Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	24
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	ARTICLE 24 — INFORMATIONS MINIMALES SUR L'OBJET ET LA NATURE DE LA RELATION EN SITUATION DE VIGILANCE FAIBLE Position : Observation — neutralisation du bénéfice du régime simplifié, dans le prolongement de l'article 23 Le CMV relève que l'article 24 impose aux entités assujetties appliquant des mesures de vigilance simplifiée d'obtenir au moins l'usage envisagé des produits ou services, la valeur estimée des transactions et, lorsque cela est nécessaire, l'origine des fonds. Ces exigences, bien que présentées comme minimales, recouvrent en pratique l'essentiel de ce qui est attendu dans le cadre d'une vigilance standard. S'agissant du marché de l'art, les points (a) et (b) présentent une pertinence particulièrement limitée : l'usage envisagé des services d'une maison de vente et la valeur estimée des transactions sont des informations par nature évidentes, déjà connues au moment de la transaction. Les imposer même dans le cadre du régime simplifié revient à nier la réalité sectorielle et à contredire directement l'approche par les risques qui

Name of the respondent	Question	Answer
		constitue le fondement même des présents RTS — puisque précisément, une situation de faible risque devrait permettre de ne pas collecter des informations dont la collecte est superfétatoire. Cette observation prolonge celle formulée à l'article 23 et révèle une tendance structurelle de la section 5 des présents RTS : le régime de vigilance simplifiée ne produit pas de simplification substantielle pour les entités dont le modèle économique repose sur des transactions ponctuelles, ce qui le prive de toute portée opérationnelle effective pour ce type d'entités et vide l'approche par les risques de sa substance. Le CMV n'appelle pas à une modification du texte de l'article 24, mais invite AMLA à prendre en compte cette réalité dans ses orientations, en précisant que lorsque certaines informations sont rendues évidentes par la nature même de l'activité de l'entité assujettie, leur collecte formelle n'est pas requise même en régime simplifié.
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	25
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	ARTICLE 25 — INFORMATIONS COMPLEMENTAIRES SUR LE CLIENT ET LES BENEFICIAIRES EFFECTIFS EN SITUATION DE VIGILANCE RENFORCEE Position : imprécision structurelle, insécurité juridique, risque de grief documentaire L'article 25 impose aux entités assujetties d'obtenir des informations complémentaires leur permettant de s'assurer de l'authenticité et de l'exactitude des informations détenues sur le client et les bénéficiaires effectifs, d'évaluer leur réputation, et d'identifier et évaluer de manière exhaustive les risques qui

Name of the respondent	Question	Answer
		leur sont associés. Le CMV relève que ces trois obligations souffrent d'un déficit de précision qui compromet leur applicabilité pratique. Qu'entend-on par informations « authentiques et exactes » au-delà de ce qui est déjà exigé dans le cadre de la vigilance standard ? Sur quelle base doit être évaluée la « réputation » du client ? Selon quels critères une évaluation peut-elle être qualifiée d'« exhaustive » ? Aucune de ces notions n'est définie, aucun seuil n'est établi, aucune méthodologie n'est proposée. Ce déficit n'est pas corrigé par les considérants. Le considérant 19 se borne à préciser que les informations obtenues doivent être « d'une qualité suffisante » pour permettre d'évaluer leur authenticité et leur exactitude, et satisfaire aux critères de fiabilité et d'indépendance. Le considérant 20 indique que ces informations doivent permettre de s'assurer que les fonds sont d'origine licite. Ces formulations reproduisent la même imprécision que le corps de l'article 25, sans apporter la moindre précision opérationnelle. Cette imprécision structurelle est d'autant plus préjudiciable qu'elle s'applique précisément aux situations de risque élevé, où les enjeux d'un grief lors des contrôles sont les plus importants. Il sera toujours possible à un superviseur d'estimer, a posteriori, que l'évaluation conduite par l'entité assujettie n'était pas suffisamment exhaustive, sans que celle-ci dispose d'aucun critère objectif pour s'en prémunir. Le CMV demande qu'AMLA précise dans le corps de l'article 25 les critères permettant de déterminer ce qu'impliquent concrètement l'authenticité et l'exactitude des informations, l'évaluation de la réputation et le caractère exhaustif de l'évaluation des risques, afin de donner aux entités assujetties un cadre opérationnel suffisant pour satisfaire à leurs

Name of the respondent	Question	Answer
		obligations de vigilance renforcée sans s'exposer à un risque permanent de grief. Proposition d'ajout à l'article 25 : Ajouter : « For the purposes of this Article, information shall be considered authentic and accurate where it has been obtained from a source that meets the criteria set out in Article 8 of this Regulation. The assessment of the customer's reputation shall be based on publicly available information from reliable sources, including recognised media, official registers and databases. The assessment of ML/TF risks shall be considered exhaustive where it covers the customer's identity, business activity, source of funds and/or of wealth and any known close relationships presenting a higher risk profile. »
Conseil des Maisons de Vente (CMV)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Conseil des Maisons de Vente (CMV)	Do you have any comments on the Annex in the draft RTS?	No
Conseil des Maisons de Vente (CMV)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Conseil National de l'Ordre des experts-comptables	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	• Specification on nationalities – Article 5 RTS Under Article 5 of the RTS, obliged entities must obtain information on all nationalities of the customer, of any natural person acting on their behalf, and of persons on whose behalf or for whose benefit a transaction is carried out. However, obliged entities might not have access to such information (French official identity documents only indicate a

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	single nationality).Moreover, the wording of Article 5 of the RTS contradicts Recital 3 of the RTS. • Documents for the verification od identity– Article 6 RTS The due diligence measures described in this article are not always applicable for chartered accountants performing assignments with foreign clients. Thus, not all identity documents necessarily include an expiration date and a number (Article 6(1)(c) RTS).Furthermore, point 3 of the same article states that obliged entities must take reasonable measures to verify the documents' authenticity, whereas they clearly do not have the expertise of civil registry officers or law enforcement to detect forged documents. There is no dedicated IT tools to the profession for such verification. • Verification measures conducted on a non-face-to-face basis – Article 7 RTS In France, electronic identification has not been implemented yet by the State, which will significantly increase the administrative burden for online accounting firms as well as for firms dealing with clients whose beneficial owners are foreign and rarely physically present at the start of the business relationship. The alternative solutions referred to in points 2 and 3 cannot easily be implemented by chartered accountants due to the lack of IT solutions adapted to the profession (for instance timestamping systems).Therefore, this could result in an inability to serve certain clients. • Reasonable measures for verification of the beneficial owner – Article 10 RTS It is surprising that consulting an official database such as the

Name of the respondent	Question	Answer
		register of beneficial owners, maintained and verified by commercial court clerks, is not considered sufficient. Other measures are difficult to implement and most probably significantly costly.Verification of the identity of beneficial owners may prove difficult for accounting firms when dealing with non-EU foreign clients. For example, assignments that are local in nature, such as accounting services for a real estate company owned by Saudi or Chinese beneficial owners and holding property in France, or assignments for a subsidiary of a non-EU foreign group.Where the chartered accountant is unable to obtain information on the beneficial owner(s) (beyond identification and consultation of central register), they will not be able to enter into a business relationship. The collection of information referred to in Article 10(a) and (b) is, in most cases, not accessible to chartered accountants. Obtaining utility bills is sometimes impossible for Ultra High Net Worth individuals who invoke personal security reasons. • Understanding the ownership and control structure of the customer– Article 11 RTS Under Article 11(1) of the RTS, obliged entities must comprehend the ownership and control structure. The use of the verb “shall” demonstrates the mandatory nature of this obligation.Therefore, they must obtain information on control or stock exchange listing. However, such information may be particularly difficult to obtain in certain countries. There is no harmonised database accessible without language barriers.Similarly, it appears impossible to require obliged entities to verify the rational reasons (other than legal and economic ones) for the structure (Article 11(4)(b) RTS), given the complexity and the impossibility of understanding all applicable legislation, particularly tax laws, within the control

Name of the respondent	Question	Answer
		structure.These practical difficulties create uncertainty in decision-making regarding whether to accept a client. In such cases, the chartered accountant would again have to refrain from entering into a business relationship, as the RTS provides no nuance based on a risk-based approach and uses mandatory wording (“shall”). • Identification of the purpose and intended nature of a business relationship or occasional transaction – Article 18 RTS Determining the legitimate nature of the origin of funds from certain geographical areas outside France may appear extremely complex and beyond the capabilities of a chartered accountant. It would be necessary to specify the due diligence to be carried out in such cases or to provide a list of territories where the origin of funds may be presumed suspicious. The strict application of this rule may lead to a denial of services by chartered accountants for certain foreign investors in France and create a distortion of competition in favour of illegal providers pretending to be registered accountants, not subject to AML/CFT regulations.The RTS should be more precise in criteria (e) for businesses not incorporated yet.
Conseil National de l'Ordre des experts-comptables	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	• Proportionality and risk-based approach – Article 1 RTS RTSs seem to create obligations beyond level 1 regulations. Further, article 1 of the RTS states the measures set out therein shall be applied in accordance with a proportionality-based approach, taking into account the type and level of risk identified by obliged entities. However, the measures described in the RTS often constitute detailed requirements to be implemented by obliged entities,

Name of the respondent	Question	Answer
		leaving little or no room for the application of a genuinely risk-based approach. The wording of the provisions is highly prescriptive, relying on mandatory formulations (in particular through the use of the term “shall”). • Entry into force – Article 33 RTS French Chartered accountants serve more than 2 million clients. The five-year period set out in Article 33 for updating client due diligence information, except in cases of higher risk, appears appropriate and proportionate in light of systemic risk considerations. Recital 25 states that the respective maximum periods of one year and five years for updating customer information should only start from the date of application of this Commission Delegated Regulation for existing clients onboarded prior to the entry into force of Regulation (EU) 2024/1624. However, the precise date of entry into application of the RTS remains unknown. It would be desirable for the date of application of the RTS to be aligned with that of Regulation (EU) 2024/1624, namely 10 July 2027, and to be explicitly specified in the final RTS.
Conseil National de l'Ordre des	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the	• Screening requirements – Article 30 RTS

Name of the respondent	Question	Answer
experts-comptables	information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The implementation of screening measures is extremely difficult for accounting firms for the following reasons: • Information systems of the accounting firms typically manage client data, but rarely beneficial ownership information. They also seldom capture clients' customers, suppliers and other financial stakeholders involved in the business relationship (for instance those reflected in the accounting records). Accounting data are maintained in separate software systems that are rarely integrated with the accounting firm's central information system; • Databases and tools provided by public authorities are not fit for purpose. Member States should be required to make available appropriate databases and tools capable of reducing reliance on private providers; • The use of private databases entails significant costs, which are disproportionate to the very low probability of encountering a sanctioned individual or entity. In practice, manual reviews will therefore be relied upon in most cases. • Reliable and independent sources of information – Article 8 RTS This concept lacks clarity: • What constitutes "reliable and independent source of information" in the French context? Does the RTS refer to the National Business Register (RNE), the Register of Beneficial Owners (RBE), or to other sources? • What is the position with respect to associations and other not-for-profit entities, foundations and endowment funds? Which registers will be accessible to obliged entities in France?

Name of the respondent	Question	Answer
		• Is an upgrade of the French trusts and fiduciary register envisaged, given that access and usability are currently overly complex for both supervisory authorities and obliged entities? • In an international context, which sources should be relied upon? Are there official equivalents to the RNE? What about beneficial ownership registers (outside the BORIS project)? • Is it envisaged that access to such registers will be made free of charge, at least within the European Union? • Which public authorities and independent professionals are authorised to certify documents, both in France and abroad? • Politically Exposed Persons (PEPs) – Article 19 RTS The absence of nominative lists established by Member States creates significant difficulties in identifying PEPs, in particular with regard to family members and close associates. Not all accounting firms have access to dedicated databases to conduct such checks, given the high cost of private data providers. How are obliged entities expected to determine whether an individual continues to qualify as a PEP for the purpose of risk assessment?
Conseil National de l'Ordre des experts-comptables	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	• Simplified due diligence measures – Articles 20 to 24 RTS Only the measure set out in point (a) of Article 33 of Regulation (EU) 2024/1624 relates to the establishment of a business relationship. It would be appropriate to provide, in the case of business relationships intended to be ongoing, that information on the source of wealth and the funds 'origin involved in the business

Name of the respondent	Question	Answer
		relationship be obtained during the relationship's first year, rather than prior to its establishment. Most assignments performed by chartered accountants do not involve the execution of financial transactions. Moreover, it is particularly difficult to assess the funds' origin invested in a company that has been established for many years. We understand that they may apply in all cases where ML/TF risk is considered low, whether in relation to customers, beneficial owners, or persons acting on their behalf. By way of example, simplified procedures could be applied to subsidiaries of listed companies where such subsidiaries are more than 75% owned by the parent listed company.
Conseil National de l'Ordre des experts-comptables	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• Information on senior managing officials – Article 13 RTS The absence of a definition of the term "senior managing officials" gives rise to uncertainty. Should this term be understood by reference to Article 2(40) of the Regulation (EU) 2024/1624, under the concept of "senior management"? • Identification and verification of the persons purporting to act on behalf of customers – Article 16 RTS Article 16 of the RTS requires powers' verification of representation of persons acting on behalf of others. However, such verification has already been carried out for the purposes of maintaining the official French register (RNE). A second verification by chartered accountants does not appear necessary.

Name of the respondent	Question	Answer
		• Re-performance of due diligence for existing clients – not addressed in the RTS Article 26(2) of the Regulation (EU) 2024/1624 on ongoing monitoring of the business relationship provides for the updating of information based on the level of risk presented by the client, at least every five years. The RTS does not provide for any mitigation of full reperformance every five years based on a risk-based approach. A full re-performance of customer due diligence measures every five years appears unnecessary for clients whose circumstances have not changed. Confirmation of the absence of any material change should be sufficient. This merely generates unnecessary administrative costs. • Information sharing within networks and professional secrecy – not addressed in the RTS Provision should be made to ascertain the possibility of sharing of information relating to customer due diligence (including customers, beneficial owners and persons acting on behalf of others) between obliged entities belonging to the same network (which would need to be more precisely defined), whether established in France or abroad. Professional secrecy obligations applicable to chartered accountants under the French Criminal Code might prevent such exchanges, notwithstanding the provisions of the EU Regulation, save for limited exceptions.

Name of the respondent	Question	Answer
Conseil National de l'Ordre des experts-comptables	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Conseil National de l'Ordre des experts-comptables	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	18
Conseil National de l'Ordre des experts-comptables	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Purpose and intended nature of a business relationship or occasional transaction – Article 18 RTS + Article 27 RTS (source of funds and source of wealth) Information relating to the source of wealth and the funds' origin involved in the business relationship is not essential for understanding the purpose and nature of the business relationship, for services relating to bookkeeping, preparation of tax returns, assistance in the preparation of annual financial statements, payroll processing and the preparation of social security filings. Moreover, such information has no impact on the commencement of the engagement. In combination with current applicable French regulatory provisions, this has led to the practice of deferring the collection of certain information until during the first year of the business relationship.
Conseil National de l'Ordre des experts-comptables	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
Conseil National de l'Ordre des experts-comptables	Please specify which recital you refer to, and share your comments below.	Recital 1 RTSs seem to create obligations beyond level 1 regulations. Recital 1 refers to a risk-based approach and the principle of proportionality. However, these principles are not reflected in the drafting of the RTS Articles, in light of their prescriptive wording (in particular the use of the term “shall”) and the absence of differentiation between varying risk scenarios in the measures set out.
Conseil National de l'Ordre des experts-comptables	Do you have any comments on the Annex in the draft RTS?	No
Conseil National de l'Ordre des experts-comptables	How would you rate the proposals set out in the draft RTS overall?	Inadequate
CONSEIL SUPERIEUR DU NOTARIAT	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Les notaires ne disposent pas des outils numériques utilisés par les autorités publiques permettant de s’assurer que les documents d’identité présentés sont authentiques et n’ont pas été falsifiés ou volés. Le RTS exigeant d’évaluer l’authenticité, la fiabilité et l’exactitude des informations fournies/collectées signifie que seules les bases publiques répondraient à ces critères. Concernant les PPE et assimilées impliquent des recherches tendant à rendre obligatoire l’utilisation de bases de données payantes ce qui peut engendrer un coût élevé pour les entités qui sont pour la plupart des structures de petite dimension avec un chiffre d’affaires peu élevé. A défaut d’utilisation de

Name of the respondent	Question	Answer
		telles bases de données, les recherches en base ouverte sur Google, Qwant ou autres seront-elles suffisantes pour répondre à ce RTS alors même que la catégorie des PPE et assimilé ne cesse de s'étendre ? Des propositions paraissent disproportionnées dans une majorité de pratiques quotidiennes des études. En effet, les notaires reçoivent des millions de personnes chaque année dont la majorité d'entre elles habitent à proximité géographique de l'office, pour des transactions en adéquation avec leur situation financière. La connaissance du notaire des prix de l'immobilier de son secteur, la relation entre lui et son client militent pour une plus large latitude dans l'appréciation du risque et des mesures inhérentes au classement en vigilance simplifiée (sauf les cas spécifiquement et déjà indiquées dans la réglementation française : montage complexe, opacifiant, d'un montant inhabituel ou avec des pays « sensibles »). Les notaires en France mettent déjà en œuvre un socle important de mesures de vigilance pour chaque transaction qu'ils reçoivent.
CONSEIL SUPERIEUR DU NOTARIAT	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Les propositions présentées permettent de savoir précisément ce qui est attendue en vigilance renforcée par la précision des mesures citées. Il faut quand même souligner qu'elles paraissent compte tenu de la taille des entités et des moyens à disposition difficiles à mettre en œuvre en pratique voire pour certaines déconnectées de la pratique des notaires. Exemple la vérification que les fonds proviennent d'un compte détenu et contrôlé uniquement ou conjointement par le client dans un établissement de crédit ou financier réglementé ou ce qui concerne l'origine des fonds ayant servi à l'acquisition de cryptos actifs.

Name of the respondent	Question	Answer
CONSEIL SUPERIEUR DU NOTARIAT	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Certaines dispositions notamment celles de l'Article 9 sur l'identification et la vérification de l'identité des personnes physiques ou morales à l'aide d'un IBAN virtuel sont inapplicables pour les notaires qui ne peuvent concerner que les établissements bancaires. Ces établissements ne partagent pas leurs informations avec les notaires en raison du secret bancaire auquel ils sont soumis.
CONSEIL SUPERIEUR DU NOTARIAT	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Les notaires mettent en place de manière systématique un socle important de mesures de vigilance dont l'effectivité est vérifiée lors des inspections. La justification écrite dans les dossiers à risque faible du positionnement en vigilance simplifiée devrait donc plutôt être remplacée par une note d'analyse du positionnement en risque élevé avec la liste des mesures de vigilance en conséquence.
CONSEIL SUPERIEUR DU NOTARIAT	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Agradecemos los esfuerzos de AMLA por establecer un marco armonizado en toda la Unión Europea, para la lucha contra el blanqueo de capitales y la financiación del terrorismo (AML/CFT), en toda la Unión Europea, proporcionado y basado en el riesgo Nuestros comentarios se refieren únicamente al efecto de las RTS en las Empresas de Asesoramiento Financiero (EAF) y las Empresas de Asesoramiento Financiero Nacionales (EAFN), inscritas en los Registros de la Comisión Nacional del Mercado de Valores en España. En el caso de las Empresas de Asesoramiento Financiero y las Empresas de Asesoramiento Financiero Nacionales solo pueden realizar 3 actividades: • Asesoramiento en materia de inversión • Asesoramiento a empresas sobre estructura de capital

Name of the respondent	Question	Answer
		• Elaboración de informes de inversiones y análisis financiero Es por ello que consideramos que las propuestas de las RTS no se deben aplicar por igual a todos los servicios y actividades que presta la entidad. Hay actividades que conllevan menos riesgos y por tanto hay determinadas propuestas que no deberían se aplicar a todas las actividades del sujeto obligado. Por ejemplo, el servicio de asesoramiento financiero en materia de inversión sí requiere un conocimiento profundo del cliente (con las particularidades que diremos a continuación), mientras que en el servicio de elaboración de informes, no sería tan necesario. En cualquier caso, las RTS deben aplicarse siempre bajo un enfoque basado en el riesgo de estas entidades y bajo el criterio de proporcionalidad. Las EAF y EAFN son entidades pequeñas, la gran mayoría de reducida dimensión, con un número de clientes bajo, y sólo realizan la actividad de asesoramiento. No intermedian ni gestionan patrimonios. Se propone que las RTS permitan explícitamente la reducción de los requisitos de documentación en situaciones de riesgo objetivamente bajo. La proporcionalidad no debe considerarse únicamente un principio general, sino un requisito operativo integrado en la aplicación de las RTS. La aplicación uniforme de requisitos diseñados para grandes entidades que prestan muchas actividades o más complejas, puede resultar ineficiente y desproporcionada en el contexto de las pequeñas entidades.
Consejo General de Economistas. E. Asesores Financieros	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	El principio basado en el riesgo debe ser el principio fundamental de las RTS: es por ello las RTS deben tener en cuenta el principio de proporcionalidad y definir procedimientos concretos y más simplificados para escenarios

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	de bajo riesgo. Un exceso de requerimientos y documentación hacen más complicado el cumplimiento
Consejo General de Economistas. E. Asesores Financieros	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Las EAF y EAFN son, en su mayoría, pequeñas empresas en el caso de las personas jurídicas y, en otros casos son personas físicas, por lo que tiene un tamaño y una estructura muy reducida. No obstante, son entidades supervisadas por la Comisión Nacional del Mercado de Valores (CNMV) y el Servicio Ejecutivo de Prevención de Blanqueo de Capitales (SEPBLAC) en España Actualmente la Ley 6/2023, de 17 de marzo sobre los Mercados de Valores y los Servicios de inversión (LMVSI) y la Ley 10/2010, de 28 de abril, de prevención del blanqueo de capitales y de la financiación del terrorismo, así como la normativa que desarrolla ambos textos legales, ya obliga a las EAF y EAFN a realizar procedimientos de diligencia debida a sus clientes y solicitan la información necesaria para su conocimiento y la evaluación del riesgo. No se considera sea necesario incrementar esta información a no ser que se detecte un riesgo mayor.
Consejo General de Economistas. E. Asesores Financieros	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	En el caso de las EAF y EAFN cuya única actividad es la que se ha descrito en la contestación a la Pregunta 1, se considera imprescindible aplicar medidas simplificadas de diligencia debida cuando se den alguna de las siguientes circunstancias: (i) se tenga constancia que el cliente ya ha sido evaluado por otra entidad financiera (por ejemplo, un banco depositario), (ii) se tenga un conocimiento amplio del cliente, (por ejemplo, clientes con una relación de hace más de 5 años), (iii) cuando el servicio que solicite y los productos en los que invierta sean acordes a su perfil de riesgo. En los casos anteriores y en todos aquellos en los que pudiera acreditarse tener un conocimiento del nivel de riesgo bajo de los clientes,

Name of the respondent	Question	Answer
		se deberían simplificar los procedimientos de diligencia debida. Las RTS deben tener en cuenta la actividad de las entidades obligadas, de cara a que el cumplimiento de la normativa de prevención de blanqueo de capitales sea proporcional, acorde al riego y sobre todo asumible por las entidades.
Consejo General de Economistas. E. Asesores Financieros	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• la aplicación proporcional de los requisitos de diligencia debida en función del riesgo del servicio prestado y de riesgo del cliente. • la aplicación de las RTS no impliquen un incremento excesivo de procedimientos, documentación y justificaciones impidan el efectivo cumplimento de la norma y el fin último que persigue..

Consiglio Nazinale del Notariato	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In qualità di notai, non si condividono le proposte di RTS, per le seguenti ragioni Art. 2: Si contesta l'obbligo di raccolta cumulativa di nome registrato e denominazione commerciale, data l'assenza di una definizione normativa di quest'ultima e della relativa fonte ufficiale. Art. 5: L'obbligo di raccogliere tutte le nazionalità è sproporzionato e di difficile attuazione, mancando strumenti di verifica autonoma. Il testo deve coordinarsi con il considerando 3, accettando la dichiarazione in buona fede del cliente. Art. 6: Manca la distinzione tra "identificazione" e "verifica dell’identità". Il sistema è contraddittorio: si richiede l'indirizzo (non presente in documenti come il passaporto) e si citano "mezzi credibili" e "misure ragionevoli" troppo vaghi. Inoltre, l’acquisizione di originali o copie certificate contrasta con il divieto italiano di copia conforme dei documenti di identità (art. 294 TULPS). Art. 7: Non è prevista l'identificazione eseguita da pubblico

Name of the respondent	Question	Answer
		ufficiale tramite atto notarile. Si criticano le limitazioni agli strumenti elettronici già in uso e l'inversione dell'onere probatorio sulla conformità della soluzione adottata. Art. 8: I criteri di valutazione impongono conoscenze tecniche estranee alla funzione notarile. L'assenza di un "rating delle fonti" ufficiale espone i professionisti a contestazioni arbitrarie. Art. 10: Si rileva mancanza di coordinamento riguardo all'adeguatezza della sola consultazione dei registri centrali in situazioni a basso rischio. Artt. 11-12: La mappatura delle entità intermedie eccede la descrizione della struttura. La richiesta di "certezza" sui dati è una petizione di principio senza indicazioni operative. I requisiti dell'art. 12 risultano indeterminati e potenzialmente incongruenti con l'AMLR. Art. 14: Si segnala una discrepanza terminologica tra "accordo giuridico" (RTS) e "istituto giuridico" (AMLR), che necessita di allineamento all'art. 53 AMLR. Art. 18: Per i notai, le informazioni sulle finalità del rapporto sono già contenute nella causa del contratto. Alcune categorie analitiche richieste sono incongrue rispetto all'attività notarile o violano il principio di proporzionalità. Art. 19: L'obbligo di screening automatizzato è ritenuto incompatibile con il GDPR e l'AI Act, oltre che con l'art. 76 AMLR. Art. 21: Il riferimento a "qualsiasi informazione pubblica" è vago e aumenta il rischio di adempimenti inadeguati per incertezza sulle fonti. Art. 27: L'onere di documentare l'origine dei fondi tramite prove documentali in ogni caso è eccessivo per i soggetti non finanziari. Il concetto di "media affidabili" è privo di criteri oggettivi.

Name of the respondent	Question	Answer
		Artt. 29-30: Gli obblighi legati al rapporto continuativo devono esplicitamente escludere i professionisti che operano su prestazioni puntuali. Art. 32-Allegato I: L'individuazione dei "rappresentanti legali" deve limitarsi alle figure in senso stretto, escludendo procuratori e mandatari, per i quali una ricerca sistematica sarebbe operativamente impossibile".
Consiglio Nazinale del Notariato	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No. Le proposte della bozza di RTS non forniscono flessibilità sufficiente per la categoria notarile e presentano criticità strutturali di applicabilità. Il notaio è un soggetto obbligato ontologicamente diverso dagli operatori finanziari. Ogni prestazione notarile è una prestazione occasionale (intesa come prestazione puntuale, autonoma, distinta e non continuativa): il notaio conosce integralmente il contenuto del contratto, la sua causa, le controprestazioni, i valori economici, le condizioni e le clausole fiscali. Questa conoscenza strutturale rende ridondante — e sproporzionata — la raccolta di molteplici categorie informative che nelle RTS sono state concepite per soggetti che gestiscono flussi di denaro senza cognizione del negozio sottostante (istituti di credito, money transfer). Il notaio, una volta identificato il cliente, ha l'obbligo giuridico di riceve l'atto, un eventuale rifiuto da parte del pubblico ufficiale di stipulare un contratto è punito espressamente dalla legge professionale ed è assimilabile al reato di omissione di atti d'ufficio; pertanto, per il notaio non è possibile esimersi dal rendere la prestazione anche in caso di adeguata verifica incompleta. Criticità specifiche di applicabilità: L'art. 18 richiede la raccolta sistematica di informazioni su origine dei fondi, destinazione dei fondi e attività commerciale

Name of the respondent	Question	Answer
		del cliente. Per il notaio, che roga contratti tipizzati con causa determinata, tali informazioni sono in larga parte già incorporate nella struttura negoziale. La formulazione attuale non prevede esplicitamente questa equivalenza, costringendo il notaio a duplicare informazioni già acquisite mediante il contratto stesso. L'art. 23, sugli aggiornamenti periodici dei dati identificativi, è chiaramente formulato per soggetti che intrattengono rapporti continuativi con la clientela. Non contiene alcuna espressa esenzione per i soggetti che, come i notai, operano esclusivamente su base puntuale. L'assenza di tale chiarimento genera incertezza applicativa e rischio di contestazione. L'art. 19 co. 3 impone lo screening automatizzato per l'identificazione delle PEP. Si consideri che non esistono elenchi per le PEP. Inoltre, per studi notarili di dimensioni ridotte, tale obbligo è tecnologicamente e finanziariamente sproporzionato. La previsione che consente il ricorso ai soli controlli manuali "a meno che le dimensioni, il modello di business, la complessità o la natura dell'attività non lo giustifichino" è formulata in modo da porre sul soggetto obbligato l'onere di giustificare la propria scelta, invertendo il principio di proporzionalità. L'art. 7 co. 4 impone al notaio che utilizzi soluzioni di verifica a distanza di dimostrare alla propria autorità competente la conformità della soluzione adottata e di giustificare il mancato ricorso ai mezzi ordinari ex art. 22(6) AMLR. Questo è un onere del tutto estraneo alla funzione notarile e privo di qualsiasi precedente normativo nel settore. Proposte redazionali: Si chiede che le RTS introducano espressamente la previsione che, per i soggetti obbligati che svolgono esclusivamente prestazioni puntuali, gli obblighi di aggiornamento periodico

Name of the respondent	Question	Answer
		(art. 23), di screening continuativo (art. 30, lett. c)) e di mantenimento di sistemi automatizzati di profilazione (art. 19 co. 3) non trovano applicazione, consentendo espressamente il solo controllo manuale. Tale esenzione è pienamente coerente con il principio di proporzionalità sancito dall'art. 1 della bozza di RTS e con l'approccio basato sul rischio del Reg. (UE) 2024/1624. Si chiede altresì che venga inserita una clausola generale di equivalenza per i soggetti obbligati che hanno piena cognizione del negozio giuridico oggetto della prestazione, secondo cui le informazioni già ricavabili dalla struttura e dalla causa del contratto si considerano acquisite ai fini degli obblighi di cui all'art. 18. Si richiede che venga inserita una previsione specifica per il pubblico ufficiale che ha l'obbligo di ricevere un atto in base alla quale questi è esentato dall'obbligo di astensione se ha identificato il cliente, indipendentemente dal completamento dell'adeguata verifica.
Consiglio Nazinale del Notariato	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	No, non integralmente. Numerose disposizioni tradiscono il principio dell'approccio basato sul rischio che costituisce il fondamento dichiarato della bozza, trasformando obblighi flessibili in adempimenti di fatto rigidi e generalizzati. Art. 18: La norma, al primo comma, utilizza l'espressione "se necessario", che in linea di principio rinvia a una valutazione basata sul rischio. Tuttavia, non viene definito il parametro di "necessità", né viene esplicitato il collegamento tra il livello di rischio accertato (standard, semplificato, rafforzato) e le categorie informative da raccogliere. In assenza di tale coordinamento, il catalogo di informazioni contenuto nell'art. 18 rischia di essere applicato integralmente in ogni caso, vanificando la modulazione in funzione del rischio. In

Name of the respondent	Question	Answer
		particolare, le verifiche sulla fonte dei fondi di cui al punto c) appaiono imposte prescindendo dal livello di rischio della prestazione. Art. 19, co. 3: Lo screening automatizzato obbligatorio per l'identificazione delle PEP è una misura di conformità generalizzata, non basata sul rischio. La deroga per soggetti di ridotte dimensioni è ammessa dalla norma in astratto, ma formulata in modo da renderne difficile l'esercizio pratico: il soggetto obbligato deve giustificare la propria scelta, con conseguente inversione del principio. Un genuino approccio basato sul rischio imporrebbe la regola inversa: lo screening automatizzato è richiesto laddove il volume e la tipologia di operazioni lo rendano necessario; per i soggetti con operatività ridotta, il controllo manuale è la misura proporzionata di default. Art. 27: L'obbligo di documentazione della fonte dei fondi mediante prove documentali esclude in via di principio la dichiarazione del cliente, indipendentemente dal profilo di rischio. Ciò contrasta con l'approccio basato sul rischio: in scenari a rischio standard o ridotto, la dichiarazione resa dal cliente — accompagnata dalla valutazione critica del soggetto obbligato — dovrebbe essere ammessa come forma di adempimento proporzionata, come già previsto in diversi ordinamenti nazionali in attuazione della Dir. (UE) 2015/849. Art. 12, lett. d): La condizione relativa a strutture che "offuscano la trasparenza senza legittima giustificazione economica" è formulata in modo talmente ampio da poter essere applicata discrezionalmente a qualunque struttura societaria. In assenza di criteri oggettivi, questa previsione non è "basata sul rischio": è basata sul giudizio soggettivo del soggetto obbligato, con conseguente esposizione a

Name of the respondent	Question	Answer
		contestazioni indeterminate. Art. 8, lett. e): Imporre al soggetto obbligato di valutare "la facilità con cui i dati possono essere falsificati" è un criterio di conformità che non ha nulla a che fare con l'approccio basato sul rischio relativo al cliente o alla transazione: è, di fatto, un obbligo di conoscenza tecnica specialistica che non appartiene al soggetto obbligato professionista e privo di fondamento normativo nel Reg. (UE) 2024/1624. Proposta redazionale: Si chiede che l'art. 18 venga emendato con l'inserimento di una tavola di corrispondenza esplicita tra il livello di rischio accertato (basso/standard/alto) e le categorie informative da raccogliere, in modo da rendere effettivo — e non meramente dichiarato — il principio della proporzionalità. Si chiede altresì che l'art. 19 co. 3 venga riformulato prevedendo come regola generale la facoltà di ricorso al solo controllo manuale per i soggetti obbligati non finanziari e per quelli privi di rapporti continuativi con la clientela, con onere di adottare sistemi automatizzati solo laddove il volume delle operazioni lo renda necessario.
Consiglio Nazinale del Notariato	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Esistono numerose situazioni concrete, proprie dell'attività notarile, in cui le informazioni richieste dalla bozza non sono disponibili e le RTS non offrono alcuna alternativa praticabile. 1. Indirizzo di residenza e documenti di identità (artt. 3 e 6): Il passaporto — documento di identità per eccellenza ed espressamente valutato idoneo dalla bozza — non contiene l'indirizzo di residenza. Il notaio non ha accesso ad anagrafi pubbliche internazionali in tempo reale per la verifica autonoma di tale dato, ma solo a banche dati italiane. La bozza non prevede esplicitamente che l'autodichiarazione del cliente sia sufficiente per colmare tale lacuna documentale. La soluzione alternativa deve essere espressamente indicata:

Name of the respondent	Question	Answer
		l'autodichiarazione del cliente è adempimento sufficiente per i dati non contenuti nei documenti idonei alla verifica. 2. Plurime nazionalità (art. 5): Non esiste alcuno strumento che consenta al notaio di accertare autonomamente tutte le nazionalità di un soggetto. Banche dati pubbliche di verifica plurima della cittadinanza non sono accessibili ai soggetti obbligati privati. La bozza ammette al considerando 3 che la dichiarazione di buona fede del cliente è sufficiente, ma l'art. 5 non lo recepisce esplicitamente. Si chiede che l'art. 5 venga allineato al considerando 3, precisando che la dichiarazione resa dal cliente è l'unico e sufficiente mezzo di adempimento. 3. Origine dei fondi (artt. 18 e 27): In molte prestazioni notarili — compravendite immobiliari tra privati, trasferimenti di partecipazioni, atti di liberalità — la fonte dei fondi non è documentata da buste paga, estratti conto o dichiarazioni fiscali disponibili al momento del rogito. La bozza non prevede la possibilità di acquisire tale informazione in forma dichiarativa dal cliente, pur in assenza di indicatori di rischio specifici. Per le transazioni a rischio standard o ridotto, la dichiarazione del cliente — unitamente alla valutazione del notaio sulla plausibilità della fonte indicata — deve essere riconosciuta come adempimento proporzionato. 4. Identificazione a distanza tramite atto notarile (art. 7): Attualmente, in molti ordinamenti europei e nella prassi internazionale, l'identificazione eseguita da un pubblico ufficiale (notaio o console) in un atto pubblico è equiparata all'identificazione diretta. La bozza non contempla questa ipotesi. La lacuna è particolarmente grave: la procura notarile o consolare — strumento diffusissimo per delegare la firma di atti — non viene riconosciuta come modalità equivalente di identificazione, con il risultato che il notaio rogante dovrebbe

Name of the respondent	Question	Answer
		identificare nuovamente il mandante già identificato da un collega in un atto pubblico o scrittura privata autenticata. Si chiede l'inserimento esplicito di tale equivalenza: l'identificazione dovrebbe ritenersi eseguita senza presenza fisica del cliente e senza necessità di acquisire copia del documento. 5. Soggetti vulnerabili (art. 6, co. 2): Per richiedenti asilo, apolidi, rifugiati e persone senza fissa dimora, la bozza ammette il ricorso ad "altri mezzi credibili", ma non li definisce. Tale indeterminatezza espone il notaio a contestazioni. La soluzione alternativa deve essere esplicitamente indicata: un verbale di identificazione redatto dal notaio stesso, fondato su tutti gli elementi disponibili, deve costituire adempimento sufficiente. 6. Legali rappresentanti delle persone giuridiche (art. 32 e Allegato I): La norma richiede i nomi dei "rappresentanti legali" (al plurale) della persona giuridica. Per enti con molteplici procuratori (es. banche, grandi società), l'identificazione di tutti i soggetti aventi poteri di rappresentanza è operativamente impossibile. La soluzione deve essere esplicitata: rilevano solo i rappresentanti legali in senso stretto (ex lege o ex statuto), non i mandatari o procuratori volontari.
Consiglio Nazinale del Notariato	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Nell'ambito del mandato di cui all'art. 28(1) Reg. (UE) 2024/1624 e tenuto conto dell'attività notarile, si propongono le seguenti misure di due diligence semplificata aggiuntive, distinte da quelle già previste dall'art. 33 AMLR. 1. Equivalenza informativa tra causa contrattuale e raccolta dati (art. 18): Per i soggetti obbligati che rogano atti pubblici o autenticano scritture private, le informazioni relative allo scopo e alla logica economica dell'operazione (art. 18, lett. a), sottopunti i, ii e iii) devono ritenersi già acquisite mediante la

Name of the respondent	Question	Answer
		causa del contratto, senza necessità di raccolta separata. Si propone l'inserimento di una norma che espliciti tale equivalenza per i contratti tipizzati rogati da pubblici ufficiali. 2. Semplificazione per prestazioni occasionali con contratti tipici a basso rischio: Per le categorie contrattuali tipizzate (compravendita immobiliare tra privati residenti nell'UE, donazione, permuta, divisione) in cui le parti siano persone fisiche già identificate e non siano presenti indicatori di rischio, si propone l'introduzione di una misura semplificata che consenta di limitare la raccolta delle informazioni sulla fonte dei fondi (art. 18, lett. c)) alla sola dichiarazione del cliente, senza obbligo di acquisizione documentale. Questo consentirebbe anche di chiarire meglio l'obbligo di acquisire "se necessario" la fonte dei fondi (art. 24 lett.c) in caso di due diligence semplificata, che altrimenti appare (nell'uso dell'espressione "se necessario") indeterminato nella casistica applicabile. 3. Esenzione dall'aggiornamento periodico per prestazioni occasionali (art. 23): Si propone che le RTS prevedano espressamente che l'obbligo di aggiornamento periodico dei dati identificativi non si applica ai soggetti obbligati che non intrattengono rapporti continuativi con la clientela. Il notaio entra in contatto con il cliente una sola volta per ogni atto: non esiste un "rapporto commerciale" continuativo da monitorare. La vigente normativa italiana (D.lgs. 231/2007) già distingue tra rapporto continuativo e prestazione occasionale; pertanto, alla luce del sistema, le RTS sarebbe opportuno che recepissero tale distinzione e specificare espressamente che la prestazione notarile è, in ogni caso, una prestazione occasionale intesa come una prestazione puntuale, autonoma, distinta e non continuativa.

Name of the respondent	Question	Answer
		4. Semplificazione per clientela già identificata in atti pubblici precedenti: Quando il cliente è già stato identificato dal medesimo notaio (o da un altro notaio dello stesso Stato membro) nell'ambito di un atto pubblico recente, i dati identificativi già acquisiti devono poter essere riutilizzati senza reiterazione della procedura di identificazione, fatta salva la verifica dell'assenza di variazioni significative nel profilo del cliente. Si tratta di una misura di semplificazione coerente con il principio di proporzionalità e con il considerando 21 delle RTS (riutilizzo delle informazioni già disponibili). 5. Screening manuale come misura standard per professionisti non finanziari: Per i soggetti obbligati non finanziari di ridotte dimensioni, lo screening manuale per l'identificazione delle PEP e per la verifica delle sanzioni deve essere previsto come misura standard, senza obbligo di adottare sistemi automatizzati. Il ricorso a soluzioni automatizzate deve essere facoltativo e non obbligatorio, lasciando al soggetto obbligato la scelta dello strumento più adeguato in funzione del proprio volume operativo. Questo è pienamente coerente con i principi di proporzionalità, con il rispetto del GDPR e dell'AI Act richiamati dall'art. 76 AMLR e con la circostanza che non esistono elenchi delle PEP. 6. Dichiarazione sostitutiva per dati non verificabili documentalmente: Le RTS devono prevedere espressamente che, per i dati identificativi che non compaiono nei documenti idonei alla verifica (es. indirizzo di residenza nel passaporto, plurime nazionalità), la dichiarazione resa dal cliente costituisce adempimento sufficiente nelle situazioni a rischio standard o ridotto. Il notaio, in quanto pubblico ufficiale, è tenuto per legge a raccogliere le dichiarazioni delle parti: tale funzione

Name of the respondent	Question	Answer
		deve essere espressamente riconosciuta dalle RTS come equivalente alla raccolta documentale.
Consiglio Nazinale del Notariato	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Consiglio Nazinale del Notariato	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Consiglio Nazinale del Notariato	Do you have any comments on the Annex in the draft RTS?	No
Consiglio Nazinale del Notariato	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Preliminarily, it is not agreed with the extended application of the RTS to the generality of the services performed by Commercialisti, as their transversal economic-legal skills go far beyond those of auditing, external accounting and tax consultancy, also extending to many other specialized activities without connotations of a patrimonial nature and/or financial content and, therefore, not suitable for generating significant risks for the purposes of AML legislation. In fact, this professional category is not completely overlapping with those identified by art. 3 of Directive EU/2024/1640 (auditors, external accountants and tax advisors). It would therefore be desirable to specify in the RTS that the anti-money laundering obligations incumbent on Commercialisti apply exclusively to professional services carried out as "auditors, external accountants and tax consultants", as required by the European legislator. That said, it should be

Name of the respondent	Question	Answer
		noted that some provisions contained in the draft RTS seem to have been developed mainly taking into account the operational characteristics of the entities in the financial sector. In this context, some of the information indicated in the draft RTS for the purpose of understanding the purpose and nature of the relationship with the client - in particular those referred to in Article 18, such as the estimated value of the transactions envisaged, the number or frequency of expected transactions or the destination of the funds - may be less relevant than the ways in which professionals acquire and manage information on their clients as part of the professional assignment. In many cases, in fact, the nature and purpose of the relationship are already clearly identified in the professional mandate and in the consultancy or assistance activities requested by the client. Similarly, some provisions relating to the understanding of the client's ownership and control structure, such as those provided for in Articles 11 and 12 of the draft RTS, require a detailed reconstruction of corporate structures and levels of participation that could be particularly burdensome for traders, especially in cases where such information is not directly available or accessible through public sources. In such situations, traders generally rely on information contained in public records, documentation provided by the client and information acquired in the context of the professional relationship. It should also be noted that some provisions of the draft RTS concern situations typical of financial services or intermediated relationships - such as, for example, those relating to identification through virtual IBANs or relationships with financial intermediaries - which are generally not applied in the

Name of the respondent	Question	Answer
		context of the activities carried out by professionals. Proposals made To this end, it is suggested to consider the introduction of the following clarifications in the text of the RTS. Articles 11 and 12 (ownership and control structure) 'Obliged entities may rely on information obtained through consultation of official public registers, corporate documentation provided by the client or information acquired in the context of the professional relationship. In order to facilitate consultation, it is suggested that: - ensure that obliged entities have easy and free access to the registers of beneficial owners; - recognize the essential role of the register as a timely source of information for the verification of the ownership structure and control of legal persons, exempting obliged entities from carrying out further verification activities." Article 18 (purpose and nature of the relationship) 'Where the relationship with the client is based on a formalised professional assignment, the purpose and nature of the business relationship may be inferred from the professional mandate or engagement letter, provided that such elements enable the obliged party to adequately understand the client's business and its risk profile.'
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	With specific reference to Commercialisti, it is believed that some provisions may benefit from further clarification in order to ensure an effectively proportionate application of due diligence measures and to avoid excessively prescriptive interpretations that could limit the operational flexibility required by the risk-based approach.

Name of the respondent	Question	Answer
		In particular, some of the information listed in the draft RTS for the purpose of identifying the purpose and nature of the relationship with the client, as provided for in Article 18, could be interpreted as requirements to be applied in a systematic manner, while in the context of professional activities such information could be irrelevant, or already available or inferable from the professional mandate and the activities carried out on behalf of the client. It would therefore be appropriate to clarify that the collection of such information must take place in a manner that is proportionate to the nature of the service provided and the level of risk identified. Similarly, with reference to the provisions relating to the understanding of the client's ownership and control structure, provided for in Articles 11 and 12 of the draft RTS, it would be useful to clarify that the intensity of the checks required must be commensurate with the risk actually identified and the information reasonably available to the obliged party, also taking into account the fact that professionals, in addition to the declaration made by the client under their own responsibility, frequently rely on information contained in public registers and in the official documentation provided by the client. On this point, reference is made to what has already been proposed in the comment to the previous question (integration of Articles 11 and 12). In the light of these considerations, it is considered appropriate to introduce a clarification aimed at explicitly strengthening the principle of proportionality in the application of the measures provided for in the RTS. To this end, it might be appropriate to provide for wording as follows: 'In applying the provisions of this Regulation, obliged entities shall take measures proportionate to the level of risk identified

Name of the respondent	Question	Answer
		and shall take into account the nature of the services provided and the information already available in the context of the business relationship.' Such clarification would help to ensure that the risk-based approach can also be applied effectively in the context of professional activities, while avoiding burdens and ensuring that due diligence measures remain consistent with the operational specificities of the various obliged entities. Proposals made In the light of these considerations, it is considered appropriate to make the following proposals. Article 18 (purpose and nature of the relationship) To avoid overly prescriptive interpretations of the list of information required, a clarification such as the following could be envisaged: 'Information relating to the purpose and intended nature of the relationship with the client may also be inferred from the professional mandate or engagement letter, where such elements enable the obliged entity to adequately understand the client's business and its risk profile.'
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Overall, the information provided in the draft RTS for the purposes of customer due diligence is considered to be generally available to obliged entities. However, considering the characteristics of the activities carried out by traders and the nature of the services provided, there may be some situations where certain information indicated in the RTS may not be readily available or may not be directly accessible to the trader. A prime example concerns cases where the trader assists small businesses or clients who are natural persons carrying out

Name of the respondent	Question	Answer
		small business activities. In such circumstances, some of the information indicated in the draft RTS for the purpose of understanding the purpose and intended nature of the relationship - such as information relating to the estimated value of future transactions, the number or frequency of transactions or the destination of funds - may not be available in a structured or forward-looking form. In many cases, such information is not formally defined by the client and can only be inferred in a general way from the economic activity carried out or the subject matter of the professional assignment. A second example concerns situations in which the professional is appointed to assist companies or corporate groups characterized by articulated ownership structures or shareholdings held through foreign entities. In such circumstances, the information required by the RTS to reconstruct in detail the client's ownership and control structure may not be fully available to the professional, especially when such information depends on documentation held by persons located in other jurisdictions or on registers that are not easily accessible. A third example is that relating to cases in which the professional provides temporally limited or occasional activities, such as assistance in the incorporation of a company, in the preparation of corporate deeds or in the performance of specific consultancy activities. In such circumstances, the professional may not have access to all the information required by the RTS, as the relationship with the client is limited to a specific professional assignment and does not necessarily involve in-depth or continuous knowledge of the client's activity. In these situations, it should be clarified that obliged entities

Name of the respondent	Question	Answer
		can only rely on reasonably available information sources, such as public registers, official corporate documentation and, before that, on the information provided by the client in the context of the professional relationship. To this end, it might be useful to introduce a clarification in the text of the RTS specifying that, where certain information is not directly available, obliged entities may base their assessment on information that is reasonably obtainable in the context of the customer relationship and on publicly available sources, applying due diligence measures in a manner proportionate to the identified risk. Such clarification would help to ensure an effective application of the risk-based approach also in the context of professional activities, while avoiding imposing information requirements on traders that are not always realistically satisfactory in the operational circumstances in which they carry out their activities. In light of the situations described above, it is considered appropriate to introduce some clarifications in the text of the RTS in order to ensure that the disclosure requirements can be applied in a proportionate manner even in cases where certain information is not reasonably available. Proposals made Reference is made to what has already been proposed in the comment on question no. 1 and, in addition, it is proposed to further integrate art. 18 as follows. Article 18 (purpose and nature of the relationship) 'Where information relating to the purpose and intended nature of the relationship with the client is not available in a structured or forward-looking form, obliged entities may base

Name of the respondent	Question	Answer
		their assessment on information that can reasonably be inferred from the client's economic activity or the subject matter of the professional assignment.'
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In general, it should be noted that some professional services provided by Commercialisti generally present a very low level of risk of money laundering and terrorist financing: - Board of Statutory Auditors not in charge of the statutory audit - Affixing the stamp of conformity on tax returns - Preparation of rulings with a request for interpretative clarifications on the application of rules, even if contextualized to concrete cases with forwarding to Ministries and Tax Agencies - Preparation of rulings with a request for interpretative clarifications on the application of rules, even if contextualized to concrete cases with forwarding to Ministries and Tax Agencies - Answers to tax and corporate questions asking what is the correct solution based on legal provisions of the case in question. The question can be abstract or contextualized with objective data (personal and value). Pro-veritate opinions - Party-appointed technical advice - Functions of assistance, defense and representation before a Judicial Authority - Mediation and arbitration - Appointments that derive from judicial appointments for which the professional interfaces with the authority that appointed the - Assignments as crisis manager and independent expert in crisis settlement

Name of the respondent	Question	Answer
		- Professional positions in the training and publishing sector - Member of the Supervisory Body pursuant to Legislative Decree 231/2001 (SB) - Preparation and/or electronic submission of various files to the competent public offices (e.g. Business Register) - Preparation at the competent public offices (SIAE, competent Ministries, Chamber of Commerce, etc.) of first registration and renewal practices for the protection of rights (trademarks, property rights, patents, software) - Technical assistance and specialist consultancy activities for the planning, management, implementation, reporting, monitoring, control, evaluation and support for the certification of public resources, including European ones, as well as for the exercise and development of the Programme Monitoring and Audit Function. In such situations, in the Italian system, customer due diligence is traced back to compliance with simplified measures such as, for example, the acquisition and storage of a copy of the client's identity document, or the acquisition and storage of the professional's appointment/deed. Looking ahead, it is suggested to provide for the application of due diligence obligations exclusively for the activities carried out by Commercialisti as "auditors, external accountants and tax consultants". In this area, the application of simplified due diligence measures may include, inter alia, the possibility of relying more on the information already acquired in the context of the business relationship and on the available documentation, where such information allows the trader to adequately understand the client's business and assess the client's risk profile. Further clarification could concern cases where the

Name of the respondent	Question	Answer
		client is a company subject to transparency and legal disclosure obligations, such as in the case of companies registered in national public registers. In such situations, it may be appropriate to explicitly recognise that obliged entities may rely, under simplified due diligence measures, on the information available in those registers. Proposals made Art. 20 (minimum requirement for the identification of the customer in low-risk situations) - In paragraph 1(b) of the RTS, it is proposed to add the following after point (iv): '(V) certificates extracted from official public registers.' - After paragraph 2, it is proposed to add the following: 'In low-risk situations, where the obliged entity acts as an auditor, external accountant and tax advisor, simplified due diligence measures may include the use of information and documentation already available in the context of the professional relationship, provided that such information allows the obliged entity to adequately understand the client's business and its risk profile.'
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No additional observations.

Name of the respondent	Question	Answer
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	Do you have any comments on the Annex in the draft RTS?	No
Consiglio Nazionale dei Dottori Commercialisti e degli Esperti Contabili	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Council of Bars and Law Societies of Europe (CCBE)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and	The pillar of flexibility comes from a correctly worded Art. 1, setting forth the principle of proportionality and the risk-based approach. The proposed RTS need to put more weight on both principles and must be refined with the aim of providing the necessary

Name of the respondent	Question	Answer
	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	flexibility. The CCBE therefore proposes the following revised text of Article 1: Article 1 - Proportionality and risk-based approach This Commission Delegated Regulation ('Regulation') shall be applied in line with the proportionality principle and in coherence with the risk-based approach. The extent and the nature of the information to be obtained and the measures to be applied by obliged entities shall therefore be commensurate with the type and level of risk identified, in order to enable obliged entities to manage and mitigate that risk appropriately. We generally agree that the draft RTS could in principle be applicable across the range of products and services provided by obliged entities, including across the legal profession, but only if substantially adapted to non-financial business models. For legal practices, particularly for small and sole practitioners, the main concern is that a cross sector RTS may be implemented in a way that fits operating models of financial institutions (e.g. dedicated compliance teams, specialist tooling, and highly standardised onboarding), which many law firms cannot provide in an efficient and proportionate manner due to their different type of activities and set-up. We also miss the explicit confirmation that listed information items (articles 3, 4, 5 & 6) are to be collected only to the extent necessary and in a manner proportionate to risk and the nature of the legal matter. Where the RTS contemplates automated tools (e.g., screening) or remote verification safeguards, it should be clarified (for example in the recitals) that a controlled manual process may be acceptable for firms where justified by size/business model or by the AML-risks associated with a client or a case, provided it is documented and consistently applied.

Name of the respondent	Question	Answer
		For drafting proposals to preserve the proportionality for legal services for Articles 7, 12, 18, 19(3) see CCBE's comments on particular provisions in the further section of the questionnaire. Article 22 – Pooled Accounts If Article 22 remains as it is currently proposed, it will have a major impact on a very large part of lawyer's activities and therefore, it must be amended. The proposed Art. 22 (a) makes the use of pooled accounts for lawyers impossible, as the prerequisite for applying simplified due diligence measures shall be that "the credit or financial institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit or financial institution", which is only fulfilled for matters falling under Article 3(3)(b) AMLR. Moreover, this provision causes major concern from the viewpoint of lawyer professional privilege/professional secrecy. For more detailed comments on this specific provision see the further section of the questionnaire.
Council of Bars and Law Societies of Europe (CCBE)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In principle, we agree that the draft provides for a risk-based approach as stipulated in Article 1 RTS. However, the risk-based approach requires some improvements, as set below. 1) Several provisions provide that the obliged entity shall obtain information on "at least one of the following" points. All these exhaustive lists should contain an additional point: "any information that the obliged entity deems useful to understand / obtain the required information". This would allow for more flexibility, as in particular situations, other information might be available or relevant, which is not

Name of the respondent	Question	Answer
		contained in the enumerative lists. 2) Some provisions state that information shall be obtained "where necessary". The wording "where necessary" should be clarified and defined. Obtaining an information is "necessary" where the obliged entity has established according to a risk-based assessment that obtaining the information is required to understand the occasional transaction or business relationship and the associated risks, is able to provide a better understanding of these risks and can be obtained with a reasonable effort. AMLA should also confirm a tiered approach to assessing reliable and independent sources, allowing small firms to apply standardized checks for commonly used sources with enhanced assessment only where defined risk triggers arise. Finally, AMLA should explicitly confirm that client information may be reused where it is still up-to-date and is appropriate to the assessed risk. This would support proportionality, reduce duplication, and limit repeated client requests across multiple matters. Clarifications that would strengthen practical risk-based operation especially for small firms • Non-checklist clarification: AMLA should clarify (for example, in recitals) that lists of information/documents in the RTS are not intended to be applied as universal checklists, but proportionately under Article 1. • Re-use / avoid duplication: Recital 21 usefully recognises that information may already be available to the obliged entity and should be considered before requesting similar information again to avoid unnecessary duplication and reduce burden. AMLA should emphasise this point, as it is highly relevant to legal practices acting for repeat clients across multiple matters.

Name of the respondent	Question	Answer
		See CCBE's comments on specific provisions and effective application of risk-based approach in the further section of the questionnaire, e.g. Article 3, 6 par.3, 6 al.5, 7, 11 and 12, 13, 25 to 28.
Council of Bars and Law Societies of Europe (CCBE)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 5: The provision requires that information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status shall be collected. However, national ID documents (such as passports or identity cards), which are examined for the purpose KYC/CDD only show one nationality (i.e. the nationality of the issuing state). Therefore, it is impossible to know if a client has other nationalities (e.g. dual citizenship); the obliged entity has no means to verify information on additional nationalities provided by the costumer. Therefore, the requirement to collect information and verify all nationalities must be replaced by a requirement to record only the nationalities shown in the ID documents presented by the costumer. In other words, verification obligations must be limited to what is objectively verifiable. Obliged entities have no means of ascertaining with certainty whether a customer holds additional nationalities beyond those declared. Recital (3) provides that verifying one nationality declared in good faith will be sufficient, which creates an inconsistency with the "all nationalities" requirement in the draft Articles. Article 22: As already explained in the answer to question 1, Article 22 (a) RTS cannot be observed in most situations involving pooled accounts of lawyers. The CCBE would like to reiterate that the draft RTS focuses obviously on the financial sector and therefore cannot be

Name of the respondent	Question	Answer
		applied directly to the non-financial sector. It is not only overly ambitious in its approach, but it is also not tailored to the nature of the business of legal professionals. The non-financial sector is comprised in large part of many small(er) entities that do not possess the same amount of resources to implement time-consuming administrative CDD-measures (not including the time it will take to study and comprehend those new rules). The heavy administrative burdens threaten to severely increase the cost of compliance for obliged entities, hampering access of citizens and businesses to their services. Legal professionals are only subject to AML obligations in specific circumstances defined by Article 3(3) of the AMLR. These are often limited, case-based, and triggered by particular client engagements. Therefore, the administrative structure and data capture logic proposed in Section 2 of the draft RTS — which appears designed for entities with ongoing client accounts, transaction volumes and continuous onboarding processes — does not align with the operational model of lawyers. A uniform application of these standards would impose disproportionate compliance burdens on lawyers and legal practices, especially sole practitioners or small offices, with no added benefit in terms of AML/CFT effectiveness. Article 14: The CCBE suggests to redraft Article 14 (1) as follows: “For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities collect shall include: a. a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine whether individual beneficiaries are ascertainable and shall be treated as

Name of the respondent	Question	Answer
		beneficial owners; and b. relevant documents to enable the obliged entity to establish that the description is correct and up-to-date on a risk-based approach." Moreover, it should be considered how in practice the commitment of Article 14(2) can be complied with by trusts. It is likely that trusts will refuse to take such commitment to inform proactively the obliged entity in case of change in beneficiaries, or in case of beneficiaries previously identified by class or characteristics becoming ascertainable. It is therefore recommended having this control whenever a payment is requested to a beneficiary.
Council of Bars and Law Societies of Europe (CCBE)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose broad additional SDD categories for legal services. Instead, the legal sector is ready to work with AMLA in providing support for the legal profession, particularly small and sole practitioners, to apply existing SDD flexibilities consistently, including: • Article 21 (low risk beneficial owners (BO) / senior managing officials (SMO) identification and verification): Provide examples on how small firms can meet the two-step approach (identify from one source; verify from a different source) in common low-risk corporate client scenarios. • Article 23 (updates in low-risk situations): Provide practical change-trigger examples suitable for legal services to support reduced update frequency while remaining compliant. If AMLA considers any drafting change appropriate, a narrowly framed recital could usefully reiterate that SDD remains part of a complete CDD process and reduces depth/frequency proportionately, rather than creating a de facto exemption.

Name of the respondent	Question	Answer
Council of Bars and Law Societies of Europe (CCBE)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Beneficial ownership verification and SMO fallback. The recitals emphasise that consultation of central registers is necessary but not sufficient, and that SMO identification is limited to cases where all means have been exhausted or doubts exist. Expectations regarding technology-based tools and proportionality. Article 7 requires remote solutions (where applicable) to meet specified safeguards and to be demonstrable to competent authorities; small firms may struggle with the cost and governance overhead of procuring, maintaining and evidencing such solutions. PEP and sanctions screening provisions also create pressure towards paid automated tools, even where manual checks may be proportionate for small firms. A possible solution may be that AMLA should clarify what constitutes an acceptable manual-check-only model for small firms (governance, record-keeping, frequency), and what documentation is sufficient to evidence compliance when using third-party tools. Lastly, as previously commented, we believe that Section 2 of the draft RTS does not sufficiently differentiate between business models. Unlike financial institutions, lawyers do not operate very often continuous transactional relationships, but rather provide episodic legal advice and representation. Concepts such as "ongoing monitoring", "customer onboarding", or "distribution channels" have limited relevance to the legal profession. Therefore, we propose that the RTS explicitly allow Member States and self-regulatory bodies to develop sector-specific implementation guidance for legal professionals, aligned with AMLR but tailored to legal ethics, practice, and risks.

Name of the respondent	Question	Answer
Council of Bars and Law Societies of Europe (CCBE)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 3 (and 5) Article 3 With respect to Article 3 (Information to be obtained in relation to addresses), the detailed information required under this Article (which applies to both the customer itself, the persons purporting to act on its behalf, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted) appears contradictory to the risk-based approach principle (e.g. when it comes to proxyholders or persons benefiting from the activity/transaction, regard could be had to reducing the amount of information relating to personal address, reducing it, on a risk-based approach, to the country of residence/nationality(ies) only). For proxyholders acting for a legal person customer, instead of asking the personal address, it could be considered to gather the information on the professional address only. Article 5 Article 5 RTS requires the collection of information on “all nationalities”, whereas Recital 3 stipulates that verification of one nationality is sufficient if a natural person declares multiple nationalities in good faith. This mitigation should be incorporated directly in Article 5 RTS instead of in the recitals

Name of the respondent	Question	Answer
		(see also a comment in this regard above). It should be confirmed explicitly that “the natural person purporting to act on behalf of the customer”, as referred to in Article 5 RTS, does not include the legal representatives acting on behalf of a legal person (as mentioned in Article 22(b)(iii) AMLR)). If this term - “natural person purporting to act on behalf of the customer” - were to include legal representatives acting on behalf of a legal person, this would impose a significant and disproportionate administrative burden on obliged entities. In many cases, legal persons have multiple representatives, which may also change frequently. Systematically obtaining and verifying also nationality information for all such representatives (particularly if this would be required in all cases and irrespective of risk) would go beyond what is reasonably necessary for AML/CFT purposes and is inconsistent with a risk-based approach of the RTS.
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6 According to Article 6, par. 3, obliged entities shall take “reasonable steps” to ensure the authenticity of the documents collected for the purpose of identification and verification of the client. Therefore, it should be clarified in the considerations how the criterium of “reasonable steps” should be interpreted. It should clarify that “reasonable steps” do not imply for example technical or forensic verification of document authenticity beyond the capabilities of (non-financial) obliged entities. It should be specified that, for independent legal professionals, this obligation is limited to

Name of the respondent	Question	Answer
		plausibility checks based on apparent validity and internal consistency of the documents provided. Lawyers lack the tools, forensic expertise and institutional role required to conduct technical, forensic or investigative verification of such documents. Art. 6 par. 4 requires obliged entities that they understand the content of foreign-language documents used for identification and verification purposes, without clarifying the acceptable level or method of translation. It should be clarified that the use of machine translations or non-certified translations is permissible where sufficient to understand the content for ML/TF purposes unless inaccuracies could materially affect the risk assessment. Across Article 6 RTS, the RTS should explicitly allow reliance on reliable and independent sources in line with Article 22(6)(a) AMLR, and provide non-exhaustive examples. Furthermore, the obligation to systematically obtain and verify documents for identification purposes should not be interpreted in a manner that conflicts with legal professional privilege/professional secrecy. Legal professionals may, in certain circumstances, be limited in what information or documents they may request or retain without infringing client rights or procedural safeguards. In face-to-face context, Article 6, par. 5 requires systematic collection of the original ID document, or a certified copy thereof, or resorting to verification measures detailed by Article 7 for non face-to-face context (i.e. which, we understand, results in getting a copy of an ID document through eIDAS-compliant tools, or through other electronic tools meeting the conditions detailed by Article 7, §3-4). As previously noted by the CCBE, the requirement of collecting the

Name of the respondent	Question	Answer
		original or (certified) copy of documents as well as the extensive conditions provided by Article 7, § 3-4 notably in terms of technological features is not aligned with a risk-based approach and consequently creates unnecessary administrative burden and additional costs. More flexible approach could be upheld on a risk-based approach, e.g. in case of proxyholders of low-risk customers (such as regulated or listed entities), relying on a simple letter detailing the minimum identification data should be sufficient. In other cases, a letter detailing the minimum identification data should be acceptable if issued by professionals being themselves subject to AML/KYC obligations and considered, on a risk-based approach, as reliable, such as, for instance, a notary, a qualified lawyer, a registered accountant or any other persons that are authorised as equivalent to a notary for document certification purposes. Reference should be made in Article 6 par. 5 to "where relevant the acquisition of information from reliable and independent sources", in accordance with Article 22(6)(a) AMLR, and it should be made clear that these means can be used instead of obtaining a passport or equivalent, in particular for beneficial owners and for natural persons purporting to act on behalf of a customer (see in this respect also the comment above under 5 on the scope of 'natural persons to act on behalf', e.g. when these natural persons are named in official documents such as excerpts from public registers, it is not clear what would be gained for AML/CTF purposes if verification would apply in accordance with Article 6(5) RTS).
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7

Name of the respondent	Question	Answer
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Articles 7-10 Article 7 Regarding Article 7 (remote verification) (but also Article 8 on reliable/independent sources), AMLA should provide clearer, outcome-focused expectations that remain achievable for small firms, including when using third-party solutions and when evidencing compliance to competent authorities. Article 7(1) establishes eIDAS-compliant electronic identification means as the primary verification method for non-face-to-face situations. Article 7(2) permits remote solutions only “in cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided.” Article 7(4) further requires obliged entities to “justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624.” eIDAS-compliant solutions should however be merely recognised as a preferred — rather than primary — verification method, with obliged entities retaining the discretion to use equivalent remote tools where appropriate. Indeed, the introduced hierarchy privileging eIDAS, reinforced by the justification required under Article 7(4), is disproportionate and fall short of any risk-based approach principle. It should be clarified that reliable and independent sources of information according to the criteria set out in Article 7 may replace any documents required for the verification of the identity of the person. This follows from Article 22(6)(a) AMLR which allows the use of such documents. It can occur that a lawyer cannot obtain some documents and in these cases, they should be able to rely on other sources.

Name of the respondent	Question	Answer
		Article 7(3a) of the RTS should consistently cover both customers and persons purporting to act on behalf of the customer (in line with Article 22 (6) of the AMLR). Requirements such as full recording of video sessions (disproportionate), time stamping, and confirmation that documents are “valid and up to date” should be framed as reasonable efforts, not technical guarantees. Proportionate alternatives (e.g. screenshots of video sessions or file notes) should be explicitly permitted. Especially to facilitate compliance by smaller law firms and to mitigate the administrative burden and (costs of) data storage. Article 8 Article 28 AMLR states that the RTS shall specify the reliable and independent sources of information that may be used to verify the identification data of natural or legal persons for the purposes of Article 22(6) and (7). Article 8 RTS does not fulfil the mandate of Article 28 AMLR, as it does not specify which sources may be used, only how they should be assessed. As already commented on Article 6 RTS, that Article does not seem to allow the use of other reliable and independent sources. The combination of Articles 6, 7 and 8 RTS leaves no room for risk-sensitive measures. The criterion referring to the “ease with which information can be forged” is unclear and unrealistic for obliged entities to verify. Article 9 Article 22(3) AMLR on the use of virtual IBAN is applicable to credit institutions and financial institutions. Article 9 RTS refers to ‘obliged entities’ in general. This may lead to confusion and

Name of the respondent	Question	Answer
		it is therefore suggested to change 'obliged entities' into 'credit institutions and financial institutions'. Article 10 Clarification is needed as to who qualifies as "persons authorised for certification purposes" (Article 10 (sub b iv) RTS). Art 10 (b): Alternatives as listed herein are practical, however, it should be clarified how these can be used for verification purposes with respect to nationalities of the beneficial owner or if not, what other sources may be used for verification of the nationality/nationalities of the beneficial owner. Art 10 (b) (iii): It is suggested to allow 'bank statements' (issued by credit or financial institutions as defined in Article 3, paragraphs (1) and (2), of Regulation (EU) 2024/1624) as third-party source. Bank statements are often used as (extra) source to verify information on natural persons.
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	11
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Articles 11-12 Article 11 The requirement to obtain a "comprehensive understanding" (as included in 11 (1) RTS) goes beyond Article 20 AMLR and should be aligned with the AMLR wording (requiring (simple) understanding of the ownership and control structure of the customer). Provisions requiring a "comprehensive understanding" (Art. 11 par. 1 RTS) of ownership and control structures and an assessment of their "economic, legal or other rationale" (Art. 11 par. 4 (b) RTS) transforming lawyers into de facto

Name of the respondent	Question	Answer
		investigators or auditors of their own clients. It should be clarified that lawyers are not required to independently verify or substantively assess the economic legitimacy of client structures beyond identifying ML/TF risk indicators apparent in the course of the mandate. Article 11 (2b under i) requires the collection of information on how control is expressed and exercised. To qualify as a beneficial owner, the possibility to exercise control is sufficient (see Article 53 AMLR), so in many cases there may not be information available on the exercise of control. Moreover, the 'expression' of control is not a term used in the AMLR and it remains unclear what is meant by it. Article 11 (2b under ii): It is suggested to specify what information on the regulated market needs to be obtained. Article 11 (3d) RTS: There seems to be a typo - 'shares of interest' should be 'shares or interest'. Article 12 It is suggested to add a sentence confirming that the definition is a trigger, not a ceiling (i.e., other risk indicators may justify treating a structure as complex even if the definition is not met). With respect to Articles 11 and 12 regarding understanding the ownership and control structure of a customer, CCBE welcomes the amendments provided to Article 12 pursuant to which the threshold was raised from two layers to three layers and now requires more than one cumulative condition (rather than one only) to be met before a structure is treated as complex. However, the CCBE wishes to reiterate its previous following comments: - the presence of several layers does not necessarily result in a

Name of the respondent	Question	Answer
		customer or an entity being considered as riskier or complex. The scope and extent of the information and supporting documentation, as the case may be, to be gathered with respect to each entity involved in the ownership structure of the customer should be determined on a risk-based approach; - accordingly, the assessment of a given ownership structure should be done on a case-by-case basis, instead of being based on mandatory criteria, such as those provided under Article 12 of the draft RTS. The question arises how are Article 12 RTS and Annex III AMLR related? What is the difference between complex corporate structures (Article 12 RTS) and unusual or excessively complex corporate structures (Annex III AMLR) and why is this difference made? It would be better to stick to a risk-based assessment. For example: In (Dutch) corporate structures, 3 layers with a foundation (Stichting Administratiekantoor) is quite commonly used and not necessarily considered a complex structure. Art 12 (2): An organigram is not “additional information” but typically the starting point of any CDD. Art 12 (3): It is suggested to delete this sub-paragraph: obliged entities should always take risk-sensitive measures to satisfy themselves that the information obtained is accurate.

Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Articles 13-16 Article 13 Article 13 RTS (like Article 22 AMLR) lacks a (further clarifying)

Name of the respondent	Question	Answer
		definition of SMO. The CCBE would suggest to limit this definition to the executive members of the management body. This comment is also linked to the point below with respect to verification measures - a broader definition of SMO (including not only the executive members but also managers responsible for day to day management) will often lead to very large groups of SMOs per legal entity - verifying their identity would lead to severe administrative burden and is not considered proportionate or feasible. Article 13 (b) RTS: Verification requirements for the identity of SMOs should not exceed the AMLR and should reflect their generally lower ML/TF risk compared to beneficial owners. The CCBE welcomes the possibility newly provided to obtain the address of the registered office of the legal entity instead of the SMO's residential address and country of residence. However, the article continues to require collecting the same information for SMOs as for beneficial owners and verifying their identity "in the same way as they would for beneficial owners," which does not reflect the different risk profile of these two categories. Indeed, as previously commented, the ML/TF risk linked to a SMO is generally low as a SMO may be, and often is, simply an employee in an entity and does not normally have a personal financial interest in the transactions / services sought from the obliged entity, and/or may not have control by other means in the entity. It is important to focus on the real risk and stick to the follow the money principle. As a result, the verification of the identity of SMOs should occur on a risk-based approach, notably taking into account their actual involvement in the transactions / services. In addition to this it should be recognised that, in practice, independent legal professionals often have no direct

Name of the respondent	Question	Answer
		interaction with SMOs, who are not clients and may not be publicly registered. In low- and standard-risk cases, legal professionals should therefore be permitted to rely on information provided by the client, including corporate documentation or written representations, with verification or escalation required only where inconsistencies, implausibilities or risk indicators arise. Article 14 Article 14(1)(b) RTS appears redundant in light of Article 76(2) AMLR. Article 15 Article 15(2) RTS should, consistent with Article 14 RTS, explicitly require timely updates when discretionary powers are exercised. Article 16 The RTS should clarify that verifying authorisation (see Article 20 (1i) AMLR) does not necessarily require a formal written power of attorney. Functional authority (e.g. acting by virtue of role or position, lacking a written power of authority) should be sufficient where appropriate.
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	18
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Articles 18-21 Article 18 In Article 18 (purpose and intended nature of the business

Name of the respondent	Question	Answer
		relationship / occasional transaction), an explicit clarification should be added that the information items in Article 18 are to be obtained only where necessary and proportionately, taking account of the nature of the service and the stage of the matter. While the repeated use of “where necessary” preserves flexibility, clarification is needed that these elements are supplementary risk based measures, not default requirements. Article 20 Article 20 (1) lists the minimum requirements for customer identification in situation of low-risk for natural persons and legal entities. Unlike Article 6 (5), it does not specify any documents required to verify this information. Our understanding is that recital (4) applies, i.e., that the obliged entity must take a risk-based approach to verify the information using reliable and independent sources. For natural persons, these include, but are not limited to, those specified in Article 6 (5). If another interpretation was intended and Art. 6 (5) was meant to also apply for natural persons in low-risk situations, we suggest that simplified due diligence measures apply at least when a person acts on behalf of a customer that is a legal person, and the acting person is named in official documents available for the customer, such as excerpts from a public register. In these cases, it is not clear what can be gained in an AML/CTF context by verifying the information in the way described in Article 6 (5). It should be clarified whether the “person purporting to act on behalf of the customer” (Article 20 RTS) also includes legal representatives of a legal person. If not, what information is to be collected on the legal representative of a legal person in

Name of the respondent	Question	Answer
		case of simplified CDD? Article 21 If we understand correctly that article 20 of the RTS does not relate to BOs/SMOs, it should be specified in this Article 21 RTS which minimum information of the BO/SMO should be collected in low risk situations. Given the risk-based approach, we expect that less information is required than mentioned in Article 62(1)(a) AMLR. The CCBE does not understand why (according to Article 22 (2) RTS) the information contained in the central register, business or company register cannot be used for verification, since 'public registers other than the central registers' (such as the company register) are mentioned in Article 22(7) AMLR as a source of verification. For example, in the Netherlands, the company register is a reliable source to verify 100% BO's and SMOs.
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	22
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 22 The proposed Art 22 (a) makes the use of pooled accounts for lawyers impossible. Moreover, it conflicts with legal professional privilege / professional secrecy (hereinafter "LPP/PS"). LPP/PS is specifically protected under Article 8 of the European Convention on Human Rights and Article 7 of the Charter. As elaborated in the case law of the ECtHR and the CJEU (cf. ECtHR, 6 December 2012, Michaud v. France; ECtHR, 9 April 2019, Altay v. Turkey; CJEU, 8 December 2022, C-694/20; CJEU,

Name of the respondent	Question	Answer
		29 July 2024, C-623/22; CJEU, 26 September 2024, C-432/23), LPP covers both representation in court and legal advice. Thus, a lawyer cannot in principle disclose his or her clients to third parties. The obligation for lawyers in activities not covered by the AML regime and regardless of the risk to immediately and at all times provide information and documents to credit institutions on the latter's mere request, would amount to a disproportionate and unjustified interference with LPP/PS. Pooled accounts are indispensable for daily operations for lawyers, as the following examples show: 1) Payment of Self Assessed Taxes In certain cases (e.g. assignments, settlements, lease agreements), fees or self-assessed taxes are paid into the lawyer's pooled account. The lawyer calculates the fee or tax and forwards the amounts to the tax authority or court. The pooled account ensures proper segregation and traceability. 2) Debt Collection and Enforcement Proceedings In debt recovery matters, debtors pay outstanding amounts into the lawyer's pooled account. The lawyer allocates payments to principal, interest, costs and expenses. Client funds remain clearly separated from the lawyer's own assets. Amounts are often only very small. 3) Damages Claims Arising from Traffic Accidents or Personal Injury After settlement negotiations, insurers transfer the compensation and legal fees to the claimant's lawyer. The lawyer uses the pooled account to settle third party claims, such as repair costs etc. The remaining amount is paid out to the client. 4) Settlement Payments and Recoverable Legal Costs in Civil Litigation

Name of the respondent	Question	Answer
		Settlement amounts or awarded cost refunds are frequently paid to a lawyer's pooled account. The lawyer distributes the funds in accordance with the settlement agreement or court decision. This is particularly useful in multiparty proceedings, such as class actions. These for examples do not fall within the scope of AML/CFT provisions (Article 3(3)(b) AMLR). The lawyer is under no legal obligation to carry out CDD/KYC. However, according to the wording of Article 22(a) RTS on CDD, the lawyer would be required to identifying and verifying the identity of the client according to Article 20(1)(h) AMLR. Lawyers can only provide this information if they have established and verified the "identity of the natural person" in accordance with Article 20(1)(h). Outside of the financial and real estate transactions mentioned in Article 3(3)(b), and moreover below the thresholds set out in Article 19(1) (EUR 10,000), lawyers are not required to collect this information, as these transactions do not fall within the scope of the Regulation. Collecting such information would be practically unmanageable, as it would have to be done for almost every client and would involve a full identification process. The requirement is neither covered by the wording nor the purpose of the AMLR: The application to lawyers was deliberately limited to the scope of Article 3(3)(b). Furthermore, the purpose of this information is limited, since depositors are usually not clients but often the opposing party. Replacing pooled accounts with direct payments to clients is not feasible, as clients are generally unable to monitor payment deadlines, calculate interest, etc. In addition, fee payments and payments from opposing parties often arrive mixed and must first be separated, which clients cannot handle

Name of the respondent	Question	Answer
		themselves. The problem is not specific the legal profession. Pooled accounts are operated for example by schools (for the purpose of collecting small amounts for expenses) or by property managers who manage operating costs. Moreover, Article 19 AMLR establishes thresholds for CDD obligations that must be observed also within Article 22 RTS. Drafting proposal: “Article 22 - … (a) the credit institution is satisfied that (i) the funds are not related to activities that fall within the scope of the obligations of Regulation (EU) 2024/1624, in particular its Article 3 and Article 19 or (ii) the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit institution;” The term “relationship” in Article 22(d) RTS should be clarified (bank–account holder vs. account holder–client).

Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Articles 23-29 Article 23 Article 23 RTS largely duplicates Article 33(5) AMLR and introduces additional obligations for low risk relationships. Deletion or alignment is recommended.

Name of the respondent	Question	Answer
		Article 24 Please clarify that source of funds information should not be treated as a standard element of simplified due diligence, but only where specifically justified on a risk-based approach. Article 25 Articles 25 to 28 prescribe mandatory enhanced due diligence measures that prevent entities from tailoring their approach to the specific risk profile. The CCBE notes that these articles were amended to provide that at least one information (from the items listed in these Articles) is to be gathered / assessed, while the EBA draft initially required all of these items. While CCBE welcomes this update as more reflective of a risk-based approach, the CCBE remains of the view that imposing any such measures to the obliged entities prevents them from applying their own risk-based approach, on a case-by-case basis, and, conversely, results in a “tick the box” exercise. Article 25 RTS introduces concepts and criteria that are not defined in the AMLR, in particular the reference to “close relationships known to the obliged entity or publicly known”. This appears to introduce a new and open-ended category that goes beyond the AMLR concepts of family members and known close associates. The provision should be aligned more closely with the AMLR by limiting additional information to clearly defined risk factors and by avoiding vague or new terms that create legal uncertainty and disproportionate investigative expectations for non financial obliged entities. Article 26 Article 26 RTS appears to impose stand alone verification

Name of the respondent	Question	Answer
		obligations (e.g. confirming that information is “accurate”) without clarifying whether this differs from the general CDD obligation to assess consistency and plausibility. It is unclear why such explicit verification language is included for specific elements only. In addition, the requirement to assess the “destination of funds” is insufficiently defined and could lead to overly broad and impractical assessments, particularly for legal services. The article should clarify that the focus is on consistency with the customer’s activities and risk profile, not on exhaustive tracing of downstream fund flows. Article 27 Article 27 RTS appears to introduce a new standard by requiring information that must “satisfy” the obliged entity that the source of funds or source of wealth is lawful. This wording risks shifting the obligation from risk based assessment to an outcome based burden of proof that is not foreseen in the AMLR. The article should be reframed to clarify that additional information can be obtained where necessary, which may consist of the listed elements, rather than imposing a qualitative sufficiency test. Furthermore, references to source of funds and source of wealth should consistently be framed as “and/or, as applicable”. Article 28 Article 28 RTS adds further requirements without providing the same level of practical guidance as Article 27 RTS. In particular, subparagraphs (a), (b) and (c) lack concrete examples of what

Name of the respondent	Question	Answer
		information may reasonably be obtained. Certain elements, such as assessing transaction patterns or evaluating whether third country customer due diligence standards are equivalent, are primarily designed for financial institutions and are not appropriate for legal professionals and other DNFBPs. The RTS should clarify this distinction and avoid extending operational expectations beyond what follows from Article 34(4f) AMLR. Article 28 (a) RTS - reference to 'institution' should be 'obliged entity'. Article 29 It is suggested to delete 'Where there is a suspicion…whether the person acting on behalf of the customer is subject to targeted financial sanctions'. This introduces a new requirement on top of screening of financial sanctions as set out in Article 20(1)(d) AMLR. Again, it is not clear if the person acting on behalf of the customer also includes the legal representative of a legal entity as client.
Council of Bars and Law Societies of Europe (CCBE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	30
Council of Bars and Law Societies of Europe (CCBE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Articles 30 – 33 Article 30 Regarding Article 30 (Screening requirements), CCBE notes that Article 30(c)(ii) still requires all obliged entities to perform screening against TFS lists "when there is a change in any of the existing designations, or a new designation is made pursuant to

Name of the respondent	Question	Answer
		Article 26(4) of Regulation (EU) 2024/1624". However, as previously commented, the corresponding provision in Article 26(4) of the AMLR clearly limits this specific requirement to credit institutions and financial institutions. Article 30(c)(ii) RTS may not impose requirements exceeding those of the AMLR and, accordingly, shall be amended to reflect the scope intended by the AMLR, limiting the obligation to perform screening upon new designations of targeted financial sanctions to credit institutions and financial institutions only, in line with Article 26(4) of AMLR. With respect to Article 30(a), iii., it may be noted that this Article requires systematic screening, of: - "any other names, aliases or trade names where they differ from the registered name"; - "digital wallet address, where available in the lists of targeted financial sanctions". The obligation to screen this information shall be strictly limited to cases where this information is otherwise held in the KYC file, to the extent in line with the risk-based approach applied by the obliged entity, and relevant to the activities / services provided under the business relationship with the customer. Article 30 Article 30(c) (ii) RTS should be aligned with Article 26(4) AMLR and limited to financial and credit institutions. Article 30(c) (iii) RTS either to be limited to financial and credit institutions in line with the point under (ii) above. Alternatively, suggest to further clarify or specify terms used such as significant change, and clarify or delete last part of this sentence referring to 'which may have a potential impact on

Name of the respondent	Question	Answer
		the designation as a listed person, body or entity'. Article 32 Provisions stating that obliged entities may apply stricter measures (such as Article 32 (2 and 4) RTS) are redundant and could be deleted, as this already follows from the risk based approach. Article 33 The second paragraph of Article 33 RTS should probably refer to the 'obliged entity', not the 'customer'. Clarification is also needed on alignment with the AMLR application date, e.g. shouldn't the RTS also enter into force on 10 July 2027?
Council of Bars and Law Societies of Europe (CCBE)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Council of Bars and Law Societies of Europe (CCBE)	Do you have any comments on the Annex in the draft RTS?	No
Council of Bars and Law Societies of Europe (CCBE)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Council of the Notariats of the European Union - CNUE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more	---

Name of the respondent	Question	Answer
	appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Council of the Notariats of the European Union - CNUE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We understand that, according to Article 34(4) of Regulation (EU) 2024/1624, in cases of higher risk as referred to in paragraph 1 of the Article, obliged entities shall apply enhanced due diligence measures, that may include, among others, obtaining additional information on the customer and the beneficial owners, as included in point (a). However, we consider point (a) of Art. 25 of the draft RTS requires to be amended or clarified to ensure the element of authenticity is satisfied. In our opinion, to ensure that information is authentic and trustworthy, it is essential that it originates from a publicly recognized authentication authority. Public authorities operate under established legal frameworks, accountability mechanisms, and transparency requirements that obligate them to verify the accuracy of the information they disseminate. Unlike unofficial sources or third-party services, public authorities typically rely on standardized procedures and verified records when producing information. Because their communications are subject to oversight, documentation, and often public scrutiny, the information they provide tends to meet higher standards of credibility and traceability. For these reasons, when the objective is to guarantee authenticity and accuracy, the most dependable approach is to rely on information issued or validated by a recognized public authority. Such sources provide a clear chain of responsibility and verification, which strengthens public trust and helps ensure that procedures and decisions are based on accurate

Name of the respondent	Question	Answer
		and legitimate information. Therefore, we believe that the following suggestion regarding the wording of Article 25(a) of the draft RTS would be appropriate to ensure, as mentioned above, that the requirement of authenticity is met: “(a) be satisfied that the information they hold on the customer and the beneficial owners or the ownership and control structure of the customer other than a natural person is deemed authentic by a publicly recognized authentication authority and accurate; or…”.
Council of the Notariats of the European Union - CNUE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	---
Council of the Notariats of the European Union - CNUE	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	---
Council of the Notariats of the European Union - CNUE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	---

Name of the respondent	Question	Answer
Council of the Notariats of the European Union - CNUE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Council of the Notariats of the European Union - CNUE	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	25
Council of the Notariats of the European Union - CNUE	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)). Credit Union Development Association (CUDA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	CUDA agrees with the position as set out by Ireland's Private Sector Consultative Forum (PSCF) on Anti Money Laundering in their Submission to this Consultation.

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Credit Union Development Association (CUDA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	CUDA agrees with the position as set out by Ireland's Private Sector Consultative Forum (PSCF) on Anti Money Laundering in their Submission to this Consultation, and add the following commentary in relation to Article 23 of Draft RTS with respect to credit unions: (i) Provision Concerned Article 23 of the Draft RTS (Customer identification data updates in low-risk situations), read in conjunction with Article 26(2) of Regulation (EU) 2024/1624. (ii) Rationale A uniform five-year maximum applied identically to a recently onboarded standard-risk customer and a twenty-year member of a credit union whose account activity has been minimal, consistent and entirely unremarkable throughout is not proportionate — it treats fundamentally different risk situations as equivalent. Credit unions maintain long-term, community-based relationships with their members, often spanning decades. A member who joined in 2005, whose account activity has been stable and low-risk throughout, whose circumstances have not changed, and against whom no suspicious activity has ever been identified, presents a categorically different risk profile from a customer approaching their first five-year refresh threshold. Recital 16 of the draft RTS states that simplified due diligence measures should ease the administrative burden on obliged entities and their customers. However, that burden persists

Name of the respondent	Question	Answer
		through repeated five-year refresh cycles regardless of how low or stable the risk profile is. The AMLR sets five years as a maximum, not a mandatory fixed interval, leaving AMLA scope within its Article 28(1) mandate to specify a longer period as an SDD measure where strict qualifying conditions are met. The draft RTS does not take that step and we submit that it should. We propose the insertion of a new Article 23(4) as follows: 4. By way of derogation from Article 26(2), point (b), of Regulation (EU) 2024/1624, and as a simplified due diligence measure pursuant to Article 33 of that Regulation, where all of the following conditions are met, an obliged entity may apply a period of up to ten years between updates to ensure that the relevant documents, data or information of the customer are kept up to date: (a) the ML/TF risk associated with the business relationship has been assessed as low; (b) the business relationship has been in existence for a continuous period of at least ten years; (c) ongoing monitoring has not identified any change in the customer's circumstances, risk profile or the nature of the business relationship; (d) no suspicious or unusual transaction or activity has been identified; and (e) the obliged entity has no reason to doubt the accuracy or currency of the documents, data or information it holds. Where this paragraph applies, the obliged entity shall document the basis of that assessment, which may be evidenced at a policy or system level where monitoring

Name of the respondent	Question	Answer
		processes support such a determination, continue ongoing monitoring throughout, and revert to the period in Article 26(2)(b) without delay if any condition ceases to be satisfied. This paragraph shall not apply to customers who are or become subject to enhanced due diligence measures under Section 4 of Chapter III of Regulation (EU) 2024/1624, in which case the period in Article 26(2)(a) shall apply without delay. For the avoidance of doubt, nothing in this paragraph limits the obligation to apply customer due diligence measures in any circumstance required under Regulation (EU) 2024/1624, including where a customer applies for a new product or service or where any other circumstance necessitates a fresh assessment of the business relationship. Why this amendment is more appropriate: Article 26(2)(b) sets five years as a maximum, not a fixed interval, and Article 28(1) expressly empowers AMLA to specify SDD measures in low-risk situations. It calibrates the frequency of updates to the actual risk profile of the relationship rather than applying a uniform maximum regardless of circumstances. It preserves the integrity of the AML/CFT framework through strict qualifying conditions, continuous ongoing monitoring, and an automatic reversion mechanism — it does not create an exemption from CDD but calibrates its frequency to risk. It gives practical effect to Recital 16's objective of easing the administrative burden on obliged entities and customers in low-risk situations across the full lifecycle of the relationship, not only at onboarding. It also delivers immediate practical relief, as existing members with over ten years of continuous

Name of the respondent	Question	Answer
		low-risk membership would qualify from the date the RTS comes into force.
Credit Union Development Association (CUDA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	CUDA agrees with the position as set out by Ireland's Private Sector Consultative Forum (PSCF) on Anti Money Laundering in their Submission to this Consultation.
Credit Union Development Association (CUDA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	CUDA agrees with the position as set out by Ireland's Private Sector Consultative Forum (PSCF) on Anti Money Laundering in their Submission to this Consultation.
Credit Union Development Association (CUDA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	CUDA agrees with the position as set out by Ireland's Private Sector Consultative Forum (PSCF) on Anti Money Laundering in their Submission to this Consultation, and add the following commentary in relation to Article 23 of Draft RTS with respect to credit unions: Article 23 of the draft RTS, read in conjunction with Article 26(2) of Regulation (EU) 2024/1624, requires that relevant documents, data or information of the customer be kept up to date, with a maximum period of five years for all customers other than those subject to enhanced due diligence. However, neither the AMLR nor Article 23 defines what keeping documents, data or information up to date means in operational practice.

