the natural persons who exercise executive functions within a legal entity and are responsible, and accountable to the management body, for the day-to-day management of the entity.' This formulation, in particular the conjunctive 'as well as' and the broad reference to natu-ral persons exercising executive functions, risks an overly expansive interpretation. In prac-tice, this could extend identification and verification obligations beyond members of the for-mal management body to multiple layers of senior employees involved in operational man-agement, particularly within complex wholesale structures. This would significantly increase Customer

Name of the respondent	Question	Answer
		Due Diligence (CDD) requirements without delivering a commensurate improvement in Money Laundering or Terrorist Financing (ML/TF) risk mitigation. In the absence of legislative amendment – which could take several years – we request AMLA to provide supervisory clarification on the practical interpretation of the SMO concept through Level 3 guidance. Such guidance could help to promote a consistent and proportion-ate approach across Member States until such time as the co-legislators may revisit the issue in the Level 1 framework. We also note the concept of 'doubts' referenced in Recital 10 is not defined in the Regula-tion, which may lead to divergent supervisory expectations and market practices regarding when recourse to SMO identification is appropriate. It would be helpful if AMLA could provide guid-ance on this concept, the better to ensure shared understanding and consistent practice from obliged entities. Recital 12 We request confirmation that this Recital reflects AMLA's intended interpretation of relevant AMLR requirements, and that the PPTA concept applies solely to persons exercising a legally conferred authority (we refer AMLA to the suggested PPTA definition we have previously sub-mitted in our consultation response to the EBA, and in later direct interaction with AMLA). Individuals who merely act in the course of their

Name of the respondent	Question	Answer
		professional duties for the customer should not be included, ensuring consistent implementation across Member States and avoiding a disproportionate expansion of CDD obligations. If AMLA cannot provide this clarity at Level 2, AMLA should provide Level 3 supervisory guid-ance to harmonise interpretation and support proportionate implementation. Recital 21 The newly inserted Recital 21 is welcomed, the recital however underscores ongoing uncer-tainty regarding the definition of 'group,' particularly for entities with non-EU headquarters. We request AMLA to clarify that 'group' may include subsidiaries and branches in third coun-tries, provided that they apply AML/CFT standards equivalent to those required under the EU framework. This would reflect the reality of cross-border banking groups and support the effective use of information already collected within the group, including at global level. Moreover, we would like to note that obliged entities would need to operate within applicable data protection requirements, including GDPR, and ensure that appropriate safeguards are in place for the sharing of information across jurisdictions.

Name of the respondent	Question	Answer
		Furthermore, we also note that the recital refers to understanding 'for instance, the purpose and intended nature of the beneficial ownership or occasional transaction' and 'as part of the audit acceptance process'. Members have not identified a clear interpretation of these references and would welcome clarification of the intended scope and meaning in practice. Overall, we support the principle that existing information should be leveraged wherever pos-sible to avoid duplication. We would welcome the principles reflected in this recital being carried through to the subsequent operative articles, the better to ensure information is used effectively to meet AML/CFT requirements while minimising unnecessary administrative burden.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Do you have any comments on the Annex in the draft RTS?	Yes
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	Please share your comments below.	comments to further articles: Art 21: We are concerned that Article 21 of the revised RTS significantly limits the practical ability to rely on central registers, including Transparency Registers and commercial registers, when applying simplified due diligence. As drafted, obliged entities may use these registers only for identification, but must verify the information using a different source, often by requesting confirmation from the customer.

Name of the respondent	Question	Answer
		In many Member States, including Austria, company and commercial registers carry legal ef-fect and are widely recognized as independent, reliable sources of corporate information. Requiring firms to disregard such registers for verification purposes introduces unnecessary bureaucracy, undermines the purpose of simplified due diligence, and provides no additional assurance. Members also question the logic of requiring customers to confirm information they themselves provided to a public register, which adds process burden without improving the quality or reliability of the data. We request AMLA to revise Article 21 to permit obliged entities to use central registers as both identification and verification sources in low-risk scenarios, where those registers carry legal reliability in the relevant jurisdiction. We also request reconsideration of the re-strictions created by Article 21(2), which narrow the available verification channels in a way that is inconsistent with a genuinely simplified approach. Allowing reliance on central regis-ters for both identification and verification would maintain proportionality, reflect Member State legal realities, and avoid unnecessary customer outreach and friction. Art 22: low risk pooled accounts should be continued to be treated as subject to SDD It is crucial that obliged entities have sufficient time for implementing the multitude of delegated acts. See also

Name of the respondent	Question	Answer
		the recently published Commission's Communication "A Simpler, Clearer and Better Enforced EU Rulebook", 28.4.2026, COM(2026) 380, in which the Commission announces re-alistic transposition and implementation timelines.
Wirtschaftskammer Österreich - Austrian Federal Economic Chamber	How would you rate the proposals set out in the draft RTS overall?	Neutral
Wirtschaftsprüferkammer	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In principle, we agree with the proposals. However, we believe that some points require further elaboration or clarification: 1. Article 5 requires obliged entities to collect information on all nationalities of the customer or any natural person acting on behalf of the customer or for the benefit of those for whom the activity is carried out. As a rule, enquiries regarding this can only be made to the customer themselves. However, it is not possible to verify the information provided by the customer regarding nationalities, as German identity documents (identity card, passport) state only one nationality. Article 5 should therefore be supplemented with the following sentence: "Enquiring with the customer is sufficient to fulfil the obligation. A separate verification of the information is not required." 2. Article 6(3) stipulates that obliged entities must take appropriate measures to ensure that the documents presented for identity verification are genuine and have not been forged or tampered with. In the case of national documents issued by public authorities, such as passports or identity cards, such verification is feasible.

Name of the respondent	Question	Answer
		However, it becomes more difficult for obliged entities when, for example, extracts from registers – particularly from foreign registers – are presented, as these do not usually feature security features as is the case with official documents (identity cards, passports). In our view, Article 6(3) should therefore be amended accordingly: “The obliged entities shall, where possible, take appropriate measures to ensure that all documents obtained for the purpose of verifying the identity of the natural person in accordance with Article 22(6)(a) and Article 22(7)(a) of Regulation (EU) 2024/ 1624 in accordance with paragraphs 1 and 2 are genuine and have not been forged or tampered with.” 3. Article 8 requires that sources of information be verified for reliability and independence. Such verification is straightforward in the case of official documents from one’s own Member State. However, it can prove more difficult with international documents. Furthermore, it is unclear whether an ‘internal’ assessment of the reliability and independence of the sources of information is sufficient, or whether additional documentation is expected. In the latter case, the documentation burden for those subject to the obligation would increase significantly without any apparent added benefit, which is why we advocate that an ‘internal’ assessment of the reliability and independence of information sources should be deemed sufficient. Furthermore, the reliability of a source should also be deemed confirmed if the information is found in several other sources.