Name of the respondent	Question	Answer
		Article 23(1) correctly identifies monitoring conditions for low-risk situations but addresses only when an update may be required, not what form it must take. This leaves obliged entities without a clear answer to fundamental questions — does the five-year maximum require physical re-collection of identity documents regardless of risk profile and account activity? Where ongoing monitoring confirms no material change, is fresh documentary collection still mandatory? Where an identity document has expired but the customer's identity is not in doubt, must a renewed document be obtained? In the Irish credit union sector this ambiguity has produced divergent practice, with credit unions applying approaches ranging from document expiry dates to fixed cycles of varying lengths, and inconsistent supervisory expectations as a result. It has also created disparity with mainstream retail banks whose long-standing customers have not been subject to equivalent refresh requirements, undermining the level playing field the AMLR is designed to create. Proposed Drafting Amendment We propose the insertion of a new Article 23(3) as follows: 3. For the purposes of Article 26(2), point (b), of Regulation (EU) 2024/1624, and without prejudice to paragraphs 1 and 2, in cases where the ML/TF risk is assessed as low, an obliged entity shall be considered to have kept the relevant documents, data or information of the customer up to date where it has, within the applicable maximum period:

Name of the respondent	Question	Answer
		(a) conducted a documented, risk-sensitive review of the existing documents, data and information held; (b) determined, on the basis of that review and ongoing monitoring under paragraph 1, that no material change in the customer's identity, circumstances, risk profile or the nature of the business relationship has occurred; and (c) recorded that determination in a manner accessible for supervisory review. Where conditions (a) to (c) are satisfied, re-collection of documents shall not be required solely by reason of the expiry of the maximum period or of a previously collected identity document, provided the customer's identity is not in doubt, no risk indicator has been identified, and existing documents, data and information remain accurate and sufficient. Where a review identifies a material change, elevated risk or any doubt as to accuracy, the obliged entity shall take steps proportionate to the risk identified. For the avoidance of doubt, nothing in this paragraph limits the obligation to apply customer due diligence measures in any circumstance required under Regulation (EU) 2024/1624, including where a customer applies for a new product or service or where any other circumstance necessitates a fresh assessment of the business relationship. Why this amendment is more appropriate: The proposed amendment defines "kept up to date" in operational terms that are directly applicable by obliged entities, auditable by supervisors, and consistent across sectors and Member States. It gives full effect to the risk-based approach by making any obligation to re-collect documents

Name of the respondent	Question	Answer
		contingent on the outcome of a documented risk-sensitive review rather than mandating blanket periodic documentary refresh. It establishes a level playing field by providing a single clear standard applicable to all obliged entities, removing the basis for inconsistent supervisory expectations. It protects against financial exclusion by ensuring long-standing low-risk customers are not subjected to disproportionate documentary requirements where their identity is not in doubt. It remains fully within AMLA's mandate under Article 28(1) of the AMLR.
Credit Union Development Association (CUDA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Credit Union Development Association (CUDA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Credit Union Development Association (CUDA)	Do you have any comments on the Annex in the draft RTS?	No
Credit Union Development Association (CUDA)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Cyprus Fiduciary Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient	Overall, we agree that the draft RTS can be applied across the range of services provided by the obliged entities. The RTS establishes a harmonised and risk-based framework that is, in principle, suitable for application across both financial and

Name of the respondent	Question	Answer
	flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	non-financial obliged entities, including DNFBPs. However, from a DNFBP perspective, certain provisions would benefit from clarification to ensure proportionate application across non-financial business models. (i) Areas where flexibility may be insufficient: • Certain provisions rely on structural indicators (e.g. nominee director involvement) without sufficient differentiation based on regulatory oversight or economic rationale. • Sanctions-screening expectations do not fully reflect DNFBP exposure to asset transfers. (ii) Proposed clarifications: • Clarify that nominee arrangements should be assessed in light of the regulatory status and jurisdiction of the service provider involved. • Clarify that TCSP will consider complex structure a structure with three or more layers to which the T CSP does not provide services (and thus such layers are not its customers) Rationale: These targeted clarifications would enhance proportionality and legal certainty for DNFBPs while preserving the effectiveness and harmonised application of the risk-based approach.
Cyprus Fiduciary Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	We are of the opinion that that the current RTS could be further improved to enhance an effective application of a risk based approach (RBA). While the RTS references proportionality and risk sensitivity, certain provisions rely on

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	prescriptive criteria that may lead to risk mis calibration, particularly for DNFBPs. i) Provisions concerned • Article 12 – Complex structures From a perspective of a TCSP who manages and controls several corporate entities within a multilayer structure i.e. several entities within the structure are its customers, it should be clarified that the TCSP will treat as complex corporate structure a structure with three or more layers to which the TCSP does not provide services (and thus such layers are not its customers). The inclusion of nominee shareholders and directors as automatic indicators of complexity does not sufficiently distinguish between regulated, transparent arrangements (e.g. EEA regulated TCSPs) and unregulated. This approach risks treating well governed structures as inherently high risk, contrary to the RBA. Similarly, the use of legal arrangements such as trusts for family succession purposes, where trustee services are provided by EE A-regulated TCSPs, including those that may be members of the Society of Trust and Estate Practitioners (STEP) and adhere to established best practices, is not differentiated. Article 12 1 (b) is also contrary to a RBA and the concept of "equivalent jurisdictions" as it indicates that a customer and any legal entity registered in jurisdictions outside the EU are of higher risk. Moreover an EU regulated TCSP who acts and provides services to an EU legal person and a non-EU legal person will treat and apply same measures and controls to

Name of the respondent	Question	Answer
		both the EU and the non-EU customer. Article 22 – 3rd country equivalence References to 3rd countries with AML regimes that are “no less robust” than the EU framework lack an objective determination mechanism. This introduces discretion and inconsistent application across obliged entities, undermining harmonised, risk based decision making. ii) Proposed clarifications & rationale • Article 12 (a) and (c) Clarify that nominee arrangements should be assessed in light of the regulatory status, jurisdiction and transparency of the service provider involved, rather than treated as an inherent risk factor. This would better align risk assessment with actual ML exposure and economic substance. Specifically, nominee arrangements provided by TCSPs should be differentiated based on: • Whether the TCSP is established within or outside the EEA and • Whether it is subject to a robust licensing and regulatory framework TCSPs operating in mature regulatory regimes often provide additional safeguards rather than heightened risk. Treating all nominee arrangements uniformly contradicts the principles of proportionality, simplification, objectivity and most critically the RBA.

Name of the respondent	Question	Answer
		Moreover, the reference to nominee directors appears unnecessary. Directors, irrespective of how appointed, remain subject to fiduciary duties and legal accountability. If the intent is to distinguish between TCSP appointed directors and others, it should be acknowledged that TCSP appointed directors are typically supported by the professional infrastructure of the licensed and regulated TCSP, whereas non TCSP directors may, in practice, pose higher governance risk. The current framing introduces an unjustified bias against TCSPs. Additionally, the provision of nominee directors by a TCSP should not be treated as a high-risk indicator by the TCSP, given the TCSP's deep operational insight and advance visibility over client decisions. A similar segregation can take place for legal arrangements like Trusts where the Trustee is an EEA licensed and regulated TCSP, that is also a STEP member and follows best practices. • Article 22 Mandate AMLA or the EU Commission to assess and publish a list of 3rd countries considered equivalent ("no less robust"), similar to the EU high risk 3rd country list. This would support consistent, risk based application and reduce discretionary divergence. Rationale: These targeted clarifications would strengthen the practical

Name of the respondent	Question	Answer
		effectiveness of the RBA by focusing supervisory and compliance efforts on substantive risk drivers rather than structural or formal indicators, while enhancing consistency, proportionality and legal certainty across obliged entities.
Cyprus Fiduciary Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	N/A
Cyprus Fiduciary Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No additional simplified due diligence measures are proposed beyond those already noted in Regulation (EU) 2024/1624 and further specified in the draft RTS. In our view, the existing framework, particularly Article 33 of Regulation (EU) 2024/1624 and Section 5 of the draft RTS already provide sufficient flexibility for obliged entities to apply proportionate simplified measures in low risk scenarios, while ensuring that all core elements of customer due diligence are preserved. We therefore consider that the current drafting appropriately balances proportionality, risk sensitivity and the need for harmonised application across sectors and Member States. Accordingly, no additional drafting proposals are recommended in this respect.
Cyprus Fiduciary Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	We have the following additional observations, which are relevant to the effective and proportionate

Name of the respondent	Question	Answer
	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	application of the draft RTS and have not been fully addressed in the preceding responses. Article 2 – Names and identification attributes Observation: Article 2 requires obliged entities to obtain all names and surnames that appear on official identification documents. While the absence of a middle name should not prevent onboarding, where middle names are available, they can materially enhance identification and verification accuracy, particularly in cases involving common names. Rationale: From practical experience, middle names significantly reduce false positives and misidentification risk (e.g. in cases such as “Andreas Andreou” or “John Smith”), especially when screening against PEP and sanctions lists. Proposed solution: Clarify in Article 2 (or accompanying recitals) that, while not mandatory, the collection and use of middle names where available is encouraged as a good practice to strengthen identification and screening outcomes, consistent with the risk-based approach. Article 6 – Documents for verification of identity Observation: Article 6(1)(e) refers to “security features” of identification documents but does not specify minimum standards. In addition, Article 6(2) allows for reduced documentary

Name of the respondent	Question	Answer
		requirements for certain categories of persons (e.g. stateless persons) without clearly mandating compensating risk-mitigation measures. Rationale: The absence of minimum standards for security features and the acceptance of documents lacking key attributes (such as expiry date, document number or signature) may create material verification gaps and increase exposure to ML/TF risks, particularly in the current geopolitical environment. Proposed solution: Specify minimum qualitative standards for “security features” under Article 6(1)(e). Where Article 6(2) applies, explicitly require the application of Enhanced Due Diligence on ongoing monitoring procedures frequency intervals and/or additional verification measures until documentation meeting Article 6(1) standards is obtained. Article 18(e)(iii) – Regulated / obliged entity status Observation: Article 18(e)(iii) refers to whether the customer’s business activity or occupation is regulated. However, the provision does not explicitly clarify that this includes obliged entities within the meaning of Regulation (EU) 2024/1624. Rationale: Being an obliged entity implies that the customer operates within a defined AML/CFT framework, including governance requirements, accountability mechanisms and the

Name of the respondent	Question	Answer
		appointment of compliance functions. This materially affects the ML/TF risk assessment and the obliged entity's understanding of the purpose and intended nature of the business relationship. In addition, there is a substantive difference between EU-regulated obliged entities and entities subject to less mature or non-equivalent (less robust than the EU) regulatory regimes, which is not sufficiently reflected in the current drafting. Proposed solution: Amend or clarify Article 18(e)(iii) to explicitly state that references to "regulated" activities include obliged entities and to allow differentiation between EU-regulated and obliged entities and entities subject to less robust supervisory frameworks. This would support a more accurate and proportionate assessment of risk when determining the purpose and intended nature of the business relationship, in line with the risk-based approach. Overall rationale: These targeted clarifications would enhance legal certainty, reduce unnecessary operational burden and strengthen the effective application of the risk-based approach, while remaining fully aligned with AMLA's mandate and the objectives of Regulation (EU) 2024/1624.
Cyprus Fiduciary Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Cyprus Fiduciary Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Cyprus Fiduciary Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Observation: There is an inconsistency between Article 3 and Annex I regarding the minimum address attributes to be collected. Specifically, the attribute “State” is included as a minimum requirement in Annex I but is not reflected in the requirements of Article 3. In addition, Article 3(c) allows for the inclusion of post office boxes as part of address information. Rationale: This inconsistency is not aligned with the principles of harmonisation and simplification, as it may lead to divergent interpretations and uneven application across obliged entities. Furthermore, the acceptance of post office boxes materially weakens traceability and is inconsistent with international best practices, as PO boxes are commonly used to obscure the actual location of natural or legal persons and may facilitate anonymity. Proposed solution: To ensure consistency and legal clarity, either the “State” attribute should be removed from Annex I or explicitly incorporated into the requirements of Article 3. In addition, references to post office boxes should be removed from Article 3, with address requirements limited to physical locations that enable effective identification and verification.

Czech Bar Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Czech Bar Association ("CBA") considers that the draft RTS, in their current form, are not sufficiently adapted to the operational realities of the non-financial sector, in particular the legal profession, and in several respects implicitly rely on assumptions derived from financial institution business models. While the RTS formally refer to proportionality and risk-based approach, a number of operational provisions appear to presuppose: continuous customer monitoring, highly standardised onboarding systems, advanced technological verification capacities, and extensive automated screening infrastructures. Such assumptions do not correspond to the structure and

Name of the respondent	Question	Answer
		functioning of the legal profession in the Czech Republic, where legal services are predominantly provided by small and medium-sized law firms and sole practitioners. Lawyers do not generally maintain continuous transactional relationships comparable to those of financial institutions, nor do they possess equivalent compliance infrastructures, specialist AML departments or advanced technological capacities. Their involvement is typically linked to specific legal mandates and transactional contexts. Moreover, AML obligations applicable to lawyers are already exhaustively defined by EU legislation and complemented by extensive national professional regulation and supervision by the Czech Bar Association. The RTS should therefore expressly clarify that: - the extent of information collected must remain proportionate to the nature of the legal service provided; - obliged entities may rely on manual and less technologically intensive processes where appropriate to the risk profile, unless such technological solutions and infrastructures are effectively made available to them in a proportionate and accessible manner; - and the lists of information contained in the RTS are not intended to operate as universal sector-neutral checklists. The CBA also stresses that several AML/CFT objectives are already achieved through existing professional regulation and sector-specific safeguards. In the Czech Republic, lawyers are subject to detailed professional obligations concerning client identification, record-keeping, escrow administration, handling of client funds and disciplinary supervision by the Czech Bar Association. Lawyer escrow services are administered through individually registered and separately designated bank

Name of the respondent	Question	Answer
		accounts under a dedicated domestic regulatory framework specifically designed to ensure transparency, traceability and protection of client assets. The CBA wishes to underline a broader institutional concern. In situations involving ordinary regulatory pressure, obliged entities can adapt their compliance systems and fulfil AML/CFT obligations proportionately. However, where legislative or regulatory developments begin to systematically weaken the independence of professional self-governance or gradually shift investigative functions of the State onto lawyers, a purely technical compliance discussion is no longer sufficient. Certain aspects of the current AML package implementation risk contributing to such developments. The cumulative effect of increasingly detailed reporting, verification and screening obligations may gradually transform lawyers into quasi-investigative actors, which is incompatible with the constitutional role of the legal profession in a democratic society governed by the rule of law. The CBA further considers that, irrespective of how carefully proportionality safeguards are drafted, secondary legislation should expressly and clearly identify the limits of obligations that are not provided for in the AMLR itself. Ambiguous wording may subsequently be interpreted expansively by certain Member States in ways that indirectly restrict legal professional privilege, limit confidential legal advice or impose administrative obligations that lawyers and Bars are practically unable to fulfil. Experience demonstrates that AML regulation may become a convenient vehicle for extending supervisory expectations and preventive powers, even where such consequences were not

Name of the respondent	Question	Answer
		intended by AMLA itself. If Member States are inclined to use interpretative uncertainty in this manner, broad or unclear wording in secondary legislation may facilitate such outcomes despite well-intentioned drafting at EU level. For this reason, the RTS should not rely solely on general references to proportionality and risk-based approach, but should expressly clarify: where obligations do not apply to the legal profession; where obligations are limited by legal professional privilege and professional secrecy; and where a genuinely risk-based limitation is required. The CBA therefore recommends stronger differentiation between financial institutions and non-financial obliged entities and clearer operational safeguards for proportionality, legal certainty and professional secrecy.
Czech Bar Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The CBA acknowledges that the draft RTS formally incorporate the principle of the risk-based approach. However, several provisions substantially weaken its effective practical application and risk transforming the risk-based approach into a predominantly formal or declaratory concept. The CBA is particularly concerned by: extensive mandatory catalogues of information to be collected irrespective of the concrete circumstances of the mandate; repeated requirements to obtain a “comprehensive understanding” of ownership and control structures; broad expectations concerning technical or quasi-forensic verification of documents; and implicit assumptions favouring automated screening and monitoring tools. Even where individual obligations may appear proportionate in isolation, their cumulative application may create significant

Name of the respondent	Question	Answer
		administrative burdens for non-financial obliged entities without a corresponding increase in AML/CFT effectiveness. The repeated use of concepts such as “where necessary”, “reasonable steps” or “sufficient understanding” without further operational clarification creates substantial legal uncertainty. In practice, undefined standards in AML legislation are frequently interpreted conservatively or expansively by supervisory authorities, leading obliged entities to apply the most burdensome interpretation in order to avoid sanctions or regulatory criticism. The RTS should therefore expressly confirm that: manual screening and verification procedures may be fully appropriate in lower-risk settings; reasonable plausibility checks satisfy verification obligations in many non-financial contexts; “reasonable steps” do not require forensic examination of documents or independent investigative activity by lawyers; reliance on public registers, official databases and regulated professional intermediaries is permissible; information previously collected may be reused where it remains current and appropriate to the assessed risk. The CBA further considers that the effective application of the risk-based approach requires clearer recognition of the operational differences between financial institutions and independent legal professionals. Otherwise, the practical effect of the RTS may be the gradual replacement of genuinely risk-sensitive compliance by mechanically applied administrative procedures. The CBA also considers it important that the RTS recognise existing national professional regulatory frameworks. In the Czech Republic, lawyers are already subject to detailed obligations concerning identification, record-keeping, escrow

Name of the respondent	Question	Answer
		administration and professional supervision by the Czech Bar Association. Additional AML obligations should therefore complement — rather than duplicate or indirectly override — existing professional regulatory systems. Finally, the CBA considers that the effective application of the risk-based approach cannot be reduced to a formal drafting principle while the substantive provisions of the RTS increasingly impose quasi-uniform operational expectations across fundamentally different sectors. The legal profession differs structurally and constitutionally from financial institutions. Lawyers are not public investigative authorities, nor can they be transformed into parallel supervisory actors of the State without affecting their constitutional role within a democratic society governed by the rule of law.
Czech Bar Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	A practical example concerns the requirement to collect information on “all nationalities” of natural persons. Czech identity documents and passports generally indicate only the nationality of the issuing State. Lawyers have no objective means to verify whether a client possesses additional nationalities beyond those officially documented. Verification obligations should be limited to objectively verifiable information and that it be sufficient to record the nationality appearing on the presented identification document. Additional practical difficulties arise regarding expectations concerning extensive verification of beneficial ownership structures and the authenticity of foreign-language documents. Lawyers, particularly smaller firms and sole practitioners, do not possess forensic, investigative or linguistic capacities comparable to those of specialised financial institutions or public authorities.

Name of the respondent	Question	Answer
		The RTS should therefore expressly clarify that “reasonable steps” do not require forensic verification of documents; machine translations or non-certified translations may be sufficient where adequate for AML/CFT purposes; and obliged entities may rely on publicly available and reliable sources where appropriate. The CBA also notes that several obligations appear designed for sectors operating continuous onboarding and monitoring systems. Legal services, by contrast, are frequently episodic, transaction-specific and dependent on the concrete legal mandate. Applying uniform operational expectations without regard to these structural differences risks creating disproportionate burdens without corresponding AML/CFT benefits. In the Czech Republic, many AML-relevant legal services involve ordinary domestic transactions handled by small law firms with limited administrative capacities. Excessively formalised compliance obligations would therefore disproportionately increase the cost of legal services and negatively affect access to legal assistance for citizens and businesses. The CBA also notes that in many situations lawyers are dependent on information and documents provided by clients or accessible through public registers. They do not possess investigative powers allowing them independently to verify all underlying factual circumstances or corporate arrangements. The RTS should therefore avoid creating expectations that effectively require lawyers to conduct investigative activities beyond the scope of legal services and beyond what is realistically achievable for non-financial obliged entities. The CBA stresses that lawyers are not public investigative authorities and should not be transformed into parallel

Name of the respondent	Question	Answer
		supervisory or enforcement actors. Their role is to provide independent legal assistance while fulfilling AML obligations within the limits defined by EU law and constitutional safeguards.
Czech Bar Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The CBA does not propose broad new categories of simplified due diligence for legal services. Instead, the focus should be on clearer operational guidance and stronger proportionality safeguards for non-financial obliged entities. The RTS or accompanying guidance should clarify that: - public registers may serve as primary verification sources in low-risk situations; - information already obtained in previous matters may be reused where appropriate; - repetitive collection of identical documents should be avoided; - update frequencies may be reduced for low-risk and long-standing clients; - and reliance may be placed on existing professional regulatory frameworks and supervised professional conduct rules. The CBA further considers that source of funds information should not become a standard element of simplified due diligence and should only be requested where justified by the specific risk profile of the matter concerned. Particular consideration should also be given to situations where lawyers operate within heavily regulated domestic professional frameworks already ensuring transparency and traceability of client-related activities. Existing national safeguards and supervisory systems should be adequately recognised when assessing proportionality and determining the

Name of the respondent	Question	Answer
		extent of additional AML obligations. The RTS should also clarify that simplified due diligence remains part of a complete CDD framework and does not create a de facto exemption regime, while still allowing meaningful reduction of the depth and frequency of checks where risks are demonstrably lower. The CBA also encourages AMLA to provide practical and sector-specific implementation guidance for the legal profession, particularly for smaller firms and sole practitioners, in order to ensure that simplified due diligence measures remain operationally workable and genuinely proportionate in practice.
Czech Bar Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	CBA welcomes the opportunity to contribute to the consultation on the draft Regulatory Technical Standards ("RTS") under Article 28(1) AMLR and considers it essential that the RTS properly reflect the substantial differences between financial institutions and non-financial obliged entities, in particular independent legal professionals. The legal profession operates within a constitutional and institutional framework fundamentally different from that of financial institutions. Lawyers are not public investigative authorities, but independent professionals entrusted with the protection of the rights of individuals, access to justice and the functioning of the rule of law. The CBA therefore considers that the RTS should avoid indirectly extending AML obligations beyond the framework established by the AMLR or creating operational expectations that are disproportionate for the non-financial sector. In particular, the RTS should:

Name of the respondent	Question	Answer
		- preserve a genuinely operational risk-based approach; - recognise the practical realities of the legal profession; - avoid transforming lawyers into de facto investigative actors of the State; - and fully respect legal professional privilege, professional secrecy and the institutional independence of the legal profession. The CBA notes that several provisions of the draft RTS appear to be drafted primarily with financial institutions in mind and insufficiently reflect the operational realities of the legal profession. A number of provisions seem to presuppose:continuous customer monitoring; highly standardised onboarding systems; advanced technological verification capacities; extensive automated screening infrastructures; and dedicated compliance departments. Such assumptions do not correspond to the structure and functioning of the legal profession in the Czech Republic or in many other Member States. The cumulative effect of increasingly detailed reporting, verification and screening obligations may gradually transform lawyers into quasi-investigative actors, which is incompatible with the constitutional role of the legal profession in a democratic society governed by the rule of law. In situations involving ordinary regulatory pressure, obliged entities can adapt their compliance systems and fulfil AML/CFT obligations proportionately. However, where legislative or regulatory developments begin to systematically weaken the independence of professional self-governance or gradually shift investigative functions of the State onto lawyers, a purely technical compliance discussion is no longer sufficient. The CBA further wishes to underline that legal certainty is

Name of the respondent	Question	Answer
		especially important in the AML field. Even where AMLA intends to preserve flexibility and proportionality, ambiguous wording in secondary legislation may subsequently be interpreted expansively at national level. Experience demonstrates that AML regulation may become a convenient vehicle for extending supervisory expectations, increasing administrative burdens or indirectly restricting confidential legal advice and professional secrecy. If Member States are inclined to use interpretative uncertainty in this manner, broad or unclear wording in secondary legislation may facilitate such outcomes despite well-intentioned drafting at EU level. AML legislation is particularly susceptible to expansive interpretation because combating money laundering and terrorist financing is frequently invoked as justification for extending preventive supervisory powers. For this reason, the RTS should not rely solely on general references to proportionality and risk-based approach, but should expressly and operationally clarify: where obligations do not apply to the legal profession; where obligations are limited by legal professional privilege and professional secrecy; where manual and less technologically intensive compliance measures remain appropriate; and where a genuinely risk-based limitation is required. The CBA also considers that the RTS should expressly confirm that: - manual screening and verification procedures may be fully appropriate in lower-risk settings; - reasonable plausibility checks satisfy verification obligations in many non-financial contexts; - “reasonable steps” do not require forensic examination of documents or independent investigative activity by lawyers;

Name of the respondent	Question	Answer
		- reliance on public registers, official databases and regulated professional intermediaries is permissible; - information previously collected may be reused where it remains current and appropriate to the assessed risk; - and technological solutions should not become a de facto mandatory condition for compliance unless such solutions are effectively accessible, proportionate and realistically available to smaller obliged entities. The CBA further notes that the repeated use of concepts such as “where necessary”, “reasonable steps” or “sufficient understanding” without operational clarification creates significant legal uncertainty.
Czech Bar Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Czech Bar Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Czech Bar Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The CBA is concerned by the apparent prioritisation of electronic identification and verification solutions under Article 7 RTS, in particular solutions based on the eIDAS framework. While such tools may be appropriate and efficient in certain contexts, they cannot be treated as a de facto primary or universal verification standard across all categories of clients and all sectors. In practice, clients established outside the European Union — including low-risk clients — frequently do not possess access to eIDAS-compliant identification tools or equivalent electronic identity infrastructures. A rigid preference for such solutions would therefore create disproportionate practical obstacles for legitimate cross-border legal services and may significantly

Name of the respondent	Question	Answer
		complicate client onboarding in situations that do not present elevated AML/CFT risks. Furthermore, the operational and technical expectations associated with eIDAS-based verification appear insufficiently clear. In practice, there is significant uncertainty as to whether standard verification methods available to ordinary users are considered sufficient for AML purposes, or whether obliged entities are expected to use specialised and potentially costly verification software and technological tools. Such uncertainty is particularly problematic for smaller law firms and sole practitioners, which often lack access to advanced technological infrastructures. The CBA therefore considers that: • face-to-face verification should not be treated as the sole benchmark against which all remote verification methods are assessed; • eIDAS-compliant solutions should remain one possible means of verification rather than an implicitly preferred or quasi-mandatory standard; • and obliged entities should retain discretion to apply proportionate and risk-sensitive verification methods appropriate to the concrete circumstances of the client relationship. The RTS should also expressly clarify that remote verification requirements must remain technologically neutral and operationally achievable for non-financial obliged entities, particularly smaller legal practices.
Czech Bar Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
Danske Advokater	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Danske Advokater supports AMLA's efforts to establish clear and harmonised rules. We also support the overall objective of the draft RTS. However, it is essential that the RTS reflects sectoral differences and ensures proportionality in practice. A key concern is that the framework appears largely designed with financial institutions in mind, which entails a risk of disproportionate administrative burdens for small and medium-sized law firms. This may, in practice, divert resources away from core activities, namely the provision of legal advice and access to justice. In particular, the provisions relating to pooled or escrow accounts raise significant concerns. There is a risk that these provisions will lead credit institutions to require full customer due diligence on underlying clients in lawyers' client accounts, including in situations that fall outside the scope of the AMLR. This would raise serious issues in relation to legal professional privilege, proportionality and access to justice. It would therefore be appropriate to clarify explicitly that customer due diligence requirements in relation to client accounts must not extend to underlying clients unless this follows clearly from the scope of the AMLR, and to reinforce the availability of simplified due diligence in low-risk scenarios.
Danske Advokater	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Danske Advokater does not consider that the draft RTS provides sufficient flexibility to accommodate the diversity of services provided across different sectors. Legal services are often advisory in nature and not mere execution of transaction-based in the same way as financial services. This creates challenges when applying standardised due diligence requirements across sectors. In particular, the provisions on identifying persons purporting to act on behalf of the customer may be interpreted too broadly, potentially

Name of the respondent	Question	Answer
		capturing individuals without real decision-making authority. It would therefore be appropriate to clarify that identification requirements should be limited to persons who have actual authority to establish or control the business relationship.
Danske Advokater	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Danske Advokater considers that the draft RTS only partially enables an effective risk-based approach. There is a risk that the requirements may be applied in a uniform and overly cautious manner, leading to over-collection of data even in low-risk situations. This is particularly relevant in relation to the collection of personal data on third parties and screening obligations, which may challenge the principles of data minimisation and necessity under GDPR. It would therefore be appropriate to strengthen the link to the risk-based approach by clarifying that the extent of due diligence and data collection must be limited to what is necessary and proportionate considering the specific risks. We also recommend that the obligation to collect private data is clearified and provided for in legislation.
Danske Advokater	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	-
Danske Advokater	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Danske Advokater considers that there is a need to further clarify and expand the availability of simplified due diligence measures.

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In particular, it should be recognised that low-risk scenarios in advisory sectors, including isolated legal mandates and the use of client accounts, may justify simplified due diligence. It should also be made clear if already identified clients should or should not be subject to repeated identification without justification. Updates could i.e., take place on a risk-based and gradual basis instead. Such clarification would reduce unnecessary administrative burdens without undermining the effectiveness of AML/CFT measures.
Danske Advokater	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Danske Advokater	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Danske Advokater	Do you have any comments on the Annex in the draft RTS?	No
Danske Advokater	How would you rate the proposals set out in the draft RTS overall?	Neutral
Danske Advokater	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this	Manageable impact

Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee	Manageable impact

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: Recurrent costs	
Danske Advokater	Please justify your answer to the previous question and provide evidence where possible.	There will be implementation costs and recurrent costs - the costs is more significant for the SMV lawfirms than the big lawfirms.
Danske Gallerier	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Danske Gallerier partially agrees with the proposals but considers that requirements under Articles 22, 23 and 25 AMLR are overly detailed and not sufficiently adapted to non-financial sectors. In particular, requirements regarding source of funds and pre-transaction verification are difficult to implement in practice.
Danske Gallerier	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Danske Gallerier does not agree that the RTS can be applied with sufficient flexibility across sectors. In the art market, customer interaction is often limited and international. Greater flexibility is required, including the possibility of post-transaction verification in low-risk scenarios.
Danske Gallerier	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Danske Gallerier considers that the RTS do not sufficiently enable an effective risk-based approach. The requirements function in practice as standardised minimum obligations rather than flexible tools. It is recommended that it be clarified that requirements may be adjusted in line with risk levels, consistent with Article 25 AMLR.
Danske Gallerier	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in	Yes. Information relating to source of funds, detailed ownership structures and address documentation is often not available, particularly for international clients. It is

	when implementing the provisions of these draft RTS.: Recurrent costs	
Data & Technology for Compliance Alliance (DT4C)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	DT4C agrees that the draft RTS are a meaningful improvement and welcome the enhanced proportionality and RBA, the greater emphasis on EU-wide harmonisation, the simplification of several operationally burdensome requirements, and the introduction of more flexible, technologically neutral methods to obtain and verify CDD information. However, DT4C considers that the proposals could provide additional flexibility across the full range of products, services, and customer contexts. In particular, recognition of third-party screening, data and due diligence services remains uneven across the RTS. While the revised draft includes “reputable data service providers” in Art 10, broader recognition of third-party services for identification and verification, EDD, as well as PEP and sanctions screening purposes, remains inconsistent. Art 19 and 30 refer to “automated screening tools or solutions”, but it is unclear whether this term covers the same types of “reputable data service providers” and whether such automated tools may be provided by third parties. In practice, third-party services support obliged entities in verifying and completing key controls such as KYC, due diligence, screening, monitoring, investigation and reporting activities. To ensure greater legal clarity, DT4C recommends giving obliged entities clearer permission to use such services. This would align with existing EBA Guidelines on ML/TF Risk Factors (EBA/GL/2021/02 - EBA/GL/2024/01, para 1.29) and would strengthen the coherence, effectiveness, and workability of the RTS without expanding its scope or undermining supervisory objectives. Article 8 Add: Obliged entities may make use of professionally managed,

Name of the respondent	Question	Answer
		third party screening, data, and due diligence services where such use is necessary and proportionate having regard to the ML/TF risks identified, and solely for the purpose of meeting their obligations under Regulation (EU) 2024/1624. Such services may be used to support the reliability, independence and ongoing accuracy of information obtained for CDD, screening, and monitoring purposes. The use of such services may, where appropriately governed, contribute to data minimisation and proportionality by reducing duplicative processing and inconsistent assessments across obliged entities. Article 10 (b) i. …and/or comparable reputable data services providers, including professionally managed third-party screening, data, and due diligence services; Article 19 3. …automated screening tools and measures, which may include the use of professionally managed, third party screening data and due diligence services, … Article 25 Add: For the purposes of points (a), (b) and (c) obliged entities may obtain additional information by consulting official registers, corroborating information across multiple reliable and independent sources, obtaining supporting documentation, or using reputable data services providers, including professionally managed third party screening, data, and due diligence services. Article 27 The RTS mentions “reputable commercially available service providers”. For consistency, we suggest replacing this with “professionally managed third party screening, data and due

Name of the respondent	Question	Answer
		diligence services". Article 29 Add: For the purposes of paragraph 1, screening obligations may be supported by professionally managed third party screening, data, and due diligence services within a risk based and governed framework. The use of such services shall support and shall not replace the verification, assessment, and decision making obligations of the obliged entity, which remains fully responsible for compliance with Regulation (EU) 2024/1624.' Article 30 (a) …or a combination of automated screening tools and manual checks, including the use of professionally managed third party screening, data and due diligence services and associated list management solutions, … (b) …of owned and controlled entities and central registers and information obtained through professionally managed third party screening, data, and due diligence services. Separately, the framing around eIDAS-compliant tools in Art 7 risks being applied too rigidly in practice, particularly for non-EU customers or in contexts where eIDAS is not realistically accessible. DT4C urges the RTS to recognise equivalent, robust independent solutions, including those aligned with the EBA's remote onboarding guidance, as peers rather than fallbacks. Article 7 1. …, obliged entities: (a) may use electronic identification means that meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels 'substantial' or 'high', or relevant qualified trust services as set out in that Regulation; or (b) shall obtain the natural person's identity document,

Name of the respondent	Question	Answer
		passport or equivalent using remote identification and verification solutions, provided that those solutions use reliable and independent sources of information and meet the requirements set out in paragraphs 2 and 3.
Data & Technology for Compliance Alliance (DT4C)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	DT4C agrees that the draft RTS improve the application of a RBA by simplifying operationally burdensome requirements and enhancing proportionality. However, further refinements are needed for the RTS to fully support an effective RBA. To achieve this, we propose amendments to articles 12, 14, and 19. Article 12 The revised RTS raises the threshold of structure complexity from two to three layers, in addition to more than one subsequent condition being met. However, the complexity of structures, rather than being measured by the number of layers, should be based on risk-based indicators such as opacity, use of nominee structures, non-cooperative jurisdictions, or where ownership cannot be traced to natural persons using standard verification tools. Number of layers alone should not predetermine complexity. We propose Article 12 to be amended as follows: 1. … a complex corporate structure where the structure presents features that significantly increase opacity or hinder the identification or verification of beneficial ownership, taking into account, in a risk-sensitive manner, all relevant circumstances, including where applicable: (a) the presence of multiple ownership or control layers; (b) the involvement of legal arrangements or similar legal entities such as foundations in any other layers; (c) the registration of the customer or intermediate entities in

Name of the respondent	Question	Answer
		jurisdictions outside the EU, in particular where such jurisdictions present higher ML/TF risk or limited transparency; (d) the involvement of nominee shareholders or nominee directors; (e) the absence of a clear legal, economic or commercial rationale for the structure; or (f) situations where ownership cannot be traced to one or more natural persons using standard verification tools and reasonable measures. Article 14 DT4C regrets that the revised approach does not address the risk of an implicit presumption that all trusts are high-risk, nor does it provide sufficient clarity on what constitutes a “timely update” and when updates are required absent material change. Trust risk should be assessed case-by-case, and a list of “material events” that trigger updates should be included. We propose Article 14 to be amended as follows: NEW 3. Obliged entities shall assess the ML/TF risk associated with such arrangements on a case-by-case basis, taking into account their purpose, legal and ownership features, jurisdictions involved, and any other relevant risk factors. NEW 4. For the purposes of paragraph 2, material events may include, on a non-exhaustive basis: (a) the exercise of a power of appointment or discretion by the trustee or equivalent person; (b) the vesting of an interest in possession or other enforceable entitlement; (c) the addition, removal or replacement of beneficiaries, trustees, protectors or equivalent persons; (d) the death of a settlor, beneficiary, trustee or other relevant

Name of the respondent	Question	Answer
		person where this affects beneficial entitlement; (e) the distribution of trust assets or income to a beneficiary; or (f) any amendment to the trust deed or equivalent governing document affecting beneficial ownership or control. Article 19 The RTS lack practical examples of trigger events as foreseen under an RBA and do not clearly distinguish when manual checks are sufficient or when automated monitoring is needed. Given the pace of PEP-related changes, manual-only screening is rarely adequate. DT4C also urges clearer trigger-event examples such as major institutional restructurings (e.g., elections) and more timely, standardised Member State information on prominent public functions, with appropriate privacy safeguards. We propose Article 19 to be amended as follows: NEW 2(d) For the purposes of points (a) to (c), obliged entities may take into account, on a non-exhaustive basis, trigger events such as elections, changes of government, cabinet reshuffles, appointments or dismissals to prominent public functions, major corporate restructurings involving state-owned entities, or other events relevant to the customer, beneficial owner, or person on whose behalf or for whose benefit a transaction or activity is carried out. 3. To comply with paragraphs 1 and 2, obliged entities shall put in place automated screening tools and measures, which may include the use of professionally managed, third party screening data and due diligence services, or a combination of automated screening tools and manual checks unless the size, business model, complexity or nature of the business of the obliged entity justifies the use of manual checks only.

Name of the respondent	Question	Answer
		The extent and frequency of ongoing screening and monitoring shall be proportionate to the nature, size and complexity of the obliged entity, the customer relationship, and the level of ML/TF risk identified. Where screening is conducted on an ongoing basis across a broader customer base, the use of automated screening tools will in many cases be necessary to ensure effectiveness and timeliness.
Data & Technology for Compliance Alliance (DT4C)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Given the nature, scale and complexity of AML/CFT obligations across the Union, there are certain situations in which specific items of customer due diligence information envisaged in the draft RTS are not routinely available in practice, or cannot be obtained in a timely or reliable manner, and where clearer alternative solutions would assist effective and proportionate compliance. In cross-border and multi-jurisdictional situations, details about beneficial ownership, control structures, PEP status, and relationships are often fragmented or incomplete, especially when ownership spans multiple jurisdictions or registers lack accessibility and timely updates. Entities must therefore use information from several sources for assessment, rather than relying on a single record. For ongoing monitoring and sanctions screening, consolidated and current data is seldom available from official lists alone. Sanctions change frequently, and identifying relevant links requires aggregating information from various public, regulatory, and reputable sources. To address these situations, as set out in our wider response,

Name of the respondent	Question	Answer
		DT4C considers that the RTS would benefit from clearer confirmation that, where specific information is not directly or immediately available from individual sources, obliged entities may adopt appropriate alternative solutions consistent with a risk-based and proportionate approach. In particular, this includes the use of professionally managed third-party screening, data and due-diligence services that support the aggregation, corroboration and maintenance of information from multiple underlying sources, provided that such use forms part of a governed framework and does not alter the responsibility of the obliged entity for verification, assessment and decision-making. The below targeted amendments that DT4C has proposed to the RTS are intended to address this. On simplified due diligence (SDD) measures, DT4C calls for clarification on what exceptions apply to the requirement for a tax identification number (TIN) or legal entity identifier (LEI) when applying SDD and on whether obliged entities are expected to perform full identity verification or simply confirm beneficial owners. We suggest that the RTS states that verifying the beneficial owner may involve confirmation, not full identity verification, unless the risk triggers enhanced due diligence. As such, we suggest Articles 20 and 21 to be amended as follows: Article 20 1. In situations of low risk, obliged entities shall obtain at least the following information to identify the customer and the

Name of the respondent	Question	Answer
		person purporting to act on behalf of the customer: (b) for a legal entity and other organisations that have legal capacity under national law: iv. where available, the registration number or tax identification number, or the legal entity identifier. For the purposes of this point, obliged entities shall not be required to obtain a tax identification number or legal entity identifier where such identifier has not been issued, is not applicable to the customer, or is not reasonably available in the circumstances. Article 21 2. To verify the identity of the beneficial owner or senior managing officials in situations of low risk, the obliged entity shall consult one of the sources of information listed in paragraph (1), points (b) or (c), that was not used for identification purposes. In low-risk situations, verification of the beneficial owner may consist of confirming, on the basis of reliable and independent sources, that the identity information obtained is consistent and credible, unless specific risk factors or discrepancies require additional verification measures or the application of enhanced due diligence.
Data & Technology for Compliance Alliance (DT4C)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	Not applicable

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	
Data & Technology for Compliance Alliance (DT4C)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Not applicable
Data & Technology for Compliance Alliance (DT4C)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Data & Technology for Compliance Alliance (DT4C)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	29
Data & Technology for Compliance Alliance (DT4C)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	DT4C calls for AMLA to avoid creating new standards and inconsistencies for targeted financial sanctions screening and instead reference existing EBA guidelines on internal policies, procedures and controls to ensure the implementation of Union and national restrictive measures. We propose Article 29 to be amended as follows: Article 29 “1. Obliged entities shall establish …. subject to targeted financial sanctions. For the purposes of paragraph 1, obliged entities shall apply screening measures in a manner consistent with existing Union requirements and guidance on internal policies, procedures and controls for the implementation of Union and national

Name of the respondent	Question	Answer
		restrictive measures. Obliged entities shall also apply a risk-based assessment of direct, indirect and aggregate ownership and control, taking into account intermediary entities and other means of control, in order to determine whether a customer, beneficial owner, or other relevant entity or person falls within the scope of targeted financial sanctions. For the purposes of paragraph 1, screening obligations may be supported by professionally managed third party screening, data and due diligence services within a risk based and governed framework. The use of such services shall support and shall not replace the verification, assessment and decision making obligations of the obliged entity, which remains fully responsible for compliance with Regulation (EU) 2024/1624.' Due to the increase of screening speed and frequency, coupled with the need for extreme efficiency to avoid false positives, consolidated and structured sanctions data sources are crucial to support automated screening solutions. Expectations regarding aggregate (e.g. two persons each owning 25%) and indirect ownership through intermediary entities should be clarified. It is important for obliged entities to understand how to interpret complex ownership chains in the context of sanctions screening. Obliged entities should be permitted to disregard "weak aliases" (e.g., nicknames or name misspellings with no strong identification link). However, guidance is needed on how to define and assess an alias as "weak".

Name of the respondent	Question	Answer
		The inclusion of wallet addresses should be reconsidered for sectors that do not offer virtual asset services. For traditional financial institutions, this data is unlikely to be relevant or actionable. The RTS should mention other useful identifiers such as passport numbers, national IDs, or LEIs, which are often used in sanctions screening and increase the accuracy of matches. Outside the scope of the RTS, there should be clarification given to the inconsistency between the screening requirements with “undue delay” cited in the AMLR, with the “immediate” screening requirements of the Instant Payments Regulation (EU) 2024/886.
Data & Technology for Compliance Alliance (DT4C)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	30
Data & Technology for Compliance Alliance (DT4C)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We propose Article 30 to be amended as follows: Article 30 “For the purposes of Article 29, obliged entities shall: (a) screen, through automated screening tools or solutions, or a combination of automated screening tools and manual checks, including the use of professionally managed third party screening, data and due diligence services and associated list management solutions, the information necessary to determine whether customers, beneficial owners and the entities or persons which control or meet the ownership conditions over such customers are subject to targeted

Name of the respondent	Question	Answer
		financial sanctions in a manner consistent with existing Union requirements and the EBA Guidelines on internal policies, procedures and controls to ensure the implementation of Union and national restrictive measures. iii. - additional identifiers, where available and relevant for improving the accuracy of screening, including date of birth, place of birth, nationality, passport number, national identification number, tax identification number, registration number and Legal Entity Identifier; - digital wallet addresses, only where relevant to the products or services offered by the obliged entity or where available in the lists of targeted financial sanctions and actionable by the obliged entity. (b) …public sources of information, such as registers of owned and controlled entities and central registers and information obtained through professionally managed third party screening, data and due diligence services. NEW (c) use screening data and list management solutions that are appropriate to the nature, scale and complexity of their business and that support screening without undue delay against updated and, where available, consolidated and structured targeted financial sanctions data. NEW (d) establish and document risk-sensitive criteria for the treatment of aliases and name variants. For the purposes of screening under point (a), obliged entities may disregard aliases or name variants that are assessed as weak aliases, provided that: i. such aliases do not provide a sufficiently strong identification

Name of the respondent	Question	Answer
		link to the listed person, body or entity; and ii. the obliged entity documents and applies consistently its methodology, controls and governance for determining when an alias or name variant may be treated as weak. NEW (e) when assessing whether entities or persons meet the ownership or control conditions under Article 20(1), point (d), of Regulation (EU) 2024/1624, take into account: i. direct ownership; ii. indirect ownership through one or more intermediary entities; iii. aggregate ownership interests held by two or more listed persons, where such interests must be considered under the applicable targeted financial sanctions regime; iii. control exercised through means other than ownership.
Data & Technology for Compliance Alliance (DT4C)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Data & Technology for Compliance Alliance (DT4C)	Please specify which recital you refer to, and share your comments below.	DT4C broadly welcomes the recitals, in particular their emphasis on proportionality, harmonisation, simplification and technological neutrality, including recital 1 on the risk-sensitive application of CDD measures, recital 16 on easing the administrative burden in low-risk situations, recital 19 on obtaining additional information in higher-risk situations, and recital 21 on avoiding unnecessary duplication of information already available to the obliged entity. However, some recitals would benefit from further clarification

Name of the respondent	Question	Answer
		to ensure that the operative provisions can be applied effectively across the full range of products, services and customer contexts, and to avoid unintended rigidities or divergent interpretations. Recital 5 DT4C welcomes the recognition of a range of reliable and independent sources. However, the recital could better reflect current practice by making clearer that obliged entities may access and use such sources through reputable third-party data and technology service providers, including for identification, verification, adverse media screening, enhanced due diligence, PEP screening and sanctions screening. This would improve consistency with the broader risk-based and technologically neutral approach reflected elsewhere in the draft RTS and would better support operationally effective compliance across sectors. Proposed amendment: “Obliged entities may access such reliable and independent sources directly or through reputable third-party service providers, including data, identity verification, screening and corporate intelligence service providers, provided that the obliged entity remains responsible for compliance with Regulation (EU) 2024/1624.” Recital 8 It should be clarified that beneficial owner information can be sourced either directly by the Obliged entity or a third-party service provider. Proposed amendment: “Obtaining beneficial owner information, either directly or via

Name of the respondent	Question	Answer
		third party service providers, for all customers that are not natural persons […] Recital 15 DT4C agrees with the recital's focus on identifying PEPs, family members and close associates. However, the recital could better acknowledge that effective PEP screening in practice often depends on automated tools and third-party screening services, especially given the speed and scale of changes in public office holders globally. It would also be helpful if the recital recognised that Member State publication practices are uneven, which may affect screening quality. Proposed amendment: "To ensure effectiveness and timeliness, obliged entities may rely on automated screening tools and reputable third-party screening service providers, in accordance with a risk-based approach. The effectiveness of PEP screening also depends on the timely and sufficiently standardised publication of information concerning prominent public functions and changes in role occupancy." Recital 19 DT4C supports the recitals' emphasis on obtaining sufficiently robust information in higher-risk situations. However, recital 19 should more clearly recognise that obliged entities frequently rely on adverse media tools, intelligence providers and other third-party enhanced due diligence services to assess authenticity, accuracy, reputation and higher-risk connections. Proposed addition: "Such information may be obtained directly or through

Name of the respondent	Question	Answer
		reputable third-party service providers, including providers of adverse media, corporate intelligence, identity verification and enhanced due diligence services, provided that the obliged entity remains responsible for compliance." Recital 22 Recital 22 should better reflect the need to avoid the RTS creating a standalone or divergent screening framework where existing Union restrictive measures implementation frameworks already exist. Proposed addition: "In specifying screening requirements, this Regulation should be applied consistently with existing Union requirements and guidance concerning the implementation of Union and national restrictive measures."
Data & Technology for Compliance Alliance (DT4C)	Do you have any comments on the Annex in the draft RTS?	No
Data & Technology for Compliance Alliance (DT4C)	How would you rate the proposals set out in the draft RTS overall?	Good
de Nederlandse Orde van Belastingadviseurs	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	PART I (PART II is included under question 2) Dear Madam / Sir, The Dutch Association of Tax Advisers (de Nederlandse Orde van Belastingadviseurs, also referred to as 'NOB') is pleased to herewith provide comments on the public consultation on the draft Regulatory Technical Standards (RTS) (Consultation Paper)

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	as published on the website of the Anti-Money Laundering Authority (AMLA) on 9 February 2026. The comments in this document will focus on the Draft RTS on supplementing Regulation (EU) 2024/1624 of the European Parliament and of the Council with regard to regulatory technical standards specifying information and requirements necessary for the performance of customer due diligence for the purposes of Article 28(1) (draft RTS under Article 28(1) of the AMLR on Customer Due Diligence). The NOB is pleased that the proportionality and risk-based approach have explicitly been incorporated in Article 1 of the RTS. In light of said approach the NOB sees room for improvement of some of the articles of the RTS. Kind Regards, The Dutch Association of Tax Advisers Margriet Lukkien Chair of Commissie Beroepszaken of the Dutch Association of Tax Advisers Observations regarding draft RTS on Customer Due Diligence under Article 28(1) of the AMLR General observations According to the Consultation Paper the draft RTS outlined contain proportionate, risk-based Customer Due Diligence

Name of the respondent	Question	Answer
		measures that contribute to harmonising the way AML/CFT requirements are applied in the European Union. The provisions are flexible enough to ensure applicability across the range of products and services offered by obliged entities in both the financial and non-financial sector. The RTS promote simplification and enable obliged entities to determine the most effective and proportionate measures to be applied. The NOB endorses AMLA's intention to place proportionality and the risk-based approach at the heart of its work and to ensure the effectiveness of the instruments to be delivered all while simplifying AML/CFT compliance for obliged entities where possible. The NOB is pleased to see that the proportionality and risk-based approach have explicitly been incorporated in Article 1 of the RTS. Article 2 – Information to be obtained in relation to names In paragraph (ii) of Article 2 an extra obligation and thus administrative burden is created, where the obliged entities have to obtain not only the registered name, but also the trade name where it differs from the registered name. The NOB does not see why or how this additional obligation could contribute to the prevention of the use of the financial system for the purposes of money laundering or terrorist financing. In the opinion of the NOB obtaining the entities' registered name should suffice. The NOB urges AMLA to reconsider this requirement, as each requirement significantly increases the administrative burden for the obliged entities, taking into account that the requirements apply to each and every client.

Name of the respondent	Question	Answer
		Besides, in the Netherlands an entity may have several trade names. As the RTS use the singular 'trade name', it can be argued that obtaining one trade name suffices, regardless which trading name. Requiring that all trade names that differ from the registered name are obtained, would definitely create an excessive administrative burden in the opinion of the NOB. Article 4 – Specification on the provision of the place of birth According to Article 4 at least the country name has to be obtained for the place of birth. In order to create a more proportionate administrative burden either the city name or the country name should suffice, unless the specific city name should not be unique. Only in the latter case requiring the country name in addition would be proportionately. Article 5 – Specification on nationalities "Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient", thus recital (3) to the RTS. To make this very clear the NOB suggests to add the cited passage (also) to Article 5. END OF PART I - PART II is included under question 2.
de Nederlandse Orde van Belastingadviseurs	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	PART II Article 6 – Documents for the verification of identity Paragraph (5) of Article 6 reads "For the purposes of verifying the identity of the persons referred to in (…), obliged entities

Name of the respondent	Question	Answer
		shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof (...).”[underlining by the NOB]. This paragraph is somewhat confusing as the obliged entity will of course have to return the original document to the person concerned as soon as possible. The NOB suggests changing the wording of said paragraph to make this clear. As an alternative the obliged entity may obtain a certified copy of the identity document. A mark of authenticity merely regards the copy, but the original document should of course also be valid. How the text is phrased now it could mean that a copy of a false identity document may be certified as long as the copy is identical to the (false) original document. In that case it is impossible for the obliged entity to meet paragraph (3) of Article 6 – “Obliged entities shall take reasonable steps to ensure that alle documents obtained for the verification (…) are authentic and have not been forged or tampered with.” – in so far as it concerns the original document. Article 7 – Verification measures conducted on a non-face-to-face basis According to paragraph (3)(c) and (3)(e) of Article 7 any images, video, sound and/or data processed through the solution should be captured (and retained) in a readable format and with sufficient quality so that the natural person is unambiguously recognisable. In order to minimize the retention of data (GDPR) the NOB is of the opinion that not all data processed through the solution has to be kept on file, provided that the verification process is auditable. Article 12 – Understanding the ownership and control structure

Name of the respondent	Question	Answer
		of the customer in the case of complex corporate structures The NOB suggests removing the word 'complex' and to merely speak of corporate structures with three or more layers between the customer and the beneficial owner, in order to neutralize the wording of this paragraph (including the heading). Article 30 – Screening requirements Paragraph (a) reads "[obliged entities shall] screen (…) (iii) in the case of a natural person, legal person, body or entity: - any other names, aliases or trade names where they differ from the registered name: (…)." The NOB is of the opinion that it is not feasible nor proportionate to screen all other names, aliases and trade names as this would force the obliged entities to record these names, provided that they become aware of all of these names anyhow. If the obliged entities record and screen at least the registered name this would sufficiently facilitate an adequate screening in the opinion of the NOB. In conclusion The NOB is available to further elaborate on this response to the evaluation. A copy of this response will be published on our website. The Dutch Association of Tax Advisers The Dutch Association of Tax Advisers, established in 1954, is the professional association of the university educated tax

Name of the respondent	Question	Answer
		advisers in the Netherlands. It has over 6,000 members (including 800 corporate tax advisers), who must meet high standards in terms of expertise, professional skills and ethics. These standards form a guarantee for the quality of service and are important because the occupation of tax adviser is not legally protected in the Netherlands. As years of practice have shown, we are in a most excellent position to monitor the quality, integrity and recognizability of the profession of tax adviser for the general public, without legal regulation. We do this through our entry requirements, our professional education and our independent disciplinary boards. The NOB has a long tradition in the area of legal commentaries. Since 1981, we have had a special Legislative Proposal Committee, which, over the years, has submitted extensive commentaries on proposed Dutch and EU tax legislations and made them available to parliament. END OF PART II

Deutsche Post AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NA
Deutsche Post AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	NA
Deutsche Post AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Comment on Article 4 – Place of Birth Issue: Article 22(1), point (a)(ii) refers to “place of birth,” which is commonly understood to mean at least the city or locality of birth. However, Article 4 requires “at least the country of birth,” creating ambiguity as to whether the country must always be provided or whether it would be sufficient to capture

Name of the respondent	Question	Answer
		only the place of birth (e.g. city or locality) without additionally requiring the country, where such more granular information is available Proposal (drafting): Clarify Article 4 to reflect a hierarchical approach: “Place of birth as referred to in Article 22(1), point (a)(ii), shall be recorded using the most specific information available (e.g. city or locality). Where such information is not available, at least the country of birth shall be recorded.” Rationale: This clarification would align the provision with common understanding and existing practice, avoid unnecessary data gaps or inconsistencies, and ensure coherence with Commission Implementing Regulation (EU) 2024/2977.
Deutsche Post AG	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Deutsche Post AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Comment on Article 6(1), point (d) Issue: Article 6(1), point (d) requires the “signature of the document holder” as a mandatory element. This requirement does not sufficiently reflect current practices and may create practical and legal inconsistencies. Proposal (drafting):

Name of the respondent	Question	Answer
		Amend Article 6(1), point (d) to remove the mandatory requirement for the signature of the document holder or clarify that it is required only where available on the identification document. Rationale: - A significant number of official identity documents and passport series do not contain a signature, making this requirement impracticable. - Certain individuals are unable to provide a signature, for example due to physical impairments or age-related limitations. - The requirement creates inconsistency with electronic identification means, where no handwritten signature is required or available. Comment on Article 7 Issue: The wording “relevant qualified trust services” lacks sufficient precision and creates uncertainty as to which specific services under Regulation (EU) No 910/2014 (eIDAS) may be relied upon. This may lead to divergent interpretations and inconsistent application across Member States. Proposal (drafting): Amend Article 7(1) as follows: “… or relevant qualified trust services as set out in that Regulation, in particular qualified electronic signatures, qualified electronic seals, and qualified electronic attestations of attributes.” Rationale: Providing a non-exhaustive clarification of relevant qualified

Name of the respondent	Question	Answer
		trust services would enhance legal certainty and support consistent supervisory and market practices, while preserving technological neutrality and alignment with the eIDAS framework.
Deutsche Post AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Deutsche Post AG	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Deutsche Post AG	Do you have any comments on the Annex in the draft RTS?	Yes
Deutsche Post AG	Please share your comments below.	Comment on Annex I – (a) Natural Person, (iv) Address Elements Issues: 1. The title “Minimum corresponding attributes” suggests that values are required for all listed attributes. In practice, however, not all address elements are consistently available (e.g. resident_state is often not provided), which may lead to implementation challenges and inconsistent data handling. 2. The current structure does not sufficiently clarify the role of “resident_address” in relation to the other listed attributes, creating ambiguity as to whether it is an additional field or a composition of the individual address elements. Proposal (drafting): • Define “resident_address” as the mandatory core attribute (i.e. the postal address). • Clarify that the additional address elements (e.g. street, house number, postal code, city, state, country) are optional components, to be collected where available and relevant for the address. Rationale:

Name of the respondent	Question	Answer
		This approach reflects practical data availability and common address structures, ensuring that a usable postal address is always captured while avoiding unnecessary data gaps or rejection of valid records due to missing attributes. It also clarifies the relationship between “resident_address” and its component elements, supporting consistent and efficient implementation. Furthermore, this proposal would ensure consistency with RTS Article 3 and Implementing Regulation (EU) 2024/2977, which also follow a structured but flexible approach to personal data attributes.
Deutsche Post AG	How would you rate the proposals set out in the draft RTS overall?	Neutral;Good
Deutscher Anwaltverein (German Bar Association)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The DAV does not agree that the draft RTS provide sufficient flexibility for application across the legal profession. Several provisions are overly prescriptive and appear to be modelled on financial institutions, without adequately reflecting the specific role, capacities and workflows of independent legal professionals. This risks imposing disproportionate obligations in practice. Detailed comments and concrete drafting proposals are provided in relation to the relevant articles below.
Deutscher Anwaltverein (German Bar Association)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The DAV does not consider that the draft RTS adequately allow for a genuinely risk-based approach. A number of provisions effectively introduce standardised, bank-like obligations that do not sufficiently take into account the lower ML/TF risks and specific nature of many legal services. This may lead to disproportionate compliance burdens. Further details and drafting suggestions are set out in the article-specific comments.

Name of the respondent	Question	Answer
Deutscher Anwaltverein (German Bar Association)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. In the context of legal services, there are multiple situations where the information required under the draft RTS is not routinely available or accessible to lawyers. This includes, for example, limited visibility over clients' financial flows, lack of direct access to certain individuals (e.g. senior managing officials), or reliance on third-party payments. The draft RTS do not sufficiently provide for such practical constraints. Specific examples and proposed solutions are included in the detailed comments.
Deutscher Anwaltverein (German Bar Association)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The DAV considers that additional simplified due diligence measures should be included for legal services that are associated with lower ML/TF risks. In particular, activities not falling within the scope of Article 3 AMLR, as well as standardised and high-volume legal services, warrant a more proportionate approach. Concrete proposals are outlined in the relevant sections below.
Deutscher Anwaltverein (German Bar Association)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The DAV has additional observations regarding the overall structure and impact of the draft RTS, in particular with regard to legal certainty, proportionality, professional secrecy and the independence of the legal profession. These overarching concerns, as well as specific drafting proposals, are addressed in detail in the article-by-article comments below.
Deutscher Anwaltverein (German Bar Association)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Deutscher Anwaltverein	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6

Name of the respondent	Question	Answer
(German Bar Association)		
Deutscher Anwaltverein (German Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	I. Verification of Identity Documents, Articles 6, 7 RTS Articles 6 and 7 RTS impose detailed verification obligations regarding the authenticity and integrity of identity documents, presupposing a level of technical expertise and verification capacity comparable to that of financial institutions. In practice, independent legal professionals do not have the means, tools or institutional role to conduct forensic or technical authenticity checks of identity documents, nor to reliably assess sophisticated forgery risks. On the other hand, the client relationship, by its nature, usually offers other means of ascertaining the identity and reliability of a client. Recommendation: Clarify that, for lawyers, “reasonable steps” to verify identity documents are limited to plausibility checks based on face validity and consistency, and do not require technical, forensic or investigative verification measures. We recommend inserting the following proposed wording as a new Article 8. “For independent legal professionals, reasonable steps to verify the authenticity and integrity of identity documents, whether in a face to face or a non-face-to-face situation, shall be limited to plausibility checks based on apparent validity, internal consistency with other information obtained in connection with the mandate. Independent legal professionals are not required to carry out technical, forensic, or investigative verification measures or to use specialised authentication tools.”

Name of the respondent	Question	Answer
		II. Foreign Language Documents, Article 6 Sec. 4 RTS Article 6 Sec. 4 RTS requires obliged entities to ensure that they understand the content of foreign language documents used for identification and verification purposes, without clarifying the acceptable level or method of translation. This creates legal uncertainty and practical burdens for lawyers involved in international matters, where certified translations may be disproportionate to the ML/TF risk and significantly delay access to legal advice. Recommendation: Clarify that the use of machine translations or non certified translations is permissible where sufficient to understand the content for ML/TF purposes, unless inaccuracies could materially affect the risk assessment. We recommend inserting the following wording as a new second sentence in the existing text of Article 6 Sec. 4: “The obligation to ensure understanding of documents drafted in a foreign language shall be satisfied where the independent legal professional obtains a translation sufficient to understand the content for the purposes of ML/TF risk assessment. Machine translations or non-certified translations may be used where appropriate, taking into account the risk level and the nature of the document.”
Deutscher Anwaltverein (German Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	11

Name of the respondent	Question	Answer
Deutscher Anwaltverein (German Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	III. Risk of role confusion: lawyers as investigators, Articles 11, 12 RTS Provisions requiring a “comprehensive understanding” (Article 11 Sec. 1 RTS) of ownership and control structures and an assessment of their “economic, legal or other rationale” (Article 11 Sec. 4 (b) RTS, Article 12 Sec. 1 (d)) risk transforming lawyers into de facto investigators or auditors of their own clients. This risks undermining: • the lawyer’s role as a legal adviser; • the boundary between AML obligations and substantive legal analysis. Recommendation: Clarify that lawyers are not required to independently verify or substantively assess the economic legitimacy of client structures beyond identifying ML/TF risk indicators reasonably apparent in the course of the mandate and relevant within its scope. We recommend inserting the following proposed wording as a new Article 11 Sec. 5 and a new Article 12 Sec. 4, respectively. “For independent legal professionals, the obligation to obtain a comprehensive understanding of the ownership and control structure shall be limited to identifying and understanding such elements of the structure that are reasonably apparent in the course of the legal mandate and relevant for the assessment of ML or TF risk, taking into account the scope of the mandate. Legal professionals shall not be required to independently investigate, verify or substantively assess the economic rationale, commercial legitimacy or legal effectiveness of ownership or control structures beyond what is necessary to identify ML/TF risk indicators.”

Name of the respondent	Question	Answer
Deutscher Anwaltverein (German Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
Deutscher Anwaltverein (German Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	IV. Beneficial Ownership and Senior Managing Officials, Articles 11, 12, 13 RTS 1. Identification of Beneficial Owner Senior Managing Officials (SMOs) may only be identified in place of Bos, if the obliged entity has been unable to identify BOs having “exhausted all possible means of identification” or where “there are doubts that the persons identified are the BOs” (Article 22 Sec. 2 AMLR, Recital 10 RTS). It is not exactly clear, when these conditions are met. Recommendation: Clarification that lawyers are only required to use reasonable means for identification that are consistent with the client’s instructions. We recommend inserting this proposed wording as a new Article 13. “For independent legal professionals, the obligation to identify the beneficial owner shall be satisfied where reasonable and proportionate means of identification have been applied, taking into account the scope of the mandate, the ML/TF risk and the information available within the professional relationship. Independent legal professionals are not required to pursue identification measures that go beyond their professional role or the instructions of the client.”

Name of the respondent	Question	Answer
		2. Senior Managing Officials (SMOs) While the option to rely on the registered office address instead of private residential addresses (Article 13 (a) RTS) is welcome, the obligation to identify and verify SMOs remains difficult in practice where such individuals are not clients and have no direct interaction with the law firm and they are regularly not required to be officially registered. Recommendation: Allow reliance on information provided by the client in low and standard risk cases, subject to escalation only where inconsistencies arise. We recommend inserting the following proposed wording as a new Article 13 Sec. 2. “Where SMOs are identified in accordance with Article 22 Sec. 2 Regulation (EU) 2024/1624, Article 13 RTS, independent legal professionals may, in low-risk and standard-risk cases, rely on information provided by the client, including corporate documentation or written representations, unless inconsistencies, implausibilities or risk indicators are identified.”
Deutscher Anwaltverein (German Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	18
Deutscher Anwaltverein (German Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	V. Identification of the purpose and intended nature, Article 18 RTS Article 18 RTS requires obliged entities, as part of understanding the purpose and intended nature of the business relationship, to obtain information on the source of

Name of the respondent	Question	Answer
		funds, including detailed categories such as employment income, business revenue, investments, inheritance or legal settlements. While appropriate in a banking or transactional context, this provision presupposes access to financial information and transactional insight that lawyers typically do not have, particularly where legal services do not involve the handling of client funds or the execution of financial transactions. In practice, lawyers are often engaged for advisory, drafting or litigation purposes and have neither visibility over nor control of the client's financial flows. Expecting lawyers to meaningfully determine or assess the origin of funds risks imposing bank-like compliance duties that are incompatible with the nature of legal services and may undermine access to legal advice, especially at early stages of a mandate. Recommendation: Clarify that, for independent legal professionals, Article 18 should be limited to obtaining a general, declaratory understanding of the legal and economic purpose of the mandate. Information on the source of funds should not be required or should be limited to high-level client explanations, unless the legal service involves the management of client funds or a higher AML/TF risk has been identified under enhanced due diligence requirements. We recommend inserting the following proposed wording as a new Article 18 Sec. 2. "For independent legal professionals, the obligation to obtain information on the source of funds shall be limited to a general, declaratory understanding of the legal and economic purpose of the mandate.

Name of the respondent	Question	Answer
		Detailed information on the origin of funds shall only be required where the legal services involve the management of client funds or enhanced due diligence measures apply due to higher ML/TF risk.”
Deutscher Anwaltverein (German Bar Association)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	22
Deutscher Anwaltverein (German Bar Association)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	VI. Problems related to pooled accounts and professional secrecy, Article 22 RTS 1. Pooled Accounts Pooled accounts are indispensable for lawyers’ daily operations. However, Article 22(a) RTS would effectively impose identification and verification obligations even in cases outside the scope of the AMLR or below the threshold of Article 19(1), making the use of pooled accounts extremely difficult. Typical use cases illustrate their necessity: in debt collection, debtors pay into the lawyer’s pooled account, allowing efficient allocation to principal, interest, and costs, especially for instalments. In damages claims, insurers transfer compensation to the lawyer, who settles third-party claims and forwards the balance to the client. In civil litigation, settlements or cost reimbursements are paid into pooled accounts and distributed accordingly, which is particularly practical in multi-party cases. Similarly, taxes or fees may be paid into the lawyer’s account and then transferred to authorities while ensuring proper segregation and traceability.

Name of the respondent	Question	Answer
		These activities generally fall outside AML/CFT rules under Article 3(3)(b) AMLR. Accordingly, lawyers are not required to carry out full CDD/KYC measures. However, Article 22(a) RTS would extend such obligations to situations not covered by the AMLR or below the EUR 10,000 threshold of Article 19(1). In practice, this would be disproportionate and difficult to implement, as it would require full identification procedures for nearly all clients. It also lacks a clear rationale, since funds are often paid by third parties rather than clients. Mandatory disclosure may conflict with professional confidentiality, while direct payment alternatives are not viable because clients cannot manage the legal and administrative handling of such transactions. Pooled accounts are not unique to lawyers; similar structures exist in other sectors such as property management or schools. In addition, the thresholds set out in Article 19 AMLR should be respected when applying Article 22 RTS. Recommendation to rephrase Article 22 as follows: "Article 22 [..] (a) the credit institution is satisfied that (i) either the funds are not related to activities that do not fall within the scope of the obligations of Regulation (EU) 2024/1624, in particular its Article 3 and Article 19 (ii) or that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to

Name of the respondent	Question	Answer
		clients for whom it administers their funds, immediately after such request has been made by the credit institution;" 2. Professional secrecy Article 22 raises serious concerns regarding professional secrecy, which is protected under Article 8 of the European Convention on Human Rights and Article 7 of the EU Charter. According to established case law of the ECtHR and the CJEU , this protection extends beyond litigation to legal advice in general. As a rule, lawyers may not disclose the identity of their clients. A general obligation to provide client information to credit institutions upon request would therefore constitute a disproportionate interference. It risks undermining trust in legal confidentiality, deterring individuals from seeking legal advice or communicating openly, and thereby affecting the right to a fair trial (Article 47 of the Charter). Moreover, it interferes with the independence of the legal profession by effectively assigning supervisory functions to financial institutions. Where oversight lies with self-regulatory bodies, banks should not assess lawyers' compliance with due diligence obligations.
Deutscher Anwaltverein (German Bar Association)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
Deutscher Anwaltverein (German Bar Association)	Do you have any comments on the Annex in the draft RTS?	No
Deutscher Anwaltverein (German Bar Association)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Deutscher Factoring-Verband e.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NA
Deutscher Factoring-Verband e.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Die Wirksamkeit des AML/CTF-Rahmens hängt von der Anwendung eines risikobasierten Ansatzes ab, d. h. von einem starken Bekenntnis zur Proportionalität, die sicherstellt, dass Maßnahmen dort ansetzen, wo die Risiken am höchsten sind, und in Kontexten mit geringem Risiko keine unnötigen Belastungen verursachen. Ein risikobasierter Ansatz ist für die Wettbewerbsfähigkeit des EU-Finanzsektors von entscheidender Bedeutung. In Deutschland und Europa spielt die Factoring-Branche eine wichtige Rolle bei der Finanzierung der Realwirtschaft, insbesondere von KMU. Unter Berücksichtigung der besonderen Merkmale von spezialisierten Finanzierungsaktivitäten mit geringem Risiko,

Name of the respondent	Question	Answer
		wie beispielsweise Factoring, möchten wir folgende Punkte hervorheben: Die Erhebung neuer Daten und die Aktualisierung von Kundeninformationen für bereits existierende Kunden werden zusätzlichen Zeitaufwand für die Mitarbeiter erfordern, was zu Lasten der Zeit geht, die für die AML/CFT-Risikobewertung aufgewendet wird. Die Verfahren zur Kundenaufnahme und -aktualisierung sollten vereinfacht werden, da nicht alle Daten stets relevant sind, insbesondere für Unternehmen, die auf risikoarme Finanzierungsformen wie Factoring spezialisiert sind – unterschiedliche Finanzierungsformen erfordern eine differenzierte Behandlung. Die RTS sollten daher eine klarere Differenzierung vorsehen, einschließlich expliziter Verhältnismäßigkeitsklauseln oder vereinfachter Regelungen. Vereinfachte Sorgfaltspflichten für risikoarme Finanzierungsformen wie Factoring sollten Folgendes umfassen: - Verzicht auf die Erhebung aller Identifizierungsdaten (Art. 2(ii) und 5 des RTS-Entwurfs), z. B. keine Erhebung aller Vornamen bei natürlichen Personen oder keine Erhebung sowohl des „eingetragenen Namens“ als auch des „Handelsnamens“ bei juristischen Personen. - Verzicht auf die Erhebung von Informationen über Wohnungsnummer, Hausnummer und Postfächer (Art. 3 (c) des RTS-Entwurfs). - Streichung der Erhebung aller Staatsangehörigkeiten eines Kunden oder insbes. wirtschaftlich Berechtigten (Art. 5), da dies weder risikobasiert angezeigt noch grds. operativ durchführbar ist. In den meisten Fällen weisen Ausweisdokumente nur eine Staatsangehörigkeit aus, und gerade bei wirtschaftlich Berechtigten kann es sehr schwierig oder sogar unmöglich sein,

Name of the respondent	Question	Answer
		Informationen zu erheben. Zumindest sollte es ausreichen, Informationen aus den Handelsregistern als zuverlässige und unabhängige Informationsquellen heranzuziehen. - Wenn ein Verpflichteter eine Geschäftsbeziehung mit einer politisch exponierten Person (PEP) eingeht, sollte die Einholung einer vorherigen Genehmigung durch die Geschäftsleitung nur auf der Grundlage einer Risikobewertung erforderlich sein, um PEP-Kunden nicht ungerechtfertigt zu benachteiligen. Was die Aktualisierung bereits bestehender und laufender Geschäftsbeziehungen betrifft, so wurden bisher für geschäftsführende Gesellschafter oder gesetzliche Vertreter grundsätzlich keine Angaben zum Geburtsort verlangt; Gleiches gilt für die Anschriften geschäftsführender Gesellschafter. Unter Berücksichtigung sowohl des Grundsatzes der Datensparsamkeit gemäß DSGVO als auch des geringen AML/TF-Risikos im Factoring sowie der unverhältnismäßigen praktischen Schwierigkeiten bei der Erhebung solcher Daten plädieren wir dafür, diese Erhebungspflicht für Geschäftsinhaber und Vertreter juristischer Personen aufzuheben, mit denen zum Zeitpunkt des Inkrafttretens der AMLR im Juli 2027 bereits eine laufende Geschäftsbeziehung besteht. Im Zusammenhang mit der Aktualisierung von Kundeninformationen möchten wir zudem auf die Notwendigkeit einer Klarstellung hinsichtlich der Folgen erfolgloser Versuche zur Aktualisierung von Kundeninformationen hinweisen. Insbesondere in Fällen mit geringem Risiko wie dem Factoring sprechen wir uns gegen die Konsequenz einer zwangsläufigen Beendigung der Geschäftsbeziehung aus, vor allem wenn das verpflichtete Unternehmen zumindest einige Informationen, z. B. durch

Name of the respondent	Question	Answer
		Einsichtnahme in Transparenzregister, einholen konnte oder zumindest die Erklärung des Kunden erhalten hat, dass keine Änderung erfolgt sind. Wie unten in unseren Anmerkungen zu den Erwägungsgründen dargelegt: Sobald ein Kunde korrekt identifiziert wurde, sollte er nicht erneut identifiziert werden müssen oder um ein neues Ausweisdokument gebeten werden, nur weil z. B. das Ausweisdokument abgelaufen ist – eine Aktualisierung der Identifizierung durch ein Ausweisdokument sollte nur dann erforderlich sein, wenn Elemente auftauchen, die Zweifel an der Identität des Kunden oder an der Echtheit des Ausweisdokuments aufkommen lassen.
Deutscher Factoring-Verband e.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Artikel 10 Angemessene Maßnahmen zur Überprüfung des wirtschaftlich Berechtigten Wir möchten darauf hinweisen, dass für Unternehmen mit Sitz in einem Mitgliedstaat nicht alle Transparenzregister in einem anderen EU-Mitgliedstaat zugänglich sind. Zentrale Register können auch aus anderen Gründen unzugänglich sein, und zuverlässige Quellen Dritter können begrenzt sein. Die Selbsterklärung des Kunden wird dann oft zur einzigen praktikablen Option, ohne dass in den Texten festgelegt ist, unter welchen Bedingungen sie als ausreichend angesehen werden kann. In den endgültigen RTS sollte daher eine Klarstellung erfolgen. Dabei sollten die verpflichteten Institute im Hinblick auf die Überprüfung des wirtschaftlich Berechtigten einen gewissen Ermessensspielraum bei der Beurteilung haben, was als angemessene Maßnahmen gilt. In diesem Zusammenhang sollte die Liste der Maßnahmen nicht erschöpfend sein. Wir schlagen vor, im ersten Satz von Art. 10 Abs. 1 des Entwurfs der RTS das Wort „kann“ vor „umfassen“ einzufügen sowie „mindestens eine der folgenden“ zu streichen und in Art. 10

Name of the respondent	Question	Answer
		Abs. 1 Buchstabe b des Entwurfs der RTS anzugeben: „die beispielsweise umfassen können“. Damit Art. 10 des Entwurfs der RTS mit Art. 20 Buchstabe b der AMLR und dem verhältnismäßigen und risikobasierten Ansatz der AMLR im Einklang steht, sprechen wir uns außerdem dafür aus, am Ende von Artikel 10 Folgendes zu präzisieren: „Diese Maßnahmen müssen in einem angemessenen Verhältnis zur Größe, Art und Komplexität der Tätigkeiten des Verpflichteten sowie zu dessen Exposition gegenüber Geldwäsche- und Terrorismusfinanzierungsrisiken stehen.“
Deutscher Factoring-Verband e.V.	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Factoring sollte generell als mit einem geringen Geldwäsche- und Terrorismusfinanzierungsrisiko verbunden angesehen werden, da das für die Bekämpfung von Geldwäsche und Terrorismusfinanzierung (AML/CFT) relevante Hauptrisiko im Factoring in der Vorlage betrügerischer Rechnungen besteht, die darauf abzielen, dass der Factoring-Kunde von der Factoring-Gesellschaft mehr Liquidität erhält, als den erbrachten Dienstleistungen oder gelieferten Waren (sofern vorhanden) entspricht (sog. „Luftrechnungen“). Für die tatsächliche Geldwäsche, d.h. um die Herkunft oder den Ursprung bestimmter Geldbeträge zu verschleiern, eignet sich Factoring jedoch grds. nicht: Da Factoring-Unternehmen sich des v.g. Hauptrisikos betrügerischer (Luft-)Rechnungen bewusst sind, pflegen sie engen Kontakt zu ihren Kunden, einschließlich regelmäßiger Vor-Ort-Prüfungen, und haben ein ureigenes Interesse daran, die Details und Hintergründe der Transaktionen ihrer Kunden zu kennen, da das Factoring-Unternehmen die daraus resultierenden Forderungen erwirbt und in den meisten Fällen auch das Delkredere-/Ausfallrisiko des Schuldners/Debitors übernimmt (echtes

Name of the respondent	Question	Answer
		Factoring/factoring without recourse). In diesem Zusammenhang möchten wir noch einmal klarstellen, dass die Kunden-/Geschäftsbeziehung im Sinne beispielsweise der AMLR und der entsprechenden RTS in der Regel zwischen dem Factoring-Unternehmen und dem Verkäufer/Abtretenden/Factoring-Kunden der Forderungen besteht – hier besteht das Vertragsverhältnis, das für die Einstufung als Kunde entscheidend ist. Zwischen dem Factor und den (oft zahlreichen) Schuldnern besteht in der Regel kein Vertragsverhältnis. Die einzige Form des Factorings, bei der dies anders gehandhabt wird, ist das Reverse Factoring (manchmal auch als z. B. Supply-Chain-/Payables-Financing oder Confirming bezeichnet), bei dem die Rollen von Schuldner/Käufer und Verkäufer in einigen Aspekten vertauscht sind: Ein Schuldner initiiert und schließt einen Vertrag sowie eine Factoring-Beziehung mit dem Factor ab, die mehrere Verkäufer/Lieferanten umfasst – in diesen Fällen steht der Schuldner im Mittelpunkt des Prozesses/der Beziehung und ist somit der eigentliche Kunde im Sinne der AML/CFT-Anforderungen (einschließlich der Sorgfaltspflicht gegenüber Kunden). Der Schuldner wählt aus, welche Verkäufer teilnehmen und welche Forderungen einbezogen werden, sodass Verkäufer Forderungen nicht ohne die Zustimmung des Schuldners an das Factoring-Unternehmen verkaufen/abtreten können. Selbst wenn beispielsweise ein Rahmenvertrag besteht, der den Factor und den Verkäufer einbezieht, gelten die Verkäufer daher nicht als Kunden, sondern lediglich als Gegenparteien (vgl. Wolfsberg Trade Finance Principles 2019). Vor diesem Hintergrund plädiert der DFV für eine factoring-spezifische Klarstellung u.a. hinsichtlich der Zusammenarbeit

Name of the respondent	Question	Answer
		von zwei oder mehr Factoring-Unternehmen/Verpflichteten, die als risikoarm einzustufen ist und somit vereinfachte Sorgfaltspflichten nach sich zieht; diese Konstellation weist deutliche Ähnlichkeiten mit dem in Erwägungsgrund 18 der RTS dargelegten Fall der Zusammenarbeit mehrerer Kreditinstitute zur gegenseitigen Erbringung von Dienstleistungen mit niedrigem Geldwäsche-/Terrorismusfinanzierungsrisiko auf. Eine solche Zusammenarbeit von Factoring-Unternehmen in grenzüberschreitenden Fällen wird oft als „Zwei-Faktor-System/Beziehung“ bezeichnet, und es ist anzumerken, dass diese nicht mit den grenzüberschreitenden Korrespondenzbeziehungen vergleichbar sind, auf die in Art. 36 der AMLR Bezug genommen wird. In Bezug auf Art. 10 des Entwurfs der RTS (basierend auf Art. 22 Abs. 7 lit. b AMLR) plädieren wir für eine Klarstellung, dass die Einsichtnahme in die Transparenzregister an sich ausreichend ist und als zuverlässige Quelle gilt; der derzeitige Wortlaut sowohl von Art. 22 Abs. 7 lit. b AMLR als auch von Art. 10 des Entwurfs der RTS lassen diese zentralen Register als unzureichend oder gar unzuverlässig erscheinen, was nicht zutrifft. Darüber hinaus würde dies dazu beitragen, Wettbewerbsverzerrungen zu vermeiden.
Deutscher Factoring-Verband e.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In verschiedenen Artikeln sowie in Anhang I der RTS heißt es, dass bestimmte Maßnahmen „sofern zutreffend“ (z. B. in Art. 11 Abs. 2b oder Art. 24 Buchstabe b) oder (im Falle von Informationen und Daten) „sofern verfügbar“ (z. B. in Art. 3 Buchstabe c, Art. 20 Abs. 1 Buchstabe b oder in Anhang I). Leider bleibt unklar, welche Anstrengungen das verpflichtete Unternehmen vornehmen muss, um diese Informationen zu beschaffen und zu überprüfen, und es bleibt auch unklar,

Name of the respondent	Question	Answer
		welche Konsequenzen sich ergeben, wenn der Kunde z. B. eine Steuer-ID-Nummer oder LEI nicht angibt oder angeben kann. Der DFV plädiert für Klarstellungen, die den Verwaltungsaufwand für die verpflichteten Unternehmen begrenzen, aber dennoch sicherstellen, dass die erforderlichen Informationen eingeholt werden können. So sollte klargestellt werden, dass risikoorientiert bspw. auf gewisse ID-Angaben verzichtet werden kann, wenn diese nicht für die Abwicklung des Geschäfts notwendig bzw. aufgrund anderer gesetzlicher Vorgaben einzuholen sind. Alternativ sollte beispielsweise die Aufforderung des verpflichteten Instituts an den Kunden, eine Steuernummer anzugeben, als ausreichende Anstrengung des verpflichteten Unternehmens angesehen werden. Im Hinblick auf die Erfüllung der Sorgfaltspflichten ohne persönlichen Kontakt („non-face-to-face“) möchten wir darauf hinweisen, dass das Verfahren des Rückgriffs auf ein anderes verpflichtetes Unternehmen zur Erfüllung bestimmter Sorgfaltspflichten, wie es in Art. 49 AMLR festgelegt ist, voraussetzt, dass die verpflichteten Unternehmen eine schriftliche Vereinbarung abschließen, in der die Bedingungen für die Übermittlung der Informationen und Unterlagen festgelegt sind. Dies kann in bestimmten Konstellationen und Ländern unproportional aufwendig sein, z. B. im Falle einer einmaligen Identifizierung, die von einem deutschen Kreditinstitut für ein anderes verpflichtetes Unternehmen durchgeführt wird. Aufgrund der hohen Anzahl von Kreditinstituten in Deutschland (bzw. in ganz Europa) ist es nicht machbar, schriftliche Vereinbarungen mit allen oder auch nur den am stärksten vertretenen Banken abzuschließen; gleichzeitig macht es der anhaltende Trend im Finanzsektor, die Anzahl der physischen Filialen zu reduzieren, erforderlich, sich

Name of the respondent	Question	Answer
		auf andere verpflichtete Stellen stützen zu können, vorzugsweise auf flexible Weise, um die Kundenfreundlichkeit zu gewährleisten. Es wäre hilfreich, wenn die RTS zu den Kundensorgfaltspflichten diesen Punkt klären und möglicherweise Optionen aufzeigen würden, die eine kundenfreundliche Flexibilität ermöglichen und gleichzeitig die AMLR einhalten.
Deutscher Factoring-Verband e.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Deutscher Factoring-Verband e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	4
Deutscher Factoring-Verband e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 4 der RTS besagt, dass bei den Angaben zum Geburtsort mindestens der Name des Landes erfasst werden muss. In Ausweisdokumenten wie Reisepässen oder Personalausweisen ist jedoch unter „Geburtsort“ nicht immer der Name des Landes angegeben, sondern lediglich der Name der Stadt/Gemeinde. Daher sollte Art. 4 dahingehend geändert werden, dass die Erfassung der im Ausweisdokument angegebenen geografischen Informationen zum Geburtsort ausreicht, unabhängig davon, ob es sich dabei um den Ländernamen, den Ortsnamen oder beides handelt.
Deutscher Factoring-Verband e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
Deutscher Factoring-Verband e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Die in den Art. 6 und 7 der RTS enthaltenen Klarstellungen zu Art. 22 Abs. 6 der AMLR sind grundsätzlich zu begrüßen. Auch die Bereitstellung von Alternativen zu den in Art. 6 Abs. 6 und

Name of the respondent	Question	Answer
		Art. 7 Abs. 1 der RTS genannten elektronischen Identifizierungsmitteln ist zu begrüßen, da die Nutzung von elektronischen Identifizierungsmitteln, die der eIDAS-Verordnung entsprechen, in der EU nicht gleichmäßig gängig ist. Auch die Umsetzung der EU Digital Identity Wallet ist noch nicht abgeschlossen, so dass den Verpflichteten bis zum Inkrafttreten der AMLR nur sehr wenig Zeit zur entsprechenden Anpassung und Vorbereitung bleiben wird. Allerdings übertragen einige Alternativen zu den elektronischen Identifizierungsmitteln, die in bestimmten EU-Mitgliedstaaten wie Deutschland in Situationen nicht-persönlichen Kontakts weit verbreitet sind, nicht alle Informationen aus dem Ausweisdokument einer natürlichen Person an die Verpflichteten, wie z. B. ein Gesichtsbild oder die Nummer des Ausweisdokuments. Da die Verpflichteten die Anpassungsprozesse der weit verbreiteten und grds. anerkannten Anbieter solcher Alternativen nicht zu beeinflussen oder beschleunigen vermögen, sollte dies berücksichtigt und zumindest für einen Übergangszeitraum akzeptiert werden; dieser Übergangszeitraum sollte dem Zeitrahmen von bis zu 5 Jahren ab Inkrafttreten der RTS für risikobasierte Aktualisierungen bei bereits bestehenden Kunden entsprechen. In Bezug auf Identitätsprüfungsmaßnahmen, die nicht im persönlichen Kontakt (non-face-to-face) durchgeführt werden (Art. 7 RTS), ist zu berücksichtigen, dass die Umsetzung von eIDAS zwar an sich verpflichtend ist, die Nutzung von eIDAS jedoch in erster Linie von der Bereitschaft des Kunden abhängt. Daher müssen alternative Systeme akzeptabel sein, um sicherzustellen, dass der Zugang zu Dienstleistungen bzw. die Aufrechterhaltung von laufenden Geschäftsbeziehungen nicht

Name of the respondent	Question	Answer
		beeinträchtigt wird. In Bezug auf die in Art. 7 Abs. 4 der RTS vorgeschriebene Begründung dafür, dass der Kunde nicht mittels der in Art. 22 Abs. 6 der AMLR genannten Mittel identifiziert werden konnte, vertreten wir die Auffassung, dass ein einfacher Verweis auf das Fehlen bzw. die Nichtnutzung elektronischer Identifizierungsmittel als Begründung seitens der Verpflichteten ausreichen sollte – es ist unverhältnismäßig und unnötig, von dem Verpflichteten zu verlangen, detailliertere (und möglicherweise durchaus private) Gründe des Kunden zu ergründen.
Deutscher Factoring-Verband e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	10
Deutscher Factoring-Verband e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Die in Art. 10 RTS genannte Liste der „angemessenen Maßnahmen“ sollte als nicht erschöpfend anzusehen sein (wobei die verschiedenen genannten Register nicht kumulativ abgefragt werden sollten) und risikobasiert anzuwenden sein. Gemäß Art. 10 können Rechnungen für Versorgungsleistungen wie Strom zur Überprüfung des wirtschaftlich Berechtigten herangezogen werden. Da solche Rechnungen jedoch bestimmte Informationen wie z. B. die Ausweisnummer nicht enthalten, sollte eine Kombination solcher Rechnungen mit z. B. Informationen einer seriösen Auskunftei oder ähnlicher Datendienstleister zur Überprüfung ausreichen. Darüber hinaus begrüßen wir ausdrücklich die Klarstellung in Erwägungsgrund 9, dass leitende Führungskräfte im Sinne der Identifizierungs- und Überprüfungsmaßnahmen keine wirtschaftlichen Eigentümer sind, da dies auch zum Verständnis von Artikel 63 der AMLR beiträgt. Art. 13 besagt jedoch, dass

Name of the respondent	Question	Answer
		für leitende Führungskräfte dieselben Informationen erhoben werden müssen wie für wirtschaftliche Eigentümer, dass es jedoch anstelle der Erfassung der Wohnadresse und des Wohnsitzlandes ausreicht, die Adresse des Sitzes der juristischen Person zu erfassen – dies ist aus Gründen des Datenschutzes zu begrüßen, schränkt jedoch die in Art. 10 aufgeführten angemessenen Überprüfungsmaßnahmen insofern ein, als z. B. Stromrechnungen von der Wohnadresse des leitenden Angestellten in diesen Fällen de facto als Überprüfungsmaßnahmen ausgeschlossen sind. Wir plädieren für entsprechende Klarstellungen in den RTS, um diese praktischen Probleme anzuerkennen und zu berücksichtigen.
Deutscher Factoring-Verband e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	12
Deutscher Factoring-Verband e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Art. 12 der RTS enthält Klarstellungen zum Verständnis der Eigentums- und Kontrollstruktur von Kunden in Fällen mit komplexen Strukturen. Eine der (zusätzlichen) Voraussetzungen für die Einstufung einer Eigentums- und Kontrollstruktur als komplex ist, dass „in einer der Ebenen“ zwischen dem Kunden und dem wirtschaftlichen Eigentümer „eine Rechtsvereinbarung besteht“ (vgl. Art. 12 Abs. 1 Buchstabe a der RTS). Leider gehen die RTS nicht näher auf den Begriff „Rechtsvereinbarung“ ein, obwohl eine weitere Klarstellung dieser Bedingung für Abgrenzungs- und Begrenzungszwecke erforderlich ist, da jede Ebene oder Zwischengesellschaft zwischen dem Kunden und dem wirtschaftlich Berechtigten letztlich auf einer Form von Rechtsvereinbarung beruht. Wir schlagen vor, einen klarstellenden Verweis auf die Definition

Name of the respondent	Question	Answer
		von „Rechtsvereinbarung“ gem. Art. 2 Abs. 32 der AMLR in Art. 12 der RTS aufzunehmen.
Deutscher Factoring-Verband e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	16
Deutscher Factoring-Verband e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In Bezug auf Art. 16 der RTS möchten wir darauf hinweisen, dass die gesetzlichen Vertreter einer juristischen Person im Sinne von Art. 22 Abs. 1 Buchstabe b der AMLR keine „Personen, die vorgeben, im Namen des Kunden zu handeln“ sind.
Deutscher Factoring-Verband e.V.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Deutscher Factoring-Verband e.V.	Please specify which recital you refer to, and share your comments below.	Der DFV begrüßt die Klarstellung in Erwägungsgrund 25, wonach bereits bestehende Kunden-/Geschäftsbeziehungen innerhalb eines Zeitraums von einem bis zu fünf Jahren nach Inkrafttreten der RTS auf risikobasierte Weise an die neuen Anforderungen zur Erfüllung der Kundensorgfaltspflichten (CDD) angepasst werden können, wobei Geschäftsbeziehungen mit höherem Geldwäsche- und Terrorismusfinanzierungsrisiko Vorrang haben. Dies trägt auch zur Klarstellung von Artikel 26 der AMLR bei. In diesem Zusammenhang möchten wir darauf hinweisen, dass ein Kunde, sobald er ordnungsgemäß identifiziert wurde, nicht erneut identifiziert werden oder ein neues Ausweisdokument vorlegen müssen sollte, nur weil beispielsweise das Ausweisdokument abgelaufen ist – eine Aktualisierung der Identifizierung anhand eines Ausweisdokuments sollte nur dann erforderlich sein, wenn Anhaltspunkte vorliegen, die Zweifel an der Identität des Kunden oder an der Echtheit des

Name of the respondent	Question	Answer
		Ausweisdokuments aufkommen lassen. Dies sollte auch für den Aktualisierungsprozess bei bereits registrierten und bestehenden Kunden vor Inkrafttreten der AMLR am 10. Juli 2027 gelten.
Deutscher Factoring-Verband e.V.	Do you have any comments on the Annex in the draft RTS?	No
Deutscher Factoring-Verband e.V.	How would you rate the proposals set out in the draft RTS overall?	Neutral
Deutscher Online Casinoverband (DOCV)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	While we welcome AMLA's objective of promoting harmonisation and a risk-based approach to customer due diligence across the Union, several provisions as currently drafted are not fully compatible with the operational realities of the online gambling sector and risk producing outcomes that are disproportionate, technologically prescriptive, and inconsistent with the AMLR's own principles. Article 7 — Non-face-to-face verification Article 7(1) establishes eIDAS-compliant electronic identification as the primary method for non-face-to-face verification, with document-based approaches available only as a fallback under Article 7(2). This hierarchy is difficult to reconcile with Article 22(6) AMLR, which expressly recognises both electronic identification and document-based verification as equally valid methods. No universally accessible EU-wide digital identity infrastructure currently exists, and not all Member States have developed qualifying solutions. Requiring eIDAS as the default therefore mandates compliance with a standard not yet achievable in practice across the Union.

Name of the respondent	Question	Answer
		Article 7(4) Article 7(4) requires obliged entities using remote verification solutions to demonstrate to their competent authority that their solution complies with the requirements of Article 7 and to justify why the customer could not be verified through the electronic identification means referred to in Article 22(6) AMLR. In the online gambling sector, where operators onboard large volumes of customers for whom eIDAS solutions are not yet operationally available, this obligation applies systematically and at scale, generating administrative burdens disproportionate to any risk reduction achieved and inconsistent with the EU simplification agenda. This is not merely an operational concern. In licensed online gambling markets, AML/CFT effective-ness is closely linked to channelisation. Rules that make the regulated offer materially more cumber-some, less accessible or less competitive, without achieving a corresponding AML/CFT risk reduc-tion, may unintentionally push customers towards unlicensed operators outside effective supervi-sion. For this reason, proportionality in the online gambling sector should also be assessed by refer-ence to whether CDD requirements support, or undermine, the ability of licensed operators to keep customers within the regulated and supervised market. In high-volume online gambling markets, onboarding friction is directly relevant to channelisation. Where licensed operators are required to apply verification methods that are not yet universally available or operationally scalable, customers may be discouraged from entering the regulated mar-ket and may instead turn to unlicensed operators with lower or no effective AML/CFT controls. AM-LA should therefore ensure that robust

Name of the respondent	Question	Answer
		document-based, national and private-sector remote verification solutions remain fully equivalent routes where they achieve the same assurance outcome. Article 18 — Purpose and intended nature of the business relationship Article 18 requires obliged entities to collect information on the purpose and intended nature of the business relationship, including estimated future levels of activity. In the online gambling sector, the purpose of the relationship is inherently clear, participation in games for entertainment, and cus-tomers are generally not in a position to predict their future levels of play or spending with any reli-ability. Requirements to obtain such estimates risk generating data of limited AML/CFT value and may produce unintended consequences in the context of gambling-sector social responsibility frameworks. Obliged entities operating high-volume digital models should be permitted to satisfy Article 18 through risk-based ranges, behavioural categories, or product-based profiles, consistent with supervisory practice already established in a number of Member States.
Deutscher Online Casinoverband (DOCV)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The DOCV considers that the proposals as currently drafted cannot be applied consistently across the range of products and services offered by online gambling operators. While the draft RTS aim to support a risk-based approach, certain provisions risk introducing a more prescriptive and less flexible framework in practice than the AMLR intends. Article 7 — Non-face-to-face verification Identity verification requirements in non-face-to-face situations

Name of the respondent	Question	Answer
		under Article 7 do not fully reflect the current availability of digital identification solutions across the EU. Although promoting eIDAS-based solutions as an onboarding modality is a legitimate objective, Article 7, read as a whole, is difficult to reconcile with the principles of technological neutrality and risk-based supervision, creating a gap between regulatory expectations and operational reality. As drafted, Article 7 may be read as establishing a hierarchy where eIDAS is the primary route and document-based verification a fallback, reducing the flexibility intended by the AMLR and limiting appropriateness in sectors and jurisdictions where robust non-eIDAS solutions are widely used. Article 7 should better reflect Article 22(6) AMLR, which recognises both document-based verification and electronic identification as equally valid methods. This concern is particularly acute in cross-border contexts and for groups operating outside the EU where equivalent solutions may not exist, requiring obliged entities to rely systematically on fallback solutions and increasing complexity and uncertainty. More broadly, a genuinely risk-based framework should allow the use of reliable and independent verification methods, including established national solutions and private tools based on new technologies such as AI, where they achieve equivalent assurance. Article 18 — Purpose and intended nature of the business relationship Requirements on understanding the purpose and intended nature of the business relationship under Article 18 are not fully adapted to all sectors. In online gambling, the purpose is inherently clear: participation in games for entertainment. Requiring additional granular information does not necessarily improve risk understanding and may lead to collecting

Name of the respondent	Question	Answer
		information of limited ML/TF relevance. Similarly, requirements to obtain estimated levels of activity such as expected transaction volumes or spending may not be meaningful. Customers are generally unable to predict their behaviour accurately, making such information unreliable and of limited risk value. This is particularly true in sports betting, where activity is seasonal and event-driven, fluctuating with sporting calendars, tournaments, and one-off events, as well as personal circumstances, interests, and disposable income. Winnings and recycling of funds can further distort patterns over time. As a result, ex ante onboarding estimates are often of limited predictive value and should not be treated as a reliable basis for risk assessment in high-volume retail gambling. Requiring speculative ex ante estimates may also create unintended consequences in the context of gambling-sector social responsibility obligations by encouraging the collection of low-quality data that serves neither AML/CFT nor consumer protection objectives. For high-volume digital models such as online gambling, obliged entities should be permitted to satisfy Article 18 requirements through risk-based ranges, behavioural categories, or product-based profiles rather than precise ex ante estimates. This approach is already reflected in supervisory practice in a number of Member States and is more consistent with a genuinely risk-based framework. From a data protection perspective, requiring operators to collect detailed forward-looking estimates of customer activity and granular information on the purpose and intended nature of the relationship also sits uneasily with the GDPR principle of data minimisation. In high-volume, low-value environments such as online gambling, such speculative data are often of

Name of the respondent	Question	Answer
		limited AML/CFT value and not strictly necessary to achieve the regulatory objective, particularly for low-risk customer relationships. For these customers, Article 18 requirements should be calibrated to what is genuinely needed for an effective risk assessment, rather than encouraging the systematic collection of additional, low-quality personal data.
Deutscher Online Casinoverband (DOCV)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The DOCV considers that, while the draft RTS express a commitment to the risk-based approach, certain provisions risk producing a more prescriptive framework in practice than the AMLR intends. Article 19 — PEP Screening Article 19 requires a level of detail in PEP screening, including family members and close associates, that goes beyond existing requirements under national law. In high-volume, non-financial sectors such as online gambling, where operators maintain large numbers of customer relationships with relatively low individual transaction values, this obligation is operationally burdensome and disproportionate to the risk reduction achieved. A genuinely risk-based framework should allow obliged entities to apply PEP screening in a manner that is proportionate to the nature, scale, and distribution model of their business, rather than imposing uniform requirements across all sectors. In addition, the breadth of data envisaged under Article 19 raises concerns in light of the GDPR principle of data minimisation. Online gambling operators in a mass-market, non-face-to-face context have very limited, if any, ability to reliably identify and verify a customer's family members and close associates. Systematically requesting and processing

Name of the respondent	Question	Answer
		personal data about such third parties, who have no direct relationship with the obliged entity, is difficult to justify where the incremental AML/CFT benefit is marginal and the information cannot be independently verified in practice. The RTS should therefore clarify what can reasonably be expected from obliged entities in this regard and avoid imposing obligations that are not operationally feasible in high-volume, low-value sectors A risk-based and proportionate approach would also require that any expanded PEP-related obligations, particularly those involving family members and close associates, apply only above clearly defined monetary thresholds, such as cumulative deposit or withdrawal levels. For typical online gambling customers whose activity remains within low monthly limits (for example up to EUR 1,000 in deposits), the inherent ML/TF risk is very limited and does not justify intrusive and costly screening measures. More intensive PEP screening, including any extension to family members and close associates, should be reserved for higher-value customer relationships where the potential impact and risk exposure are materially greater. Article 23 — Ongoing monitoring and CDD updates The draft RTS do not sufficiently recognise existing national simplified due diligence models that are already well-established and effective. Article 23 places considerable emphasis on periodic refresh of customer information, without adequately acknowledging that in high-volume digital environments such as online gambling, risk-relevant changes are more reliably identified through trigger events, behavioural indicators, and unusual activity rather than systematic periodic

Name of the respondent	Question	Answer
		re-collection. A genuinely risk-based approach should allow obliged entities to rely on existing national SDD frameworks where these demonstrably achieve equivalent risk outcomes, rather than requiring full realignment with a new harmonised standard where no material risk gap exists.
Deutscher Online Casinoverband (DOCV)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes, the DOCV identifies several situations where information required under the draft RTS is not routinely available in practice and where the proposed framework does not provide a sufficiently workable alternative. Article 6 — Identity verification documents The RTS appears to assume that identity verification is primarily document-based. However, in several Member States, highly reliable digital identification solutions are widely used which do not require the collection of identity documents. In Denmark, BankID provides a high level of assurance, and in Belgium, the itsme solution is used by both banks and public authorities. In such cases, obtaining and storing copies of identity documents is neither necessary nor aligned with existing practices. The RTS does not explicitly recognise such solutions as sufficient, leaving obliged entities in these Member States without a clear compliance pathway. Article 27 — Source of funds and source of wealth In enhanced due diligence situations under Article 27, obliged entities are required to obtain information on the source of funds and source of wealth of the customer. In the online gambling sector, customers are typically private individuals who may not hold documentary evidence of their source of funds or wealth in a readily accessible form. The RTS does not

Name of the respondent	Question	Answer
		provide sufficiently flexible alternatives for situations where such documentation is routinely unavailable, despite the obliged entity having other reliable means to assess the plausibility of the customer's financial profile. AMLA should clarify that proportionate and operationally feasible methods of evidencing source of funds and source of wealth are sufficient in such cases, rather than requiring specific documentary proof that may not be obtainable in practice.
Deutscher Online Casinoverband (DOCV)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The DOCV welcomes AMLA's recognition of the importance of simplified due diligence measures and agrees that the AMLR already provides a degree of flexibility in low-risk scenarios. At the same time, there is scope to further develop sector-specific SDD measures for non-financial and digital sectors such as online gambling. Low-value transactions and regulated payment methods Additional simplified measures should be considered where the ML/TF risk is demonstrably low and well understood, including where transactions are of low value and below relevant regulatory thresholds, where customers use regulated payment methods subject to their own AML/CFT controls such as credit institutions or payment service providers within the EU, and where the customer relationship is limited in scope and does not exhibit indicators of higher risk. In this context, AMLA could, for example, recognise that customer relationships where cumulative deposits and/or withdrawals remain below a clearly defined monthly threshold (for instance up to EUR 1,000) present a de minimis ML/TF risk. Such relationships should benefit from simplified due diligence, including reduced information requirements on the purpose and intended nature

Name of the respondent	Question	Answer
		of the business relationship and a more limited scope of PEP screening. More intensive CDD and EDD measures, including any extension of PEP-related checks to family members and close associates, should be reserved for customers whose activity exceeds these thresholds. In such low-risk cases, it should also be permissible to allow greater reliance on information already obtained through other regulated entities, where legally and operationally available to the obliged entity. Sector-specific simplified due diligence measures should be understood as a tool to strengthen, rather than weaken, AML/CFT effectiveness. In online gambling, proportionate SDD can support channelisation by allowing low-risk customers to enter and remain within the licensed market, while ensuring that higher-risk behaviour is identified through transaction monitoring, payment controls, behavioural indicators and escalation triggers. By keeping the vast majority of customers within the regulated perimeter, licensed operators are better placed to detect suspicious behaviour, file STRs and contribute to the practical enforcement of AML/CFT objectives. Staged Onboarding AMLA should explicitly confirm that staged onboarding models are permissible as a simplified due diligence measure in demonstrably low-risk scenarios. Under a compliant staged onboarding model, a customer may begin limited activity subject to strict conditions, including a deposit cap (for example EUR 150 per transaction and EUR 600 cumulative until verification is completed), a prohibition on withdrawals until identity is fully verified, and a defined maximum timeframe for completion of verification (for example 30 days). The overall ML/TF risk of such a model is demonstrably contained, because

Name of the respondent	Question	Answer
		the financial exposure is capped, no funds can leave the system prior to verification, and the operator retains full ability to freeze or close the account if verification is not completed within the permitted period. Recognising staged onboarding as compatible with the SDD framework would bring the RTS into alignment with operational practice already accepted by supervisory authorities in several Member States. A corresponding provision could read: „Obliged entities may apply simplified customer due diligence during an initial onboarding phase, provided that: (a) the customer's activity is subject to defined deposit and spending caps; (b) withdrawals are not permitted until identity verification is completed; (c) verification is completed within a maximum period of [30] days from the commencement of the business relationship; and (d) the obliged entity maintains the ability to suspend or terminate the relationship where verification is not completed within the permitted period.“
Deutscher Online Casinoverband (DOCV)	How would you rate the proposals set out in the draft RTS overall?	Inadequate

If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	N.A.
Deutscher Steuerberaterverband e.V. (DStV)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Insbesondere bei Kleinstunternehmen, kleinen Unternehmen sowie neu gegründeten Unternehmen (Start-ups) bestehen in der Praxis häufig Konstellationen, in denen bestimmte Informationen nicht in standardisierter oder formalisierter Form verfügbar sind. Dies betrifft etwa formalisiert dokumentierte Unterlagen zu Eigentumsstrukturen, wie sie bei größeren Unternehmen regelmäßig vorliegen. Der RTS-Entwurf lässt bereits in engen Grenzen alternative Nachweise zu. Aus Sicht des DStV sollten diese Möglichkeiten jedoch praxisgerechter und klarer ausgestaltet werden. Denkbar sind insoweit insbesondere eine zeitlich gestufte Nachweiserbringung, die Anerkennung strukturierter

Name of the respondent	Question	Answer
		Eigenerklärungen, die ausdrückliche Zulässigkeit von Ersatznachweisen, eine reduzierte Analysetiefe bei niedrigem Risiko sowie eine Safe-Harbour-Regelung für Verpflichtete, die auf Grundlage einer dokumentierten Risikobewertung handeln. Dies könnte wie folgt in einem Artikel konkret ausformuliert werden: Artikel [X] Anwendung der Sorgfaltspflichten bei Kleinstunternehmen und neu gegründeten Unternehmen (1) Bei der Anwendung der kundenbezogenen Sorgfaltspflichten nach der Verordnung (EU) 2024/1624 können Verpflichtete bei Kleinstunternehmen und neu gegründeten Unternehmen (Start-ups) Art, Umfang und Tiefe der einzuholenden Informationen und Nachweise verhältnismäßig ausgestalten, sofern 1. das Unternehmen zum Zeitpunkt der Begründung der Geschäftsbeziehung seit weniger als 12 Monaten besteht oder sich nachweislich noch in der Gründung befindet, 2. das mit dem Kunden verbundene Geldwäsche- oder Terrorismusfinanzierungsrisiko als niedrig eingestuft wird und 3. keine Anhaltspunkte für Hochrisikokonstellationen im Sinne der Verordnung (EU) 2024/1624 vorliegen. (2) Soweit bestimmte Informationen oder formale Nachweise noch nicht vorliegen oder nur mit unverhältnismäßigem Aufwand beschafft werden können, dürfen Verpflichtete vorläufig auf alternative, glaubwürdige und nachvollziehbare Informationsquellen zurückgreifen, insbesondere:

Name of the respondent	Question	Answer
		1. strukturierte und schriftliche Eigenerklärungen der vertretungsberechtigten Personen oder wirtschaftlich Berechtigten, 2. Gründungsunterlagen, Registrierungs- oder Einreichungsbestätigungen bei zuständigen Behörden oder Registern, 3. Businesspläne, Finanzierungsübersichten, Investorenunterlagen oder vergleichbare Dokumente, 4. öffentlich zugängliche und verlässliche Informationen, insbesondere Unternehmenswebseiten, Unterlagen von Inkubatoren oder Informationen zu Förderprogrammen. (3) In den Fällen des Absatzes 2 dürfen Verpflichtete die Verifizierung einzelner Informationen zeitlich nachlagern, sofern 1. die Identität der maßgeblichen natürlichen Personen initial festgestellt wurde, 2. die Geschäftsbeziehung in der Zwischenzeit angemessen überwacht wird, und 3. die fehlenden Nachweise innerhalb einer angemessenen Frist, die sechs Monate nicht überschreiten soll, nachgeholt werden. (4) Die Anwendung vereinfachter oder alternativer Nachweise nach diesem Artikel ist ausgeschlossen, wenn 1. der Kunde, ein wirtschaftlich Berechtigter oder eine vertretungsberechtigte Person eine politisch exponierte Person ist, 2. der Kunde oder dessen Eigentümerstruktur einen Bezug zu

Name of the respondent	Question	Answer
		Hochrisikodrittstaaten aufweist oder 3. die Eigentums- oder Kontrollstruktur als komplex im Sinne dieser technischen Regulierungsstandards einzustufen ist. (5) Verpflichtete haben die Anwendung dieses Artikels nachvollziehbar zu dokumentieren. Die Dokumentation umfasst insbesondere - die Gründe für die Beurteilung der Unverhältnismäßigkeit, - die herangezogenen alternativen Nachweise und - die vorgesehenen Schritte zur Nachholung der noch fehlenden Nachweise. (6) Die Anwendung dieses Artikels stellt keine Befreiung von den kundenbezogenen Sorgfaltspflichten dar, sondern dient ausschließlich ihrer risikobasierten und verhältnismäßigen Umsetzung. Begründung: Die vorgeschlagene Regelung trägt dem Umstand Rechnung, dass Kleinstunternehmen und Start-ups häufig noch nicht über vollständige formale Nachweisdokumente verfügen, ohne dass hiervon automatisch ein erhöhtes Geldwäsche oder Terrorismusfinanzierungsrisiko ausgeht. Durch eine zeitlich begrenzte, dokumentationspflichtige Flexibilisierung wird finanzielle Inklusion ermöglicht, ohne das Schutzniveau der Verordnung (EU) 2024/1624 zu senken oder den risikobasierten Ansatz zu verlassen.
Deutscher Steuerberaterverband e.V. (DStV)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	Die bereits vorhandenen Sorgfaltspflichten für Verpflichtete im nationalen Geldwäschegesetz (GwG) stellen einen ausreichenden geldwäschepräventiven Standard dar, der

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	bereits heute in der beruflichen Praxis in den Kanzleien aus Sicht des DStV zu erheblichem bürokratischem Aufwand führt. Die Anforderungen, die durch die europäische Anti-Geldwäsche-Verordnung (EU) 2024/1624 nunmehr ausgeweitet und in den technischen Regulierungsstandards weiter ausdifferenziert werden, sollten in ihrer Regulierungstiefe nicht über das bereits vorhandene Maß im GwG hinausgehen. Gerade im Rahmen der vereinfachten Sorgfaltspflichten sollte im Interesse einer wirksamen und verhältnismäßigen Prävention eine schnelle und vor allem unbürokratische wesentliche Überprüfung möglich bleiben. Die im Entwurf vorgesehenen weiter ausgeweiteten Standards mit ausdrücklichen Mindestanforderungen für die Anwendung der vereinfachten Sorgfaltspflichten führen demgegenüber in der Praxis zu einer zusätzlichen Mehrbelastung. Sie konterkarieren damit den eigentlichen Zweck vereinfachter Sorgfaltspflichten, nämlich Verpflichtete bei geringeren Risiken gezielt zu entlasten. Vor diesem Hintergrund sollte im Entwurf der technischen Regulierungsstandards klargestellt werden, dass bei der Anwendung vereinfachter Sorgfaltspflichten die Identitätsdaten nach (§10 Abs. 1 Nr. 1) GwG der Vertragspartner und gegebenenfalls die für ihn auftretende Person in einfacher Form erfasst werden können und der Zweck der Geschäftsbeziehung pauschal erfasst werden darf. Ebenso sollte, entsprechend dem Ansatz des § 14 GwG, klargestellt werden, dass vertiefte Plausibilitätsprüfungen ohne konkreten Anlass, zusätzliche externe Datenquellen sowie detaillierte Darlegungen zur Mittelherkunft nicht verlangt

Name of the respondent	Question	Answer
		werden bzw. erfasst werden müssen. Ferner sollte klargestellt werden, dass eine ereignisbezogene Aktualisierung der Kundendaten genauso ausreichend ist, wie die Beschränkung der Überwachung auf auffällige Abweichungen. Schließlich sollte klargestellt werden, dass für die Erfüllung der vereinfachten Sorgfaltspflichten Kundenangaben, Handels- oder Transparenzregister sowie einfache Strukturübersichten grundsätzlich ausreichen.
Deutscher Steuerberaterverband e.V. (DStV)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Aus Sicht des DStV führen die Regelungen in Abschnitt 2 (und den folgenden Artikeln) zu einer weiteren spürbaren Ausweitung der Anforderungen an Verpflichtete bei der Identifizierung natürlicher und juristischer Personen gegenüber dem bereits bestehenden Standard des nationalen GwG. Der Entwurf der technischen Regulierungsstandards präzisiert einzelne Datenpunkte und Verifizierungsmaßstäbe in erheblichem Umfang und erhöht damit auch in diesem Bereich die Regulierungstiefe in der praktischen Anwendung. Dies führt zu einer deutlichen Mehrbelastung für den Berufsstand. Ein entsprechender zusätzlicher geldwäschepräventiver Mehrwert ist aus Sicht der Praxis jedoch nicht erkennbar. Vielmehr ist der damit verbundene erhöhte Aufwand nur schwer mit den vorhandenen und limitierten Ressourcen in den Kanzleien vereinbar. Es sollte daher auch im Bereich der Identifizierung natürlicher und juristischer Personen dabei bleiben, dass die Anforderungen nicht über das nationale GwG hinausgehen. Dieses stellt bereits heute einen ausreichenden

Name of the respondent	Question	Answer
		geldwäschepräventiven Standard dar. Zusätzliche Spezifizierungen und weitere Detailvorgaben erscheinen vor diesem Hintergrund weder erforderlich noch verhältnismäßig. Daher sollte im Entwurf der technischen Regulierungsstandards klargestellt werden, dass bei der Identifizierung natürlicher Personen Angaben wie die in § 11 Abs. 4 Nr. 1 GwG vorgesehenen ausreichend sind. Dies betrifft Vor- und Nachname, Geburtsort, Geburtsdatum, Staatsangehörigkeit und Wohnanschrift. Weitergehende Spezifizierungen, etwa die Erhebung sämtlicher auf dem Identitätsdokument aufgeführten Namen, sollten demgegenüber nicht verlangt werden. Ebenso sollten für die Identifizierung juristischer Personen Angaben wie die in § 11 Abs. 4 Nr. 2 GwG ausreichen, nämlich Firma, Name oder Bezeichnung, Rechtsform, Registernummer, soweit vorhanden, die Anschrift des Sitzes oder der Hauptniederlassung sowie die Namen der Mitglieder des Vertretungsorgans oder der gesetzlichen Vertreter; soweit Mitglieder des Vertretungsorgans oder gesetzliche Vertreter selbst juristische Personen sind. Zusätzliche Angaben, etwa zu einer gesonderten Handelsbezeichnung (Engl. „trade name“), sollten hingegen nicht erforderlich sein.
Deutscher Steuerberaterverband e.V. (DStV)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Deutscher Steuerberaterverband e.V. (DStV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10

Name of the respondent	Question	Answer
Deutscher Steuerberaterverband e.V. (DStV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	An dieser Stelle weist der DStV darauf hin, dass der Entwurf der technischen Regulierungsstandards zu einem nennenswerten Mehraufwand für den Berufsstand führt – sowohl bei der Verifizierung als auch beim Verständnis des wirtschaftlich Berechtigten (ab Artikel 10). Im Vergleich zum nationalen Geldwäschegesetz (GwG) werden die Anforderungen an Verpflichtete auch in diesem Bereich weiter ausgeweitet. Dies gilt insbesondere für die detaillierteren Vorgaben zur Aufklärung von Eigentums- und Kontrollstrukturen sowie für die Sonderanforderungen und die Definition komplexer Unternehmens- und Beteiligungsstrukturen der Mandanten. Der Entwurf erhöht somit erneut die Regulierungstiefe in einem Bereich, der bereits nach geltendem Recht mit einem bedeutsamen Prüf- und Dokumentationsaufwand verbunden ist. Für die berufliche Praxis in den Kanzleien bedeutet dies einen zusätzlichen Aufwand, der unter den gegebenen Ressourcen und Personalstrukturen nicht angemessen umsetzbar und darstellbar ist. Gerade kleinere und mittlere Kanzleien stoßen bereits heute bei der praktischen Erfüllung geldwäscherechtlicher Pflichten an personelle und organisatorische Grenzen. Aus Sicht der Praktiker ist kein entsprechender zusätzlicher Mehrwert im Sinne einer verbesserten Geldwäscheprävention erkennbar. Vielmehr besteht die Gefahr, dass weitere Spezifizierungen und zusätzliche Detailvorgaben zu einer zunehmenden Belastung der Verpflichteten führen, ohne dass damit ein entsprechender praktischer Erkenntnisgewinn

Name of the respondent	Question	Answer
		verbunden wäre. Der DStV möchte daher erneut darauf hinweisen, dass das nationale GwG im Hinblick auf das Verständnis und die Verifizierung von Eigentums- und Kontrollstrukturen wirtschaftlicher Berechtigter bereits einen ausreichenden Rahmen bietet. Eine weitergehende Ausweitung der Anforderungen auf europäischer Ebene erscheint vor diesem Hintergrund nicht erforderlich.

	when implementing the provisions of these draft RTS.: Recurrent costs	
Digital Currencies Governance Group (DCGG)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	DCGG and its members support the objective of Article 28 of Regulation (EU) 2024/1624 (AMLR) to develop harmonised regulatory technical standards that ensure consistent application of customer due diligence requirements across obliged entities in the Union. Please note that this response is submitted from the perspective of obliged entities operating in the crypto-asset and stablecoin issuance sector (i.e. CASPs and EMIs). Accordingly, it focuses on the practical implementation of the draft RTS in technology-driven, high-volume and cross-border digital asset environments. While DCGG fully supports the principles of proportionality, risk-based application and simplification in low-risk scenarios underpinning Article 28 of the AMLR, we note that several provisions of the draft RTS may in practice introduce a level of prescriptiveness that reduces operational flexibility and risks transforming the risk-based approach into a procedural compliance exercise. In our response, we suggest targeted adjustments and drafting clarifications to ensure the RTS remains aligned with AMLA's stated objective of standardisation without over-prescription. In relation to Q1, we broadly agree with the structure and intent of the draft RTS. However, several provisions could be clarified to better reflect the risk-based framework under Article 28 of the AMLR, particularly in relation to CASPs and EMIs, where onboarding, verification and transaction monitoring are inherently technology-driven and often rely on automated processes.

Name of the respondent	Question	Answer
		• Information collection requirements (articles 3-5 of the RTS): The granularity of required information (e.g. address formatting, nationality scope, identity attributes) enhances consistency but may not always reflect proportionality under Article 28(2) of the AMLR. We therefore suggest the following clarification to be added across the three articles: “Obliged entities shall obtain the information listed in this Regulation where and to the extent that, it is necessary and proportionate to the assessed ML/TF risk associated with the customer, product or service.” In our view, this would better reflect the principles established across Article 28(2)(a) to (d) of the AMLR. • Identity verification (articles 6 and 7 of the RTS): The draft RTS sets out detailed documentary and technical requirements for identity verification, particularly for non-face-to-face onboarding. While this can contribute to improving legal certainty, it also risks becoming overly prescriptive for CASPs, which often rely on qualified electronic identity solutions, decentralised verification providers and automated onboarding flows. To this end, we suggest Article 7(1) of the draft RTS explicitly states the following: “Obliged entities shall use electronic identification means or functionally equivalent technological solutions that provide an equivalent level of assurance…”, in order to better align with technology-neutral intent of AMLR’s Article 28.
Digital Currencies Governance Group (DCGG)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	We consider that while the RTS is designed to be broadly applicable, its uniform application across CASP services may not fully reflect the diversity and specificities of crypto-asset business models under MiCA. CASPs provide a range of services (exchange, transfer, custody, execution), each with different

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	levels of control over customer funds, visibility over transaction flows and access to customer information. In particular, we note that provisions on beneficial ownership and control structures (art.10 - 12 of the RTS) may be difficult to apply in decentralised or pseudonymous contexts. In addition, articles 11 and 12 on ownership/control analysis may not always be meaningful in blockchain-native transactional environments. That is why we suggest that AMLA considers including the following caveat: “Obliged entities shall apply the requirements of this Regulation in a manner that is proportionate to the nature of the service provided and the degree of control or information reasonably available to the obliged entity.” In our view, this would better reflect the proportionality principle that AMLA is striving to achieve.
Digital Currencies Governance Group (DCGG)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We note that the detailed nature of several provisions under the draft RTS may lead CASPs to adopt defensive compliance practices, including over-collection of information to mitigate supervisory uncertainty. This risk is particularly relevant where multiple data fields are mandatory in structure, verification methods are tightly specified and simplified due diligence is narrowly framed. We therefore recommend the following general clause addition: “Obliged entities shall not be required to collect or verify information beyond what is necessary and proportionate to the ML/TF risk identified, taking into account the nature of the product, service and delivery channel.”, in order to reinforce Article 28(2) of the AMLR more directly.
Digital Currencies Governance Group (DCGG)	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower	We agree that the draft RTS appropriately recognises, in principle, that obliged entities may apply risk-sensitive measures where information is available to them. However, in practice, CASPs are likely to face structural limitations in obtaining or verifying certain categories of information, which

Name of the respondent	Question	Answer
	ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	are inherent to the design of crypto-asset markets and global digital infrastructure. This is particularly relevant across three core areas: • Beneficial ownership and corporate structures: In cross-border crypto-related activity, customers may operate through complex multi-jurisdictional arrangements involving layered corporate entities in non-EU jurisdictions, decentralised organisational structures, or intermediary-based ownership models. In such cases, the information required under Articles 10 - 12 of the draft RTS may not be publicly available, subject to equivalent registration standards, or reliably verifiable through independent sources. Even where customers act in good faith, obliged entities may be unable to obtain documentary confirmation beyond reasonable doubt despite applying all available measures. • Source of funds/wealth in crypto-native environments: The RTS assumes the availability of traditional financial documentation (e.g. payslips, tax filings, bank statements). However, CASPs frequently onboard customers whose wealth originates from decentralised protocols, on-chain trading activity, staking or validator rewards, NFT markets, or cross-platform crypto transfers. In such cases, traditional documentary evidence may not exist in a conventional form or may not be meaningful for assessing the economic origin of funds. This creates a mismatch between the evidentiary expectations in Articles 27 and 28 of the RTS and blockchain-based value creation. • Identity verification constraints in global digital environments: CASPs operate cross-border by design and customers may be located in jurisdictions where identity

Name of the respondent	Question	Answer
		infrastructure is limited or fragmented, public registries are incomplete or not interoperable, or access to official documentation is restricted. Even with Article 7 allowing remote verification, CASPs may still face limitations in confirming identity attributes to the level expected in traditional financial contexts. In addition, the draft RTS reflects a largely documentation-centred compliance approach, whereas CASPs increasingly operate within data-driven, cryptographically verifiable and decentralised environments. This can result in compliance expectations that exceed what is technically or reasonably obtainable, despite the use of advanced tools such as blockchain analytics, digital identity solutions and behavioural risk models. To ensure alignment with Article 28's proportionality and risk-based approach, we suggest that AMLA considers adopting the following clarification: "Where information required under this Regulation cannot reasonably be obtained, verified, or substantiated due to the nature of the product or service, the technological environment in which it is provided, or jurisdictional constraints, obliged entities may rely on a combination of alternative reliable indicators, including technological, transactional, behavioural or risk-based evidence, provided that such measures are appropriately documented and proportionate to the assessed risk." This clarification would help ensure that CASPs are not required to meet unattainable evidentiary standards, that innovation in compliance tools (including blockchain analytics and digital

Name of the respondent	Question	Answer
		identity frameworks) is explicitly recognised and that the risk-based approach under Article 28 of the AMLR is preserved in substance. Without it, there is a risk of regulatory overreach driven by implicit expectations of evidentiary completeness, leading to over-collection of information as a precautionary compliance response.
Digital Currencies Governance Group (DCGG)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We agree that Article 28(1)(b) of the AMLR provides a sufficient legal basis for AMLA to specify simplified due diligence measures tailored to low-risk scenarios, including sector-specific applications for CASPs and EMIs. However, we consider that the current draft RTS does not yet fully operationalise simplification in a way that reflects the structural characteristics of blockchain-based activity. In particular, simplification should not be limited to reducing data fields, but should also reflect technological verifiability of transactions, reduced reliance on redundant documentary evidence and the ability to rely on regulated ecosystem participants. In traditional finance, transaction verification relies heavily on intermediaries and account-based records. By contrast, blockchain-based transactions can be independently verified in real time through immutable distributed ledger data. Where both counterparties are CASPs subject to AMLR/MiCA obligations and transactions are fully traceable on-chain and consistent with the customer's expected profile, there is a strong case for recognising blockchain transparency as a simplifying factor under SDD measures. To avoid duplication of verification effort and reflect this inherent transparency, we suggest the following drafting:

Name of the respondent	Question	Answer
		"Simplified due diligence measures may include reliance on independently verifiable distributed ledger transaction data, where transactions are conducted between obliged entities subject to equivalent AML/CFT obligations and where the transaction history is consistent with the customer's risk profile and expected activity." In addition, we note that the draft RTS may still lead to overly rigid expectations around ongoing verification, even in low-risk scenarios. In CASP environments, where onboarding is increasingly digital and monitoring technology-driven, requiring frequent periodic CDD updates may not reflect actual risk evolution. In line with the principle of proportionate ongoing monitoring and Article 28(2)(d) of the AMLR, we recommend the following drafting: "For customers assessed as low risk, obliged entities may determine the frequency of customer due diligence update obligations, including identity verification updates, on the basis of risk-sensitive triggers rather than fixed periodic intervals, provided that ongoing monitoring remains effective and proportionate." Finally, while the RTS appropriately references electronic identification means and qualified trust services under Regulation (EU) No 910/2014, it would benefit from explicitly recognising that identity verification is evolving beyond traditional centralised frameworks. CASPs increasingly rely on verified digital identity providers and decentralised identity (DID) systems with cryptographic assurance. We therefore suggest the following drafting:

Name of the respondent	Question	Answer
		"Obliged entities may rely on electronic identification means, qualified trust services and equivalent digital identity solutions, including decentralised identity technologies, provided that such solutions deliver an equivalent level of assurance and are subject to appropriate governance and risk controls." Taken together, these refinements would ensure that SDD under Article 28 AMLR is operational in digital asset markets, consistent with AMLA's technology-neutral approach and aligned with a risk-based rather than documentation-prescriptive framework. Without such clarification, there is a risk that simplification remains theoretical, while operational practice shifts towards excessive verification as a precautionary compliance response.
Digital Currencies Governance Group (DCGG)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Digital Currencies Governance Group (DCGG)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

DigitalTrade4.EU	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	DigitalTrade4.EU supports the objective of the draft RTS to ensure harmonised and consistent customer due diligence requirements across the Union. Although our organisation is not an obliged entity within the meaning of Regulation (EU) 2024/1624, we consider that the draft RTS can in principle be applied across a broad range of products and services, provided that the risk-based approach set out in Article 1 is interpreted dynamically and technologically neutrally. Cross-border economic activity increasingly relies on interoperable digital infrastructures, structured metadata, and secure trust services. In this context, the effective application of harmonised CDD requirements across sectors will depend not only on entity-level compliance procedures, but also on the availability of interoperable analytical and verification tools that allow obliged entities to manage ML/TF risks

Name of the respondent	Question	Answer
		proportionately. We therefore support the draft RTS and encourage clarification that its provisions are compatible with the use of interoperable digital trust infrastructures and analytical tools operating across jurisdictions, in line with proportionality and data protection requirements.
DigitalTrade4.EU	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree that the draft RTS appropriately embeds the principle of proportionality and the risk-based approach in Article 1 and throughout its structure. At the same time, the effectiveness of a harmonised risk-based approach in a cross-border environment increasingly depends on the ability to detect patterns of ML/TF risk that transcend individual customers, products or Member States. Many contemporary ML/TF typologies involve multi-layered ownership structures, distributed identifiers, cross-border transactional flows, and sanction evasion techniques that cannot be fully identified through isolated, document-based verification. While Articles 29 and 30 require automated screening tools, the draft RTS does not explicitly recognise that risk-based compliance may legitimately include interoperable analytical tools capable of identifying cross-border risk patterns across structured datasets or risk indicators. We therefore suggest adding a clarification in Article 1 or Article 30 stating that the application of the risk-based approach may include the use of interoperable analytical systems, including machine learning-based tools, provided that

Name of the respondent	Question	Answer
		such systems comply with applicable data protection, proportionality and governance requirements. Such clarification would not introduce new obligations, nor mandate the use of specific technologies. It would simply ensure that the harmonised CDD framework remains future-proof and compatible with secure, metadata-based analytical infrastructures supporting cross-border AML implementation.
DigitalTrade4.EU	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As a cross-border digital infrastructure initiative, we do not collect customer due diligence information directly. However, we observe that in complex cross-border environments certain information required for CDD purposes may be fragmented across jurisdictions, registries, or sectoral systems. This is particularly relevant in cases involving: * multi-layered ownership structures spanning several Member States or third countries, * distributed digital identifiers already used within the Union framework (such as EUID, LEI, EORI numbers in customs contexts, or crypto-asset wallet identifiers) * situations where up-to-date beneficial ownership data is available but not interoperable across systems. In such cases, information may not be unavailable per se, but practically inaccessible in a structured and machine-readable format. We therefore suggest that the RTS explicitly recognise that obliged entities may rely on interoperable digital trust infrastructures capable of aggregating and validating structured metadata across trusted sources, provided that traceability,

Name of the respondent	Question	Answer
		data integrity and supervisory access are ensured. This would not lower standards, but improve effective availability of required information across borders.
DigitalTrade4.EU	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose additional categories of simplified due diligence. However, we note that the level of ML/TF risk may be materially reduced where customer identification and verification rely on: * electronic identification means at substantial or high assurance levels under Regulation (EU) 2024/1183 * qualified trust services, * structured digital attestations of attributes, * immutable audit trails ensuring lifecycle traceability. In such environments, the integrity and authenticity of identification data are inherently strengthened. We therefore suggest that, where these safeguards are demonstrably in place, obliged entities should be able to take this into account within the proportionality assessment under Article 1 when determining the scope and frequency of updates or supplementary documentation. This would remain fully consistent with the risk-based approach while encouraging secure digitalisation.
DigitalTrade4.EU	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	We encourage AMLA to ensure that the final RTS remain technologically neutral while explicitly compatible with interoperable, cross-border digital trust infrastructures. The effectiveness of harmonised AML/CFT implementation

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	across the Union will increasingly depend on: * secure, metadata-based exchange mechanisms rather than centralised data pooling, * structured identifiers (e.g. LEI and other persistent identifiers), * auditability and traceability mechanisms, * analytical tools capable of identifying cross-border risk patterns while respecting data protection requirements. Clarifying that the RTS framework supports such interoperable and analytics-enabled infrastructures would strengthen supervisory convergence and future-proof the Union's AML architecture without introducing additional compliance burdens.
DigitalTrade4.EU	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
DigitalTrade4.EU	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
DigitalTrade4.EU	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 1 correctly establishes the principle of proportionality and a risk-based approach. In a cross-border digital environment, the effective application of this principle increasingly depends on the ability to assess structured risk indicators across jurisdictions. While the draft RTS embeds proportionality, it does not explicitly clarify that the risk-based approach may be supported by interoperable analytical tools operating on structured metadata and risk signals.

Name of the respondent	Question	Answer
		We suggest clarifying that obliged entities may, where appropriate, rely on interoperable analytical systems capable of identifying cross-border ML/TF risk patterns, provided that such systems comply with applicable data protection, governance and proportionality requirements. This clarification would not introduce new obligations but would strengthen legal certainty and future-proof the harmonised AML framework.
DigitalTrade4.EU	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
DigitalTrade4.EU	Please specify which recital you refer to, and share your comments below.	Recital (1) correctly emphasises harmonisation and the application of a proportionate, risk-based approach across Member States. In a cross-border digital economy, the effectiveness of such harmonisation increasingly depends not only on consistent data requirements, but also on interoperable infrastructures capable of supporting structured, machine-readable information exchange and analytical assessment. We suggest that Recital (1) could be complemented by clarifying that the harmonised application of customer due diligence measures may benefit from interoperable digital trust infrastructures and analytical tools that support the identification of cross-border risk patterns, provided that such tools comply with applicable data protection and governance requirements. Such clarification would not alter substantive obligations, but

Name of the respondent	Question	Answer
		would enhance legal certainty regarding the compatibility of the RTS framework with secure, metadata-based and analytics-supported AML implementation models.
DigitalTrade4.EU	Do you have any comments on the Annex in the draft RTS?	No
DigitalTrade4.EU	How would you rate the proposals set out in the draft RTS overall?	Good
Dr. Ing. h.c. F. Porsche AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The RTS proposals are largely not considered sufficiently tailored to the products and services of the automotive and goods trading sector. The requirements are strongly oriented towards banking type processes, which typically do not exist in trading activities. In particular, it should be clearly stated that purely ancillary or service related activities are not automatically brought within the scope of the obligations.
Dr. Ing. h.c. F. Porsche AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS only partially enables an effective risk based approach, as it often presupposes ongoing customer relationships and continuous information flows. For the trading sector, greater emphasis should be placed on object and payment related risk indicators and on the involvement of regulated financial institutions.
Dr. Ing. h.c. F. Porsche AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, certain customer due diligence information, in particular regarding the source of funds or third party payers, is frequently not available in a verifiable form. The draft RTS does not currently provide sufficient alternative or plausibility based approaches for such situations, especially in the case of fully bank or leasing financed transactions.
Dr. Ing. h.c. F. Porsche AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your	The RTS should explicitly provide for additional simplified due diligence measures, in particular where payments are fully

Name of the respondent	Question	Answer
	obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	account based and processed via supervised EU credit or leasing institutions, as well as through increased use of appropriate external registers for identifying beneficial owners.
Dr. Ing. h.c. F. Porsche AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A practical and legally certain implementation requires clear delineations, standardised implementation guidance and workable identification solutions. In particular, the terms "regular" and "principal" (in context of the 250.000 € limit) trading in high value goods should be clearly defined in order to avoid legal uncertainty. There is uncertainty as to who should be regarded as the "customer" in a trading context (e.g. end customer, commercial customer, supplier).
Dr. Ing. h.c. F. Porsche AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Dr. Ing. h.c. F. Porsche AG	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Dr. Ing. h.c. F. Porsche AG	Do you have any comments on the Annex in the draft RTS?	No
Dr. Ing. h.c. F. Porsche AG	How would you rate the proposals set out in the draft RTS overall?	Neutral
Dutch Banking Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more	Art.7 Non-face-to-face verification measures We note that several concerns raised during the EBA consultation have been addressed in this article, including the removal of the explicit consent requirement and the replacement of the mandatory end-to-end encrypted video chat with a technology-neutral safeguard. These are welcome

Name of the respondent	Question	Answer
	appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	improvements. However, we are concerned that Art.7 has become less proportionate. The safeguards listed in Art.7:3 are formulated as strict, cumulative requirements that leave no room for OEs to apply their approach proportionate to the risk. Moreover, we consider this to be a burden on society, particularly for groups of people who do not yet have an eIDAS-based digital identity, including minors who will not have access to eIDAS identity wallets. Art.7 appears to expect OEs to actively push clients to obtain an eIDAS identity wallet, which is neither proportionate nor realistic. OEs should be able to apply these safeguards proportionate to the identified risk. We propose adding the following wording to paragraph 3: “OEs shall apply the safeguards referred to in this paragraph proportionate to the ML/TF risk associated with the business relationship or occasional transaction.” The obligation under Art.7:4 for OEs to justify why the client’s identity could not be verified through means referred to under AMLR Art.22(6) is unclear in its scope and purpose. AMLR Art.22(6) does not impose a hierarchy of verification methods, yet Art. 7:4 effectively introduces one by requiring OEs to account for not using eID or qualified trust services. This Level 2 text thus appears to be stricter than the AMLR Level 1 text, which should not be permissible. Given that verification is already carried out through alternative reliable means, it is unclear what added value this justification requirement would bring. It is also unclear what standard of justification is

Name of the respondent	Question	Answer
		expected, in which circumstances it should be provided, and whether this creates de facto an obligation to prioritise eID-based verification where available. We recommend that AMLA either removes this justification requirement or clarifies that the choice of verification method remains at the discretion of the OE, in line with the technology-neutral approach of the AMLR. Until qualified and certified eIDAS 2.0 remote identification solutions are widely operational and adopted, AMLA should allow the use of existing national or market-proven remote identification solutions. In its interlocutory judgment of 13-3-2026 (ECLI:NL:HR:2026:392), the Dutch Supreme Court referred preliminary questions to the CJEU regarding the implementation of 4AMLD Art.40 in Dutch AML Law Art. 33. The Supreme Court has doubts as to whether this provision, read in light of the GDPR principle of data minimisation, requires OEs to retain a copy of the identity document used to verify a client's identity, and if so, whether that retention obligation extends to the photograph on the identification document. This illustrates that, at least in the Netherlands, there is a clear need for regulatory clarity on whether and to what extent OEs are permitted to store copies of identity documents, including photographs. Would AMLA's ability to carry out its regulatory tasks be hindered if banks were unable to produce the documents used in the client acceptance process (copies of the IDs used, including a clear photograph of

Name of the respondent	Question	Answer
		the ID holder) to demonstrate compliance with the AMLR and to support fraud investigations?
Dutch Banking Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art.11/12 Ownership and control structure/complex structures The requirement to treat more than three layers between client and BO as complex with additional measures amounts to a one-size-fits-all rather than a risk-based approach. The article should allow a qualitative assessment of the client risk rather than just counting layers. The obligation to collect detailed information on intermediary entities with which the bank has no business relationship goes beyond AMLR Art.62(1)d requirements for legal entities, express trusts or similar legal arrangements and is operationally burdensome for banks with international corporate clients. The content and scope of the required 'organigram' remains undefined. In addition, it should be clarified what is expected where no BO can be identified, e.g., is a structure to be considered 'complex' in such cases or not? The addition in para 1 sub a 'such as a foundation in any of the layers' needs to be nuanced considering the notifications by MS, including the Netherlands, that foundations are not considered to be similar to express trusts (Art.57(3)). This is especially relevant for Dutch foundations that have legal personality. The RTS should clarify that a 'complex structure' does not automatically trigger EDD, to avoid confusion with the

Name of the respondent	Question	Answer
		'excessively complex ownership structures' flagged as a higher risk factor in Annex III AMLR. Art.18/24/26 Purpose and intended nature – CDD, SDD, EDD The 'where necessary' framing and 'at least one of' structure are improvements, but the sheer length of the information lists (e.g. sub-points c and e with 8 sub-options on source of funds documentation or occupation and business activity) risks becoming a checklist. AMLR Art.20(1)c and 25 define that information must be obtained as appropriate/where necessary to understand the purpose and intended nature of the business relationship. For most natural persons with daily banking products, the purpose and intended nature should be inferable from the products itself without requiring extensive information gathering. In cases where there are no risk indicators and a client poses a non-high risk, requiring additional data does not add value to the risk assessment. Rather, it creates unnecessary friction in business relationships with well-intended clients, negatively impacting client experience and diverting resources from higher risk cases. The objective expressed in Recital 13 that information already at the disposal of the OE should be sufficient to understand the purpose and nature, is not reflected in Art.18. We propose to add explicit language that OEs may rely on the information inherently available from the type of product or service requested, without the need for additional client outreach, in case of standard CDD.

Name of the respondent	Question	Answer
		This is also relevant for Art.24 in case of non-high risk situations. Where AMLR Art.33(1)c allows for inferring the purpose and intended nature of the business relationship from the type of transactions or business relationship established, Art.24 seems to negate that by also requiring to understand 'where applicable, the estimated value of transactions during the business relationship or of the occasional transaction' and 'where necessary, the source of funds'. Art.26:1 requires OEs to obtain additional information that will allow them 'to be satisfied' on various aspects. It is unclear what threshold this requirement sets: what does it mean in practice for an OE to be 'satisfied' and how will supervisors assess this? In particular, sub-point c requires OEs to assess that expected transactions are 'consistent with the declared business activity, source of funds or source of wealth.' The scope and depth of this assessment needs flexibility and rewording. Art.26:2 specifies that additional information may consist of information on the client's key clients, contracts, business partners and associates, including the BO's business partners or associates. Even for EDD, this is extensive and risks being interpreted as requiring OEs to perform due diligence on their client's business relationships, which is beyond the scope of AML obligations. We propose to delete this requirement. Art.23:2 Ongoing due diligence We request confirmation that automated monitoring is sufficient to satisfy the ongoing due diligence for non-high risk clients, without active periodic client outreach absent risk

Name of the respondent	Question	Answer
		triggers. Where no risk indicators have been identified, there should be no obligation to proactively request updated information from the client. Client data should be presumed correct absent concrete reasons to doubt its accuracy. An effective monitoring process would flag any relevant changes or events, thereby eliminating the need for routine client outreach. Where no material changes have been detected, the client file should be considered reviewed through the automated process.
Dutch Banking Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art.4 Place of birth Art.4 makes the requirement of AMLR Art.22 to obtain the place of birth to mean 'at least the country name' ambiguous. Since not all official identity documents include both the city and country of birth, it should be sufficient to obtain one of these two data points. Often the country must be derived from the city or asked separately. Art.5 Nationalities The RTS should clarify in Art.5 itself that this obligation is met when the OE relies on the client's self-declaration. We advocate that additional nationalities should only be requested where there is a specific reason to do so, the mere collection of additional nationalities does not add value to the risk assessment. Absent contradictory information, no further steps should be expected. Furthermore, only the primary nationality should need to be verified; verification of additional nationalities should not be required. This should be in Art.5, not only in Recital 3.

Name of the respondent	Question	Answer
		Additionally, systematic inquiry into all nationalities raises concerns regarding discrimination, which merits acknowledgement in the RTS or accompanying guidance. Art.6 Identity verification We would like to stress 'once verified, always verified.' Once a client's identity has been properly verified, it should not be necessary to obtain a new identity document solely because the original has expired; the RTS should confirm this principle. In practice, updates to identify documentation should be required only where there are concrete indications that core identity information may have changed or is no longer accurate, not due to document expiry or changes to non-core elements alone. That would be disproportionate and does not appear to be required under Level 1 legislation. Art.14/15 Identification and verification of beneficiaries of (discretionary) trusts The RTS should clarify what constitutes 'sufficient information' under both articles, particularly where such information is not publicly available. OEs often depend entirely on the trustee for this information, and the RTS should acknowledge that information provided by the trustee is sufficient. We consider it 'sufficient information' where a trust deed defines e.g., beneficiaries as 'the children and grandchildren of the settlor,' a copy or extract of the trust deed describing the class, combined with a written confirmation from the trustee that no individual beneficiary has yet been ascertained. Or for a discretionary trust, a description from the trustee of the objects of power, confirmation of whether power of discretion

Name of the respondent	Question	Answer
		has been exercised and any beneficiaries have been appointed, together with details on the default takers, should be sufficient. Where the trustee confirms that no distributions have been made and no beneficiaries have been appointed, this should be accepted as sufficient absent contradictory information. AMLA could include practical examples in the RTS to provide clarity on what OEs can reasonably be expected to obtain, particularly in cases where trust documentation is governed by non-EU law and may not be publicly accessible. Art.16. Person purporting to act on behalf of the customer This article requires OEs to obtain information to verify the existence and extent of the power of representation. The obligation to verify the extent of the power of representation goes beyond AML purposes. It is unclear what level of verification is expected. The current wording lacks the necessary precision to ensure a proportionate application across different types of legal entities and representatives. The RTS text should state that 'purporting to act on behalf of the client' concerns only persons who act towards the OE in the context of the business relationship. It does not, for example, cover operational contact persons or cardholders within a company. This distinction must be made clear. It should not leave room to be interpreted as covering all persons with general powers of representation, as it would not be proportionate nor risk-sensitive to require identification and verification of all persons with a general power of representation. Art.16 should include text explaining that 'the power of representation' applies only to those who legally

Name of the respondent	Question	Answer
		engage with the OE in the context of the business relationship. Additionally, the examples in Recital 12 of 'proof of legal or parental representation by means of a birth certificate or court-appointed guardianship' appear to narrow the flexibility that Art.16 provides. Birth certificates are not commonly held in the Netherlands and must be obtained at cost. As such, requiring them as a standard verification of power of representation for all minors is disproportionate. Where there is reasonable doubt, obtaining birth certificates may be a suitable measure, but in other cases the approach should be risk-based and assessed case-by-case by the OE. The recital should be redrafted so that it cannot be read as restricting Art.16.
Dutch Banking Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We would recommend AMLA to specify that in non-high risk situations, the information on purpose and nature may be inferred from the product used by the client, and that identity information may be limited to a single source document. AMLA states in paragraph 3.3. 'Rationale' that it found no room for additional SDD measures beyond AMLR Art.33. This is a missed opportunity. Certain categories of clients, products, and services present inherently low ML/TF risks. Listed companies, SWIFT RMA, bodies governed by public law and government-related entities in non-high-risk countries are obvious candidates where the transparency and oversight already in place justify simplified CDD measures. We urge AMLA to reconsider this position. Recital 127 AMLR states that for listed companies and bodies governed by public law of the Member States, beneficial ownership and control are of a similar level of transparency,

Name of the respondent	Question	Answer
		and there is no need to apply beneficial ownership requirements. We therefore propose that OEs be exempted from the obligation to identify BOs in these situations, and that the application of SDD be explicitly allowed. In March 2024, Dutch banks and public sector partners completed the first FinCrime Threat Assessment for banks (FCTA). This collaboration provided valuable input for banks' individual business-wide risk assessments (BWRA) supporting the identification of top risks and targeted investigations. The outcomes also served as a framework for a public-private partnership project selection. Building on these results, the FCTA 2026 was performed with a more data-driven approach and broader participation of partners across the AML/CFT ecosystem. Banks can integrate the outcomes of the FCTA into their BWRAs, strengthening their AML/CFT control frameworks in a data-driven manner. The insights support a genuinely risk-based approach, taking more measures where necessary and less where possible, and enable effective resource allocation. Based on identified high and low value areas, banks and partners can deploy targeted thematic investigations, proportionate EDD measures, and specific SDD applications. Ultimately, the FCTA strengthens the evidence base for SDD, ensuring that simplified measures are applied where risks are genuinely low.
Dutch Banking Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	Art.33 Entry into force and transitional provisions We welcome the clarity in Art.33, including reference to AMLR

Name of the respondent	Question	Answer
	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Art.26(2) and the distinction between entry into force and application date. However, explicit confirmation that all CDD elements (structure, BO, SMO, etc.) are covered is essential. The 1yr period for updating existing high risk client files under AMLR Art.26(2)a presents a major operational challenge. Updating existing client files will be risk-based, but full compliance within 1yr is unlikely to be feasible. Updates to BO registries by legal entities are expected to take place only from 2027 onwards, and banks wish to avoid updating client files multiple times, avoiding repeated client outreach and unnecessary discrepancy reporting where legal entities have not yet updated their BO registration. This challenge is compounded because several other RTS essential for the CDD framework have not yet been published or planned, meaning requirements remain unknown. Further essential RTS and guidelines are scheduled for later delivery. Ultimately, client files can only be completed once all relevant RTS are finalised. Without a complete single rulebook, OEs risk not having enough time to update policies, processes, systems, and training. OEs cannot yet design and implement processes needed to carry out the enhancements, let alone begin updating client files. We urge AMLA to extend the transitional period for high-risk clients beyond 1 year, as OEs cannot complete updates within that timeframe. The 1-year period for updating should only commence once all relevant RTSs and guidelines have been finalised and published and, in any event, only after the AMLR has become applicable.

Name of the respondent	Question	Answer
		In addition, we request confirmation that OEs may begin collecting and updating client data in line with the AMLR and this RTS ahead of its application date, where requirements are sufficiently clear, and that such early collection of additional data points is supported by a legitimate interest under GDPR. Art.33 uses 'publication' as start of the grace period, whereas Recital 23 refers to 'date of application'; this discrepancy should be resolved in favour of the application date, as Level 2 cannot take effect before Level 1 regulation applies. AMLA should clarify that the 5yr grace period under Art.33 also applies to non-high risk clients subject to standard CDD. A grandfathering rule should be introduced for long-standing relationships where documentation on source of funds or source of wealth was never required or kept under the previous framework. Art.6/27 Verification & certification With reference to Recital 2, harmonisation and a level playing field are essential. The RTS should make clear that identity verification concerns only all names and surnames and date of birth. It should also clarify that verifying an identity should not require verification of all obtained data points of a (legal or natural) person and does not require address verification. As stated in Recital 3, a declaration in good faith by the client should suffice for data points other than name and date of birth. The RTS should clarify who is authorised to perform certifications. We interpret 'certified' as confirmation that a

Name of the respondent	Question	Answer
		copy matches the original, with flexibility for OEs to determine how and by whom this is done, and to assess the reliability of the certification. Art.25-28 EDD additional information Standard CDD measures are already very extensive. The extensive additional information requirements as stipulated in Art.25-28 will significantly impact and limit the risk-based approach. We urge AMLA to revisit these articles, allow for a more risk-sensitive application of EDD measures and enable OEs to determine case-by-case which additional information suffices. Art.22 Pooled accounts Art.22(a) should recognise that for escrow accounts, quality accounts, or Dutch third-party funds foundation accounts of notaries and lawyers, the account holder (lawyer/notary) cannot, due to professional privilege, immediately provide client information and documents at a bank's request. These accounts should be excluded from the scope of Art.22. If clients cannot comply, they may become unbankable. Art.22 also does not distinguish between different types of pooled accounts and would include those opened by one bank (correspondent) for another bank (respondent), despite the underlying clients already being subject to CDD by the respondent bank. This raises challenges for ICSDs and custodian banks, whose clients typically hold omnibus accounts with thousands of underlying clients. The reference to AMLR Art.20(1)h in Art.22 and Recital 17 should be deleted. Correspondent banking relationships should be excluded from

Name of the respondent	Question	Answer
		Art.22, consistent with EBA's interpretation. The same applies for professional accounts held by notaries, lawyers and other legal practitioners who do not carry out any of the activities listed in AMLR Art.3:3:b.
Dutch Banking Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We welcome AMLA's emphasis on proportionality and the risk-based approach, through the inclusion of a new Art.1 as an overarching principle. The shift from cumulative requirements towards more risk-sensitive formulations is a welcome step forward. It reflects the spirit of the AMLR and gives banks and other OEs the room to tailor CDD measures to the actual risk profile of their clients and the nature of the products and services they offer. Nevertheless, we propose to further facilitate the risk-based approach in several articles of this RTS. Even though the RTS requires a risk-based and proportionate approach, AMLA could strengthen this throughout the RTS by replacing wording like 'such as' with 'for example' and avoiding terminology like 'at least' and 'additional'.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	9
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Art.9 lacks clarity on several key points and would benefit from further definition: 1) it should specify what it means to 'use' a vIBAN and who qualifies as a 'vIBAN user', e.g., whether this captures only the account holder or also third parties transacting through it; 2) the article should clarify how verification of the identity of the person using the vIBAN is to

Name of the respondent	Question	Answer
		be performed, particularly where the user is not the OE's client; 3) it should set out the OE's obligations regarding the information obtained on the vIBAN user, including how it should be retained, monitored, and used for ongoing due diligence.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	SMOs are a fallback measure when no BO can be identified; they are not a source of risk. Requiring the same level of identification and verification as for BOs, including nationalities and place of birth, is disproportionate (Art.13/21). Name and surname, date of birth and a business address should suffice for identification purposes. We propose that for non-high-risk cases, the trade registry extract should suffice for both identification and verification of the SMO and this should also be sufficient for the BO, since the BO/SMO information is already verified by the trade registry. For those situations, requiring additional information is neither proportionate nor risk-based. In cross-jurisdictional situations where registries are unavailable or unreliable, the RTS should state that OEs may rely on the most reliable information available. The RTS should mention which individuals qualify as SMOs. In our view, only members of the statutory executive board (such as the CEO and CFO) should be considered at the level of the client. The BO central register should be listed separately from business or company registers under Art.21(1)(a), as the two

Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	19
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Art.19:2:b requires OEs to act 'without delay' upon any new information or change in CDD data that may have an impact on the identification as a PEP. The removal of the 'significant' qualifier for trigger-based rescreening means any change in CDD data could require immediate action. Additionally, for an existing client with a well-established relationship and a known transaction history who becomes a PEP, the OE already holds substantial knowledge that informs its risk assessment and measures. The RTS should acknowledge that the extent of additional measures to be applied relates to the OE's existing knowledge of the client and the nature of the established relationship. The RTS should also allow a more proportionate approach for low-risk PEPs and for existing clients with a well-established relationship who became PEPs.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	23
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Art.23 uses the term 'low degree of risk.' It should be clarified whether this term is intended to convey the same meaning as 'low risk.' Conversely, 'non-high risk' would be preferred. In any case, consistent terminology across regulatory instruments is essential to avoid divergent interpretations and ensure uniform application.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	28
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Several concepts in Art.28 require further clarification: § The meaning of 'use of assets representing higher ML/TF risks' is unclear. We would welcome clarity on whether this is intended to refer to specific asset classes, such as those subject

Name of the respondent	Question	Answer
		to large price fluctuations, high-value low-volume assets, or high-value transactions or to a broader category of risk indicators. § The reference to 'higher risks in respect of the parties involved' should be clarified to confirm that it does not create an obligation to perform CDD on the client's counterparties, which would go beyond the scope of AML/CFT requirements.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	29
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Art.29 does not address the question of whether SMOs are subject to sanctions screening. Given that the SMO is not a beneficial owner, we consider that sanctions screening of the SMO should not be required. The client's assets are not linked to those of the SMO and would therefore not be subject to asset-freezing measures in the event of a positive sanctions match against the SMO. AMLA should confirm this interpretation.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	30
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	The scope of sanctions screening data (Art.30) appears to have been broadened compared to the existing EBA framework. Specifically, sub-paragraph (i) requires screening against 'all the names and surnames.' whereas EBA/GL/2024/15 (para 17) refers to 'the first name and surname.' The rationale for this broader scope is unclear. We recommend aligning the screening scope with the existing EBA guidance or providing a clear justification for the deviation. The requirement to screen against wallet addresses, trade names and aliases (sub a, para iii) assumes that all listed data

Name of the respondent	Question	Answer
		points are available to the OE. However, data such as wallet addresses and aliases are generally not available to or collected by OEs outside the crypto-asset sector. We therefore propose amending the wording to 'where available to the OE' to ensure that the requirement remains realistic and proportionate across the full range of OEs. Regarding the requirement stated in sub c, para iii to screen existing clients and BOs in case of a significant change in due diligence data, it should be clarified that a significant change in residence refers only to a change of residence to a country with a significant sanctions risk, and not any change of address within a country. Similarly, further clarification is needed on what constitutes an impactful significant change in business operations. Moreover, a change in nationality, business operations, or residence does not in itself result in a different match outcome.
Dutch Banking Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	17
Dutch Banking Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Art.17 imposes full identification and verification obligations on CIUs with respect to final investors via AMLR Art.20(1)h. In practice, CIUs distribute through intermediaries that are themselves OEs and already perform CDD on underlying investors. Requiring CIUs to collect data on potentially thousands of investors behind omnibus accounts duplicates these efforts, creates an insurmountable administrative burden, and increases data protection risks. The reference to AMLR Art.20(1)h in Art.17 and Recital 13 should be deleted. Instead, Art. 17 should specify that CIUs may rely on the

		distributor where it is satisfied that the distributor applies robust and risk-based CDD measures.
Dutch Banking Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Dutch Banking Association	Do you have any comments on the Annex in the draft RTS?	No
Dutch Banking Association	How would you rate the proposals set out in the draft RTS overall?	Neutral
Dutch Banking Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee	Disruptive impact

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: One-off implementation costs	
Dutch Banking Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Not applicable/no information available
Dutch Fund and Asset Management Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	Partly. We welcome several elements, in particular the explicit recognition of a risk-based approach. However, a number of provisions remain too prescriptive, insufficiently tailored to the asset management sector, or unclear from an operational perspective. Scope clarification for holding and parent companies

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	• Where a holding or parent company qualifies as an obliged entity under AMLR, we would appreciate clarification on who should be regarded as the relevant "customer" or "business relationship". • The AMLR defines business relationship as follows: "a business, professional or commercial relationship connected with the professional activities of an obliged entity, which is set up between an obliged entity and a customer, including in the absence of a written contract and which is expected to have, at the time when the contact is established, or which subsequently acquires, an element of repetition or duration." The definition requires that a relationship should be connected with the 'professional activities of the obliged entity'. In practice a holding company/parent company could have as main objective to manage and acquire other financial institutions or companies. Do we understand correctly that in those circumstances, due diligence would be required in case the financial holding acquires a new financial holding company? Could there be other examples? In addition to the above, please see our article-by-article comments on the draft RTS.
Dutch Fund and Asset Management Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The RTS explicitly allows for a risk-based approach, which we welcome. However, it remains unclear how this approach should operate in practice across the range of products and services offered within the asset management sector. In particular, uncertainty remains regarding the interpretation and practical application of proportionality in light of several provisions that appear to prescribe minimum mandatory measures in a more rule-based manner, as well as the

Name of the respondent	Question	Answer
		interaction with other RTS and guidelines that may still be forthcoming. We therefore believe that the asset management sector would benefit from additional clarification, practical examples, and confirmation of certain interpretations, including those referred to in our consultation response. In our view, such clarifications would provide greater legal certainty and support a more consistent and proportionate implementation of the RTS across different business models, customer types, and distribution structures.
Dutch Fund and Asset Management Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Not fully. Although Article 1 recognises the importance of a risk-based approach, several subsequent provisions appear to prescribe extensive information collection and verification requirements without sufficient flexibility to calibrate the depth of the measures, the verification standards applied, or the timing of remediation to the actual ML/TF risk identified. We therefore believe the RTS should more explicitly confirm that obliged entities may determine, on the basis of a documented risk assessment, the appropriate extent of data collection, the type and intensity of verification, the sources relied upon, and the remediation timelines, provided that the overall AML/CFT objectives are effectively achieved.
Dutch Fund and Asset Management Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower	Yes. Examples include: place of birth country where the identity document does not contain the relevant information; all nationalities where no independent source is available; address

Name of the respondent	Question	Answer
	ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	verification in cross-border situations; detailed ownership information on intermediary entities in complex but lower-risk structures; and information relating to very large populations of final investors investing through intermediaries into funds. In intermediary distribution models, we believe obliged entities should not be required to routinely obtain all final investor information themselves, but should be able to rely on the confirmation that the regulated intermediary has obtained and verified the relevant CDD information and can provide it upon request where necessary.
Dutch Fund and Asset Management Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Additional simplified due diligence measures should be recognised for products and relationships with demonstrably lower ML/TF risk, including certain collective investment structures and relationships with regulated institutional investors or counterparties. Concrete proposals: Examples include: allowing reliance on existing regulatory status and public supervisory registers for regulated investors and regulated counterparties; limiting UBO and ownership inquiries for listed entities and entities already subject to equivalent transparency requirements; and recognising that, for collective investment undertakings, the AML/CFT focus should be on persons exercising ownership or control rather than on all end-investors in pooled structures. For funds distributed through regulated intermediaries, the RTS should also expressly allow simplified or adapted measures where the intermediary is subject to equivalent AML/CFT requirements and the risk is not high. Rationale: These measures would better reflect the actual risk

Name of the respondent	Question	Answer
		profile of the sector, reduce unnecessary administrative burden, and support the consistent, harmonised and proportionate application of AML/CFT requirements across the EU.
Dutch Fund and Asset Management Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We welcome the inclusion of a risk-based approach. This seems to address DUFAS' earlier concern that the differences between types of obliged entities are not always adequately reflected in the AML framework. Article 1 of the RTS appears to allow deviations from the information to be obtained and the measures to be applied under this RTS, depending on the type of risk identified. We therefore understand the RTS to permit a proportionate and risk-based application of the requirements. In that context, we would appreciate clarification on the following points: • Can Article 1 of the RTS be applied to all provisions of the RTS? For example, to Article 5 of the RTS, which sets minimum requirements for customer identification in lower risk situations? • Can Article 1 of the RTS result in fewer identification and verification measures to be applied, based on the internal policy of the obliged entity? For example, when carrying out

Name of the respondent	Question	Answer
		due diligence on regulated investors or other regulated business relationships, where the relationship meets a predefined low-risk profile that takes into account the risk factors set out in Annexes I–III AMLR? • The RTS is based on Article 28 AMLR (regulatory technical standards on the information required for customer due diligence). Article 28 AMLR also refers to other AMLR provisions that mandate the development of RTS, such as Article 33 AMLR (simplified due diligence). Does this RTS cover all RTS mandates assigned to AMLA under these articles?
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	2
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	• Article 2 stipulates that obliged entities shall obtain all of the customer's full names and surnames. We propose to clarify how obliged entities should deal with call names, marital names, aliases, and the different use of prefixes and suffixes across Member States. Without such clarification, divergent implementation is likely. • We propose to clarify that for example in cases of low risk, minor variations caused by local naming conventions, call names, marital names, prefixes, suffixes, diacritics, transliteration or ordering of names should not require additional remediation where the obliged entity can reasonably establish that the information relates to the same person.

Name of the respondent	Question	Answer
Management Association		
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 4 details that the place of birth concerns at least the country name. In practice, passports and identity cards often do not show the country of birth in a manner that can be independently verified. The RTS should therefore specify what evidence is acceptable, including whether a customer statement can be relied upon where no official source is reasonably available, and whether additional measures/request for additional measures may be omitted, for example in cases of low risk.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	5
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 5 requires obliged entities to obtain information on all nationalities. For many obliged entities, including asset managers, there is no public database against which this can be verified. The RTS should clarify that, absent red flags, a declaration by the customer and supporting identity documentation should be considered sufficient and obliged entities are not expected to independently verify the absence of other nationalities.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11
Dutch Fund and Asset	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	a comprehensive understanding of the ownership and control structure of the customer pursuant to Article 20(1)(b) of Regulation (EU) 2024/1624. We understand this to mean that

Name of the respondent	Question	Answer
Management Association		the requirements set out in this Article should be interpreted and applied in a proportionate and risk-based manner. In that context, we understand in particular that: • the requirement to obtain references to intermediary legal entities or legal arrangements between the customer and the beneficial owner should be limited to entities that form part of the direct ownership or control chain, and should not extend to sister companies or other group entities that are not relevant to establishing ownership or control; • the depth of the inquiry should remain commensurate with the level of ML/TF risk identified, such that in lower-risk cases obliged entities may rely on corporate documentation, public registers, or information already obtained for prudential or other regulatory purposes; and • the requirement in paragraph 2(b)(ii) to obtain information on the regulated market on which securities are listed should be applied proportionately, particularly where listed status already points to a lower ML/TF risk and may support simplified customer due diligence. We would welcome confirmation that this interpretation is consistent with the intended application of Article 11.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	12
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	DUFAS supports the objective of understanding ownership and control structures. However, in the asset management industry, the criterion in paragraph 1(b) (“jurisdictions outside the EU”) is met in a large number of standard, legitimate structures due to the inherently international nature of the

Name of the respondent	Question	Answer
		sector. As a result, many low- or medium-risk structures are automatically classified as complex, leading to disproportionate administrative burdens without a corresponding increase in AML/CFT effectiveness. To ensure a more risk-based and proportionate approach, DUFAS proposes to replace “three or more layers” with “five or more layer” and to replace “outside the EU” with a reference to “high-risk third countries” (e.g. as identified by the FATF or EU). This would better align the requirement with actual ML/TF risk. DUFAS also proposes to amend Article 12(2) as follows: “In the case of complex corporate structures as referred to in paragraph 1, obliged entities shall take reasonable measures and, where necessary, obtain additional information, such as an organigram, needed to complement the information collected under Article 11(1), to understand the complex corporate structure.”
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	13
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 13 appears to require identification and verification of senior managing officials in a way that mirrors the approach for UBOs. Given the broad AMLR definition of senior managing official, this may create excessive operational burden without corresponding AML/CFT benefit.

Name of the respondent	Question	Answer
		DUFAS suggests limiting the obligation to executive board members or, alternatively, to those senior managing officials who are materially involved in the business relationship or transaction. Moreover, we assume that, based on article 1 RTS, the information to be obtained in respect of senior managing officials can be more limited compared to UBO's. For senior managing officials, there is generally no added value in collecting source of funds or source of wealth information, because they do not themselves provide the funds for the relationship.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	14
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	DUFAS would welcome clarification whether Articles 14 and 15 apply only where the trust or similar legal arrangement is the customer, or also where such arrangement appears as an intermediate layer in a customer's ownership or control structure. Where the trust is only an intermediate layer and the relationship is not higher risk, a risk-sensitive ownership and control assessment under Articles 11 and 12 should be sufficient.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	16

Name of the respondent	Question	Answer
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	DUFAS would welcome clarification that Article 16 applies to persons with authority to bind or instruct the customer in relation to the business relationship, and does not extend to persons who merely transmit operational instructions, provide administrative support, or act in a limited technical capacity where the investor or account holder remains the customer. This would support harmonised application and avoid unnecessary requests for irrelevant individuals.
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	17
Dutch Fund and Asset Management Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	We welcome article 17 RTS, as in the fund sector, the number of final investors subscribing through an intermediary can reach hundreds of thousands. Funds are pooled investment vehicles in which investment decisions are taken by the asset manager and are typically not determined or controlled by end-investors. A general look-through requirement to all final investors should therefore not apply where units or shares are held or distributed through regulated intermediaries that are subject to equivalent AML/CFT requirements and effective supervision. In addition, where the intermediary relationship is higher risk or where one of the Article 17 conditions is not fully met, this should not automatically result in systematic identification and verification of every final investor by the CIU. Instead, the CIU should apply enhanced due diligence and oversight to the intermediary and the distribution arrangement.

Name of the respondent	Question	Answer
		We understand Article 17 RTS to mean that a collective investment undertaking distributing its shares through another credit institution or financial institution may rely on the customer due diligence performed by that institution, provided that, in addition to the measures listed in points (a)–(d), the collective investment undertaking has conducted appropriate due diligence on the intermediary institution itself, including identification and verification, and is satisfied — for example through contractual arrangements — that the intermediary institution will provide relevant due diligence information relating to the final investors upon request where necessary. For the purposes of Article 17, “final investor” should mean the natural or legal person on whose behalf or for whose benefit the intermediary credit institution or financial institution acts when acquiring, holding or redeeming shares or units of the collective investment undertaking. DUFAS would welcome a practical common reference, such as an AMLA or Commission list, methodology or supervisory guidance identifying third countries whose AML/CFT requirements may be treated as no less robust than Regulation (EU) 2024/1624 for the purposes of Article 17(a).
Dutch Fund and Asset Management Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	26
Dutch Fund and Asset	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 26(1)(b) refers to obtaining additional information in order to be satisfied that the destination of funds is consistent with the stated nature of the business relationship or

Name of the respondent	Question	Answer
Management Association		occasional transaction and the customer's risk profile. It is currently unclear what specific information or sources would, in practice, enable obliged entities to make this assessment. We therefore consider that the RTS should provide further clarification and practical examples of acceptable methods for satisfying this requirement, such as assessing the transaction rationale, subscription or redemption documentation, account matching, known custody or settlement flows, and information already available through regulated intermediaries. We further understand that obliged entities are not expected to establish or verify the ultimate end-use of funds, but rather to assess whether the payment flow is plausible and consistent with the known business relationship, the customer profile, and the relevant risk indicators. We would welcome confirmation that this interpretation is consistent with the intended application of Article 26(1)(b). And since there is no longer an option to add our latest comment, please find below one additional remark regarding Article 30: Article 30(c)(i) refers both to "during customer onboarding" and "before entering into a business relationship". It is not clear whether these are intended to describe different situations. Clarification is needed to avoid divergent interpretations and unnecessary duplication.
Dutch Fund and Asset	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	process and potentially increase drop out rates. Recital 4 notes that because not all government-issued identity documents contain this information, entities "may need to obtain that information from other sources". Article 6(5) further states that if the document does not include the stipulated information, obligated entities must use "other credible means to obtain this information". The RTS does not define what "other credible means" entail for natural persons. While Article 21 explicitly permits obliged entities to identify beneficial owners using information provided by the customer in low-risk situations, this f lexibility is omitted for natural person customers under Article 20. Proposed solution: Self-Declaration with Risk-Based Verification: Permit obliged entities to rely on the customer's self-declared place of birth and nationality during onboarding for low-to-medium-risk relationships.
Ebury Partners Belgium NV/SA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In the case of low-risk clients, such as regulated financial institutions or entities with transparent and well-documented ownership structures, the draft RTS should be amended to permit reliance on a single, highly reliable public source for both identification and verification purposes. Currently, Article 21(2) of the draft RTS requires that for verification in low-risk situations, the obliged entity must consult a source of information that was not used for the identification process. To streamline this, a new paragraph could be inserted into Article 21 stating that, by way of derogation from the general requirement, where the customer is an institution subject to

Name of the respondent	Question	Answer
		equivalent AML/CFT obligations or is registered in a government-mandated transparency register with verified data, the obliged entity may satisfy both identification and verification requirements through a single consultation of that reliable independent source. The rationale for this proposal is rooted in the principle of proportionality and the objective of reducing unnecessary administrative burdens for both obliged entities and their customers. For entities that are already subject to strict regulatory oversight or whose ownership data is maintained in a verified central register, the incremental risk mitigation achieved by forcing the use of a second, separate source is negligible. This duplication of controls adds operational friction without materially improving the detection of money laundering or terrorist financing risks.
Ebury Partners Belgium NV/SA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	None
Ebury Partners Belgium NV/SA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

While Article 21 explicitly permits obliged entities to identify beneficial owners using information provided by the customer in low-risk situations, this flexibility is omitted for natural person customers under Article 20. Proposed solution: Self-Declaration with Risk-Based Verification: Permit obliged

Name of the respondent	Question	Answer
		entities to rely on the customer's self-declared place of birth and nationality during onboarding for low-to-medium-risk relationships.
Ebury Partners Markets Cyprus Limited	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes. While Articles 17, 20, and 22 provide simplified measures for specific sectors like CIUs, they do not sufficiently address interactions between other regulated obliged entities (e.g., CIFs). Currently, firms are often required to redundantly duplicate the collection and verification of identity information. Proposed Solution: We suggest a new provision in Section 5: 'Sectoral simplified measures for customers that are obliged entities.' This would allow firms to satisfy Article 20(1) by obtaining proof of registration and authorization for EU-based (or equivalent) entities assessed as low risk.
Ebury Partners Markets Cyprus Limited	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Ebury Partners Markets Cyprus Limited	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS would not generate significant additional costs for our entity beyond those required by Regulation (EU) 2024/1624
EGP- European Governance Partners GIE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	As experienced independent directors sitting on Funds' and asset management firms' boards, we are concerned that the provisions of article 17 in the RTS could jeopardize the wholesale retail distribution model of funds within the EU. For the most part, funds are distributed/sold through regulated financial institutions (banks, insurance companies and pension providers mainly) across the EU, in Europe and beyond (Asia, LATAM, Middle East) to final investors to whom they provide financial services/advice. UCITS have been a success story for the EU and are a well-established brand internationally recognised for its regulatory solidity and governance. These intermediaries/distributors are bound to do AML/CTF checks

Name of the respondent	Question	Answer
		on their own end clients as per the regulation they are subject to and the distribution agreements they sigh with asset managers. If funds have to be in a position to request, at first notice, from their distributors the identity (and supporting evidence to verify) of any/all final investors these distributors intermediate, we consider that this does not bring any benefit from an AML perspective and will meet opposition from the distributors who are bound by business confidentiality obligations. Not to mention incremental costs at the fund/asset manager level in terms of work load, staffing and IT to make sense out of this supplemental load of data/ Why would the fund seek information on a given name or all names indistinctively represented by a distributor in the normal course of business? If we are in the context of sanctions screening against specific individuals/entities the fund has requested confirmation from its distributors that they abide by the sanctions and periodically will seek renewed confirmation this is the case. Releasing their full customer list with supporting evidence is a breach of business confidentiality and potentially could raise GDPR issues as well for EU based distributors. Last, having the name only does not tell us a lot about the investor sources of funds and background. Wholesale distribution is all about relying (and adequately monitoring via distribution due diligences at onboarding and periodically) on distributors to manage the client relationship and related financial advice. Furthermore, for well-established technical reasons, distributors can either have their own account with the fund's TA or go through a custodian bank specialist which will have an omnibus account with the fund's TA "representing" several

Name of the respondent	Question	Answer
		potentially distributors making the search for final investors more complex and the idea of obtaining a comprehensive list of all existing investors identity unpractical. Omnibus accounts are subject to enhanced due diligence (EDD) both at on boarding periodically while the provisions of article 17 a to d appear redundant with the required EDD. If the EDD requirements are not met then the omnibus account cannot be opened or has to be closed. We would propose article 17 to be drafted as follows to allow for the timely identification of any investor holding 25% or more of a given fund: Quote When a collective investment undertaking has registered shares or unit holders, with whom it maintains a correspondent relationship, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if it is satisfied that the respondent will provide the information necessary to identify and verify the identity of any underlying investor, who holds directly or indirectly 25% or more of the units or voting rights of the fund through the respondent without undue delay and upon request. Unquote

EGP- European Governance Partners GIE	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
Ekobanken Medlemsbank	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Ja
Ekobanken Medlemsbank	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Delvis, se under del 3.
Ekobanken Medlemsbank	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Nej
Ekobanken Medlemsbank	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Att beskriva mer specifika KYC-åtgärder för en bank som har (mindre) föreningar och stiftelser som kund, som saknar verklig huvudman (VH), men som i stället har styrelseledamöter och lägre omsättning. Se även vidare under del 3 med hänvisning till specifika artiklar.