Name of the respondent	Question	Answer
		4. Article 10(b)(iv) permits the collection of information from documents of the legal entity in which the beneficial owner is named and in which the identity of the named person is confirmed by persons authorised to certify documents. In our view, these can only be persons who are employed by the legal entity. Nevertheless, we consider a clarifying formulation to be desirable. We therefore propose the following addition: “Documents of the legal person or the legal arrangement in which the beneficial owner is named and in which the identity of the named person is confirmed by persons within the legal person or the legal arrangement who are authorised to certify documents.” 5. Article 13 governs the identification of senior managers where they are deemed to be beneficial owners. It is unclear exactly who is included in the definition of ‘senior managers’. From the perspective of risk-proportionality, reference should be made here to the executive members of a company’s management body. We suggest that a corresponding clarification be included.
Wirtschaftsprüferkammer	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In our view, the regulations can be applied to the full range of products and services offered by the entities we supervise. However, it should be noted that there are provisions that focus very strongly on transactions, such as Article 18(b) to (d), Article 26(1)(b) or Article 28. In the case of auditors/certified public accountants, transactions play a very minor role, if any at all.

Name of the respondent	Question	Answer
		Precisely because the Technical Regulatory Standard is intended to apply to both the financial and non-financial sectors, it would be desirable to clarify in the provisions primarily concerned with transactions that these do not apply where the remuneration of the services provided by the obligated entities is at issue.
Wirtschaftsprüferkammer	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Some provisions allow for the effective application of the risk-based approach, e.g. Article 19(3). In the case of other provisions, however, it is not yet possible to apply the risk-based approach in this way. The scope of the data to be collected or the documentation requirements, and the associated effort involved, are in some cases significantly disproportionate to the benefits gained in terms of anti-money laundering insights (e.g. Article 13). It would be desirable, particularly with regard to documentation and data collection requirements, to allow for a degree of flexibility that is more proportionate to the risk.
Wirtschaftsprüferkammer	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes, auditors/chartered accountants cannot obtain specific information on transactions, as this is often not available to them. However, we do not consider alternative solutions to be necessary in such cases. In these instances, it would be better to use alternative wording such as "where available" to make it clear that the information does not necessarily have to be collected from every obligated party.
Wirtschaftsprüferkammer	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	We have no further proposals for simplified due diligence requirements.

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	
Wirtschaftsprüferkammer	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Wirtschaftsprüferkammer	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	6. Article 18(b) to (d) sets out requirements regarding the information to be obtained in the case of occasional transactions. In our view, the current provision is not sufficiently clear in this regard and could also be interpreted to mean that obliged entities must verify the specific source of the funds used to pay for their services. Where services are provided within a business relationship, the vagueness of the provision does not necessarily lead to misunderstandings, as the draft RTS on criteria for business relationships, occasional transactions and related transactions, as well as lower thresholds in Article 1(1), contains a corresponding definition of occasional transactions. However, there are also a few separate services provided by auditors/certified public accountants outside a long-term business relationship (for example, one-off tax advice). In such cases, it is unclear whether the obliged entity must comply with the requirements of Article 18(b) to (d). As this would lead to a significant increase in administrative burden without any discernible added value, we advocate at this point for a clarifying formulation making it clear that an occasional transaction does not refer to the payment for the obliged party's services. This could read as follows: "Occasional transactions that trigger the requirements of Article 18(b) to (d) do not

Name of the respondent	Question	Answer
		include the remuneration of the person liable for their services.”.
Wirtschaftsprüferkammer	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	29
Wirtschaftsprüferkammer	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	7. Articles 29 and 30 stipulate that obliged entities must determine whether their customers or beneficial owners are subject to targeted financial sanctions. To carry out these checks, obliged entities should use automated screening tools or solutions, or a combination of automated screening tools and manual checks. However, Article 30 does not provide for the option of using exclusively manual checks, provided that the size, business model, complexity or nature of the obliged entity’s business activities justify this – as permitted in Article 19(3) (identification of politically exposed persons). It is not clear why the option of exclusively manual checks is not provided for in the case of targeted financial sanctions. Particularly for very small practices, whose clients come from the immediate local area and whom they have generally known for many years, the use of automated screening tools is often associated with high costs that are disproportionate to their actual income. Even with the use of a screening tool, the information gained in these cases is no greater than that obtained through a manual check. We therefore propose adding the following to Article 30(a): “Obliged entities may only carry out manual checks of

Name of the respondent	Question	Answer
		information subject to verification under this point if such manual checks are proportionate to the size, business model, complexity or nature of their business activities.”
Wirtschaftsprüferkammer	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Wirtschaftsprüferkammer	Do you have any comments on the Annex in the draft RTS?	No
Wirtschaftsprüferkammer	How would you rate the proposals set out in the draft RTS overall?	Inadequate
World Council of Credit Unions	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	N/A
World Council of Credit Unions	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	World Council of Credit Unions (WOCCU) appreciates the focus on proportionate, risk-based CDD measures and believes it is critical to effectively prevent financial crimes. We support AMLA’s efforts to place proportionality and a principle-based approach at the heart of this work. However, we anticipate challenges to an effective application of the risk-based approach. To minimize some of those challenges, WOCCU requests that AMLA more clearly include financial inclusion as part of the guiding principles stated in the document.

Name of the respondent	Question	Answer
		Similar to international guidelines such as those from the Financial Action Task Force (FATF), it is important these standards specifically state financial inclusion is a key principle and consideration. Interpretations of CDD standards can differ among supervisory staff. There is often a disconnect between a risk-based requirement that allows for thorough but flexible procedures to meet the CDD objectives, and the way it is applied by examiners onsite at a local financial institution. This disconnect can be caused by less experienced or an overly strict examiner who will only accept the most common, mainstream forms of identification or require over compliance regardless of the risk level. It can also be due to a lack of updated information or understanding of risks in a particular area or situation. A supervisory disconnect often disproportionality impacts efforts towards financial inclusion, especially when individuals have unique situations. These situations include vulnerable groups such as migrant workers, refugees, the elderly and individuals experiencing homelessness. It also increases the compliance burden and redirects resources that could otherwise be focused on high-risk areas. The unintended consequence of AML/CFT practices that do not allow for sufficient flexibility and proper risk assessments results in financial exclusion. It provides further opportunities for financial criminals to take advantage of vulnerable populations forced to use unregulated bad actors for basic financial services. It is

Name of the respondent	Question	Answer
		critical that the standards encourage supervisors to recognize that financial institutions may need to utilize flexibility differently based on their own service offerings, location, and client base to achieve the same outcome of proper CDD. Moreover, risk-based CDD approaches that allow for broader financial inclusion do not diminish the outcome of properly verifying the identity of the individual but rather highlight different approaches to a successful CDD process. The FATF Recommendation 1 and the corresponding guidance, updated in 2025, provides helpful language to encourage supervisors to consider financial inclusion when evaluating the sufficiency of their risk-based approach. In its CDD standards, we urge AMLA to recognize that a risk-based approach requires clear risk assessments and dialogue between the regulator and regulated. The challenge of consistent implementation and understanding the true risk are concepts that also extend to other areas of CDD such as Enhanced Due Diligence (EDD) methods.
World Council of Credit Unions	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Please see below.

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	
World Council of Credit Unions	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	CDD requirements often place a disproportionate compliance burden on credit unions. Credit unions are typically smaller asset size financial institutions offering traditional deposit and loan services. WOCCU appreciates AMLA's proposed simplified due diligence measures in lower ML/TF risk situations. However, a key component to effective simplified measures is a clear understanding of when they can be used. Additional information to ensure both a financial institution and regulator have the same understanding and assessment of low-risk situations would support greater use and ease the compliance burden. Additionally, we caution against overly prescriptive data requirements if other data points are readily available to supplement the verification process. Flexibility within even the simplified measures can be helpful. For example, the ability to use a combination of foreign government issued identification cards (that may lack one element of mandatory data) and alternative measures such as utility bills and community attestations to fully meet the CDD objective within low-risk situations is valuable. WOCCU requests that AMLA carefully consider and minimize the breadth of firm requirements and establish acceptable alternatives for mandated data points. The type of information required must be comprehensive to verify identity but flexible enough to streamline administrative burden and allow for what is both most reliable and readily available.

Name of the respondent	Question	Answer
		This concept also extends to other measures that are difficult to anticipate what a regulator's interpretation will be, such as customer identification data updates in low-risk situations. WOCCU requests that AMLA include additional information and clarification to help individual institutions understand what constitutes a 'satisfied' understanding when determining whether the listed triggers are present. A credit union can deploy resources more effectively with further clarity.
World Council of Credit Unions	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? WSBI-ESBG	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6
WSBI-ESBG	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 6(2) – ESBG would appreciate it if AMLA could provide examples of “other credible means” for obtaining information on an identity document. Art. 7 pt. 3: • Through the remote solution described in paragraph 2, the documents and data shall be first collected and then verified. Therefore, in our understanding, the wording "collected and verified" would be more appropriate. • Through the remote solution, the documents and data shall also be obtained and not only verified. Therefore, in our understanding, the wording "obtained and verified" would be more appropriate. Article 7(4): We would appreciate it if AMLA could clarify why the previous section was deleted. In Article 7(4), the last clause should be deleted. Obliged

Name of the respondent	Question	Answer
		entities cannot document every individual case in which identification in accordance with Article 22(6) of the AMLR was not possible. Article 9: We would appreciate a more detailed description of the obligations. Article 9 does not currently make it sufficiently clear whose identity must be verified (beyond the customer's identity, also the identity of the person for whom the vIBAN is used?). Article 11 (4) c): When obliged entities assess a customer's ownership and control structure, they are required to consider both "beneficial ownership through ownership interest" and "control through ownership interest." We would appreciate it if AMLA could clarify whether the above framework requires obliged entities to identify beneficial owners by applying two distinct calculations: (i) calculating beneficial ownership on the basis of the actual ownership percentages, and (ii) applying a 100% attribution where there is an ownership interest of 50% or more, irrespective of the exact percentage held. In particular, guidance from AMLA would be appreciated on whether these approaches/calculations are intended to be applied in parallel and, if so, how obliged entities should reconcile the results in practice.

Name of the respondent	Question	Answer
		Article 12 a): Obliged entities are required to treat an ownership and control structure as complex where a legal arrangement (e.g. express trust, private equity trust) or a similar legal entity, such as a foundation, is present at any level of the structure. Guidance would be appreciated on whether the mere presence of a legal arrangement, irrespective of the size of its ownership interest (e.g., a minority interest below 10%), automatically renders the structure complex, or whether materiality thresholds are intended to apply in a risk-based manner. We call on the AMLA to clarify how the relationship between “complex structures” referred to in Art. 12 should be considered in conjunction with Annex III(1)(f) of the AMLR. How do the two relate to each other? Article 13 a): We would appreciate it if AMLA could clarify whether the requirement to collect the same information on senior managing officials as for beneficial owners is intended to refer exclusively to identifying information (such as name, date and place of birth, nationality), or whether it also extends to customer due diligence measures, including the determination and assessment of politically exposed person (PEP) status. ESBG has some concerns regarding Art. 17 draft CDD RTS (incl. recital 14) on whether it is fully aligned with the respective paragraphs in the AMLR, particularly regarding what is foreseen for high-risk intermediary institutions.

Name of the respondent	Question	Answer
		Article 17: it imposes unrealistic AML obligations on CIUs and custodian banks without direct investor relationships. Article 17 goes beyond AMLR by creating an upstream AML obligation that is incompatible with established market practice and therefore should be amended to explicitly exclude public-ly offered funds from end investor identification by CIUs and custodian banks. Article 17 should be amended to clarify that it applies exclusively when a CIU or management company has a direct CDD obligation arising from di-rect investor contact. Any wording that could be interpreted as imposing such obligations indirectly should be removed. Intermediary institutions al-ready perform effective AML and CDD measures for fund investors. The idea of intermediaries acting as qualified third parties for CIUs remains, at present, operationally and legally unrealistic and might have data protection and liabil-ity concerns. Article 18 a) iv) – Regarding “Identification of the purpose and intended nature of a business relationship or occasional transaction”, we would appreciate it if AMLA could explain the term "wider group". Additionally, we would welcome more detailed clarification on which information regarding the purpose and intended nature is to be obtained in the case of a business relationship, and which information is to be obtained in the case of an occasional transaction.

Zagrebačka banka d.d.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	(i) Insufficient flexibility Firstly, Article 10 RTS (verification of the beneficial owner) assumes that obliged entities have legal or technical access to a range of information sources listed in Article 10(b). In the Croatian jurisdiction, obliged entities do not have access to several of these sources, including passport, residence or tax registers, and verified beneficial owner information held by other credit or financial institutions. As a result, obliged entities are objectively unable to apply Article 10(b) RTS as drafted, irrespective of the product type or ML/TF risk profile. Secondly, Article 30 RTS (targeted financial sanctions) introduces ambiguity that affects consistent application across products and services. Article 30(a)(i) RTS does not specify whether the date of birth is expected to be used as identifying data in the sanctions screening process, despite the EBA Guidelines on restrictive measures clearly requiring date of birth to be used as supporting information within name screening. In addition, Article 30(d) RTS requires screening and

Name of the respondent	Question	Answer
		verification to be performed “without undue delay”, while the Regulation and the EBA Guidelines require screening to be performed “immediately” after a new or amended restrictive measure enters into force. This divergence creates uncertainty regarding the applicable operational standard. Taken together, these elements limit legal certainty and prevent uniform application of the RTS across different products and services. (ii) Proposed drafting improvements To address these shortcomings, the RTS should:explicitly allow obliged entities to rely on best available national sources for beneficial owner verification where the sources listed in Article 10(b) RTS are not l accessible, provided that the objectives of Article 22 of Regulation (EU) 2024/1624 are met; provide clear guidance on the permissibility and conditions of any cross-institutional reliance on beneficial ownership information, ensuring compatibility with national banking secrecy regimes; align Article 30 RTS with the EBA Guidelines by clarifying that date of birth is used as supporting information within name screening for sanctions purposes; and clarify whether “without undue delay” in Article 30(d) RTS is intended to reflect the same standard as “immediately” under the Regulation and the EBA Guidelines, or to define a different threshold. These amendments would ensure proportionality, legal certainty and consistent application of the RTS across Member States without lowering AML/CFT standards.