Name of the respondent	Question	Answer
Ekobanken Medlemsbank	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Nej
Ekobanken Medlemsbank	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ekobanken Medlemsbank	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10
Ekobanken Medlemsbank	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Ja, artikel 10: Identiteten på den verkliga huvudmannen, eller den person för vars räkning eller till vars förmån transaktionen eller verksamheten genomförs, ska verifieras. Faller då styrelseledamöter under ” eller den person för vars räkning eller till vars förmåntransaktionen eller verksamheten genomförs”? Och om inte, vad gäller för styrelsen? Eller är det då artikel 13 som gäller? Menas att när det gäller den verkliga huvudmannen (UBO) får en bank inte enbart förlita sig på vad kunden själv har uppgett i ett register om vem som är UBO, eftersom denna uppgift kan vara felaktig?
Ekobanken Medlemsbank	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	13
Ekobanken Medlemsbank	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Ja, artikel 13 ”högsta ledande befattningshavare”, faller styrelseledamot från en ekonomiskt/ideell förening eller stiftelse under den kategorien?
Ekobanken Medlemsbank	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	20

Name of the respondent	Question	Answer
Ekobanken Medlemsbank	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Ja, Section 5 – Förenklade åtgärder för due diligence, nämns 'låg risk' specifikt i alla artiklarna. Gäller då såväl medel- och högrisk för Section 6 Utökade åtgärder för due diligence?
Ekobanken Medlemsbank	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	29
Ekobanken Medlemsbank	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Ja, Section 7 – Ska samtliga styrelseledamöter från en ekonomiskt/ideell förening eller stiftelse sanktionsscreenas?
Ekobanken Medlemsbank	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Ekobanken Medlemsbank	Please specify which recital you refer to, and share your comments below.	Ja, 9 och 10. Angående (ideella) föreningar och stiftelser så har dessa inga verkliga huvudmän (UBO), men styrelseledamöter som utövar inflytande. Räknas styrelseledamöter som SMO? Om inte, önskas ett tillägg av "styrelseledamöter", inklusive en riktlinje om att alla KYC-åtgärder gäller för samtliga styrelseledamöter eller till exempel bara för ordförande. Vår nuvarande KYC-process, inklusive identitetskontroll, omfattar hela styrelsen, inklusive suppleanter, men här råder det oklarheter inom banker i Sverige. Ja, 15 Om PEP-screeningsåtgärder. Räknas en styrelseledamot som "den person för vars räkning eller till vars förmån en transaktion eller verksamhet genomförs"? Förtydligande är önskvärt. Ja, 22 Om sanktionsscreening "om kunden eller den verkliga huvudmannen (UBO) omfattas av riktade finansiella sanktioner" Vad gäller styrelseledamöter? Förtydligande är önskvärt. Ja, 25 " De maximala perioderna för att uppdatera

Name of the respondent	Question	Answer
		kundinformation är 1 respektive 5 år” Innebär detta 1 år hög risk, 2 till 3 år mellan, 5 år låg?
Ekobanken Medlemsbank	Do you have any comments on the Annex in the draft RTS?	No
Ekobanken Medlemsbank	How would you rate the proposals set out in the draft RTS overall?	Neutral
Ekobanken Medlemsbank	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available

Name of the respondent	Question	Answer
Ekobanken Medlemsbank	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Not applicable/no information available
Ekobanken Medlemsbank	Please justify your answer to the previous question and provide evidence where possible.	-
Electronic Money Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	Some of the proposals set out in the RTS are too limiting or prescriptive to be practicable. We have set out our comments and proposed amendments in more detail against each relevant RTS Article under "additional input". Please see our comments on Articles 2, 6, 11, 12, 30 In particular we consider that the obligation to use eIDAS-

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	compliant digital ID for remote onboarding is not possible in many (if not most) EU member states and/or EU customers. Our comments are set out in more detail under our comments on Article 7.
Electronic Money Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Some of the proposals set out in the RTS are too prescriptive so as to remove firms' ability to apply a risk-based approach. In particular, some of the factors listed in Article 31 on the e-money exemption from CDD are so specific as to remove any possibility to apply a risk-based approach. We have set out our comments and proposed amendments in more detail against each relevant RTS Article under "additional input". Please see our comments on Article 5, 9, 18, 31.
Electronic Money Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We continue to be concerned by the absence of any meaningful alternative to electronic identification means that meet the requirements of Regulation (EU) No 910/2014 (Art. 22(6)(b) AMLRs) where these are either unavailable or cannot reasonably be expected to be provided. In the light of the anticipated difficulties in cross-border use of the EU Digital Identity Wallet, whether within or outside of the EU, availability of such an alternative becomes an ever more pressing issue. In this respect, the alternative provided in Arts 7(2)-(4) RTS is too restrictive in that it mandates reliance on an official identity document. This precludes use of other available digital means of verification that may be less costly and more appropriate to the nature and risks of products offered (particularly where there is a low risk of identity theft). To use such alternative means is consistent with a risk-based approach, which suggests focusing resources on areas where they are most likely to prevent financial crime, as well as with

Name of the respondent	Question	Answer
		the principle of technological neutrality, which has guided EU policy on remote onboarding to date. In this context, it is important to note that it is now possible for information provided by a customer to be augmented with information available from reliable third-party sources and other signals that can be collected in real time during the onboarding process (including geographic indicators, online presence, etc.) These inputs can be ingested and validated holistically in a manner that allows for a better understanding to be obtained of a customer's identity and profile (and therefore potential financial crime risk) at a lower cost (which may be appropriate in the context of certain products), while also improving the experience for the customer. Overdependence on the submission of identity documents risks reducing the scope for further innovation in new identity verification measures and processes – to date, a notable strength of EU firms in comparison to peers in other regions – at a time when greater innovation and development in this space is possible now more than ever before. As we have raised in our previous submissions, this issue is of great importance to FinTech firms because it: (i) impacts firms' ability to onboard new customers and thus their ability to scale their businesses, (ii) restricts their ability to employ innovative means of verification, (iii) impacts the costs of carrying out CDD, and (iv) disrupts the consumer journey, discouraging the taking up a payment product. One of our larger members estimates that they will incur an ongoing additional cost of 2.3M EUR per year given the manual review process that is required in instances when the user is not able to utilize an

Name of the respondent	Question	Answer
		identification document that complies with a high level of assurance. We therefore urge you to reconsider your approach to mandatory use of an official identity document. The RTS should explicitly recognise that in some circumstances a combination of customer-declared and implicit, programmatically collected data is a valid and proportionate basis for CDD, and that formal document verification is not required as a universal step in all cases. Our members currently employ the following alternative means of verification. The RTS should allow flexibility for their use without prescribing any one means: • Reliance on the funding account by establishing that a funding bank account with an EEA credit institution is in the name/control of the account holder; • Database verification based on reliable credit and government sources; • Cross-checks between digital footprint data (such as IP address, biometrics) and other elements of ID and of documentation, such as where the residential address is not stated on the official ID document; and • AI/ML-based assurances.
Electronic Money Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	Limited use of a payment product warrants the application of SDD until a customer has reached a threshold of use that could potentially bring it within one of the known ML/TF typologies. Before that point, there is not only little risk of financial crime, but the cost of conducting CDD (both monetary and in term of customer experience) far exceeds the value thereby added. We therefore suggest that AMLA utilise its mandate under

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	Art. 28(1)(b) AMLRs to identify additional SDD measures for small merchants (such as digital platform developers) or private sellers who receive payments in exchange for goods or services, up to a cumulative annual transaction threshold of EUR 1,000, as long as no money can be withdrawn from their account before full CDD is completed.
Electronic Money Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	All of our detailed comments are set out beside the relevant Articles under "additional input"
Electronic Money Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 2 RTS – Definition of persons acting on behalf of We propose an amendment to Art. 2 RTS to clarify that the requirement in Arts 20(1)(i) and 22(1) AMLRs to verify 'that any person purporting to act on behalf of the customer is so authorised and identify and verify their identity' does not apply to legal representatives (e.g., Directors) and other authorised signatories (e.g., employees or staff empowered to request the issuance of corporate expense cards from a payment service provider) of the customer. This is in order to avoid unnecessarily extending CDD requirements to a potentially large group of corporate customer employees or staff. Such a clarification accords with the text of Recital 12 RTS and is also

Name of the respondent	Question	Answer
		currently being made in relation to the equivalent UK provisions, which are based on the EU's AML regime. Furthermore, we propose an amendment to Art. 2 RTS to clarify that the legal representatives whose names must be obtained under Art. 22(1)(b)(iii) AMLRs are only those relevant to the business relationship in question. Multinational corporations and other large corporate clients often have extensive lists of statutory legal representatives, many of whom have no connection to, or oversight of, the specific business relationship being established with the obliged entity. Suggested alternative drafting (new text in CAPITALS): Article 2 - Information to be obtained in relation to names 1. OBLIGED ENTITIES SHALL NOT REGARD NATURAL PERSONS THAT ARE LEGAL REPRESENTATIVES OR OTHERWISE TO ACT ON BEHALF OF CUSTOMERS THAT ARE LEGAL PERSONS AS FALLING WITHIN THE CATEGORY OF 'ANY PERSON PURPORTING TO ACT ON BEHALF OF INDIVIDUALS (FOR EXAMPLE WHEN THE INDIVIDUAL HAS GRANTED A POWER OF ATTORNEY TO ANOTHER INDIVIDUAL OR ENTITY) OR TO THIRD PARTIES ACTING ON BEHALF OF AN ENTITY (FOR EXAMPLE WHEN AN AGENT OR INTERMEDIARY ACTS FOR A COMPANY). EMPLOYEES OR STAFF OF A LEGAL PERSON ACTING ON ITS OWN BEHALF SHOULD BE CONSIDERED TO BE ACTING AS THE ENTITY. 2. In relation to the names and surnames of a natural person as referred to in Article 22(1), point (a)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain all names and

Name of the respondent	Question	Answer
		surnames that feature on the identity document, passport or equivalent. 3. In relation to the name of a legal entity as referred to in Article 22(1), point (b)(i), and other organisations that have legal capacity under national law as referred to in Article 22(1), point (d)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain the registered name and the trade name where it differs from the registered name. 4. IN RELATION TO THE NAME OF LEGAL REPRESENTATIVES AS REFERRED TO IN ARTICLE 22(1), POINT (B)(III), OBLIGED ENTITIES SHALL ONLY OBTAIN THE NAMES OF THOSE REPRESENTATIVES RELEVANT TO THE BUSINESS RELATIONSHIP IN QUESTION.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 5 RTS – Verification of nationalities Art. 22(1)(a)(iii) AMLRs does not refer to 'all' nationalities but merely to 'nationalities.' Specifying in Article 5 that information 'on all nationalities' must be obtained therefore exceeds the requirements of the AMLRs, implying that obliged entities must ensure that customers disclose all their nationalities to them. The 'all' should accordingly be removed. Furthermore, Art. 5 RTS should be aligned with Recital 3 RTS, which states that 'where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient.'

Name of the respondent	Question	Answer
		Suggested alternative drafting: Article 5 - Specification on nationalities (proposed new text in CAPITALS) For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall obtain information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. WHERE A PERSON HOLDS MULTIPLE NATIONALITIES AND DECLARES THEM IN GOOD FAITH, VERIFYING ONE NATIONALITY IS SUFFICIENT.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 6 RTS – Documents for the verification of identity Art. 6(5) RTS requires obliged entities relying on an identity document for verification to obtain either the original document or a certified copy thereof. However, it is currently common industry practice to rely on standard, uncertified copies of identity documents, which are then cross-referenced against other data sources. Mandating formal certification by a notary or public authority is a retrograde step that will introduce severe operational friction, high costs, and significant delays to digital onboarding processes. We therefore suggest deleting this requirement.

Name of the respondent	Question	Answer
		Suggested alternative drafting: Article 6 - Documents for the verification of identity 5. For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or a [DELETE] copy thereof, or act in accordance with Article 7.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We continue to be concerned by the lack of recognition of equally or more robust alternatives to electronic identification means that meet the requirements of Regulation (EU) No 910/2014 (Art. 22(6)(b) AMLRs), including in situations where these are either unavailable or cannot reasonably be expected to be provided. In the light of the anticipated difficulties in cross-border use of the EU Digital Identity Wallet, whether within or outside of the EU, availability of such an alternative becomes an ever more pressing issue. In this respect, the framing of Article 7 itself is too restrictive: Article 7(1) mandates the use of eIDAS as the primary means of verification, and the alternative provided in Arts 7(2)-(4) RTS is in turn limited to reliance on an official identity document. This precludes use of other available digital means of verification that may be less costly and more appropriate to the nature and risks of products offered (particularly where there is a low risk of identity theft). To use such alternative means is consistent with a risk-based approach, which suggests focusing resources on areas where they are most likely to prevent financial crime, as well as with the principle of technological neutrality, which

Name of the respondent	Question	Answer
		has guided EU policy on remote onboarding to date. This is particularly important given that financial crime evolves faster than any single technology can address: locking Level 2 around eIDAS as the primary modality embeds a technological bias into the AML/CFT regime and forecloses solutions that have demonstrated equivalent or higher assurance under the EBA Guidelines on remote customer onboarding (EBA/GL/2022/15). Furthermore, eIDAS is itself an identification instrument, not a ML/TF risk detection tool: it confirms identity at onboarding but does not address whether the customer is a victim of identity theft, a money mule, under coercion, or whether the identity is a synthetic one generated through AI — risks that current verification solutions are specifically designed to detect. Mandating eIDAS as primary would therefore reduce rather than enhance risk-relevant information at onboarding. In this context, it is important to note that it is now possible for information provided by a customer to be augmented with information available from reliable third-party sources and other signals that can be collected in real time during the onboarding process (including geographic indicators, online presence, etc.) These inputs can be ingested and validated holistically in a manner that allows for a better understanding to be obtained of a customer's identity and profile (and therefore potential financial crime risk) at a lower cost (which may be appropriate in the context of certain products), while also improving the experience for the customer. Overdependence on the submission of identity documents risks reducing the scope for further innovation in new identity

		name/control of the account holder; • Database verification based on reliable credit and government sources; • Cross-checks between digital footprint data (such as IP address, biometrics) and other elements of ID and of documentation, such as where the residential address is not stated on the official ID document; and • AI/ML-based assurances. Please see below for wording recommendations.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Furthermore, regarding Art. 7(4) RTS, we request clarification that the duty to 'justify' why the customer could not be verified through the means referred to under Art. 22(6) of Regulation (EU) 2024/1624 should be understood as a duty to 'explain' the use of an alternative means. This is to avoid the understanding that an assessment of any reasons supplied by a customer as to why they do not have e-IDAS compliant means of ID is to be made by the obliged entity (with the implication that some reasons may need to be rejected and onboarding consequently refused). The duty to explain should also be capable of being satisfied categorically (at a firm or product rather than individual customer level) where appropriate. For instance, where it is clear that e-IDAS compliant means are either not available or could not be expected to be produced, a detailed rationale for every customer would be inappropriate and serve little purpose. More fundamentally, Article 22(6) AMLR recognises both document-based and electronic identification as valid modalities, and a Level 2 measure should not narrow options recognised at Level 1; these further supports removing

Name of the respondent	Question	Answer
		the per-customer justification requirement altogether. Finally, to guard against a possible scenario in which pan-European uptake and interoperability of the EU Digital Identity Wallet does not fully materialise while alternative means of identity verification (as well as threats, such as those posed by AI-generated synthetic identities) develop at a continuing rapid pace, we recommend introducing a review clause in the RTS that will insure that requirements and assumptions that no longer reflect operational reality can be revised on a timely basis. To give effect to the points raised above and to the principles of the risk-based approach and technological neutrality, the framing of Article 7(1) should be amended from 'shall' to 'may'. This restores eIDAS-based solutions as one valid high-assurance option without precluding other compliant remote verification solutions, aligns Level 2 with Article 22(6) AMLR and ensures that obliged entities retain the ability to choose proportionate measures of equivalent assurance, as the risk-based approach requires. The amendments to paragraphs 2 and 4, together with the review clause in paragraph 5, complete the calibration. Suggested alternative drafting (changes in CAPITALS: Article 7 - Verification measures conducted on a non-face-to-face basis 1. To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-

Name of the respondent	Question	Answer
		face situation, obliged entities MAY use electronic identification means that meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels 'substantial' or 'high', or relevant qualified trust services as set out in that Regulation. 2. IN ADDITION, AND IN PARTICULAR in cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall VERIFY THE NATURAL PERSON'S IDENTITY using remote solutions that meet the conditions set out in paragraphs 3 and 4. 3. Obliged entities shall ensure that the solution described in paragraph 2 uses reliable and independent information sources and includes the following safeguards regarding the quality and accuracy of the data and documents to be verified: (a) controls to ensure that, WHERE AN IDENTITY DOCUMENT, PASSPORT, OR EQUIVALENT IS USED, the natural person presenting the customer's identity document, passport or equivalent is the person on the picture of the document; […] 4. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with this Article and they shall also be able to EXPLAIN, EITHER BY REFERENCE TO THE CUSTOMER OR THE OBLIGED ENTITY'S POLICIES, why the customer WAS NOT verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624.

Name of the respondent	Question	Answer
		5. BY [DATE], AMLA SHALL, IN COOPERATION WITH THE COMMISSION, REVIEW THE APPLICATION OF ARTICLE 7 IN LIGHT OF THE MATURITY AND PAN-EUROPEAN INTEROPERABILITY OF ELECTRONIC IDENTIFICATION MEANS UNDER REGULATION (EU) NO 910/2014 AND SUBMIT A REPORT ACCOMPANIED, WHERE APPROPRIATE, BY PROPOSALS TO AMEND THIS REGULATION.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	9
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	We would like to make AMLA aware of the fact that the second paragraph in Art. 22(3) AMLRs confuses the role of the issuing institution with that of the account servicing payment service provider ('ASPSP'). Art. 22(3) AMLRs requires the ASPSP to ensure that it can obtain information about the user from the issuing institution. However, given that the vIBAN user is the customer of the ASPSP in the first place and their identity has been verified by the ASPSP at the outset of the business relationship, the roles should be reversed, with the issuing bank required to ensure that it can obtain the information from the ASPSP. This should be clarified in the guidance. Additionally, the wording in Art. 9 RTS 'shall obtain and verify' does not make the required distinction between the ASPSP, who verifies the identity of the vIBAN user, and the issuing institution, which is merely required to 'obtain information to identify and verify' (Art. 22(3) AMLRs). This difference in wording carries substantive implications: While the AMLR formulation permits reliance by the issuing institution on the verification undertaken by the ASPSP, the RTS formulation appears to impose an independent obligation to perform

Name of the respondent	Question	Answer
		verification on the issuing institution. We suggest changes to the text below that highlight that distinction. The additional obligations may very well lead to the loss of this very valuable innovation that is used by multiple PSPs for reconciliation of payments. Finally, the meaning in Art. 9(c) RTS is uncertain, as it is not clear whether what is meant by 'the associated bank or payment account' is the underlying payment account that the vIBAN user holds with the ASPSP, the account that the ASPSP holds with the issuing institution or the vIBAN itself (which may in certain cases be re-used with another customer). This should also be clarified in the text of the guidance. Suggested alternative drafting (proposed changes in CAPITALS): Article 9 - Identification and verification of the identity of the natural or legal persons using a virtual IBAN For the purposes of Article 22(3) of Regulation (EU) 2024/1624, IT IS UNDERSTOOD THAT the obliged entity THAT IS REQUIRED TO ENSURE THAT IT CAN OBTAIN INFORMATION ABOUT THE VIRTUAL IBAN USER FROM THE ACCOUNT SERVICING INSTITUTION IS THE ISSUING INSTITUTION. THE ACCOUNT SERVICING INSTITUTION shall obtain and verify the following information: (a) In relation to the natural or legal persons using the virtual IBAN, the information required pursuant to Article 22(1) of Regulation (EU) 2024/1624;

Name of the respondent	Question	Answer
		(b) the virtual IBAN number assigned to that natural person or legal person; (c) the dates on which the associated bank or payment account was opened and, where applicable, closed.
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	11
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Articles 11 and 12 RTS – Corporate structures We take issue with the requirement in Art. 11(4)(b) RTS for obliged entities to be satisfied that there is 'an economic, legal or other rationale' behind the ownership and control structure of a customer. This goes beyond the requirement in Art. 20(1)(b) AMLRs to 'understand' that structure, seemingly requiring a judgment of whether the structure is appropriate, necessary or justified. While requiring an understanding of a customer's ownership structure is sensible, anything more places too onerous a requirement on obliged entities and may result in unnecessary friction for legitimate multinational groups. It is also unclear how obliged entities could discharge their duty to comply with this requirement in practice and when a suspicious activity report would be required. We therefore suggest deleting this point, or minimally to provide a safe harbour' for listed or regulated group structures. Relatedly, we think that the contributing factor in Art. 12(1)(b) of any part of the group structure being outside the EU for the structure to be considered 'complex' will catch too many legitimate (and in reality, non-complex) structures. Location itself should not be seen as contributing to complexity and therefore the risk of financial crime, unless the location is

Name of the respondent	Question	Answer
		already designated as high-risk. Finding otherwise would impact the ability of European firms to offer services to customers that include in their structure an entity registered in, for example, the UK or US. We therefore suggest deleting this factor. Suggested alternative drafting (changes in CAPITALS): Article 11 - Understanding the ownership and control structure of the customer 4. When obliged entities assess the ownership and control structure, they must be satisfied that: (a) the information included in the description pursuant to paragraph 2, point (a) is credible; AND [DELETE] (B) that they understand how the overall structure affects the ML/TF risk associated with the customer.

Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Art. 18 RTS – Purpose and intended nature of the business relationship We note that some of the information listed under Art. 18 RTS, particularly around estimated funds, anticipated transaction size and expected activity, will often not be meaningful information to collect as part of CDD for all firms in the same way it might be for a traditional bank. In the FinTech sector many firms are new startup businesses that do not have a clear sense of what annual turnover they can expect to generate in the first year of operation or how quickly they might be capable of scaling up. In such cases, a declaration predicting turnover during onboarding may likely turn out not to be accurate or reliable, but this inaccuracy does not necessarily equate to elevated financial crime risk. We believe that in such circumstances other forms of benchmarking that do not rely on user input information (e.g., sector benchmarking against similar companies, forecasts based on price of goods sold, and other data) prove more

Name of the respondent	Question	Answer
		reliable and can be utilised alongside ongoing monitoring, which generates objective behavioural data against which customer activity can be benchmarked in real time, are more effective risk controls. A similar logic would apply to consideration of the destination of funds as touched on in Art.18(d) RTS, where the use of innovative payment methods and services might evolve or develop over time in a way that would not be seen in a traditional bank. In this case, as in the above scenario, we believe that methods of benchmarking, forecasting and monitoring that provide real-time insight and information will be more reliable and meaningful than estimates provided by users during CDD. As such, we would be in favour of the RTS explicitly recognising – in either an operative provision or an additional recital – that firms should consider what information might be relevant to meeting the requirement of Art. 20(1)(c) AMLRs by applying a risk-based approach specific to their own particular business, and that in some cases alternative methods to those outlined in Art. 18 RTS might be appropriate.

Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 30 RTS – Sanctions screening Article 30(a)(iii) refers to digital wallet addresses as identifiers for sanctions screening. However, wallet addresses are unlike names, which are clear in their given form and for which false positives are expected and managed. With wallet addresses, one cannot assume that what appears in a sanctions list is

Name of the respondent	Question	Answer
		always a clean, canonical, chain-specific, valid 'address string' ready for deterministic equality checks. Before a match can even be identified, the data will need to be normalised (e.g., case-folding, checksum handling, prefix stripping, encoding format conversion) and malformed entries (e.g., truncated/partial entries, contextualised entries (e.g., "0x… (Ethereum)", "BTC: …", "TRON: …", labels, spaces, punctuation) will need to be addressed. The RTS does not provide a definition of whether a 'match' in this context means exact string equality or a match after normalisation and validation. This gap creates a risk of supervisory drift of expectation towards deterministic equality alerts with zero tolerance for any deviation in approach. This is ineffective in practice, as screening for deterministic equality will not contribute to the value of sanctions screening while it will make it harder for firms adopting a more realistic and appropriate approach to evidence compliant handling under Article 30(b) RTS and timely processing under Article 30(d) RTS. Suggested alternative drafting (changes in CAPITALS): Article 30 - Screening requirements For the purposes of Article 29, obliged entities shall: (a) screen, through automated screening tools or solutions, or a combination of automated screening tools and manual checks, at least the following information on customers, beneficial owners and the entities or persons which control or meet the ownership conditions over such customers: i. in the case of a natural person, all the names and surnames, in the original and/or transliteration of such data;

Name of the respondent	Question	Answer
		ii. in the case of a legal person, the registered name of the legal person, in the original and/or transliteration of such data; iii. in the case of a natural person, legal person, body or entity: – any other names, aliases or trade names where they differ from the registered name; – digital wallet addresses, where available in the lists of targeted financial sanctions, AFTER THESE HAVE BEEN NORMALISED AND VALIDATED
Electronic Money Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	31
Electronic Money Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 31 RTS – Risk factors for the electronic money exemption from CDD We believe Art. 31 RTS introduces excessively restrictive risk factors that undermines the exemption in Art. 19(7) AMLRs by unduly narrowing the scope of its application. We specifically recommend the following: • Transaction Limits: Point (a) should be removed, as the AMLRs already set a low limit of EUR 150. • Funding Sources: Point (b) requires that funds originate from an EEA-regulated account. This undermines the purpose of e-money as a cash substitute at points-of-sale and should be removed or extended to the SEPA area to allow, for example, travellers from the UK to take up an exempted product. • Charges: Point (c) should be removed, as the charge for a product has no bearing on its ML/TF risk. This factor may also interfere with competition between providers. • Geographical restriction: Products should be used to support the single market, and issuers should not be precluded from supporting such use; we therefore suggest that the

Name of the respondent	Question	Answer
		geographical restriction in point (e) is removed and that the restrictions in points (j) and (k) are rephrased to countries outside the SEPA area. • Distribution: We suggest deleting the references to 'including electronic signature' and 'anti-impersonation' in point (h), as specifying such CDD measures would go against the intention behind the exemption and undermine its use. • Intermediaries: Point (i) should be removed, as it focuses on the distribution setup of the issuer rather than the risk associated with the payment instrument itself and therefore falls outside AMLA's mandate. Suggested alternative drafting (changes in CAPITALS): Article 31 - Risk factors Where supervisors decide to allow for an exemption under Article 19(7) Regulation (EU) 2024/1624, based on the conditions listed in Article 19(7), points (a) to (d), of Regulation (EU) 2024/1624, supervisors shall consider one or more of the following risk factors to determine the extent of that exemption: (a) [DELETE] (b) [DELETE] (c) [DELETE] (d) the nature and the range of the goods or services that can be acquired, including the level of risks associated with these goods and services; (e) the extent to which the [DELETE] issuer is regulated by a national or regional public authority for specific social or tax purposes to acquire specific goods or services from suppliers having a commercial agreement with the issuer;

Name of the respondent	Question	Answer
		(f) the extent to which the transactions through the electronic money instrument are executed by an obliged entity that applies customer due diligence measures and recordkeeping requirements laid down in Regulation (EU) 2024/1624; (g) the extent to which the payment instrument has a specific and limited duration in which the payment instrument can be used; (h) the extent to which the payment instrument is available through direct channels which may include the issuer or a network of service providers and, in the case of online or non-face-to-face distributions, possess adequate safeguards [DELETE]; (i) [DELETE] (f) the extent to which the payment instrument IS DISTRIBUTED OUTSIDE THE SEPA AREA [DELETE]; (g) the extent to which the issuer applies adequate technological tools, including geofencing and IP tracking, to restrict access from, transfers to or receiving funds from countries that are not WITHIN THE SEPA AREA [DELETE].

Electronic Money Association	Do you have any comments on the Annex in the draft RTS?	Yes
Electronic Money Association	Please share your comments below.	Recital 18 RTS – Safeguarding accounts as correspondent relationships The characterisation of safeguarding account relationships for

Name of the respondent	Question	Answer
		Electronic Money Institutions (EMIs) and Payment Institutions (PIs) as 'correspondent relationships' is unsupported by the definition of correspondent relationships in Art. 2(1)(22) AMLRs. A bank providing a safeguarding account to an EMI or EMI is not providing any services on behalf of the EMI/PI to its customers, as the account balance is owned by the EMI/PI. The banking services are therefore provided to the EMI/PI only. Treating the provision of safeguarding accounts as giving rise to a correspondent relationship would impose onerous obligations on any EU bank providing such accounts to EMIs/PIs in third countries, including the UK, effectively requiring the safeguarding bank to assess the AML/CFT controls of the third-country EMI/PI (see Art. 36 AMLRs). This interpretation of the relationship, which has not been adopted previously and is neither expressed nor implied by the AMLRs, is therefore likely to exacerbate de-risking and create significant barriers to market access for non-EU institutions. Suggested alternative drafting: (18) This Regulation identifies a service that would benefit from specific simplified due diligence measures. This is the case where a credit institution opens a pooled account for a customer that is an obliged entity, to hold or administer funds that belong to the customer's own clients, where the ML/TF risk of that service is assessed as low, based on the credit institution's risk assessment. In such cases, since the final customers are already subject to the customer due diligence measures applied by the obliged entity, it is proportionate to allow specific simplified due diligence measures, in order to

Name of the respondent	Question	Answer
		avoid duplication of controls while ensuring that appropriate safeguards remain in place. Situations where credit institutions open a payment account for payment institutions or electronic money institutions will fall outside the scope of the sectoral simplified measures provision of this Regulation. [DELETE]
Electronic Money Association	How would you rate the proposals set out in the draft RTS overall?	Neutral
Electronic Money Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact

Name of the respondent	Question	Answer
Electronic Money Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact
Entrust	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The proposed measures in Article 7 are technically compatible with certified identity verification solutions and we broadly support the risk-based structure and the principle of technological neutrality. However, the RTS as drafted confines mandatory certified verification to the initial onboarding moment, by reference to Article 22(6)(b) AMLR. In our assessment, this creates a material gap between the point at which certified verification is required and the points at which fraud exposure is highest across the CDD lifecycle.

Name of the respondent	Question	Answer
		Entrust's 2026 Identity Fraud Report — based on over 1 billion identity verifications across 195 countries and 30+ industries — found that in digital banking 55% of fraud occurs after onboarding, and in payments 82% of fraud attempts target the authentication stage rather than account creation. This represents one of the most comprehensive real-world datasets currently available on CDD lifecycle fraud distribution, and in our view warrants serious consideration in assessing where mandatory certified verification requirements should apply. Article 26 AMLR requires CDD to be applied on a risk-sensitive basis throughout the business relationship — including at periodic review, upon risk-profile changes, and when transactions trigger enhanced scrutiny. In Entrust's assessment, the absence of a mandatory certified verification standard at these stages means obliged entities may currently discharge re-verification obligations using uncertified solutions that fall below the standard required at onboarding, at moments of comparatively higher fraud exposure. We also note that Article 7(3)(a)'s requirement to match a live image against an identity document photo is specific to the initial onboarding moment and does not translate to re-verification scenarios where no new document is presented. The RTS should confirm that certified liveness-based re-verification against a previously captured and stored biometric reference is a valid proportionate measure under Article 26 AMLR. Entrust recommends that the RTS explicitly require that (i) non-

Name of the respondent	Question	Answer
		face-to-face re-verification conducted under ongoing CDD obligations meets a certified eIDAS assurance standard, with the applicable level — 'substantial' or 'high' — determined by the ML/TF risk assessment at that point in the relationship and that (ii) liveness-based re-verification against a stored biometric reference is a permitted and proportionate method in this context.
Entrust	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The risk-based framework in Article 7 is well-structured within its current scope. However, as we stated in response to the previous question, confining that scope to onboarding means that risk-based calibration is unavailable at the moments in the CDD lifecycle where, on available evidence, fraud pressure is highest. Entrust's 2026 Identity Fraud Report, based on over 1 billion identity verifications, found that fraud patterns vary sharply by lifecycle stage. In payments, 82% of fraud attempts target post-onboarding authentication. In digital banking, 55% of fraud occurs after account creation. A risk-based approach that mandates certified verification only at onboarding applies its highest assurance requirement at the point of comparatively lower fraud exposure and provides no mandatory certified floor at higher-risk stages. This sits in tension with Article 26 AMLR, which requires ongoing CDD calibrated to risk throughout the business relationship. An obliged entity that elevates a customer's risk classification and conducts remote re-verification in response currently has no regulatory certainty as to whether Article 7(3) standards apply or at what level of proportionality. This creates an asymmetry in the risk-based framework: the standard is clear

Name of the respondent	Question	Answer
		at onboarding, but absent where the risk evidence suggests it is most needed. Article 7 should explicitly provide that non-face-to-face re-verification conducted under ongoing CDD obligations meets a certified eIDAS assurance standard, with the applicable level — 'substantial' or 'high' — determined by the ML/TF risk assessment at that point in the relationship. This would create a coherent lifecycle-spanning framework that better reflects the actual distribution of fraud risk.
Entrust	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Entrust responds as a solution provider rather than an obliged entity and does not itself collect CDD information from customers. We note one practical challenge that may affect obliged entities using automated verification solutions. Document quality variation presents difficulties in some circumstances. Entrust's 2026 Identity Fraud Report found that national ID cards accounted for 46% of fraudulent document submissions globally in 2025, and vary significantly in security feature quality, with older versions remaining in circulation across multiple jurisdictions. Where automated document matching fails due to genuine quality limitations rather than fraud indicators, the draft RTS does not currently provide a proportionate fallback pathway. Where a valid identity document cannot be adequately verified by automated means due to genuine quality constraints, obliged entities should not be left without a compliant alternative. The current drafting does not address this scenario. Entrust recommends that the RTS acknowledge that certified liveness-based verification against a stored biometric reference

Name of the respondent	Question	Answer
		may serve as a proportionate alternative where document quality prevents automated verification, subject to appropriate risk calibration and documentation of the reason for the alternative approach. This would preserve the integrity of the verification standard while avoiding a binary outcome that could otherwise lead to unnecessary customer exclusion.
Entrust	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Entrust does not propose specific additional simplified due diligence measures in the context of our operations as a solution provider. We observe that the interaction between simplified CDD determinations and the Article 7 verification requirements would benefit from clarification. Where an obliged entity applies simplified measures on the basis of a lower ML/TF risk determination under Article 33 AMLR, the draft RTS does not specify the minimum verification standard that continues to apply under Article 7, including whether a certified solution meeting eIDAS 'substantial' assurance remains required or whether a proportionately lighter pathway is available. Without this clarification, there is a risk that simplified CDD determinations are used to justify uncertified verification at moments where a baseline certified standard should nonetheless apply. This would undermine the minimum floor that Article 7 is designed to establish. We believe the RTS should specify that, even where simplified CDD measures are applied under Article 33 AMLR, non-face-to-face identity verification must still meet a minimum certified standard under Article 7, and should identify the applicable eIDAS assurance level in that context. In Entrust's view, eIDAS

Name of the respondent	Question	Answer
		'substantial' should remain the minimum floor for remote verification even in simplified CDD scenarios, absent specific justification for a lower standard.
Entrust	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 7(3)(d) and Article 7(3): The injection attack gap and liveness detection Article 7(3)(d) requires the verification process to be interrupted where technical shortcomings or unexpected connection interruptions are detected. This language addresses data integrity failures. It does not adequately address injection attacks, which operate on an entirely different logic. In an injection attack, a fraudster routes synthetic or AI-generated media into the verification pipeline via a virtual camera, bypassing the device's native camera entirely. The resulting stream is technically clean. There is no connection interruption, no signal shortcoming, and in Entrust's assessment no trigger under the current drafting — even though the biometric capture is fraudulent. Entrust's 2026 Identity Fraud Report, based on over 1 billion identity verifications across 195 countries, found that injection attacks increased approximately 40% year-over-year across our verification network between 2023-24 and 2024-25. Virtual camera injection, frequently paired with device emulation, was the primary method observed. Deepfakes — the content most commonly introduced via injection attacks — accounted for 1 in every 5 biometric fraud attempts across our network. These attacks were disproportionately concentrated in sectors directly regulated under AMLR: crypto accounted for 60% of all deepfake fraud attempts, with digital-first banks and payments providers also heavily targeted.

Name of the respondent	Question	Answer
		Proposed amendment to Article 7(3)(d): Add the following: "or where signals indicate that the video or biometric data may not originate from a live capture by the device's native camera." This is intentionally non-prescriptive as to detection method, preserving technological neutrality, while creating an explicit obligation to address injection attacks as a distinct threat class. AMLA should cross-reference CEN/TS 18099 in the relevant recital, which addresses injection detection separately from presentation attack detection. Proposed amendment to Article 7(3): The sub-provisions of Article 7(3) govern the technical safeguards required of remote verification solutions. Active liveness detection — including presentation attack detection — is not currently named as a required safeguard. Given that deepfakes accounted for 1 in 5 biometric fraud attempts across Entrust's network, a framework that does not require liveness detection as a named control for the 'substantial' assurance threshold does not reflect the threat environment Article 7 is designed to address. Entrust recommends that active liveness detection, including presentation attack detection, be designated a required safeguard under Article 7(3) for mechanisms used to meet the 'substantial' threshold, and that injection attack detection capability be required for the 'high' threshold. This would create an enforceable and coherent link between the Article 7(3) safeguards and the assurance level framework under Article 7(1).
Entrust	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Entrust	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Entrust	Do you have any comments on the Annex in the draft RTS?	No
Entrust	How would you rate the proposals set out in the draft RTS overall?	Neutral
Ernst & Young Baltic UAB	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	EY partially agrees that the draft RTS can be applied across a range of obliged entities. However, in their current form, the proposals do not provide sufficient flexibility for non-financial professional service providers, including audit firms. (i) Insufficient flexibility While the RTS aim to be sector-neutral, a number of provisions appear calibrated to transactional business models typical of financial institutions and do not adequately reflect the nature of audit and advisory services. Audit and assurance engagements are: • non-transactional, and primarily retrospective in nature; • independent, with no involvement in client decision-making or execution of transactions; • conducted within strict ethical and independence frameworks, limiting access to and reliance on certain types of information. In practice: • Requirements to collect detailed identity data (including full passport-level data) even where qualified electronic identification is used are disproportionate. • Verification expectations assume availability of tools and databases (e.g. document authenticity checks) that are not accessible to audit firms. • Transaction-focused information (e.g. source/destination of funds) lacks relevance in audit contexts.

Name of the respondent	Question	Answer
		This results in a “one-size-fits-all” framework that risks imposing disproportionate burden without corresponding risk mitigation. (ii) Proposed drafting improvements EY recommends: • Explicit proportionality clause for non-financial sectors clarify that requirements shall be applied in light of the nature of services (transactional vs non-transactional). • Recognition of non-transactional services introduce wording such as “where relevant to the service provided” for transaction-related data points (e.g. Article 18). • Acceptance of qualified electronic identification clarify that high-assurance eID solutions may replace collection of full identity datasets in low- to medium-risk scenarios. • Limitation to accessible verification sources specify that obliged entities should rely on sources reasonably available to them, without implying use of proprietary tools or commercial databases.
Ernst & Young Baltic UAB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EY does not fully agree that the draft RTS enable an effective application of the risk-based approach. (i) Provisions of concern While the RTS reference proportionality, several provisions introduce de facto prescriptive requirements: • Uniform data collection requirements, irrespective of risk level; • Extensive verification expectations, even where risk is low and information is unavailable; • Continuous screening expectations (e.g. PEP monitoring) requiring automated or systematic checks that are not feasible for audit firms.

Name of the respondent	Question	Answer
		In practice: • Audit firms do not have automated tools to continuously screen UBOs for PEP status changes, and manual periodic screening is not scalable. • Requirements around ongoing monitoring are not aligned with services that are episodic and non-transactional. This risks shifting from a risk-based approach to a formalistic compliance model. (ii) Proposed drafting improvements EY recommends: • Strengthen risk-based language throughout RTS clearly allow adjustment of scope, depth, and frequency of CDD measures based on risk. • Differentiate baseline vs enhanced requirements ensure detailed measures apply only where justified by specific risk indicators. • Allow flexibility in monitoring frequency remove ongoing screening requirements (including PEP checks) for professional services firms. For auditors, while providing historical data assurance service, ensure that CDD measures are proportionate to the nature of the engagement • Limit operational expectations avoid implicit assumptions that all obliged entities have access to automated screening tools. These changes would ensure that the RTS enable — rather than constrain — effective risk-based implementation.
Ernst & Young Baltic UAB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable	Yes — in the context of audit firms, there are multiple situations where required information is routinely unavailable and no workable alternative is provided. Examples

Name of the respondent	Question	Answer
	and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	• Qualified electronic identification Even where a high-assurance e-signature is used, RTS still require collection of full identity datasets, making the process duplicative. • Verification of identity documents Audit firms do not have access to tools to verify authenticity or detect forged documents. • Beneficial ownership and SMO data o Identification of UBOs in complex multinational structures can be uncertain; o Where no UBO exists, identification of all SMOs may result in dozens of individuals, making full verification unrealistic. • Source of funds / wealth information Requests for tax returns or pay slips for UBOs or SMOs are often not obtainable and not relevant in audit engagements. Proposed alternative solutions • Allow reliance on official registers and client declarations, supplemented by risk-based checks. • Introduce a “reasonable efforts” standard, rather than absolute completeness. • Limit SMO verification to selected individuals based on risk, not all members. • Explicitly allow use of existing audit knowledge and engagement understanding. • Permit documented justification where data cannot be obtained, without automatic high-risk classification. These adjustments would ensure operational feasibility while maintaining AML/CFT safeguards.
Ernst & Young Baltic UAB	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your	EY considers that additional simplified due diligence measures should be included to reflect the lower ML/TF risk associated

Name of the respondent	Question	Answer
	obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	with audit and similar professional services. Proposed measures • Reliance on public registers for UBO/SMO verification verification via one reliable official source should be sufficient in low-risk cases. • Simplified treatment of SMOs allow reliance on corporate records (e.g. company register extracts) without requiring full identity documentation. • Recognition of non-transactional professional services explicitly allow Simplified DD where: o no transactions are executed or controlled; o services are analytical or assurance-based. • Reduced monitoring requirements allow less frequent updates and screening where risk remains stable. • Use of internal knowledge and prior CDD within the firm or network especially where safeguards and controls are in place. These measures would align the RTS with the principle that simplified due diligence reduces the extent, but not the existence, of CDD obligations.
Ernst & Young Baltic UAB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Additional observations 1. Misalignment with non-financial sector realities The RTS remain heavily influenced by financial sector business models and do not sufficiently reflect the nature of audit services, which are independent, non-transactional, and limited in access to client information. 2. Operational feasibility concerns Certain requirements — particularly around: • continuous PEP screening, • source of wealth verification,

Name of the respondent	Question	Answer
		• verification of all SMOs — are not feasible in practice and may not meaningfully enhance AML/CFT outcomes. 3. Over-reliance on unavailable or unclear sources References to “reliable and independent sources” and commercial providers lack clarity and may create uncertainty and inconsistent application. 4. Risk of disproportionate burden without added value In many audit engagements, enhanced data collection would not improve risk detection but would significantly increase administrative workload. 5. Need for clearer definitions Further clarity is required for: • SMO scope and expectations; • “significant change” triggering updates; • acceptable verification sources and methods. 6. Implementation and practical application EY supports the objective of harmonisation, but stresses the importance of: • proportionality; • clarity; • alignment with existing professional frameworks.
Ernst & Young Baltic UAB	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Ernst & Young Baltic UAB	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Ernst & Young Baltic UAB	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Ernst & Young Baltic UAB	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Ernst & Young Baltic UAB	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact
Ernst & Young Baltic UAB	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Name of the respondent	Question	Answer
	of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Ernst & Young Baltic UAB	Please justify your answer to the previous question and provide evidence where possible.	The assessment of a disruptive impact for one-off implementation costs reflects the significant structural and operational changes required to comply with the draft RTS, beyond those already envisaged under Regulation (EU) 2024/1624. In particular, the RTS introduce highly granular and prescriptive requirements that would necessitate substantial upfront investment in multiple areas. These include: - Comprehensive revision of internal policies and procedures, especially to accommodate expanded verification requirements (e.g. source of wealth, senior managing officials) and ongoing monitoring expectations; - Material system upgrades or implementation of new tools, including integration of continuous PEP screening capabilities and enhanced data management functionalities; - Onboarding and integration of external data providers, due to

Name of the respondent	Question	Answer
		reliance on “reliable and independent sources”, which are not clearly defined and are often only available through commercial providers; - Extensive staff training and methodological updates, given the need to embed new concepts (e.g. broader SMO scope, new verification thresholds, interpretation of “significant changes”) across engagement teams. These changes go beyond incremental adjustments and require fundamental redesign of existing AML/KYC frameworks, particularly for non-financial sector entities such as audit firms, whose business model (independent, non-transactional, and with limited access to underlying client data) is not fully aligned with the assumptions underpinning the RTS.
Ernst & Young, s.r.o.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	EY partially agrees that the draft RTS can be applied across a range of obliged entities. However, in their current form, the proposals do not provide sufficient flexibility for non-financial professional service providers, including audit firms. Moreover there are still multiple references to credit institutions, although the document is supposed to be targeted across various obliged entities. (i) Insufficient flexibility While the RTS aim to be sector-neutral, a number of provisions appear calibrated to transactional business models typical of financial institutions and do not adequately reflect the nature of audit and advisory services. Audit and assurance engagements are: • non-transactional, and primarily retrospective in nature; • independent, with no involvement in client decision-making or execution of transactions; • conducted within strict ethical and independence

Name of the respondent	Question	Answer
		frameworks, limiting access to and reliance on certain types of information. In practice: • Requirements to collect detailed identity data (including full passport-level data) even where qualified electronic identification is used are disproportionate. • Verification expectations assume availability of tools and databases (e.g. document authenticity checks) that are not accessible to audit firms. • Transaction-focused information (e.g. source/destination of funds) lacks relevance in audit contexts. This results in a “one-size-fits-all” framework that risks imposing disproportionate burden without corresponding risk mitigation. (ii) Proposed drafting improvements EY recommends: • Explicit proportionality clause for non-financial sectors clarify that requirements shall be applied in light of the nature of services (transactional vs non-transactional). • Recognition of non-transactional services introduce wording such as “where relevant to the service provided” for transaction-related data points (e.g. Article 18). • Acceptance of qualified electronic identification clarify that high-assurance eID solutions may replace collection of full identity datasets in low- to medium-risk scenarios. • Limitation to accessible verification sources specify that obliged entities should rely on sources reasonably available to them, without implying use of proprietary tools or commercial databases.

Name of the respondent	Question	Answer
Ernst & Young, s.r.o.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EY does not fully agree that the draft RTS enable an effective application of the risk-based approach. (i) Provisions of concern While the RTS reference proportionality, several provisions introduce de facto prescriptive requirements: • Uniform data collection requirements, irrespective of risk level; • Extensive verification expectations, even where risk is low and information is unavailable; • Continuous screening expectations (e.g. PEP monitoring) requiring automated or systematic checks that are not feasible for all audit firms. In practice: • Audit firms do not have automated tools to continuously screen UBOs for PEP status changes, and manual periodic screening is not scalable. • Requirements around ongoing monitoring are not aligned with services that are episodic and non-transactional. This risks shifting from a risk-based approach to a formalistic compliance model. (ii) Proposed drafting improvements EY recommends: • Strengthen risk-based language throughout RTS clearly allow adjustment of scope, depth, and frequency of CDD measures based on risk. • Differentiate baseline vs enhanced requirements ensure detailed measures apply only where justified by specific risk indicators. • Allow flexibility in monitoring frequency remove ongoing screening requirements (including PEP checks) for professional services firms. For auditors, while providing

Name of the respondent	Question	Answer
		historical data assurance service, ensure that CDD measures are proportionate to the nature of the engagement • Limit operational expectations avoid implicit assumptions that all obliged entities have access to automated screening tools. These changes would ensure that the RTS enable — rather than constrain — effective risk-based implementation.
Ernst & Young, s.r.o.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes — in the context of audit firms, there are multiple situations where required information is routinely unavailable and no workable alternative is provided. Examples • Qualified electronic identification Even where a high-assurance e-signature is used, RTS still require collection of full identity datasets, making the process duplicative. • Verification of identity documents Audit firms do not have access to tools to verify authenticity or detect forged documents. • Beneficial ownership and SMO data o Identification of UBOs in complex multinational structures can be uncertain; o Where no UBO exists, identification of all SMOs may result in dozens of individuals, making full verification unrealistic. It would be the most efficient if authorised representatives of the client entity (and not to go above to ultimate parent as is current case / clients have dificulties to identify SMO themselves) as inscribed in relevant registers would be deemed as SMO. • Source of funds / wealth information Requests for tax returns or pay slips for UBOs or SMOs are

Name of the respondent	Question	Answer
		often not obtainable and not relevant in audit engagements. Moreover in case of SMOs it does not make much sense, given the fact that their personal monies are typically not involved at all. Proposed alternative solutions • Allow reliance on official registers and client declarations, supplemented by risk-based checks. • Introduce a "reasonable efforts" standard, rather than absolute completeness. • Limit SMO verification to selected individuals based on risk, not all members of management. • Explicitly allow use of existing audit knowledge and engagement understanding. • Permit documented justification where data cannot be obtained, without automatic high-risk classification. These adjustments would ensure operational feasibility while maintaining AML/CFT safeguards.
Ernst & Young, s.r.o.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EY considers that additional simplified due diligence measures should be included to reflect the lower ML/TF risk associated with audit and similar professional services. Proposed measures • Reliance on public registers for UBO/SMO verification verification via one reliable official source should be sufficient in low-risk cases. • Simplified treatment of SMOs allow reliance on corporate records (e.g. company register extracts) without requiring full identity documentation. • Recognition of non-transactional professional services explicitly allow Simplified DD where: o no transactions are executed or controlled;

Name of the respondent	Question	Answer
		o services are analytical or assurance-based. • Reduced monitoring requirements allow less frequent updates and screening where risk remains stable. • Use of internal knowledge and prior CDD within the firm or network especially where safeguards and controls are in place. These measures would align the RTS with the principle that simplified due diligence reduces the extent, but not the existence, of CDD obligations. Currently, SDD does not really feel simplified at all and does not reflect the real risk. While we expected AMLA to provide more details, AMLA referred to AMLR without real help or guidance in our view.
Ernst & Young, s.r.o.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Misalignment with non-financial sector realities The RTS remain heavily influenced by financial sector business models and do not sufficiently reflect the nature of audit services, which are independent, non-transactional, and limited in access to client information. 2. Operational feasibility concerns Certain requirements, particularly around: • continuous PEP screening, • source of wealth verification, • verification of all SMOs are not feasible in practice and may not meaningfully enhance AML/CFT outcomes. 3. Over-reliance on unavailable or unclear sources References to “reliable and independent sources” and commercial providers lack clarity and may create uncertainty and inconsistent application.

Name of the respondent	Question	Answer
		4. Risk of disproportionate burden without added value In many audit engagements, enhanced data collection would not improve risk detection but would significantly increase administrative workload. 5. Need for clearer definitions Further clarity is required for: • SMO scope and expectations; It would be beneficial to understand whether PEP status is at all relevant for SMOs and to what extent can SMO - PEP status affect the client (according to current Czech FIU the substitute UBO/SMO according to new terminology, would not "infect" the Company by PEP status). Also, it does not make much sense to seek tax returns and sources of wealth of these people, who are not real UBOs. • “significant change” triggering updates; • acceptable verification sources and methods. 6. Implementation and practical application EY supports the objective of harmonisation, but stresses the importance of: • proportionality; • clarity; • alignment with already existing professional frameworks. General comment: numerous obliged entities typically do not have budget, technologies and AML experts available to fully understand the requirements of AMLR and RTS. The aim should be to provide as much clarity and minimum of what is actually required and needed.
Ernst & Young, s.r.o.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Ernst & Young, s.r.o.	Please justify your answer to the previous question and provide evidence where possible.	We were asked earlier this year by Czech Chamber of Auditors about the estimated costs of implementation. These indeed differ, there would be difference between one man show auditor and Big 4 audit firm. This is what we reported back in January: With respect to the estimated costs of implementing the EU AML package, we are convinced that these will be significantly higher for so-called Big Four audit firms, as the new legislation

Name of the respondent	Question	Answer
		introduces substantial changes in the area of compliance. The preparation and implementation of these new rules require considerable investment and effort. 1. Internal costs related to implementation: Total estimated internal hours: approximately 1,000 hours Estimated internal labour cost: approx. EUR 48,000 This includes in particular: Legislation analysis: The review of AMLR, AMLD, AMLAR and various related documents and guidelines comprises approximately 1,500 pages. At a reading pace of 10 pages per hour, this requires 150 hours. Analysis, gap assessment and recommendations for changes add a further 100 hours, resulting in a total of 250 hours. Development of updated policies, standards and processes: Review and redesign require approximately 120 hours. Adjustment of processes and procedures (including IT systems): Review of existing processes: 40 hours Implementation of process changes (RBA, risk calculations, questionnaires): 120 hours Updates to technology supporting questionnaires and document archiving: 100 hours Adjustments to reporting and monitoring: 80 hours People: Training: Each employee interacting with clients will require approximately 20 minutes of additional training on top of

Name of the respondent	Question	Answer
		existing training. For 1,000 employees, this amounts to approximately 333 hours (which cannot be utilized for client work). Training development: 40 hours Overall, documentation requirements under the AMLR are higher compared to the currently applicable AML directives and local legislation. Certain new requirements may result in a doubling of the time needed to perform client identification and due diligence, particularly in cases involving more complex corporate structures, which represent a significant portion of Big Four audit clients. As a conservative estimate, an average 20% increase in time per client is expected for client identification and due diligence procedures. 2. Additional costs: New Compliance Manager role: Estimated annual cost of approximately EUR 60,000 (approx. CZK 1,500,000) Technology and software enhancements: Investments in new systems (including PEP and sanctions screening) or major upgrades may reach EUR 100,000 (approx. CZK 2,400,000) Legal and advisory services: Estimated external legal costs range between EUR 50,000 and EUR 100,000 (approx. CZK 1,200,000 to 2,400,000) Subsequent updates to policies and processes: The new regulation contains a number of areas that will be further interpreted by AMLA, and it is likely that additional time to read the guidance, process adjustments, further training, discussions and explanations of the requirements to clients etc. will be required. The costs of these cannot be reliably

Name of the respondent	Question	Answer
		estimated at this stage, but are significant. Given the fact that in the last 15 plus years we had no reportable suspicious transaction, this feels disproportionate.
Erste Group Bank AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, please refer to comments under pt. 5.
Erste Group Bank AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Please refer to comments under pt. 5.
Erste Group Bank AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Please refer to comments under pt. 5.
Erste Group Bank AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	
Erste Group Bank AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Recital 7, track changes: This add-on does not refer to any above-mentioned examples, it is only connected to a constellation involving a minor child. The representative has to be properly identified and verified. For this person there is no simplification - although the last sentence before the current track changes under this recital (7) refers to a "more flexible approach" by using "other credible means". The birth certificate for the minor child we cannot see as a simplification, since more than that the minor child would most likely anyhow not have. New recital point (12): We understand this new recital point (12) is referring to Art. 16 in Section 2 of this Regulation. The examples in the last sentence of this point include only child representation. However, in our opinion this should be applicable also to the representation of all types of customers (incl. legal entities) even due to the general civil law and/or company law rules. Recital (21 – newly inserted): If using the data between obliged entities within the Group, usage of such data needs to be regulated by the data sharing agreement or through the ruling in this Regulation or in the respective upcoming RTS (to ensure the proportionate and safeguarded information sharing in line with the GDPR Rules)? Shall this point be considered as obligation for obliged entities (to check availability of such information internally within the group)? Or is it to be understood as an option to simplify the data collection within the KYC process? Art. 7 pt. 3: Through the remote solution described in paragraph 2, the

Name of the respondent	Question	Answer
		documents and data shall be first collected and then verified. Therefore, in our understanding the wording "collected and verified" would be more appropriate. Through the remote solution the documents and data shall be also obtained and not only verified. Therefore, in our understanding the wording "obtained and verified" would be more appropriate. Art. 9 : We would appreciate a more detailed description of the obligations. Article 9 does not currently make it sufficiently clear whose identity has to be verified (besides the customer's identity also the identity of the person the vIBAN is used for?). Art 12: We would welcome clarification, how the relationship between "complex structures" referred to in Art. 12 should be considered in conjunction with Annex III(1)(f) of the AMLR. How do the two relate to each other? Art. 17: We have concerns regarding Article 17 (incl. Recital 14), as it imposes unrealistic AML obligations on CIUs and custodian banks without direct investor relationships. Article 17 goes beyond AMLR by creating an upstream AML obligation that is incompatible with established market practice and therefore should be amended to explicitly exclude publicly offered funds from end investor identification by CIUs and custodian banks. Art 17 should be amended to clarify that it applies exclusively where a CIU or management company has a direct CDD obligation due to direct investor contact. Any wording that could be interpreted as imposing such obligations indirectly, should be removed. Intermediary institutions already perform effective AML and CDD measures for fund investors. The idea of intermediaries acting as qualified third parties for CIUs remains, at present, operationally and legally unrealistic and might have data protection and liability concerns.

Name of the respondent	Question	Answer
		Art. 18: In addition to our comments on Article 18 to the ESBG, we would like to note that we would welcome a more detailed clarification as to which information on the purpose and intended nature is to be obtained in the case of a business relationship and which information is to be obtained in the case of an occasional transaction. Art. 33: Which is the start date of calculating the 1 or 5 years period? Is it the publication date; date of entering into force; or the not yet defined "Date of application" below of this Regulation?

Name of the respondent	Question	Answer
	Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Erste Group Bank AG	Please justify your answer to the previous question and provide evidence where possible.	The CDD RTS (following the AMLR) are foreseeing basic changes in the KYC process.
Estonian Auditors' Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Important comment: this and the following comments are fully in line with the comments of the professional body representing Lithuanian auditors, with whom we have consulted on the matter. Position: We partially agree. Key Concern: 1) While the draft RTS establishes a harmonized framework for customer due diligence across the EU, several provisions do not sufficiently reflect the diversity of obliged entities and the fundamentally different business models, risk profiles and access to information between financial institutions and professional services providers such as auditors and accountancy professionals. In particular, number of requirements appear to be designed primarily for financial institutions and transaction-based services and, if applied uniformly, risk creating disproportionate administrative and financial burdens for non financial obliged entities without delivering commensurate AML/CFT risk mitigation. Examples include: a. transaction specific requirements and ongoing screening expectations which are difficult to reconcile with the nature of statutory audit and accountancy engagements; b. identity verification requirements that presuppose access to official databases or document authenticity tools which are not available to our sector;

Name of the respondent	Question	Answer
		c. broadly framed obligations that do not sufficiently distinguish between front office client interaction and back office verification functions. 2) Terminology. We raise a fundamental concern regarding the clarity of the scope for the professional services sector under Article 3 of the AMLR. A significant conceptual ambiguity exists regarding the term "material aid". The term may imply financial or tangible support, and, therefore may be misunderstood while implementing needed measures and setting supervision in a certain country. In the context of the audit and accounting profession, providing "material aid" in its literal financial sense would constitute a severe breach of professional independence and ethical standards (IESBA Code). 3) Scope and Sectoral Specificity. In the Article 3 of the AMLR defined scope as follow “auditors, external accountants and tax advisors, and any other natural or legal person including independent legal professionals such as lawyers, that undertakes to provide, directly or by means of other persons to which that other person is related, material aid, assistance or advice on tax matters as principal business or professional activity”. It is necessary to note that in the range of services provided by auditors and external accountants material aid, assistance or advice on tax matters in most cases is only part or even minor part of services provided. Audit of financial statements and information, most of other assurance services provided by auditors are focused on historical financial and other data and does not involve financial transaction management – it is strictly limited or prohibited by ethics and independency standards, also legal regulation, as would overlap with management functions or financial decision-

Name of the respondent	Question	Answer
		making. Therefore, CDD intensity for auditors and external accountants should be adjusted accordingly or explained following risk-based approach. 4) Insufficient flexibility. The current drafting does not: a. sufficiently differentiate between sectors with continuous transactional exposure and those providing non transactional professional services; b. recognize that auditors and accountancy professionals in most cases represent the final link in a long chain of prior public sector and legal entity identification and verification; c. adequately limit obligations to what is reasonably achievable access to information and tools. Drafting Proposal: 1) The RTS shall include a clarifying provision or a preamble stating that "material aid" refers strictly to the relevance or significance of the professional service provided, rather than financial or tangible support. Without this clarification, the Regulation risks creating a direct conflict with existing professional ethics codes and leading to fragmented application across Member States. 2) The intensity of CDD should be adjusted to reflect risk of services provided by auditors and external accountants, taking into consideration key concerns disclosed above. 3) The RTS shall clarify that verification measures must be applied on a risk based approach and only using sources reasonably available to the obliged entity from official sources (like EU or state registers, public tax institutions, etc.), do not force using commercial based resources provided by private entities; 4) Introducing explicit wording that sector neutral provisions

Name of the respondent	Question	Answer
		should be interpreted proportionately to the nature of services provided, in line with Article 28(1) AMLR
Estonian Auditors' Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Position: We partially agree. Key Concern: While the draft RTS establishes a harmonized framework, the principle of proportionality is not sufficiently operationalized for non-financial obliged entities, several provisions do not sufficiently reflect the fundamentally different business models and risk profiles between financial institutions and non-transactional based professional service providers such as auditors and external accountants. Requirements often presuppose access to official databases or document authenticity tools that are unavailable to our sector and the current draft RTS proposals risk creating disproportionate administrative burdens for non-financial obliged entities, irrespectively of actual ML/TF risk. Examples include: 1) verification requirements that appear to apply uniformly rather than being clearly conditional on assessed risk; 2) enhanced due diligence measures that may be triggered in situations where sector specific ML/TF exposure remains low; 3) screening requirements that could be interpreted as mandating continuous monitoring without clear risk triggered events. Drafting Proposal. The following amendments would strengthen legal certainty and ensure that the RTS genuinely enable, rather than inadvertently constrain, risk based implementation 1) explicitly limiting transaction specific and continuous monitoring obligations to obliged entities whose business model does not involve execution or processing of

Name of the respondent	Question	Answer
		transactions; 2) for auditors, while providing historical data assurance service, ensure that CDD measures are proportionate to the nature of the engagement; 3) clearer differentiation between baseline information requirements and additional measures that are triggered exclusively by elevated risk; 4) explicit confirmation that certain data elements (e.g. detailed source of funds or wealth, utility bills and similar) are not required for low risk roles such as senior management unless a specific ML/TF risk indicator is present; 5) clarification that “significant change” triggering review or enhanced measures must be defined by reference to risk relevant events
Estonian Auditors' Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Position: Yes. While the draft RTS emphasizes proportionality, this principle is not sufficiently operationalized for low-risk services provided by auditors and external accountants. Key Concern: 1) In professional services contexts, certain information required under the draft RTS is routinely unavailable despite reasonable efforts by the obliged entity, and the RTS do not always provide a workable alternative. Some examples: • verification of identity document authenticity where auditors, external accountants and tax advisors have no access to official verification databases or document validation tools; • independent verification of nationality or place of birth where such information is not reliably available from public registers and cannot reasonably be authenticated; • comprehensive source of funds or source of wealth, utility bills information for senior managing officials of corporate clients, where no ML/TF indicators exist and such data is

Name of the respondent	Question	Answer
		outside the professional service relationship 2) Due to independency and ethics requirements, it is strictly prohibited for auditors to act on behalf of the client, while providing audit of company reports or other assurance services. Proposed alternative solutions 1) Based on sector specificity and where risk appropriate, the obliged entity shall rely on official public registers and client representations; 2) If there are justified doubts regarding beneficial ownership or the accuracy of registry information: a. the obliged entity fulfils its obligations by submitting a report to competent authorities or the FIU, after which responsibility for further investigation rests with public authorities; b. the obliged entity's management shall estimate possibility to continue providing service. This approach would be proportionate, realistic and aligned with the respective roles of private obliged entities and public enforcement bodies.
Estonian Auditors' Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	As is already specified above, by responding to questions 1, 2, and 3, auditors and external accountants: a) in major cases provide non-transactional based professional services; b) while providing professional services, in most cases work only with historical data; c) are not involved in execution or processing of transactions; d) have limited access to the registers; e) have no power to stop a suspicious transaction or activity, or limit the client by any other measures, except for the sole decision to stop or discontinue the service provided in particular cases.

Name of the respondent	Question	Answer
		Following risk-based approach principle, rationale and proportionality, we would propose simplified measures that wouldn't reduce responsibilities and the value of AML/TF prevention goals, but would increase efficiency by focusing on real ML/TF risks: a) explicit recognition that statutory audit and regulated services, subject to professional standards, ethical rules and public oversight, may qualify for simplified due diligence where no risk indicators are present; b) for small-scale audit engagements or one-off assurance reports that fall below the EUR 10,000 threshold and do not involve indicators of high risk during initial client identification, simplified due diligence should be considered the default standard; c) simplified requirements for identifying senior managing officials where beneficial ownership is clearly documented in official public registers; d) clearer differentiation between baseline information requirements and additional measures triggered exclusively by elevated risk. For instance, collecting detailed sources of wealth information for senior managing officials (SMOs) should not be mandatory for low-risk roles in audited entities unless a specific ML/TF risk indicator is present; e) reduced frequency of CDD updates for long standing clients with stable ownership, governance and risk profiles, absent triggering events. We recommend including illustrative examples of low risk scenarios in the RTS, explicitly covering: • auditor operates under the ISQM 1 developed by the IAASB (or an equivalent standard), which require high standards of professional ethics, independency and internal quality control,

Name of the respondent	Question	Answer
		the engagement is considered low-risk, justifying the application of simplified Customer Due Diligence (CDD) procedures, unless a specific ML/TF risk indicator is present and/or politically exposed persons are identified in relation to the audit engagement or professional service provided; • professional services provided are non-transactional based, no client transactions are executed or controlled by the obliged entity • auditor or external accountant is not acting on behalf of the client management or financial decision-making This would enhance consistency of application across Member States and also reduce supervisory fragmentation.
Estonian Auditors' Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would like to raise the following additional points: 1. Ongoing and continuous targeted financial sanctions screening obligation. The RTS should clearly limit ongoing and continuous targeted financial sanctions screening obligation for auditors, external accountants and tax advisors due to the following: a. Auditors, external accountants, tax advisors are obliged to check on a legal entity and beneficial owner(s) level existence of targeted financial sanctions prohibiting providing a particular professional service; if so, professional service cannot be provided at all. b. Ongoing or continuous screening in the absence of obvious changes of the client's beneficial owner(s) during the period when professional service is provided, is disproportionate to the nature of the services that are episodic, non-transactional based and where the obliged entity has no power to block the client's transaction limit client's activity. 2. Automated screening tools requirement. Audit firms do not operate automated, continuous screening solutions. Non-

Name of the respondent	Question	Answer
		exceptional requiring automated tools or ongoing manual checks is disproportionate and inconsistent with the nature and risk of non-transactional services provided by auditors as already disclosed above. 3. Use of digital identification. Where qualified digital identification or signatures are used, additional personal identity document equivalent data collection should not be mandatory, unless there are justified doubts regarding beneficial ownership or the accuracy of registry information. 4. Private commercial identification service providers. The RTS should avoid creating an indirect obligation to purchase identification or authentication services from unregulated private commercials of this kind of service providers. This creates additional administration burden, increases costs and intermediaries without demonstrable AML/CFT effectiveness benefits. Such option should be clearly stated as a non-mandatory possibility. Instead, measures shall be taken to ensure that official state registers all over EU are able to provide efficient, trusted identification and authentication services for reasonable price to all obliged entities. 5. Role and powers of obliged entities. The RTS should better reflect that auditors and accountancy professionals are market participants without enforcement powers, investigatory authority or access comparable to public bodies. Requirements that implicitly expect such capabilities risk being ineffective and disproportionate. We strongly support maintaining a firm but realistic distinction between private sector preventive obligations and public sector enforcement responsibilities.
Estonian Auditors' Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Estonian Auditors' Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Estonian Auditors' Association	Do you have any comments on the Annex in the draft RTS?	No
Estonian Auditors' Association	How would you rate the proposals set out in the draft RTS overall?	Inadequate
EU Federation for the Factoring and Commercial Finance Industry (EUF)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NA
EU Federation for the Factoring and Commercial Finance Industry (EUF)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The EUF fully supports the objective of strengthening the EU's anti-money laundering and counter-terrorism financing (AML/CTF) framework. Nevertheless, Regulation 2024/1624 of 31 May 2024 includes the principle of proportionality. The effectiveness of the AML/CTF framework depends on the application of a risk-based approach, meaning a strong commitment to proportionality ensuring that measures are targeted where risks are highest and do not impose unnecessary burdens in low-risk contexts. It is crucial for the competitiveness of the EU finance sector to have a risk-based approach. In Europe, the sector play a major role in financing the real economy.

Name of the respondent	Question	Answer
		In accordance with Article 1 “Proportionality and risk-based approach”, we call for a real application of principle of proportionality in the RTS. Obliged entities of banking and financing sector have sufficient experience in combating money laundering and terrorist financing to assess the risks. We emphasize the following points, taking into account the specific characteristics of low-risk specialised financing activities such as factoring. Collecting new data and updating customer information for existing customers onboarded will require additional time from staff, at the expense of time spent on AML/CFT risk assessment. Customer onboarding and updating procedures should be simplified since not all data are always relevant, especially for entities specialised in low risk forms of financing such as factoring – different forms of financing require differentiated treatments. The RTS should therefore introduce clearer differentiation, including explicit proportionality clauses or simplified regimes. Simplified due diligence measures for low risk forms of financing such as factoring should include the following: - Cancellation of collection of all identifying information (art. 2(ii) and 5 of the draft RTS), e.g. not collecting all first names for natural persons or not collecting both the “registered name,” and “trade name” for legal entities. - Cancellation of collection of the information about apartment number, building number, post boxes (art. 3 (c) of the draft RTS). - Cancellation of collection of all nationalities of a customer or beneficial owner (BO) (art. 5) since this is neither risk-based nor operationally feasible. In most cases, identification documents

Name of the respondent	Question	Answer
		display only one nationality, and for BOs, it can be very difficult or even impossible to gather information from their identity documents due to their location. At the very least, it should suffice to use information extracted from BO registers as reliable and independent sources of information. - If an obliged entity enters into a business relationship with a PEP, obtaining prior authorisation from senior management should only be required based on risk in order not to treat PEP customers with unfounded prejudice. With regard to cases of updating already existing and ongoing business relationships, data on the place of birth has so far not generally been required for BOs or legal representatives; the same applies to addresses of BOs. Taking into consideration both the GDPR's data minimisation principle, the low AML/TF risk of factoring as well as disproportionate impracticabilities in the collection of such data, we advocate to cancel this data collection requirement for BOs and representatives of legal entities with whom an ongoing business relationship has already been established at the time of applicability of the AMLR in July 2027. In this context of updating customer information, we also wish to point out the need for clarification as to consequences of unsuccessful attempts at updating customer information. Especially in cases of low risk such as factoring, we advocate against the consequence of a necessary termination of the business relationship, especially if the obliged entity has been able to obtain at least some information through e.g. consulting registers or at least obtaining the customer's declaration that there has been no change. As stated below in our comments to the recitals: Once a customer has been

Name of the respondent	Question	Answer
		correctly identified, they should not need to be identified again nor be asked for a new ID document solely because e.g. the ID document has expired – an update of the identification through an ID document should only be necessary if elements emerge that cast doubt on the customer's identity or on the authenticity of the ID document.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Articles 6 and 7 Article 6 lists documents for the verification of identity. Further clarity should be provided, for example through a non-exhaustive list of acceptable measures, to preserve flexibility and proportionality. From a technological perspective regarding non-face-to-face verification (art. 7), each Member State will be required to provide a EU Digital Identity Wallet with common specifications, which are currently being developed by a consortium (monitored by the European Commission). This wallet must be made available to users by the Member State by the end of 2026. These elements must then be rolled out across Member States and within customer journeys, which will leave institutions very little time to prepare until the AMLR is applicable as from 10 July 2027. As the obliged entities cannot speed up the adaptation and implementation processes of the widely used and acknowledged providers of such alternatives, this needs to be taken into consideration and accepted at least for an interim period which should correspond to the timeframe for updates on already existing customers in a risk based manner within up to 5 years after the RTS' entry into force. Article 6 (art. 22 of AMLR) does not appear to require BO to provide an identity document. However, Article 62 of the

Name of the respondent	Question	Answer
		Regulation refers to the collection of the identity document number and a general description of the type of document concerned. Article 22 requires either the presentation of the identity document or the taking of reasonable steps to obtain the necessary information, documents and data. We understand that it is not mandatory for the BO to present an identity document. We consider it preferable to state this in the text of the RTS in order to avoid any ambiguity. Article 6 para. 5 of the draft RTS should therefore be amended accordingly. This clarification is important for Articles 22 and 62, particularly for beneficiaries in countries where no form of identification exists or where it is not mandatory. Article 10 Reasonable measures for verification of the BO We wish to draw attention to the fact that, in some countries, there are no central registers. Also, for entities with their registered office in one member state, not all registers in another EU Member State are accessible. Central registers may also be inaccessible for other reasons, and reliable third-party sources may be limited. Self-declaration often becomes the only viable option, without the texts specifying under what conditions it may be considered sufficient. Clarification should therefore be provided in the final RTS. With regard to verifying the BO, institutions should therefore have some discretion in assessing what constitutes reasonable measures. In this context, the list of measures should not be exhaustive. We suggests inserting the word “may” before ‘include’ in the first sentence of art. 10 para. 1 of the draft RTS, as well as deleting ‘at least one of the following’ and stating in art. 10 para. 1 lit. (b) of the draft RTS ‘which may include, for example’. In order for art. 10 of the draft RTS to be consistent with art. 20

Name of the respondent	Question	Answer
		(b) of the AMLR and the proportional and risk-based approach of the AMLR, we also advocate to specify at the end of Article 10: “These measures must be proportionate to the size, nature and complexity of the obliged entity’s activities, as well as to its exposure to ML/TF risks”. Article 27: Additional information on the source of funds/source of wealth of customers/BO With regard to the application in practice of art. 27 to PEPs, obtaining additional information on the source of funds/wealth will be very difficult for obliged entities who are not holders of the PEP’s account. Accordingly, a clarification on PEPs is advised. Article 32 : Electronic identification means and relevant qualified trust services : In case an electronic identification means or qualified trust service is missing attributes, the obliged entities must obtain and verify the missing attributes through other means. However, it needs to be taken into consideration that not all natural persons and legal entities will be enrolled in or use such tools electronic identification / relevant qualified trust services in 2027. In order to ensure accessibility especially to specialised financing services, the RTS should show up options that allow for customer-friendly flexibility while still complying with the AMLR. Alternative electronic/non-face-to-face identification means which are widely used and accepted need to be taken into consideration and accepted at least for an interim period which should correspond to the timeframe for updates on already existing customers in a risk based manner within up to

Name of the respondent	Question	Answer
		5 years after the RTS' entry into force (see also our reply to section 2, question 3).
EU Federation for the Factoring and Commercial Finance Industry (EUF)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Factoring should generally be considered as associated with lower ML/TF risk since the main risk relevant for AML/CFT purposes is the risk of fraudulent invoices, aimed at the factoring client receiving more liquidity from the factoring company than corresponds with the services provided or goods delivered (if any). Factoring is however not well suited for actually laundering money to hide the sources or origins of certain amounts of money: Since factoring companies are well aware of the aforementioned main risk of fraudulent invoices, they keep close contact to their customers, including regular field audits, and have an intrinsic interest to know the details and background to their clients' transactions since the factoring company purchases the receivables stemming therefrom, in the majority of cases also assuming the credit/default risk of the debtor (factoring without recourse). In this context, the EUF wishes to once more clarify that the customer/business relationship for the purpose of e.g. the AMLR and the corresponding RTS generally lies between the factoring company and the seller/assignor/factoring client of the receivables – this is where the contractual relationship exists, which is critical for the classification as customer. There is generally no contractual relationship between the factor and the (often numerous) debtors. The only form of factoring where this is handled differently is reverse factoring (sometimes also referred to as e.g. supply chain/payables finance or confirming), where the roles of debtor/buyer and seller are in some aspects reversed: One debtor initiates and enters into a contract and factoring

Name of the respondent	Question	Answer
		relationship with the factor which covers several sellers/suppliers – in these cases, the debtor is central to the process/relationship and is hence the actual customer in the context of AML/CFT requirements (including customer due diligence). The debtor selects which sellers participate and which receivables are included, so that sellers cannot sell/assign receivables to the factoring company without the debtor's approval. Therefore, even if e.g. framework agreement exists that includes the factor and the seller, the sellers are not considered as customers, but rather as mere counterparties (cf. Wolfsberg Trade Finance Principles 2019). The EUF also advocates for a factoring-specific clarification on inter alia the cooperation of two or more factoring companies/obliged entities as low-risk, hence entailing simplified due diligence measures, since this constellation shows clear similarities to the case referenced in recital 18 of the RTS. Such a cooperation of factoring companies in cross-border cases is often referred to as "two-factor system/relationship", and it has to be noted that they are not comparable to the cross-border correspondent relationships which are referenced in art. 36 of the AMLR. Article 8 - Reliable and independent sources of information: For low-risk cases such as factoring, several options could be proposed, e.g. self-declaration, consultation of a register, an independent source. Generally, in order to ensure compliance with conditions (d) and (e), more specific guidance is welcome, while adding the phrase "as far as possible" to (d) and (e) would ensure the proportionality and risk-based approach. With regard to art. 10 of the draft RTS (based on art. 22 para. 7 (b) of the AMLR), we advocate for a clarification that consulting the central registers of BOs is in itself sufficient and considered

Name of the respondent	Question	Answer
		as a reliable source; the current wording of both art. 22 para. 7 (b) AMLR and art. 10 of the draft RTS make the central registers appear as insufficient or even unreliable, which is incorrect. Furthermore, this would help avoid distortions in competition. In addition, we wish to point out that declarations of discrepancies between the data resulting from searches carried out via reliable sources and data declared by the customer to the BO registry or equivalent at European level will increase the administrative burden of obliged entities such as factoring companies even though factoring only shows AML/TF low risk. Article 20 - Minimum requirement for customer identification in situations of low risk: In low-risk situations such as factoring, obliged entities should also be allowed to perform identity verification pursuant to Article 22(6) of AMLR in a manner commensurate with the type and level of risk identified, including by relying on information declared by the customer (with appropriate consistency checks), provided that the level of assurance achieved is proportionate to the identified risk.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In different articles as well as in Annex I of the RTS, it is stated that certain measures are to be fulfilled or carried out „where applicable“ (e.g. in art. 11 para. 2b or art. 24 lit. b) or (in the case of information and data) „where available“ (e.g. in art. 3 lit. c, art. 20 para. 1 lit. b or in Annex I). Unfortunately, it remains unclear what efforts need to be undertaken by the obliged entity to obtain and verify this information, and it also remains unclear what consequences follow if the customer cannot or will not provide e.g. a tax ID number or LEI. The EUF advocates for clarifications that limit the administrative burden on obliged entities but still ensure that the required information can be obtained. Hence, e.g. asking the customer

Name of the respondent	Question	Answer
		for a tax ID should be considered as sufficient effort undertaken by the obliged entity. With regard to legal entities, Article 2(ii) of the draft RTS provides that, for legal persons and other organisations with legal capacity under Article 22(1) of Regulation (EU) 2024/1624, obliged entities must collect both the registered legal name and the trade name, where different. If the provision is maintained (and we call for simplified measures for low-risk forms of financing such as factoring, see our answer to question 2 above), it is necessary to clearly indicate which information sources can be consulted to comply with this obligation. With regard to fulfilling CDD requirements in a non face-to-face context, we wish to point out that the process of reliance on another obliged entity for meeting certain CDD requirements as it is laid down in art. 49 AMLR requires that the obliged entities conclude a written agreement, specifying the conditions for the transmission of the information and documents. This can be disproportionately cumbersome in certain constellations and countries, e.g. in the case of a one-off identification being conducted by a credit institution for another obliged entity. Due to the high number of credit institutions in one EU member state (let alone in all of Europe), it is not feasible to enter into written agreements with all or even just the most widely represented of these banks, but simultaneously, the ongoing trend in the financial sector to downsize the amount of physical branches makes it necessary to be able to rely on other obliged entities, preferably in a flexible way to ensure customer friendliness. It would be helpful if the RTS on customer due diligence would clarify this point and perhaps show up options that allow for customer-

Name of the respondent	Question	Answer
		friendly flexibility while still complying with the AMLR. The RTS should also not apply immediately after publication; rather, there should be a transitional period to enable adjustments. At the very least, the RTS' application should be linked to the applicability of the AMLR.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	4
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 4 RTS states that for the information on the birth place, at least the country name is to be collected; but identity documents do not always state the country name, just the name of the town/municipality. Hence, art. 4 should be changed so that the collection of any information on the place of birth as provided in the identity document suffices.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7

Name of the respondent	Question	Answer
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The clarifications on art. 22 (6) AMLR in arts. 6 & 7 RTS are generally to be welcomed. Also, providing alternatives to the electronic identification means in arts. 6 (6) & 7 (1) RTS is to be welcomed as the use of eIDAS-regulation compliant means is not evenly distributed in the EU. The use of various identity-verification methods should be possible & allowed for remote-onboarding processes. Some alternatives to electronic identification means widely used in some member states in non-face-to-face situations do not transfer all of the information on a natural person's identity document to the obliged entity (e.g. facial image, identity document's number). As the obliged entities cannot speed up adaptation processes of the providers of such alternatives, this needs to be taken into consideration & accepted at least for an interim period which should correspond to the timeframe for updates on existing customers in a risk based manner within up to 5 years after the RTS' entry into force (cf. also section 2, reply to question 3). Regarding verification measures conducted on a non-face-to-face basis (art. 7 RTS), it needs to be considered that even though the implementation of eIDAS as such is mandatory, the use of eIDAS depends primarily on the customer's willingness. Therefore, an alternative system must be acceptable to ensure that there is no disruption to access to services or to commercial relationships. It would be advisable to add at the end of art. 7 para. 4 RTS "in particular when the proportionality and risk-based approach as expressed in art. 1 justifies it". As for the justification why the customer could not be verified through the means mentioned in art. 22 (6) AMLR (as required in art. 7 (4) RTS), we also advocate that a reference to the non-existence/-use of electronic identification means should suffice

Name of the respondent	Question	Answer
		as justification – it is disproportionate & unnecessary to require the obliged entity to investigate into more detailed, possibly private reasons of the customer.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	8
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 8 RTS does not merely reiterate the obligation to use reliable sources of information, but codifies the criteria for determining such reliability, the risk-based or risk-sensitive nature of this rule should therefore be emphasized more.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The list of “reasonable measures” mentioned in art. 10 RTS should be considered as non-exhaustive (with the various mentioned registers not having to be consulted cumulatively) & be applied in a risk-based manner. Under art. 10, utility bills can be used for the verification of the BO. However, these do not contain certain information such as e.g. the ID document number, so that a combination of such utility bills with e.g. information from a reputable credit agency or similar data service providers should suffice for verification. We highly welcome the clarification in recital 9 that senior managing officials are not BOs for the purposes of

Name of the respondent	Question	Answer
		identification & verification measures since it also helps with the understanding of art. 63 AMLR. However, art. 13 RTS states that the same information has to be collected for senior managing officials as for BOs, but that instead of obtaining the residential address & country of residence, it suffices to obtain the address of the legal entity's registered office – this is to be welcomed for reasons of privacy protection, but it limits the reasonable measures for verification as listed in art. 10 in that e.g. utility bills from the senior managing official's residential address are de facto excluded as measures for verification in these cases. We advocate for corresponding clarifications in the RTS to recognize & reflect these practical issues.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	12
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Art. 12 RTS contains clarifications on understanding the ownership & control structure of customers in complex structure cases. One of the (additional) conditions for classifying an structure as complex is that "there is a legal arrangement in any of the layers" between the customer & the BO (cf. art. 12 (1)(a) RTS). Unfortunately, the RTS do not explain the concept of "legal arrangement" although further clarification is necessary for limitation & delineation purposes since every layer/intermediate company between the customer & the BO is ultimately based on some form of legal arrangement. We suggest to add to art. 12 RTS a clarifying reference to the definition of "legal arrangement" as contained in art. 2 (32) AMLR.

Name of the respondent	Question	Answer
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	16
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	With regards to art. 16 RTS, we wish to point out that the legal representatives of a legal entity as referenced in art. 22 (1) lit. b AMLR are not “persons purporting to act on behalf of the customer” – this should be clarified.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Please specify which recital you refer to, and share your comments below.	The EUF welcomes the clarification in recital 25 that allows for updates for already existing customers to the new CDD standards in a risk-based manner within 1 to up to 5 years after the RTS’ entry into force, prioritizing updating higher ML/TF risk business relationships. This also helps clarify art. 26 of the AMLR. In this context, we wish to point out that once a customer has been correctly identified, they should not need to be identified again nor be asked for a new ID document solely because e.g. the ID document has expired – an update of the identification through an ID document should only be necessary if elements emerge that cast doubt on the customer’s identity or on the authenticity of the ID document. This should also apply to the updating process for already onboarded and existing customers before the application of the AMLR from 10 July 2027.

Name of the respondent	Question	Answer
		Likewise, if the customer already has a business relationship with the obliged entity, there is no need to identify them again to start another business relationship – this is in line with recital 21 and avoids unnecessary duplication and also reduces the regulatory burden on the obliged entities and their customers.
EU Federation for the Factoring and Commercial Finance Industry (EUF)	Do you have any comments on the Annex in the draft RTS?	No
EU Federation for the Factoring and Commercial Finance Industry (EUF)	How would you rate the proposals set out in the draft RTS overall?	Neutral
Eurobank Ltd	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 7 Non face to face verification measures Certain limitations or practical considerations in terms of the readiness of financial institutions are expected to be encountered through the imposition of e- IDAS verification measures especially to people with vulnerabilities or limitations and who do not have yet access to e-IDAS based digital identities. We suggest a phased in approach for the e-IDAS provisions until e-IDAS 2.0 remote identification solutions are widely operational. Article 22 - Sectoral simplified measures with respect to pooled accounts We suggest that AMLA reassess the provisions of the specific

Name of the respondent	Question	Answer
		article particularly in terms of the classification of pooled accounts in the category of SDD eligible products. Given the open-ended provision of Article 22 (b) for allowing the eligibility of SDD measures to any type of obliged entity subject to the condition of Article 22 (d) of being classified as low risk we expect local market reaction by obliged entities challenging their risk classification in their effort of being treated in the context of SDD measures. At the same time, we seek clarification if pool accounts will be permissible for obliged entities being classified as of High/Normal ML/TF risk and in case of High Risk what should be the applicable EDD measures. Moreover, the EDD measures should define a risk-based approach framework for the due diligence to be performed by defining the scope and extend of these measures with the possibility of introducing specific monetary thresholds (e.g. 10.000) for the application of enhanced due diligence measures.
Eurobank Ltd	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 12 - Understanding the ownership and control structure of the customer in the case of complex corporate structures The use of nominee directors per Article 12.1.c is not considered an element of complexity of the ownership structure while at the same time it will be difficult to ascertain the role of directors in the intermediary layers and conclude if it is or not a nominee director. It will be useful to clarify how the element of credibility shall be assessed for the information included in the relevant “organigram”.

Name of the respondent	Question	Answer
Eurobank Ltd	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 18 – Identification and intended nature of the business relationship or the occasional transactions: On the identification of the purpose and intended nature of a business relationship or occasional transaction we foresee a challenge allowing obliged entities to at least one of the types of information specified in each of the paragraphs (a)-(e). This is because AML Risk Based models, transaction monitoring systems as well as account opening forms and periodic review forms are set up based on these requirements hence giving the discretion to each entity to apply a different criterion will distort uniform market practices. To this respect, we consider that it may be more appropriate to differentiate requirements to different regulated entities (i.e. Credit Institutions vs Gambling entities) while standardizing specific requirements without allowing interpretation. The above maybe in contrast with the uniform policy framework suggested by AMLA nevertheless we expect a potential issue in terms of market reaction especially in cases of comparing the level and extent of information to be collected by Credit Institutions of the same country.
Eurobank Ltd	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Article 23 - Customer identification data updates in low-risk situations: The RTS should clearly clarify that, for low risk customers, obliged entities may choose to rely on perpetual reviews—supported by continuous data analytics, behavioural transaction monitoring triggers, and ongoing updating of expired KYC data—as an alternative to conducting customer reviews at fixed periodic intervals.

Name of the respondent	Question	Answer
Eurobank Ltd	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 33 – Entry into force AMLA should conduct a thorough assessment and communication with National Central Banks and Member States in order to achieve timely and seamless implementation without gaps and with legal certainty. This challenge is especially important, in cases where the RTS does not provide for issues specifically addressed and regulated under the current national guidelines. For example from the review of the RTS it appears that CDD and EDD requirements explicitly defined in national banking cyprus secondary legislation, are not provided for in the draft RTS eg (i)Face to Face meeting with the UBO prior the activation of a corporate entity account ; (ii)Prohibition in engaging with Shell Companies; (iii) obtaining recent Audited Financial Statements of as mandatory requirement in all cases prior account opening or Management accounts if newly incorporated entity. While we understand that a uniform risk-based standard will be applicable across various industry sectors, advanced measures that exist in regulated industries such as Credit Institutions or specific jurisdictions need to be taken into consideration. In case the Customer due diligence measures are not expected to significantly differentiate from the draft RTS document then adequate time needs to be given to obliged entities to revise current policies and procedures as well as educate customers to new Due Diligence requirements given divergence from the existing National requirements.

Name of the respondent	Question	Answer
Eurobank Ltd	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Eurobank Ltd	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Eurobank Ltd	Do you have any comments on the Annex in the draft RTS?	No
Eurobank Ltd	How would you rate the proposals set out in the draft RTS overall?	Neutral
Eurobank Ltd	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	No significant additional costs

Eurobank Ltd	Please justify your answer to the previous question and provide evidence where possible.	Overall we achieve high level of readiness to the new requirements as a systemic and important Credit Institution
Euroclear SA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	Certain provisions could not be applied to the range of products and services offered by Euroclear group. Namely, these include the provisions of Article 22 and Article 17 of the draft RTS. What is the Euroclear group?

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	Euroclear group includes, among others, six central securities depositories (CSDs) and one international central securities depository (ICSD) – Euroclear Bank, which is also a credit institution. In its role of ICSD (one of the two in Europe), Euroclear Bank acts as a Financial Market Infrastructure – a pillar of European and global capital markets – facilitating the processing of securities transactions efficiently, enhancing liquidity, and managing associated risks. The company operates secure and resilient platforms where a wide network of the world's largest financial institutions and central banks hold and transact securities. To illustrate the global footprint of Euroclear Bank alone, we note that it serves approximately 1,800 financial institutions, which use its platform to access circa 50 different markets. On their behalf, Euroclear Bank holds approximately 20 trillion EUR of assets under custody and enables 197 million netted transactions per year, worth an equivalent of 772 trillion EUR. Moreover, Euroclear Bank operates a dedicated funds platform. This platform connects fund managers with fund distributors and sub-distributors. Article 22 – incompatibility with capital markets Euroclear's core service is the settlement of global securities transactions. In practice, it involves opening and maintaining accounts for large financial institutions, which pool funds of their own customers. Article 22 of the draft RTS seems to create a serious

Name of the respondent	Question	Answer
		impediment to global securities transactions. This is due to the following: 1) It applies to credit institutions, i.e. it captures in scope Euroclear Bank, which acts as an ICSD and Financial Market Infrastructure. 2) Euroclear Bank maintains omnibus (pooled) accounts for its customers, which are financial institutions. 3) Article 22 does not explicitly distinguish whether the pooled account is provided in the context of a correspondent relationship or within a different arrangement, such as the one referenced in the EBA's Guidelines on ML/TF Risk Factors (EBA/GL/2021/02) regarding notaries and legal professionals holding pooled accounts for their customers. 4) In the capital markets, the conditions listed in points (a) to (e) would rarely be cumulatively met, if ever. The most relevant condition is the one laid down in point (e) whereby the credit institution would need to obtain sufficient comfort that the account holder applies robust and risk-sensitive CDD measures on its clients and their beneficial owners. This is in alignment with Article 19 of the AMLDs and Article 36 of the AMLR. Consequently, Article 22 could be read as applying to credit institutions offering pooled accounts in the context of correspondent relationships. This would result in the following unwanted consequences: 1) It would create an insurmountable administrative burden on

Name of the respondent	Question	Answer
		an ICSD such as Euroclear Bank. As an illustration, a single Euroclear Bank customer, which is a major international broker, would on average hold a pooled account for over twenty thousand underlying clients. It is not operationally feasible for an ICSD/credit institution to perform identification and verification of all the natural persons behind the underlying clients, especially given the fact that Euroclear Bank has no direct contact with these underlying clients. 2) This burden will be shared between the ICSD/custodian which needs to obtain the information from its customers, and the latter which would need to transmit the information, hence running increased risks of delays in establishing a business relationship and personal data protection-related risks in relation to the transmission of large volumes of such data. 3) This would be a duplication of the CDD already performed by these other financial institutions. This would thus not be in line with the proportionality objective which is an integral part of the AMLR impact assessment. 4) Crucially, such an approach would be extremely damaging to the competitiveness of EU capital markets. The burden spilling over the intermediaries will push them to explore options outside the EU for their securities investment accounts. Therefore, we recommend clarifying that correspondent banking relationships fall outside the scope of Article 22 of the RTS in relation to Article 20(1)(h) of the AMLR. These relationships would remain covered by Article 36 of the AMLR. A concrete wording proposal is provided in the specific sections

Name of the respondent	Question	Answer
		on Article 22 and on Recital 18. Article 17 The potential issues stemming from Article 22 would by analogy be experienced by fund managers in relation to the provisions of Article 17 (see Section 3).
Euroclear SA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We acknowledge that the majority of the provisions in the RTS contain a risk-based element whereby obliged entities are expected to apply risk-sensitive measures to obtain the required information. This is aligned with the overarching principle laid down in Article 1, and is a welcome development. There are some remaining provisions that could also benefit from a stronger risk-based approach. These mainly include Article 17 (see article-specific feedback) and Article 22 (see Question 1 and article-specific feedback), but also Article 12 and Article 13. Article 12 – need for a risk-based approach with regards to complex ownership structures We note that Article 12 requires obtaining additional information with respect to the entities meeting the conditions laid down in para. 1, “such as an organigram”. This requirement could be juxtaposed to the one under Article 11. Article 11 already requires obtaining a description of the ownership and control structure of the customer where it contains more than one legal entity. In practical terms, this is achieved by requesting the customer to provide an organigram.

Name of the respondent	Question	Answer
		Therefore, from a risk-based perspective, it is unclear why an additional assessment needs to be conducted with respect to entities containing three or more layers. The practical consequences would be identical to the ones pursuant to Article 11, with no added AML/CFT value. Additionally, we note that the organigram is mentioned as an example, but it is unclear what other documents may be requested and for what purpose. Consequently, we propose removing Article 12 from the RTS. The requirements laid down in Article 11 should be sufficient to collect the relevant information concerning the potential ML/TF risks stemming from complex structures. Article 13 – need for proportionality There are two main difficulties with respect to Article 13 which could be considered at odds with the risk-based approach. These include the extensive data collection requirement and the large scope of persons falling under the definition of 'senior managing official' (SMO). First, Article 13 requires collecting with respect to SMOs the same information as the one for beneficial owners, and also verifying it in the same way. We believe this approach to be disproportionate given that SMOs are employees of the respective legal entities, without owning or controlling them. The extensive data requirements which apply to beneficial owners are intrusive and in practice create severe difficulties in obtaining the required information.