Name of the respondent	Question	Answer
Zagrebačka banka d.d.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Proposals set out in these draft RTS do not fully allow effective application of a risk-based approach towards compliance with AML/CFT requirements. While the draft RTS reflect a risk-based approach at a conceptual level, several provisions limit its effective application in practice and reduce the ability of obliged entities to tailor measures to actual ML/TF and sanctions risks. (i) Provisions concerned Firstly, Article 10 RTS (verification of the beneficial owner) introduces expectations regarding the types of sources to be used for verification. These expectations apply irrespective of the risk profile of the customer, product or transaction, and without sufficient consideration of national legal and technical constraints. Where the listed sources are objectively unavailable, obliged entities are unable to calibrate verification measures proportionately. Secondly, Article 30 RTS (targeted financial sanctions) creates uncertainty that affects risk-based implementation. The RTS do not specify whether the date of birth is expected to be used as part of sanctions screening, despite the EBA Guidelines on restrictive measures requiring date of birth to be used as supporting information within name screening. This lack of clarity complicates alert management and risk-based decision-making in sanctions screening processes. In addition, Article 30(d) RTS requires screening and verification to be performed “without undue delay”, while the Regulation and the EBA Guidelines require screening to be performed “immediately” after new or amended restrictive measures enter into force. The

Name of the respondent	Question	Answer
		absence of alignment between these standards introduces ambiguity regarding the expected level of urgency and may lead to inconsistent supervisory expectations. (ii) Proposed drafting improvements To support the effective application of a risk-based approach, the RTS should clarify that obliged entities may select verification sources for beneficial owner verification proportionate to the identified ML/TF risk, taking into account national legal frameworks and availability of information, rather than being expected to demonstrate attempted use of sources that are objectively inaccessible and explicitly align Article 30 RTS with the EBA Guidelines by clarifying that date of birth is used as supporting information within name screening for sanctions purposes; andclarify whether "without undue delay" in Article 30(d) RTS is intended to reflect the same standard as "immediately" under the Regulation and the EBA Guidelines, or to define a distinct threshold, including guidance on what constitutes "undue delay" in practice. These clarifications would enhance legal certainty and enable obliged entities to apply AML/CFT and sanctions requirements in a risk-based, proportionate and consistent manner across Member States.
Zagrebačka banka d.d.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Yes. Considering the nature of our business, including its size, risk profile and complexity, there are situations in which the information to be collected for customer due diligence purposes under the draft RTS is routinely unavailable, and the RTS do not provide a clear

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	alternative solution. In particular, in the Croatian jurisdiction, obliged entities do not have legal or technical access to several information sources listed in Article 10(b) RTS for the verification of the beneficial owner. Specifically, access is not available to:national registers such as passport, residence or tax registers, beyond the very limited scope explicitly made accessible under national law; verified beneficial owner information held by other credit or financial institutions, as no legally or operationally established mechanisms exist for cross-institutional access or exchange of such information. As a result, obliged entities are objectively unable to apply Article 10(b) RTS as drafted, even where the beneficial owner has been identified, the ownership structure is transparent and no elevated ML/TF risk indicators are present. The RTS do not currently provide sufficient guidance on how to proceed where the listed sources are unavailable in practice. Proposed alternative solutions: To ensure operational feasibility and consistent application across Member States, the RTS should explicitly allow obliged entities to rely on best available national sources and verification tools where the sources listed in Article 10(b) RTS are not legally or technically accessible; confirm that the list of sources in Article 10(b) RTS is non-exhaustive and subject to proportionality and national availability. These adjustments would allow obliged entities to meet

Name of the respondent	Question	Answer
		the objectives of Article 22 of Regulation (EU) 2024/1624 while avoiding different practices.
Zagrebačka banka d.d.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Taking into account AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624, the draft RTS should further clarify simplified due diligence (SDD) measures applicable in situations of lower ML/TF risk, in order to ensure proportionality and operational feasibility. While Article 20 RTS sets minimum identification requirements for low-risk situations, certain elements are difficult to apply in practice. Proposed clarifications and simplified measures: Trade name requirement - Article 20(1)(b)(ii) RTS requires the collection of a legal entity's trade name where it differs from the registered name. In practice, trade names do not necessarily derive from, or appear in, official company registers and are not always acessible. Proposed clarification: For the purposes of SDD, the RTS should clarify that trade name information is required only where it is readily available from reliable sources or explicitly declared by the customer, and that the absence of such information should not prevent the application of SDD. Beneficial owner verification under SDD In low-risk situations, obliged entities should be permitted to rely primarily on ceofficial company registers. These clarifications would support proportionality, reduce unnecessary administrative burden and ensure

Name of the respondent	Question	Answer
		consistent application of simplified due diligence across Member States.
Zagrebačka banka d.d.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 10 RTS – Verification of the beneficial owner In certain Member States, including Croatia, obliged entities do not have legal or technical access to some of the information sources listed in Article 10(b) RTS, in particular national registers such as passport, residence or tax registers and verified beneficial owner information held by other credit or financial institutions. The RTS would benefit from clearer confirmation that the list of sources is non-exhaustive and that obliged entities may rely on best available national sources where RTS-listed sources are inaccessible. Article 30 RTS – Targeted financial sanctions Article 30 RTS would benefit from alignment with existing Union-level standards. In particular, clarification is needed that date of birth is used as supporting information within name screening, in line with the EBA Guidelines on restrictive measures, and that the requirement to perform screening “without undue delay” is consistent with the obligation to act “immediately” following the entry into force, update or lifting of restrictive measures.
Zagrebačka banka d.d.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Zagrebačka banka d.d.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10

Name of the respondent	Question	Answer
Zagrebačka banka d.d.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	paragraph 1 point (a)
Zagrebačka banka d.d.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	paragraph 1 point (a) (i)
Zagrebačka banka d.d.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Zagrebačka banka d.d.	Do you have any comments on the Annex in the draft RTS?	No
Zagrebačka banka d.d.	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Zagrebačka banka d.d.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or	Manageable impact

	implementing the provisions of these draft RTS.: Recurrent costs	
Zagrebačka banka d.d.	Please justify your answer to the previous question and provide evidence where possible.	Proposed amandmants will impact policies and procedures, system upgrades and staff training.
Zero21 Ltd	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Partially agree. While the draft RTS provide a useful harmonised framework, they cannot be effectively applied across the full range of products and services without further flexibility and operational calibration.
Zero21 Ltd	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Partially agree. While the draft RTS formally incorporate elements of a risk-based approach (RBA), they do not fully enable its effective application in practice. In several areas, the RTS remain overly prescriptive, limiting the ability of obliged entities to calibrate CDD measures proportionately to risk.
Zero21 Ltd	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are multiple recurring situations where the information required under the draft RTS is not readily available, and the RTS do not sufficiently provide alternative solutions. These gaps are particularly evident in occasional or non-face-to-face interactions, cross-border and digital environments, complex or opaque ownership structures.
Zero21 Ltd	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account	Additional simplified due diligence (SDD) measures should be explicitly included in the draft RTS. While the

	your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	draft recognises SDD in principle, it does not sufficiently operationalise it, which risks underuse of SDD, over-application of full CDD, reduced effectiveness of the risk-based approach.
Zero21 Ltd	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The draft RTS are a significant step toward EU-wide harmonisation of CDD, but they require further refinement to ensure operational feasibility, enable a true risk-based approach, reflect digital and cross-border realities.
Zero21 Ltd	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Zero21 Ltd	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Związek Przedsiębiorstw Finansowych w Polsce	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	Nie w pełni zgadzamy się, że propozycje zawarte w niniejszym projekcie RTS w obecnym brzmieniu umożliwiają skuteczne stosowanie podejścia opartego na analizie ryzyka w zakresie przeciwdziałania praniu pieniędzy i finansowaniu terroryzmu.

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	Projekt w wielu miejscach przewiduje wymogi, które mogą ograniczać możliwość dostosowania zakresu pozyskiwanych informacji do rzeczywistego poziomu ryzyka klienta lub transakcji. Tymczasem podejście oparte na ryzyku wymaga, aby zakres stosowanych środków należytej staranności był adekwatny i proporcjonalny. Jednocześnie wskazujemy, że w niektórych przypadkach pozyskiwanie określonych kategorii danych nie jest konieczne dla zapewnienia skuteczności procesów przeciwdziałania praniu pieniędzy i finansowaniu terroryzmu, a ich nadmiarowe gromadzenie może prowadzić do naruszenia przepisów o ochronie danych osobowych wynikających z rozporządzenia (UE) 2016/679 oraz przepisów krajowych. W związku z powyższym przedstawiamy poniższe uwagi szczegółowe, których celem jest lepsze odzwierciedlenie podejścia opartego na ryzyku w niniejszym projekcie RTS: 1) Uwaga do artykułu 2(i) W działalności podmiotów zrzeszonych w ZPF identyfikowane są sytuacje w których pozyskanie drugiego imienia klienta nie jest konieczne dla zapewnienia bezpieczeństwa procesów AML/CFT, w szczególności, gdy: - instytucja obowiązana dysponuje innymi danymi pozwalającymi na jednoznaczną identyfikację i weryfikację tożsamości klienta (np. krajowy numer identyfikacyjny - w Polsce PESEL),

Name of the respondent	Question	Answer
		- ryzyko danego klienta zostało ocenione jako niskie, - w danym Państwie drugie imiona nie są faktycznie używane, a funkcjonują jedynie formalnie. Propozycja brzmienia artykułu 2(i): “i) In relation to the names and surnames of a natural person as referred to in Article 22(1), point (a)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain all surnames that feature on the identity document, passport or equivalent and first name or all names accordingly to the with the type and level of risk identified associated with particular client or obtaining of other data enabling the unambiguous identification of a person’s identity.”. 2) Uwaga do artykułu 4 W działalności podmiotów zrzeszonych w ZPF identyfikowane są sytuacje, w których pozyskiwanie informacji o miejscowości urodzenia klienta nie jest konieczne. Z perspektywy oceny ryzyka kluczowe znaczenie ma państwo urodzenia, natomiast miejscowość urodzenia klienta ma charakter pomocniczy i powinna być pozyskiwana jedynie wtedy, gdy nie jest możliwa jednoznaczna identyfikacja klienta lub występują dodatkowe czynniki ryzyka. W przypadku większości klientów urodzonych w państwach Unii Europejskiej wystarczające jest ustalenie państwa urodzenia. Propozycja brzmienia artykułu 4: „The information on place of birth as referred to in

Name of the respondent	Question	Answer
		Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name. Additional information on place of birth shall be collected accordingly to the type and level of risk identified associated with a particular client.”. 3) Uwaga do artykułu 5 W działalności podmiotów zrzeszonych w ZPF identyfikowane są sytuacje w których pozyskanie informacji o wszystkich obywatelstwach klienta nie jest konieczne dla zapewnienia bezpieczeństwa procesów AML/CFT. Sytuacje takie mogą mieć miejsce w szczególności, gdy klient posiada obywatelstwo państwa członkowskiego Unii Europejskiej oraz urodził się na jej terytorium, a jednocześnie nie występują inne czynniki podwyższające poziom ryzyka. Propozycja brzmienia artykułu 5: “For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall obtain information on nationality or all nationalities, accordingly to the with the type and level of risk identified associated with a particular client, or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted.”. 4) Uwaga do artykułu 20(1) W ocenie podmiotów zrzeszonych w ZPF w odniesieniu

Name of the respondent	Question	Answer
		do sytuacji niskiego ryzyka, katalog wymaganych danych powinien zostać ograniczony do minimum niezbędnego dla identyfikacji klienta. Jednocześnie proponujemy wyraźne powiązanie zakresu danych z poziomem ryzyka, w szczególności poprzez rezygnację z pozyskiwania drugiego imienia i ograniczenie danych o miejscu urodzenia do państwa. Propozycja brzmienia artykułu 20(1): „In situations of low risk, obliged entities shall obtain at least the following information to identify the customer and the person purporting to act on behalf of the customer: (a) for a natural person: i. first name and surnames; ii. country of birth; iii. date of birth; iv. nationality of the natural person or their statelessness, refugee or subsidiary protection status. (...)".
Związek Przedsiębiorstw Finansowych w Polsce	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Nie dotyczy
Związek Przedsiębiorstw Finansowych w Polsce	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account	Wskazujemy, że w praktyce rynkowej istnieją produkty finansowe, w których cel, charakter oraz wartość relacji

Name of the respondent	Question	Answer
	your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	gospodarczej wynikają bezpośrednio z umowy (np. produkty typu buy now, pay later). W takich przypadkach ponowne pozyskiwanie tych informacji od klienta nie tylko nie zwiększa efektywności AML, ale może prowadzić do dezorientacji klienta oraz zbierania danych już posiadanych przez instytucję obowiązaną. Tym samym dodatkowe zwrócenie się do Klienta o udzielenie odpowiedzi na przedmiotowe pytania będzie w naszej ocenie niezasadne. W związku z powyższym proponujemy następujące brzmienia: 1) art. 18: "Except for cases in which the purpose and economic rationale of the occasional transaction or business relationship and estimated amount of the envisaged activities follows directly from the agreement with the Client, for the purposes of Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, where necessary: a. in relation to the purpose and economic rationale of the occasional transaction or business relationship, taking into account the nature of the product or service provided, at least one of the following information: i. the reason the customer has requested the obliged entities' products or services; ii. the intended use of the products or services requested by the customer; iii. the reason for performing the occasional transaction; iv. whether the customer has additional business