Name of the respondent	Question	Answer
		SMOs might claim that requesting such vast amounts of information contravenes personal data protection rules. It renders the CDD process slower and more burdensome. We therefore believe a more proportionate approach to data collection for SMOs should be applied. This would also be aligned with the provisions of the AMLR considering the following: - Recital 125 of the AMLR explicitly specifies that SMOs are not beneficial owners. - Article 22(2) of the AMLR states that "[f]or the purposes of identifying the beneficial owner of a legal entity or of a legal arrangement, obliged entities shall collect the information referred to in Article 62(1), second subparagraph, point (a)". This provision refers only to beneficial owners, not to SMOs. Similarly, Article 62 also pertains to beneficial ownership information. Consequently, the AMLR permits the application of less strict data requirements with respect to SMOs. We would hence recommend that Article 13 be amended in the following way: "In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect information on all names and surnames, date of birth, residential address and country of residence of the senior

Name of the respondent	Question	Answer
		managing official. Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence; (b) verify the identity of senior managing officials in the same way as they would for beneficial owners". Second, Article 63(4) of the AMLR defines SMOs as the persons who are the executive members of the management body, as well as the natural persons who exercise executive functions and are responsible for the day-to-day management of the entity. This definition captures a disproportionately high number of natural persons, especially in cases of larger corporate entities. We therefore call for including the persons responsible for the day-to-day operations only in cases where there is no management body in place. This would also be aligned with the Level 1 text as it would not bring about any material changes to the AMLR provision.
Euroclear SA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We caution that information on end investors (Article 17) and on underlying clients behind pooled accounts (if applicable to correspondent relationships) would not be available to the obliged entities. This would be the case since the end investors and underlying clients are not customers of the obliged entity, but of the customer of the obliged entity. Consequently, processes would need to be put in place to transmit the information from the customer to the obliged entity, without any possibility for the latter to be in direct

Name of the respondent	Question	Answer
		contact with the end investor/underlying client. Moreover, the obliged entity would lack information on the change of ownership, which would be visible only to the intermediary (the customer). The proposed solutions are put forward in the response to Question 1, and in the article-specific sections, including a section on Recital 18.
Euroclear SA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A.
Euroclear SA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We note the introduction of Article 16 which requires obliged entities to obtain information enabling them to verify the existence and extent of the power of representation with respect to persons purporting to act on behalf of the customer. However, Article 16 does not clarify the scope of such persons. We maintain that this should not extend to authorised signatories and other internal staff of the legal entity, such as relationship managers. It should rather focus on external representatives (agents) who hold the formal authority to act on behalf of the customer. This would allow focusing efforts on where actual ML/TF risks may lie. We therefore recommend amending the draft Article 16 in the

Name of the respondent	Question	Answer
		following way: “In relation to the identification and verification of the person purporting to act on behalf of the customer as referred in Article 22 of Regulation (EU) 2024/1624, and in addition to the information to be collected pursuant to the relevant provisions of Section 2, obliged entities shall obtain the following information: (a) in situations where a natural person is unable to act on his/her own behalf, such as minors and persons lacking mental capacity, the document confirming legal guardianship; (b) in situations where a person is authorised to act on behalf of a legal entity, the proxy agreement or power of attorney, except where a natural person is a member of the management body of the legal entity or an employee acting in fulfillment of his/her professional duties.
Euroclear SA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Euroclear SA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	17
Euroclear SA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 17 raises significant operational challenges for collective investment undertakings (CIUs) and their service providers, particularly in cross-border contexts. CIUs often rely on intermediaries (e.g., distributors, custodians) who already perform CDD on underlying investors. Imposing full identification and verification obligations on CIUs duplicates these efforts.

Name of the respondent	Question	Answer
		In practice, CIUs would need to collect data on potentially thousands of underlying investors behind omnibus accounts, even when those investors have already been subject to CDD by regulated intermediaries. This creates an insurmountable administrative burden and increases risks related to data transmission and privacy. This burden will be shared with each intermediary entity down the chain and the end-distributor who would need to transmit the information, hence running increased risks of delays in investment and personal data protection-related risks in relation to the transmission of large volumes of such data. In addition, Article 17 does not sufficiently distinguish between different distribution models or account structures, such as direct subscriptions versus pooled/omnibus accounts held by intermediaries. This creates ambiguity for CIUs operating through multiple layers of distributors, transfer agents, and nominee arrangements. The RTS does not clarify the extent of "look-through" obligations for CIUs. For example, whether CIUs must identify all beneficial owners in complex structures such as feeder funds or nominee accounts, regardless of materiality thresholds. The negative impact is further amplified by the absence of proportionality for very small holdings. Where the conditions for the exemption are not met, CIUs may need to identify natural persons holding even negligible interests in a fund. CIUs and their service providers will face significant operational

Name of the respondent	Question	Answer
		and financial burdens to implement full look-through identification and verification obligations. These costs include system upgrades, data collection processes, and contractual amendments with distributors, which may reduce margins and investor returns. Regarding smaller UCITS/AIF managers that lack resources to absorb compliance costs, this could lead to market consolidation and reduced diversity in the EU asset management sector. The challenges described above could create a competitive disadvantage vs non-EU CIUs: 1) The RTS introduces complexity for global distribution networks, making EU funds harder to market internationally. 2) Distributors may prioritise non-EU funds to avoid duplicative CDD obligations, reducing EU CIUs' access to international capital. 3) Increased data collection requirements may slow down investor onboarding, making EU CIUs less responsive compared to competitors. This is particularly problematic for institutional investors who expect fast execution. Non-EU competitors may avoid these complexities, giving them a speed and cost advantage. In view of the extensive challenges described, we propose revising Article 17 so that it focuses on CIUs obtaining sufficient comfort that the distributor applies robust and risk-sensitive CDD measures to its own customers

Name of the respondent	Question	Answer
		and its customers' beneficial owners. Concretely, the provision could take the following form: "When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if the following conditions are met: (a) it is satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the identity of any final investor without undue delay and upon request; (b) it is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners."
Euroclear SA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	22
Euroclear SA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	In view of the challenges described in our response to Question 1, we recommend clarifying that correspondent banking relationships fall outside the scope of Article 22 of the RTS in relation to Article 20(1)(h) of the AMLR. In its responses to questions on the Consultation Paper (EBA/CP/2025/04) in relation to the RTS on CDD under Article 28(1) AMLR, the EBA acknowledges that "the relationships between a credit institution (which opens a pooled account) and a PI or EMI should be more appropriately

Name of the respondent	Question	Answer
		assimilated to correspondent relationships within the meaning of Article 2(22) point (b) AMLR. As such, they fall outside the scope of this specific provision of the RTS". To this end, the EBA has amended Recital 18 to specify that "[s]ituations where credit institutions open a payment account for payment institutions or electronic money institutions will fall outside the scope of the sectoral simplified measures provision of this Regulation. Such situations would be regarded as correspondent relationships within the meaning of Article 2(22), point (b), of Regulation (EU) 2024/1624". Moreover, the EBA guidelines on ML/TF Risk Factors refer to pooled accounts only in the section dedicated to retail banking, not in the correspondent banking one. The definition of 'pooled accounts' also refers to legal practitioners and notaries, rather than correspondent banking relationships. This is further reiterated in Recital 51 of the AMLR. Based on the above, it is our understanding that correspondent banking relationships fall outside of the scope of Article 22 of the RTS and Article 20(1)(h) of the AMLR, respectively. We hence suggest amending the wording of Article 22 to specify that "With the exception of situations falling under Article 2(22) of Regulation (EU) 2024/1624, where a credit institution opens an account…". We further propose that this is reflected in Recital 18 (cf. our comment to the Recital which includes a wording proposal).

Name of the respondent	Question	Answer
Euroclear SA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Euroclear SA	Please specify which recital you refer to, and share your comments below.	Recital 18 In relation to the obligation imposed on credit institutions to perform CDD on the customers of their customers holding pooled accounts, Recital 18 clarifies that there are two exceptions – for payment institutions and for electronic money institutions. The Recital further specifies that such situations would be regarded as correspondent relationships within the meaning of the AMLR. It appears that the intention of the legislator is to exclude correspondent relationships from the scope of Article 22. However, we then question why this has not been explicitly stated, but rather only two types of correspondent relationships have been mentioned. This clarification is important, as the extension of CDD requirements to correspondent relationships would have an immense negative impact on EU capital markets, as explained in our feedback to Article 22. We hence propose replacing the last two sentences of the Recital with the following: “Situations of correspondent relationships within the meaning of Article 2(22) of Regulation (EU) 2024/1624 will fall outside the scope of the sectoral simplified measures provision of this Regulation, as these would be governed by the provisions of

Name of the respondent	Question	Answer
		Article 36 of that Regulation." The amended Recital 18 will then take the following form: "This Regulation identifies a service that would benefit from specific simplified due diligence measures. This is the case where a credit institution opens a pooled account for a customer that is an obliged entity, to hold or administer funds that belong to the customer's own clients, where the ML/TF risk of that service is assessed as low, based on the credit institution's risk assessment. In such cases, since the final customers are already subject to the customer due diligence measures applied by the obliged entity, it is proportionate to allow specific simplified due diligence measures, in order to avoid duplication of controls while ensuring that appropriate safeguards remain in place. Situations of correspondent relationships within the meaning of Article 2(22) of Regulation (EU) 2024/1624 will fall outside the scope of the sectoral simplified measures provision of this Regulation, as these would be governed by the provisions of Article 36 of that Regulation."
Euroclear SA	Do you have any comments on the Annex in the draft RTS?	No
Euroclear SA	How would you rate the proposals set out in the draft RTS overall?	Good
Euroclear SA	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or	Disruptive impact

Name of the respondent	Question	Answer
	consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Euroclear SA	Please justify your answer to the previous question and provide evidence where possible.	The provisions of Article 17 and 22 would have a major impact in terms of expected costs. This is provided that the obligation to ID&V end investors is maintainted. Similarly, if the obligation to ID&V natural persons behind pooled accounts in the context of correspondent relationships applies, the expected costs would be even higher, and extremely difficult to manage. Other provisions, such as that on SMOs, would further contribute to the increased administrative burden and related investments in additional KYC resources.
Eurofinas	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Eurofinas does not consider that the proposals can be applied across the full range of products and services without further differentiation. The RTS do not sufficiently distinguish between high-risk financial services and low-risk consumer credit activities. Applying largely uniform requirements across such diverse products undermines the risk-based approach and risks diverting compliance resources away from higher-risk activities. The RTS should therefore introduce clearer differentiation, including explicit proportionality clauses or simplified regimes for low-risk products such as BNPL, point-of-sale finance and small-value consumer credit. We welcome the objective of promoting a more consistent and harmonised application of AML/CFT requirements across the

Name of the respondent	Question	Answer
		Union through directly applicable RTS that national supervisors will be required to follow. This is particularly important given the significant divergences currently observed between Member States in areas such as remote onboarding, customer data requirements and ongoing monitoring obligations. At present, obliged entities are often confronted with fragmented and sometimes inconsistent interpretations by national AML supervisors, which may also not always be sufficiently coordinated with other relevant authorities, including data protection authorities regarding the interaction between AML/CFT obligations and GDPR requirements. Greater supervisory convergence and cross-authority coordination will therefore be essential to ensure legal certainty, proportionality and a genuinely risk-based application of the framework. The RTS should more clearly state that requirements are to be applied only to the extent appropriate to the level of ML/TF risk. Collecting extensive new data and updating customer information for existing customers will require significant operational resources without corresponding AML/CFT benefits in low-risk sectors. For existing customers and low-risk products, customer due diligence requirements should therefore be simplified. In particular, Eurofinas considers the following provisions disproportionate when applied to standardised consumer credit: • Collection of highly granular address information, such as apartment numbers or post boxes. • Collection of all nationalities of a customer, despite the fact that identification documents generally display only one

Name of the respondent	Question	Answer
		nationality and there is no reliable source to verify additional nationalities. • Prescriptive requirements regarding place of birth where reliable documentation across Member States is not harmonised. • Extensive updating obligations for pre-existing customers where no relevant change in risk has occurred. Article 6 on verification of identity is also problematic for low-risk consumer finance activities. Mandatory documentary verification risks undermining digital and instant financing models, particularly BNPL, at a time when firms are simultaneously implementing major obligations under the Consumer Credit Directive, AI Act and related frameworks. Specialised consumer credit providers already use multiple effective tools to mitigate AML/CFT and fraud risks, including geo-fencing, IP tracking, transaction consistency checks, BIN controls, delivery address verification, sanctions and PEP screening, 3D Secure authentication and verification of payments through accounts held with regulated EEA institutions. Lenders also have information regarding the source of funds, as payments are made from accounts held in the customer's name with a credit or financial institution established in a Member State or the EEA. The financed goods or services are identified, the overall consistency of transactions is monitored against the customer's profile and financial situation, and transactions remain highly traceable. Obliged entities maintain constant vigilance and, where appropriate, report their suspicions to the relevant FIU.

Name of the respondent	Question	Answer
		The RTS should explicitly recognise such measures as valid risk mitigants and allow obliged entities flexibility to tailor controls to the actual level of risk.
Eurofinas	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While the draft RTS formally recognise the risk-based approach, they do not sufficiently enable its effective application in practice. The level of prescriptiveness and lack of differentiation limit the ability of obliged entities to tailor measures to the actual level of ML/TF risk. The RTS should contain stronger proportionality provisions, particularly for low-risk financing activities such as consumer credit and equipment leasing. Several provisions create disproportionate operational burdens without materially improving AML/CFT outcomes: Articles 3, 4 and 5 – Customer data requirements The proposed requirements relating to addresses, place of birth and nationalities exceed what is necessary in low-risk contexts. • Street name and building number should generally be sufficient for address identification; additional elements such as apartment numbers should only be required where relevant to the risk. • The RTS should allow collection of either the country or place of birth depending on the information available in reliable documentation. • The requirement to obtain all nationalities is neither risk-based nor operationally feasible. Obligations should be limited

Name of the respondent	Question	Answer
		to the nationality evidenced through verification. For customers onboarded before the RTS enter into force, collecting new data points would be burdensome and difficult to reconcile with the GDPR principle of data minimisation. Article 6 – Documents for verification of identity A non-exhaustive list of acceptable verification measures should be provided to support consistent implementation while preserving flexibility, and requirements that effectively mandate certified copies should be avoided to prevent disproportionate barriers to digital consumer finance. Article 7 – Non-face-to-face verification Eurofinas strongly supports the recognition of multiple methods for verifying identity remotely. The RTS should explicitly recognise methods such as: • First payment verification from an account held with a regulated EEA institution. • Reliance on PSD2 account information service providers. • Digital identifiers verified through regulated payment schemes. These methods provide reliable and auditable verification while supporting financial inclusion and digital onboarding. The RTS should also ensure technology neutrality and avoid creating a de facto hierarchy favouring only eIDAS solutions.

Name of the respondent	Question	Answer
		Implementation timelines are extremely challenging: Member States must make Digital Identity Wallets available by end-2026, while the AML package applies from 2027, leaving institutions very limited time to adapt. The RTS should therefore allow an appropriate transition period and continued reliance on existing reliable verification solutions. In addition, Article 7(3)(e) should clarify that standard digital formats extracted from eIDAS-compliant identity documents, including digitally signed PDFs or XML files, constitute valid and sufficient evidence for ex-post verification purposes. Article 10 – Proportionality of monitoring solutions Eurofinas considers it necessary to add at the end of Article 10: "These solutions must be proportionate to the size, nature and complexity of the obliged entity's activities, as well as to its exposure to ML/TF risks." Article 18 – Purpose and intended nature of the relationship For standardised consumer credit products, the purpose of the relationship is inherently defined by the financing of a specific good or service. Requiring additional detailed information provides limited AML/CFT value and should only apply where justified by the level of risk. Article 19 – Politically Exposed Persons Eurofinas supports a risk-based approach to PEP screening. Requiring senior management approval in all cases for low-value consumer credit products is disproportionate and risks

Name of the respondent	Question	Answer
		slowing transactions and reducing access to finance. The RTS should permit simplified handling for low-risk products while ensuring PEPs continue to be identified and monitored. Article 20 – Simplified due diligence in low-risk situations The RTS should ensure that simplified due diligence remains operationally coherent. Certain data elements excluded under simplified measures may nevertheless remain necessary in practice for effective identification and fraud prevention. Article 23 – Updating customer information The current drafting could be interpreted as requiring termination of contractual relationships where customer information cannot be updated. This would be disproportionate in low-risk situations, particularly for performing consumer credit or leasing contracts. The RTS should clarify that updating obligations must remain proportionate and risk-based, taking into account whether there has been any relevant change in the customer's circumstances.
Eurofinas	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. Several data points foreseen under the draft RTS are routinely unavailable, difficult to verify, or operationally impractical in the context of low-risk consumer credit activities. Place of birth and country of birth Identification documents across Member States are not harmonised and often contain only the city or place of birth

Name of the respondent	Question	Answer
		rather than the country of birth. Obliged entities may therefore not be able to independently verify the exact information required under the RTS. The RTS should explicitly allow obliged entities to rely on the information available in reliable documentation and permit collection of either the country or place of birth. Multiple nationalities In most Member States, identification documents display only one nationality. There is generally no reliable or centralised source allowing obliged entities to verify additional nationalities. Any requirement to obtain all nationalities would therefore rely primarily on self-declaration while generating significant operational complexity without meaningful AML/CFT benefits. The RTS should limit obligations to the nationality evidenced through reliable verification documentation. Address information Highly granular address information, including apartment numbers or post boxes, may not always be available or standardised across jurisdictions. In many low-risk retail financing contexts, such information is not necessary to establish customer identity. Street name and building number, or equivalent information, should therefore generally be considered sufficient unless additional granularity is justified by risk.

Name of the respondent	Question	Answer
		Electronic identification and digital identity tools Not all customers will have access to electronic identification means or qualified trust services by 2027. Availability and uptake of eIDAS solutions and EU Digital Identity Wallets will vary considerably between Member States. The RTS should therefore preserve flexibility by explicitly recognising alternative reliable verification methods, including bank-based verification, first-payment verification and PSD2 account information services. Existing customers For customers onboarded before the RTS become applicable, institutions may not possess all newly required data fields and obtaining them retrospectively may be difficult or disproportionate. The RTS should therefore allow obliged entities to update customer information gradually and in a genuinely risk-based manner, prioritising situations where there is a material change in the customer relationship or risk profile.
Eurofinas	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	The RTS should explicitly recognise simplified due diligence measures tailored to low-value and low-risk consumer credit products. In particular, the RTS should clarify that a customer's self-declared residential address may be considered sufficient

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	where: • the customer's core identity has been verified through reliable means, such as eID, remote identification or bank-based verification; and • payments are made via an account held in the customer's name with a regulated EEA credit or financial institution. In such cases, obliged entities should not be required to obtain additional documentary proof of address, such as utility bills. The RTS should further clarify that, in low-risk situations and in accordance with Article 22(6) of Regulation (EU) 2024/1624, obliged entities may apply customer identification and verification measures in a manner proportionate to the level of ML/TF risk. This should include the ability to rely on: • customer-declared information combined with consistency checks and fraud prevention tools; • first-payment verification; • account verification through PSD2 account information services; • transaction monitoring adapted to the low-risk nature of the product; • existing customer information where there has been no relevant change in circumstances. The RTS should also explicitly recognise that standardised consumer credit products, including BNPL and point-of-sale

Name of the respondent	Question	Answer
		financing, generally present low ML/TF risks due to: • low transaction values; • limited duration; • identified financed goods or services; • traceable payment flows through regulated institutions; and • limited ability to transfer or layer funds. Simplified due diligence measures reflecting these characteristics would improve proportionality while allowing institutions to focus resources on genuinely higher-risk activities.
Eurofinas	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 3 – Address information Street name and building number should generally be sufficient; additional elements such as apartment numbers should only be required where relevant to the risk. Further granularity does not materially enhance AML/CFT effectiveness while increasing operational complexity. Article 4 – Place of birth The RTS should permit collection of either the country or place of birth based on available reliable documentation. For beneficial owners and legal representatives, reliance on official registers should be explicitly permitted. Article 5 – Nationalities The requirement to obtain all nationalities is neither risk-based

Name of the respondent	Question	Answer
		nor operationally feasible; identification documents generally display only one nationality and there is no reliable source to verify additional ones. The obligation should be limited to the nationality evidenced through verification. Article 6 – Verification of identity The RTS should provide a non-exhaustive list of acceptable verification measures to support consistent implementation while preserving flexibility. Requirements regarding certified copies should also be clarified to avoid disproportionate barriers to digital onboarding. Article 7 – Remote verification The RTS should explicitly recognise bank-based and PSD2-based verification, including first-payment and account information services, as reliable and auditable methods that must be safeguarded to prevent national fragmentation. Standard digital formats extracted from eIDAS-compliant identity documents should be clarified as valid evidence for ex-post verification. Article 18 – Purpose and intended nature of the relationship For standardised consumer credit, the purpose of the relationship is self-evident through the financing of a specific good or service. Additional information requirements should therefore apply only where justified by risk. Article 19 – Politically Exposed Persons

Name of the respondent	Question	Answer
		Rescreening and approval requirements should remain proportionate and risk-based; extending obligations beyond core identification data creates disproportionate burdens without improving outcomes. Article 20 – Simplified due diligence Simplified due diligence measures must remain operationally workable and must not create ambiguity regarding which data remains necessary for effective identification and fraud prevention. Article 23 – Updating customer information The inability to update certain customer information should not automatically require termination of a contractual relationship, particularly in low-risk consumer credit or leasing contexts. Updating obligations must remain proportionate and risk-based. Article 32 – Electronic identification means and relevant qualified trust services The draft RTS does not sufficiently address the consequences where customers or beneficial owners lack the attributes required under Article 32. Not all natural persons and legal entities will be enrolled in electronic identification means or qualified trust services by 2027, and obliged entities must be permitted to obtain missing attributes through alternative reliable means without this constituting a compliance failure.

Name of the respondent	Question	Answer
		Requiring reliance exclusively on such tools risks preventing access to financing services for customers not yet enrolled, which would be disproportionate and contrary to financial inclusion objectives. The RTS should clarify that obliged entities may continue to rely on established alternative verification methods where electronic identification means or qualified trust services are unavailable.
Eurofinas	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate;Neutral
European Association of Co-operative Banks (EACB)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not believe that the RTS, as drafted, can be applied uniformly across all low risk products and services. In particular, the requirements regarding identification and verification, especially regarding nationalities, will be difficult (in some cases impossible) to comply with. Most prominently, it must be noted that to date no one source has been identified through which multiple nationalities can be verified. In addition, the RTS offers limited SDD measures. Although Recital 16 explicitly recognises that SDD should “ease the administrative burden on obliged entities and their customers”) the operational reality of Art.20–24 is that SDD requirements are nearly identical to standard CDD provisions (Art.2–6). As a result, the RTS removes almost all practical distinction between SDD and CDD. In its current form, the RTS would require to collect the same level of identification and source of information in low and higher risk situations, including place of birth and all nationalities—even though such attributes have negligible ML/TF risk relevance. This would create unnecessary regulatory pressure, customer burden, and administrative cost in segments where the ML/TF risk is widely recognised as

Name of the respondent	Question	Answer
		minimal. To ensure the RTS remains compatible with the AMLR's risk based intent, we recommend: • Introducing genuine differentiation for SDD, so that low risk products may rely on a more limited set of identification attributes, e.g., name, date of birth, and verification via a single reliable source. • Making additional data points optional under SDD (e.g., place of birth, additional nationalities, source of funds information), unless specific risk indicators are present.
European Association of Co-operative Banks (EACB)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We note the following: • In art. 6 we suggest clarifying that, except where suspicion of ML-FT or fraud exist, obliged entities are not required to request a new identity document solely due to expiry of the one initially used for identification. Once a customer has been identified in line with applicable standards, expiry of the identification document should not invalidate the identification. Updated documentation should be requested only at the next periodic or risk-triggered review. This is particularly critical as more vulnerable customers are likely to face difficulties in providing updated documents within the expected timeframes. This approach "once identified, always identified" would ensure proportionality and efficiency, while maintaining the integrity of the initial identification process. • With regard to Art. 13, it does not appear proportionate to collect and verify the same level of data for a SMO as for an BO, given the different roles they perform (Recital 25 AMLR). We therefore suggest to allow for a differentiation based on identified risk. For example, requiring a residential address is disproportionate and adds limited value. Similarly, we believe

Name of the respondent	Question	Answer
		that nationalities and place of birth of SMOs are not necessary for identification purposes, due to the limited risk relevance. • Art.17 and 22 of the draft RTS refer to art. 20(1)(h) of Reg. (EU) 2024/1624, which requires identifying and verifying the identity of natural persons on whose behalf or for whose benefit a transaction or activity is carried out. In situations addressed by art.17 and 22, final investors and end-clients would hence qualify as ”natural persons on whose behalf or for whose benefit a transaction or activity is carried out”. This would create significant operational burdens and would, in many cases, go beyond proportionate and effective risk mitigation measures typically applied in these contexts. It could also raise practical concerns in relation to data protection and professional secrecy requirements. We therefore suggest to specify that obliged entities (CIUs and credit institutions) may apply CDDs on final investor/end clients on a risk sensitive basis (i.e. CDDs not systematically required). With a view to favouring a risk-based approach, it would be helpful to clarify that “customer identification updates” refers exclusively to the updating of customer identification data and does not extend to all stages of the customer due diligence process. Accordingly, it would be appreciated if it could be confirmed that such updates may be performed through automated systems without requiring customer contact, in particular in low-risk situations. In this respect, and with a view to enhancing the customer journey, AMLA is invited to further clarify that, for low-risk customers, the updating of information may be carried out in an automated manner without customer contact (Recital 16 and Art.23 RTS). More specifically, in the absence of the conditions set out in points (a), (b) and (c) of Art.23 RTS and read in conjunction with Recital 16, institutions

Name of the respondent	Question	Answer
		should be permitted to update or confirm customer information through automated processes not requiring intervention by either an operator or the customer. • With regard to Art. 18, while the information required may be relevant in higher-risk situations (purpose, economic rationale, anticipated activity levels, sources and destinations of funds, business activity) requiring the full set of data for all customers would not be consistent with a proportionate approach. For mass-retail customers and simple payment accounts, this level of detail appears excessive and may limit access to basic financial services. We would therefore suggest limiting the more granular data points in Art.18(a)–(e) to cases where specific ML/TF high-risk indicators are present, with a simple statement of purpose aligned with the product being sufficient for SDD and potentially standard CDD. • Art. 19 appears to create some internal inconsistency as par.(2)(a) allows flexibility while par.(2)(b) and (2)(c) seem to imply immediate action. In addition, the repeated reference to "without delay" does not fully reflect operational realities, particularly for large institutions handling continuous data flows. We would therefore suggest aligning the timing requirements with practical implementation constraints. • Art. 21(2) as drafted would effectively prevent the trade register from being used both for identification and verification, requiring instead two separate sources of reliable documentation. This approach does not appear risk-proportionate for SDD scenarios and even for standard CDD a single reliable source is generally sufficient. We would therefore suggest deleting this paragraph.
European Association of	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the	We have identified a number of situations in which the information required under the draft RTS may be routinely

Name of the respondent	Question	Answer
Co-operative Banks (EACB)	information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	unavailable in practice, without sufficiently clear alternative solutions being provided: • Art.4 expands the requirement of Art.22 AMLR to obtain the place of birth with “at least the country name”. However, not all official identity documents include both city and country of birth. We would therefore suggest that it should be sufficient to obtain either one of these data points. • Art.4 and 5 place of birth, nationality and residency cannot always be obtained through governmental sources, and third-country branches may not consistently have access to this information. We would therefore suggest allowing the use of non-governmental sources as well. Where such data cannot be obtained even through alternative sources, it should be possible to collect it directly from the customer, for example by email. • We note that the provision in Art.7 on non-face-to-face verification may conflict with Art. 22(6) AMLR, and we would appreciate guidance on its practical implementation. The Art. continues to require the use of electronic identification means or qualified trust services compliant with eIDAS, without sufficiently recognising valid alternatives for digital onboarding. This approach is considered disproportionate from a risk-based perspective, as it limits remote verification solutions already deemed acceptable under the EBA Remote Customer Onboarding Guidelines. The final RTS should allow obliged entities to freely choose appropriate verification measures in non-face-to-face contexts, including alternative solutions aligned with the EBA guidelines. In particular, regarding the verification of the identity of legal entities, the only applicable solutions in a remote context are the use of electronic identification means or qualified trust services as provided

Name of the respondent	Question	Answer
		under Art.7(1), since alternative remote identification solutions under paragraphs (2) to (4) are only applicable to natural persons. It should be noted that, to date, the development of "legal entity wallets" under the revised eIDAS framework remains significantly less advanced than digital identity solutions for natural persons, both at institutional and industry level. It is therefore highly unlikely that such solutions will be fully operational, widely adopted and reliably accessible by 10 July 2027. Therefore, we suggest re-introducing the deleted Art.7(4), as provided for in the EBA's response to the CfA dated 30 October 2025. Otherwise, it should be specified either that (i) Art.7 applies exclusively to the verification of natural persons; or (ii) allow the remote verification of legal entities through independent and reliable sources, i.e. statutory documents, certificates of incorporation, in a way that guarantees a sufficient level of assurance (for instance, obtaining statutory documents directly from public/company registers, or copies secured with electronic signatures...). Such an approach would also be consistent with Level 1 requirements, as the use of "independent and reliable sources" within the meaning of Art.22(6)(a) AMLR is not expressly limited to face-to-face contexts.
European Association of Co-operative Banks (EACB)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We note that, in practice, applying SDD is often difficult, as the required processes, assessments, and documentation to justify it to auditors and supervisors can be more burdensome than standard CDD. This discourages its use even in low-risk cases and may undermine the risk-based approach under the AMLR. We therefore invite AMLA to clarify that proportionate use of SDD is consistent with supervisory expectations, supports efficient resource allocation in the fight against ML/TF, and should not require a level of justification exceeding that of

Name of the respondent	Question	Answer
		standard CDD in lower-risk situations. Other specific points that we would like to raise are: • In the SDD context, art.20, still requires collecting all names of natural persons, which is stricter than standard CDD requirements as set out in Art.2(1) of the RTS and may create inconsistencies. We therefore suggest aligning Art.20(1)(a)(i) with Art.2(1), so that only all names and surnames as they appear on identity documents, passports, or equivalent need to be collected. • As regard pooled accounts operated by credit institutions, Recital (18) and Art.22 of this RTS set too strict limitations to the possibility of obliged entities to rely on diligences carried out on end-customers by their customers that are obliged entities. This may cause unintended consequences for credit institutions in activities involving triangular/layered relationships schemes with other obliged entities other than payment services providers, notably in cases where robust regulatory safeguards exist, i.e. in one of the Member States, lawyers are required to deposit their client's funds on accounts opened by credit institutions for control institutions in charge of controlling the handling of such funds (depending on situations, omnibus accounts may be opened, with sub-accounts opened for each professionals). We would raise AMLA's awareness on the fact that in these models, customers and end customers are bound by a strict professional secrecy and therefore would not be able to satisfy the credit institutions' information requests. This would trigger the unintended outcome of mandatory closing of accounts of legal professionals, hence undermining principles such as financial inclusion and access to justice. We would therefore suggest the addition of the following sentence at the end of Recital (18): "in

Name of the respondent	Question	Answer
		cases where the ML/TF risk of that service would not be assessed as low, credit institutions should not need to obtain information on the identity of their customer's own clients in all cases, notably where said customers are obliged entities (other than payment institutions or electronic money institutions), provided that they are able to justify that such obliged entities apply and maintain robust and risk-sensitive CDD measures, and proper risk mitigation measures are in place." • We believe an exemption for identifying and verifying BOs of listed entities and government institutions, including public bodies in EU Member States, should be introduced as an SDD measure. Recital 127 already indicates that it is proportionate to exempt certain entities from BO identification obligations and that public bodies should not be required to determine their beneficial owners. Given the higher level of transparency and the limited added value of BO identification and registration in such low-risk situations, it appears disproportionate to impose full identification and verification requirements, particularly where BOs may change frequently and are not always accessible to the entities themselves. • In addition, we consider that SWIFT RMA relationships could be suitable for SDD treatment, given their inherently controlled and trusted nature. • Furthermore, operational staff, i.e. authorised personnel acting on behalf of the customer under internal processes and procedures, may in practice be treated as persons purporting to act on behalf of the customer. In such cases, identifying and verifying potentially large numbers of individuals does not appear proportionate. We would therefore suggest that an umbrella agreement could be sufficient, under which the

Name of the respondent	Question	Answer
		customer undertakes to provide relevant information on operational staff upon request by the obliged entity, where necessary, in particular in higher-risk scenarios. • Finally, we believe that PEP screening obligations and the associated EDD measures should not be required for low-risk products and clients, where a PEP status would not materially affect the overall low-risk assessment of the business relationship. This is particularly relevant in cases where the source of funds does not raise concerns, such as employee savings plans funded by companies.
European Association of Co-operative Banks (EACB)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• We noted that several paragraphs of Art.2 to 5 on customers identification would also be relevant for identification of BOs, however, they only refer to provision of AMLR on customers' identification, i.e. Art.22(1) AMLR, to the exclusion of corresponding provisions on BOs' identification, i.e. Art.22 (2) and 62(1)(a) AMLR. Therefore, we suggest including such references in: o Art.2 (1) of the RTS CDD; o Art.3 of the RTS CDD; and o Art.4 of the RTS CDD. • In reference to Art.11, we note that the wording is technology-neutral, allowing obliged entities to apply manual, automated, or AI-supported processes in carrying out such assessments. We would welcome confirmation that the term 'assess' is intended in the context of risk-based principles, permitting firms to utilise technology-supported assessment solutions, provided that outcomes are appropriate and satisfy supervisory expectations • We remain concerned about the broad scope of SMO (Art.63 AMLR), which, beyond members of the management body in its

Name of the respondent	Question	Answer
		management function, also includes 'natural persons who exercise executive functions […] and are responsible, and accountable to the management body, for the day-to-day management' of the entity. For financial institutions operating complex group structures, such an interpretation would significantly expand the number of individuals treated as SMOs, triggering unnecessary identification, verification, and ongoing CDD obligations that go beyond the intended purpose of the framework, while delivering little incremental ML/TF risk mitigation. We therefore recommend that AMLA provide clear, EU-wide guidance limiting the scope of SMO to those individuals who formally constitute the management body in its management function or, where such a body does not exist, to the single natural person performing an equivalent top-level managerial role, explicitly excluding ordinary executives, divisional managers, senior employees, or anyone involved in operational management without ultimate responsibility for the overall management of the legal entity. • Identifying BOs is one of the most complex aspects of KYC, especially in multi-layered structures. Divergent approaches across Member States create uncertainty, inconsistent supervision and operational inefficiencies. While not explicitly required, Recital 105 of Reg(EU) 2024/1624 foresees Commission guidance on BO identification, which we consider essential for harmonisation. We therefore request that the Commission, in coordination with AMLA, issue practical, case-based guidance before the Regulation applies. This should address BO determination under Art. 52–54, clarify that nominees are not beneficial owners under Art.61 (in line with FATF), and include examples for private equity funds, limited partnerships and other collective investment undertakings.

Name of the respondent	Question	Answer
		• BOs and authorised representatives should not be treated solely as formal KYC identification elements, as they may also constitute relevant indicators of potential sanctions evasion risks and could therefore merit more explicit integration into the assessment of sanctions-related risk within the CDD framework. • We have observed that neither the Regulation nor the current RTS draft addresses the verification of legal entities as customers. Specifically, neither sets out which documents may be used to identify or verify a legal entity in accordance with the AMLR. While we note Recital 5 of the RTS, the verification sources referenced there are not reflected in the binding provisions. We therefore recommend revisiting this issue and standardizing requirements for verifying the identity of legal entities, ensuring a level of clarity and consistency comparable to that applied to natural persons. • The RTS introduces changes to Art.33. In particular, it provides that, for customers onboarded before the publication of the Regulation, the relevant documents, data and information must be aligned with both the RTS and Reg(EU) 2024/1624, on a risk sensitive basis and within the time limits set out in Art.26(2) of that Regulation. This appears to diverge from the EBA's earlier clarification (EBA response to the EC CfA), where the EBA confirmed that the RTS could define transitional arrangements only for the RTS itself, and not for the underlying AMLR. Clarification would be appreciated as to whether Art.33 is now intended to extend the transitional period also to all of the requirements of Reg(EU) 2024/1624. The Art. also raises questions about the feasibility of one-year timeframe and may therefore warrant reconsideration, given the broad scope and operational intensity of the remediation

Name of the respondent	Question	Answer
		exercise; the expected phased updates to BO information only as from 2027; and the continued absence of key RTSs, which creates material uncertainty and prevents obliged entities from fully designing, implementing, and adequately preparing the necessary systems, processes and training within the required timeframe.
European Association of Co-operative Banks (EACB)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 2(1) requires that all names and surnames that feature on the identity document, passport, or equivalent, are obtained by obliged entities. However, the verification of the names of the 'person on whose behalf or for the benefit of whom a transaction or activity is being carried out' may be done via other means than an ID-doc/eIDAS (AMLR art. 22(7)(b)). Since there are differences in how granular names are shown in passports or identity documents (e.g. driver's licenses), we would like to ask what the minimum set of names to be obtained in such situations should be. Additionally, we would welcome some clarification on the term "trade names" (par.2), since no legal definition has been provided so far. In this regard, to facilitate compliance with this requirement, we would suggest that a review of the commercial register should be sufficient.

European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We request clarification from AMLA on the wording “where available” in Article 3(c) of the RTS, including whether this phrase may also encompass situations where: • the relevant information is not included in the identity document presented (e.g. where a passport does not contain a postal code or address); • certain address elements, such as postal codes or street names, do not exist in the relevant jurisdiction; or the customer does not provide the requested data. In particular, we would welcome confirmation that the third scenario can reasonably be understood as covered by the notion of “where available”, as this interpretation would be consistent with the risk-based approach set out in Article 1 of the RTS. In standard-risk scenarios, and in the absence of suspicion of ML/FT, requiring such detailed address information in all cases could be disproportionate. It would also be aligned with fundamental principles applicable to natural persons, including data minimization and purpose limitation.

European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The revised RTS make repeated reference to obligations applying to a ‘person purporting to act’ on behalf of a customer (art.5,6, 16, 20) . However, neither the AML Regulation nor the RTS provide any definition of this term. This absence of a clear

Name of the respondent	Question	Answer
		and common definition is problematic, given that extensive CDD, screening and verification requirements are triggered in respect of such persons, with significant operational and cost implications for financial institutions. Without legal and supervisory clarity, institutions may adopt differing and overly conservative interpretations to mitigate regulatory risk, leading to unnecessary duplication of CDD, inefficient allocation of resources, and a material increase in compliance burden with negligible incremental risk mitigation benefit. We strongly suggest that the RTS should define this term in a risk-based and targeted manner. The definition should not capture employees of a counterparty acting in the ordinary course of their employment (for example, treasury, operations or relationship management staff of a corporate customer). In such cases, institutions should be able to rely on their interaction with those employees as interaction with the counterparty itself, rather than being required to treat an individual employee as a separate subject of CDD. We therefore request that a clear, proportionate definition of the term, with practical examples, to ensure consistent application across Member States and avoid unnecessary costs. We previously proposed the following risk-based definition 'any legal representative(s) (e.g., legal guardians) of a natural person customer or any natural person, other than an employee or senior manager of a legal person authorised to act on behalf of a legal person customer pursuant to a mandate (e.g. an agent), or any natural person authorised to act on behalf of a legal person customer pursuant to a bilateral proxy agreement' that act legally towards the respective obliged entity. Additionally, the reference to "person purporting to act on

Name of the respondent	Question	Answer
		behalf of the customer" does not explicitly clarify whether it applies, in addition to natural persons, also to legal entities. While the overarching principle should indisputably be that a "person purporting to act on behalf of the customer" is a natural person, the definition should nevertheless accommodate situations in which a customer or a court has mandated a legal entity to perform specific acts on the customer's behalf vis-à-vis the obliged entity. For example, a corporate customer may authorise an accounting firm to undertake certain invoicing and payroll-related actions in dealings with the obliged entity on its behalf. In such circumstances, it would not be appropriate to treat the natural persons employed by the authorised legal entity as "persons purporting to act on behalf of the customer," since they are merely performing tasks based on the authorisation granted to their employer and not pursuant to any mandate addressed to them personally. In comparable cases, it should suffice for the obliged entity to collect the information required under AMLR Article 22(1)(b) with respect to the legal entity authorised by the customer or by the court. We note that the revised version of the RTS introduced a new recital (Rec.(12)) that mentions which information and documentation may be used to evidence the existence and scope of any power of representation of "persons purporting to act" on behalf of the customer. If a clearer definition of the "persons purporting to act" on behalf of the customer cannot be included in this RTS, we suggest instead to add clarifications on situations where power of representation should (and should not) trigger full application of identification and verification measures set out in art.16. Our developments in the above paragraphs would also be relevant in this respect.

Name of the respondent	Question	Answer
		Finally, Article 5 requires collecting and verifying all nationalities. In line with Recital 3, we propose a more risk-based approach to multiple nationalities. First, obtaining and verifying additional nationalities should only be required where there is a specific risk-based reason, as it does not generally enhance CDD assessments. Second, where this information is requested, it should rely on customer self-declaration, given the lack of reliable independent sources to obtain this information and the absence of guidance in the RTS on how to collect it. In this context, the EBA has indicated a preference for self-disclosure and a red-flag approach. Rather than actively pursuing this information, firms should reassess it during regular KYC reviews.
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The revised RTS make repeated use of the concept that information, documentation and CDD records must be 'up to date' (recital 25, articles 7, 8, 10, 14, 15), yet this term is not defined in either the AML Regulation or draft RTS. In practice, the absence of a common and objective definition creates legal and supervisory uncertainty for obliged entities, particularly in the context of audit and assurance, where firms can expect divergent and increasingly conservative interpretations of what 'up to date' should mean. While we generally favour risk-based flexibility over prescriptive rules, this is one area where a clear and common definition would be both helpful and proportionate. We therefore request that a practical, risk-based definition of 'up to date' be introduced via AMLA supervisory guidance, setting

Name of the respondent	Question	Answer
		out how the concept should be applied in a risk-based manner by reference to customer risk, material change and review triggers. Such guidance (which could simply require the use of 'latest available' across various documentary typologies) would promote a harmonised supervisory and audit understanding across the EU, provide firms with greater legal certainty, and reduce unnecessary friction, while preserving the flexibility needed to tailor approaches to different business models and risk profiles. In addition, the safeguards listed in Article 7(3) are currently formulated as strict, cumulative requirements, which may limit the ability of obliged entities to tailor their approach to the specific circumstances. It may therefore be considered whether obliged entities could be allowed to apply these safeguards in a manner proportionate to the identified ML/TF risk. In this context, we would suggest adding the following wording to paragraph 3: "Obliged entities shall apply the safeguards referred to in this paragraph in a manner that is proportionate to the ML/TF risk associated with the business relationship or occasional transaction." In this regard, we also note that the revised version modified art. 7(5) (now 7(4)) by introducing the requirement for obliged entities 'to be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624' (namely by means of an eIDAS compliant solution). First, the purpose of this change appears unclear from a risk management perspective. Indeed obliged entities are already expected to be able to justify that they comply with any of their obligations under AML-CFT rules at the request of supervisors and auditors. Article 22(6) of the AMLR does not establish a hierarchy of verification methods.

Name of the respondent	Question	Answer
		However, in accordance with paragraph 4 and as also confirmed by AMLA during the hearing, the new formulation appears to reflect an “eIDAS first” approach. In this respect, the RTS seems to introduce a stricter requirement than the AMLR itself, which may not be fully aligned with the level-1 text. Besides, given the current lack of sufficient certified solutions available on the market that comply with revised eIDAS regulation (a limited number of provider have been certified, but the current scarcity in the offers would overly limit the choice of adequate solutions for obliged entities, with expectable technical or compliance impediments at a later stage), and the minimum implementation time necessary for obliged entities and technical services providers, a transitional period will be necessary for obliged entities in order to achieve full compliance with art. 7, with the possibility to maintain existing online client journeys until eIDAS compliant solutions can be widely accessible. Finally, it is also unclear what standard of justification is expected, in which circumstances it must be provided, and whether this creates a de facto obligation to prioritize eID-based verification where available. We recommend that AMLA either removes this justification requirement or clarifies that the choice of verification method remains at the discretion of the obliged entity, in line with the technology-neutral approach of the AMLR.
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10

Name of the respondent	Question	Answer
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 10 of the draft RTS provides that obliged entities may verify the identity of a beneficial owner or of the person according to Art. 20(1)(h)AMLR (hereafter referred to as "user/initiator") by collecting up-to-date information from a credit or financial institution among others. Under Article 48 of Regulation (EU) 2024/1624, obliged entities may rely on another obliged entity only with respect to specific elements of CDD, laid down in Article 20(1)(a)(b)(c). In addition, Article 49 of the Regulation contains several conditions for such reliance on other obliged entities. Art. 10 of the draft RTS raises questions regarding its interaction with Articles 48 and 49 of Regulation, which regulate reliance on other obliged entities. It appears to allow obliged entities to rely on information/confirmations from other credit or financial institutions that a beneficial owner or the user/initiator has already been AML Regulation identified and verified, without explicitly referring to the safeguards and requirements set out in Articles 48 and 49 AML Regulation. It would therefore be helpful to clarify: • whether the mechanism described in Article 10 RTS should be understood as reliance on another obliged entity within the meaning of Articles 48 and 49 AML Regulation, and therefore subject to the conditions laid down in those provisions (e.g. a written agreement), or • whether Article 10 RTS is intended to establish an additional independent source of verification that may be used outside the reliance framework of Articles 48 and 49 AML Regulation. Additionally, Article 10(b)(4) of the RTS provides that the verification of the identity of a beneficial owner or of the user/initiator may be carried out on the basis of documents issued by the legal entity or legal arrangement in which the

Name of the respondent	Question	Answer
		beneficial owner is named, provided that the identity of the named person is certified by persons authorised to carry out document certification. However, it is unclear whether Article 10(b)(4) refers to information collected directly from the customer or to information obtained from other sources. If the certification requirement were to apply to all information collected from the customer, this would entail significant operational challenges. In practice, most customers and legal persons do not have individuals internally who are legally authorised to certify identities. Compliance with such a requirement would therefore typically necessitate the involvement of external parties, such as notaries. In the context of Article 10, we would further note that under certain conditions, listed companies and public institutions in Member States are exempt from the obligation to identify and verify their BO, as noted in Recital 127 AMLR. This exemption is justified because these entities already achieve a comparable level of transparency through other means, making direct identification unnecessary. However, the AMLR maintains that obliged entities must still identify the beneficial owners when performing CDD (Recital 127, Art. 65). It is not clear why this exemption does not also apply when these entities act as customers of banks. We therefore suggest providing a clear rationale and updating the RTS under Art. 10 CDD to reflect this proportional, risk-based approach.

Name of the respondent	Question	Answer
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 12(1) does not reflect that many legitimate EU industrial groups commonly have ownership structures that usually involves three intermediaries, one of which, or the beneficial owner, is based in a third country. Third-country residence should not automatically be treated as a risk factor when assessing complexity. Point (b) of Article 12(1) should therefore refer to “third countries with higher risk factors” (cf. Annex III of Regulation (EU) 2024/1624), and it should be clarified that such structures do not in themselves imply higher ML/TF risk or qualify as “excessively complex” under Annex III 19(f). While requiring more than three layers and more than one criterion improves earlier drafts, the thresholds remain low. Some provisions, including those on foundations, are open to interpretation, although such entities are common in international structures. The rule-based approach of Article 12 may also significantly increase operational workload, especially where additional EDD measures apply. A more general consideration regarding art.12 is that its purpose appears unclear in light of Article 11. While art.12 introduces a specific reference to the organigram, the reference to the accuracy of the information collected reflects a requirement that is already inherent under art.11. Art.12 appears largely to reiterate the same objectives and concepts, particularly following the recent addition of Article 11(1) referred to above. To avoid duplication and potential confusion, we suggest that art.12 of the RTS be merged with Article 11, or, if specific and additional steps are required in the case of complex corporate structures, regardless of the actual risk, be reworded so as to more clearly distinguish those steps. Finally, we have some difficulty reconciling the wording of this

Name of the respondent	Question	Answer
		article internally and perceive the article as contradictory. A corporate structure would typically be understood as a structure composed exclusively of corporate entities. However, the criteria for identifying a complex corporate structure appear to include non-corporate elements such as legal arrangements
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	17
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	We would first draw AMLA's attention to the fact that conditions to be fulfilled under Art. 17 for CIUs (including fund managers) to be able to rely on CDDs performed by intermediary financial institutions for the mandatory identification and verification of identity of final investors raise serious issues as regard operational/supervisory approaches of funds distribution models. From an operational perspective, Art. 17 does not match business practices of most distribution models (especially for retail funds) and would cause severe disruptions in competition. CIUs indeed do not have direct access to final investors (which are not its clients) but mostly have business relationships with intermediaries (e.g. institutional distributors, platforms) – except in limited case such a dedicated funds tailored for the needs of qualified investors known by fund managers. Therefore, KYC information about final investors is held by the closest financial intermediary (being in a business relationship with them) and then may not be readily accessible, notably in multi-layered structures, making the requirement to obtain such information "without undue delay" difficult to

Name of the respondent	Question	Answer
		meet in practice. In addition, existing partnership arrangements generally do not provide for the transmission of investor data by distributors to the CIU on a systematic basis (requests should by justified by a specific compliance issue), notably for confidentiality, data protection and competition reasons. It is worth mentioning that many distribution models are based on “open architectures” where intermediaries belonging to one financial group distribute funds of various CIUs pertaining to the same group and other financial groups. There is a risk that Art.17 undermine such models since it may be used as a ground for external CIUs / competitors to request extensive information on clients of the intermediary institution. Providing CIUs with access to final investor data would not only create risks of client poaching but also a disintermediation at the expense of little CIUs which largely rely on said models in order to distribute their products. This requirement would not reflect the common supervisory approach of CIUs distribution models either. Indeed, according to EBA Guidelines on risk factors (EBA/GL/2021/02, §16.13 and 16.14), qualification of parties as customer in CIU distribution schemes generally depends on whether or not their name is entered in the register as managing the collective investment unit or share registry. Therefore, where a financial intermediary (e.g. a custodian account-keeper or a Euroclear member) acting in its own name and on behalf of the end investor appears in the register, the intermediary should be considered the customer of the fund manager for AML/CFT purposes. It follows that relationships between funds manager and financial intermediaries would better fit in the definition of correspondent relationships within the meaning of Article 2

Name of the respondent	Question	Answer
		(22)(b) of the AMLR ("relationships between and among credit institutions and financial institutions (…) including relationships established for securities transactions (…)"). Funds manager hence should not be required to perform de facto systematic identification and verification measure of final investors (CDD measures on final investors being of the liability of the respondent institution, i.e., the financial intermediary). Consequently, Art. 17 appears overly disproportionate and would cause substantial compliance costs for a limited added value from a risk management perspective (i.e., since CDDs and mandatory screenings are already performed by the intermediary, CIUs do not have a view on global activities of final investors so its capacity to detect unusual behaviour and transactions of final investors would be very limited). By contrast, Article 17 would introduce additional operational complexity and increase compliance costs without commensurate risk mitigation benefits. Therefore, in line with abovementioned EBA guidelines (16.13), identification and verification of identity of final investors should not be systematic, and CIU should be authorized to apply risk-sensitive measures for this purpose. Such an approach would better concur to achieve objectives of the EU "Omnibus" simplification initiatives, which aim to reduce administrative burdens and compliance costs for businesses. Therefore, Art. 17 and Recital (14) should be amended so as to enable funds managers to determine: (i) in which distribution models identification and verification measures on final investors would be necessary to manage the ML-FT risks, depending on specific characteristics of those models; and (ii)

Name of the respondent	Question	Answer
		the nature and extent of information to be collected, and the way to obtain it (for instance, by asking a prospective customer to declare whether they are investing on their own behalf or whether they are an intermediary investing on someone else's behalf).
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	22
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 22 of the draft RTS introduces sector specific simplified measures for pooled accounts, applicable where a credit institution opens an account in which the account holder administers funds on behalf of its clients, subject to the conditions set out in that provision. While Article 22 of the RTS refers explicitly to "pooled accounts", it remains unclear whether its scope is intended to be limited strictly to pooled payment or cash accounts, or whether it is also meant to extend to other fiduciary arrangements in which assets are administered on behalf of underlying clients. In this regard, clarification would be helpful as to: • whether the simplified measures provided for in Article 22 RTS apply exclusively to pooled accounts in the context of payment or cash accounts; or • whether they may also apply to other fiduciary structures in which an intermediary administers assets on behalf of underlying clients, including fiduciary omnibus securities accounts (e.g. pooled fiduciary custody accounts / "Sammeltreuhanddepots"). Additionally, EACB members note that paragraph (a) requires account holders to be obliged entities in order to fall within

Name of the respondent	Question	Answer
		scope of this provision. This may have the unintended consequence that certain types of pooled accounts (such as rent deposit accounts or school class accounts), which are currently subject to SDD, would fall outside of scope. Members consider that this would not support an efficient and effective allocation of resource and is unlikely to reflect the intention of the co-legislators. In this regard, we have noted that the measures set out in Article 33 (1) AMLR and in Section 5 of the draft RTS should be understood as illustrative rather than exhaustive. Given that no regulatory framework can anticipate all possible customer types, account structures, or risk scenarios, it is important that obliged entities retain the ability to apply appropriate, risk-based measures according to the circumstances of the situation at hand. With this in mind, we would encourage AMLA to clarify this point to ensure that low-risk account types currently subject to SDD may continue to be treated as such, and that a proportionate, risk-based approach can be applied to analogous accounts and situations that may arise in future. Finally, with regard to the requirement that credit institutions must be satisfied that the account holder will provide funds 'immediately' – we have also noted previously that if taken literally, this provision would be close to impossible to fulfil. We therefore suggest that it be amended to 'promptly' or 'without undue delay' to ensure a shared understanding of the limits of practical applicability.
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	25

Name of the respondent	Question	Answer
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	We note that the revised RTS introduce a new concept of 'close relationships' in Article 25, without providing any definition of this new term. The term does not appear in the AML Regulation and has no established meaning in EU AML legislation, yet obliged entities are required to identify and assess ML/TF risks associated with such relationships as part of the additional customer information process. In the absence of a definition, firms risk implementing divergent or overly cautious approaches, potentially leading to the unnecessary collection of personal data about individuals whose connection to the customer may be remote, incidental, or irrelevant to risk. This would undermine proportionality, complicate implementation, and reduce harmonisation across Member States, while offering limited additional risk insight. We request that AMLA provide a clear and narrowly framed definition of 'close relationships' (noting and taking into account any intended crossover with the definition of 'person known to be a close associate' provided in Article 2 (1) (36) AMLR) that is aligned with the risk-based approach and limited to connections that are genuinely relevant to ML/TF risk. We also request that AMLA provide examples to ensure supervisory consistency and to avoid disproportionate data collection on individuals who pose no discernible financial crime relevance.
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	27
European Association of	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The mandatory request for documents regarding the source of funds of the beneficial owners of companies subject to increased due diligence obligations according to EU Regulation

Name of the respondent	Question	Answer
Co-operative Banks (EACB)		2024/1624 Art. 34 (4) with Article 27 of the may be practically challenging and could negatively affect competitiveness without materially mitigating ML/TF risk. Particularly for operating companies where the source of funds can be clearly verified based on operative income (based on annual reports etc.) a source of funds verification on the level of the beneficial owner by tax declarations and comparable sources should not be deemed necessary. Similarly, the requirements should be reduced even in the high-risk segment to those cases where such verification measures are necessary to verify the source of funds. Additionally, practical guidance is needed to ensure compliance with GDPR when personal data is involved, and to avoid imposing unnecessary burdens on obliged entities.
European Association of Co-operative Banks (EACB)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	29
European Association of Co-operative Banks (EACB)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 29 of the draft RTS states "Where there is a suspicion of circumvention or evasion of targeted financial sanctions, obliged entities shall also establish whether the person acting on behalf of the customer is subject to targeted financial sanctions." Under Article 20(1)(d) of the EU AML Regulation, sanctions checks are required only for customers, WEs, and intermediaries within the ownership/control structure. Persons merely claiming to act on behalf of the customer are not included in the CDD measures. Consequently, art.29 represents a significant extension of CDD obligations beyond what is set out in the EU AML Regulation. We therefore suggest deleting this paragraph. Otherwise, we would welcome clarification from AMLA regarding the legal basis for this extension and

Name of the respondent	Question	Answer
		invite AMLA to ensure that the RTS remain fully aligned with the scope of obligations defined in the AMLR. Additionally, articles 29 and 30 primarily reflect existing practices for sanction screening and monitoring, but do not adequately clarify how circumvention risks should be assessed in practice. Therefore, further guidance should be provided to help obliged entities consistently identify and address sanction circumvention risks beyond standard measures.
European Association of Co-operative Banks (EACB)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
European Association of Co-operative Banks (EACB)	Do you have any comments on the Annex in the draft RTS?	No
European Association of Co-operative Banks (EACB)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
European Banking Federation (EBF)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Art. 6 RTS We propose inserting the following two paragraphs: 7. For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624 pursuant to paragraphs 1-6, obliged entities shall verify the full name, date of birth, and country of residence of these persons. 8. Where doubts arise with regard to the veracity of the information referred to in paragraph 7, obliged entities shall take measures to re-verify it.

Name of the respondent	Question	Answer
		Rationale: - Para. 7: The proposal aims to clarify that the verification requirements under Art. 20, 22(6), and 22(7) should cover only those data points which allow for the verification of the identity of the relevant natural person (i.e., full name, date of birth, and country of residence), as opposed to additional secondary information (e.g., all the address fields where collected). - Para. 8: The addition aims at strengthening the risk-based approach and reaffirm the principle of “once identified, always identified”. Once a customer has been duly identified and verified, re-verification would not be necessary unless there is a specific reason to doubt the accuracy of the original information. From an AML/CFT-risk perspective, obliged entities should not be required to obtain a new identity document solely because the original document has expired, including during reviews under Art. 26 (2) AMLR. Expiry alone does not undermine the validity of prior verification, and such a requirement would be disproportionate and not required per Level 1 legislation. Re-verification should arise only where there are indications that core verified data, such as full name, date of birth or country of residence, has changed or is no longer reliable. Art. 7 RTS We believe that Art. 7 could be changed to make requirements more proportionate, through the following amendments: - Para. 2.: “In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person’s identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraph 3.

Name of the respondent	Question	Answer
		- Para. 3: “(e) the information, documents and data verified through the remote solution are valid and copies are retained, time-stamped and stored securely by the obliged entity. The content of stored records, including images, videos, sound and data shall be available in a readable format and allow for ex-post verifications”. We suggest inserting a new point (f) to para. 3: “(f) Obliged entities shall apply the safeguards referred to in this paragraph in a manner that is proportionate to the ML/TF risk associated with the business relationship or occasional transaction”. Finally, we propose removing para. 4. Rationale: - The safeguards listed in Art. 7(3) are formulated as strict, cumulative requirements, leaving insufficient flexibility for OEs to tailor their approach. This may create a disproportionate burden particularly for people who do not yet have access to eIDAS-based digital identities. The provision should not be interpreted as requiring OEs to steer customers towards obtaining an eIDAS identity where this is neither realistic, nor proportionate considering the existing market implementation. Art. 7(3) should provide that the safeguards are to be applied in a proportionate and risk-based manner, and we hence propose adding 3(f) above. - Art. 7(4) – We question the requirement in Art. 7(4) whereby obliged entities need to justify why the customer could not be verified through the means referred to in Art. 22(6), which does not establish a hierarchy of verification methods. However, Art. 7(4), particularly when read together with Art. 7(2), risks introducing such a hierarchy in practice by creating a de facto expectation that eIDAS-compliant solutions or qualified trust services should be prioritised wherever available. This makes

Name of the respondent	Question	Answer
		the Level 2 text more restrictive than the Level 1, creating legal uncertainty and undermining the technology-neutral approach of the AMLR and the draft RTS. - We recommend that AMLA either removes this justification requirement or clarifies that the choice of verification method remains at the discretion of the OEs, in line with the technology-neutral approach of the AMLR and the Draft RTS (see the 5 guiding principles in Section 3.2 AMLA's approach). - The RTS should take into consideration the current status of adoption by MS. Until qualified and certified eIDAS 2.0 remote identification solutions are widely available and operational, obliged entities should be permitted to continue using existing national and other market-proven remote identification solutions. - Furthermore, we note that MS apply an inconsistent approach with respect to the interpretation of 'equivalent' documentation. We urge AMLA to work with NCAs to ensure consistent application of supervisory expectations.
European Banking Federation (EBF)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 11–12 RTS The requirement to treat more than 3 layers between client and UBO as complex with additional elements amounts to a one-size-fits-all approach rather than a risk-based one. The article should allow a qualitative assessment of the client risk rather than a layer count. The obligation to collect detailed information on intermediary entities with which the bank has no business relationship goes beyond AMLR Art. 62(1)(d) requirements for legal entities, express trusts or similar legal arrangements and is operationally burdensome for banks with international corporate clients. Overall, there is no clear differentiation between the

Name of the respondent	Question	Answer
		requirements under Art. 11 and Art. 12. Art. 11 requires taking risk-sensitive measures to ensure that a comprehensive understanding of the ownership and control structure of the customer is obtained (para. 1), as well as a description of said structure (para. 2). This is normally ensured by asking the customer to provide an organigram. Therefore, we question the usefulness of adding an additional assessment to determine the existence of a complex ownership structure when this would have no practical consequences. Notwithstanding the above, should AMLA decide to retain Art. 12, we provide further considerations and suggested amendments in the “Additional input” section. Art.13 – 21 RTS We welcome the address simplification for Senior Managing Officials (SMOs). However, applying the same level of identification and verification requirements as for beneficial owners, such as collecting extensive personal data (e.g. nationalities, number of an ID document or place of birth), would be disproportionate and not aligned with a risk-based approach. Since SMOs are only substitute UBOs with no own AML/CFT-risk, contributing to the customer risk, there is no value in identifying more than one of the SMOs. We emphasise that such an approach would not contravene the Level 1 text. Whereas Art. 22(2) states that obliged entities need to collect the information referred to in Art. 62(1)(a), this refers to the identification of beneficial owners. Recital 125 AMLR explicitly states that SMOs are not beneficial owners. Hence, we maintain that the AMLR allows for the adoption of a less strict approach when it comes to the identification of

Name of the respondent	Question	Answer
		SMOs. We would hence recommend that Art. 13 be amended in the following way: “In relation to senior managing officials as referred to in Art. 22(2), second subparagraph of Regulation (EU) 2024/1624, obliged entities shall: a. collect information on all names and surnames, date of birth, full country name and, where available, town name or its nearest alternative of the senior managing official. Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; b. verify the identity of senior managing officials in the same way as they would for beneficial owners." Additionally, Art. 63 (4) AMLR appears to extend the SMO concept by including “natural persons who exercise executive functions within a legal entity and are responsible and accountable to the management body for the day-to-day management of the entity”. This article entails that in all cases, the scope of SMOs would include the first management level below the management body in its management function, despite them being merely involved in operational management but not having ultimate responsibility for the overall management of the legal entity. Such an extensive requirement to generally include a broader group of natural persons based on Article 63(4) AMLR would be excessively burdensome and unnecessary if the entity has a management body in a formal sense and would not reflect the underlying AML/CFT risk. We therefore advocate for:

Name of the respondent	Question	Answer
		o The extension under Art. 63(4) AMLR to only apply in scenarios where there is no management body in a formal sense; as such the second alternative of Art. 63 (4) AMLR should only apply in a supplementary manner if the first alternative (i.e. management body) does not apply due to the specific nature of the entity client. o obliged entities to be allowed to rely on information from reliable and independent sources, such as company registers, certificates of incorporation, or articles of association, when identifying SMOs and the use of a risk-based approach as appropriate. Further clarification, either in the RTS or, alternatively, through Level 3 guidance, is necessary to ensure consistent interpretation and to avoid disproportionate requirements that do not meaningfully enhance AML/CFT risk mitigation.
European Banking Federation (EBF)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art. 3 RTS We propose the following amendment to point (b): (b) the town name or its nearest alternative; The reference to “town name” is proposed to align with the terminology in FATF Recommendations (October 2025) and Payments Transparency related artifacts such as BIS Core Data Elements Page 25, SWIFT PMPG Industry Guidance on Hybrid Addresses. Collecting the town name (in addition to country) adds limited risk mitigation value for due diligence on beneficial owners. As this information is not always available, the wording on address data requirements for beneficial owners should be clarified. Art. 4 RTS

Name of the respondent	Question	Answer
		We propose the following amendment: “The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name or, where not available, the town name or its nearest alternative as long as the address information available is sufficient to clearly identify the location of the customer for AML/CFT controls such as sanctions screening and monitoring. Should the identity document, passport or equivalent of the customer provide additional information on place of birth, such information shall be collected.” Given that official identity documents across EU and third-country jurisdictions vary in content, and do not always include both the country of birth and city/town, it should be sufficient to obtain at least one of these data points as long as the address information available is sufficient to clearly identify the location of the customer for AML/CFT controls such as sanctions screening and monitoring. Where neither is included, the RTS should clarify that OEs may rely on the customer’s self-declared statement. Art. 5 RTS We suggest the current text of Art. 5 becomes para. 1 and is amended as follows: “1. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall obtain information on the nationality or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted”. Proposed new para. 2: “Obliged entities shall request the

Name of the respondent	Question	Answer
		persons referred to in para. 1 to declare any other nationalities they may hold." Art. 5 should state that the requirement is fulfilled where an OE relies on the customer's self-declared information, rather than leaving this clarification solely to Recital 3. Additional nationalities should be collected only where there is a clear and justified reason, as their routine collection does not add value to the risk assessment. Where an individual has only one nationality, confirming such nationality should be sufficient which is supported by the wording of Art. 22(6) AMLR. Absent any conflicting information, no further verification steps should be necessary. Art. 16 RTS The current definition in Art. 16 is not sufficiently detailed, as it: • does not explicitly specify that only individuals whose mandate grants the authority to legally bind the company are to be considered, • does not explicitly exclude individuals with operational mandates and disponents (i.e. those whose responsibilities are limited to back-office activities and/or logistics). Considering EBF members' experience from the implementation of AMLD4 and AMLD5, the definition should be limited to third parties being natural persons and acting via proxy or power of attorney in accordance with official company registration certificate. Employees of the legal entity customer acting in the ordinary course of their employment (e.g. senior managers, treasury or relationship management staff of a corporate customer) are excluded. In the context of wholesale

Name of the respondent	Question	Answer
		banking, capturing individuals acting in their professional capacity, especially those employed with regulated FIs, has proved excessively burdensome and ineffective in combatting financial crime. We suggest amending Art. 16 in the following way: “In relation to the identification and verification of the person purporting to act on behalf of the customer as referred in Article 22 of Regulation (EU) 2024/1624, and in addition to the information to be collected pursuant to the relevant provisions of Section 2, obliged entities shall obtain the following information: (a) in situations where a natural person is unable to act on his/her own behalf, such as minors and persons lacking mental capacity, the document confirming legal guardianship; (b) in situations where a person is authorised to act on behalf of a legal entity, the proxy agreement or power of attorney, except where a natural person is a member of the management body of the legal entity or an employee acting in fulfilment of his/her professional duties."
European Banking Federation (EBF)	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We would recommend AMLA to specify that in non-high-risk situations, the information on purpose and nature may be inferred from the product used by the client, and that identity information may be limited to a single source document. We therefore request confirmation that Article 33 AMLR is not exhaustive in its prescribed measures, and that obliged entities may, in addition to those set out by AMLA, apply measures that are proportionate to the nature and size of the counterparty and to the risks identified. Such an approach would support the

Name of the respondent	Question	Answer
		effective operation of a risk-based framework and enable resources to be directed where they are most needed. AMLA states in par. 3.3. 'Rationale' that it found no room for additional SDD measures beyond AMLR Art.33. This is a missed opportunity. Certain categories of clients' products, and services present inherently low ML/TF risks. Listed companies, SWIFT Relationship Management Application (RMA), bodies governed by public law and government-related entities in non-high-risk countries are obvious candidates where the transparency and oversight already in place justify simplified CDD measures. We urge AMLA to reconsider this position. Recital 127 AMLR states that for listed companies and bodies governed by public law of the Member States, beneficial ownership and control are of a similar level of transparency, and there is no need to apply beneficial ownership requirements. We therefore propose that OEs be exempted from the obligation to identify UBOs in these situations, and that the application of SDD be explicitly allowed. Specific scenarios where additional simplification could be supported: • Listed companies and public bodies, where beneficial ownership and governance are already subject to robust disclosure and regulatory oversight, as noted above. • Regulated financial institutions subject to equivalent AML/CFT requirements, where duplication of due diligence provides limited additional risk mitigation; • Relationships between entities within the same regulated group (outside the scope of Recital 11), where entities are

Name of the respondent	Question	Answer
		subject to consolidated supervision and group-wide AML/CFT frameworks • Established interbank frameworks (e.g. SWIFT RMA relationships), where due diligence is embedded within the system and supported by existing controls; • Standardised retail or low-risk products, where the purpose and nature of the relationship can be reasonably inferred, and no risk indicators are present. - Art. 21 RTS The current draft RTS does not provide clear guidelines regarding the application of simplified due diligence (SDD) related to the identification and verification of the beneficial owners. The draft RTS Article 21 requires the application of different measures for the identification and verification of the beneficial owner's identity, which do not differ significantly from the draft RTS Article 10 applicable to standard scenarios. We therefore propose amending the article in the following way: “To verify the identity of the beneficial owner or senior managing officials in situations of non-high risk, the obliged entity shall consult one of the sources of information listed in paragraph (1)”. Art. 10 RTS The mandatory verification of beneficial ownership information through central registers for all customers may be disproportionate and inconsistent with the risk-based approach. It should be explicitly stated that such verification is

Name of the respondent	Question	Answer
		performed risk-based. Finally, we would like to stress the issue of accessibility to the UBO registries and the fact that obliged entities in certain jurisdictions may not have public access to the said registries.
European Banking Federation (EBF)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Art. 17 and Art. 22 RTS Art. 17 and 22, as currently drafted, impose full identification and verification obligations with respect to end investors and underlying clients behind pooled accounts. In practice: Pooled accounts, including omnibus accounts operated by banks or international central securities depositories (ICSDs), may hold funds for hundreds or thousands of underlying customers who have already undergone CDD by the direct customer (intermediary). Consequently, this duplication of efforts would result in an overwhelming administrative burden. Similarly, CIUs distribute shares through intermediaries (e.g., distributors, custodians, payment institutions), which are themselves obliged entities and already perform CDD on their clients. In the majority of cases the omnibus/pooled accounts structure is used. Again, this could involve thousands of natural persons behind these omnibus accounts, making the practical application of the requirements under Art. 17 virtually impossible. This would be to the detriment of EU fund managers and fund distributors and the EU capital markets. To ensure proportionality and operational feasibility while maintaining effective AML/CFT controls, we propose the following: • Explicitly clarify that pooled accounts opened by a correspondent bank for a respondent bank fall outside the scope of Article 22, consistent with existing EBA guidance. This is already implied by Recital 18. However, it only refers to payment institutions and electronic money institutions, leaving

Name of the respondent	Question	Answer
		the question open whether the exemption applies to all kinds of correspondent relationships. • With regard to Art 17, remove the conditions listed in points (a), (b)" and (c) and instead focus on the assessment described in point. (d), namely, to be satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures. A more detailed explanation of the aforementioned issues, as well as concrete suggestions are proposed in the sections on the respective provisions below. Art. 18, 24, 26 RTS The 'where necessary' framing and 'at least one of' structure in Article 18 are welcome improvements. AMLR Articles 20(1)(c) and 25 define that information must be obtained as appropriate/where necessary to understand the purpose and intended nature of the business relationship. For most natural persons with daily banking products, the purpose and intended nature should be inferable from the product itself without requiring extensive information gathering. In cases where there are no risk indicators and a client poses a non-high risk, requiring additional data does not add value to the risk assessment. Rather, it creates unnecessary friction in business relationships with well-intended clients, negatively impacting client experience and diverting resources from higher risk cases. Article 26(2) specifies that additional information may consist of information on the client's key clients, contracts, business partners and associates, including the UBO's business partners or associates. Even for EDD, this is extensive and risks being interpreted as requiring OEs to perform due diligence on their

Name of the respondent	Question	Answer
		client's business relationships, which is beyond the scope of AML obligations. We propose to delete this requirement. Alternatively, if the provision is maintained, we suggest the following amendment: For the purposes of points (a) to (c) of paragraph 1, obliged entities may collect additional information, such as on the customer's key customers, contracts, business partners, associates or the occasional transaction, including, where relevant, the beneficial owner's business partners or associates. Art. 19 RTS Article 19(2)(b) requires obliged entities to act "without delay" upon any new information or change in CDD data that may affect a customer's identification as a politically exposed person (PEP). The removal of the 'significant' qualifier for trigger-based rescreening means any change in CDD data could require immediate action. Additionally, for an existing client with a well-established relationship and a known transaction history who becomes a PEP, the OE already holds substantial knowledge that informs its risk assessment and measures. Based on the AMLR article 34(4) which provides that «obliged entities shall apply enhanced due diligence measures, proportionate to the higher risks identified», we recommend that the RTS:" • Para. 2 (b) and (c) - remove "without delay". • Acknowledge that the extent of additional measures to be applied should consider the obliged entity's existing knowledge of the customer and the nature of the established relationship.

Name of the respondent	Question	Answer
		• Allow a more proportionate approach for non-high risk PEPs and for existing clients with a well-established relationship.
European Banking Federation (EBF)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The EBF welcomes the inclusion of Article 1, which establishes the risk-based approach as the overarching principle of the RTS and its implementation. Accordingly, the RTS should be applied proportionately to the level of ML/TF risk, allowing OEs to exercise appropriate judgement in calibrating their controls. Supervisory assessments should likewise reflect the relevant customer, product and activity risk profile. The EBF remains concerned, however, that supervisory expectations under the draft RTS continue to vary across MS, including in relation to equivalent documentation and acceptable verification methods. This fragmentation risks undermining consistent, proportionate application of the RTS and creates unnecessary complexity for cross-border groups. The EBF therefore encourages AMLA, in cooperation with NCAs, to promote a more harmonised and convergent approach across the EU.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	14
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Art. 14 and 15 RTS The RTS should clarify what constitutes ‘sufficient information’ under both articles, particularly where such information is not publicly available. In practice, OEs often depend entirely on the

Name of the respondent	Question	Answer
		trustee for this information, and the RTS should acknowledge that information provided by the trustee is sufficient. In our view, it should be 'sufficient information' where a trust deed defines for instance beneficiaries as 'the children and grandchildren of the settlor,' a copy of or extract from the trust deed describing the class, combined with a written confirmation from the trustee that no individual beneficiary has yet been ascertained. Or for a discretionary trust, a description from the trustee of the objects of power, confirmation of whether the power of discretion has been exercised and any beneficiaries have been appointed, together with details on the default takers, should be sufficient. Where the trustee confirms that no distributions have been made and no beneficiaries have been appointed, this should be accepted as sufficient absent contradictory information. AMLA could usefully include such practical examples in a Level 3 factsheet to provide clarity on what OEs can reasonably be expected to obtain, particularly in cases where trust documentation is governed by non-EU law and may not be publicly accessible.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	17
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 17 raises significant operational challenges for collective investment undertakings (CIUs) and their service providers, particularly in cross-border contexts. CIUs often rely on intermediaries (e.g., distributors, custodians) who already perform CDD on underlying investors. Imposing full identification and verification obligations on CIUs duplicates these efforts. We caution that the conditions listed in points (a) to (c) are too

Name of the respondent	Question	Answer
		restrictive given the respective cross-border nature of the funds business. Consequently, many relationships will not fit the conditions for the application of SDD. In practice, CIUs would then need to collect data on potentially thousands of underlying investors behind omnibus accounts, even when those investors have already been subject to CDD by regulated intermediaries. This creates an overwhelming administrative burden and increases risks related to data transmission and privacy. This would also be a highly dynamic process, as due to the nature of this business the end investors change frequently. This burden will be passed on to each intermediary entity down the chain, and the end-distributor who would need to transmit the information, hence running increased risks of delays in investment and personal data protection-related risks in relation to the transmission of large volumes of such data. In addition, Article 17 does not sufficiently distinguish between different distribution models or account structures, such as direct subscriptions versus pooled/omnibus accounts held by intermediaries. This creates ambiguity for CIUs operating through multiple layers of distributors, transfer agents, and nominee arrangements. The RTS does not clarify the extent of "look-through" obligations for CIUs. For example, whether CIUs must identify all beneficial owners in complex structures such as feeder funds or nominee accounts, regardless of materiality thresholds. The negative impact is further amplified by the absence of proportionality for very small holdings. Where the conditions for the exemption are not met, CIUs may need to identify natural persons holding even negligible interests in a fund. CIUs and their service providers will face significant operational

Name of the respondent	Question	Answer
		and financial burdens to implement full look-through identification and verification obligations. These costs include system upgrades, data collection processes, and contractual amendments with distributors, which may reduce margins and investor returns. Regarding smaller UCITS/AIF managers that lack resources to absorb compliance costs, this could lead to market consolidation and reduced diversity in the EU asset management sector. The challenges described above could create a competitive disadvantage versus non-EU CIUs: o The RTS introduces complexity for global distribution networks, making EU funds harder to market internationally. o Distributors may prioritise non-EU funds to avoid duplicative CDD obligations, reducing EU CIUs' access to international capital. o Increased data collection requirements may slow down investor onboarding, making EU CIUs less responsive compared to competitors. This is particularly problematic for institutional investors who expect fast execution. Regarding non-EU competitors, they will benefit from less complexity, speed, and cost advantage. In view of the extensive challenges described, we propose revising Article 17 so that it focuses on CIUs obtaining sufficient comfort that the distributor applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners. Concretely, the provision could take the following form: "When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU)

Name of the respondent	Question	Answer
		2024/1624 if the following conditions are met: (a) it is satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the identity of any final investor without undue delay and upon request; (b) it is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners."
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	23
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We propose the following amendment to Art. 23: "Where, in cases with a low degree of ML/TF risk, obliged entities reduce the frequency of customer identification updates as referred to in Article 33(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall follow adequate risk-based measures to be satisfied that:" With respect to para. 1, we suggest highlighting that obliged entities are not expected to proactively request updated information from the client in the absence of the risk triggers referred to in para. 1, including between updates under Article 26(2)(b) AMLR. An effective control framework should be sufficient to identify the circumstances referred to in points (a) to (c). Where no such changes have been identified, the customer file should be deemed to have been duly reviewed. We understand that this will be clarified per the AMLA guidelines on ongoing monitoring of a business relationship and on the monitoring of the transactions carried out in the context of such relationship (aligned to AMLR Art. 26).

Name of the respondent	Question	Answer
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	33
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	We welcome the clarity provided by Art. 33, in particular the direct cross-referencing to Art. 26(2) and the distinction between entry into force and date of application. Nevertheless, explicit confirmation that all CDD elements (ownership structure, UBO, SMO, representatives etc.) are covered would be essential. However, the one-year timeframe for updating the documents, data, and information relating to existing high-risk customers under Art. 26(2)(a) presents a significant market impact (e.g., potential impact to EU customers that may share relationships with multiple obliged entities uplifting the customer base to the new standards starting on the same day and during the same period) and operational challenge for the obliged entities. The scope of remediation is considerable and must be carried out for a substantial number of customer files. The updating of existing customer files will be carried out on a risk-based basis, but achieving full compliance within one year is unlikely to be feasible and achieve desired outcomes. As an example, updates to beneficial ownership registries by the companies themselves are expected to take place only from 2027 onwards. Obliged entities wish to avoid updating their files multiple times, including unnecessary customer outreach and discrepancy reporting where companies have not yet updated their UBO registration. This challenge is compounded by the fact that several other RTSs, essential for the correct application of the CDD

Name of the respondent	Question	Answer
		framework, have not yet been published for consultation or are not yet scheduled under the AMLA Single Programming Document, meaning that their content and requirements remain unknown. Several essential RTS and guidelines are scheduled for later delivery, including: • under Art. 20(3) on risk variables and risk factors when entering into business relationships; • under Art. 26(5) on ongoing monitoring of a business relationship; • under Art. 42 on the level of risk associated with PEPs. • under Art. 69(5) on guidelines on indicators of suspicious activity or behaviours. Ultimately, customer files can only be uplifted once all relevant RTS are finalised. Without a complete and known regulatory framework, obliged entities risk not having enough time to update their policies, processes, systems, provide adequate, timely training to staff, and awareness to clients. As a result, OEs cannot yet adequately design and implement the processes and systems needed to carry out the remediation, let alone begin updating customer files. We therefore urge AMLA to extend the transitional period for high-risk customers beyond one year to reflect market readiness and the reality that obliged entities will not be in a position to complete updates for existing high-risk customers within that timeframe. The one-year period should commence only once all relevant RTS and guidelines have been finalised and published, and in any event only after the AMLR has become applicable

Name of the respondent	Question	Answer
		In addition, we would welcome confirmation from AMLA that OEs may begin collecting and updating the documents, data and information relating to customers in line with the AMLR and this RTS ahead of its application date (i.e. 10 July 2027), where the requirements are already sufficiently clear, and that such early collection of additional data points is supported by a legitimate interest under the GDPR, even though the AMLR and the CDD RTS have not yet become applicable.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	9
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Neither the Level 1 nor the CDD RTS specify a particular mechanism of how relevant vIBAN user information shall / may be obtained. Where the assignment of the vIBAN to an end user or the identification of such user is not carried out by the issuer itself, the issuer is dependent on information provided by its customer or a third party. In practice, mostly the assignment of the vIBAN will be delegated to another party. Regarding this, we see the need to specifically clarify that any contractual arrangement with a relevant party is permissible, provided it enables the obliged entity to fulfill the requirements of Article 22(3) AMLR. Accordingly, the issuer shall be allowed to obtain information from 3rd party: (a) Through reliance on another obliged entity (Art. 48 AMLR) (b) Through outsourcing provisions (Art. 18 AMLR) or (c) via other contractual arrangements (Art. 22(3) AMLR) Proposed clarification in Art. 9(3) CDD-RTS: Where an obliged entity issuing the virtual IBAN does not itself establish the business relationship or identify the user of the virtual IBAN, it may obtain the information according to (a) to

Name of the respondent	Question	Answer
		(c) via contractual arrangements with a relevant information providing party. Such arrangement shall ensure that information is provided without undue delay and in any case in time to fulfill the obligations under Article 22(3) AMLR. Such arrangement does not constitute an outsourcing (Art. 18 AMLR) or reliance (Art. 48 AMLR).
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	6
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Paragraph 6 appears to create an obligation for obliged entities to accept electronic identification means in a face-to-face context where such means is available to the customer, any person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being carried out. Not only would this lead to important operational challenges for obliged entities, but this measure would also create a gap with the eIDAS regulation (2024/1183) whose Article 5(f) creates an obligation to accept the EUDIW, by December 2027, only where strong user authentication for online identification is required. We hance propose the following amendment to para. 6: Obliged entities may accept the use of electronic identification means, or relevant qualified trust services as described in Article 7(1), to verify the identity of the natural person in a face-to-face context where they are available to the customer, any person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being carried out.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	22

Name of the respondent	Question	Answer
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	The provision of Article 22 refers to pooled accounts opened by credit institutions for 'account holders'. It hence does not explicitly exclude correspondent relationships (e.g. a credit institution or a central securities depository holding a pooled account with another credit institution). Capturing correspondent relationships in scope would lead to the following unwanted consequences: 1) Duplication of efforts : Credit institutions would need to verify the identity of their customers' customers in all cases not falling within the limited scope of its exceptions. We emphasise that these underlying customers are already subject to CDD by the intermediary. Imposing full identification and verification obligations on credit institutions providing pooled accounts duplicates these efforts. The conditions listed in points (a) to (e) would rarely be cumulatively met, if ever. In practice, the most relevant condition is the one laid down in point "e" whereby the credit institution would need to obtain sufficient comfort that the account holder applies robust and risk-sensitive CDD measures on its clients and the clients' beneficial owners. With regard to the respondent bank's policies, procedures and controls, these are assessed at the onboarding stage and subsequently at recertification to ensure that robust risk-sensitive and CDD measures are applied vis-à-vis the underlying customers. 2) EU capital markets disruption: Imposing CDD requirements on customers' customers in the correspondent relationship context would raise a significant challenge in the capital markets domain, particularly regarding international central securities depositories (ICSDs), custodian banks, correspondent banking relationships, securities traders, etc. As an illustration, ICSDs act as financial market infrastructures

Name of the respondent	Question	Answer
		and as pillars of the European and international capital markets. Similarly to custodian banks, ICSDs are also credit institutions, thus falling under the scope of Article 22. Their clients are typically banks in the context of a correspondent relationship for securities settlement purposes (in the majority of cases cross-border). These respondent (customer) banks open pooled/omnibus accounts consisting of funds of their own clients (natural and legal persons), whose number could be in the hundreds or in the thousands. For example, a major international broker could hold a pooled account for over twenty thousand underlying clients. It is not operationally feasible for an ICSD/credit institution to perform identification and verification of all the natural persons behind the underlying clients. This burden will be shared between the ICSDs/custodians who need to obtain the information from their customers, and the respondent banks/intermediaries who would need to transmit the information, hence running increased risks of delays in establishing a business relationship and personal data protection-related risks in relation to the transmission of large volumes of such data. The additional administrative burden imposed on the respondent banks would also undermine the competitiveness of EU custodians who would impose much stricter administrative requirements than their peers from other parts of the world. In view of the described challenges, we recommend clarifying that correspondent banking relationships fall outside the scope of Article 20 of the RTS in relation to Article 20(1)(h) of the AMLR. In its responses to questions on the Consultation Paper (EBA/CP/2025/04) in relation to the RTS on CDD under Article 28(1) AMLR, the EBA acknowledges that “the relationships

Name of the respondent	Question	Answer
		between a credit institution (which opens a pooled account) and a PI or EMI should be more appropriately assimilated to correspondent relationships within the meaning of Article 2(22) point (b) AMLR. As such, they fall outside the scope of this specific provision of the RTS". To this end, the EBA has amended Recital 18 to specify that "situations where credit institutions open a payment account for payment institutions or electronic money institutions will fall outside the scope of the sectoral simplified measures provision of this Regulation. Such situations would be regarded as correspondent relationships within the meaning of Article 2(22), point (b), of Regulation (EU) 2024/1624". Moreover, the EBA guidelines on ML/TF Risk Factors refer to pooled accounts only in the section dedicated to retail banking, not in the correspondent banking one. The definition of 'pooled accounts' also refers to legal practitioners and notaries, rather than correspondent banking relationships. This is further reiterated in Recital 51 of the AMLR. We hence suggest amending the wording of Article 22 to specify that "With the exception of situations falling under Article 2(22) of Regulation (EU) 2024/1624, where a credit institution opens an account…". We further propose that this is reflected in Recital 18 (cf. our comment to the Recital which includes a wording proposal).
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	12
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	While we welcome AMLA's explicit reference to the risk-based approach in Article 12, we consider that the expectations placed on obliged entities with regard to complex structures are unclear and do not provide added value, particularly considering the breadth of information already required to be

Name of the respondent	Question	Answer
		collected under Article 11. We therefore take the view that Article 12 is not necessary, as outlined above. However, should AMLA decide to retain Article 12, we would like to put forward the following consideration and suggested amendment: Article 12 (1)(b), refers to the condition whereby "the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU". We note that for obliged entities with international activities, having clients registered outside of the EU is regular and should not lead to consider the structure as "complex". Furthermore, Article 12(1)(b) RTS CDD excessively restricts the scope by using only the term "EU" when referring to customers or legal entities registered in certain jurisdictions. As a result, all EEA countries that are not EU Member States are excluded. In addition, third countries with equivalent or comparable AML/CTF frameworks, such as Switzerland, are also not taken into account. Against this background, we strongly request and highly recommend that EEA Member States and countries with equivalent or comparable AML/CTF regulations be explicitly mentioned in addition to the term "EU". If the Article 12 is to be kept we suggest alternative wording for Article 12(1)(b) RTS CDD: "[…] are registered in jurisdictions outside the EU, the EEA, or countries with equivalent or comparable ML/FT regulations.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	32
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	EBF identifies several situations where information required by the draft RTS is not available in practice across a range of customer types and jurisdictions, and where the RTS as drafted offers no workable alternative. EBF's position is that the

Name of the respondent	Question	Answer
		unavailability of a specific data point should not prevent the establishment or continuation of a business relationship where the overall risk can be managed by other means. It is important that the systematic approach outlined in AMLR Article 22 is also reflected in the RTS. AMLR Article 22 distinguishes between identification (par. 1) and verification (par. 6 and 7). In AMLR Article 22(1), various requirements for information to be obtained are listed. This information can be obtained by asking the customer, without the customer having to provide documentation for it (verification). The requirements for customer verification are set out in AMLR Article 22, paragraphs 6 and 7. Article 22(6) states the obliged entity shall obtain either a passport (or equivalent) or use electronic identification. There is no requirement that all the information obtained pursuant to Article 22(1), must be verified. It is explicitly stated in AMLR Article 22(6)(a) that a passport is sufficient for verification. A passport, however, will never contain all the information listed in paragraph 1, such as the usual place of residence. The same applies to electronic identification, where it is sufficient that the electronic identification meets the requirements of Article 7 Article 32 (2) of the RTS therefore also gives rise to uncertainty in this regard, as it appears to go beyond the requirements of the AMLR. It introduces specific requirements for the use of electronic identification, by reference to Article 20(1) of the AMLR, which do not apply to passports, and which are not consistent with Article 20(6), according to which electronic identification means complying with eIDAS assurance levels 'substantial' or 'high' may be used for verification. Therefore, the use of electronic identification that meets the requirements of this regulation should be sufficient to fulfil the

Name of the respondent	Question	Answer
		verification requirement. AMLR does not provide any allowance to impose additional requirements. Furthermore, it should be noted that the electronic identification currently does not include all this information, meaning it would (in reality) not be possible to use electronic identification for any customers. The entirety of Article 32 should therefore be rewritten accordingly and taking into consideration feedback provided for other relevant Articles in the draft CDD RTS.
European Banking Federation (EBF)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	29
European Banking Federation (EBF)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Art. 29 RTS Recital 125 of the AMLR as well as Recital 9 Draft RTS state that SMOs are not to be considered beneficial owners. This is further referenced and supported in the EBA's final RTS and accompanying feedback (October 2025). Taken together, these elements support the conclusion that obligations specifically applicable to UBOs, such as sanctions or PEP screening, should not automatically extend to SMOs. We would welcome clarification of this distinction in the RTS, as this would contribute to greater legal certainty in the application of AML/CFT requirements. Art. 30 RTS The scope of sanctions screening in the draft RTS appears broader than existing EBA guidance (EBA/GL/2024/15): • Sub-paragraph (a) (i) requires screening against all names and surnames, whereas EBA/GL/2024/15 (para 17) refers to "the first name and surname". We recommend aligning the scope with the existing EBA guidance.