Name of the respondent	Question	Answer
		relationships with the obliged entity or, where applicable, its wider group, and the extent to which that information influences the obliged entity's understanding of the customer. b. in relation to the estimated amount of the envisaged activities, at least one of the following information: i. the estimated amount of funds to be deposited; ii. the estimated amount of funds to be used in connection with the product offered or service provided; iii. information to understand the anticipated type and frequency of activities that are likely to be performed during the business relationship or occasional transaction; iv. information to understand the anticipated number, size, volume, type and frequency of transactions that are likely to be performed during the business relationship or occasional transaction. c. in relation to the source of funds, at least one of the following information to understand the activity that generated the funds and the means through which the customer's funds were transferred: i. employment income, including salary, wages, bonusses and other compensation from employment; ii. pension or retirement funds and government benefits including social benefits; iii. grants; iv. business revenue; v. capital provided by shareholders and intercompany funding; vi. loans and credit facilities; vii. savings and investments income;

Name of the respondent	Question	Answer
		viii. inheritance, gifts, sales of assets and legal settlements. d. in relation to the destination of funds, at least one of the following information: i. the expected types of recipient(s); ii. the jurisdiction where the transactions are to be received; iii. whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary. e. in relation to the business activity or the occupation of the customer, at least one of the following information: i. the occupation of the customer, including information on the customer's employment status; ii. the sector in which the customer is active, including information on customer's industry, operations, products and services; iii. whether the business activity or the occupation of the customer is regulated; iv. whether the customer is an obliged entity and the sector in which the customer operates; v. whether the customer is actively engaged in business; vi. geographical presence of the customer; vii. information on the main sources of revenues of the customer; viii. key stakeholders of the customer.". 2) art. 24: "Except for cases in which the purpose and economic rationale of the occasional transaction or business

Name of the respondent	Question	Answer
		relationship and estimated amount of the envisaged activities follows directly from the agreement with the Client, in order to apply simplified due diligence measures pursuant to Article 33(1), point (c), of Regulation (EU) 2024/1624, obliged entities shall at least take risk-sensitive measures to understand: (a) the intended use of the products or services requested by the customer; (b) where necessary, the estimated value of transactions during the business relationship or of the occasional transaction; (c) where necessary, the source of funds.”.
Związek Przedsiębiorstw Finansowych w Polsce	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	W ocenie podmiotów zrzeszonych w ZPF obecne brzmienie art. 32(1) dopuszcza co najmniej dwie odmienne interpretacje, co uzasadnia potrzebę jego doprecyzowania. W szczególności przepis ten może być rozumiany w następujący sposób: 1) Wyznacza on jedynie minimalny zakres atrybutów jakie musi posiadać środek identyfikacji elektronicznej lub kwalifikowana usługa zaufania do weryfikacji. Jednocześnie instytucja obowiązana nadal musi zidentyfikować wszystkie dane wskazane w art. 22(1) lit. a) rozporządzenia (UE) 2024/1624, 2) W przypadku dokonania przez instytucję obowiązaną weryfikacji tożsamości klienta poprzez środek identyfikacji elektronicznej lub kwalifikowaną usługę zaufania posiadającą te atrybuty, które wskazuje Załącznik I to nie musi ona pozyskiwać danych, które są wskazane w art. 22(1) lit. a) rozporządzenia (UE) 2024/1624 204 lecz nie ma ich w Załączniku I (np. drugie

Name of the respondent	Question	Answer
		imię). Wątpliwości interpretacyjne wynikają w szczególności z użytego sformułowania: “(...) in order to fulfil the requirements of Article 20(1), points (a) and (b), and Article 22(1) of that Regulation”. Jednocześnie przepis ten nie odwołuje się do art. 22(6), lecz wyłącznie do artykułów 20(1) lit. a) i b) oraz 22(1). Może to sugerować, że spełnienie wymogów określonych w Załączniku I prowadzi do pełnego wypełnienia obowiązków zarówno w zakresie identyfikacji, jak i weryfikacji tożsamości klienta, a nie jedynie określa warunki techniczne, jakie muszą spełniać środki identyfikacji elektronicznej lub kwalifikowane usługi zaufania. W konsekwencji nie jest jasne, czy analizowany przepis należy traktować jako lex specialis względem art. 22(1) lit. a) rozporządzenia (UE) 2024/1624 oraz art. 20(1) niniejszego projektu regulacyjnych standardów technicznych, czy też jako regulację o charakterze uzupełniającym, niewyłączającą obowiązku pozyskania pełnego zakresu danych. W związku z powyższym postulujemy o doprecyzowanie art. 32(1).

(Hellenic Loan Servicers Association)	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Ειδικά για τις εταιρείες διαχείρισης απαιτήσεων από δάνεια και πιστώσεις (Servicers), το επιχειρησιακό μοντέλο βασίζεται στη διαχείριση υφιστάμενων και συχνά παλαιών απαιτήσεων, οι οποίες αποκτώνται ή ανατίθενται από τρίτους πιστωτές. Η σχέση με τον οφειλέτη δεν προκύπτει από πρωτογενές onboarding ούτε συνοδεύεται κατ' ανάγκη από πλήρη και επικαιροποιημένα στοιχεία δέουσας επιμέλειας. Ορισμένες διατάξεις των σχεδίων ΡΤΠ φαίνεται να προϋποθέτουν την ύπαρξη ενεργής επιχειρηματικής σχέσης από το στάδιο έναρξής της, γεγονός που δεν ανταποκρίνεται στη φύση της διαχείρισης απαιτήσεων στη δευτερογενή αγορά. Κρίνεται συνεπώς αναγκαία η πρόβλεψη ειδικών ρυθμίσεων ή εναλλακτικών τρόπων συμμόρφωσης για Servicers, ιδίως ως προς την έννοια της κληρονομικότητας των στοιχείων CDD.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Υπό προϋποθέσεις, τα σχέδια ΡΤΠ επιτρέπουν την εφαρμογή προσέγγισης βάσει κινδύνου. Ωστόσο, σε ορισμένες διατάξεις παρατηρείται περιορισμένη ευελιξία ως προς την προσαρμογή των μέτρων δέουσας επιμέλειας στη φύση και τα χαρακτηριστικά των χαρτοφυλακίων που διαχειρίζονται οι Servicers. Χαρτοφυλάκια μη εξυπηρετούμενων απαιτήσεων, στα οποία δεν υφίσταται παροχή νέων χρηματοοικονομικών υπηρεσιών ούτε ενεργή συναλλακτική σχέση με τον οφειλέτη, εμφανίζουν διαφορετικό προφίλ κινδύνου σε σχέση με ενεργές τραπεζικές σχέσεις. Η εφαρμογή μέτρων ίδιας έντασης ενδέχεται να περιορίσει την ουσιαστική εφαρμογή της προσέγγισης βάσει κινδύνου.