Name of the respondent	Question	Answer
		• the requirement to consider all other names, aliases and wallet names may be challenging in practice. We recommend clarifying that the text refers to aliases "as stated in relevant sanctions lists" given that customer aliases are not required to be collected under Article 22 of the AMLR and aligned to EBA guidelines). We propose the following amendment to point (a) (iii) to that effect: o in the case of a natural person, legal person, body or entity, any other names, aliases, trade names, where they differ from the registered name, digital wallet addresses, where available in the lists of targeted financial sanctions.
European Banking Federation (EBF)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
European Banking Federation (EBF)	Please specify which recital you refer to, and share your comments below.	`Recital (1): Art. 12(1)(b); Art. 17(a); Art. 22(b) Given that Regulation (EU) 2024/1624 applies identically across the EU and the EEA, it should be explicitly ensured that all simplified due diligence measures, risk-based facilitations and comparable regulatory reliefs provided for in the RTS apply uniformly in all EEA States. This clarification should be reflected consistently throughout all relevant RTS provisions and not be limited to isolated articles or specific scenarios. Recital 5 We would welcome clarification on the meaning of "certification" as used throughout the RTS, including whether (i) the same certification standard applies to all documents and (ii) the same categories of persons may certify, or whether requirements differ depending on the document type and/or

Name of the respondent	Question	Answer
		the category of person to be identified. We note the following references: • Recital 5 indicates that, for documents relating to non-natural persons, documents may be certified by an independent professional or a public authority. • Article 6 refers to a certified copy of an identity document, passport or equivalent for the identification of a natural person. • Article 10(b)(iv) requires documents confirming the identity of the beneficial owner to be certified by persons authorised for document certification purposes. If these provisions are intended to impose different certification requirements, we would welcome clarification: (i) on which "independent professionals" fall within scope;(ii) that no separate assessment is necessary, and no specific requirements apply and (iii) whether any specific requirements apply to the certification of copies of identity documents. We also suggest clarifying whether (and on what basis) obliged entities may be treated as persons authorised for document certification purposes. In this context, it would be helpful to confirm whether an "independent professional" must be external to the organisation (e.g., a notary) or whether certification may also be performed by suitably independent internal functions (e.g., in-house legal and/or company secretary). In addition, given members' global operating models, clarification on whether certification may be performed by a company/corporate secretary would be welcome. Finally, we note that Article 6(3) appears to allow obliged entities to take reasonable steps to satisfy themselves as to the authenticity of documents obtained for the verification of the

Name of the respondent	Question	Answer
		identity of natural persons. Confirmation of how this interacts with any “certified copy” requirement would be welcome. Recital 18 In relation to the obligation imposed on credit institutions to perform CDD on the customers of their customers holding pooled accounts, Recital 18 clarifies that there are two exceptions – for payment institutions and for electronic money institutions. The Recital further specifies that such situations would be regarded as correspondent relationships within the meaning of the AMLR. It appears that the intention of the legislator is to exclude correspondent relationships from the scope of Article 22. However, we then question why this has not been explicitly stated, but rather only two types of correspondent relationships have been mentioned. This clarification is important, as the extension of CDD requirements to correspondent relationships would have an immense negative impact on EU capital markets, as explained in our feedback to Article 22. We propose replacing the last two sentences of the Recital with the following: “Situations of correspondent relationships within the meaning of Article 2(22) of Regulation (EU) 2024/1624 will fall outside the scope of the sectoral simplified measures provision of this Regulation, as these would be governed by the provisions of Article 36 of Regulation (EU) 2024/1624.” The amended Recital 18 will then be the following: “This Regulation identifies a service that would benefit from specific simplified due diligence measures. This is the case where a credit institution opens a pooled account for a

Name of the respondent	Question	Answer
		customer that is an obliged entity, to hold or administer funds that belong to the customer's own clients, where the ML/TF risk of that service is assessed as low, based on the credit institution's risk assessment. In such cases, since the final customers are already subject to the customer due diligence measures applied by the obliged entity, it is proportionate to allow specific simplified due diligence measures, to avoid duplication of controls while ensuring that appropriate safeguards remain in place. Situations of correspondent relationships within the meaning of Article 2(22) of Regulation (EU) 2024/1624 will fall outside the scope of the sectoral simplified measures provision of this Regulation, as these would be governed by the provisions of Article 36 of Regulation (EU) 2024/1624."
European Banking Federation (EBF)	Do you have any comments on the Annex in the draft RTS?	Yes
European Banking Federation (EBF)	Please share your comments below.	Annex I to the AMLR on risk variables and Articles 25 and 26 of the RTS There is a need for clarity regarding Annex I to the AMLR. The Annex constitutes an indicative and non exhaustive list; however, it simultaneously states that "obliged entities shall take into account (…)". It is therefore unclear how the Annex is intended to be applied. Nonetheless, EBF assumes that it should be applied in accordance with the risk based approach, meaning that it should not automatically form part of standard CDD for all customers. In our view, this interpretation is supported by the provisions on enhanced due diligence in the RTS. As an example, Article 25(b) of the RTS on enhanced due diligence provides that the

Name of the respondent	Question	Answer
		reputation of the customer and the beneficial owners may be taken into account as an additional measure. Information on reputation is also listed as a risk variable in the Annex. Thus, the information cannot be included in the CDD for all customers and at the same time serve as an additional measure to get a better understanding of the customer. We would therefore welcome clarification from AMLA as to how the requirements for the application of the risk variables should be understood. Annex I of the draft CDD RTS We suggest including resident town name under address elements aligned to FATF Recommendations (October 25).
European Banking Federation (EBF)	How would you rate the proposals set out in the draft RTS overall?	Neutral
European Boating Industry (EBI)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	EBI does not fully agree that the proposals, as currently drafted, can be applied across the range of products and services in the recreational boating sector (high-value craft) without further clarification and sector-specific flexibility. EBI supports AMLA's objective of a harmonised, proportionate and risk-based customer due diligence framework. The consultation paper itself states that the draft RTS are intended to be applied in line with a risk-based approach and that the extent and nature of information and measures should be commensurate with the type and level of risk identified. However, the current drafting remains heavily influenced by a financial-sector operating model and does not sufficiently reflect the operational reality of high-value craft.

Name of the respondent	Question	Answer
		The recreational boating sector is characterised by occasional, high-value transactions, often involving one-off purchases, long build and transaction timelines, cross-border parties, as well as many parties involved (dealers, brokers, owner representatives, lawyers, notaries, banks and other intermediaries) besides the manufacturer. The overwhelming majority of businesses in the sector are SMEs, with limited compliance departments, limited access to specialist screening databases, and limited ability to conduct forensic corporate-structure analysis. Due to character limitations, the main provisions raising concerns and proposals are laid out in the next section under additional input related to specific articles.
European Boating Industry (EBI)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EBI does not fully agree. While Article 1 states that the Regulation shall be applied in line with a risk-based approach, several provisions risk becoming prescriptive in practice and may limit the ability of non-financial entities and SMEs in particular to apply proportionate due diligence measures. The draft RTS recognise the principle of proportionality, and AMLA's consultation paper emphasises simplification, flexibility and risk-based application. However, the operative provisions often require the collection or verification of information that may be difficult, costly or disproportionate in low-risk or standard-risk transactions involving recreational craft. This is particularly relevant because the sale of a pleasure boat or yacht is normally an occasional transaction rather than an ongoing account-based relationship. It is not comparable to continuous financial relationships. Many transactions involve

Name of the respondent	Question	Answer
		through banks, lawyers, notaries, brokers and other professionals who may themselves be subject to AML/CFT obligations. The risk-based approach should therefore allow non-financial obliged entities to avoid duplicating checks already performed by such entities. Due to character limitations, the main provisions raising concerns and proposals are laid out in the next section under additional input related to specific articles.
European Boating Industry (EBI)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In the recreational boating sector, there are several situations where information required by the draft RTS may be routinely unavailable, difficult to verify, or disproportionate to obtain. 1. Beneficial ownership information may be difficult to obtain or verify where the customer is a legal entity established outside the EU, part of a multi-layered holding structure, or linked to a trust, foundation or similar legal arrangement. The draft RTS require understanding of ownership and control structures, including intermediate entities and the rationale behind the structure. Recreational boating companies as obliged entities often do not have access to foreign registers, legal tools, or specialist expertise to verify such structures. 2. Information on trusts and similar legal arrangements may not be routinely available. A manufacturer or dealer may not have the leverage or expertise to assess the trust documentation. 3. Information on the future use of the craft may be uncertain at the time of purchase. Article 18 requires information on intended use, anticipated type and frequency of activities,

Name of the respondent	Question	Answer
		estimated funds to be used in connection with the product or service, and anticipated transaction patterns. A prospective owner may know the purchase price but not yet the precise frequency of future use, cruising locations, future maintenance arrangements or whether another vessel may be purchased in future. 4. Source of funds and source of wealth documentation may be unavailable or commercially sensitive. Customers purchasing recreational craft may be unwilling to provide detailed documents to an obliged entity. Such information may be more appropriately assessed by banks, lawyers, notaries or other professional intermediaries. 5. PEP and sanctions screening information may not be accessible to SMEs. Non-financial obliged entities may not have access to comprehensive PEP databases, ownership/control databases, transliteration tools or sanctions-screening systems equivalent to those used by large financial institutions. Due to character limitations, the main provisions raising concerns and proposals are laid out in the next section under additional input related to specific articles.
European Boating Industry (EBI)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EBI considers that additional simplified due diligence measures should be included for low-risk or standard-risk transactions involving recreational craft. The consultation paper notes that Article 28(1) AMLR mandates AMLA to specify requirements for standard due diligence, simplified due diligence and enhanced due diligence, and that the RTS aim to remain proportionate and risk-based. The draft

Name of the respondent	Question	Answer
		RTS currently include simplified measures for low-risk situations. However, they do not provide a corresponding simplified approach for non-financial high-value goods sectors such as purchase of recreational craft. EBI considers that recreational boating may constitute a lower-risk situation. In such cases, simplified due diligence should be available. This would not exempt businesses from AML/CFT requirements, but would allow them to apply proportionate measures that reflect the actual risk and avoid duplication of checks already carried out by financial institutions and regulated professionals. Due to character limitations, the main provisions raising concerns and proposals are laid out in the next section under additional input related to specific articles.
European Boating Industry (EBI)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	EBI strongly recommends that AMLA develop sector-specific guidance for recreational boating, pleasure boats and yachts in cooperation with the industry and competent authorities. The draft RTS are horizontal and may be difficult for newly covered or non-financial obliged entities to apply without practical examples. The consultation paper acknowledges that some newly introduced obliged entities, particularly in the non-financial sector, may incur initial compliance costs in interpreting how horizontal CDD principles apply to their business models. High value alone should not automatically trigger enhanced due diligence. The assessment should consider the full risk profile, including payment method, customer profile, jurisdictional risk, use of intermediaries, transparency of

Name of the respondent	Question	Answer
		ownership, and the involvement of regulated financial institutions. Article 25 refers to assessing the reputation of the customer and beneficial owners. This concept is subjective and difficult for SMEs to apply consistently. It may also create liability risks if an obliged entity is expected to make reputational judgments without reliable sources or legal certainty. Article 30 requires screening of names in the original and/or transliteration. For non-financial SMEs, this requirement is vague and potentially burdensome, given the number of possible transliterations across languages and scripts. The RTS should more clearly explain how SMEs should record the due diligence steps taken, especially where information is unavailable or alternative verification has been used. EBI recommends that AMLA provide a standardised due diligence checklist or template for non-financial obliged entities. This would improve compliance, reduce administrative burden and support consistent supervisory expectations. The European recreational boating industry is globally competitive. Excessively intrusive or disproportionate due diligence requirements could lead customers to purchase outside the EU, especially where non-EU competitors are not subject to equivalent obligations. For this reason, proportionality is not only a compliance issue but also a competitiveness issue for a European manufacturing sector made up predominantly of SMEs.

Name of the respondent	Question	Answer
		Due to character limitations, the main provisions raising concerns and proposals are laid out in the next section under additional input related to specific articles.
European Boating Industry (EBI)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Boat transactions are frequently cross-border, conducted with brokers and without direct seller-buyer interaction, companies do not have the resources for advanced digital onboarding or ID-check tools that large financial institutions have access to, this presents a high compliance cost for SMEs It should be possible to rely on third-party verification (banks, lawyers, notaries) and proportionality for occasional transactions compared to continuous relationships needs to be ensured
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	10
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	There is a lack of knowledge in the sector on which type of information can be collected, and risk of unwillingness of customers to provide such data, a clear list of documents should be provided The purchasing process for a craft may be managed by an owner representative, which should be considered in this framework, a standard operating procedure in the sector
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	11

Name of the respondent	Question	Answer
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Legal entities involved may be based outside of the EU and information may be very difficult to obtain, this is standard industry practice Companies involved in the sale of craft do not have the skills for forensic corporate analysis, and are not able to fulfil these without legal tools or access rights, and open up liability issues if structure misunderstood; a proportionate approach is required.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	12
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	This presents difficulties for obliged entities to check accuracy of information as they are not specialised in the area; a more proportionate and minimum steps should be provided.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	14
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	A rigid application of Article 14 to the marine sector may create challenges, as the identification and verification of beneficial owners of trusts or similar arrangements is not always feasible or proportionate.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	16
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	This is a standard procedure in the case of the sale of craft with owner representatives involved in representing the customer; more information needs to be provided on how the existence and power of representation should be checked
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18

Name of the respondent	Question	Answer
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	The purpose of taking the decision to purchase a craft is based on the want to enjoy the use of the craft for leisure or touristic purposes, it seems excessive to request this information in each case when a potential owner wants to buy a craft and could be seen as intrusive (which is a very occasional purchasing decision). Related to the envisaged activities, the prospective owner will be aware of the costs of purchasing the craft but not yet the amount of funds to be used in connection with the craft, how often it will be used or whether they will purchase a new craft in some years; this section needs to be adapted to the realities of the sector and such questions reduced. Questions on the source of funds and business activity or occupation may be difficult as customers may not want to share this information; regarding the destination of funds, it should be assumed that this is the obliged entity that is selling the craft. Understand the origin of funds is an extensive requirement, requiring supporting documentation while in the sector payments typically executed via banks, dealers and other obliged entities. Entities in the sector, for example, do not see underlying financial flows and cannot verify tax returns or other. This leads to a duplication of controls that are already performed by financial institutions that are obliged entities under AML rules themselves, which should be reduced to be proportionate.

Name of the respondent	Question	Answer
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	19
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	It will be difficult for the obliged entity to ask for information about Politically Exposed Persons (PEPs) and companies may not have access to the relevant registers and information to check accordingly.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	20
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Applies to articles 20-24 Considering that the recreational boating sector may constitute a low-risk situation pursuant to Article 28(1), second subparagraph (b), it is reasonable to allow for Simplified Due Diligence (SDD) measures. Section 5 should, by default, apply to all transactions involving pleasure boats and yachts. It is unclear how the analysis of low or high risk should be conducted. It would therefore be beneficial to have guidance on this from AMLA or develop a sectoral risk analysis together with the sector(s) affected and relevant stakeholders.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	25
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Section 6: More guidance and tools need to be provided on how the obliged entity should check the accuracy or authenticity of the customer or beneficial owner; it is also a very subjective measure to assess the “reputation” of customer and beneficial owner, which should be removed.
European Boating Industry (EBI)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	30

Name of the respondent	Question	Answer
European Boating Industry (EBI)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Regarding screening obligations, the requirement that obliged entities refer to the customer's original name and/or transliteration is vague. It may potentially render non-financial entities (manufacturing companies) non-compliant due to the wide range of possible cases.
European Boating Industry (EBI)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
European Boating Industry (EBI)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact
European Boating Industry (EBI)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would	Disruptive impact

Name of the respondent	Question	Answer
	be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
European Casino Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	DISCLAIMER: This contribution to the AMLA consultation is submitted on behalf of the European Casino Association (ECA) and reflects the consolidated views of the Association at European level. Given the diversity of regulatory frameworks across Member States, in particular as regards the implementation of previous EU anti-money laundering directives, certain positions expressed in this response may not fully reflect the views or practices of all individual members. Differences may arise due to national legal specificities, supervisory approaches, and established compliance frameworks. Furthermore, in light of the principle of

Name of the respondent	Question	Answer
		subsidiarity applicable in the field of gambling, some elements addressed in this response may be considered by individual members as more appropriately regulated at national level. The positions set out in this contribution should therefore be understood as general policy orientations supported by the ECA, without prejudice to the positions that individual members may adopt in their respective jurisdictions or in their own response to the consultation. The ECA broadly welcomes the horizontal, risk-based approach of the draft RTS and AMLA's guiding principles of proportionality, technological neutrality, and maximum harmonisation. The ECA notes that the draft RTS was developed principally by the EBA with a financial sector focus, and that the non-financial sector subgroup was not subject to formal public consultation. This consultation is the primary opportunity to reflect the operational characteristics of land-based casino operators in the final instrument. The ECA broadly agrees that the draft RTS can be applied to land-based casino operators, subject to the clarifications below where current proposals lack sufficient flexibility. Article 6 - Face-to-face identity verification. The draft RTS does not expressly confirm that physical document verification fully satisfies the identity verification obligation without supplementation by electronic means. Article 7 is designed for non-face-to-face scenarios. Land-based casino operators interact exclusively with physically present customers and have invested substantially in document verification technology (UV scanners, MRZ readers, OCR, and biometric chip readers,…)

Name of the respondent	Question	Answer
		subject to oversight by national gambling regulators. Proposed solution: AMLA should confirm that physical document verification under Articles 6(1)–(4) fully satisfies the verification obligation for land-based casino operators without any requirement to supplement with electronic identification means, and that Article 7 applies exclusively to non-face-to-face scenarios. Article 18(a) - Purpose and intended nature. The nature of the gambling service is self-evident and legally defined. The “where necessary” qualifier in Article 18 should confirm that no additional routine enquiry on purpose is required for standard-risk customers at a licensed physical casino. Proposed solution: AMLA should confirm in guidance or otherwise that the nature of the licensed gambling service satisfies the purpose and intended nature requirement for standard-risk customers without additional enquiry, consistent with Recital 13 of the draft RTS. Article 18(c) - Source of funds and casino-generated winnings. Where a cash-out payout includes genuine winnings (the amount exceeding funds introduced by the customer) that component originates entirely from the casino’s own regulated and documented funds. The casino’s transaction records evidence its origin with complete certainty. Applying source-of-funds enquiry to the winnings component is circular. Proposed solution: AMLA should confirm that casino transaction records satisfy the source-of-funds obligation under Article 18(c) for the genuine winnings component, and that a brief categorical customer declaration satisfies Article 18(c) for standard-risk threshold-level transactions, with documentary evidence under

Name of the respondent	Question	Answer
		Article 27 reserved for EDD situations. Article 27 - EDD and high-net-worth customers. The “one or more” documentary flexibility is essential for casino VIP customers whose wealth spans diverse structures. Where thorough EDD documentation is current and no material change has occurred, systematic re-collection serves no incremental AMLCFT purpose. Proposed solution: AMLA should maintain the “one or more” flexibility and confirm that periodic review may be discharged through a structured assessment - including customer confirmation under Recital 70 AMLR - without mandatory re-collection of already-current documentation. Article 33 - Casino operators hold CDD records for tens of thousands of customers collected under prior national frameworks. Full remediation by 10 July 2027 is unrealistic. AMLA should confirm that updates may be risk-based and prioritised, with at least 18 months from OJEU publication before application.
European Casino Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The ECA broadly agrees that the draft RTS are framed around a risk-based approach and welcomes AMLA’s stated commitment to proportionality and simplification. However, the ECA identifies several provisions where the current drafting, if applied without sector-specific clarification, risks producing outcomes inconsistent with a genuine risk-based approach for land-based casino operators. Article 18(c) - Source of funds: risk calibration. The draft RTS does not draw a sufficiently clear distinction between the source-of-funds information required at standard risk and the

Name of the respondent	Question	Answer
		documentary evidence required at enhanced due diligence level. Without this distinction, national supervisors may interpret Article 18(c) as requiring documentary evidence (tax declarations, pay slips, bank statements) for every customer at the €2,000 CDD threshold, regardless of risk profile. This is not risk-based. The overwhelming majority of casino customers at the €2,000 threshold are standard-risk recreational visitors. Proposed solution: AMLA should clarify that at standard risk a brief categorical customer declaration (e.g., employment, pension, savings) satisfies Article 18(c), and that the documentary evidence in Article 27 is reserved for enhanced due diligence situations triggered by a positive risk assessment. The distinction should be explicit in the final RTS text, not left to national supervisory interpretation. Articles 20–24 - Absence of casino-specific SDD criteria. The risk-based approach requires that genuinely low-risk customers benefit from simplified measures. The 2022 SNRA assessed land-based casinos at Medium residual risk (level 2), confirming that the sector's controls are effective and improving. The majority of casino customers are lawful recreational visitors with no elevated risk indicators. Without gambling-sector-specific SDD criteria, operators lack the legal certainty to calibrate CDD proportionately across their customer base, undermining the risk-based approach in practice. Proposed solution: AMLA should include, in the final RTS or sector-specific guidance before the application date, criteria confirming when land-based casino operators may apply SDD to recreational visitors - consistent with Article 33 AMLR's existing flexibility and the Medium residual risk baseline.

Name of the respondent	Question	Answer
		Articles 25–27 - EDD: high value is not the same as high risk. The draft RTS risks being interpreted as requiring EDD whenever a customer's transaction profile exceeds defined reference points. For casinos this could mean EDD for any active customer who visits regularly or stakes higher amounts, irrespective of actual risk indicators. A recreational, verified, non-PEP customer with consistent, stable behaviour and a traceable payment history is not high-risk merely because they gamble more than average. Proposed solution: AMLA should confirm that EDD is triggered by elevated risk factors (PEP status, adverse media, unusual behaviour, source-of-funds inconsistency, geographic risk) not by transaction volume or stake level alone. Guidance should clarify the distinction between high-value and high-risk customers for land-based casino operators. Article 19 - PEP screening: real-time feasibility. For land-based casinos, PEP screening is typically triggered from the first transaction and when the relevant customer due diligence threshold is reached, including the €2,000 AML threshold. While customers are often screened before being permitted to play, requiring screening to be fully completed before any transaction or gaming activity proceeds can create significant operational challenges in high-footfall casino environments, particularly given the high number of false positives requiring manual review. The ECA therefore recommends that AMLA confirms that, in standard-risk situations, PEP screening may be completed within a short, clearly defined period after the relevant threshold has been identified, provided it is conducted promptly, documented, and escalated where a potential match arises. Transaction processing or gaming activity should not

Name of the respondent	Question	Answer
		automatically have to be withheld pending final real-time confirmation. Article 26(2) - Ongoing monitoring frequency. Article 26(2) AMLR already establishes clear maximum update periods: one year for higher-risk customers subject to EDD measures, and five years for all other customers. AMLA should avoid introducing additional fixed periodic review cycles for standard-risk casino customers beyond those limits. Instead, operators should be permitted to rely on ongoing transaction monitoring and trigger-event reviews, with customer information updated within the applicable AMLR maximum period or earlier where risk indicators, suspicion or relevant changes in circumstances arise.
European Casino Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The ECA would like to clarify that Land-based casinos constitute a distinct sub-sector with their own risk profile, customer journey, and operational controls (not comparable to online gambling, sports betting, lotteries, or gaming halls). The situations below arise specifically in the land-based casino context. Source of funds documentary evidence in real-time transactions - Article 18(c). This is the single most operationally critical gap in the draft RTS for land-based casino operators. The draft lists documentary evidence (tax declarations, pay slips, bank statements) as the means of satisfying Article 18(c). In a land-based casino, the €2,000 threshold is triggered in real time at a cashier interaction. Recreational customers do not carry financial documents and cannot reasonably be expected to produce them on the spot. Requiring documentary evidence

Name of the respondent	Question	Answer
		in a physical casino environment is not operationally feasible and causes recreational customers - the majority of casino visitors - to leave rather than comply. The result is that licensed casinos lose customers to illegal alternatives with no AML controls. The ECA draws AMLA's attention to the experience in Sweden. Progressive tightening of AML and CDD requirements, combined with increasing compliance burden in the physical gambling environment, contributed directly to the sustained decline in customer traffic at Casino Cosmopol — Sweden's state-owned casino operator. Between 2020 and 2025, Casino Cosmopol closed all its venues and ceased to exist by the end of 2025. As of 1 January 2026, Sweden became the first EU Member State to eliminate licensed land-based casino gambling, with approximately 900 jobs lost in the four casinos. The demand did not disappear - it migrated to online platforms, predominately unlicensed ones and to flourishing illegal casinos in private locations. This is the gravest risk facing the licensed land-based casino sub-sector across the EU. Disproportionate CDD requirements do not prevent money laundering - they destroy the licensed market that the AML framework is designed to supervise. AMLA should conduct a formal customer displacement impact assessment before finalising the CDD RTS. Proposed solution: AMLA should confirm that for standard-risk occasional transactions, a brief categorical customer declaration satisfies Article 18(c), with documentary evidence under Article 27 reserved for EDD situations.

Name of the respondent	Question	Answer
		Place of birth and residential address - Article 6 and articles 20(1)(a) and (b) combined with article 32 and the Annex I. The draft RTS requires collection of both place of birth and residential address as simpified and standard CDD data points. Many EU national ID cards and third-country passports do not record either element - residential address is almost never included in a passport. Requiring customers to produce separate address-proof documentation at a casino cashier is wholly disproportionate for a standard-risk threshold interaction. The purpose of identification in a land-based casino is to verify who the customer is. A valid passport or official national ID card achieves this purpose. Collecting information beyond the data visible on that document serves no proportionate AML/CFT objective at the standard-risk level. Proposed solution: AMLA should clarify that place of birth and residential address are required only where available on the official identity document presented and expressly confirm that collection of information beyond the data on a valid passport or national ID card is not proportionate for simplified and standard-risk CDD at a land-based casino. Beneficial ownership registers and PEP screening. Following the ECJ's Sovim judgment (C-601/20), public access to several EU beneficial ownership registers has been restricted; non-EU registers may be incomplete. Proposed solution: a documented manual review of publicly available online sources (such as official government websites, AMLA and FATF guidance, reputable media publications, and available open-source intelligence tools) should constitute a compliant alternative where no reliable automated screening tool provides adequate coverage of the jurisdiction concerned, with the limitation and

Name of the respondent	Question	Answer
		the sources consulted recorded in the operator's compliance file. Casino-generated winnings - Article 18(c). Where a payout includes genuine casino winnings — the amount by which the cash-out exceeds the funds the customer introduced during that session — the source of those funds is the casino itself. The casino's own transaction records constitute complete and internally verifiable evidence of that origin. The ECA requests that AMLA confirm expressly in the final RTS or accompanying guidance that the source-of-funds obligation under Article 18(c) does not apply to the genuine winnings component of a casino payout, and that no customer declaration or documentary evidence is required in respect of that component.
European Casino Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The ECA would like to clarify that Land-based casinos constitute a distinct sub-sector with their own risk profile, customer journey, and operational controls (not comparable to online gambling, sports betting, lotteries, or gaming halls). The situations below arise specifically in the land-based casino context. Source of funds documentary evidence in real-time transactions - Article 18(c). This is the single most operationally critical gap in the draft RTS for land-based casino operators. The draft lists documentary evidence (tax declarations, pay slips, bank statements) as the means of satisfying Article 18(c). In a land-based casino, the €2,000 threshold is triggered in real time at a cashier interaction. Recreational customers do not carry financial documents and cannot reasonably be expected to produce them on the spot. AMLA should conduct a formal customer displacement impact assessment before finalising the CDD RTS. Proposed solution: AMLA should confirm that for standard-risk occasional transactions, a brief categorical customer declaration satisfies Article 18(c), with documentary evidence under Article 27 reserved for EDD situations. Place of birth and residential address - Article 6. The draft RTS

Name of the respondent	Question	Answer
		requires collection of both place of birth and residential address as standard CDD data points. Many EU national ID cards and third-country passports do not record either element - residential address is almost never included in a passport. Requiring customers to produce separate address-proof documentation at a casino cashier is wholly disproportionate for a standard-risk threshold interaction. The purpose of identification in a land-based casino is to verify who the customer is. A valid passport or official national ID card achieves this purpose. Collecting information beyond the data visible on that document serves no proportionate AML/CFT objective at the standard-risk level. Proposed solution: AMLA should clarify that place of birth and residential address are required only where available on the official identity document presented and expressly confirm that collection of information beyond the data on a valid passport or national ID card is not proportionate for standard-risk CDD at a land-based casino. Beneficial ownership registers and PEP screening. Following the ECJ's Sovim judgment (C-601/20), public access to several EU beneficial ownership registers has been restricted; non-EU registers may be incomplete. Proposed solution: a documented manual review of publicly available online sources (such as official government websites, AMLA and FATF guidance, reputable media publications, and available open-source intelligence tools) should constitute a compliant alternative where no reliable automated screening tool provides adequate coverage of the jurisdiction concerned, with the limitation and the sources consulted recorded in the operator's compliance file.

Name of the respondent	Question	Answer
		Casino-generated winnings - Article 18(c). Where a payout includes genuine casino winnings — the amount by which the cash-out exceeds the funds the customer introduced during that session — the source of those funds is the casino itself. The casino's own transaction records constitute complete and internally verifiable evidence of that origin. The ECA requests that AMLA confirm expressly in the final RTS or accompanying guidance that the source-of-funds obligation under Article 18(c) does not apply to the genuine winnings component of a casino payout, and that no customer declaration or documentary evidence is required in respect of that component.
European Casino Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The following additional observations address specific articles not covered in the ECA's responses to Questions 1-4. Application date - Article 4 equivalent. Land-based casinos are not newly subject to AML/CFT obligations - ECA members have applied controls for many years under successive EU directives. The relevant issue is implementing a new, directly applicable harmonised EU technical standard requiring changes to customer-registration systems, transaction-attribution, cross-establishment monitoring, data architecture, staff procedures, and internal controls, all currently designed around national requirements. Adapting them is a substantial governance and systems project. The fact that casinos already comply with AML/CFT obligations does not remove the need for a realistic transition period; existing compliance experience makes careful implementation planning more important, not less. Both consultations closed on 8 May 2026. The final RTS still need to be submitted to the Commission, adopted and published in the Official Journal, meaning OJEU publication is unlikely before

Name of the respondent	Question	Answer
		late 2026, leaving operators a preparation window of just six to nine months. This is insufficient for the systems redesign, staff training, privacy impact assessments and regulatory approvals that genuine compliance requires. Divergent national interpretations have been a persistent structural failure of successive EU AML Directives, creating an uneven playing field across the single market. Harmonisation will only be achieved if national authorities interpret and enforce the final text consistently from day one, and sector-specific guidance from AMLA does not yet exist. The ECA requests a minimum implementation period of 18 months from the RTS's OJEU publication and calls on AMLA to issue dedicated sector-specific guidance for land-based casino operators before the application date. Responsible gambling and AML/CFT monitoring synergy. The ECA highlights an important synergy between the responsible gambling framework of the licensed casino sector and its AML/CFT monitoring obligations. When a guest visits a licensed casino, trained staff are legally obliged to identify changes in player behaviour, intervene where indicators of problem gambling arise, and apply responsible gambling protocols including cooling-off periods and self-exclusion. This behavioural monitoring is closely linked to AML/CFT monitoring, as the same transaction patterns, stake escalations and behavioural anomalies that prompt responsible gambling interventions also constitute AML/CFT red flags. Licensed casino operators do not merely perform CDD at a threshold moment, but maintain a continuous, active picture of each customer’s behaviour throughout every visit. No other obliged entity in the EU operates under an equivalent dual-monitoring

Name of the respondent	Question	Answer
		obligation for the same customer at the same time using the same trained staff and systems. Technological neutrality and AI-based CDD tools. AMLA should expressly confirm that AI-based identity verification, document authentication, PEP and sanctions screening, and behavioural monitoring tools may satisfy CDD obligations, provided they comply with applicable EU law including the AI Act and GDPR. Overly prescriptive technical requirements risk excluding more effective technologies. For land-based casinos, AI-assisted real-time tools offer the best prospect of managing compliance in a high-footfall environment without prohibitive customer friction. AMLA should include a guidance note confirming that AI-based and automated compliance tools are permitted where they meet applicable EU law standards. Source of wealth versus source of funds - Articles 25-27. The draft RTS does not clearly distinguish source of funds (origin of transaction funds) from source of wealth (the customer's broader economic situation). For casino EDD customers this distinction is material. Where source of wealth has been comprehensively established and remains consistent with observed spending patterns, re-evidencing it on each visit is disproportionate. AMLA should clarify that source of wealth need not be re-collected at subsequent visits where ongoing monitoring confirms no material change in circumstances. Intra-group CDD reliance. A customer subject to full CDD at one group venue may trigger duplicate requirements at another. AMLA should confirm that intra-group reliance on CDD records is compliant where centralised records are maintained and

Name of the respondent	Question	Answer
		data sharing is GDPR-compliant. The ECA invites AMLA to visit an ECA member casino to observe the customer journey firsthand, engage with compliance and operational staff, and develop a shared understanding of the true risks and practical constraints at the point of sale.
European Casino Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
European Casino Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
European Casino Association	Do you have any comments on the Annex in the draft RTS?	No
European Casino Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
European Casino Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Name of the respondent	Question	Answer
European Cooperation Centre	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, we do not fully agree. (i) Why the proposals lack sufficient flexibility The draft RTS: - Do not adequately account for high-volume, low-value transaction models, such as remote gaming. - Implicitly assume linear customer relationships, rather than continuous, behaviour-driven interactions. - Provide limited recognition of automated monitoring systems, which are essential in this sector. - Risk imposing disproportionate due diligence requirements, potentially leading to: 1) Operational inefficiencies 2) Reduced effectiveness (ii) Proposed drafting improvements: 1. Explicit sectoral proportionality clause Add provision allowing obliged entities to adapt controls based on: - Transaction frequency - Transaction value distribution - Customer interaction model (e.g. non-face-to-face, platform-based) Why: Aligns RTS with risk-based approach

Name of the respondent	Question	Answer
		2. Recognition of behavioural risk monitoring Include language such as: “Ongoing monitoring may incorporate behavioural, transactional and velocity-based indicators…” Why: Reflects actual AML controls in remote gaming (more effective than static KYC alone). 3. Flexibility for automated controls Clarify that: Automated systems and risk engines can satisfy monitoring and risk assessment obligations Why: Ensures scalability and avoids manual-control bias. 4. Tiered due diligence triggers Allow simplified or delayed enhanced due diligence where: Individual transactions are low risk but monitored cumulatively Why: Prevents disproportionate friction while maintaining risk coverage. The RTS are directionally sound, but not yet fully adaptable to digital, transaction-intensive sectors like remote gaming. Introducing explicit proportionality, behavioural monitoring,

Name of the respondent	Question	Answer
		and automation recognition would make them significantly more effective and practical.
European Cooperation Centre	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Partially agree. The Anti-Money Laundering Authority draft RTS support a risk-based approach in principle, but certain provisions limit its effective and proportionate application in practice. (i) Provisions of concern: - Risk factor methodology: overly structured, with limited flexibility in weighting and calibration. - CDD triggers: reliance on predefined thresholds rather than dynamic, risk-sensitive indicators. - Ongoing monitoring: insufficient emphasis on continuous, real-time monitoring. (ii) Proposed drafting improvements 1. Flexibility in risk assessment Allow obliged entities to determine the weighting of risk factors based on their business model and risk exposure. Why: Ensures genuinely risk-sensitive outcomes. 2. Behavioural and event-driven triggers Include transactional and behavioural indicators as valid triggers for CDD and risk reassessment. Why: Improves detection of emerging risks. 3. Recognition of automated monitoring

Name of the respondent	Question	Answer
		Clarify that ongoing monitoring may be conducted through automated, real-time systems. Why: Supports scalable and effective compliance. The RTS would better enable a risk-based approach if they incorporated greater flexibility and recognition of dynamic, data-driven risk management practices, such as behavioural monitoring (e.g. changes in activity patterns), velocity checks (e.g. rapid successive deposits and withdrawals within a short timeframe), cumulative risk scoring (e.g. risk levels increasing based on aggregated low-value transactions over time), and automated real-time transaction monitoring (e.g. systems flagging unusual betting or transaction patterns instantly).
European Cooperation Centre	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, in certain situations the required information may not be routinely available, and the draft RTS do not always provide sufficiently flexible alternatives when compared to existing sector practices. Examples of situations: - Non-face-to-face onboarding: -Obtaining detailed source of funds/wealth is often not feasible at the outset; instead, reliance is placed on ongoing transactional behaviour. - Low-value, high-volume activity: -Customers engaging only in small, frequent transactions cannot reasonably be expected to provide extensive financial documentation; risk is instead assessed cumulatively over time. - Third-party payment methods: Limited transparency on origin of funds, mitigated through monitoring of payment patterns and consistency rather than upfront verification.

Name of the respondent	Question	Answer
		Proposed alternative solutions 1. Phased due diligence Allow certain CDD elements to be obtained post-onboarding, triggered by behavioural or transactional thresholds. Why: Reflects practical application where risk crystallises over time. 2. Behavioural and transactional substitution Explicitly allow transaction patterns, activity monitoring, and customer behaviour to supplement unavailable CDD data. Why: Aligns with established practices where risk is identified dynamically The RTS would benefit from recognising that, in practice, certain CDD information gaps are addressed through ongoing monitoring and behavioural analysis (e.g. transaction patterns, cumulative activity, and payment behaviour) rather than solely through upfront data collection.
European Cooperation Centre	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Considering the Anti-Money Laundering Authority draft RTS and the need to better reflect proportionate, low-risk scenarios, additional simplified due diligence (SDD) measures should be explicitly included to address products and services with inherently lower ML/TF risk (e.g. low-value, high-volume, digital transactions). Proposed additional SDD measures 1. Threshold-based simplified onboarding

Name of the respondent	Question	Answer
		Allow SDD where cumulative transaction values and activity remain below defined risk-based thresholds. Drafting proposal: “Obliged entities may apply simplified due diligence where the cumulative value and frequency of transactions are assessed as low risk and remain within thresholds defined in their risk assessment.” Rationale: Low-value, limited activity presents reduced ML/TF exposure and should not require full CDD. 2. Reliance on ongoing behavioural monitoring Permit the use of transaction patterns and customer behaviour to support or partially replace upfront CDD elements. Drafting proposal: “Where risk is assessed as low, obliged entities may rely on ongoing monitoring of transactional behaviour to supplement or defer certain due diligence measures.” Rationale: Enables risk to be assessed dynamically rather than relying solely on static onboarding data. 3. Simplified approach for traceable payment methods Allow reduced verification where funds are received through identifiable and regulated payment channels. Drafting proposal: “Simplified due diligence may be applied where funds are transacted through payment instruments that provide sufficient transparency and traceability, subject to ongoing monitoring.”

Name of the respondent	Question	Answer
		Rationale: Lowers duplication where financial flows are already transparent. 4. Reduced frequency of periodic reviews Permit extended review intervals for low-risk customers. Drafting proposal: “For customers assessed as low risk, the frequency of periodic reviews may be adjusted in line with the obliged entity’s risk-based assessment.” Rationale: Aligns review intensity with actual risk exposure. The draft RTS would benefit from explicitly recognising that low-risk, low-value, and behaviourally consistent activity can justify simplified due diligence, supported by ongoing monitoring rather than full upfront verification in all cases.
European Cooperation Centre	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Under Regulation (EU) 2024/1624 (notably Article 62 and related CDD provisions), obliged entities are required to identify and verify the beneficial owners of all customers, including legal entities and arrangements established outside the Union. However, the draft RTS under Article 28(1) do not explicitly clarify how this requirement should be operationalised where beneficial ownership information for non-EU entities is not readily available or is of limited reliability in the jurisdiction of incorporation. It is therefore proposed that the RTS include a specific clarification providing that, in such cases, obliged entities may apply a risk-based approach and rely on alternative reliable sources of information (such as ownership declarations,

Name of the respondent	Question	Answer
		corporate documentation, and corroborating evidence), provided that reasonable measures are taken to verify the beneficial owner's identity in line with the Regulation. This would enhance legal certainty, ensure consistent application across obliged entities, and better reflect practical limitations in accessing beneficial ownership information for non-EU structures.
European Cooperation Centre	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
European Cooperation Centre	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
European Cooperation Centre	Do you have any comments on the Annex in the draft RTS?	Yes
European Cooperation Centre	Please share your comments below.	While the Annex provides a useful baseline for harmonised information collection, it would benefit from greater flexibility, explicit proportionality, and allowance for alternative information sources, ensuring that obliged entities can adapt requirements to different risk scenarios and operational realities in a manner consistent with established risk-based supervisory approaches.
European Cooperation Centre	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
European Digital Payments	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient	The European Digital Payments Industry Alliance (EDPIA) welcomes the recognition of eIDAS-based identification solutions as a modality for remote customer onboarding, while noting that the framework should allow for the use of multiple

Name of the respondent	Question	Answer
Industry Alliance - EDPIA	flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	secure solutions and that one overarching solution is not sufficient and raises multiple challenges. EDPIA believes that preserving technological neutrality for customer onboarding processes is essential and can likewise contribute to a risk-based approach to client risk management. We therefore remain cautious with the draft Regulatory Technical Standards, more precisely Article 7, which uses mandatory language ("shall") to impose eIDAS-based solutions as the primary identification method, with Article 7(2) permitting alternatives only where eIDAS "is not available or cannot reasonably be expected to be provided", and Article 7(4) further requiring per-customer justification of why each customer could not be verified through eIDAS. The combined effect treats eIDAS as the mandatory default and relegates other compliant - and often more risk-relevant - solutions to a fallback of last resort. Such an approach raises serious questions from both an operational and legal perspective, in turn hindering the ability of payment service providers to onboard customers in an efficient manner, especially in cross-border contexts where the relevant competent authority for that per-customer justification is itself unresolved. To recall, these solutions are not universally available and interoperable at present and will still need time to reach their intended uptake. The European Digital Identity framework only entered into force in May 2024, with Member States required to make at least one EU Digital Identity Wallet available by end of 2026 - just months before the AMLR applies on 10 July 2027. Broad acceptance, cross-border interoperability, and operational stability of eIDAS solutions cannot reasonably be expected by the time this RTS enters into force, and a binding Level 2 instrument should not be set in stone around

Name of the respondent	Question	Answer
		assumptions that do not yet hold. In order to ensure that the measures can be properly implemented and do not pose a disproportionate burden or dual-stack problem, EDPIA proposes the following amendments to Article 7, treating eIDAS-based solutions as a recognised high-assurance option rather than a primary legal obligation: Suggested wording of Article 7 (1, 2 and 4): (1) Obliged entities may [not "shall"] use electronic identification means meeting the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels "substantial" or "high", or relevant qualified trust services as set out in that Regulation. (2) In addition, especially where the solution under paragraph 1 is not available or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person's identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3 and 4. … (4) Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions used comply with this Article. The per-customer justification under Article 22(6) of Regulation (EU) 2024/1624 should be deleted. New final article - Review clause: By [date], AMLA shall, in cooperation with the Commission, review the application of Article 7 in light of the maturity and pan-European interoperability of electronic identification means under Regulation (EU) No 910/2014, and submit a report accompanied, where appropriate, by proposals to amend this Regulation.

Name of the respondent	Question	Answer
		This proposal builds on a proven approach. The EBA Guidelines on remote customer onboarding (EBA/GL/2022/15) have demonstrated since 2022 that an outcome-based, technology-neutral framework delivers high assurance to remote identification across the Union. The framework is also future-proof: it does not lock in any technology and adapts as new technologies but also threats (e.g. AI-generated synthetic identities) evolve.
European Digital Payments Industry Alliance - EDPIA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In line with our answer to Question 1, EDPIA believes that the provisions mandating the use of eIDAS-based solutions undermine the essence of a risk-based approach: by imposing eIDAS through mandatory language and relegating other compliant solutions to a fallback requiring per-customer justification, the draft treats identification as a binary hierarchy rather than a risk-sensitive determination. Robust remote onboarding solutions - including AI/ML-based identity verification meeting or exceeding eIDAS assurance levels, as well as widely used national solutions (such as Denmark's BankID and Belgium's "itsme") - are presumptively non-compliant unless eIDAS is unavailable, regardless of risk. Article 7 as drafted constrains - and arguably contradicts - Article 22(6) AMLR, which recognises both document-based and electronic identification as valid modalities. A Level 2 measure should not narrow options recognised at Level 1. A further point: eIDAS is an identification instrument, not a ML/TF risk detection tool. It confirms identity at onboarding but does not address whether the customer is a victim of identity theft, a money mule, under coercion, or whether the identity is a synthetic one generated through AI. Current verification solutions - liveness and deepfake detection,

Name of the respondent	Question	Answer
		document authenticity checks, behavioural biometrics, real-time anomaly detection - are designed precisely to address those risks. Mandating eIDAS as primary and relegating these capabilities to a justified fallback reduces, rather than enhances, risk-relevant information at onboarding. Locking Level 2 around eIDAS therefore embeds a technological bias into the AML/CFT regime, foreclosing the very tools best equipped to address evolving threats - technological neutrality is essential precisely because financial crime evolves faster than any single technology can address. EDPIA accordingly proposes the drafting amendments to Article 7 set out under Question 1, together with the review clause. These measures align Level 2 with Article 22(6) AMLR, preserve technological neutrality, the risk-based approach, and European competitiveness in payments innovation as already operationalised under EBA/GL/2022/15.
European Digital Payments Industry Alliance - EDPIA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	EDPIA has identified two main instances where the information required by the draft RTS may not be routinely available and the proposals do not offer alternatives: (1) Annex I attributes are not consistently available through identity documents and electronic identification means in use across the EU. The list of minimum attributes corresponding to Article 22(1) AMLR - including all names and surnames, place of birth, all nationalities, national ID number, residential address, and tax identification number - does not match the data routinely surfaced by widely used identification means or recorded on physical identity documents accepted across the EU. A review of the Council's PRADO database confirms that not all attributes appear on every document, Member State, or customer category, and those that do appear are not

Name of the respondent	Question	Answer
		standardised in scope or structure. A further concern is the relationship between Annex I and Article 22(1) AMLR itself: where the AMLR uses qualifiers such as "where available" and "where applicable", Level 2 should reflect that flexibility rather than narrow it. EDPIA proposes recalibrating the Annex I data set so attributes that are of limited AML/CFT value in low-risk scenarios, and are likewise consistently unavailable, are collected only where the risk profile so requires, not uniformly. (2) eIDAS-based identification for cross-border remote onboarding. A substantial share of customers will not have a usable eIDAS at onboarding - particularly from Member States with delayed wallet rollout or low qualified trust service uptake, and from underserved groups (mobile workers and migrants resident outside the Member State issuing their eID; third-country nationals lawfully resident in the EU; older customers; younger customers without an eID). An eIDAS-only default sits uneasily with the EU objectives of financial inclusion. A further consequence is a dual-stack burden: a separate compliant onboarding solution will be required for every customer without a usable eIDAS means, and even where the customer has eIDAS, if it does not surface all Annex I attributes a fallback mechanism will still be required to complete the data set. Our proposed way forward is outlined in our previous answers to Questions 1 and 2.
European Digital Payments Industry Alliance - EDPIA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	Concerning the exemption under Article 19(7) Regulation (EU) 2024/1624, and Article 31 of the draft RTS outlining the risk factors to be detailed, EDPIA has identified four areas where targeted amendments would foster a genuine and workable risk-based approach: (1) Risk factors must not be cumulative. The relevant risk

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	factors should be understood as a non-exhaustive list, with supervisors able to consider one or more such factors to determine the extent of the exemption - rather than applying a binary catalogue where each factor must be fulfilled in its entirety. This is essential to allow national competent authorities to apply a genuine risk-based approach and accommodate the diverse business models of e-money issuers. (2) Distribution-side and issuer-side risk factors are missing. Several of the most effective risk-mitigating measures available to e-money issuers focus on the distribution and use of the instrument over its lifecycle, not on the moment of issuance. We propose adding distribution monitoring, merchant monitoring, suspicious-pattern detection with automatic deactivation, and adequate technological safeguards as recognised risk factors. These measures materially mitigate ML/TF risk associated with the distribution and use of e-money products and are demonstrably more risk-relevant than some of the criteria currently envisaged. (3) Certain proposed criteria should be reconsidered. Criteria that effectively replicate elements of the Limited Network/Range exclusion under Article 3(k) of Directive (EU) 2015/2366 risk conditioning the e-money exemption on the product not being e-money at all, which would run counter to the legislative intent of Article 19(7) AMLR. Similarly, criteria focused on the issuer or its distribution infrastructure (rather than on the e-money instrument itself) sit uneasily with AMLA's mandate, which is directed at the instrument. (4) Account-based funding should not be a precondition. Linking the e-money exemption to funds originating from a regulated EEA account would contradict the spirit of the Level 1 text, which is intended to cover current e-money products that

Name of the respondent	Question	Answer
		are acquired in exchange for coins and banknotes (Recital 13 of Directive 2009/110/EC). EDPIA proposes the following wording revisions to Article 31: Where supervisors decide to allow for an exemption under Article 19(7) Regulation (EU) 2024/1624, based on the conditions listed in Article 19(7), points (a) to (d), of Regulation (EU) 2024/1624, supervisors shall consider one or more of the following risk factors to determine the extent of that exemption: (a) the extent to which the payment instrument has low transaction limits or thresholds to limit transaction values; (b) the nature of the goods or services that can be acquired, including the level of risks associated with these goods and services; (c) the extent to which the transactions through the electronic money instrument are executed by an obliged entity that applies customer due diligence measures and record-keeping requirements laid down in Regulation (EU) 2024/1624; (d) the extent to which the payment instrument is available through direct channels which may include the issuer or a network of service providers which have appropriate safeguards and fraud measures in place; (e) the extent to which the payment instrument has a limited geographical distribution; (f) the extent to which the issuer applies adequate technological tools, such as geo-fencing and IP tracking, to monitor access to the payment instrument from, transfers to or receiving funds from countries that are not EU Member States nor EEA countries, in accordance with the applicable laws. (g) The extent to which the issuer has measures in place that allow for an effective monitoring of the distribution channels of

Name of the respondent	Question	Answer
		the e-money product in order to detect and prevent suspicious activities. (h) The extent to which the issuer has measures in place that allow for an effective monitoring of the merchants that accept payments via the e-money product in order to detect and prevent suspicious activities. (i) The extent to which the issuer has measures in place that allow for the identification of suspicious transaction patterns and behavioral profiling and allows for disabling the payment instrument in case a suspicious activity pattern is detected. Re-activation of the product can only be done by the issuer. (j) The extent to which the issuer has adequate technological safeguards in place. Such measures could include device fingerprinting and IP address tracking to detect suspicious activity or the use of velocity checks (e.g. number of transactions in a short period).
European Digital Payments Industry Alliance - EDPIA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	EDPIA wishes to flag a cross-cutting observation relevant to the draft RTS as a whole. The article-specific concerns raised under Questions 1–4 share a common thread: ensuring that the implementing standards reflect the flexibility expressly recognised at Level 1 ' including the document-based and electronic identification modalities under Article 22(6) AMLR, the "where available" and "where applicable" qualifiers in Article 22(1) AMLR, and the genuinely risk-based logic of Article 19(7) AMLR. EDPIA would welcome a recital in the RTS reaffirming that obliged entities and competent authorities are to apply these standards consistently with the risk-based and technology-neutral approach, providing a stable interpretative anchor over the lifetime of the RTS and helping to avoid diverging national practices. In line with this, recognising the

Name of the respondent	Question	Answer
		existing outcome-based, technology-neutral framework that has been in operation across the financial sector since 2022 alongside Article 7 - rather than displacing it - would preserve technological neutrality, support European competitiveness in payments innovation, and ensure that the measure is no more restrictive than necessary to achieve the AML/CFT objectives.

European Ethereum Institute	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 1 should be expanded to make clear that the proportionality principle applies also to the volume and nature of personal data collected. We propose adding the following sentence: "Obliged entities shall not collect personal data beyond what is necessary, adequate and relevant for the purposes of meeting their obligations under Regulation (EU) 2024/1624, and shall apply the principle of data minimisation in line with Article 5(1)(c) of GDPR." This explicit cross-reference would resolve any tension in supervisory practice, where obliged entities default to maximal collection. Article 7(3) sets out very prescriptive technical safeguards for remote verification. The obligation to retain and store images, video and biometric-grade data raises significant concerns under Articles 9 and 25 GDPR. We recommend: Recasting Article 7(3)(e) to require retention of evidence of verification rather than retention of the biometric content itself, where a verifiable assertion is technically sufficient. Permitting use of zero-knowledge or selective-disclosure schemes (compliant with the EUDI Wallet that prove the relevant attribute without revealing the underlying document image. Clarifying that 'remote solutions' include qualified electronic attestations of attributes, so that obliged entities are not pushed back to document-image collection, where a more

Name of the respondent	Question	Answer
		privacy-preserving primitive is available. Both Articles 11 and 12 assume a corporate-structure paradigm: they do not address structures that lack a legal personality at all, for example, open-source and publicly accessible on-chain protocols governed by smart contracts and token-based coordination mechanisms, which may not have any incorporated form in any jurisdiction. The current text, therefore, risks being read as imposing duties that are technically impossible to discharge. The following is critical: Where the customer is a legal entity, Articles 11 and 12 apply normally, and the analysis is performed by reference to that entity; Where the obliged entity merely interacts with, or routes a transaction through, a software protocol that has no legal personality, the protocol is not a "customer that is a legal entity" within the meaning of Article 22 AMLR. The customer due diligence obligations of the obliged entity attach to the natural or legal person who instructs the engagement, not to the protocol. Proposed recital text:"For the purposes of Article 20(1), point (b), of Regulation (EU) 2024/1624 and Articles 11 and 12 of this Regulation, the assessment of the ownership and control structure of a customer that is a legal entity is to be performed by reference to that legal entity. Software protocols based on distributed ledger technology that do not have legal personality and that operate without a centralised controlling person or organisation should not, by reason of an obliged entity's interaction with such protocols on behalf of its customer, be treated as customers that are legal entities for the purposes of those provisions. In such cases, the customer due diligence obligations of the obliged entity should be discharged by

Name of the respondent	Question	Answer
		reference to the natural or legal person who is the customer of the obliged entity and who instructs the relevant transaction or activity." Article 18 enumerates a long menu of information categories covering source of funds, destination of funds, occupation, sector, key stakeholders, etc. The chapeau requires obliged entities to obtain this information 'where necessary'. In practice, the level of detail in the menu creates a strong anchoring effect: obliged entities tend to collect everything listed.To avoid this, we suggest: Strengthening the chapeau of Article 18 to read '...obliged entities shall obtain only the minimum information necessary to satisfy themselves of the purpose and intended nature, having regard to the level of risk identified.' Adding a recital noting that the items in points (a) to (e) are illustrative options and that selection from among them is a function of risk, not a checklist. The list in Article 27 is a useful menu, but it is not exhaustive of legitimate evidence and the structure of the article risks being read as a mandatory checklist. We propose a clarifying recital that an obliged entity may rely on a single sufficiently probative item where it adequately satisfies the test, and is not required to layer multiple categories of documentation absent specific risk factors. This is particularly important for legitimate users with non-traditional income sources (including digital-asset-related income), where the listed categories often map imperfectly. Annex I lists attributes that exceed what is strictly required at standard or simplified due diligence. We support the approach of using the EUDI Wallet attribute schema, but suggest that Annex I distinguishes more clearly between the minimum

Name of the respondent	Question	Answer
		mandatory set and additional attributes that may be requested only where a specific risk justifies them.
European Ethereum Institute	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The drafting is risk-based in principle; however, as noted above, several provisions create downward pressure toward maximal collection. We make three concrete proposals: Reframe the menus in Articles 18, 25, 26, 27 and 28 explicitly as non-cumulative options, with a recital that selecting fewer items is appropriate where risk is lower. Embed a 'minimum necessary' clause in Article 1, as suggested above. Recognise on-chain transparency as a positive risk-mitigant. For transactions whose origin is verifiable on a public ledger and whose path can be reconstructed without further data collection from the customer, the obliged entity should be entitled to rely on that transparency as part of the risk picture, including for the purpose of source-of-funds verification.
European Ethereum Institute	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Not relevant.
European Ethereum Institute	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	AMLA notes that Article 33 AMLR already provides flexibility and that further SDD measures would risk exceeding AMLA's mandate. We agree with the cautious framing, but suggest three additions that are within mandate and would meaningfully reduce regulatory burden without weakening AML/CFT outcomes: On-chain-verifiable origin of funds. Where an obliged entity can independently verify, through the public ledger, that funds

Name of the respondent	Question	Answer
		originate from an address previously verified by another EU-supervised obliged entity (e.g. via the Travel Rule under Regulation (EU) 2023/1113), source-of-funds enquiries may be simplified. Use of EUDI Wallet attestations of attributes. Where the customer presents qualified attestations of attributes (e.g. age, residency, AML-relevant declarations) drawn from the EUDI Wallet, identification and verification can be simplified by relying on those attestations without redundant document collection.
European Ethereum Institute	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The draft RTS is well adapted to traditional financial and non-financial obliged entities. It is less well adapted to obliged entities operating with public, permissionless distributed ledgers. We highlight three structural points: Article 20(1)(h) AMLR requires identification of the natural person on whose behalf or for the benefit of whom a transaction is conducted. Where a customer instructs an obliged entity to interact with a smart contract or unincorporated protocol, the contract or protocol has no agency and is not acting on behalf of any natural person — it is the rails on which the customer's transaction settles. The RTS should clarify that, in such cases, Article 20(1)(h) is satisfied by reference to the customer and any identified ultimate beneficiary. Articles 11 to 13 of the draft RTS (ownership and control structure, senior managing officials) presume that the customer is a legal entity supported by corporate documentation. As set out in our response to Question 1, this presumption breaks down where the customer is unincorporated or where the obliged entity's interaction is with

Name of the respondent	Question	Answer
		a software protocol that has no legal personality. The recital proposed under Articles 11 and 12 addresses this directly. The AMLR's third-party reliance regime already provides the right lever for chained scenarios. Article 17 of the draft RTS demonstrates that reliance is an appropriate response in specific intermediated scenarios where the upstream party is supervised. The same logic should be capable of applying more generally where an obliged entity sits at the end of a chain involving other regulated, supervised parties. Re-performing CDD on customers already verified by an upstream obliged entity adds to the personal-data footprint without a corresponding AML/CFT benefit, and runs counter to the data minimisation principle in Article 5(1)(c) GDPR. We therefore urge AMLA to add a recital making explicit that the RTS is technologically neutral, that interaction with public, permissionless infrastructure does not, of itself, generate CDD obligations beyond those owed to the obliged entity's own customer, and that the existing reliance regime is to be read consistently with this principle.

European Ethereum Institute	How would you rate the proposals set out in the draft RTS overall?	Neutral
European Fund and Asset Management Association (EFAMA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	EFAMA supports the efforts to strengthen the EU AML/CFT framework by enhancing harmonisation of rules, including through this Draft RTS. With that in mind, significant concerns need to be raised with the way the specificities of the collective investment undertakings' (CIUs) sector were addressed in Art. 17. Within the broader financial industry ecosystem, the asset management sector operates under significantly different parameters than, e.g. the banking industry. This manifests particularly in how units/shares in investment funds are sold/purchased and in the character of their relationship, or lack thereof, with the underlying investors. While Art. 17 of the Draft RTS includes specific rules on how CIUs (i.e. funds and their managers) may fulfil some of the CDD obligations, it does not recognise these specificities correctly, favouring an approach that would still require intermediaries to provide information on their own clients to CIUs. In many cases, it would prove legally and operationally impossible due to the nature of fund distribution and intermediaries' being prevented from sharing this data by data protection laws, among others. It would require substantial new information-sharing and record-keeping arrangements between investors, intermediaries (e.g. banks), and asset managers. Further exercise of CDD obligations by funds directly on underlying investors would be duplicative, prolonging their onboarding process. This would likely discourage retail investors from participating in financial products or encourage them to choose comparable non-EU products with a simpler and more predictable subscription

Name of the respondent	Question	Answer
		process. An increase in costs would also reduce their returns. This would have significant implications on how the financial industry operates, leading intermediaries to reduce the number of funds they distribute, therefore limiting the diversity of investment solutions available to retail investors. In the EU, intermediaries may be inclined to limit their offer to funds managed by entities from the same capital group. In the Nordic Member States, where systems similar to stock exchanges for funds were established, these proposals could lead to the total collapse of these well-functioning solutions. Outside the EU, EU funds would find it much harder to compete successfully in an increasingly challenging international landscape, risking UCITS losing its position as a global gold standard. This would have a significant impact on Europe, by diminishing the amount of money flowing to the EU real economy from third countries, at a time when achieving the exact opposite lies at the heart of EU agenda. According to the data gathered by EFAMA, at the end of 2024, EUR 5.7 trillion in net fund assets domiciled in the EU (the vast majority being UCITS) were held by non-EU investors. To address these concerns, create a harmonised approach, secure a level-playing-field for the EU asset management industry vis-á-vis competitors from third countries, and take into due consideration the limited ML/TF risk, it is necessary to provide CIUs with a relief from obligations under Art. 20(1) AMLR. The approach currently proposed in Art. 17 of the Draft RTS fails to achieve this goal as it duplicates the work and analysis already done by intermediaries. The mandate under Art. 28(1)(b) AMLR was purposely given to specify measures applicable to specific categories of obliged entities and products or services, having regard to the ML/TF risk assessment at the EU level. The European Commission, in

Name of the respondent	Question	Answer
		its Report on the assessment of the risk of money laundering and terrorist financing (COM(2022) 554 final, p. 45), found no shortcomings across the entire asset management industry. The proposed direction has also been marked out by the co-legislators in recital 51 AMLR, where it is said that "In the context of customer due diligence, the person for the benefit of whom a transaction or activity is carried out does not refer to the recipient or beneficiary of a transaction carried out by the obliged entity for their customer". The FATF has also long acknowledged that funds typically sell units/shares through other financial institutions, making those institutions the funds' customers and leaving the funds without direct knowledge of intermediaries' underlying investors. In that sense, funds are also similar to cross-border correspondent relationships, and the FATF Recommendations do not require the correspondent securities providers to conduct CDD on the customers of their respondent institutions. By still requiring CIUs to secure visibility into intermediaries' client bases, the proposed Art. 17 of the Draft RTS remains disproportionate to the level of ML/TF risk identified in the sector and fails to fulfil the mandate under Art. 28(1) AMLR. Moreover, it goes against the logic of these relationships and their legal and practical reality. We provide further details in responses to Questions 3 and 5.
European Fund and Asset Management Association (EFAMA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	EFAMA welcomed the introduction of a clear reference to the risk-based approach and proportionality principle in the Art. 1 of the Draft RTS, which remains the core principle of any successful AML/CFT framework, as also highlighted in the recitals of AMLR. Its proper recognition is particularly important in view of a more harmonised AML/CFT framework, aligning measures applicable across all Member States – a goal

Name of the respondent	Question	Answer
		that we support. As mentioned in recital 29 AMLR: “In line with the risk-based approach of this Regulation, those policies, procedures and controls should be proportionate to the nature of the business, including its risks and complexity, and the size of the obliged entity and respond to the risks of money laundering and terrorist financing that the entity faces, including, for crypto-asset service providers, transactions with self-hosted wallets.” This clearly acknowledges the need to apply the risk-based approach both at the level of a particular obliged entity and at the level of a specific sector. It is therefore important to fully recognise these sector-specific circumstances, as also explained in our response to Questions 1, 3 and 5. Moreover, a direct reference to a risk-based approach won’t be sufficient if it is followed by overly detailed and prescriptive rules; instead, it requires flexibility and principles-based rules. We highlight instances where we believe these might be the case in our responses under Section 3 of this questionnaire.
European Fund and Asset Management Association (EFAMA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As explained under Question 1, there are a number of models existing across the EU through which investment funds are made available to investors. In many Member States (e.g., Germany, Denmark, France, Ireland, Luxembourg, and Sweden), retail investors subscribe to funds through regulated intermediaries, e.g. banks, investment firms, brokers, or independent financial advisors. In the same manner, outside the EU, third-country investors subscribe to EU funds through the intermediaries active in those non-EU jurisdictions. In such cases, units/shares in the fund are

Name of the respondent	Question	Answer
		purchased in the name of the regulated financial intermediaries and on behalf of their clients. Recent changes to AIFMD and UCITS clarified that in such instances, the intermediary would not be acting on the manager's behalf, and rules on delegation would not apply. As the underlying investors of the intermediary are not customers of the fund, there is no legal relationship between them and the fund, and CIUs do not have visibility into those natural or legal persons. Intermediaries are prevented from disclosing to CIUs data gathered during their client onboarding by data protection and professional secrecy obligations, among other reasons. Any additional obligation to access the data imposed on CIUs would not entitle intermediaries to share the data, and such disclosure may be further constrained by the laws of the EU, Member States, and third countries. Moreover, because the identities of their clients are a crucial commercial asset for intermediaries, they would be hesitant to enter into relationships that could threaten disclosure of this data. Efforts to apply a look-through to the intermediary's client base would, in any case, be duplicative, as intermediaries, which are AML-obliged entities themselves, already conduct full CDD measures on them. The fund, in turn, performs AML/CFT analysis on the intermediary. In compliance with the risk-based approach, funds apply in the majority of cases additional measures such as: (a) gathering of sufficient information about the institution to understand the nature of the financial intermediary's business and to determine from publicly available information the reputation of the institution and the quality of supervision,

Name of the respondent	Question	Answer
		including whether it has been subject to a ML/TF investigation or regulatory action; (b) assessing the financial intermediary's AML and CFT controls; (c) obtaining approval from senior management before establishing new relationships; (d) clearly understanding and documenting the respective responsibilities as regards the fight against ML/TF ; (e) being satisfied that the financial intermediary has a framework in place to verify the identity of and perform ongoing due diligence on their customers. Through this ongoing AML risk assessment and an in-depth understanding of distribution channels, and because intermediaries are AML obliged entities themselves, subject to AML/CFT supervision by competent authorities, ML/TF risk in the fund sector is properly mitigated. Similar to the one described above is the model existing, e.g. in Italy and Spain, where the intermediary acts as a distributor of the fund domiciled in that Member State, and the fund's units/shares are registered in the name of the private individual investor, rather than the bank or broker platform's own name. In these cases, the primary distinction from the scenario described above would be that the intermediary's clients may also be considered clients of the fund. However, there are many aspects that this model shares with the one previously described: (i) the end investors are primarily clients of intermediaries, (ii) intermediaries are obliged entities subject to AML/CFT obligations, (iii) they are required to perform all elements of the risk-based CDD on end investors, (iv) the access to information gathered on end investors by intermediaries is not without significant practical challenges, and (v) the CIU will undertake the due diligence on the

Name of the respondent	Question	Answer
		intermediary as described above to thoroughly understand the distribution channels and evaluate AML/CFT risks. In this case, too, the exposure to ML/TF risk is substantially mitigated as it involves an intermediary that is an obliged entity directly responsible for conducting CDD on its own clients. Further sub-scenarios apply, for example, in Sweden, Denmark, or Finland, where structures similar to stock exchanges were also set up for funds. They allow a wide range of intermediaries to make a variety of funds available to end investors at cost-efficient prices, which has been a fundamental prerequisite for the development of these markets. Specific is also the case of ETFs, which constituted EUR 2.6. trillion of UCITS net assets in 2025 and are traded on regulated exchanges (subject to requirements of MiFID II and MiFIR). As a result, identifying the holders of ETF units on secondary markets is also operationally impossible.
European Fund and Asset Management Association (EFAMA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	As Article 17, the key for the asset management industry, has been moved from Section 5 to Section 2 of the Draft RTS, we do not have further comments to provide on the cases where Simplified Due Diligence would apply according to the current wording of Section 5.
European Fund and Asset Management	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	To address the specificities of the CIUs sector, the practical functioning and the diversity of the asset management industry, as described under responses to Questions 1 and 3 above, need to be fully recognised.

Name of the respondent	Question	Answer
Association (EFAMA)	evidence. Where necessary, comments should also include a proposed solution.	Therefore, we believe that under Art. 17 of the Draft RTS, CIUs should be allowed to fulfil the requirements of the entire Art. 20(1) AMLR by relying on credit or financial institutions and without requiring them to provide information on their customers. This should apply irrespective of which scenario from those described under Question 3 would apply, and provided that conditions under points (a) to (d) are met. Only in this way, a harmonised AML/CFT approach could be established for the asset management industry, which would take into account the diversity of business models and ways in which subscriptions to funds are allowed in a particular Member State or outside the EU. If the proposed solution applies only to letter (h), as in the current wording of the Draft RTS, any instances in which the intermediary's customer could also be considered the CIU's customer would require duplicative CDD, causing unjustified disruption to the industry's functioning, as described under Question 1. For the same reasons, CIUs should not require these counterparties to provide information on their customers, but be allowed to rely on credit or financial institutions which are obliged entities themselves. It is crucial to underscore that conditions specified under letters (a) to (d) clarify the AML/CFT steps that would still need to be taken by CIUs vis-á-vis the intermediaries, which would allow them to gather confidence in the ML/TF risks being properly mitigated both in intra-EU and extra-EU relationships. Additionally, we would propose that the condition under letter (a) also recognises the robustness of AML/CFT rules applied by international capital groups. Often, the group-wide AML policies are applied across all subsidiaries and branches of such

Name of the respondent	Question	Answer
		groups, including in jurisdictions where local AML laws may be less developed. Without this, relationships with such entities would be penalised even though, through group standards, they meet or exceed EU requirements. We are also of the opinion that Art. 17 has to fully reflect the fund industry's mitigated ML/TF risk and refer to instances where the risk associated with the relationship is “not high”. Within the AML/CFT terminology, the adjective “standard” is typically used to describe the type of CDD measures rather than the level of ML/TF risk associated with a relationship. The reference to the level of risk that is “not high” would be more in line with the current practices of AML/CFT risk-based approach. Taking all that into account, we would suggest the following wording for Art. 17 of the Draft RTS: “When shares or units of a collective investment undertaking are sold through another credit institution or financial institution, the collective investment undertaking may fulfil the requirement under Article 20(1) of Regulation (EU) 2024/1624 by being satisfied that: (a) the credit institution or financial institution is subject directly or through group policies to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624, or has implemented an equivalent AML/CFT program; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a);

Name of the respondent	Question	Answer
		(c) the risk associated with the relationship with the credit institution or financial institution is not high; and (d) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners." In EFAMA's view, the issues explained above will not be solved by the current wording of Recital 14 of the Draft RTS, as proposed in the Consultation Paper. Given its interpretative function, we do not believe the proportionality and risk-based approach introduced therein will provide the necessary relief from the directly binding obligations of Art. 17.
European Fund and Asset Management Association (EFAMA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
European Fund and Asset Management Association (EFAMA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Even a well-crafted technical standard cannot foresee every possible scenario, and there may be instances where a literal compliance with a specific requirement would be impracticable or excessively onerous, while contributing little to ML/TF risk mitigation. In such instances, an obliged entity should have the possibility to apply alternative and proportionate measures, provided that (i) the situation is exceptional and not part of a

Name of the respondent	Question	Answer
		broader pattern, (ii) the ML/TF risk involved is assessed to be low or effectively mitigated by other measures, and (iii) the entity provides a clear, documented rationale demonstrating why the deviation is necessary and how equivalent AML/CFT safeguards are maintained. Therefore, we propose to add a second paragraph to Art. 1 of the Draft RTS: “2. Without prejudice to the obligations set out in this Regulation and in Regulation (EU) 2024/1624, obliged entities may, in exceptional, isolated and duly justified circumstances, apply alternative measures to those prescribed herein, provided that: a. the deviation is necessary to ensure that the application of a specific requirement does not result in a disproportionate burden relative to the identified money laundering or terrorist financing (ML/TF) risk; b. the ML/TF risk associated with the customer, transaction or business relationship is demonstrably low or effectively mitigated by other measures; c. the alternative measures applied are appropriate, risk-sensitive, and achieve an equivalent level of risk mitigation as the standard requirement; d. the exception is not applied systematically or as a matter of routine practice, e. the rationale behind such exception is duly documented and available to competent authorities upon request.”
European Fund and Asset	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5

Name of the respondent	Question	Answer
Management Association (EFAMA)		
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 5 of the Draft RTS still requires that obliged entities shall obtain information on “all nationalities” of the customer. This obligation is very impractical given that obliged entities do not have access to any database that will give them such satisfaction. Moreover, identification documents, such as passports or IDs, for obvious reasons, inform only about the nationality of one country. Given that Art. 22(1)(a)(iii) AMLR does not refer to “all” nationalities, we believe that this requirement is excessive and obliged entities should be able to apply it by taking reasonable measures. Therefore, we would propose the following wording for Art. 5 of the Draft RTS: "For the purposes of Article 22(1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall take reasonable measures to obtain information about nationalities their customer may hold or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted."
European Fund and Asset Management	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6

Name of the respondent	Question	Answer
Association (EFAMA)		
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Firstly, EFAMA would like to highlight that, as with the other paragraphs of Article 6, paragraph 5 should only apply to customers who are natural persons. Moreover, we believe that the requirement to obtain “identity document, passport or equivalent, or a certified copy thereof (…)” is excessive and does not allow the obliged entities to apply a risk-based approach. In some sectors of the financial industry, which operate in a significantly different manner from the banking industry, it would simply not be possible to apply these requirements. A good example is the asset management industry, which we describe in more detail under our responses in Section 2. Due to the specificities mentioned there, customer identity verification rarely occurs in person, and most customers are institutional investors or other legal entities. For example, obtaining certified copies for such investors in jurisdictions such as Kenya, Singapore or the British Virgin Islands can take weeks and involves a high cost. It would also be duplicative as these entities would already be verified by regulated intermediaries (custodians, prime brokers). Also, for retail investors who would be the fund's direct customers (which is not typical in most of the asset management industry), identity verification would always occur first at the bank level. This is because cash subscriptions do not exist in the fund's reality, and any payments to the fund and then to the investor always occur through a bank account. As such, it would become a duplicative measure, at an additional cost, that would not bring any added value in terms of reducing ML/TF risk.

Name of the respondent	Question	Answer
		Moreover, the proposed wording of paragraph 5 is also not in line with provisions of the AMLR, which in Art. 22(6)(a) do not include the requirement of only originals or certified copies to be provided. Instead, it refers to “the submission of an identity document, passport or equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer”, which we believe gives much more room for the obliged entities to decide on how this submission and acquisition will take place, in accordance with the identified level of ML/TF risk. From a retail customer perspective, the obligation to provide an original document or a certified copy will significantly increase the costs borne by customers and will be even more challenging for customers from third countries. Our understanding is that the AML Package was intended to enhance the system's security, not to disincentivise customers from using services provided by the EU financial sector. Such an approach would contradict the EU's efforts to encourage retail investors to use financial products and the recent work of the FATF, underscoring the importance of financial inclusion. As can be observed in other jurisdictions, for example, in Australia (https://www.oaic.gov.au/news/media-centre/know-your-privacy-obligations-under-the-anti-money-laundering-counter-terrorism-financing-amlctf-act-updated-oaic-guidance), steps are being taken to limit the collection of personal information, including minimising the record-keeping of documents such as IDs, etc. Instead of full documents, records are to be maintained containing specific personal information related to

Name of the respondent	Question	Answer
		compliance obligations. This broader perspective and trends need to be taken into account to secure a level playing field for obliged entities from the EU. Therefore, a risk-based approach must be applied when collecting IDs to avoid unnecessary costs and burden. The effort and focus on obtaining IDs in original and/or certified form should be required only in case of inconsistencies or doubts about the customer's actual identity. In particular, document certification is solely one of the numerous measures (and certainly not the most effective) an obliged entity can take to verify the obtained information. Therefore, we would propose the following wording for Art. 6(5) of the Draft RTS: "5. For the purpose of verifying the identity of the natural persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities shall gather, from these persons or from other reliable sources, the identity document, passport or equivalent information. In case of customers posing a higher risk of ML/TF obliged entities shall adopt appropriate mitigation measures, such as, for example, those referred under Article 7."
European Fund and Asset Management Association (EFAMA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7

Name of the respondent	Question	Answer
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	While we welcome improvements made so far to Art. 7 of the Draft RTS, it still establishes the use of electronic identification means as the main identification method in the non-face-to-face context, allowing obliged entities to acquire documents only if the “solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided”. We believe that this approach goes against the logic of Art. 22(6) AMLR and against the principle of a risk-based approach. Article 22(6) AMLR provides two means for the verification of customers’ (and other persons') identity: submission of a document or acquisition of information from reliable and independent sources under letter (a) or the use of electronic means under letter (b). AMLR doesn’t favour one solution over the other, whether verification takes place in person or not, leaving the obliged entity the option to choose the best approach. With the increased use of online services in the financial industry, non-face-to-face interactions have become a standard business practice in many countries. Such circumstances do not necessarily lead to a higher level of ML/TF risk, particularly when other mitigating factors or measures are in place. This is the reality of the asset management industry, where the majority of customer interactions occur in non-face-to-face settings. Nevertheless, the ML/FT risk is considered low, given that the majority of fund customers will be intermediaries who are institutional/regulated entities themselves. The requirement to use e-IDAS solutions in such circumstances would be highly disproportionate and unworkable. It would contradict the risk-based approach and technological neutrality, blocking the use of other innovative solutions, and as a result, risking the new AML framework quickly becoming

Name of the respondent	Question	Answer
		obsolete. Also, in a broader context, such a strong preference for solutions such as e-IDAS is not sustainable. It is unrealistic to expect that all natural persons will have access to e-IDAS, as the uptake of these solutions in Member States is insufficient. It also discriminates against customers from third countries, where the e-IDAS Regulation does not apply. Therefore, it is essential that Art. 7 clearly allows obliged entities to apply a risk-based approach to non-face-to-face interactions. We also believe that the separate paragraph allowing the use of reproductions of documents for customers who are not natural persons should be restored. In such cases, the use of remote solutions, as described in paragraphs 2 and 3, would not be relevant. In the asset management industry, where, in many cases, other financial institutions acting as intermediaries are considered customers, it is common to acquire a list of authorised signatories with reproductions of their IDs or signatures, or, in the case of some third countries, chips. Those lists can include multiple individuals (sometimes going in tens or hundreds). Verifying each of them via the remote solutions would be highly disproportionate and not in line with the risk-based approach, bearing negative implications on the current business model of investment funds. Therefore, we propose the following wording for paragraphs 1, 2 and 5 as well as the introductory part of paragraph 3 of Art. 7: “1. To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-

Name of the respondent	Question	Answer
		face situation, obliged entities shall: (a) apply additional and appropriate measures, on a risk-based approach, to mitigate the inherent higher risk that this type of customer relationship may present; or (b) use electronic identification means, that meet the requirements of Regulation (EU) 910/2014 with regard to the assurance levels 'substantial' or 'high', or relevant qualified trust services as set out in that Regulation. 2. Alternatively to the solutions described in paragraph 1, obliged entities may obtain the natural person's identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3 and 4. Such solutions shall be commensurate to the size, nature and complexity of the obliged entity's business and exposure to ML/TF risks. 3. Obliged entities shall ensure that the solutions described in paragraph 2 use reliable and independent information sources and include where suitable the following safeguards regarding the quality and accuracy of the data and documents to be collected: (...) 5. Where obliged entities accept reproductions of an original document, for customers that are not natural persons, and do not examine the original document, obliged entities shall take risk-based steps to ascertain that the reproduction is reliable. Where available, during the verification process, obliged entities shall verify the security features embedded in the official document, if any, such as holograms, as a proof of their authenticity."
European Fund and Asset	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10

Name of the respondent	Question	Answer
Management Association (EFAMA)		
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	While improvements have been made in the wording of Art. 10 of the Draft RTS proposed by AMLA, EFAMA remains of the opinion that the approach is excessive and does not allow for the application of a risk-based approach. While it refers to obliged entities taking risk-sensitive measures, it still requires specified information to be obtained in any case where the ownership or control structure contains more than one legal entity or legal arrangement. Many multilevel structures are created for business and operational reasons, and gathering all of the listed information will be unnecessary for the purpose of understanding the ownership and control structure of the customer. The approach here should depend on the complexity of the structure and the ML/TF risk it poses. In the asset management industry, which we describe in more detail under our response to Questions 1, 3 and 5 of Section 2, it is common to find layers of intermediaries between the fund and investors (who are customers of the intermediary). These intermediaries are mainly banks or other financial entities that help investors invest in the funds and optimise costs and charges to provide them with lower fees. Given the characteristics of entities existing in the chain and the low level of ML/TF risk they could create, we do not believe that acquiring all of the information mentioned in Art. 10 regarding intermediaries at each level would be justified. Moreover, collecting additional information would create operational and technological burdens. Additional names would need to be recorded, kept updated and screened,

Name of the respondent	Question	Answer
		requiring time, economic resources and often technological developments, without mitigating any actual ML/TF risk. In such circumstances, we believe that to fulfil the requirements of Art. 62 AMLR, it is sufficient for the obliged entity to understand the structure existing between the customer and the beneficial owner by collecting the names of entities in between and the percentage of their ownership. Any more detailed information on those entities could be required in cases where a higher level of ML/TF risk would be identified, or they would exceed the threshold for beneficial ownership under Art. 52(1) AMLR. Therefore, we would propose the following wording for Art. 10 of the draft RTS: “1. Obliged entities shall take risk-sensitive measures to ensure they obtain a comprehensive understanding of the ownership and control structure of the customer pursuant to Art. 20(1) point (b) of Regulation (EU) 2024/1624. 2. For the purposes of the first paragraph, in situations where the customer’s ownership and control structure is complex and posing a higher risk of ML/TF, obliged entities shall take risk-sensitive measures to obtain and assess at least the following information: (a) a description of the ownership and control structure, including the legal entities and/or legal arrangements that constitute intermediate entities between the customer and their beneficial owners owning more than 25% within the customer structure, and relevant for understanding the ownership and control structure; and

Name of the respondent	Question	Answer
		(b) where applicable: i. where beneficial ownership is determined on the basis of control, information on how this is expressed and exercised; or ii. information on the regulated market on which the securities are listed, in case a legal entity at an intermediate level of the ownership and control structure has its securities listed on a regulated market, and the number and percentage of shares listed if not all the legal entity's securities are listed on a regulated market. 3. With respect to the legal entities and/or legal arrangements described in paragraph (2), point (a), and to the extent that it is relevant obliged entities shall take risk sensitive measures to obtain the following information: (a) the legal form of such entities and/or legal arrangements; (b) the jurisdiction of incorporation or registration of the legal person or legal arrangement, (c) in the case of a trust, the jurisdiction of its governing law. 4. When obliged entities assess the ownership and control structure, they must be satisfied that: (a) information included in the description pursuant to paragraph 2, point (a) is credible; (b) that there is economic, legal or other rationale behind the structure; and (c) that they understand how the overall structure affects the ML/TF risk associated with the customer.
European Fund and Asset Management Association (EFAMA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	12

Name of the respondent	Question	Answer
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	While we acknowledge the improvements made to the text of Art. 12 of the Draft RTS by the EBA and AMLA, we must first question whether AMLR mandates the establishment of a de facto definition of a “complex corporate structure” in this Draft RTS. This element is not specified under the Art. 28(1) AMLR, nor is it mentioned under Art. 20(1)(b) which is referred here. While the recitals of the AMLR refer to the difficulty of identifying beneficial owners in cases of complex corporate structures, this element is already taken into account when specifying rules on beneficial ownership identification, as explained in Recital 108 AMLR. If there is any indication of a possibility for further guidance, it is reserved for guidelines adopted by the European Commission that set rules for identifying beneficial owners in different scenarios, as mentioned under Recital 105 AMLR. We are therefore of the opinion that Art. 12 should be removed from this Draft RTS. If, however, our reasoning is not shared and Art. 12 of the Draft RTS is to be maintained, we would like to reiterate our concerns that the proposed provisions would still result in the vast majority of ownership structures being treated as complex. Multinational companies and medium/large financial entities typically have multiple layers of ownership, and in the majority of cases, in different jurisdictions, including outside EU. We do not believe this was intended by the AML Package, and again would not be in line with the level of ML/TF risk posed by those structures. If the vast majority of structures are being recognised as complex, those that truly pose a higher level of ML/TF risk would become less visible.

Name of the respondent	Question	Answer
		The experience of EFAMA's members shows that the proposed number of "three or more layers between the customer and the beneficial owner" would still be too low, in particular if incorporation outside EU is the other condition. This would still capture many "normal" structures, including those that are fully transparent and pose a low level of ML/TF risk. Therefore, we believe that instead of concentrating on the number of layers, the preassessment of the structure should be left to the obliged entity and its expert judgement. Its opinion whether a particular structure appears unusual or excessively complex, should be primarily taken into account. Moreover, with regard to the jurisdiction of incorporation, only those countries that are already considered high risk should be taken into account. The mere incorporation outside the EU should not be treated as an indication of a complex structure, as it could discriminate against jurisdictions that uphold the same AML/CFT standards as the EU does. Lastly, we would support the reference to "reasonable measures", as proposed by the EBA in its final advice to the Commission, to be restored. In our opinion, it would allow obliged entities to avoid this additional client outreach in cases where the structure is already well understood through access to other sources (e.g.: public registers). This would be much more in line with the risk-based approach. Therefore, we would propose the following wording for Art. 12(1-2) of the draft RTS: "1. To understand the ownership and control structure of the

Name of the respondent	Question	Answer
		customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer's business, and, in addition, more than one of the following conditions is met; a. there is a legal arrangement or a similar legal entity such as foundation in any of the layers; b. the legal arrangements/ legal entities present at any of these layers are incorporated or domiciled in a jurisdiction included in the EU list of non-cooperative jurisdictions for tax purposes; c. there are nominee shareholders or nominee directors involved in the structure; d. the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification. 2. In the case of complex corporate structures as referred to in paragraph 1, obliged entities shall take reasonable measures and, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an organigram."

European Fund and Asset Management	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	EFAMA would like to highlight that the level of ML/TF risk that can be associated with senior managing officials (SMOs) is not the same as the potential risk that could be associated with beneficial owners (BOs). Firstly, the SMOs, unlike the BOs, do

Name of the respondent	Question	Answer
Association (EFAMA)		not hold ownership interest over the company and do not control it through that ownership or via other means. If they did, they would have to be identified as BOs. Instead, and according to Art. 63(4) AMLR, their details are being provided in cases where it was not possible to identify BOs or their identification is uncertain. As explained in recital 125 AMLR and reiterated in AMLA's Interpretative Note for the purpose of Data Collection Exercise (page 17), "senior managing officials are not the beneficial owners". Secondly, as these are persons who exercise executive functions within the legal entity, their identity has already been verified multiple times, as they would usually have to perform actions vis-à-vis multiple national authorities, such as tax or national registers. Due to the same reasons, their important details are usually available through reliable and independent sources of information, mentioned under Art. 22(6)(a) AMLR. Therefore, it does not seem justified to require the same set of information and verification rules for SMOs as for BOs. According to Art. 63(4)(b) AMLR the details that are to be collected on SMOs are to be equivalent to those required under Art. 62(1), second subparagraph, point (a). It does not refer to all the information listed for BOs' identification under Art. 62, moreover, the article clearly refers to "equivalent" information, which does not mean "the same". Particularly, we believe that requiring a CEO of a big company to provide his ID would be disproportionate, as his data and identity can be easily retrieved through the relevant company's registers. As a result, this overburdening obligation can have far-reaching implications, discouraging international companies from using

Name of the respondent	Question	Answer
		the services of EU financial entities. Therefore, we would propose the following wording for Art. 13 of the Draft RTS: “In relation to senior managing officials as referred to in Article 22(2) second subparagraph of Regulation (EU) 2024/1624, obliged entities shall: a. collect information for identification purposes. Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; b. verify the identity of senior managing officials using risk-sensitive measures.” Alternatively, we propose that the solutions provided under Art. 21 of the Draft RTS apply to SMOs in all circumstances and not only low-risk situations.
European Fund and Asset Management Association (EFAMA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	16
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	In our opinion, it would be beneficial to provide obliged entities with more clarity not only with regard to the information to be collected and verification means for the persons purporting to act on behalf of the customer, but also to define this term. It would help ensure harmonisation and avoid divergent interpretations among Member States. Our understanding is that this definition is intended to cover

Name of the respondent	Question	Answer
		instances in which a person (natural or legal) and external to the customer is acting on the customer's behalf. Therefore, with regard to legal entities, it should exclude employees acting on behalf of their employer as part of their employment. Requesting information such as nationality or place of residence, as well as requiring ID verification may not be possible and could go against their right to privacy, given that these persons will be merely representing the legal entity as part of their employment contract and not acting in their own interest. Applying a full identification and verification process to all of them would be excessive and ineffective in combating financial crime. Therefore, we believe that the definition should include persons who are external to the customer (i.e., not employed) and act under a proxy or power of attorney. Moreover, as in the case of SMOs, acquiring information about such persons' residential address will meet a strong and justified objection due to privacy and security reasons. This data is neither necessary nor commensurate with the limited ML/TF risk that they would pose. Therefore, we would propose the following paragraphs to be added to Art. 16 of the draft RTS: “2.‘Person purporting to act on behalf of the customer’ means (i) legal representative(s) of a customer who is a natural person, or (ii) any legal or natural person, external to the customer and in particular other than an employee or senior managing official of a legal person, authorised to act on behalf of the customer pursuant to a mandate, or proxy agreement. 3. Obliged entities may decide to obtain the address of the

Name of the respondent	Question	Answer
		registered office of the legal entity instead of the residential address and country of residence of the person purporting to act on his behalf.”
European Fund and Asset Management Association (EFAMA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	23
European Fund and Asset Management Association (EFAMA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	While we support improvements made to the wording of Art. 23 of the Draft RTS, specifying the frequency of customer identification data updates in low-risk situations, we would like to point out practical questions that arise while considering the conditions put forward in paragraph 1, points (a) and (b). As they refer to instances in which there is either no change in the circumstances relevant to the assessment or no event requiring an update, they can be identified primarily through a review. Otherwise, how can the obliged entity be satisfied that no such circumstance has transpired? This severely limits the possibility of applying a lower update frequency, despite it being clearly justified by the lower level of ML/TF risk.
European Fund and Asset Management Association (EFAMA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
European Fund and Asset Management	Please specify which recital you refer to, and share your comments below.	With regard to recital 14, please see the comments shared under the response to Question 5 in Section 2 of this questionnaire

Name of the respondent	Question	Answer
Association (EFAMA)		
European Fund and Asset Management Association (EFAMA)	Do you have any comments on the Annex in the draft RTS?	Yes
European Fund and Asset Management Association (EFAMA)	Please share your comments below.	We would like to highlight the misalignment that exists between the list of attributes required for electronic identification means and qualified trust services, and the information on the addresses under Art. 3 of the Draft RTS. While the Article requires information about country, city or alternative, and where applicable: postal code, street name, post box, building and apartment number, the Annex 1 also includes elements such as state, address and “other”. We believe that these data sets should be aligned to avoid discrepancies between systems of obliged entities and the electronic identification providers.
European Fund and Asset Management Association (EFAMA)	How would you rate the proposals set out in the draft RTS overall?	Inadequate
European Gaming and Betting Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	EGBA welcomes AMLA’s efforts to promote harmonisation and a risk-based approach across the Union. However, the current proposals cannot be applied consistently across all sectors, particularly online gambling. Several provisions appear calibrated for the financial sector and do not reflect the operational realities of non-financial, digital-first models. First, requirements on identity verification (e.g. Articles 6 and

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	7) assume widespread availability of standardised electronic identification. In practice, no universally available EU-wide digital identity framework exists, and not all Member States have developed qualifying solutions. While the EU Digital Decade foresees 80% uptake by 2030, cross-border interoperability, acceptance, and operational stability remain years away. Mandating eIDAS as the primary solution under Article 7(1) therefore requires compliance with a standard not yet achievable in practice. In the interim, obliged entities must operate at least two systems in parallel (eIDAS under Article 7(1) and fallback solutions under Article 7(2)), generating material costs disproportionate to any risk reduction. The RTS also lacks clarity on acceptable solutions (e.g. approved providers or minimum standards). This issue is particularly acute for EU-licensed operators serving customers outside the Union, where equivalent digital identification solutions may be unavailable, while the operator remains subject to EU AML/CFT obligations. This risks creating disproportionate operational barriers while entities remain subject to EU AML/CFT obligations. Article 7 should better reflect Article 22(6) AMLR, which recognises both document-based and electronic identification as valid verification methods. As drafted, Article 7 suggests eIDAS is the default in non-face-to-face situations, with other methods as fallback, narrowing the flexibility intended at Level 1. Second, the RTS does not fully accommodate widely used, reliable national solutions that do not rely on traditional identity documents. In Denmark, BankID is a high-assurance onboarding tool, and in Belgium, “itsme” provides comparable certainty and is widely accepted by financial institutions and

Name of the respondent	Question	Answer
		public authorities. These solutions may not involve collecting identity documents but still ensure high assurance. Moreover, Article 7 risks rendering robust technology-based solutions (e.g. AI-based) presumptively non-compliant unless eIDAS is unavailable, regardless of risk outcomes. Recognising such solutions would improve proportionality, practical applicability, technological neutrality, and EU competitiveness in innovation. Third, certain provisions (notably Article 7) risk being overly prescriptive and insufficiently technology-neutral or risk-based. This should be considered in light of the EU simplification agenda, which seeks to reduce administrative and compliance burdens. Harmonisation alone does not deliver simplification if measures introduce disproportionate costs. By effectively mandating eIDAS as the primary method and altering remote onboarding practices, Article 7 imposes significant costs not proportionate to the risk reduction achieved and inconsistent with this agenda. Additionally, certain data points (e.g. all nationalities, place of birth) may not be available via widely used electronic identification solutions and may have limited AML/CFT value in low-risk scenarios. Their collection should remain proportionate, risk-based, and operationally feasible, particularly where digital onboarding does not provide these attributes. In light of the above, we recommend: • ensuring the RTS remain technology-neutral, risk-based, and adaptable, including closer alignment of Article 7 with Article 22(6) AMLR, preserving document-based and electronic verification; • preventing market distortion by recognising and ensuring equal treatment of reliable national and private onboarding

Name of the respondent	Question	Answer
		solutions; • providing greater clarity on acceptable standards or approaches where harmonisation is intended; • ensuring requirements are proportionate and feasible for non-financial sectors, including online gambling; and • clarifying the meaning of "cannot reasonably be expected" in Article 7(2) through objective criteria or indicative parameters to reduce uncertainty and divergent supervisory interpretation.
European Gaming and Betting Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	While the draft RTS aim to support a risk-based approach, certain provisions risk introducing a more prescriptive and less flexible framework in practice. Identity verification requirements in non-face-to-face situations (Article 7) do not fully reflect the current availability of digital identification solutions across the EU nor align with the EU simplification agenda. Promoting eIDAS-based solutions as an additional onboarding modality is a legitimate objective; however, Article 7, read as a whole, is difficult to reconcile with technological neutrality and risk-based supervision, creating a gap between regulatory expectations and operational reality. Article 7 should better reflect Article 22(6) AMLR, which allows both document-based verification and electronic identification. As drafted, it may be read as establishing a hierarchy where eIDAS is the primary route and document-based verification a fallback, reducing the flexibility intended by the AMLR and limiting appropriateness in sectors and jurisdictions where robust non-eIDAS solutions are widely used. This may require obliged entities to rely systematically on fallback solutions, increasing complexity and uncertainty, particularly in cross-border contexts and for groups operating outside the EU where equivalent solutions may not exist.

Name of the respondent	Question	Answer
		More broadly, the approach risks lacking technological neutrality. A genuinely risk-based framework should allow the use of reliable and independent verification methods, including national solutions and private tools based on new technologies (e.g. AI), where they achieve equivalent assurance. The RTS should therefore support robust electronic identification means, qualified trust services, and other reliable digital methods, including where supplemented by measures addressing missing attributes. In addition, requirements on understanding the purpose and intended nature of the business relationship (Article 18) are not fully adapted to all sectors. In online gambling, the purpose is inherently clear, namely participation in games for entertainment. Requiring additional granular information does not necessarily improve risk understanding and may lead to collecting information of limited ML/TF relevance. Similarly, requirements to obtain estimated levels of activity (e.g. expected transaction volumes or spending) may not be meaningful. Customers are generally unable to predict behaviour accurately, making such information unreliable and of limited risk value. This is particularly true in sports betting, where activity is seasonal and event-driven, fluctuating with sporting calendars, tournaments, and one-off events, as well as personal circumstances, interests, and disposable income. Winnings and recycling of funds can further distort patterns over time. As a result, ex ante onboarding estimates are often of limited predictive value and should not be treated as a reliable basis for risk assessment in high-volume retail gambling. Requiring speculative ex ante estimates may also create unintended consequences in the context of gambling-sector

Name of the respondent	Question	Answer
		social responsibility obligations by encouraging collection of low-quality data that is neither reliable for AML/CFT purposes nor suited to consumer protection and affordability frameworks. For high-volume digital models such as online gambling, obliged entities should be able to meet Article 18 requirements through risk-based ranges, behavioural categories, or product-based use profiles rather than precise ex ante estimates. This is more sophisticated than static forecasts and already reflected in supervisory practice in some Member States, where operators rely on behavioural monitoring, transaction profiling, and dynamic risk indicators. Overall, while harmonisation is supported, greater flexibility is needed to ensure effective application of the risk-based approach. In particular: • ensure the RTS remain technology-neutral, risk-based, and adaptable to different identification solutions, while fostering EU competitiveness in innovation; • prevent market distortion by recognising and ensuring equal treatment of reliable national and private onboarding solutions; and • tailor requirements on the purpose and nature of the relationship to sector-specific realities.
European Gaming and Betting Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, we identify several situations where the information required under the draft RTS is not routinely available in practice and where the proposed framework does not provide a sufficiently workable alternative, particularly in the online gambling sector. First, certain information required in relation to identity verification (Article 6) may not always be available or necessary

Name of the respondent	Question	Answer
		in practice. The RTS appears to assume that identity verification is primarily document-based. However, in several Union Member States, highly reliable digital identification solutions are widely used which do not require the collection of identity documents. For example, in Denmark, BankID provides a high level of assurance, and in Belgium, the “itsme” solution is used by both banks and public authorities. In such cases, obtaining and storing copies of identity documents is neither necessary nor aligned with existing practices. Second, the requirements for non-face-to-face verification (Article 7) may not be feasible where qualified electronic identification means are not available. As highlighted above, there is currently no universally available digital identity solution across the EU, and such solutions may be even less prevalent in third countries where operators are required to apply equivalent measures at group level. The RTS does not provide sufficient clarity on acceptable alternatives in such cases and does not sufficiently reflect the principles of technological neutrality and the risk-based approach. Finally, Article 7 as currently drafted does precisely the opposite of the EU simplification agenda: by fundamentally altering the paradigm under which remote customer onboarding is conducted which imposes significant implementation and compliance costs on obliged entities that are not proportionate to the risk reduction achieved. Third, the requirements relating to the purpose and intended nature of the business relationship (Article 18) are not fully applicable to the online gambling sector. The purpose of the relationship is inherently clear—participation in games for entertainment—and additional information such as detailed economic rationale or estimated future activity may not be

Name of the respondent	Question	Answer
		meaningful. In particular, customers are generally not able to reliably estimate future levels of play or spending, making such information of limited practical value. In light of the above, we recommend: • explicitly recognising digital identification solutions that provide equivalent levels of assurance; • providing clearer and more flexible alternatives where qualified electronic identification means are not available; • limiting information requirements to data that is reasonably accessible to obliged entities; and • allowing for sector-specific adaptations, particularly where certain information (e.g. purpose of relationship or estimated activity) is inherently clear or not meaningful. These adjustments would enhance both the practicality and proportionality of the framework.
European Gaming and Betting Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We welcome AMLA's recognition of the importance of simplified due diligence (SDD) measures and agree that the AMLR already provides a degree of flexibility in low-risk scenarios. At the same time, we consider that there is scope to further develop sector-specific SDD measures, particularly for non-financial and digital sectors such as online gambling. In particular, additional simplified measures could be considered in situations where the ML/TF risk is demonstrably low and well understood, including where: • transactions are of low value and below relevant regulatory thresholds; • customers use regulated payment methods subject to their own AML/CFT controls (e.g. credit institutions or payment service providers within the EU); and • the customer relationship is limited in scope and does not

Name of the respondent	Question	Answer
		exhibit indicators of higher risk. In such cases, it may be appropriate to allow greater reliance on information already obtained through other regulated entities, where legally and operationally available to the obliged entity. In addition, consideration could be given to simplifying requirements relating to the purpose and intended nature of the business relationship in sectors where this is inherently clear. For example, in the online gambling sector, the purpose of the relationship—participation in games for entertainment—is generally self-evident, and requiring additional detailed information in low-risk scenarios may not enhance the understanding of ML/TF risk. More broadly, further clarification on how SDD measures can be applied in high-volume, low-value transaction environments would be beneficial, to ensure that simplified measures can be used effectively without creating ambiguity or supervisory divergence. A predominantly periodic refresh model may not, in itself, deliver a genuinely risk-based outcome in high-volume digital environments, where relevant risk changes are more effectively captured through trigger events, behavioural indicators and unusual activity. For low-risk customer relationships, the RTS should clarify that identification data and other CDD information may be refreshed on the basis of trigger events, changes in circumstances, unusual activity, or other risk indicators, rather than through repeated periodic re-collection where no relevant change has occurred. At this stage, we would welcome further engagement with AMLA and stakeholders to develop more detailed, sector-

Name of the respondent	Question	Answer
		specific proposals for SDD measures, including based on operational input from industry experts.
European Gaming and Betting Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We welcome AMLA's work in developing these draft RTS and support the overall objective of enhancing harmonisation and promoting a risk-based approach to customer due diligence across the EU. The framework provides a strong foundation and reflects a high level of technical detail. At the same time, we consider that further adjustments are needed to ensure that the RTS are fully applicable across all obliged entities, including those in the non-financial sector and in particular digital-first sectors such as online gambling. A key overarching concern is that certain provisions appear to be calibrated primarily for the financial sector and do not sufficiently reflect the operational realities of other sectors. This is particularly evident in areas such as identity verification, where the RTS assumes the widespread availability of specific digital identification solutions, and in requirements relating to the purpose and intended nature of the business relationship, which may not be meaningful in all contexts. AMLA should ensure that the final RTS focus on the level of risk coverage and assurance achieved, rather than implicitly privileging specific tools or technological routes where equivalent outcomes can be demonstrated. In addition, greater clarity and flexibility would be beneficial to ensure that the RTS remain technology-neutral, risk-based and can accommodate a range of reliable identification methods, including established national solutions and reliable private solutions. This is especially important given the current absence of a universally available EU digital identity framework and the expected timeline for its broader adoption.

Name of the respondent	Question	Answer
		We also note that certain information requirements may not be accessible to obliged entities outside the financial sector, and that in some cases the collection of additional data may not materially enhance the assessment of ML/TF risk. We also note that the draft RTS would benefit from greater conceptual clarity regarding the distinction between source of funds and source of wealth. While both concepts are referenced repeatedly, the draft does not clearly explain their respective scope, purpose, or the circumstances in which one should be applied instead of, or in addition to, the other. In particular, Article 27 appears to suggest that both source of funds and source of wealth may be required in higher-risk situations, without clearly identifying the relevant triggers or proportionality considerations. Greater clarity on this point would support more consistent application across obliged entities and supervisors and reduce uncertainty as to supervisory expectations. For existing customers, PEP screening should remain risk-sensitive and event-driven, taking into account the nature, scale, and distribution model of the obliged entity, and should not be interpreted as requiring constant or transaction-by-transaction rescreening in all cases. Overall, we would encourage AMLA to further strengthen the proportionality and sectoral applicability of the RTS by: • ensuring alignment between regulatory expectations and the practical availability of identification solutions; • preserving technological neutrality and the risk-based approach, while fostering European competitiveness in technology innovation; • preventing structural market distortion and ensure equal treatment of all compliant remote onboarding solutions;

Name of the respondent	Question	Answer
		• allowing for sector-specific adaptations where appropriate; and • limiting requirements to information that is both accessible and relevant from a risk perspective. We would be pleased to continue engaging with AMLA and to provide further operational input as the work progresses.
European Gaming and Betting Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

	when implementing the provisions of these draft RTS.: Recurrent costs	
European Gaming and Betting Association	Please justify your answer to the previous question and provide evidence where possible.	At this stage we have been unable to provide an estimate within the deadline. However, we do expect implementation costs to increase.
European Payment Institutions Federation	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	EPIF does not agree with all the proposals set out in this draft RTS. Please refer to Section 3 for our comments on specific articles.
European Payment Institutions Federation	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	As a general statement, EPIF strongly supports a risk-based assessment over the onboarding method. The manner in which a customer is onboarded (face-to-face vs remote) should not indicate the risk level in isolation. AML/CTF frameworks should continue to prioritize holistic risk assessments, considering the overall customer profile and the reliability of the verification measures used. We consider the simplified due diligence provisions in AMLR Article 33 to be appropriate and that the information outlined in the RTS provides the necessary level of flexibility of the AMLR. We would nonetheless like to highlight one exception, specifically Article 21(2) of the RTS. This provision sets out that two alternative sources of information should be used to identify and to verify a beneficial owner or senior managing official in a low-risk situation. We believe this hard requirement is unnecessary. There will be circumstances where a single

Name of the respondent	Question	Answer
		piece of information will be capable of both identifying and verifying the identity of a beneficial owner / senior managing official. This might be the case, for example, where an official register includes a periodic identity verification requirement for beneficial owners or managing officials listed within the register. In such a case it would be reasonable for a firm to rely on that register for the purpose of a low-risk situation.
European Payment Institutions Federation	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We consider the enhanced due diligence provisions in AMLR Article 34 are sufficient and that the RTS should support the flexibility set out in these provisions. We note, however, that the same challenges highlighted in Question 2 regarding limitations on the utility of user provided forecasts of certain information provided as part of CDD may also exist with respect to the requirements of Article 26(1)(b) and (c) of the RTS. These similarly require forward-looking assessments of destination of funds and transactional activity. This does not necessarily present an issue given that Article 26(1)(a) of the RTS provides the possibility to use otherwise confirming information regarding the intended nature of a business relationship. This could include the use of other information, such as real-time data and forecasting, for purposes of verifying the intended nature of a business relationship with a customer in line with Article 34(4)(b) of the AMLR. Nonetheless, similar to our comments to Question 2, there would be value in confirming in a recital that it is appropriate in some circumstances to rely on information from sources other than forecasts or representations by the customer for purposes of considering the nature of the

Name of the respondent	Question	Answer
		business relationship as part of EDD in line with Article 26(1)(b) and (c) of the RTS.
European Payment Institutions Federation	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EPIF does not have suggestions for further simplified due diligence measures that should be added.
European Payment Institutions Federation	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No.
European Payment Institutions Federation	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
European Payment Institutions Federation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
European Payment Institutions Federation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	While we fully support the objective of harmonizing electronic identification solutions for AML/CTF purposes, we have significant concerns regarding the mandatory use of eIDAS in its current form. The existing eIDAS framework explicitly excludes AML/CFT verification from its scope, leading to legal

Name of the respondent	Question	Answer
		and operational misalignment that must be resolved before any mandatory implementation can proceed effectively. Our key concern is the overall complexity and fragmentation risk. Requiring obliged entities to operate parallel verification systems — one for eIDAS-compliant customers and another for those outside its scope — would add unnecessary operational burden and complexity. Rather than strengthening AML/CTF controls, thus approach risk fragmentation, reducing the overall 63 efficiency and consistency in verification practices. Any mandatory adoption of eIDAS for AML/CFT purposes should only proceed following appropriate legislative alignment. A structured transition period is essential to allow for effective implementation, ensuring obliged entities can align their verification systems without disruption. Drafting proposal: “Further, consistent with the risk-based approach, obliged entities should be able to leverage reliable and independent sources of information to verify the identity of low-risk individuals, rather than necessarily having obtain and verify copies of identity documents in every case."
European Payment Institutions Federation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
European Payment Institutions Federation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 7(3)(a): Article 7 provides a structured and risk-sensitive approach to identity verification in non-face-to-face situations. The article is currently overly restrictive and too reliant on the provision by individual customers of identity documents where we feel the relevant provision of the AMLR (Article 22(6))

Name of the respondent	Question	Answer
		leaves greater scope for reliance on an "equivalent" to an ID document, or alternative measures, to be applied. In this context it is important to note that it is now possible for information provided by a customer to be augmented with information available from reliable third party sources and other signals that can be collected in real time during the onboarding process (including geographic indicators, online presence, etc.). These inputs can be ingested and validated holistically in a manner that allows for a better understanding to be obtained of a customer's identity and profile (and therefore potential financial crime risk) at a lower cost (which may be appropriate in the context of certain products), while also improving the experience for the customer. Overdependence on the submission of identity documents by users risks reducing the scope for further innovation in new identity verification measures and processes – to date, a notable strength of EU firms in comparison to peers in other regions – at a time when greater innovation and development in this space is possible now more than ever before. Moreover, while representing a further avenue for potential innovation, the eIDAS scheme and framework is not yet fully realised and rolled out across the EU. As such, we are concerned that forcing reliance on this scheme at this point in time risks creating issues of inequality of access between different Member States, which would further exacerbate issues arising from the challenges with accessing reliable company and beneficial ownership registers on a cross-border basis during the parallel rollout of the BORIS database. While we are supportive of both the EU's eIDAS and BORIS initiatives, AMLA should be mindful of the risks associated with poorly

Name of the respondent	Question	Answer
		sequenced dependence or premature reliance on the outputs of these initiatives before they are sufficiently robust and accessible, which might be imposing costs on the financial sector, reducing technological innovation in the fintech sector, and / or slowing e-commerce without materially improving financial crime outcomes. Overdependence on the submission of identity documents by users risks reducing the scope for further innovation in new identity verification measures and processes – to date, a notable strength of EU firms in comparison to peers in other regions – at a time when greater innovation and development in this space is possible now more than ever before. As currently drafted, Article 7(3)(a) appears to require obliged entities to perform a facial or photo match between the individual presenting the document and the photograph contained in that document. In practice, this can only be achieved through one of the following means: • A live video interaction with a human operator performing a visual check; or • An automated facial recognition or biometric matching solution. We seek clarification of Article 7(3)(a). Requiring automated photo-matching or facial recognition technology would effectively mandate the collection and processing of biometric data — a special category of personal data under Article 9 of Regulation (EU) 2016/679 (GDPR). This would represent a significant and novel obligation, as AML/CFT frameworks have not, to date, imposed a general requirement on obliged entities to collect or process biometric data as part of their customer due diligence procedures.

Name of the respondent	Question	Answer
		We would therefore respectfully request explicit clarification on the following points: • Whether Article 7(3)(a) is intended to require biometric data collection or processing, or whether it can be satisfied through non-biometric means (e.g., a live video call with a human operator performing a visual check); • If biometric processing is contemplated, what legal basis under the GDPR is expected to apply, and whether the Regulation itself is intended to serve as the legal basis pursuant to Article 9(2)(g) GDPR; • How obliged entities that rely on third-party identity verification providers to satisfy this requirement should document and evidence compliance.
European Payment Institutions Federation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
European Payment Institutions Federation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	On determining the purpose and intended nature of a business relationship, the use of the qualifier “where necessary” in this provision may create ambiguity for obliged entities when determining the extent of information to be collected from the customer at onboarding versus what may be reasonably inferred from the type of transactions or business relationship established as well as supplemented over time based on the characteristics and evolution of the business relationship. In particular, clearer and more objective criteria would be beneficial to support more consistent implementation and

Name of the respondent	Question	Answer
		reduce the risk of divergent interpretations across institutions and NCAs.
European Payment Institutions Federation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	19
European Payment Institutions Federation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The definition of PEPs should be harmonised across the EU. Discrepancies between Member States will inevitably lead to an inconsistent application of the rules. EPIF proposes that the definition on family members should be set at EU level and that siblings are either consistently included or consistently excluded from the PEP definition across the EU.
European Payment Institutions Federation	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	27
European Payment Institutions Federation	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	This article relates to additional information on the source of funds and source of wealth of the customer and of the beneficial owners. EPIF members would welcome guidance in line with the Risk Based Approach in case of low or medium risk clients. In addition, the Source of Wealth is not treated the same across the EU. Some countries require basic information for lower risk clients. However other Member States require more documentation e.g. last 3 payslips for the basic account of an employee. As a result, account opening takes several weeks in some cases. We would therefore welcome the RTS to specify more detail on the information and/or documentation to be collected under the risk-based approach to ensure harmonisation across EU.

Name of the respondent	Question	Answer
European Payment Institutions Federation	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
European Payment Institutions Federation	Please specify which recital you refer to, and share your comments below.	Recital (3): The treatment of nationality in cases of naturalisation requires further attention. Nationality may arise by birth or through descent from an individual's parents. The draft RTS also state that where a person holds multiple nationalities and declares them in good faith, verification of a single nationality is sufficient. This approach, however, introduces inconsistencies. Individuals who acquire an additional nationality through naturalisation may effectively obscure their original nationality—whether by birth or inheritance—which may carry higher inherent risk. For example, a person originally linked to a high risk or sanctioned jurisdiction may subsequently declare only their naturalised nationality, thereby reducing the risk profile that should otherwise be assessed based on their original nationality. Furthermore, the RTS should provide a clearer definition of the term "declaration in good faith". Without explicit guidance, obliged entities face uncertainty when determining whether a customer's declaration is complete, accurate, and aligned with the underlying risk based obligations. EPIF's preference would be to remove the concept of a declaration in good faith. Recital (5): In the case of a trust or similar legal arrangements that may not be subject to registration, a recent copy of the trust deed, or an extract thereof, together with any other document that determines the exercise of any powers by the trustees or similar administrators, certified by an independent

Name of the respondent	Question	Answer
		professional, should qualify as reliable and independent sources of information. It should also be clarified who is deemed to be an independent professional and what documentation is acceptable under national law. Moreover, the RTS should clarify that a qualified digital signature may replace certifications. Recital (8): A consultation of central registers for information on beneficial owners for verification purposes should be necessary and sufficient. In instances where there is no access to official registers, the rules should clarify what actions suffice to fulfil the verification requirements. This should involve one of the following: - A shareholders registry; - government data bases; - regulated corporate service providers; - notarised organisational chart or articles of association in which the beneficial owners are stated, or any other relevant documents; or - certificate of incumbency. Recital (9): While SMOs are not beneficial owners, for the purposes of identification and verification measures, obliged entities should collect equivalent information for SMOs as they do for the beneficial owners, excluding information on the source of wealth and source of funds. Recital 21 – information provided in the same group: We welcome the principle set out in this recital, which acknowledges that obliged entities — and other entities within the same group — may already hold information relevant to

Name of the respondent	Question	Answer
		AML/CFT compliance requirements. We support avoiding the unnecessary duplication of information requests is a positive step. In particular, we strongly support the acknowledgment that information already available within a group — whether collected for AML/CFT purposes, or other regulatory or business purposes — should be capable of contributing to the fulfilment of AML/CFT obligations without requiring the same customer to provide the same documentation multiple times. This is consistent with the principle of proportionality and reflects sound operational practice within group structures that have centralised compliance or onboarding functions. However, we would welcome further clarification on the legal characterisation of such intra-group information sharing arrangements. Specifically, it is unclear whether the re-use of documentation or information collected by another group entity — or the reliance on due diligence performed by another group entity — would constitute intra-group outsourcing within the meaning of applicable AML/CFT and financial services regulatory frameworks. This distinction has material implications for governance, contractual arrangements, and regulatory notification or approval requirements. We note that the boundary between (i) legitimate intra-group reliance on shared information and (ii) outsourcing of AML/CFT functions to a group entity is not always clear in practice, and the absence of explicit guidance on this point risks creating inconsistent approaches across obliged entities and jurisdictions. We would therefore encourage to provide explicit

Name of the respondent	Question	Answer
European Signature Dialogue	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The European Signature Dialog (ESD), which brings together leading Qualified Trust Service Providers servicing over 250 million users across Europe and is the recognised interlocutor for European and national institutions — including the European Commission, Parliament, and Council — broadly agrees that the proposals set out in the draft RTS can be applied across a wide range of products and services. The outcome-based and functionally neutral approach adopted in most provisions is appropriate and allows obliged entities operating across different sectors to calibrate compliance measures accordingly. However, ESD wishes to draw attention to specific limitations in the current drafting of Article 7, governing verification measures conducted on a non-face-to-face basis. All ESD members are listed on the EU Trusted List and operate under strict compliance with the eIDAS framework, bringing extensive operational experience in the deployment of secure remote identification and digital onboarding solutions across multiple Member States. This collective expertise reveals concrete challenges in translating the requirements of Article 7 into auditable, cross-border compliant workflows. With specific reference to Article 7(4), and taking into account the detailed safeguards listed in Article 7(3), particularly in light of the continuously evolving technological landscape and the increasing sophistication of digital fraud techniques, ESD considers that further clarity is needed regarding how obliged entities may demonstrate compliance with the prescribed requirements to their competent authorities. While the draft RTS appropriately sets functional and outcome-based requirements, obliged entities would benefit from wording that explicitly acknowledges the possibility of relying on recognised

Name of the respondent	Question	Answer
		technical standards to evidence compliance. In this regard, ETSI TS 119 461 represents the most up-to-date European technical standard specifically addressing remote identity proofing, aligns with eIDAS assurance principles, and is already referenced in other European regulatory acts. ESD proposes amending Article 7(4) to explicitly recognise adherence to such recognised European technical standards — including, where applicable, the assurance levels defined in Regulation (EU) 2024/1183 for trust services — as an acceptable means of demonstrating compliance, without limiting technological neutrality.
European Signature Dialogue	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	ESD members, all listed on the EU Trusted List and collectively serving over 250 million users, observe that a genuine risk-based approach requires not only that obliged entities assess the level of risk associated with a customer relationship, but also that they can calibrate the technical measures deployed accordingly and demonstrate the adequacy of those measures to competent authorities in a structured, transparent, and reproducible manner. The current draft does not provide such a structured reference framework. Without an explicit acknowledgment of standardised identity proofing frameworks, obliged entities — and the QTSPs supporting them — face uncertainty regarding how to evidence compliance in a risk-proportionate way across different national supervisory environments. This uncertainty is particularly acute given the cross-border nature of ESD members' operations and the divergent supervisory expectations that currently exist across Member States. In this context, ETSI TS 119 461 directly enables calibration of technical controls through its two-tiered structure: a Baseline Level of Identity Proofing (LoIP) for lower-risk contexts, and an

Name of the respondent	Question	Answer
		Extended LoIP for higher-risk scenarios. This structure operationalises the risk-based approach in a concrete, auditable, and harmonised manner, fully consistent with the principles underlying the AML Regulation. ESD respectfully proposes that Article 7(4) be amended to recognise ETSI TS 119 461 — at Baseline or Extended LoIP depending on the obliged entity's risk analysis — as an acceptable reference standard for demonstrating compliance, ensuring consistency with EBA Guidelines EBA/GL/2022/15, which already acknowledge structured frameworks for remote identity proofing.
European Signature Dialogue	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	ESD acknowledges that the progressive rollout of European Digital Identity Wallets (EUDIW) under Regulation (EU) 2024/1183 will, in the coming years, significantly simplify the collection and verification of identity information in non-face-to-face contexts. However, during the transitional period preceding widespread wallet adoption, obliged entities will continue to operate across a heterogeneous landscape of remote verification methods and identity schemes, in which situations may arise where specific CDD information is technically difficult to obtain or verify in a fully automated manner. Rather than proposing new or alternative identification methods, ESD's position is straightforward: there is no need to reinvent the wheel. The existing EU regulatory framework already defines a mature, harmonised, and legally recognised set of identification modalities and assurance levels. In particular, Regulation (EU) 2024/1183 establishes the assurance levels and requirements applicable to trust services — providing a robust, supervisory-backed reference architecture directly relevant to the non-face-to-face

Name of the respondent	Question	Answer
		verification requirements of Article 7. The issue is not the absence of suitable solutions, but the absence of an explicit reference to these existing frameworks in the draft RTS. This is precisely why ESD advocates for a more precise formulation of Article 7(4) that expressly recognises adherence to recognised European technical standards ensuring equivalent safeguards and assurance levels — including, where applicable, the levels defined in Regulation (EU) 2024/1183 for trust services — as an acceptable means of demonstrating compliance. This would provide obliged entities with a clear, technology-neutral compliance pathway grounded in existing EU instruments, applicable across the full range of scenarios encountered today and fully compatible with the transition toward wallet-based verification
European Signature Dialogue	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Pursuant to Article 28(1) of Regulation (EU) 2024/1624, ESD proposes that the RTS introduce an explicit simplified due diligence measure recognising the use of eIDAS-recognised electronic identification means at "substantial" assurance level as a sufficient verification basis in defined lower-risk scenarios, without requiring the additional layered verification steps currently set out in Article 7(3). Rationale: ESD, as the representative body of QTSPs operating under the eIDAS framework and listed on the EU Trusted List, is uniquely positioned to observe the regulatory asymmetry between the eIDAS and AML/CFT frameworks. Customers verified through eIDAS "substantial"-level identification schemes — which include mandatory conformity assessment, supervisory oversight, and cross-border recognition — present an inherently lower ML/TF risk profile than customers verified through non-certified methods. The draft RTS does not adequately reflect this distinction, creating a missed

Name of the respondent	Question	Answer
		opportunity to leverage the trust infrastructure that the EU has already built. Moreover, European Digital Identity Wallets, introduced by Regulation (EU) 2024/1183, will progressively become the primary digital identification instrument for EU citizens. ESD considers it essential that the RTS establish clear provisions for wallet-based customer verification — including appropriate simplified due diligence treatment where the wallet operates at "high" assurance level — ensuring coherence between the EU's digital identity policy objectives and its AML/CFT framework. Concrete drafting proposal: "Where a customer relationship presents a lower risk profile in accordance with the applicable provisions of Regulation (EU) 2024/1624, obliged entities may, when verifying customer identity on a non-face-to-face basis, rely on electronic identification means notified under Regulation (EU) No 910/2014 at 'substantial' assurance level, or on European Digital Identity Wallets as defined under Regulation (EU) 2024/1183, as the sole verification measure, without application of the additional requirements of Article 7(3), provided that the risk assessment supporting this determination is documented and retained."
European Signature Dialogue	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	ESD reiterates its support for the objective of strengthening secure non-face-to-face verification within the AML/CFT framework and respectfully proposes the following revised text for Article 7(4), reflecting the collective operational experience of its members across European jurisdictions (additions in bold): "Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote

Name of the respondent	Question	Answer
		verification solutions they use comply with the requirements of this Article. Such compliance may be demonstrated, inter alia, through adherence to recognised European technical standards that ensure equivalent safeguards and assurance levels, including where applicable the levels defined in Regulation (EU) 2024/1183 for trust services. They shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624." This amendment would preserve technological neutrality and outcome-based regulation, strengthen legal certainty for obliged entities, facilitate supervisory convergence across Member States, and ensure continuity with EBA Guidelines EBA/GL/2022/15, which already acknowledge structured and auditable frameworks for remote identity proofing. On ETSI TS 119 461 ETSI TS 119 461 is the European technical standard specifically designed for remote identity proofing, already referenced in other EU regulatory acts and fully aligned with eIDAS assurance principles. ESD strongly advocates for its explicit — though non-mandatory — recognition in the RTS as an acceptable compliance reference, providing competent authorities across Member States with a clear and objective supervisory benchmark and reducing the risk of divergent national interpretations that currently fragment the single market for digital identity services. On continuity with EBA Guidelines EBA/GL/2022/15 The proposed amendment ensures full consistency with EBA Guidelines on the use of Remote Customer Onboarding Solutions (EBA/GL/2022/15). ESD considers it essential that the AML RTS build upon — rather than deviate from — this existing

Name of the respondent	Question	Answer
		supervisory architecture, which ESD members have invested significantly in implementing across their onboarding solutions.

	ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
European Third Party Providers Association (ETPPA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Under AMLR, for C2B payment solutions, the ASPSP performs CDD on its customer, and executes the payment, while the merchant-facing PSP performs CDD on the merchant who receives the payment. This implies the merchant-facing PSP does not conduct any CDD on the payer. This should also apply for merchant-facing Payment Initiation Services Providers (PISPs). Like card acquirers, such PISPs do not open accounts for payers, and payers can use the service only after the merchant instructs the PISP to initiate the flow. However, the CDD requirements for PISPs have been subject to significant ambiguity. In 2018, the European Commission at a meeting of the API Evaluation Group (API EG032-18) stated that AML checks for PISPs relate to merchants, not payers. Subsequently, the EBA 2021 final ML/TF Risk Factors Guidelines clarified that where a PISP has a business relationship with the payee and the payer initiates a one-off transaction, the PISP's customer for AML/CFT purposes is the payee, not the payer. This was confirmed in level 3 guidance from the EBA (Q&A 2021_6048). Despite this, in 2022, the Swedish FSA, as part of a supervisory intervention, stated that PISPs should, in certain cases, perform CDD on payers even without the occurrence of occasional transactions. No other NCA has offered any official guidance on what PISPs need to do. Different NCAs have different expectations, which has led to a significantly distorted playing field, where PISPs licensed in a Member State that does not require them to perform CDD on payers can offer a payment

Name of the respondent	Question	Answer
		journey significantly more convenient for the payer across all EU markets. AMLR explicitly set out the CDD requirements for PISPs, aiming to end the legal ambiguity and ensure a level playing field. Recital 62 and Article 19 (6)(d) make it clear that for PISPs, the merchant is the customer. This means merchant-facing PISPs should perform CDD on the merchant only, not on payers. However, although AMLR is finalised, the Swedish NCA in a recent intervention against a PISP stated that the nature and purpose of the relationship with the payer needs to be assessed the first time the consumer makes a PIS payment, contrary to what is implied by AMLR. The uncertainty still prevails and there is no harmonised view on whether PISPs should conduct CDD on payers, meaning platforms cannot operate seamlessly across the EU. This lack of regulatory consistency hampers competition and innovation in the payment sector, with direct consequences for consumers and merchants. AMLA guidance is necessary to provide the market certainty regarding the regulatory expectations under AMLR. Without such guidance, the market may have to wait years for legal precedent to emerge and, given the risk of regulatory sanctions, firms are unlikely to rely on the logical interpretation of AMLR. This will negatively impact competition and in turn, merchant and consumer choice. To avoid regulatory arbitrage and distortions to competition, AMLA guidance is also needed for the case when the same payment institution (PI) that initiates the payment also acts as the collecting PSP on behalf of the merchant. Historically,

Name of the respondent	Question	Answer
		merchants accepting PIS payments also used a collecting PSP (the merchant's card acquirer) which collected the initiated payments, hence allowing the merchant the benefits of reconciliation, reporting, consolidated settlements and the other features inherent in the usage of a collecting PSP. Since the adoption of PSD, several PIs that provide PIS have started providing the collection of payments on behalf of their merchants. In this case, the same PI provides PIS and collects the initiated payments, and subsequently settles the proceeds to the merchant in a consolidated settlement, similar to what merchants receive from their card acquirers. This removes the need for merchants to contract with both a PISP and a separate collecting PSP to accept PIS as a payment method, which promotes competition. Under AMLR, where one PI initiates the payment, and a separate PI collects it on behalf of the merchant, neither would be obliged to perform CDD on the payer. The meaning of the last sentence of Recital 62 AMLR should be clarified to ensure that if the same payment institution initiates and collects the payments, that entity is not required to perform CDD on the payer. We appeal to AMLA to add a clarification recital: "AMLR for the first time explicitly addresses the customer due diligence requirements applicable to obliged entities that perform payment initiation services. For the provision of payment initiation services where a natural or legal person is the payer and a merchant is the payee, the obliged entity needs to conduct customer due diligence on the merchant

Name of the respondent	Question	Answer
		only, irrespective of payment amount and frequency. The same principle applies if an obliged entity, in addition to providing the payment initiation service, also collects the initiated payments."
European Third Party Providers Association (ETPPA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
European Third Party Providers Association (ETPPA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
European Third Party Providers Association (ETPPA)	Please specify which recital you refer to, and share your comments below.	N/A - We appeal to AMLA to add a clarification recital: AMLR for the first time explicitly addresses the customer due diligence requirements applicable to obliged entities that perform payment initiation services. For the provision of payment initiation services where a natural or legal person is the payer and a merchant is the payee, the obliged entity needs to conduct customer due diligence on the merchant only, irrespective of payment amount and frequency. The same principle applies if an obliged entity, in addition to providing the payment initiation service, also collects the initiated payments.

Name of the respondent	Question	Answer
European Third Party Providers Association (ETPPA)	How would you rate the proposals set out in the draft RTS overall?	Inadequate
European Third Party Providers Association (ETPPA)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available
European Third Party Providers Association (ETPPA)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs	Disruptive impact

Name of the respondent	Question	Answer
	stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
EY Nederland B.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Overall, we welcome the proposed amendments to the draft RTS on CDD. That said, we also note that the draft RTS appear primarily designed for the financial sector, where relationships typically involve ongoing financial transactions. The draft RTS are less well suited to the professional services sector. In our view, the draft RTS would benefit from clearer sector-specific differentiation and a stronger emphasis on proportionality. This would help ensure that the standards remain practical and effective, and better reflect the operational realities of obliged entities in the non-financial sector. Examples include: • Articles 18(c) and 18(d) require information on the source and destination of funds, which is largely transactional in nature. While accountants and tax advisors can collect information on sources of funds and wealth as part of the CDD

Name of the respondent	Question	Answer
		process, the wording in the draft RTS appears geared more towards individual transactions than towards a broader understanding of the client's overall profile and background. • Article 28 requires information on the rationale for intended or executed transactions and their consistency with the business relationship as part of enhanced due diligence measures. In a professional services context, these requirements are difficult to implement, as they are framed primarily around transactional activity. We suggest adding "where relevant" in these types of sections, where it now seems tailored to the financial sector, in order to ensure sector-specific flexibility. This would support application across all sectors in a proportionate fashion.
EY Nederland B.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In general, the RTS is very detailed and elaborate, leaning more towards a rule-based approach than a risk-based approach. Examples are: •Article 3 does not differentiate between any person purporting to act on behalf of the customer and the customer itself. In case the client is a legal entity, the person purporting to act on behalf of the customer would in essence be a client representative. Obtaining the personal address information of this person does not seem to be of much relevance from a money laundering/terrorism financing risk perspective in most instances. Therefore, we would suggest introducing a more risk-based approach and allowing for use of the address of the legal entity instead, unless there are indications that obtaining the personal address details are of relevance from a money laundering/terrorism financing perspective. •Article 4 states that should the identity document, passport or equivalent of the customer provide additional information on

Name of the respondent	Question	Answer
		place of birth, such information shall be collected. From a risk-based approach, collecting this additional information would add minimal value whereas it adds to the administrative burden. •Article 6 paragraph 3 requires obliged entities to take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6)(a) and Article 22(7)(a), of Regulation (EU) 2024/1624 are authentic and have not been forged or tampered with. This requirement does not seem to take into account that the inherent risk of receiving forged identification documents or identification documents that have been tampered with differs across the obliged entities. Therefore, we would suggest introducing a more risk-based approach here as well and allow obliged entities with a low inherent risk of receiving such documents to only take these steps if the obliged entity identifies identify conditions that cause them to believe that a document may not be authentic. •Article 12 paragraph 1 is quite detailed and only allows limited room to apply a risk-based approach regarding treating an ownership and control structure as complex, whereas the complexity of a corporate structure for a large part depends on the context. A structure that can be regarded as a regular structure for a multinational can be regarded as a complex structure for a relatively small business. Therefore, more room for a risk-based approach would be of great value in article 12. In that line of thinking we propose to add a criterion such as 'The organizational structure is unusual and/or overly complex, given the activities of the customer and the group of which the client is a part'. Furthermore, we would propose not taking into account the number of layers between the customer and the

Name of the respondent	Question	Answer
		beneficial owner to determine whether to treat a structure as complex or not, as this can result in treating the top holding in a structure as part of a 'regular' corporate structure and an subsidiary in that same structure as being part of a 'complex corporate structure', just because they are in a different layer of the same structure. It is also unclear how this criterion can be applied in the case of multiple UBOs, each through a different number of intermediate entities. Furthermore, criterion a (involving a legal arrangement or similar legal entity, such as a foundation, in any of the layers) and criterion b (registered in jurisdictions outside the EU) apply to many standard international group structures. These criteria are therefore by themselves or in aggregate not suitable for identifying complexity in ownership and control structures. •Article 13 requires that in relation to senior managing officials, obliged entities shall collect the same information as the information they would collect for beneficial owners except for the address. Article 13 furthermore requires the verification of the identity of senior managing officials to happen in in the same way as it would for beneficial owners. This does not seem in line with a risk-based approach as senior managing officials are in essence employees of a legal entity, and not its real beneficial owners. In terms of money laundering and terrorism financing risks, this means senior managing officials and real beneficial owners pose different risks and should not be treated the same. Doing so would be disproportionate and significantly increase the administrative burden without materially reducing the risks of money laundering or terrorism financing. Collecting the names and date of birth of senior managing officials should suffice for screening purposes. We propose that verification of their identity could take place

Name of the respondent	Question	Answer
		through reasonable measures and that this may include, where appropriate, using reliable and independent sources such as extracts of the Chamber of Commerce, trade registers, or other publicly available information submitted to competent authorities (e.g. regulatory filings).
EY Nederland B.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We foresee difficulties in fulfilling the conditions set in (a) and (b) of article 10 regarding the reasonable measures for verification of the beneficial owner as the public registers listed under (a) are not accessible to obliged entities and the information under (b) such as utility bills of the UBO, will likely not be available at the customer either.
EY Nederland B.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No.
EY Nederland B.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In article 33 it is determined that the RTS shall enter into force on the twentieth day following that of its publication in the Official Journal of the European Union. However, we would suggest that the application date of this RTS aligns with the application date of the Regulation (EU) 2024/1624 being 10 July 2027. We suggest using that date as recital 25 states that the maximum periods of 1 and 5 years, respectively, for updating customer information in accordance with the requirements of the Regulation (EU) 2024/1624 should only start with the application date of this Commission Delegated Regulation for existing customers onboarded before Regulation (EU)

Name of the respondent	Question	Answer
		2024/1624 took effect. Therefore, it would be sensible to have this RTS enter into force at the same date as Regulation (EU) 2024/1624 takes effect.
EY Nederland B.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
EY Nederland B.V.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
EY Nederland B.V.	Do you have any comments on the Annex in the draft RTS?	No
EY Nederland B.V.	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
EY Nederland B.V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc.	Not applicable/no information available

Name of the respondent	Question	Answer
	Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
EY Nederland B.V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? EY Nederland B.V.	Please justify your answer to the previous question and provide evidence where possible.	This is difficult to estimate at this point in time.
Fastighetsmäklarförbundet FMF	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient	FMF does not consider that the proposals set out in these draft RTS, in their current form, are fully applicable to the range of services offered within the real estate brokerage sector. While the overarching principles on customer due diligence are

Name of the respondent	Question	Answer
	flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	relevant, their application must allow clearer risk differentiation between different types of services and mandates. FMF emphasises that the real estate brokerage sector primarily provides services rather than products. The application of the regulatory framework should therefore be based on the nature of the services and mandates and the risks associated with them. Why the current proposals do not provide sufficient flexibility The sector includes various services, such as brokerage mandates, drafting assignments, valuations and related services. These differ in purpose, scope of the customer relationship, degree of insight into financing, ability to obtain and verify information, and exposure to money laundering or terrorist financing risks. A uniform level of control therefore risks being insufficiently targeted and, in some cases, disproportionate. At the same time, certain services may involve higher risks and justify more extensive measures. This may include valuations used for credit decisions, drafting assignments in private transfers without open market exposure, transactions involving complex ownership structures, unusual financing arrangements, transactions with international elements, or other circumstances deviating from a normal risk pattern. FMF does not object to enhanced measures where the risk level justifies this.

Name of the respondent	Question	Answer
		FMF considers that high-risk services and situations should be further specified through sector-specific risk indicators and guidance. This would enable more targeted checks and a more proportionate application across different types of mandates. Other mandates may typically involve a standard risk profile, such as ordinary residential brokerage transactions financed through established EU credit institutions, where ownership structures and payment flows appear transparent. The framework should therefore allow the level of control to be adapted to the actual risk profile of the service and mandate. Customer due diligence measures in this sector often rely on documentation provided by the customer, as brokers do not have the same access to bank-related information as credit institutions. It is therefore important that the RTS clearly set out overarching principles for what documentation should be requested at different risk levels and for different services. National competent authorities should also be given a clear role in developing sector-specific guidance and practical examples adapted to national conditions, including what documentation is normally sufficient, relevant timeframes and when additional verification is required. Proposed amendments “Obliged entities shall apply the requirements set out in these RTS in a manner proportionate to the specific service or mandate provided, taking into account the nature of the service, the degree of involvement in the transaction, and the

Name of the respondent	Question	Answer
		risks associated with that service." "Obliged entities shall be permitted to differentiate customer due diligence measures according to documented low, standard and high-risk situations relating to the type of service or mandate and the circumstances of the transaction, provided such categorisation is risk-based and regularly reviewed." "Where a service or transaction presents higher risk factors, enhanced due diligence measures shall be applied commensurate with the risks identified." "Where access to relevant information depends primarily on documentation provided by the customer, competent authorities should provide sector-specific guidance on the types of evidence normally considered sufficient and when additional verification is required." Rationale These additions would make the RTS more flexible and better adapted to different services in both financial and non-financial sectors. For the real estate brokerage sector, they would enable a more targeted application where the level of control is determined by the actual risk in each mandate, rather than applying the same level of control irrespective of the nature of the service. This would strengthen proportionality, improve compliance, increase legal certainty and allow resources to be focused on higher-risk situations.
Fastighetsmäklarförbundet FMF	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach	FMF does not consider that the proposals set out in these draft RTS, in their current form, fully enable the effective application

Name of the respondent	Question	Answer
	towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	of a risk-based approach within the real estate brokerage sector. FMF shares the ambition to establish a harmonised framework based on proportionality, risk sensitivity and effective compliance. At the same time, the draft contains, in several respects, detailed and far-reaching requirements that risk steering obliged entities towards a more formalised and caution-driven approach, rather than towards genuinely risk-based assessments. This applies in particular in situations where the obliged entity — as is regularly the case in the real estate brokerage sector — has only a short-term customer relationship, limited independent insight into the customer's other financial activities, and where checks in practice often rely on documentation submitted by the customer. In such cases, there is a risk that the focus shifts from actual risk to documenting that every element of the RTS has formally been considered. In this context, it should be emphasised in particular that the real estate brokerage sector is characterised by time-limited and property-specific mandates. An effective risk-based approach in our sector therefore means that resources should primarily be concentrated on mandates where concrete risk indicators are present, for example: • complex ownership and control structures; • foreign connections or cross-border arrangements; • unclear financing circumstances; • unusual payment arrangements or third-party payments; • deviating transaction patterns; or • other circumstances that justify enhanced scrutiny. If the same extensive level of control is in practice also applied

Name of the respondent	Question	Answer
		in low-risk or standard-risk cases, resources risk being diverted from the situations where the need for enhanced scrutiny is greatest. Customer due diligence measures in the real estate brokerage sector also often rely on the customer being requested to provide relevant documentation, since brokers normally do not have the same direct access to bank-related information as credit institutions. Against this background, it is particularly important that the regulatory framework clarifies which documentation that is de facto accessible to brokers should normally be considered sufficient in low-, standard- and high-risk situations. Concrete drafting proposals FMF proposes that the relevant provisions be supplemented with the following general wording: In order to ensure a clearly risk-based and proportionate application, the following general wording should be introduced: “Obliged entities shall apply customer due diligence measures in a risk-based and proportionate manner, taking into account the nature of the service or mandate, the level of risk identified, and the circumstances of the transaction.” In order to enable effective prioritisation of resources, clearer support for risk-based allocation of resources should be introduced: “The scope and intensity of customer due diligence measures shall be commensurate with the money laundering and terrorist financing risks identified, allowing obliged entities to allocate enhanced scrutiny and resources to higher-risk situations.” In order to ensure practical applicability in situations where

Name of the respondent	Question	Answer
		checks rely on documentation submitted by the customer, the following addition should be considered: “Where customer due diligence relies primarily on documentation provided by the customer, competent authorities should provide sector-specific guidance on the types of evidence normally considered sufficient for low, standard and high-risk situations.” In order to counteract an overly formalised approach, the following should be introduced: “Obliged entities shall not be required to obtain or verify information that is not relevant to the specific service or mandate or not proportionate to the risks identified.” In order to strengthen consistent application, sector-specific guidance should be developed: “AMLA and competent authorities should provide sector-specific examples illustrating when standard customer due diligence measures are sufficient and when enhanced due diligence measures should be applied.” Reasons These additions would more clearly ensure that the RTS enable genuinely risk-based application in both the financial and non-financial sectors. For the real estate brokerage sector, this would mean that resources can be focused on mandates involving actual risk — for example complex structures, international connections or unclear financing arrangements — rather than being tied up in the same level of control for all mandates. It would strengthen proportionality, improve the effectiveness of AML/CFT work, increase legal certainty and reduce the risk of mechanical and overly formalised compliance work.

Name of the respondent	Question	Answer
Fastighetsmäklarförbundet FMF	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Taking into account the nature, size, risks and complexity of the real estate brokerage sector, there are several recurring situations where information required under the draft RTS is not directly available to the obliged entity, but must in practice be obtained from the customer or a third party. In such situations, guidance is often insufficient regarding what documentation may be accepted, the required level of verification, how far back documentation should extend, and when customer due diligence should be considered sufficient. For this sector, this is a key practical issue. The challenge is not access to information, but the lack of clear and predictable parameters for what documentation should be obtained, how extensive checks should be, and when obligations are fulfilled. This is particularly relevant in a transaction-based sector where mandates are time-limited, linked to a specific property, and where insight into the customer's wider finances is limited. Concrete examples Source of funds and source of wealth Brokers can and should request documentation in higher-risk situations, but it is often unclear what is sufficient and how far back it should extend, particularly where financing comes from multiple sources such as savings, sale of property, gifts, inheritance, family loans, foreign assets or corporate structures. Uncertainty arises regarding bank statements, loan commitments, gift or inheritance documentation, tax information and when additional documentation is required.

Name of the respondent	Question	Answer
		Verification is often indirect and based on customer-provided information, highlighting the need for clearer guidance. Ownership and control structures In transactions involving legal persons, especially foreign or multi-layered structures, it may be difficult to obtain reliable information on ownership, beneficial owners, control structures and purpose. It is often unclear what level of documentation is required within a single mandate. New developments and project financing In transactions involving project companies or developers, it may be unclear how projects are financed, including land acquisition, construction financing and ongoing costs. These issues may be difficult to assess within a single mandate, creating uncertainty regarding the scope of checks and what documentation is proportionate. Short-term mandates In certain mandates, such as drafting assignments or already agreed transactions, customer contact may be very limited. This creates uncertainty regarding the scope of information gathering and whether extensive measures, such as site visits or other resource-intensive checks, are required. When due diligence is sufficient It is often unclear when the obliged entity has done enough. This may lead to overly cautious application, increased administration, divergent practices and supervisory uncertainty. FMF emphasises that clearer and more standardised guidance on what documentation should normally be obtained would improve the conditions for effective risk analysis. Where guidance is unclear, risk assessments may become inconsistent,

Name of the respondent	Question	Answer
		affecting legal certainty. Proposed amendments “Where information required for customer due diligence is not directly available, obliged entities shall take reasonable and proportionate steps to obtain relevant documentation from the customer or other appropriate sources.” “AMLA should provide indicative lists of documentation normally considered sufficient for source of funds, source of wealth and ownership structures, taking into account sector-specific circumstances.” “Such guidance should specify appropriate look-back periods, expected verification depth and when additional documentation is required.” “Where Union-level standardisation is not feasible, competent authorities should provide sector-specific guidance.” “Where material uncertainty remains, obliged entities may apply enhanced due diligence measures or refrain from carrying out the transaction without being considered non-compliant solely because additional information could not be obtained.” “Where the customer is a legal person involved in real estate development, obliged entities shall take reasonable steps to understand the source of funds, but shall not be required to conduct in-depth verification beyond what is reasonably

Name of the respondent	Question	Answer
		accessible, unless higher-risk indicators are identified." Rationale These additions would provide clearer and more practical guidance while preserving the risk-based approach. They would reduce legal uncertainty, improve consistency and enable resources to be focused on genuine risks, thereby strengthening the effectiveness of AML/CFT measures.
Fastighetsmäklarförbundet FMF	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	FMF considers that additional measures for simplified customer due diligence should be introduced with caution and only where the individual risk is low and no enhanced risk indicators are present. At the same time, the regulatory framework must enable proportionate and risk-based application in practice, allowing customer due diligence measures to be adapted to the circumstances of the individual mandate. FMF acknowledges that simplified customer due diligence is primarily intended for low-risk situations. However, in the real estate brokerage sector there are recurring situations that may formally fall within a standard-risk category but where the actual risk profile is limited, transparent and well understood. In such cases, the framework should allow proportionate application of due diligence measures, which may involve practical simplifications without constituting simplified due diligence in the strict sense. Situations for proportionate customer due diligence

Name of the respondent	Question	Answer
		In the real estate brokerage sector, there are recurring situations where the overall risk typically falls within the standard-risk category and no enhanced risk indicators are present. The framework should therefore support proportionate measures adapted to the nature, scope and risk profile of the mandate. This may typically be the case where most or all of the following apply: • the customer is a natural person resident in the EU; • identity is verified through reliable electronic identification or public registers; • financing is provided through a regulated credit institution within the EU; • there is no complex ownership structure; • there are no PEP, sanctions or high-risk international indicators; and • the transaction follows a normal, transparent and verifiable structure. Concrete measures Identity verification Where identity has been verified through a reliable electronic system or equivalent source, further documentation should normally not be required in the absence of risk indicators. Financing as a mitigating factor Financing through a regulated EU credit institution should be considered a relevant mitigating factor when assessing the need for further checks, unless risk indicators are present. Ownership structure

Name of the respondent	Question	Answer
		Where the customer is a natural person or a legal person with a simple and transparent structure, checks may be limited to reliable register information. Purpose and nature Where the transaction is transparent and follows a normal structure, it should be sufficient to document its basic purpose without extensive investigation. No updating after completion For one-off, time-limited mandates, periodic updating of customer due diligence after completion should not normally be required unless new risks emerge. Proposed amendments “Where lower risks have been identified in relation to a specific customer, transaction or mandate, and no enhanced risk factors are present, obliged entities may apply simplified customer due diligence measures proportionate to the lower risk identified.” “Obliged entities shall apply customer due diligence measures in a manner proportionate to the nature, purpose and risk of the transaction or mandate, including in standard-risk situations.” “For single real estate transactions involving natural persons resident in the Union and financed through a regulated credit institution, obliged entities may take that financing structure into account as a mitigating factor when determining the extent of additional measures, unless specific risk indicators require further verification.”

Name of the respondent	Question	Answer
		"Where the customer is a natural person or a legal person with a simple and transparent ownership structure, verification may be limited to reliable public sources unless higher-risk indicators are identified." "For one-off transactions completed within a limited mandate, no periodic updating of customer due diligence information shall be required after completion, unless new risks emerge." Rationale These additions would provide clearer guidance on how simplified and proportionate measures can be applied without undermining the risk-based framework. For the real estate brokerage sector, this would allow resources to be focused on transactions with genuine risk indicators, while reducing unnecessary administration in transparent low-risk cases. It would strengthen proportionality, improve effectiveness, enhance legal certainty and support more targeted AML/CFT efforts.
Fastighetsmäklarförbundet FMF	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	FMF would like to provide the following additional observations. Need for clearer sector-specific application (general observation) Across several provisions of the draft RTS, there is a recurring need for clearer sector-specific guidance, particularly for non-financial, transaction-based sectors such as real estate brokerage. While the RTS aim to establish a harmonised framework, the practical application of certain requirements

Name of the respondent	Question	Answer
		remains unclear in sectors characterised by time-limited mandates and limited access to financial information. Article-specific observation – practical application of customer due diligence requirements In relation to provisions concerning the scope of customer due diligence and ongoing monitoring, FMF wishes to emphasise that the current drafting does not sufficiently distinguish between ongoing customer relationships and one-off transactions. In the real estate brokerage sector, mandates are typically limited to a single transaction and end upon completion. Applying ongoing monitoring requirements in such cases risks creating disproportionate obligations. FMF therefore suggests that the RTS explicitly clarify that, for time-limited mandates relating to a single transaction, ongoing monitoring obligations should be limited to what is appropriate and necessary in light of the identified risks. Access to information and verification challenges Another key issue relates to access to information. Real estate brokers generally lack direct access to customers' financial data, and verification often relies on documentation provided by the customer. This creates uncertainty regarding what constitutes sufficient verification, particularly in relation to source of funds, ownership structures and complex financing arrangements. FMF therefore recommends that AMLA and competent authorities provide more detailed and sector-specific guidance on:

Name of the respondent	Question	Answer
		acceptable documentation; appropriate look-back periods; expected depth of verification; and circumstances requiring additional checks. Need for alignment with existing national frameworks FMF also emphasises the importance of ensuring that the RTS are aligned with well-functioning national frameworks. In Sweden, the real estate brokerage sector already operates under strict supervision, personal legal responsibility and structured documentation processes supported by digital systems. New requirements should build on, rather than duplicate or conflict with, these existing frameworks. Proposed solution (general) FMF proposes that the RTS be supplemented with general provisions stating that: requirements shall be applied proportionately, taking into account the nature of the service and the duration of the mandate; assessments shall be based on information reasonably available to the obliged entity; and competent authorities should provide sector-specific guidance where Union-level standardisation is not feasible. Conclusion Clarifying these aspects would improve legal certainty, enhance consistency across Member States and enable obliged entities

Name of the respondent	Question	Answer
		to focus resources on genuine risk indicators, thereby strengthening the effectiveness of the risk-based approach.
Fastighetsmäklarförbundet FMF	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Fastighetsmäklarförbundet FMF	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Fastighetsmäklarförbundet FMF	Do you have any comments on the Annex in the draft RTS?	No
Fastighetsmäklarförbundet FMF	How would you rate the proposals set out in the draft RTS overall?	Neutral
Fastighetsmäklarförbundet FMF	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact
FDJ UNITED	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and	Le projet de RTS est globalement applicable à nos activités. Toutefois, certaines exigences ne tiennent pas suffisamment compte des spécificités d’un opérateur de jeux. Les obligations de collecte exhaustive des données

Name of the respondent	Question	Answer
	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	d'identification, le recours à des documents comportant une date d'expiration et l'exigence de solutions d'identification électronique avancées sont susceptibles d'entraîner des impacts opérationnels significatifs, sans bénéfice proportionné en matière de réduction du risque LCB FT pour les situations à faible risque.
FDJ UNITED	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Ce projet de RTS gagnerait à préciser de manière plus claire l'application de l'approche fondée sur les risques et proportionnée aux secteurs non financiers tels que les jeux d'argent et de hasard. Dans ce secteur, l'évaluation du risque repose principalement sur l'analyse des comportements et des schémas transactionnels. Les mesures de vigilance devraient, en conséquence, être adaptées de manière proportionnée aux caractéristiques des produits, au profil du client et à l'activité constatée.
FDJ UNITED	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	En premier lieu, il apparaît nécessaire de préciser que la nature et l'objet de la relation d'affaires s'appliquent difficilement au secteur des jeux d'argent et de hasard tels qu'ils sont classiquement entendus dans le dispositif LCB-FT. En pratique, la relation d'affaires se limite à l'accès aux opérations de jeu, les sommes retirables correspondant uniquement à d'éventuels gains, sans lien avec une activité économique ou patrimoniale structurée. Cette spécificité justifie une clarification ou une adaptation des exigences réglementaires au regard des réalités opérationnelles du secteur. En second lieu, certaines informations exigées au titre de la vigilance client sont, en pratique, indisponibles, sans que le projet de RTS ne prévoie systématiquement de solutions alternatives opérationnelles et proportionnées.

Name of the respondent	Question	Answer
		Cette difficulté concerne en particulier l'exigence de vérification du lieu de naissance du client, a minima du pays de naissance. Si cette information est bien collectée dans le cadre du parcours d'inscription, son caractère vérifiable ne peut pas être garanti dans tous les cas. En effet, certains documents d'identité ne permettent pas d'identifier le pays de naissance de manière fiable. C'est notamment le cas des nouvelles cartes nationales d'identité françaises, qui mentionnent uniquement le lieu de naissance sans indication du pays. Lorsque la commune indiquée n'est pas située sur le territoire national, la donnée collectée devient inopérante et ne permet pas de satisfaire l'exigence de vérification prévue par la RTS. La mise en œuvre de dispositifs compensatoires impliquerait des développements techniques lourds et coûteux sur les parcours clients, apparaissant disproportionnés au regard des risques LCB-FT concernés, en particulier pour les situations à faible risque, sans bénéfice opérationnel significatif. Par ailleurs, pour les clients classés à risque faible ou nul, les obligations de mise à jour des informations devraient être appliquées conformément au principe de proportionnalité et à l'approche fondée sur le risque. En l'absence de facteurs déclencheurs, de signaux d'alerte ou de changements significatifs dans la situation du client, une actualisation systématique n'apporte pas de valeur ajoutée en matière de détection des risques de blanchiment de capitaux et de financement du terrorisme. Des revues périodiques allégées, ciblées sur la persistance du faible niveau de risque,

Name of the respondent	Question	Answer
		permettraient d'atteindre les objectifs réglementaires sans imposer de diligences excessives.
FDJ UNITED	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Le projet de RTS devrait prévoir plus explicitement l'applicabilité de mesures de vigilance simplifiées pour les produits de jeux et les profils de clientèle présentant un faible niveau de risque BC-FT, en particulier s'agissant des activités de loterie, tant en point de vente physique qu'en ligne, dont les caractéristiques intrinsèques limitent l'exposition aux risques BC-FT.
FDJ UNITED	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	La question 1 du draft n'est pas reprise dans ce formulaire et elle était : Do you agree with the proposals set out in these draft RTS? If you do not agree, please specify: (i) the provision(s) concerned; and (ii) the rationale for your position. Please provide concrete drafting proposals to resolving the issue and explain why the measure you propose would be more appropriate. Notre réponse à cette question est la suivante : Nous soutenons globalement les propositions contenues dans ce projet de RTS, qui poursuit un objectif essentiel d'harmonisation et de cohérence dans l'application des mesures de vigilance à l'échelle de l'Union européenne. Toutefois, certaines dispositions mériteraient d'être précisées afin d'en garantir une mise en œuvre effective, proportionnée et opérationnellement soutenable. En l'état, certaines exigences impliquent une collecte d'informations plus étendue qui engendrent des sollicitations supplémentaires de

Name of the respondent	Question	Answer
		documents auprès des clients. En outre, lorsque l'entreprise ne dispose pas d'un dispositif d'identification électronique, l'exigence implique nécessairement le déploiement de solutions alternatives. L'ensemble de ces exigences entraîne un fort impact opérationnel, notamment en termes d'évolutions des systèmes et des processus, des coûts significatifs ainsi que l'allongement des parcours clients. • Noms et prénoms (article 2) : la collecte et la vérification systématiques de l'ensemble des noms et prénoms figurant sur le document d'identité, y compris les deuxièmes et troisièmes prénoms, peuvent générer des difficultés opérationnelles. Il serait utile de confirmer la possibilité d'une approche fondée sur les risques, incluant la validation par le client des données extraites du document d'identité et une mise en conformité progressive des clients existants lors des cycles périodiques de revue. • Pays de naissance (article 4) : dans la mesure où cette information n'est fréquemment pas disponible sur les documents d'identité, une clarification serait bienvenue afin de confirmer que la déclaration du client peut être acceptée lorsque des sources documentaires fiables ne sont pas raisonnablement accessibles, sous réserve d'une approche par les risques.
FDJ UNITED	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
FDJ UNITED	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
FDJ UNITED	Do you have any comments on the Annex in the draft RTS?	No

	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	
FEBIS	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Business Information Providers could be considered as comparable reputable data services providers as listed in Article 10 of the draft RTS, provided they meet the following criteria: Article 10 - Reasonable measures for verification of the beneficial owner: This article mentions that obliged entities may collect information from third-party sources, including reputable credit agencies and/or comparable reputable data services providers, to verify the identity of beneficial owners. Business information providers may fall under this category. • Reputation and Credibility: The provider must have a strong reputation and be recognized as a credible source of information. • Reliability and Independence: The data provided by the business information provider must be reliable and sourced independently, ensuring accuracy and authenticity. • Up-to-Date Information: The information provided must be current and regularly updated to reflect any changes in the customer's or beneficial owner's details. • Verification Standards: The provider should have robust processes in place to verify the information they collect, ensuring it is consistent with other reliable sources. Verification of Beneficial Owners: If a business information provider meets these criteria, obliged entities can use their services to collect and verify information about beneficial owners or other relevant parties as part of their enhanced due diligence measures. Regarding the "reasonable measures" for verification under Article 10, Business Information Providers (BIPs) serve as the "reputable data services providers"

Name of the respondent	Question	Answer
		necessary for independent corroboration, though their application differs between the initial identification and ongoing monitoring stages. For the initial UBO check, obliged entities are primarily expected to obtain and store an official register extract and are further required to provide direct feedback to the registry regarding any identified gaps or discrepancies. However, the utility of BIPs data becomes even more critical during periodic reviews, where the "door is wider open" for relying on independent third-party sources to ensure information remains current, especially when official data is outdated or restricted to non-reusable PDF formats. Furthermore, regarding Article 10(b)(iv), FEBIS emphasizes that BIPs are unable to provide private, confidential documents such as shareholders' or partnership agreements, which are not filed with official registers; therefore, a clear distinction must be maintained between data obtainable via BIPs and information that must be collected exclusively from the customer. For this reason, FEBIS proposes that Article 10 explicitly recognizes a three-category data framework that distinguishes between official registry data, reputable third-party verification, and information obtainable exclusively from the customer. The AMLR Compliance Deadlock: A practical deadlock exists regarding the mandatory collection of ID document numbers for beneficial owners and senior managers. These individuals are often not the contractual counterparty and resist providing

Name of the respondent	Question	Answer
		sensitive personal data, as these numbers are routinely unavailable in public registers or through common data providers, they cannot be independently verified, leading to "CDD cannot be completed" situations that trigger severe consequences for the relationship under Article 21 AMLR.
FEBIS	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	FEBIS members are Business Information Providers (BIPs) supplying verified business information (incl. lawful UBO-related data) to support AML/KYC/KYB compliance, credit assessment and fraud prevention. In the draft RTS, BIPs are treated as third-party/reliable independent sources and may have legitimate interest to access the UBO Register (Art. 12, 6th AMLD) to support obliged entities' CDD. • Key points: CDD data on corporates is often unavailable because EU/national implementations of company law (Dir. 2017/1132 as amended), GDPR and open-data rules are misaligned; official data is frequently unstructured (PDF/scans), restricted or outdated. Concrete examples of routinely unavailable information Examples reported by members across Member States (incl. France): • ID document numbers (UBOs/SMOs): routinely not in public registers and often refused by individuals who are not the contracting party; they cannot be independently verified, creating "CDD cannot be completed" deadlocks with serious consequences (Art. 21 AMLR). • France—restricted personal data: since 2023 the French National Enterprises Register provides only partial birth dates (MM/YYYY) in structured formats; legal changes allow non-disclosure for sole entrepreneurs, and a 2025 decree enables

Name of the respondent	Question	Answer
		legal representatives to request non-disclosure of private addresses in official certificates/articles of association. • Source of funds: not contained in standard corporate filings/balance sheets accessible via BIPs. • Private/confidential documents (e.g., shareholders'/partnership agreements, nominee arrangements): often not filed with registers and cannot be sourced by BIPs; transaction monitoring also requires bank data that BIPs do not hold. • SMO and listed entity gaps: SMOs beyond statutory legal representatives are generally not in registers; the register/beneficial-owner logic is not always meaningful for listed companies/public bodies. FEBIS recommends AMLA map, across Member States, which company/ownership data is available and reusable in structured formats versus locked in unstructured PDFs/scans, to avoid CDD verification failures driven by format and access barriers. Proposed Amendment: • In Article 8, allow obliged entities to rely on BIPs to provide alternative sources of information, such as data from reputable credit agencies, utility bills, or other independent sources, when official registers are unavailable or incomplete. Rationale: This enables OEs to meet CDD duties when official sources are limited, while leveraging BIPs' ability to access and corroborate alternative reliable data. Suggestions and questions to AMLA (BIPs) 1) Considering data required on natural persons, it is not clear if we must consider consumers or sole entrepreneurs, the latter to be considered as professionals, or both. If it includes sole entrepreneurs, we do encourage AMLA to be precise.

Name of the respondent	Question	Answer
		2) We suggest AMLA provide more explanations on what is expected for "the names of persons holding shares or a directorship position in nominee form, including reference to their status as nominee shareholders or directors" under article 22 (1) (point b) (iv). 3) We suggest AMLA provide more details on which "identification numbers of the individual legal entities" are required under article 62 (1)(d)? Is it the national business identifier, the EUID, the LEI? All of them? 4) We encourage AMLA to be much more precise regarding SMOs ie "natural persons holding the positions of senior managing officials." Who are they? Legal representatives of the legal entity as provided by the certificate of registration and articles of association, members of the Board (ex: HR director, CFO, Marketing director)? Information on SMOs other than legal representatives is generally not available from official business/enterprise registers; while some may be found via websites, annual reports or press sources, collecting and verifying it to BO-level standards will be difficult. 5) Could AMLA precise what kind of documents be considered when reading "documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by persons that are authorized for document certification purposes." (art 10 (b) iv) of the draft RTS. Does AMLA mean shareholders / partnership agreement for example? If yes, please note that they may be confidential and not to be filed and disclosed by the official Business Register. In other words, BIPs will not be able to provide such a document.

Name of the respondent	Question	Answer
FEBIS	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The performance of AML CDD when talking about information / data required on businesses / corporates is significantly hindered by the inefficient interaction between three key EU legislations and their national implementations: • The Consolidated Directive 2017-1132 relating to company law, recently modified by Directive (EU) 2025/25. • The GDPR, which does not differentiate between the private and professional capacity of a data subject. • The Open Data Directive (EU) 2019/1024, to be integrated into the future Data Act according to the "Digital Omnibus" proposal. This lack of alignment generates significant difficulties in accessing and providing required AML CDD data. 2. Business Information Providers could be considered as comparable reputable data services providers as listed in Article 10 of the draft RTS, provided they meet the following criteria: Article 10 - Reasonable measures for verification of the beneficial owner: This article mentions that obliged entities may collect information from third-party sources, including reputable credit agencies and/or comparable reputable data services providers, to verify the identity of beneficial owners. Business information providers may fall under this category. • Reputation and Credibility: The provider must have a strong reputation and be recognized as a credible source of information. • Reliability and Independence: The data provided by the business information provider must be reliable and sourced independently, ensuring accuracy and authenticity. • Up-to-Date Information: The information provided must be current and regularly updated to reflect any changes in the

For this reason, FEBIS proposes that Article 10

Name of the respondent	Question	Answer
		explicitly recognizes a three-category data framework that distinguishes between official registry data, reputable third-party verification, and information obtainable exclusively from the customer. Under Article 21 of the draft RTS, business information providers (BIPs) can play a role in the identification and verification of beneficial owners or senior managing officials in low-risk situations by providing reliable and independent data from the following sources: • Central Registers or Business/Company Registers: BIPs often aggregate and provide access to official central registers or business/company registers, which contain information about beneficial owners and senior managing officials. Obliged entities can use these services to identify and verify the relevant individuals. • Customer-Provided Information: BIPs can assist in verifying the accuracy of information provided by customers by cross-referencing it with their own databases or other reliable sources. • Publicly Available Information: BIPs can provide access to publicly available information from reliable independent open sources, such as corporate filings, financial statements, or other public records, to verify the identity of beneficial owners or senior managing officials. By leveraging the services of BIPs, obliged entities can streamline the process of identifying and verifying beneficial owners or senior managing officials in low-risk situations, ensuring compliance with the requirements of Article 21.

Name of the respondent	Question	Answer
FEBIS	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
FEBIS	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10
FEBIS	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	• The AMLR Compliance Deadlock: A practical deadlock exists regarding the mandatory collection of ID document numbers for beneficial owners and senior managers. These individuals are often not the contractual counterparty and resist providing sensitive personal data, as these numbers are routinely unavailable in public registers or through common data providers, they cannot be independently verified, leading to "CDD cannot be completed" situations that trigger severe consequences for the relationship under Article 21 AMLR. • Practical Barriers to CDD in France: The French Data Protection Authority has reported a significant surge in complaints over the last two years regarding the public availability of personal data within corporate articles of association disclosed for legal publicity. This trend is highlighted by ongoing ECJ jurisprudence, such as Case C-0798-24, which stresses the escalating tension between the principles of transparency and individual privacy rights. These legal shifts have resulted in immediate, concrete data gaps for obliged entities: since 2023, the French National Enterprises Register provides only partial birth dates (MM/YYYY) in structured formats. Furthermore, regulatory changes now allow sole entrepreneurs to mandate the non-disclosure of their personal data, and a 2025 French decree extends this right to legal representatives, who may now request the non-disclosure of their private addresses in official registration certificates and articles of association.

Name of the respondent	Question	Answer
		• Source of Funds: Information regarding the "source of funds" is routinely unavailable through BIPs because this data is not contained within the corporate balance sheets or standard financial filings BIPs manage. • Private Documents and Transaction Monitoring: Confidential documents such as shareholders' agreements, partnership agreements, or nominee arrangements are often not filed with official business registers. Furthermore, BIPs do not monitor business transactions, as this requires access to banking transaction data, which BIPs traditionally do not possess. • SMO and Listed Entity Gaps: Information on Senior Managing Officials (SMOs) other than statutory legal representatives is generally not in official registers. Additionally, the "register logic" fails for listed companies and public bodies where there may be no meaningful beneficial owner concept or register entry to reconcile against. To resolve the practical barriers to data accessibility of key data for CDD verification, FEBIS recommends that AMLA undertakes a comprehensive mapping exercise across all EU Member States to verify which company and ownership information is fully available and reusable in a structured format, as opposed to data that is only available via PDF documents subject to mandatory public disclosure under company law. This assessment is vital because official data is often locked in unstructured filings or scanned documents, making it difficult for automated systems to retrieve and verify CDD data effectively.
FEBIS	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	21

Name of the respondent	Question	Answer
FEBIS	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Under Article 21 of the draft RTS, business information providers (BIPs) can play a role in the identification and verification of beneficial owners or senior managing officials in low-risk situations by providing reliable and independent data from the following sources: • Central Registers or Business/Company Registers: BIPs often aggregate and provide access to official central registers or business/company registers, which contain information about beneficial owners and senior managing officials. Obliged entities can use these services to identify and verify the relevant individuals. • Customer-Provided Information: BIPs can assist in verifying the accuracy of information provided by customers by cross-referencing it with their own databases or other reliable sources. • Publicly Available Information: BIPs can provide access to publicly available information from reliable independent open sources, such as corporate filings, financial statements, or other public records, to verify the identity of beneficial owners or senior managing officials. By leveraging the services of BIPs, obliged entities can streamline the process of identifying and verifying beneficial owners or senior managing officials in low-risk situations, ensuring compliance with the requirements of Article 21. BIPs may encounter situations where certain information required for CDD is unavailable, particularly for entities operating in jurisdictions with limited public access to registers or where data is outdated or incomplete. For example, in some jurisdictions, beneficial ownership information is not publicly accessible or is not updated regularly, making it difficult for BIPs to provide accurate data.

Name of the respondent	Question	Answer
		• SMO and Listed Entity Gaps: Information on Senior Managing Officials (SMOs) other than statutory legal representatives is generally not in official registers. Additionally, the "register logic" fails for listed companies and public bodies where there may be no meaningful beneficial owner concept or register entry to reconcile against. To resolve the practical barriers to data accessibility of key data for CDD verification, FEBIS recommends that AMLA undertakes a comprehensive mapping exercise across all EU Member States to verify which company and ownership information is fully available and reusable in a structured format, as opposed to data that is only available via PDF documents subject to mandatory public disclosure under company law. This assessment is vital because official data is often locked in unstructured filings or scanned documents, making it difficult for automated systems to retrieve and verify CDD data effectively. We also encourage AMLA to be much more precise regarding SMOs ie "natural persons holding the positions of senior managing officials." Who are they? Legal representatives of the legal entity as provided by the certificate of registration and articles of association, members of the Board (ex: HR director, CFO, Marketing director)? Please note that information on "natural persons holding the positions of senior managing officials" other than legal representatives are not available from official Business Registers and other official enterprises registers. Some information can be provided from websites, annual public reports, articles from newspapers etc., but it seems to us that it will be quite difficult to collect, verify and provide the same information as the one that would be collected for beneficial

Name of the respondent	Question	Answer
		owners.
FEBIS	How would you rate the proposals set out in the draft RTS overall?	Neutral
Federal Ministry of Justice	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Point a) of the proposed Art. 22 regarding sectoral simplified measures with the respect to pooled accounts contradicts the day-to-day professional practice of lawyers, who regularly handle a wide range of transactions arising from their daily business acitivities through pooled accounts. Many of their business acivities - like for example debt collection or transactions based on enforcement proceedings or lawsuits arising from traffic accidents, personal injuries or divorce - do not fall within the scope of the AMLR. According to Art. 3 para. 3 point b) AMLR regarding lawyers (and notaries) only the financial and real estate transactions listed there are included. In addition, natural persons who transfer funds to a lawyer´s pooled account or to whom funds are transferred by a lawyer often even do not have a client relationship with the account holder such as for example opposing parties. In that respect also conflicts with confidiality obligations of a lawyer (or notary) could arise. It should also be taken into account that according to Art. 19 para. 1 point b) AMLR customer due diligence measures of obliged entities do not apply to occasional transactions of a value up to EUR 10 000 at all. According to the proposed Art. 22 point a) a credit institution that opens an account in which the account holder administer the funds of its clients fulfils the requirements stipulated in Art.

Name of the respondent	Question	Answer
		20 para. 1 point h AMLR if it is satisfied that the account holder will provide the information and documents required by this provision in relation to clients for whom it administers their funds, immediately after such request has been made by the credit institution. Apart from the fact that gathering the information and documents persuant to Art. 20 para. 1 point h AMLR to identify and verify every natural person on behalf of or for the benefit of whom a transaction is conducted by a lawyer (or notary) via pooled accounts would be practically unmanagable for lawyers (and notaries), such a broad obligation for pooled account holders would also be in significant conflict with the scope of the AMLR. Because of the relevance of pooled accounts in the daily business not just for lawyers, but also for schools (for the pupose of collecting small amounts for expenses) or property managers who manage operating costs and other third-party funds, a full transfer of the identification obligations stipulated in Art. 20 para. 1 point h AMLR from credit institutions to pooled account holders has to be well-balanced and in line with daily business reality. Also the scope of the AMLR as described has to be observed in this context. Therefore it should be clarified that in situations where the account holder (lawyer) is not an obliged entity or a transaction conducted via a lawyer´s pooled account does not fall within the scope of the AMLR it is always up to the credit institution to conduct the required identification process. A specific recital would be helpful for this purpose.

Name of the respondent	Question	Answer
		On the other hand, in situations where the account holder (lawyer) is an obliged entity and which fall within the scope of the AMLR the application of simplified measures regarding pooled accounts for credit institutions should be based on the AML risk level of the relevant transaction and not in a specific threshold.If a specific threshold is deemed necessary in this context too, in any case it should correspond to the threshold set out in Art. 19 para. 1 point b) AMLR (EUR 10 000).
Federal Ministry of Justice	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In general, the RTS should reflect the characteristics of the non-financial sector and the structure of the oblieged entities within that sector more appropriately. In Austria for example notaries always and lawyers regularly operate as sole practioners or - in the case of lawyers - in small law firms. Therefore, when imposing due diligence measures on them, the personal, financial, technical and practical resources available to them has to be taken into account appropriately. Taking this into account, we propose to clarify in Art. 7 para. 1 (remote verification) that obliged entities shall use electronic identification means "only to the extent that they are available". Regarding Art. 18 (Identification of the purpose and intended nature of a business relationship or occassional transaction) it should be clarified that the information set out in this provision is to be obtained not only when necessary, but when

		"necessary and where appropriate".
Federal Ministry of Justice	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	According to Art. 5 obliged entities shall obtain information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. As national ID documents only show one nationality in fact, it is not possible to know if a client has other nationalities too. Therefore it should be clarified that obliged entities shall obtain the information of other nationalities of a natural person only "to the extent that it is possible based on the available information and documents". According to Art. 6 para. 3 obliged entities shall take reasonable "steps" to ensure that all documents obtained for the verification of identity of a natural person are authentic und have not been forged or tampered with. As "reasonable steps" seems too vague, we propose to replace this with "reasonable measures". In addition, examples should be used to illustrate obliged entities what reasonable measures might be in this context.
Federal Ministry of Justice	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	We refer to our general remarks on question 2: In general, the RTS should reflect the characteristics of the non-financial sector and the structure of the oblieged entities within that sector more appropriately. In Austria for example notaries always and lawyers regularly operate as sole practioners or - in case of lawyers - in small law firms. Therefore, when imposing

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	due diligence meausres on them, the personal, financial, technical and practical resources available to them have to be taken into account appropriately.
Federal Ministry of Justice	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-
Federal Ministry of Justice	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Federal Ministry of Justice	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Federal Ministry of Justice	Do you have any comments on the Annex in the draft RTS?	No
Federal Ministry of Justice	How would you rate the proposals set out in the draft RTS overall?	Neutral
Fédération Bancaire Française (French Banking Federation)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Issues related to customer identity verification, whether conducted face to face or remotely, raise specific practical challenges across the various activities of our member institutions. In light of these challenges, we consider that the draft RTS should evolve as follows: Article (Art.) 6 – Face to face electronic identification • Preserve financial inclusion: Art.6(2)(d) should be removed, as requiring substitute documents issued by public authorities including a photograph would exclude certain categories of customers, notably minors and adults under guardianship or

Name of the respondent	Question	Answer
		with disabilities. Allowing alternative approaches is essential to ensure financial inclusion. • Apply the “once identified, always identified” principle:Once a customer has been properly identified in line with applicable standards, re verification should not be required solely due to the expiration of an identity document. Such a requirement would add operational burden without enhancing AML/CFT safeguards and would disproportionately affect vulnerable customers. • Make the use of Electronic Identification Means (EIM) optional, not mandatory: Art.6(6) should not create an obligation to accept EIM in face to face contexts. Mandatory acceptance would go beyond eIDAS Regulation (EU) 2024/1183, which only requires acceptance of the EUDI Wallet in online contexts and by December 2027. The RTS should clearly reflect that obliged entities may allow such means. Hence the following wording proposal to be added in §6 of Art.6: "Obliged entities may use electronic identification means as described in Art.7(1) to verify the identity of the natural person in a face-to-face context where they are available to the customer, any person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being carried out.") Furthermore, it should be specified that the means of identification established under eIDAS will be used from the application date set by the eIDAS 2 Regulation, or from the date of application of this RTS, should this date be later than the one set by the aforementioned Regulation. • Ensure technology neutrality beyond EIM: In Art.6(6), the reference to “electronic” identification should be removed to avoid limiting identification methods to EIM only. Other

Name of the respondent	Question	Answer
		identification means provided for under Art.7(1), such as qualified trust services, should remain available. Article 7 – Remote identification • Do not restrict alternative identification solutions to specific customer groups:A progressive implementation is necessary, allowing continued reliance on existing national solutions until AMLR compliant solutions are fully operational. • Allow reliance on PVIDs where needed:Credit institutions should be permitted to rely on PVIDs when customers do not hold AMLR compliant identification solutions, particularly for elderly customers or others with limited access to digital identity tools. • Maintain remote verification options for legal entities:The deletion of Art.7(4) would result in electronic identification means or qualified trust services becoming the sole option for remote verification of legal entities, despite the limited maturity of “legal entity wallets” under eIDAS. The RTS should therefore either explicitly clarify that Art.7 applies only to natural persons, or allow remote verification of legal entities using independent and reliable sources (e.g. statutory documents obtained from public registers or secured with electronic signatures). In this context, retention of former Art.7(4) is considered essential. • Remove the justification requirement linked to eIDAS solutions:Art.7(4), which requires obliged entities to justify why eIDAS based solutions were not used, is premature given the current level of awareness and adoption. At this stage, a customer’s refusal should be considered a valid justification. The paragraph should therefore be deleted.

Name of the respondent	Question	Answer
		In addition, we consider that several provisions applicable to customers are equally relevant for ultimate beneficial owners (UBOs) and should be clarified accordingly: Article 2: Paragraph 1 would also be relevant for the collection of names of UBOs, where they are verified by mean of an identity document. Therefore, it shall also include an express reference to Article 22 (2) and 62(1)(a) AMLR (identification of UBOs). As UBOs can also be verified with other reliable sources, this paragraph should mention that all names and surnames collected can be those featuring on the identity document, passport or equivalent, or contained in other reliable sources. Articles 3 and 4:These articles, relating respectively to address information and place of birth, should aslo include an explicit reference to Articles 22(2) and 62(1)(a) of the AMLR, relating to the identification of ultimate beneficial owners (UBOs), as these provisions are also relevant to the collection of UBO's addresses.
Fédération Bancaire Française (French Banking Federation)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We partially agree that the draft RTS aims to support a risk based approach to AML/CFT and welcome several improvements.In particular, we welcome the retention of article (Art.) 1, which usefully recalls this core principle of the AML/CFT framework and helps ensure consistency with Level1 requirements.However, several provisions as currently drafted risk undermining its effective and proportionate application, calling for further clarification and targeted amendments. Article 7 may be interpreted as requiring systematic verification of all customer data, regardless of ML risk, which would be

Name of the respondent	Question	Answer
		inconsistent with the risk based approach under the AMLR. The RTS should therefore explicitly clarify that verification requirements must be risk based and proportionate; and that not all elements of customer data must be verified in every situation, particularly in non face to face or low risk contexts. Articles 10–13 and 21 The draft RTS tends to create a one size fits all approach to complex ownership and control structures, which risks undermining the effective application of a risk based approach. In particular: • Article 10(b):The systematic use of certified documents raises proportionality concerns due to significant operational and cost burdens. Certification should be limited to higher risk cases, as an enhanced measure within a risk based approach, rather than a general requirement. • Article 12(b):Considering ownership structures as complex solely because entities are registered outside the EU is overly broad. For internationally active institutions, non-EU registration is common and should not, in itself, indicate complexity. The article should instead refer to the European Commission lists under Articles 29 to 31 AMLR. • Excessive information requirements:The obligation set out in Art.11 §2 b) ii to collect detailed information on intermediary entities with which the obliged entity has no business relationship goes beyond Art.62(1)(d) AMLR and creates significant operational burdens, particularly for banks with international corporate clients. • Enhanced due diligence (EDD):The RTS should clearly state that identifying a structure as complex does not automatically trigger EDD, for there could be legal, economic or other

Name of the respondent	Question	Answer
		reasons compared with sructures abnormally complex. A complex structure of an entity may be indeed justified by the sector in which it operates or by its history/evolution. While obliged entities shall take risk-sensitive measures, the complexity of the structure does not automatically mean that the AML/CFT risk is high, requiring EDD which is only relevant if the complexity appears abnormal.Consequently, point 2 of Art.12 must be amended by replacing “where necessary” with “in case of AML/CFT risk or suspicion of the abnormal or unjustified nature of the complexity of the structure of the legal entity. • Article 21 – Simplified Due Diligence (SDD) for beneficial owners (BO):The draft RTS does not provide sufficiently clear guidance on how SDD should apply to the identification and verification of BO. Art.21 largely mirrors the measures under Art.10, which limits its added value in low risk situations. In this context, we propose removing paragraph 2 of Art.21 RTS. Article 13:Further clarification is required regarding both the scope and treatment of SMOs. SMOs are intended as a fallback mechanism where no beneficial owner can be identified and should not, in themselves, be treated as a source of ML/TF risk. Applying identification and verification requirements equivalent to those for beneficial owners would be disproportionate. Accordingly:1)identification should generally be limited to a core set of information (name, date of birth, country of business address);2)verification should not be systematic, particularly in non high risk scenarios;3)reliable and independent sources (e.g. company registers) should be sufficient for both identification and verification in standard cases, for both SMOs and BO.