Name of the respondent	Question	Answer
		Θα ήταν σκόπιμο τα σχέδια ΡΤΠ να προβλέπουν σαφέστερα κριτήρια ή γεγονότα ενεργοποίησης (risk triggers) για την εφαρμογή ενισχυμένων ή επικαιροποιημένων μέτρων CDD, ιδίως για τον κλάδο των Servicers.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Ναι, υπάρχουν περιπτώσεις στις οποίες οι πληροφορίες που απαιτούνται για σκοπούς δέουσας επιμέλειας δεν είναι συστηματικά διαθέσιμες για τις εταιρείες διαχείρισης απαιτήσεων. Ενδεικτικά, τέτοιες περιπτώσεις περιλαμβάνουν απαιτήσεις έναντι αποβιωσάντων φυσικών προσώπων, νομικά πρόσωπα σε λύση ή εκκαθάριση, καθώς και παλαιά χαρτοφυλάκια που δημιουργήθηκαν πριν από την καθιέρωση σύγχρονων απαιτήσεων CDD. Επιπλέον, σε πολλές περιπτώσεις, η ουσιαστική επικοινωνία με τον οφειλέτη δεν είναι εφικτή χωρίς νομικούς ή πραγματικούς περιορισμούς. Τα σχέδια ΡΤΠ δεν προβλέπουν επαρκώς εναλλακτικά ή υποκατάστατα μέτρα συμμόρφωσης για τέτοιες περιπτώσεις. Κρίνεται αναγκαία η ρητή αναγνώριση της αντικειμενικής αδυναμίας συλλογής ορισμένων πληροφοριών και η δυνατότητα reliance σε στοιχεία του αρχικού πιστωτή, δημόσια μητρώα ή τεκμηριωμένη διατήρηση της υφιστάμενης κατάστασης.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example	Λαμβανομένων υπόψη των χαρακτηριστικών και του χαμηλότερου προφίλ κινδύνου που παρουσιάζουν ορισμένες δραστηριότητες των Servicers, θεωρούμε ότι θα πρέπει να προβλεφθούν ρητά απλουστευμένα μέτρα δέουσας επιμέλειας στα σχέδια ΡΤΠ.

Name of the respondent	Question	Answer
	because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Τέτοια μέτρα θα μπορούσαν να εφαρμόζονται, ιδίως, όταν η δραστηριότητα περιορίζεται στην παθητική είσπραξη απαιτήσεων, δεν υφίσταται νέα χρηματοδότηση ή τροποποίηση των όρων της απαίτησης και όλες οι πληρωμές πραγματοποιούνται μέσω εποπτευόμενων τραπεζικών καναλιών εντός της Ένωσης. Η απουσία ρητής πρόβλεψης απλουστευμένων μέτρων για τέτοιες περιπτώσεις ενδέχεται να οδηγήσει σε δυσανάλογη κανονιστική επιβάρυνση χωρίς αντίστοιχο όφελος ως προς την πρόληψη κινδύνων ΞΧ/ΧΤ.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Πέραν των ανωτέρω, κρίνεται σκόπιμο να επισημανθούν ορισμένα ζητήματα που χρήζουν περαιτέρω αποσαφήνισης στο πλαίσιο εφαρμογής των σχεδίων Ρυθμιστικών Τεχνικών Προτύπων από τις εταιρείες διαχείρισης απαιτήσεων από δάνεια και πιστώσεις (Servicers), προκειμένου να διασφαλιστεί η αναλογικότητα και η ασφάλεια δικαίου. Ειδικότερα, οι υποχρεώσεις συνεχούς παρακολούθησης και περιοδικής επικαιροποίησης των στοιχείων δέουσας επιμέλειας θα πρέπει να ερμηνεύονται σε συνάρτηση με τη φύση της επιχειρηματικής σχέσης και την ύπαρξη ή μη ενεργών συναλλαγών, ιδίως σε περιπτώσεις διαχείρισης υφιστάμενων ή παλαιών απαιτήσεων. Η απουσία ρητών διευκρινίσεων ως προς το εύρος και την ένταση των εν λόγω υποχρεώσεων ενδέχεται να οδηγήσει σε δυσανάλογη εφαρμογή των μέτρων χωρίς αντίστοιχο όφελος για τη διαχείριση κινδύνων ΞΧ/ΧΤ. Περαιτέρω, το κανονιστικό πλαίσιο δεν αποσαφηνίζει επαρκώς τον βαθμό στον οποίο οι Servicers δύνανται

Name of the respondent	Question	Answer
		να βασίζονται στα στοιχεία δέουσας επιμέλειας που έχουν συλλεγεί από τον αρχικό πιστωτή κατά το στάδιο του onboarding, ιδίως σε περιπτώσεις μεταβίβασης ή ανάθεσης χαρτοφυλακίων. Η μηχανιστική επανεκτέλεση πλήρους CDD σε τέτοιες περιπτώσεις ενδέχεται να εγείρει ζητήματα αναλογικότητας και επιχειρησιακής εφαρμοσιμότητας. Τέλος, σε θέματα εντοπισμού και επαλήθευσης πραγματικών δικαιούχων νομικών προσώπων, καθώς και ως προς τη χρήση τεχνολογικών εργαλείων και πηγών δεδομένων για σκοπούς KYC/KYB, θα ήταν χρήσιμες περαιτέρω κατευθυντήριες γραμμές, προκειμένου να ενισχυθεί η συνεπής και ομοιόμορφη εφαρμογή των RTS από τον κλάδο των Servicers σε ευρωπαϊκό επίπεδο. Προτείνεται η πρόσβαση των Servicers σε δημόσια αρχεία προσωπικών δεδομένων οφειλετών χωρίς συναίνεση, βάσει του έννομου συμφέροντος (άρθρο 6 παρ. 1(στ) GDPR), ώστε να διενεργούνται αποτελεσματικά οι απαραίτητοι έλεγχοι CDD και AML, διασφαλίζοντας τη συμμόρφωση με τις κανονιστικές υποχρεώσεις πρόληψης ξεπλύματος χρήματος και αναγνώρισης ταυτότητας. Εξ αυτού του λόγου θα πρέπει είτε οι εταιρείες να έχουν πρόσβαση σε αντίστοιχα εθνικά συστήματα είτε να απλοποιηθούν για αυτή την κατηγορία εταιρειών οι απαιτήσεις των σχετικών διατάξεων του Κανονισμού (ΕΕ) 2024/1624.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
(Hellenic Loan Servicers Association)		
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Η παρατήρηση αφορά όλο το εύρος του εν λόγω άρθρου 3 από το οποίο προκύπτει ο εξής προβληματισμός: οι πληροφορίες σχετικά με τις διευθύνσεις θα πρέπει να συλλέγονται διαζευκτικά ή σωρευτικά, δεδομένης και της ευελιξίας που επικαλείται ο εν λόγω κανονισμός;
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Η παρατήρηση αφορά την παράγραφο 4 του άρθρου 6, καθώς αναγράφει ότι τα υπόχρεα πρόσωπα θα πρέπει να διασφαλίζουν ότι κατανοούν το περιεχόμενο των πρωτότυπων εγγράφων που είναι σε ξένη γλώσσα. Οι υπόχρεες οντότητες με βάση αυτή την απαίτηση θα πρέπει να απαιτούν τη λήψη επίσημα μεταφρασμένων εγγράφων; Σε συνδυασμό με την ευρύτερη δυσκολία που αντιμετωπίζουν οι εταιρείες διαχείρισης απαιτήσεων στη συλλογή εγγράφων και στοιχείων θα πρέπει να προβλεφθεί η χρήση εναλλακτικών μέσων επαλήθευσης, βάσει κινδύνου.