Name of the respondent	Question	Answer
		The definition of SMOs set out in Art.63 AMLR should be understood as applying solely within the scope of that article, which concerns the obligations incumbent upon legal entities. It is then coherent that identification obligations imposed on obliged entities rely on a more restricted definition of SMOs. Greater clarity is nonetheless needed as to which individuals qualify as SMOs for these purposes. This clarification should reflect a hierarchical approach, whereby SMOs are identified as executive members of the management body in its executive function. Extending the concept to broader layers of operational management would be disproportionate and misaligned with ML/TF risk. Further requests relating to Articles 16,19 and 26 are set out below. Conclusion:Overall, further clarification within the RTS is essential to ensure consistent interpretation,avoid disproportionate requirements, and support the effective application of a risk-based approach accross the EU.
Fédération Bancaire Française (French Banking Federation)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The FBF highlights that, in a number of cases, the information required under the draft RTS is not available in practice across different customer types and jurisdictions, and that the current drafting does not provide workable alternatives. Insufficient flexibility in this respect risks creating unnecessary friction, delaying legitimate business relationships, and leading to inconsistent outcomes across Member States. Moreover, while the FBF welcomes the harmonization efforts within the EU, the AMLR and this draft RTS will have a significant operational impact for EU obliged entities' branches and subsidiaries established in EU-equivalent countries in terms of ML/FT

Name of the respondent	Question	Answer
		regulation due to the nature and volume of expected data compared with global standards. The FBF considers that the unavailability of a specific data point should not, in itself, prevent the establishment or continuation of a business relationship, provided that the overall ML/TF risk can be appropriately mitigated through alternative, risk based measures. Key points of concern include the following: • Nationalities (article 5) To provide greater assurance to obliged entities, we propose the following paragraph to be added: “Obliged entities should collect information to understand the nationality and the place of birth of customers who are natural persons. Since not all government-issued identity documents contain information on the holder’s nationality or their place of birth, obliged entities may need to obtain that information from other sources. Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient. In situations where the person is stateless, or has refugee or subsidiary protection status, this information should instead be obtained.” • Ownership and control structures (Articles 12–13) Article12. A clarification of the criterion in paragraph 1 (d) is needed to improve legal certainty and ensure a proportionate application, by making clear that only structures lacking any legitimate economic rationale or justification should be captured, rather than complex but economically justified ownership arrangements. We therefore propose the following rewording of point (d): “(d) the structure has no other objective than to obfuscate or diminish transparency of ownership.”

Name of the respondent	Question	Answer
		Article 13. It should be noted that, unlike beneficial owners, most senior managing officials (SMOs) are not listed in reliable and independent sources. The approach proposed in the response to Question 2—namely limiting identification requirements to a defined set of core SMOs—would help mitigate the resulting operational burden. • Sanctions screening The topics addressed by article 30 of the RTS were recently covered in detail by the European Banking Authority in its guidelines on internal policies, procedures and controls to ensure the implementation of Union and national restrictive measures under Regulation (EU) 2023/1113 (EBA/GL/2024/15); these guidelines were published in November 2024 and entered into force in December 2025. We have identified certain discrepancies between the provisions set out in the guidelines — which constitute a final document — and those in the draft RTS currently under consultation. In order to avoid confusion or inconsistencies between the two texts, we believe that the content of the RTS should be fully aligned with the guidelines. For example: • The guidelines (section 17. a. a.) state that PSPs and CASPs should screen at least, in the case of a natural person, the first name and surname; however, as per draft RTS (article 30 (a) i.), for natural persons, obliged entities shall screen all first names and surnames. Draft RTS should be modified. • The guidelines (section 16. c.) state that trigger events for screening should include significant changes in the customer due diligence data of an existing customer; however, as per draft RTS (article 30 (c) iii.), trigger events should include

Name of the respondent	Question	Answer
		significant changes occur in the customer due diligence data of an existing customer, or beneficial owner. Guidelines target only customers, whereas draft RTS also include beneficial owners, therefore we propose to modify the draft RTS to stick to what is provided by the guidelines, i.e. to not mention beneficial owners. Subsidiarily, if AMLA wants to keep the mention of beneficial owner in this article, it would be necessary to add the following provision at the end of article 30 (c) iii.: "Regarding the due diligence data of beneficial owner or entity, or person which controls or meet the ownership conditions under Article 20(1), point (d), of Regulation (EU) 2024/1624, only changes that are notified to the institution trigger a new screening."
Fédération Bancaire Française (French Banking Federation)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	EDD or Standard Due Diligence (e.g. ID check, PEP screening, periodic reviews) appear disproportionate for low risk products, (e.g. consumer credit, financial leasing, certain life insurance products, employee savings and short term/low value credit). Given their limited transaction types, capped amounts and defined purposes, these products justify significant CDD simplifications or exemptions, notably for KYC reviews and PEP screening, in line with the proportionality principle and the risk based approach. Key areas for simplification: • Low risk activities and products: For consumer credit, leasing/credit bail, life insurance-like, and short or medium term engagements with limited cash flows (e.g. repayments, insurance premiums), ongoing KYC reviews and systematic PEP screening should be limited to suspected ML cases . - ML risks of low value, short term or consumer credit products

Name of the respondent	Question	Answer
		and three installments without fees payments are limited, especially where funds flow through accounts already subject to KYC by another Obliged Entity (OE). Periodic KYC reviews are ill suited to fixed term, low value contracts. Ongoing PEP screening generates a high volume of alerts with limited relevance, reliance on identification and verification already performed by banks (e.g. by Verification of Payee) should be allowed. RTS should allow to maintain affected or short term credit and certain leasing activities (e.g. with option to purchase as ownership is not transfered) existing SDD without periodic reviews or additional beneficial ownership requirement. - For life insurance-like product—such as borrower insurance, pension products, group insurance or employee savings related life insurance—further simplifications are justified, given their low premiums, predefined benefit conditions, absence of surrender value and as customer identification is already performed by the lender. Simplified identification measures, without systematic verification, should therefore apply. - Employee savings and retirement schemes are collective arrangements managed through employers, who identify eligible employees. During the collective phase, account providers have no direct relationship with individual employees, making systematic identity verification operationally unfeasible and potentially disruptive to payroll flows. Verification measures should therefore apply only when the relationship becomes direct. These schemes are recognised as low risk under the AMLR, given their strict regulation and predominant employer funding. Art. 59 AMLR provides a waiver on the treatment of beneficiaries as beneficial owners, which the RTS should clarify

Name of the respondent	Question	Answer
		as applicable regardless of the legal structure of such schemes, provided no higher ML risk is identified, to ensure legal certainty across Member States. - For Investment research and financial analysis, while a business relationship exists, the only financial information generally available for a fund is its Net Asset Value, which is largely driven by market fluctuations and provides limited insight into the origin of the client's funds. The focus could instead be on the assets at the management company level at the time of identification. Investment research activities merely involve the periodic provision of market information, comparable to a newsletter, in exchange for fees. Despite constituting a business relationship, it presents a very low ML risk, making the application of full due diligence measures disproportionate. Simplified measures should therefore be allowed. • Clients: - For companies listed on regulated markets or public entities, OEs should be exempt from the obligation to identify and verify the identity of UBOs. - Simplifications should apply to minors' or pensioners' accounts with a single income source. - In the absence of ML suspicion and below defined thresholds, OEs should be exempt from applying CDD measures to occasional transactions. Any doubt as to the origin of funds should trigger appropriate CDD measures. Key SDD requiring further simplification or alternatives: • For low risk products linked to a main contract or repaid via an account held with a credit institution, ID checks may rely on CDD already performed by the deposit holding institution. An

Name of the respondent	Question	Answer
		initial payment from the banking or financial institution could be relied upon to verify the identity of the debtor. • Periodic KYC reviews are unnecessary for fixed term (often less than 5 years), low value products with stable and limited flows. Continuous PEP screening is disproportionate for one off, low risk products, as the identification of a PEP does not increase the product's inherent risk. For low risk products, SDD should prevail over EDD. The RTS should state that OEs may apply other appropriate SDD measures, based on the lower ML risks associated with their products and services, and should not provide an exhaustive list, in order to preserve sufficient flexibility at entity level.
Fédération Bancaire Française (French Banking Federation)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Yes. In addition to the comments provided above, we have identified several additional points that could not be addressed earlier in this response. These comments relate in particular to Recitals (10), (12), (14) and (18), as well as Articles 10, 16, 17, 19, 21, 22, 23 and 33 of the draft RTS, and are detailed in the dedicated sections.
Fédération Bancaire Française (French Banking Federation)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Fédération Bancaire Française (French	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Regarding Beneficial Owners of listed companies, the RTS should clarify that financial institutions are not required to identify and verify the identity of UBOs when the client entity is listed on a regulated market in the EU or EEA, or when it is a

Name of the respondent	Question	Answer
Banking Federation)		public authority or body meeting certain transparency criteria. Indeed, obliged entities should not be required to identify the beneficial owners of clients that are listed companies and subject to disclosure obligations (under stock exchange rules, law, or other binding means) that ensure sufficient transparency regarding beneficial ownership. Moreover, obliged entities cannot consult the register to identify and verify the identity of the beneficial owner since these companies are not subject to the obligation to identify their beneficial owner (AMLR, Article 65). In addition, due to the transparency requirements imposed on them, such listed companies present a lower risk of money laundering (AMLR, Annex II). This point should be clarified in the RTS. Financial Institutions and regulated market infrastructures : - To avoid huge operational burden, obliged Entities should be exempted from verifying the identity of financial institutions and their beneficial owners in light of the supervision, transparency and governance rules, to which they are subject. - Public bodies are created under statutory provisions. This level of transparency would allow us to waive the verification of the customer's identity and that of the beneficial owner."

Fédération Bancaire Française (French	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The scope of "person purporting to act on behalf of the customer" must be clearly defined to exclude individuals whose responsibilities are limited to back-office activities. In line with

Name of the respondent	Question	Answer
Banking Federation)		a risk-based approach, only those whose mandate grants the authority to legally bind the company should be included in the definition of persons purporting to act. Individuals whose mandate is restricted to operational execution should be expressly excluded from this definition. The person purporting to act on behalf of the client is not the client and should therefore not be subject to the same identification and identity verification requirements. However, we welcome the requirement relating to the verification of the existence and scope of the authority granted to that person.
Fédération Bancaire Française (French Banking Federation)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	17
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 17 currently imposes full identification and verification obligations on CIUs with respect to final investors via AMLR Article 20(1)(h). In current Asset Management industry practice, CIUs are distributed through intermediaries that are themselves obliged entities and already perform CDD on underlying investors. This is supported by the Interpretative Note on the risk assessment methodologies pursuant to draft RTS under Article 12(7) AMLAR and draft RTS under Article 40(2) AMLD which provides a definition of the business relationship for asset management companies: "Customer should refer to the person mentioned in the shares/ units register of Collective Investments Undertaking (CIU) for which the Asset Management Company is designated AIFM or UCITS Management Company".

Name of the respondent	Question	Answer
		In this regard, since distribution of CIU will involve a business relationship between a fund manager and a financial institution established for securities transactions (i.e. transactions involving units or shares of CIU), relationships between funds manager and financial intermediaries would fit in the definition of correspondent relationships within the meaning of Article 2 (22)(b) of the AMLR. Under such qualification, CIU should not be required to carry out systematic due diligences on final investors. KYC information about final investors is held by the closest financial intermediary (being in a business relationship with them) and then may not be readily accessible, notably in multi-layered structures, making the requirement to obtain such information “without undue delay” impossible to meet in practice. In addition, existing partnership arrangements generally do not provide for the transmission of investor data by distributors to the CIU on a systematic basis (requests should by justified by a specific compliance issue), notably for confidentiality, data protection and competition reasons. It is worth mentioning that many distribution models are based on “open architectures” where intermediaries belonging to one financial group distribute funds of various CIUs pertaining to the same group and other financial groups. There is a risk that Art.17 undermines such models since it may be used as a ground for external CIUs / competitors to request extensive information on clients of the intermediary institution. Providing CIUs with access to final investor data would not only create risks of client poaching but also a disintermediation at the expense of little CIUs which largely rely on said models in order to distribute their products.

Name of the respondent	Question	Answer
		Requiring CIUs to collect data on potentially thousands of investors behind omnibus accounts duplicates these efforts, creates an overwhelming administrative burden, and increases data protection risks. Implementing an IT framework for transmission of data between financial intermediaries would require massive investment and cost, with detrimental effects on EU capital markets, investor participation, and the competitiveness of EU asset managers. Consequently, Art. 17 appears overly disproportionate and would cause substantial compliance costs for a limited added value from a risk management perspective (i.e., since CDDs and mandatory screenings are already performed by the intermediary, CIUs do not have a view on global activities of final investors so its capacity to detect unusual behavior and transactions of final investors would be very limited). By contrast, Article 17 would introduce additional operational complexity and increase compliance costs without commensurate risk mitigation benefits. Instead, Article 17 should specify that CIUs may rely on the distributor where the CIU is satisfied that the distributor applies robust and risk-sensitive CDD measures. This approach aligns with Recital 51 AMLR, which emphasizes that the concept of “person on whose behalf or for the benefit of whom a transaction or activity is conducted” should not extend to capital market relationships. So any reference to Article 20(1)(h) AMLR in Article 17 (and Recital 14) should be removed. In light of CIU distribution models, Article 17 should be amended so as to retain only criterion (d). The first three criteria appear as unnecessary and should be removed. The criterion (c) is considered as disproportionate because the risk

Name of the respondent	Question	Answer
		rating is often unrelated to the robustness of the intermediary's AML framework. It follows that the revised wording of Article 17 would therefore read as follows: "When a collective investment undertaking (CIU) distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, the CIU shall rely on any credit or financial institution if the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners."
Fédération Bancaire Française (French Banking Federation)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	19
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Regarding PEPs, the responsibility for identifying PEPs should not rest solely on the bank. PEP and RCA clients should proactively disclose their status to their bank. In this respect, greater involvement from the entities, bodies and authorities employing PEPs would be essential, in order to ensure that PEPs and their close associates are informed as early as possible of the obligations arising from their functions, thereby facilitating the timely and effective collection of relevant information by banks. In any case, the obligation incumbent upon banks to identify PPEs can only constitute an obligation of means and never an obligation of result. It is important to emphasize that, at the national level,

Name of the respondent	Question	Answer
		authorities remain vigilant to avoid stigmatizing PEPs and expect application of due-diligence measures on a risk-sensitive approach. The RTS should enable institutions, on a case-by-case basis, once the functions giving rise to PEP status have ended, to determine, using a risk-based approach, the appropriate duration for maintaining PEP status. In any event, it should not be considered a breach of an obliged entity to have lifted PEP status three years after the cessation of the functions that originally conferred on such status. In addition, greater clarity and operational consistency would be achieved through the establishment of a European level nominative list of PEPs with limited and secured access, which would support obliged entities in meeting their identification obligations while ensuring a harmonised application across Member States.
Fédération Bancaire Française (French Banking Federation)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	21
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The current draft RTS does not provide clear guidelines regarding the application of simplified due-diligence (SDD) related to the identification and verification of the beneficial owners. The draft RTS article 21 requires the application of different measures for the identification and verification of the beneficial owners identity, which doesn’t strongly differ from the draft RTS article 10 applicable to standard scenarios. In consideration of low-risk situation, it will be relevant to limit the due diligence to identification and consequently, to delete

Name of the respondent	Question	Answer
		the verification due diligence. We propose amending the article by removing paragraph 2. It follows that the revised wording of Article 21 would therefore read as follows: “To identify and verify the beneficial owner or senior managing officials in situations of low risk, obliged entities shall consult one of the following sources of information: (a) the information contained in the central register, business or company register; (b) any information provided by the customer, including information that obliged entities may already hold; (c) any publicly available information contained in a reliable independent open source.”
Fédération Bancaire Française (French Banking Federation)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	22
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	The AMLR provides that obliged entities will be required to conduct diligences on “natural persons on behalf of or for the benefit of whom an activity is being conducted”, i.e. identification, verification of identity and performance of PEP screening (as provided in Art. 20 (1) (g) and (h), Art. 22 (1) and (7) AMLR). We note that the current drafting of article 22 in CDD RTS may lead to unintended consequences in this respect. Whilst this article introduces specific and simplified CDDs regimes that constitute valuable improvements for the financial sector, they strictly limit situations where obliged entities may decide not to extend CDD measures to final investors in distribution schemes

Name of the respondent	Question	Answer
		and end-customers for pooled accounts. In addition, given the express reference to article 20(1)(h) AMLR included in both articles, we understand that these third parties should be qualified as "natural persons on behalf of or for the benefit of whom an activity is being conducted". Therefore, is a risk that obliged institutions would be required to apply corresponding CDDs without distinction (i) to any financial investors and end-customer in situations referred to where abovementioned conditions of Article22 are not fulfilled, and (ii) more generally in activities and transactions involving triangular/layered relationships schemes. This would entail the mandatory performance of CDDs on a very significant number of persons, with consequential huge operational burden for obliged entities, whereas the risk may be otherwise properly managed by client monitoring policies. Therefore, not only it raises operational and conformity-risk management issues, but it also directly contradicts the risk-based approach (i.e., CDD mandatory requirements shall be relevant and proportionate to the actual risk of business relationships and not exceed their operational capabilities). It follows that the CDD RTS should clearly specify that: - obliged entities may take risk-sensitive measures to understand and obtain relevant information on other third parties where it is relevant to mitigate the actual risk; and - in article 22, cases other than those which fulfill conditions for benefiting from the specific and simplified regime set out therein should not systematically give rise to CDD measures on all final investors and end-clients. Accordingly, reference to article 20(1)(h) AMLR should be removed. In addition, the Interpretative Note on the risk assessment methodologies pursuant to draft RTS under Article 12(7)

Name of the respondent	Question	Answer
		AMLAR and draft RTS under Article 40(2) AMLD provides a definition of the business relationship for asset management companies :" Customer should refer to the person mentioned in the shares/ units register of Collective Investments Undertaking (CIU) for which the Asset Management Company is designated AIFM or UCITS Management Company". This definition appears to be inconsistent with the AML Regulation (art 20 h) and the draft RTS (art 17) in which the investor is qualified as the person for whom an activity is carried out and not as the client.
Fédération Bancaire Française (French Banking Federation)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	23
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	As a complement to our answer to question 4, we could also refer to the following two key SDD cases that would benefit from further simplification or the introduction of alternative approaches: • Third-party guarantors: Although guarantors commit to guaranteeing a customer's debt and are known to the lending institution, they cannot be treated as customers, as no service related business relationship exists at the time the guarantee is signed. Their involvement is contingent on a potential default, which requires a clear distinction between the signing of the guarantee and its enforcement. • By now-pay later (BNPL): To ensure continuous payment flows, ID checks for interest-free installment payments ("Buy Now Pay Later") should rely on the account direct debit or card

Name of the respondent	Question	Answer
		payments with strong authentication used by the debtor to reimburse the funds to the credit institution.
Fédération Bancaire Française (French Banking Federation)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	We are supportive of a progressive, risk based implementation of the RTS. In this respect, Article 33 appears to move in the right direction, which we welcome. However, the proposed drafting suggests that institutions would have only one year to re assess and re certify all high risk customers in accordance with the requirements set out in the RTS. Such a timeline may prove challenging to implement, particularly given the current lack of visibility on the publication of the final text, following review by the European Commission and the European co legislators. Indeed, banks are making their best efforts to be ready for the upcoming deadlines. However, the evolving and staggered timelines of the AML package do not allow institutions to ensure that fully AMLR-compliant systems will be in place by 10 July 2027. Indeed, once Level 2 or Level 3 texts are published, institutions must undertake a series of critical steps, including impact assessments, the design and validation of operational processes, IT system developments and upgrades, revisions to internal control frameworks, staff training (in particular for client-facing teams), and the deployment of changes across multiple business lines and entities. Based on the experience of the sector, and taking into account the number, scope and complexity of the forthcoming RTS and Guidelines, a minimum additional implementation period of 18 months following the publication of each set of Level 2 or Level

Name of the respondent	Question	Answer
		3 measures is necessary to ensure a full, safe and compliant implementation. Applying the RTS from the date of its publication, rather than from the general date of application of the AMLR, would therefore be more consistent with operational realities and with the objective of effective and harmonised implementation. From this perspective, the implementation deadline should take into account an 18-month to remediade high risk clients following the final publication of this RTS adopted pursuant to Article 28(1) of the AMLR. Furthermore Article 33 should be amended to ensure that the transitional regime operates in a clear and legally consistent manner. As presently drafted, the provision refers to customers who entered into a business relationship “before the publication date of this Regulation” creates a potential gap for customers onboarded between publication of the RTS and the application date of Regulation (EU) 2024/1624. In the absence of clarification, such customers would not be expressly covered by the transitional provision, which may give rise to legal uncertainty and may, in practice, result in obliged entities being required to apply new CDD requirements before the AMLR becomes applicable. We therefore propose that the reference to the “publication date” be replaced with a reference to the “application date of Regulation (EU) 2024/1624”, so as to ensure a coherent grandfathering mechanism covering all business relationships established prior to the application date, on a risk-sensitive basis and within the time limits set out in Article 26(2) of Regulation (EU) 2024/1624.

Name of the respondent	Question	Answer
Fédération Bancaire Française (French Banking Federation)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Fédération Bancaire Française (French Banking Federation)	Please specify which recital you refer to, and share your comments below.	Recitals (10), (12), (14) and (18) Recital (10) While Recital (10) usefully clarifies that difficulties arising from complex corporate structures do not, in themselves, amount to "doubts" as to the identity of the beneficial owner, the notion of "doubts" remains undefined. Greater clarity would be achieved by amending Recital (10) as follows: «A doubt may result from the unability to clearly identify or discard the UBO presence despite having exhausted all possible means of identification. The complexity of the ownership structure cannot be the sole basis of the doubt» In the absence of a clear definition or objective criteria, the concept of "doubts" may be interpreted inconsistently across obliged entities and supervisory authorities, potentially leading to legal uncertainty and divergent practices. Further clarification would therefore be welcome, for example by specifying the circumstances or indicators that may legitimately give rise to "doubts" regarding the status of the persons identified as beneficial owner. Recital (12) This recital should expressly clarify that the characterization of

Name of the respondent	Question	Answer
		a power of representation in legal entities and legal arrangements for the purpose of applying identification and verification requirement set out in this RTS should be strictly limited to : (i) situations involving statutory legal representation, namely functions which, under the applicable national law, confer upon a person the authority to represent and legally bind the legal entity ; and (ii) situations involving persons other than statutory legal representatives who are duly authorised to act on behalf of the legal entity (e.g. employees, agents or proxies), insofar as such persons act within the scope of their mandate and consitute the designated point of contact of the obliged entity in relation to the provision of products or services that are part of the business relationship or the occasional transaction with that legal entity. In any other situation of representation, including employees acting in the ordinary course of their functions (accounting, treasury, back office opérations...), obliged entities should be able to adjust identification and verification measures to the actual risk. Recital (14) The addition of the last two sentences of recital (14) is a welcome improvement. For the sake of further clarity, we would also suggest to adjust the first one as follow : "CIUs shall not obtain information on the identity of the underlying investor, provided that they are able to justify that proper risk mitigation measures are in place".

Name of the respondent	Question	Answer
		We also suggest to remove reference to Article 20(1), point (h), of Regulation (EU) 2025/1624 at the beginning of Recital (14) provided that the scope of the definition of “the natural person on whose or for the benefit of whom a transaction or activity is being conducted” excludes capital market relationships as per detailed in Recital (51) of Regulation (EU) 2025/1624. It follows that the revised wording of Recital (14) would therefore read as follows: “To ensure the effectiveness of customer due diligence measures and the proportionality of their application, it is appropriate to allow CIUs, to rely on the intermediate institution for the identification and verification of the final investors. CIUs shall not obtain information on the identity of the underlying investor, provided that they are able to justify that proper risk mitigation measures are in place.“ Recital (18) This RTS strictly limit situations where obliged entities offering pooled accounts may decide to rely on diligences carried out on end-customers by their customers that are obliged entities. This may cause unintended consequences for credit institutions in activities involving triangular/layered relationships schemes with other obliged entities other than payment services providers (such as consequential huge operational burden) whereas the risk may be otherwise properly managed by their customer's CDD policies and robust monitoring policies at their level. We would therefore suggest the addition of the following sentence at the end of Recital (18) : "in cases where the ML/TF risk of that service would not be assessed as low, credit

Name of the respondent	Question	Answer
		institutions should not need to obtain information on the identity of their customer's own clients in all cases, notably where said customers are obliged entities (other than payment institutions or electronic money institutions), provided that they are able to justify that such obliged entities apply and maintain robust and risk-sensitive CDD measures, and proper risk mitigation measures are in place." In any case, the obligations incumbent on credit institutions should be regarded as obligations of means rather than obligations of result, allowing them to rely on appropriate risk based assessments where ML/TF risks are adequately mitigated.
Fédération Bancaire Française (French Banking Federation)	Do you have any comments on the Annex in the draft RTS?	No
Fédération Bancaire Française (French Banking Federation)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Fédération Bancaire Française (French Banking Federation)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in	Disruptive impact

	additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In France, non-life insurance has so far been included within the scope of activities subject to AML/CFT regulations. However, a simplified regime allows for the application of measures proportionate to the level of risk associated with these contracts/activities. The French market is concerned about the potential implications of the AMLR and its implementing measures, including the draft RTS subject to this consultation, on the framework applicable to non-life insurance in France. It therefore appears appropriate to provide for an article or a recital clarifying that, where Member States choose to include activities beyond those identified within the scope of this Regulation, they may provide for derogating provisions for such activities. Otherwise, non-life insurance could be subject to enhanced requirements that would not be justified by the level of ML/TF risk.
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The proposals set out in the draft do not allow for the effective implementation of a risk-based approach. With regard to “customer risk”: the draft appears to properly take into account situations where the risk presented by the customer is particularly low, to the extent that it provides for exceptions to the application of certain due diligence obligations. Regulation (EU) 2024/1624 (Article 65) indeed provides that, where the customer benefits from enhanced transparency safeguards (e.g. public bodies of a Member State;

Name of the respondent	Question	Answer
		listed companies), obligations such as the identification of beneficial owners do not appear appropriate. The Regulation therefore provides for a full exemption from this obligation for obliged entities where customer risk is particularly low. Article 28 of Regulation (EU) 2024/1624 provides that the RTS subject to this consultation should include provisions allowing for the application of simplified due diligence measures for specific categories of products or services. However, the draft RTS contains no provisions addressing this situation. In practice, certain products are only minimally exposed to such risks. This is the case, for example, for life insurance contracts without a savings or investment component (pure risk products such as death cover, birth or marriage-related insurance), as well as for products with a savings component below certain thresholds. Proposed amendment to the text: Article – Certain products present a particularly low risk of money laundering and terrorist financing. 1. Life insurance or capitalisation contracts with an annual premium not exceeding EUR 1,000 or a single premium not exceeding EUR 2,500; 2. Life insurance contracts without a savings component (death insurance, marriage-related or birth-related insurance) or without a surrender value. Beyond the products listed above, obliged entities shall, as part of their risk classification, identify, where appropriate, guarantees and contracts which by their nature present a lower level of risk.

Name of the respondent	Question	Answer
		Given that the risk associated with these products is particularly low, we propose exemptions from certain obligations, in line with what is already provided for “customer risk ». It should be noted that such exemptions already exist under current French law for these types of products. These exemptions, or at least these simplifications, would concern the following obligations: • Identity verification requirement: proposal for exemption; • Requirement to identify politically exposed persons: proposal for simplification. Concrete drafting proposals are provided in response to Question 4 of the consultation.
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	• Identity verification of elderly persons: Derogations provided for minors should be extended to elderly persons. • Proposed amendments to the text: - §(7) Introductory wording: “This could be the case where the customer is or acts on behalf of a minor child or vulnerable persons (such as certain elderly individuals) who do not possess a passport or identity document. In view of the representation of the minor by a parent or legal guardian, who would themselves be subject to identification and verification, it would be appropriate to consider a birth certificate as a reliable source for the purposes of identifying and verifying the identity of the minor child.”

Name of the respondent	Question	Answer
		- Article 6(2): “In situations where a natural person cannot provide an identity document, passport or a document that meets the requirements set out in paragraph 1 for a legitimate reason—such as statelessness, refugee status, subsidiary protection status, or, more generally, a situation of vulnerability—another document shall be considered equivalent to an identity document or passport, provided that it meets all of the following requirements:” Such clarifications could also be provided through AMLA guidelines. • Nationalities: Obtaining information on all the nationalities of a customer may create operational difficulties that do not appear to be justified by the benefits derived from collecting such additional information. • Identification and verification of the identity of legal persons: We note that the draft RTS states in its introduction that the same approach should apply to identification and verification of identity, whether the customer is a natural or a legal person (“The same approach should apply to all customers, whether they are a natural person or a legal person”). However, with regard to identification and verification of identity, the RTS lays down specific provisions for natural persons without providing equivalent provisions for legal persons, in particular in the context of remote onboarding. • Identification and verification of the identity of beneficial owners:

Name of the respondent	Question	Answer
		The information required for the purpose of identifying beneficial owners is strengthened by the draft RTS compared to the current regulatory framework, including in low-risk situations. Such strengthening does not appear to be necessary.
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	While the Regulation does provide for simplifications (Article 33), including the possibility to postpone the verification of the customer's identity, it does not provide for any exemptions with regard to certain obligations which may nevertheless appear disproportionate in light of the risk-based approach. Accordingly, given the particularly low risk associated with certain products/services, we propose the following amendments: • With regard to the obligation to identify and verify identity: Proposal: - Article 20 – Minimum requirements for the identification of a customer in low-risk situations Addition: "3. Where the product presents a particularly low ML/TF risk and in the absence of any of the situations referred to in Article 33(5) of the Regulation, identification alone shall be sufficient and the obliged entity shall not be required to verify the identity of the customer [and of the person on whose behalf the relationship is established]." It should be noted that this exemption reflects existing provisions under current French law. - Article 21(2):

Name of the respondent	Question	Answer
		With regard to identity verification, we propose removing the obligation to consult sources other than the beneficial ownership register (central register); evidence of consultation of the register should be sufficient. • With regard to the identification of politically exposed persons (PEPs): Proposal: Article 19 – Identification of politically exposed persons Addition: “4. Where the product presents a particularly low ML/TF risk and in the absence of any of the situations referred to in Article 33(5) of the Regulation, the obliged entity may limit itself to identifying only those categories of PEPs presenting a higher ML/TF risk.” Remark: The identification of higher-risk PEP categories would be carried out in line with forthcoming AMLA guidelines, which are expected to address “the assessment of the level of risk associated with a particular category of PEP, their family members and persons known to be close associates.” • With regard to the updating of customer due diligence information: The frequency of updates in low-risk situations appears excessive and not justified by the level of risk. The RTS could provide for greater flexibility (e.g. reduced frequency, limitation of the scope of information to be updated).

Name of the respondent	Question	Answer
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• With regard to the approval of business relationships involving PEPs: In order to ensure a risk-based approach proportionate to ML/TF risks, it does not appear appropriate to apply enhanced due diligence requirements where the product presents a particularly low ML/TF risk. Proposal: Article 19 – Identification of politically exposed persons Addition: “5. The provisions set out in Article 42(1) of Regulation (EU) 2024/1624 shall not apply where the product presents a particularly low ML/TF risk and in the absence of any of the situations referred to in Article 33(5) of that Regulation.” • General remark: The category relating to “officials” of local authorities raises practical implementation issues. Indeed, the notion of “official” appears particularly unclear: should this be understood as referring to a single senior official per local authority, or to all officials within each authority? Depending on the interpretation, in France the number of persons concerned could range from approximately 500 to 31,000. In the latter case, it would be very difficult to carry out effective screening in practice, given the very limited publicly available information on such individuals. In most cases, only a first and last name would be available for matching against customers, which would make the analysis particularly complex.

Name of the respondent	Question	Answer
		This notion should therefore be clarified in future AMLA guidelines.
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	How would you rate the proposals set out in the draft RTS overall?	Neutral
FEDERATION NATIONALE DE LA MUTUALITE FRANCAISE	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Finance Denmark	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Thank you for the opportunity to provide comments to the consultation. Our top key messages: I. Art. 17 on CIU’s identification and verification obligations when distributing their products through an intermediary. II. The interpretation of Art. 22 of the AMLR and the alignment of the RTS. We note that the RTS appears to introduce verification requirements that go beyond those set out in AMLR. This is a matter of significant importance to us.

Name of the respondent	Question	Answer
		III. Furthermore, we consider it important to highlight the principle of “once verified, always verified”, notably in relation to Art. 6 and Art. 7 of the RTS. We emphasise that, as a general rule, re verification of the identity of customers or beneficial owners should not be carried out repeatedly. IV. We seek a clarification on the intended application of the Annex 1 to the AMLR and the RTS’s provisions on EDD. Art. 17: We agree that the proposals set out in this draft RTS can be applied across banking and mortgage credit products. However, we see significant challenges in applying the RTS to “CIUs”, where products are distributed through intermediaries. The requirements for CIUs under Art. 17 would be practically unworkable and would operate directly against the EU’s stated policy objectives of reducing barriers and promoting effective competition. For the Danish and Nordic markets implementation of the RTS in its current wording would have detrimental consequences. (i):The measures in Art. 17 do not appear to build on existing solutions and expertise within the asset management industry, nor do they reflect the diversity of business models operating successfully across Member States (MS). They also raise questions as to their alignment with the risk based approach underpinning the EU AML/CFT framework and their potential to deliver additional value in mitigating risks. CIU’s that distribute their products through one og more intermediaries, do not have a business relationship with the underlying investor. We believe the proposed obligation would simply duplicate the work already done by intermediaries.

Name of the respondent	Question	Answer
		Further, it risks unintentionally disrupting well functioning distribution channels for investment products in MS. From a practical perspective, the CDD-requirement is opposed to a number of operational considerations, which are fundamental to the efficient functioning of the capital markets and the retail investors' investor journey: • In Denmark funds are predominantly subscribed through intermediaries, e.g., banks, investment firms, or brokers. In addition, a significant proportion of funds in the Danish market are listed on Nasdaq Copenhagen and are traded daily in the secondary market. Given the efficient nature of the trading venues, which provide investors with direct market access to fund units, CIUs are not in a position to perform CDD at the level of the individual investor. • CDD is already performed by the intermediary - who are obliged entities - with which the investor has an established customer relationship. • The distribution structure further ensures that CIUs are not directly engaged in transactions with investors, as there is no direct transactional relationship between the fund and the end investor; all subscriptions and redemptions are executed through the intermediary layer. • The look-through obligation would require extensive new information-sharing and record-keeping between investors, distributors, and asset managers, and would often be operationally unfeasible given distribution structures and data-sharing restrictions. An example is the increased use of omnibus accounts, which inherently limit a CIU's ability to access granular investor level information. • Consequently, these considerations could lead intermediaries

Name of the respondent	Question	Answer
		to reduce the number of funds they distribute, ultimately limiting the diversity of investment solutions available to retail investors. • The European Commission in its Supranational risk assessment of ML and TF (COM(2022)554 final) did not detect any shortcomings in the entire asset management industry. (ii): Below follows our suggestion for changes in Art. 17: • Delete the reference to Art. 20(1)(h) AMLR in Art. 17 and Recital 13. • Include a definition of 'person on whose behalf or for the benefit of whom a transaction or activity is conducted' in the RTS consistent with Recital 51, excluding capital market relationships from the scope. • Specify that CIUs may rely on the distributor where robust, risk-sensitive CDD measures are in place. • Allow CIUs to take risk-sensitive measures to understand relevant information on third parties in the business relationship, for example by asking prospective investors whether they are investing on their own behalf or through an intermediary, as recommended in the EBA Guidelines on ML/TF Risk Factors (§16.13). Alternatively, we support the amendment to Art. 17 proposed by the EBF.
Finance Denmark	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	AMLR art. 22 and RTS art. 32: Where the AMLR allows room for a risk-based approach (RBA), it is important that the RTS does not tighten these provisions and thereby leads to an implementation beyond the AMLR's framework (not in line with the simplification strategy overall).

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Several provisions in the RTS could be further clarified to support the RBA and ensure proportionality. There is a risk that the RTS could be interpreted as a more rule-based approach by national authorities and/or obliged entities. It is important to keep room for the risk based application of CDD and EDD across the RTS, to avoid requirements extending beyond AMLR and to ensure that obligations are workable in practice. This is especially relevant for areas such as complex structures, remediation timelines, and the identification and verification of customer information. Overall, the RTS should clearly distinguish between baseline requirements and risk based enhancements, in order to safeguard the flexibility needed for obliged entities to apply a RBA in line with the objectives of the AML framework. Therefore, we believe that the RTS should be adjusted in those instances where it uses “shall” although the Regulation uses “may”, and similar discrepancies. This is the case in Articles 25–27 of the RTS where it states “shall obtain one or more” compared to the wording “may” in Art. 34 of the AMLR. Another example can be found in Recital 3, where a requirement to verify nationality (at least one) is introduced. This requirement does not appear in the AMLR, nor in the provisions of the RTS. Specific need for clarity on obligations for identification and verification: Furthermore, at a general level, we seek clarity regarding Art. 22 of the AMLR, in particular with respect to the precise requirements as to which information must be collected and

Name of the respondent	Question	Answer
		which information is subject to verification. It is very important that the systematic approach outlined in AMLR Art. 22 is also reflected in the RTS. AMLR Art. 22 distinguishes between identification and verification. While the AMLR requires the collection of a broad set of customer data—particularly under Articles 22(1), 22(2), and 62(1)(a)—the verification framework set out in Articles 20, 22(6), and 22(7) focuses on establishing and confirming the identity of the customer and, where relevant, the beneficial owner. In this context, verification should be understood as requiring the use of reliable and independent sources to confirm the accuracy and truthfulness of core identity elements and to ensure a sound understanding of the beneficial ownership structure. The requirements for customer verification are set out in AMLR Art. 22, para. 6 and 7. Art. 22(6) states the obliged entity shall obtain EITHER a passport (or equivalent) or use electronic identification. There is no requirement that all the information obtained pursuant to Art. 22(1), must be verified. It is explicitly stated in AMLR Art. 22(6)(a) that a passport is sufficient for verification. A passport, however, will never contain all the information listed in para. 1, such as the usual place of residence. The same applies to eID, where it is sufficient that the electronic identification meets the requirements of Regulation 910/2014 (eIDAS). Accordingly, verification efforts should be primarily concentrated on key identity attributes, such as name and date of birth (which are in fact verified by the identification methods provided for under Art. 22(6)). While a wide range of data

Name of the respondent	Question	Answer
		points may need to be collected, requiring each of these to be verified to the same exhaustive standard as core identity elements would be disproportionate and would not reflect a RBA. The RTS should therefore clarify that verification is intended to ensure the accuracy and reliability of key identity information, based on documents, data, or information obtained from independent and reliable sources, rather than to require exhaustive verification of every individual data point collected. Art. 32 (1 and 3) of the RTS therefore also gives rise to uncertainty in this regard, as it appears go beyond the requirements of the AMLR. It introduces specific requirements for the use of electronic identification, by reference to AMLR, Art. 20(1) and RTS annex 1, which do not apply to passports, and which are not consistent with AMLR, Art. 20(6), according to which electronic identification means complying with eIDAS assurance levels 'substantial' or 'high' may be used for verification. The use of electronic identification that meets the requirements of this regulation should be sufficient to fulfil the verification requirement. AMLR does not provide allowance to impose additional requirements. Furthermore, it should be noted that the electronic identification currently does not include all this information, meaning it would (in reality) not be possible to use electronic identification for any customers.
Finance Denmark	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	Art. 6 and 7 - once identified always identified: The identification and verification of a customer and beneficial owner is a key element. Further clarification is needed to support the effective application of a risk-based approach to identity verification under Art. 6. In particular, the RTS should

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	explicitly confirm the continued applicability of the principle of "once identified, always identified". More specifically, we consider that the principle of "once verified, always verified" should apply. Although additional customer information may need to be obtained during the course of the business relationship, including as a consequence of new AMLR requirements, this should not, as a general rule, necessitate re verification. ODD and transaction monitoring are the mechanisms that ensure continuous customer knowledge (thus, not the verification document). In practice, updates to identity documentation should only be required where there are indications that core identity elements may have changed or are no longer accurate. Changes to non-core elements, such as address, or the mere expiration of an identity document, should not, in themselves, trigger a requirement to re-verify identity. Based on a risk based approach, and where there is no reason to doubt the identity of an existing customer or beneficial owner after July 2027, we consider that obliged entities should only be required to enhance their CDD in accordance with the Regulation and the RTS – and the deadlines stated in the Recital 25 - without having to re verify their identity through a "new" identification document or method for all existing customers and beneficial owners – including existing customers onboarded non face-to-face. It is important that this is set out in the transitional provisions. Art. 6(2) – identification without standard identification

Name of the respondent	Question	Answer
		documents: It is unclear how the rules should be applied in situations where the customer has neither a passport (or similar document) nor an electronic ID. This may particularly affect customer groups such as children, elderly persons, and vulnerable individuals. Not all Member States offer alternative national identity documents containing the required information. Moreover, the issuance of such alternative documents may be subject to fees. This could result in financial exclusion or involuntary de-risking, particularly for customer groups that do not have access to the necessary identification documentation. It is unclear how these individuals can be sufficiently verified if no national document exists that contains the criteria set out in RTS Art. 6(2). The last sentence of paragraph 2 states that if the customer does not possess an ID that meets the four criteria, the obliged entity “shall use other credible means to obtain this information.” Would it be sufficient for a child to use a birth certificate, and could this alone constitute adequate documentation? Birth certificates are mentioned in the recitals, but if such an example is indeed sufficient, it should be included in the operative provisions of the RTS. For other customer groups, such as vulnerable individuals, it is also unclear what may be considered sufficient as “other means”. The expressed need for clarity and flexibility to accommodate national identification frameworks is also essential since it is central to determining whether a customer relationship can be established or maintained. For instance, what would this mean for mortgage financing (when maintaining an ongoing

Name of the respondent	Question	Answer
		customer relationship) if ODD cannot be conducted? Furthermore, this question must be considered in connection with AMLR Art. 21(1), as it remains unclear whether a customer relationship must be restricted (where possible) or terminated.
Finance Denmark	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Art. 22 Pooled accounts Finance Denmark finds the RTS's interpretation of Art. 20(1)(h) of the AMLR to be overly broad, and we therefore consider that it leads to an excessively wide application of Art. 17 and Art. 22. Art. 22 requires credit institutions to verify the identity of customers' customers in all cases not covered by its limited exceptions, through the reference to Art. 20(1)(h) of the AMLR. The provision does not distinguish between different types of pooled accounts and could therefore also be understood as if it will also apply to pooled accounts opened by one bank (correspondent) for another bank (respondent), even where the underlying customers have already been subject to CDD by the respondent bank. This is particularly challenging for international central securities depositories (ICSDs), custodian banks, correspondent banking relationships, securities traders, trading venues, CCP (Central Counterparty) etc., as they operate as financial market infrastructures and typically maintain pooled or omnibus accounts for banks on behalf of hundreds or thousands of underlying customers. Requiring obliged entities to collect data on customers' customers would duplicate CDD already performed and result in significant administrative and operational burdens. We therefore propose – in line with EBF's consultation

Name of the respondent	Question	Answer
		response – the following: • Delete the reference to Art. 20(1)(h) of the AMLR in Art. 22 and Recital 17. • Clarify that credit institutions may rely on account holders being obliged entities where they are satisfied that those entities apply robust and risk sensitive CDD measures. Explicitly clarify the correspondent banking relationships, including ICSD, custodian bank arrangements, securities traders, trading venues, CCP (Central Counterparty) etc. fall outside the scope of Art. 22 and Art. 20(1)(H) ALMR, consistent with the EBA interpretation that such relationships constitute correspondent relationships under Art. 2(22). Art. 13 Senior Managing Officials and Art. 10 beneficial owners Identification requirements for SMOs and beneficial owners should remain proportionate. A limited set of core information — such as name, date of birth, and business address — should generally be sufficient. In non high risk cases, information obtained from reliable and independent sources, including central registers, should be considered sufficient for both identification and verification of SMOs and beneficial owners. In this context, we note with respect to RTS Art. 10 that in Denmark we have a central business register (the CVR), but there are no other public registers available that obliged entities can reasonably use to verify beneficial owners in regard to Art. 10(1)(a). Thus, it is relevant that it is possible to solely use the central register. Further clarity is needed regarding the scope of the SMO concept. It should primarily cover individuals formally constituting the management body in its management

Name of the respondent	Question	Answer
		function. This should refer to those members of the management body in its management function as evidenced by an official Companies House extract (or equivalent corporate register) from the country in which the corporate customer is domiciled. Overall, further clarification in the RTS or through Level 3 guidance would help ensure consistent interpretation and avoid disproportionate requirements that do not materially increase AML/CFT risk mitigation.
Finance Denmark	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	AMLR Annex 1: Regarding Annex I to the AMLR and the RTS provisions on EDD, we consider it necessary that AMLA provides explicit clarification on the intended application of the Annex. We consider it clear that Annex I should be interpreted as a risk-based reference framework, to be applied proportionately and in conjunction with the RTS provisions on EDD, which specify when particular risk variables are relevant due to an elevated risk level. In order to avoid divergent interpretations, disproportionate operational burdens, and practices that do not contribute to effective de-risking, we encourage AMLA to provide explicit clarification on this point. The Annex should not be interpreted as requiring obliged entities to systematically collect and assess all listed risk variables for each customer and beneficial owner. Consequently, the Annex would effectively introduce a mandatory minimum dataset to be obtained in all cases in order to determine the risk of a business relationship,

Name of the respondent	Question	Answer
		irrespective of its inherent risk profile. This possible interpretation gives rise to significant concerns. In particular, Annex I states that obliged entities shall take into account the reputation of customers and beneficial owners. If applied as a standard CDD requirement, this would require obliged entities to assess reputation not only at onboarding, but also retrospectively for all existing customers and beneficial owners, and potentially on an ongoing basis. Such an approach would be operationally burdensome, disproportionate, and unlikely to result in meaningful additional risk mitigation. Regarding the Art. 25 of the RTS assessment of the reputation of customers or beneficial owners is an EDD-measure applicable to high-risk business relationships. The distinction strongly suggests that risk variables in Annex 1, such as reputation assessment, is not intended to form part of standard CDD for all customers and beneficial owners. Art. 33 Entry into force: We note that the timeframe for implementing the rules in practice is very tight due to the deadlines for the Level 2 and Level 3 legal acts, including those that have been further delayed. While we acknowledge the significant amount of work AMLA is required to deliver within a very limited timeframe, there is a clear need to ensure sufficient time for effective implementation in the private sector. Rushed implementation does not provide the strongest safeguard against ML and TF. Furthermore, the one-year timeframe for updating documents, data, and information relating to existing high-risk customers under Art. 26(2)(a) poses significant operational challenges. The remediation effort is extensive and must be carried out

Name of the respondent	Question	Answer
		across a large number of existing customer relationships. Although updates will be conducted on a risk-based basis, achieving full compliance within the one-year period is unlikely to be feasible in practice. This is further compounded by the fact that updates to beneficial ownership registers by the companies themselves are not expected to be completed until 2027. Overall, there is a need for a complete, coherent and finalised legal framework, followed by a realistic implementation timeline. Moreover, in line with the risk-based approach, re verification should not be required for existing customer files where obliged entities have already conducted CDD in accordance with the applicable framework, unless new information or risk indicators warrant such re verification.
Finance Denmark	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 5 Nationalities: Collecting information on nationalities should primarily relate to the individual's main nationality and should not, as a general rule, extend to any additional na-tionalities. Where an individual holds a single nationality, confirmation of that na-tionality should generally be considered sufficient. We ask for Art. 5 to clarify that the requirement may be fulfilled on the basis of the customer's self declared information, rather than relying solely on Recital 3 for this

Name of the respondent	Question	Answer
		clarification (not in line with the AMLR art. 22(6) as mentioned above in this consultation response). The collection of additional nationalities should be limited to cases where this is relevant and justified, as systematic collection does not appear to materially strengthen the risk assessment - nor should a customer's risk profile be systematically affected solely by the fact that the customer was born in a specific country. In the absence of conflicting information, collection further information on nationalities would not normally be necessary. Finally, it would also be inconsistent with the risk based approach to require obliged entities, upon the entry into force of this RTS, to ask all existing customers whether they hold multiple nationalities or have renounced a nationality.
Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	23
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Art. 23(2) ODD: We would welcome a clear confirmation that automated monitoring is sufficient to be used as part of the ODD for non-high-risk customers – inducing the purpose of maintaining up-to-date customer information. For customers with no relevant risk triggers, additional customer outreach should not be required as a matter of routine in line with the risk-based approach to allow for the obliged entities to focus their efforts against ML and TF risks. We consider that this very approach, whereby measures are tailored to the customers' risk categories, constitutes the essence of the risk based foundation of the AML framework.

Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	30
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 30 Targeted Financial Sanctions: With regard to Art. 30 (1)(a), it is important that the terms “any other names” and “trade names” do not include secondary names, as legal entities may potentially have more than 100 secondary names in addition to the registered name. We therefore propose that the provision specifies: “Any other name or trade name, where they differ from the registered name.” Clarity would be welcome as to which sources these data may be obtained from.
Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	1
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Risk sensitive measures/basis/approach: The RTS uses several terms alongside the concept of a “risk-based approach”, which may give rise to uncertainty as to whether any substantive distinction is intended or whether the different expressions are meant to describe the same underlying principle. In particular, the RTS refers to “risk-sensitive measures”, “risk-sensitive CDD measures”, “risk-sensitive basis” and “risk-sensitive ap-proach”, in addition to “risk-based approach”. We would welcome clarifica-tion from AMLA on this point. Finance Denmark’s understanding is that these terms are intended to refer to risk mitigating measures applied in accordance with the risk based approach, and that no material

Name of the respondent	Question	Answer
		distinction is intended between the use of “risk-sensitive measures” as opposed to “risk-based” terminology.
Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	16
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Art. 16 person purporting to act on behalf of the customer: A key concern relates to the lack of a clear definition of a “person purporting to act on behalf of the customer”. The RTS should clearly limit the scope of Art. 16 to natural persons who act on behalf of the customer on the basis of a formal mandate, such as a proxy or power of attorney, and who interact directly with the obliged entity in the context of the business relationship. Individuals acting within the customer’s internal organization - such as employees, employees that act under implied authority arising from their position, senior managers, cardholders, employees with access to online banking systems etc. - should be excluded. Extending requirements to such persons would be disproportionate, misaligned with a risk based approach, and operationally burdensome without corre-sponding AML/CFT benefits, particularly in wholesale and correspondent banking contexts. The focus should instead remain on external representatives with formal authority, who present a more relevant ML/TF risk. Clarifying this distinction would reduce unnecessary scope and enable institutions to better target resources towards higher risk situations. Retail banking for personal customers frequently encounters requests to estab-lish a business relationship for an entire family, such as two parents and young children. Imposing strict documentation requirements in these situations creates

Name of the respondent	Question	Answer
		unnecessary operational burdens, adversely impacts the customer expe-rience, and does not result in meaningful risk mitigation. We recommend that Recital 12 explicitly acknowledge that, based on a risk based approach, obliged entities may use evidence other than birth certificates or court appointed guardianship to demonstrate the existence and extent of parental powers of representation.
Finance Denmark	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	21
Finance Denmark	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	AMLR Art. 21 termination of a customer Pursuant to Art. 21(1) of the AMLR, where an obliged entity is unable to com-ply with the requirement to apply customer due diligence measures set out in Art. 20(1), it shall refrain from carrying out a transaction or establishing a business relationship, terminate the business relationship, and consider reporting a suspicious transaction to the FIU in accordance with Art. 69. Although Art. 21(4) foresees the issuance of guidelines, we raise this issue in the context of this consultation given that Art. 21 is part of the CDD framework, and that clarity on its practical application is essential. If the requirements are understood to mean that obliged entities must refuse or terminate a customer relationship in the absence of suspicion, or where non-terminate a customer relationship in the absence of suspicion, or where non-compliance is solely due to one or a limited number of missing CDD data points, this would not appear to be proportionate. In

Name of the respondent	Question	Answer
		the context of the existing customer database, a customer's failure to provide information on their place of birth may be due to entirely benign reasons, such as overlooking a request or not perceiving it as relevant in a long standing customer relation-ship. Terminating customer relationships in such cases would be disproportionate. Additionally, such an interpretation could have negative consequences for vulnerable customer groups, including children, the elderly and other vulnerable persons, and may undermine the objective of financial inclusion. It would also have adverse consequences for customers with mortgage financing. While we acknowledge that obliged entities must have the ability to refuse or terminate a customer relationship where necessary, it is important that the framework also allows for the application of less intrusive measures. We therefore suggest the RTS will confirm that the guidelines set out in EBA/GL/2023/04, "Guidelines on policies and controls for the effective management of ML and TF risks when providing access to financial services", concerning Art. 14(4) of Directive (EU) 2015/849, will continue to apply. Practice after the AMLR enters into force should likewise continue to be that credit and financial institutions should put in place risk-sensitive policies and procedures to ensure that their approach to applying CDD-measures does not result in them unduly denying customers legitimate access to financial services. Before taking a decision to reject or to terminate a business relationship, credit and financial institutions should satisfy themselves that they have con-sidered the possible mitigating measures that could reasonably be applied in the

Name of the respondent	Question	Answer
		particular case. Lastly, with regard to Article 21 AMLR, clarification is needed concerning the interpretation and scope of the wording in paragraph 1, namely “where an obliged entity has a duty to protect its customers’ assets…”. This is likewise relevant in the context described above.
Finance Denmark	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Finance Denmark	Please specify which recital you refer to, and share your comments below.	Recital 3 In addition to our comment on recital 3, we would like to emphasise that recitals should not contain requirements or guidance that are not also reflected in the Articles. This creates uncertainty and entails a risk of a lack of harmonisation of both the rules and their implementation.
Finance Denmark	Do you have any comments on the Annex in the draft RTS?	No
Finance Denmark	How would you rate the proposals set out in the draft RTS overall?	Neutral
Finance Latvia Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Finance Latvia Association partially agrees. While the overall structure of the draft RTS is welcome, several provisions do not, in their current form, provide sufficient flexibility for the diversity of legitimate financial sector products, services and distribution models. Our principal concerns are the following: (i) Virtual IBAN services (Article 9). The draft places identification and verification obligations on the issuing credit or financial institution that, in business-to-business-to-customer (B2B2C) models, duplicate measures already performed by the regulated intermediary that contracts with

Name of the respondent	Question	Answer
		the end user. Where the issuer's direct client is itself an EU-licensed and supervised payment or e-money institution that has performed full CDD on the end user, the draft does not differentiate that arrangement from a direct customer relationship. We note that AMLA itself acknowledges in its rationale (paragraph 3.3) that exchanges on virtual IBANs "did not result in substantive changes to the specific provisions in the EBA draft", and FNA respectfully invites AMLA to revisit this point. As drafted, Article 9 risks rendering the vIBAN service model operationally unviable, despite robust AML/CFT controls being in place at the intermediary level. (ii) Trade names of legal entities (Articles 2(ii), 20(1)(b)(ii) and 30(a)(iii)). The requirement to obtain trade names for all business customers, and to screen those trade names against targeted financial sanctions lists, is disproportionate. Sanctions lists, including AKAs, are built around registered names; trade names are not systematically captured in any authoritative cross-border source. The requirement therefore generates substantial operational effort and a high volume of false-positive alerts, without a corresponding ML/TF or sanctions-risk benefit. (iii) Sectoral simplified measures for pooled accounts (Article 22). The draft restricts application of the simplified measures to relationships assessed as low risk. In credit institution practice, pooled-account relationships with regulated obliged entities are routinely classified as standard risk; the result is that Article 22 will be virtually inoperative. Article 17, addressing reliance on collective investment undertakings for a comparable purpose, sensibly accommodates both low and standard risk

Name of the respondent	Question	Answer
		profiles. (iv) Verification of all senior managing officials (Article 13). The draft, read with Recital 9, would require equivalent verification measures for every senior managing official of a customer where no natural person can be identified as beneficial owner. In state-owned or municipality-owned enterprises, only a subset of senior managing officials is authorised to represent the customer vis-à-vis the obliged entity. Extending verification to non-representing officials creates administrative burden without commensurate ML/TF risk-mitigation benefit. (v) Multiple nationalities (Article 5). While Recital 3 helpfully clarifies that, where a person declares multiple nationalities in good faith, verifying one nationality is sufficient, Article 5 still requires obliged entities to obtain information on all nationalities. Identification documents customarily reflect a single nationality, and obliged entities have no effective independent means to verify the completeness of self-declarations of additional nationalities. Compliance with the collection obligation therefore depends on customer self-declaration that cannot be objectively validated. Concrete drafting proposals are set out in Section 3.
Finance Latvia Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Finance Latvia Association partially agrees. The risk-based approach is the foundation of Regulation (EU) 2024/1624 and is referenced throughout the draft RTS, including in Article 1. However, several specific provisions, taken together, narrow the operational space for genuine risk-sensitivity and create internal inconsistencies that the final RTS should resolve.

Name of the respondent	Question	Answer
		Article 21 (low-risk BO and SMO identification and verification). Although intended to introduce simplified requirements for low-risk situations, the article does not allow the obliged entity to rely on data obtained from a business or company register. The verification steps required (consulting one source for identification and a different source for verification) substantially mirror those applicable in non-low-risk situations, which empties the simplified regime of practical content. Article 22 (pooled accounts). Restricting the sectoral simplified measures to relationships assessed as low risk produces an outcome at odds with how risk is, in practice, classified for arrangements with regulated obliged entities. Aligning the available risk band with that of Article 17(c), which encompasses both low and standard risk, would deliver a more coherent risk-based framework. Article 9 (vIBAN). The draft applies a uniform identification and verification standard to vIBAN end users, regardless of whether those end users are clients of a regulated intermediary that has already performed full CDD. A genuinely risk-based approach would permit proportionate oversight measures (assessment of the intermediary's internal control system, sample-based file review, ongoing monitoring) in lieu of duplicative direct CDD. Recital 8 read with Articles 10 and 21. Recital 8 states categorically that consultation of central registers is "not sufficient" to fulfil verification requirements, without distinguishing risk situations. Read together with Article 10 (which prescribes additional reasonable measures) and Article 21 (which, as drafted, denies reliance on business or company

Name of the respondent	Question	Answer
		register data even in low-risk situations), the framework leaves no scenario in which register-based verification alone is permissible. This is in tension with the proportionality principle in Article 1 of the draft RTS. With targeted amendments in these areas, the RTS would more faithfully reflect the risk-based approach mandated by Article 28(1) AMLR and emphasised by AMLA throughout the consultation paper.
Finance Latvia Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. Finance Latvia Association members have identified several recurrent situations in which the information required by the draft RTS is not reliably available, and in which no alternative compliance pathway is provided. (a) All nationalities of natural persons (Article 5). Standard identification documents (passports, national identity cards, residence permits) typically display a single nationality, even where the holder may hold others. While Recital 3 addresses verification, Article 5 still requires obliged entities to obtain information on all nationalities. Compliance would therefore require obliged entities to ask all natural persons concerned to declare every nationality held, with no realistic verification mechanism. Suggested alternative: information on additional nationalities should be collected and recorded only where, on a risk-sensitive basis, the obliged entity obtains reliable documentation indicating that further nationalities exist. (b) Trade names of legal entities (Articles 2(ii), 20(1)(b)(ii) and 30(a)(iii)). There is no authoritative or comprehensive official source that systematically records trade names of legal entities across jurisdictions. Obliged entities would therefore depend

Name of the respondent	Question	Answer
		on customer self-declaration that cannot be independently validated, while incurring ongoing maintenance costs and a material false-positive screening burden. Suggested alternative: trade names should be considered, at most, as an element of public-source checks under enhanced due diligence; their systematic collection and screening should not be mandatory for all business customers. (c) Senior managing officials of state and municipality-owned enterprises (Article 13 read with Recital 9). Such enterprises commonly have several board members, of whom only those holding designated signing authorities engage with the obliged entity. Obtaining and verifying equivalent information for non-representing senior managing officials is impractical and adds administrative load without a corresponding risk-mitigation effect. Suggested alternative: clarify that verification applies only to senior managing officials who are authorised to represent, and who actually represent, the customer vis-à-vis the obliged entity. (d) Identification of vIBAN end users by the issuing institution (Article 9). Where the vIBAN end user is the client of an EU-licensed intermediary financial institution, the issuing institution does not directly onboard, contract with or interact with the end user. The detailed CDD information envisaged by the draft is held by the intermediary. Suggested alternative: permit the issuing institution to obtain the information from the intermediary on request and within the 5-working-day window already foreseen in Article 22(3) AMLR, supported by a risk-based oversight framework.

Name of the respondent	Question	Answer
Finance Latvia Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Finance Latvia Association notes that AMLA states in its rationale (paragraph 3.3) that it "did not identify opportunities to specify additional measures to simplify the SDD measures without creating exemptions from the obligations stemming from the AMLR", and welcomes the consultation as the appropriate forum to identify such measures. The proposals below remain within the level-1 framework and do not create exemptions from AMLR obligations; they specify how SDD measures may operate in practice. (1) Reliance on EU business and company register data in low-risk situations (Article 21). For customers that are legal entities incorporated within the EU and assessed as low risk, identification and verification of the beneficial owner or senior managing official should be capable of being carried out solely on the basis of data obtained from the business or company register. Suggested wording: "In low-risk situations, where the customer is a legal entity incorporated in a Member State, obliged entities may identify and verify the beneficial owner, or, as the case may be, the senior managing official, solely on the basis of information obtained from the business or company register." (2) Extension of pooled-account simplified measures to standard risk (Article 22). Point (d) should be amended so that the simplified measures apply where the ML/TF risk associated with the business relationship is assessed as low or standard, mirroring the approach taken in Article 17(c) for collective investment undertakings. Suggested amended wording: "(d) the ML/TF risk associated with the business relationship is low or standard."

Name of the respondent	Question	Answer
		(3) Risk-based oversight regime for vIBANs issued to clients of regulated intermediaries (Article 9). Where the vIBAN end user is a client of an EU-licensed and supervised intermediary that has performed CDD under Article 22(1) AMLR, the issuing credit or financial institution should be permitted to discharge its obligations through proportionate, risk-based oversight (assessment of the intermediary's ICS and AML/CFT framework; sample-based verification of customer files; ongoing monitoring; right to obtain underlying CDD records on request and within the AMLR Article 22(3) timeline) rather than duplicative direct CDD. This approach faithfully reflects the allocation of AML/CFT responsibilities under EU law and the realities of modern distribution models, while maintaining the issuing institution's accountability. (4) Risk-sensitive scope for nationality data (Article 5). The collection of additional nationalities (beyond the one reflected in the identification document presented) should be triggered only where reliable documentation comes to the obliged entity's attention indicating that the natural person concerned holds further nationalities. This complements Recital 3, which addresses verification, by aligning the collection obligation with the practical availability of evidence. (5) Limitation of SMO verification to representing officials (Article 13). Where senior managing officials are identified in lieu of beneficial owners, verification measures should be limited to those officials who are authorised to represent, and who actually represent, the customer vis-à-vis the obliged entity.

Name of the respondent	Question	Answer
Finance Latvia Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Finance Latvia Association wishes to emphasise three cross-cutting themes that should guide the finalisation of the RTS. Internal consistency between RTS and AMLR. Several draft provisions go beyond, or sit uncomfortably with, the corresponding provisions in Regulation (EU) 2024/1624. The trade-name screening obligation (Articles 2(ii), 20(1)(b)(ii) and 30(a)(iii) of the draft RTS) is an example: AMLR Article 22(1)(b)(i) refers to the registered name, and the systematic collection and screening of trade names is not mandated by the level-1 text. AMLA should ensure that the RTS implements, rather than expands, the obligations laid down in the AMLR. Internal coherence within the RTS. Comparable situations should be treated comparably. The mismatch between Article 17(c) (reliance on collective investment undertakings: low and standard risk) and Article 22(d) (pooled accounts: low risk only), and the absence of any scenario in which register-based verification of the beneficial owner alone is sufficient (when reading Recital 8 with Articles 10 and 21), illustrate the need for a final review of cross-references and risk thresholds. Proportionality and risk-based proportioning of obligations. The risk-based approach is hollowed out where simplified regimes are calibrated so narrowly that they cease to operate in practice. The final RTS should ensure that simplification, where envisaged, produces a meaningful operational difference for obliged entities, and that enhanced obligations are imposed where genuinely needed for ML/TF or sanctions-risk mitigation, not as default settings.

Name of the respondent	Question	Answer
		FNA would welcome the opportunity to engage further with AMLA on the points raised, in particular on the calibration of Articles 9, 21 and 22, where targeted amendments would materially improve the operability of the RTS without weakening its objectives.
Finance Latvia Association	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 5, read with Article 22(1)(a)(iii) AMLR, requires obliged entities to obtain information on all nationalities, statelessness or refugee/subsidiary protection status of the customer, of any natural person purporting to act on the customer's behalf, and of any natural person on whose behalf or for whose benefit a transaction or activity is conducted. While Recital 3 helpfully clarifies that, where a person declares multiple nationalities in good faith, verifying one nationality will be sufficient, Recital 3 addresses only verification, not the underlying collection obligation. In practice, identification documents typically reflect only one nationality. Compliance with Article 5 as drafted would require obliged entities to ask each natural person concerned to specifically declare every nationality held, going beyond what standard identification documents support. Even where such declarations are obtained, obliged entities have no effective independent means to validate their completeness, raising legal certainty, enforceability and proportionality concerns regarding the collection obligation. Proposed drafting (Article 5): "For the purposes of Article 22(1), point (a)(iii), of Regulation (EU) 2024/1624, obliged entities

Name of the respondent	Question	Answer
		shall obtain information on the nationality reflected in the identity document, passport or equivalent presented for identification purposes and, where applicable, on statelessness and refugee or subsidiary protection status. Where, in the course of customer due diligence or enhanced due diligence, an obliged entity, on a risk-sensitive basis, obtains reliable documentation indicating that the persons concerned hold additional nationalities, the obliged entity shall record and retain such information." The proposal preserves the core regulatory aim (capturing relevant nationality information where it has ML/TF or sanctions-risk significance), aligns the collection obligation with the verification approach already taken in Recital 3, and removes an obligation that, as drafted, cannot be reliably discharged in practice.
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	9
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 9 implements Article 22(3) AMLR by requiring the obliged entity to obtain and verify, in respect of natural or legal persons using a virtual IBAN it issues, the information set out in Article 22(1) AMLR, the vIBAN number and account-opening/closing dates. As drafted, the provision does not differentiate between (i) vIBANs issued to direct customers of the issuer, and (ii) vIBANs issued through a B2B2C model in which the vIBAN end users are customers of an EU-licensed and supervised intermediary financial institution (e.g., a payment institution or e-money institution) that contracts with the end user and performs full CDD on it. AMLA itself notes in paragraph 3.3 of the consultation paper that exchanges on virtual IBANs "did not result in substantive changes to the

Name of the respondent	Question	Answer
		specific provisions in the EBA draft"; Finance Latvia Association respectfully invites AMLA to revisit this point in light of the issues set out below. In the second scenario, the issuing credit or financial institution does not have, and is not the contractual counterparty to obtain, the full CDD data set directly from the end user. Imposing duplicative direct CDD on non-customers risks rendering the vIBAN model operationally unviable, despite robust AML/CFT controls maintained by the regulated intermediary and runs counter to the Union simplification agenda. Proposed drafting (additional paragraph in Article 9): "Where the natural or legal person using a virtual IBAN is a client of another credit or financial institution that is licensed and supervised in the Union for AML/CFT purposes, the obliged entity issuing the virtual IBAN may discharge its obligations under paragraph 1 by: (a) assessing the AML/CFT framework, internal control system and identification and verification processes of that other institution, including against its own standards and applicable regulatory expectations; (b) carrying out sample-based verification of customer files and ongoing oversight on a risk-sensitive basis; (c) ensuring that it is able to obtain from that other institution, without delay and in any case within 5 working days of request, the information referred to in Article 22(1) of Regulation (EU) 2024/1624 in respect of the natural or legal person using the virtual IBAN." The proposal aligns Article 9 with the allocation of AML/CFT responsibilities under EU law and reflects the operational

Name of the respondent	Question	Answer
		reality that vIBANs are commonly distributed through regulated intermediaries. The 5-working-day window mirrors Article 22(3) AMLR. The issuing institution remains accountable through risk-based oversight.
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 13, read with Recital 9, requires obliged entities, where no natural person can be identified as beneficial owner, to collect equivalent information on, and to verify the identity of, senior managing officials in the same way as for beneficial owners. In practice this scenario is most frequently observed in state-owned and municipality-owned enterprises, which typically have multiple board members, of whom only a subset, in accordance with their designated signing authorities, are authorised to represent the enterprise vis-à-vis the obliged entity. Applying the article to all senior managing officials, including those who do not represent the customer vis-à-vis the obliged entity, results in additional administrative burden for both the customer and the obliged entity, without a corresponding ML/TF risk-mitigation benefit. The non-representing officials neither initiate nor authorise transactions through the obliged entity. Proposed clarification (Article 13(b)): Add a paragraph or recital making clear that the verification measures referred to in Article 13(b) apply only to senior managing officials who are authorised to represent, and who actually represent, the customer vis-à-vis the obliged entity. Suggested wording: “For the purposes of point (b), the obliged entity shall verify the

Name of the respondent	Question	Answer
		identity of those senior managing officials who, individually or jointly, are authorised to represent the customer vis-à-vis the obliged entity." The clarification preserves the regulatory aim (substituting verifiable information on natural persons for unavailable beneficial-owner information) while focusing the obligation on the natural persons who actually engage with the obliged entity on the customer's behalf.
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	21
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 21 is intended to introduce simplified requirements for the identification and verification of the beneficial owner or senior managing official in low-risk situations. As drafted, however, paragraph 2 expressly requires the obliged entity to consult "one of the sources of information listed in paragraph (1), points (b) or (c), that was not used for identification purposes", thereby excluding reliance on the central register, business or company register (paragraph 1, point (a)) for verification. The required steps therefore substantially mirror those applicable in non-low-risk situations, leaving the simplified regime without practical content. This outcome is also in tension with the proportionality principle in Article 1 of the draft RTS. Proposed drafting (Article 21(2)): "In low-risk situations, where the customer is a legal entity incorporated in a Member State, the obliged entity may identify and verify the beneficial owner, or, as the case may be, the senior managing official, solely on the basis of information obtained from the central register,

Name of the respondent	Question	Answer
		business or company register referred to in paragraph 1, point (a). In other low-risk situations, the obliged entity shall consult one of the sources of information listed in paragraph 1, points (b) or (c), that was not used for identification purposes." EU business and company registers are official, regulated sources, including registers of beneficial ownership information being progressively rebuilt under the AMLR framework. Allowing reliance on register data alone in genuinely low-risk situations is consistent with the risk-based approach and with the simplification mandate in Article 28(1) AMLR.
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	22
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 22 introduces sectoral simplified measures for pooled accounts but limits their application, in point (d), to relationships in which the ML/TF risk associated with the business relationship is assessed as low. In credit institution practice, business relationships with regulated obliged entity account holders are routinely assessed as standard risk; as a result, Article 22 will rarely, if ever, be applicable in practice. Article 17(c), addressing identification and verification obligations in respect of collective investment undertakings for a comparable purpose, allows reliance on another institution where "the risk associated with the relationship with the credit or financial institution is low or standard". There is no principled reason to apply a stricter risk threshold to pooled accounts when the other safeguards (regulated/supervised account holder, robust risk-sensitive CDD, prompt provision of information on request) operate equivalently to those required

Name of the respondent	Question	Answer
		under Article 17. Proposed drafting (Article 22(d)): Amend point (d) of Article 22 to read: “(d) the ML/TF risk associated with the business relationship is low or standard.” The amendment aligns the risk threshold with that applied in Article 17(c) for a comparable reliance scenario, preserves the other safeguards built into Article 22, and ensures that the simplified regime can produce its intended operational effect.
Finance Latvia Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	30
Finance Latvia Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	The draft RTS requires obliged entities to obtain the trade name of legal entities, where it differs from the registered name (Article 2(ii) and, in low-risk situations, Article 20(1)(b)(ii)) and, under Article 30(a)(iii), to screen “any other names, aliases or trade names where they differ from the registered name” against targeted financial sanctions lists. This obligation is not mandated by Regulation (EU) 2024/1624. AMLR Article 22(1)(b)(i) refers to the legal form and name of the legal entity. Where an entity is subject to targeted sanctions, sanctions lists, including AKAs, are built around the registered name; trade-name screening does not materially enhance identification of sanctioned entities. By contrast, it is likely to generate a significant volume of false-positive alerts, with consequent operational costs and customer-experience impact. There is no authoritative or comprehensive official source that systematically records trade names of legal entities. Compliance would therefore require obliged entities to identify, validate and continuously maintain trade-name data

Name of the respondent	Question	Answer
		on a self-declaration basis, without a clear corresponding ML/TF or sanctions-risk benefit. Proposed drafting: Remove the requirement to obtain trade names of legal entities (Article 2(ii) and Article 20(1)(b)(ii)) and to screen trade names against targeted financial sanctions lists (Article 30(a)(iii), first indent). Trade names may, where relevant, form part of public-source checks under enhanced due diligence on a risk-sensitive basis. Alternative wording for Article 30(a)(iii), if the screening obligation is retained: limit it to situations where the obliged entity has, on a risk-sensitive basis, become aware that the customer is commonly known under a name different from its registered name. Sanctions screening based on registered names and AKAs reflected in the official sanctions lists is the most effective means of identifying sanctioned entities. A blanket trade-name collection and screening obligation imposes disproportionate operational effort without a clear corresponding regulatory benefit, and goes beyond the level-1 obligations in AMLR Article 22(1)(b)(i).
Finance Latvia Association	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Finance Latvia Association	Please specify which recital you refer to, and share your comments below.	Recital 8 states: “Obtaining beneficial owner information for all customers that are not natural persons is essential for complying with anti-money laundering and countering the financing of terrorism (AML/CFT) requirements and with targeted financial sanctions obligations. For this reason, consultation of central registers for information on beneficial owners is necessary but not sufficient to fulfil the verification

Name of the respondent	Question	Answer
		requirements." The categorical statement that consultation of central registers is "not sufficient" to fulfil verification requirements does not differentiate by risk level. Read together with Article 10 (which prescribes additional reasonable measures in all cases) and Article 21 (which, as drafted, denies reliance on register data even in low-risk situations), the framework leaves no scenario in which register-based verification alone is permissible. This is in tension with the proportionality and risk-based principle expressed in Article 1 of the draft RTS, and with the level-1 simplification mandate in Article 28(1) AMLR. Proposed drafting (Recital 8): Amend the second sentence to read: "For this reason, consultation of central registers for information on beneficial owners is necessary but not sufficient to fulfil the verification requirements, except in low-risk situations where reliance on the central register, business or company register may, in accordance with Article 21, be sufficient." The proposed wording reconciles Recital 8 with the proportionality principle in Article 1 and with the proposed amendment of Article 21 (see article-specific comment), preserves the principle that enhanced verification effort is required where risk is elevated, and avoids creating a categorical position that empties the simplified regime of practical content.
Finance Latvia Association	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Finance Latvia Association	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Finance Latvia Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact

Finance Norway	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Generally, Finance Norway (The trade and employers association for the financial industry in Norway) views the Draft RTS as too prescriptive/restrictive. The RTS does not adequately reflect a risk-based approach. It could lead to resources being allocated to measures that are not calibrated or effective in combatting money laundering and terrorist financing. Concerning identification and verification of identity, Finance Norway strongly advocates for the principle of “once identified, always identified” to be reflected in the RTS. Art. 4 (specification on the provision of the place of birth). Finance Norway notes that information on place of birth is not included in Norwegian official Identity cards. This means that only passports will qualify as identification for Norwegian

Name of the respondent	Question	Answer
		customers. This might represent an unduly burden on customers, both economically and practically. It is also unfortunate from a financial inclusion perspective and will also constitute further administrative burdens on banks. It would be beneficial if an added paragraph to Article 4 could specify that National ID Cards/National driver's license could on a risk-based approach be accepted as sufficient documentation, so that place of birth do not necessarily need to be verified unless deemed necessary from a risk-based perspective Art. 5: The requirement in art. 5 is unreasonably strict. It necessitates personal contact with the customer. A general requirement to "obtain information on all nationalities" that they have knowledge of a customer's double nationality is not in line with a risk-based approach. It should be sufficient – and in line with the risk-based approach – that the requirement to identify whether a customer or a beneficial owner has two or more nationalities applies if the bank has indications of multiple nationalities (to the best of their knowledge). Additionally, due to possible differences in the concept of "nationality" and to achieve a harmonized understanding of the provision, Finance Norway proposes to replace "nationality" with "citizenship". Finally, there is a concern that future risk requirements will be based on this customer measure, potentially leading to unnecessary monitoring of customers and possible discrimination issues, as well as raising questions concerning GDPR. Art. 6(1): For the sake of clarity, it should be noted that

Name of the respondent	Question	Answer
		passports for minors does not include signatures. Art. 6 (5): This paragraph raises concern in a Norwegian context. The concept of a certified copy has very limited use in Norway. Norway does not have notaries. The concept of certified copy is, in the view of Finance Norway, also not suitable for verifying identity documents as certifications easily can be falsified. The concept of a “certified copy” therefore needs to be clarified in our view. In Norway, a confirmed copy by a notarius publicus (Court of first instance) is only obtainable in very limited circumstances. Confirmed copies (signed and stamped) can be issued by different public authorities, lawyers, etc., but such verification does not have any statutory legal status. From a risk-based point of view, it would be better to replace “certified copy” with “trustworthy” or something similar. This could also be an alternative solution to “certified copy”. In Norway, a birth certificate is accepted for minors in connection with the verification of the customer. On the basis of a risk-based approach, this is a practice that is accepted and used frequently. For the obliged entity, the birth certificate is obtained electronically from the National Population Register. Based on the above, concerning article 6(5), Finance Norway proposes that it should be up to the individual jurisdiction to decide what kind of documentation that is acceptable under the term “certified copy”.

Name of the respondent	Question	Answer
		Art. 12: The definition concerning “complex structures” still raises concerns. “Three layers or more layers” do not as a rule qualify as complex. On the contrary, it is not unusual. The article as it reads invites to and unintentionally facilitates for a “tick the box approach”. EDD will potentially need to be applied in a large number of customer relations and undermines the risk-based approach significantly. The definition can potentially lead to resources being allocated to cases not well calibrated at identifying customers for EDD. Whether an ownership and control structure should be regarded as complex, must be decided on qualitive, not solely quantitative data. The term “organigram” should be substituted with “organizational chart”.
Finance Norway	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 16: The criteria provided in the new Article 16 are still not sufficiently detailed. It should be clarified that only persons with a mandate to legally bind the legal entity are covered by this article. An appropriate and proportionate approach would be to limit the definition to third parties being natural persons and acting via proxy or power of attorney. In the context of wholesale banking, capturing individuals acting in their professional capacity (e.g., authorised signers), in particular those employed with regulated financial institutions, has proved excessively burdensome and ineffective in combatting financial crime. We therefore suggest amending the definition of a “person

Name of the respondent	Question	Answer
		purporting to act" such as: Legal representative(s) (e.g., legal guardians) of a natural person customer in situations where the customer is unable to act on their own behalf and any individual authorized to act on behalf of a legal person pursuant to a proxy agreement. This definition should be applied consistently across the AMLR and RTS. Art. 17: The draft article 17 sets out specific rules on the obligations applicable to collective investment undertakings with respect to customer due diligence measures vis-à-vis the end investor where funds are distributed through another undertaking, typically through a nominee arrangement. Distribution of funds in the EU, and particularly in the Nordic fund market, largely takes place through a nominee structure. The distributor (e.g. a bank) is registered as the unit holder in the unit holder register maintained by the management company and is considered the customer of the management company. The management company does not know the end investor, and the customer relationship is established with the distributor. Consequently, it is the distributor, which itself is an obliged entity, that carries out customer due diligence measures in respect of the end customer/investor. This structure facilitates efficient distribution of investment funds to non-professional customers. The wording of the proposed art. 17 challenges a well-functioning and very widely used distribution model. Although recital 14 provides some guidance to ensure appropriate, proportionate and risk-based application of customer due diligence measures where the risk is assessed as

Name of the respondent	Question	Answer
		low or standard, the drafting of the article is nevertheless problematic and does not reflect established and widespread distribution models for investment funds. In particular, it is inappropriate and impractical that the management company, where funds are distributed through undertakings that are themselves obliged entities, must be able to require the distributor, without undue delay, to disclose information necessary to identify the end customer. This is complicated and cost□increasing, may make the customer experience more cumbersome, and does not contribute to reducing the risk of money laundering. Finance Norway cannot understand how this solution can be harmonized with a risk-based approach. It can also potentially duplicate other procedures. If this draft article is retained it could seriously undermine a well-functioning market structure. In the view of Finance Norway the article as it is drafted, may have significant negative consequences for a number of EU targets and processes, such as simplification, burden reduction, increased participation from private investors and competitiveness of European markets. Art. 18(a) point iv: The term “wider group” should be specified. Art. 20: Finance Norway is of the view that an obligation to obtain information on the place of birth is unnecessary and should be removed. Concerning nationality, it would be helpful if it could be clarified if it is sufficient to ask the customer. Art. 22: It should be clarified what types of accounts are to be identified as “pooled accounts”. Specific questions arise

Name of the respondent	Question	Answer
		regarding lawyers and their client accounts. Lawyers are only covered by the AML framework for parts of their work. There might be a conflict between lawyer-client confidentiality and the obligation to give information to the bank on demand. Generally, there is limited room for categorizing such accounts as low-risk. In the view of Finance Norway, the possibility for simplified measures in this regard should not be limited to low-risk situations. Another legal technical solution that could be contemplated is to expand the scope of low-risk situations. It would be beneficial if the term “satisfied” in article 22(a) could be further clarified. Obliged entities do not have an obligation to identify the customer’s customer. It should be clarified that obliged entities are not required to identify and verify underlying investors and may rely on regulated intermediaries applying robust and risk-sensitive CDD measures.
Finance Norway	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Art. 23: The article, as currently drafted, represents a substantive challenge for obliged entities. The process of obtaining updated information from the customers can be time and resource-consuming, as the customers in many instances respond late or only after several reminders provide the necessary information. Finance Norway suggests that the RTS should indicate the interval at which the request/procedure for obtaining updated information should be initiated, not the deadline for all information being updated. This would facilitate necessary flexibility in ODD and be better designed to protect vulnerable customer groups and contribute to ensuring financial inclusion. Art. 27: This draft article contains comprehensive obligations

Name of the respondent	Question	Answer
		concerning documentation. It should be further clarified how far back in time obliged entities are required to go. Finance Norway understands that this requirement is applicable only to assets / wealth that are included in the customer relationship. It should be clarified that this understanding is correct. Art. 29: It is not a requirement under AMLR Art. 20(1) to screen persons acting on behalf of the customer when there is a suspicion of circumvention or evasion of targeted financial sanctions. This draft article is going beyond the AMLR. It is also unclear as to what situations it does actually apply. Finance Norway suggests that this draft article is harmonized with AMLR concerning screening of customers and UBOs. Art. 30: In relation to the draft article, paragraph b, it should be sufficient to check selected sources of information to clarify that a match is a false positive. In paragraph d, it is stated that screening should take place using updated targeted sanctions lists without undue delay. To secure a harmonized approach to this requirement, some additional clarification would be beneficial.
Finance Norway	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Cf. above

Name of the respondent	Question	Answer
Finance Norway	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Cf. above
Finance Norway	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Finance Norway	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Finance Norway	Do you have any comments on the Annex in the draft RTS?	No
Finance Norway	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Finance Norway	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Finance Sweden	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i)	Finance Sweden supports the proposals given by the European Banking Federation EBF

Name of the respondent	Question	Answer
	explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Finance Sweden	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Finance Sweden supports the reply given by EBF and would also like to add further input. Art 12 An ownership and control structure with three layers between the customer and beneficial owner is rather common, as is e.g. having layers registered in different jurisdictions. Therefore, rather than art 12(1) providing a strict definition of what establishes a complex structure, with three layers and at least one of the conditions in a -d ,the list of criteria should be considered by the obliged entity using a risk-based approach to determine whether a complex ownership and control structure exists. The RTS should also clarify that identifying a structure as complex doesn´t automatically trigger EDD, to avoid confusion with the “Excessively complex ownership structures” referenced as higher-risk indicators in Annex III of the AMLR. Art 13 Finance Sweden supports the proposals given by the EBF

Name of the respondent	Question	Answer
		regarding art 13. We still find the wording in AMLR art 22 (2) confusing. In case there are doubts whether the persons identified are the beneficial owners due to circumstances pertaining to the customer, like incorrect information or that the customer is uncooperative, it seems counterintuitive to proceed with CDD by identifying the SMOs instead. In our experience, doubts regarding the BO:s are a risk flag that the legal person is used for ML. Intuitively, the CDD-process should then be discontinued, and all circumstances be reported to the FIU, instead of proceeding with identifying the SMOs. It would be very helpful if AMLA in art 13 could provide guidelines on how obliged entities are expected to handle such a situation. There is a definition of “senior managing officials” under Art 63(4) AMLR, but that seems to be related only to that specific paragraph. Hence, we propose that it should be stated that the same definition applies also for article 22(2) AMLR as well as RTS 13. Art 16 Finance Sweden supports the proposal given by the EBF that the scope of art 16 needs to be limited to natural persons who act on behalf of the customer on the basis of a formal mandate, such as a proxy or power of attorney, and who engage directly with the obliged entity in the context of the business relationship. The art should be amended the way EBF proposes.

Name of the respondent	Question	Answer
		Art 18 From a risk-based perspective it´s not motivated for all customers to enquire into detailed information about customers´ type of occupation when the customer is a physical person: doctor, fireman, banker etc. In art 18 (e) ii it must be sufficient to ascertain how the customer earns its living; whether the person is employed, self-employed, a student, retired, unemployed etc. Art 25 Additional information on the customer and the beneficial owners Section c) refers to “close relationships known to the obliged entity or that are publicly known”. We propose that the scope of this section is limited to relationships that are relevant to the business relationship.
Finance Sweden	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Finance Sweden supports the reply given by EBF and would also like to add further input. Art 4 In the Nordic countries place of birth is not included on state or public authority issued Identity Cards commonly used for identification verification purposes. The AMLR and RTS requirements would mean that passports are the only acceptable form of identification, placing overly burdensome requirements on banks and potential difficulties for large numbers of customers to provide the required documentation. Also, passports don´t always state country of birth as required

Name of the respondent	Question	Answer
		by art 4. We also note that official identification documents across EU and third-countries vary in content, and do not always include both the country of birth and city/town. It should therefore be sufficient to ascertain either the town name or country of birth, whichever is available from the document presented. We would like to refer to proposed amendment to art 4, given by EBF. On this note Art 20 should align with Recital 17 by referring to the type of information “usually included in a passport or identity document” that would not necessarily include place of birth. Art 5 It`s impossible to ascertain whether a customer or a beneficial owner has several nationalities (citizenships), unless the person discloses this herself/himself, since the information is not available in any public records. The statement in rec 3 that it is sufficient to verify only one nationality needs to be explicitly stated in art 5 to create sufficient legal certainty, since the text in the recital is not legally binding. EBF has proposed an amendment of the article and an addition that we fully support. Given that different language versions of the AMLR use the terms nationality and citizenship interchangeably, it would be useful to clarify whether the RTS, once adopted, will also be translated into other EU languages in a way that reflects the nuances of national legal frameworks. This could help reduce ambiguity around the concepts of nationality and citizenship

Name of the respondent	Question	Answer
		and ensure consistent interpretation across jurisdictions, where these terms may otherwise be treated as interchangeable depending on the country of application. Art 6 A basic principle must be “Once identified, always identified”. It needs to be clearly stated in art 6 that an already identified customer doesn’t need to be formally re-identified again during the ongoing due diligence, unless there are the occurrence of a trigger event or signs of change in relevant circumstances that would motivate such a check. Compulsory re-identification creates a disproportionate burden on obliged entities without clear value from a risk perspective. It also causes problems for vulnerable customer groups. From a risk perspective there comes no clear value from re-identifying an already identified customer. We support the proposal made by EBF regarding electronic identification and the proposal to amend art 6. Art. 27 The scope of art 27 and the information regarding source of funds and source of wealth need to be limited to such assets that are relevant to the business relationship. All types of assets may not be relevant to the business relationship and to the customer risk. It´s also not possible to find information in public registers regarding all types of assets. The investigating into a person´s wealth can also be problematic from an

Name of the respondent	Question	Answer
		integrity perspective. Hence a risk-based approach is necessary with a discretion for the obliged entity to obtain information on certain parts of the customers wealth that is assessed to potentially impact the risk connected with the customer relationship. That goes for both the customer and for the BO. We therefore propose the wording “Such information may include one or more of the following, that are relevant to the business relationship: …”
Finance Sweden	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Finance Sweden supports the reply given by the EBF and would like to add further input. Art. 22 Finance Sweden supports the arguments put forward by EBF and the proposals to amend art 22. We would also like to point out that it will not be possible for a credit institution to provide pooled accounts in many cases, as it will be prevented by AMLR art 20(1)h and RTS art 22. This applies in cases where the account holder themselves are obliged entities subject to AML/CFT obligations, who are effectively supervised and where the credit institution is satisfied that the account holder applies CDD measures, but where secrecy regulations prevents them from providing the credit institution with the information stated in (a) and the MLTF-risk associated with the business relationship is low. This will affect these types of obliged entities in a negative way and prevent them from protecting their clients founds by putting them into a pooled account in a credit institution. We therefore suggest that when the account holder is an

Name of the respondent	Question	Answer
		obliged entity it should be sufficient that (b), (c) and (e) are met. (a) and (d) should therefore be deleted. Art 17 The problems emanating from art 17 has been described in detail by The Swedish Investment Fund Association, SIFA, and the European Fund and Asset Management Association, EFAMA. We agree with their findings and would like to stress the need to find a practical working solution. We therefore support their proposal to amend art 17: “When shares or units of a collective investment undertaking units are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it the collective investment undertaking may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 if it is satisfied that the credit institution or financial institution will provide information necessary to identify and verify the identity of the final investors without undue delay and upon request. This applies provided that: a, the credit institution or financial institution is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624; b, the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); c, the risk associated with the relationship with the credit institution or financial institution is low or standard not high;

Name of the respondent	Question	Answer
		and d, the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners." To this we propose a new paragraph 2: 2. Where the risk associated with a relationship with a credit institution or financial institution is assessed as high, the collective investment undertaking shall apply enhanced due diligence measures in respect of that relationship. The classification of the relationship as high risk shall not, of itself, require the collective investment undertaking to identify and verify the identity of the natural persons on behalf of or for the benefit of whom the transaction or activity is being conducted pursuant to Art 20(1)(h) of Regulation (EU) 2024/1624. The collective investment undertaking shall identify and verify the identity of those natural persons only where it is unable to satisfy itself, through the enhanced due diligence measures applied and any other available risk-mitigating measures, that the natural persons to whom the shares or units of the collective investment undertaking are sold have been correctly identified and verified by the credit institution or financial institution.
Finance Sweden	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	Finance Sweden supports the reply given by the EBF and would like to add further input. Art 29 With reference to art 20(1)(d) AMLR, the Level 1 text clearly

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	establishes that the core perimeter for sanctions screening includes customers and beneficial owners, including the assessment of control and ownership structures (i.e. whether sanctioned persons control or hold significant ownership interests in a legal entity). The purpose of the RTS is to support the technical implementation of the AMLR framework and ensure its consistent application across the EU. In this context, RTS art 29 requires obliged entities to screen customers, beneficial owners, and persons or entities falling within the ownership and control perimeter defined in Art 20(1)(d) for targeted financial sanctions. Art 29 further introduces an additional requirement