Name of the respondent	Question	Answer
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Η παρατήρηση αφορά όλο το εύρος του άρθρου 7 σε σχέση με τα μέτρα επαλήθευσης που διεξάγονται χωρίς φυσική παρουσία. Δεδομένου ότι οι εταιρείες διαχείρισης απαιτήσεων αναλαμβάνουν πελάτες τραπεζών χωρίς επικαιροποιημένα έγγραφα πολλές φορές, θα μπορούσε να υπάρξει ειδική πρόβλεψη και η ταυτοποίηση που έχει γίνει πρωτογενώς από τις τράπεζες ψηφιακά να μην επαναλαμβάνεται και από τους servicers
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Στο εν λόγω άρθρο διακρίνονται υπερβολικά αυστηρές απαιτήσεις ταυτοποίησης. Οι εταιρείες διαχείρισης απαιτήσεων δεν έχουν αντικειμενικά τις δυνατότητες πρόσβασης σε αξιόπιστα εθνικά συστήματα και μητρώα, πέραν συγκεκριμένων (πχ Μητρώο Πραγματικών Δικαιούχων). Εξ αυτού του λόγου θα πρέπει είτε οι εταιρείες να έχουν πρόσβαση σε αντίστοιχα εθνικά συστήματα είτε να απλοποιηθούν για αυτή την κατηγορία εταιρειών οι απαιτήσεις της εν λόγω διάταξης.

Name of the respondent	Question	Answer
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Σε σχέση με το εν λόγω άρθρο παρατηρούνται αυστηρές απαιτήσεις για τον εντοπισμό των UBOs, δημιουργώντας ταυτοχρόνως ζήτημα σε σχέση με τις πολυεπίπεδες εταιρικές δομές των επενδυτών από χώρες εκτός της ΕΕ. Για αυτό το λόγο θα πρέπει είτε να δημιουργηθεί ένα ενιαίο επίσημο μητρώο είτε να υπάρξει και σε αυτή την περίπτωση ευελιξία σε σχέση με την καταγραφή των πληροφοριών που θα πρέπει να συλλέγουν οι διαχειρίστριες εταιρείες.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	18
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Στο εν λόγω άρθρο δεν φαίνεται να λαμβάνεται υπόψη ότι οι εταιρείες servicers δεν συνάπτουν συνήθως με τους οφειλέτες νέα επιχειρηματική σχέση, αλλά αναλαμβάνουν μία ήδη υφιστάμενη. Προτείνεται για τη συγκεκριμένη κατηγορία εταιρειών από τη στιγμή που θα διαγιγνώσκεται ότι σκοπός της σχέσης είναι η απόκτηση της απαίτησης, να μην απαιτείται επιπλέον έρευνα.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	20

Name of the respondent	Question	Answer
(Hellenic Loan Servicers Association)		
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Στην παράγραφο 1 του εν λόγω άρθρου παρατηρείται να υφίσταται μία αντίφαση σε σχέση με την Αιτιολογική σκέψη 3 εδάφιο γ΄ όπου προβλέπεται ότι « Όταν ένα άτομο κατέχει πολλαπλές ιθαγένειες και τις δηλώνει καλή τη πίστει, η επαλήθευση μίας ιθαγένειας θα είναι επαρκής». Η παράγραφος 1 του άρθρου 20 περ. iv απαιτεί ότι κατ' ελάχιστον για τα φυσικά πρόσωπα θα πρέπει οι υπόχρεες οντότητες να λαμβάνουν πληροφορίες για την ταυτοποίηση αυτών για τις « iv. ιθαγένειες του φυσικού προσώπου ή ανιθαγένεια, ή πρόσφυγες κλπ» . Κρίνεται ότι ίσως δημιουργηθεί μία σύγχυση για τα ελάχιστα απαιτούμενα έγγραφα που αποδεικνύουν την ιθαγένεια.
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	24
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Με βάση την περίπτωση γ΄ του ανωτέρω άρθρου 24 η οποία αναφέρει ότι στα απλουστευμένα μέτρα δέουσας επιμέλειας για τον πελάτη χαμηλού κινδύνου οι υπόχρεες οντότητες λαμβάνουν τουλάχιστον μέτρα ευαίσθητα στον κίνδυνο για να κατανοήσουν, όπου είναι απαραίτητο, την πηγή των κεφαλαίων, δίνεται ουσιαστικά η δυνατότητα, σε πελάτες χαμηλού ρίσκου και αν αυτό δεν απαιτείται, να μην συλλέγονται απαραίτητα πληροφορίες για την πηγή προέλευσης των κεφαλαίων.

Name of the respondent	Question	Answer
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Please specify which recital you refer to, and share your comments below.	Αναφορικά και με την Αιτιολογική Σκέψη 7, ανακύπτει το ερώτημα εάν, σε περίπτωση έλλειψης εγγράφων ταυτοποίησης από αξιόπιστες και ανεξάρτητες πηγές, στο πλαίσιο της ευελιξίας του παρόντος Κανονισμού, θα μπορούσαν να χρησιμοποιηθούν ιδιωτικά έγγραφα στα οποία θα περιλαμβάνονται οι ταυτοποιητικές πληροφορίες; Αναφορικά με την Αιτιολογική Σκέψη 8, αναφέρεται ότι η αναζήτηση πληροφοριών σχετικά με τους πραγματικούς δικαιούχους σε κεντρικά μητρώα είναι απαραίτητη, αλλά όχι επαρκής για την εκπλήρωση των απαιτήσεων επαλήθευσης. Άρα, θα απαιτείται και επαλήθευση από τα Κεντρικά Μητρώα και η συλλογή των απαραίτητων εγγράφων των πραγματικών δικαιούχων;
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Do you have any comments on the Annex in the draft RTS?	No
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
(Hellenic Loan Servicers Association)		
ΕΝΩΣΗ ΕΤΑΙΡΕΙΩΝ ΔΙΑΧΕΙΡΙΣΗΣ ΑΠΑΙΤΗΣΕΩΝ ΑΠΟ ΔΑΝΕΙΑ ΚΑΙ ΠΙΣΤΩΣΕΙΣ (Hellenic Loan Servicers Association)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact
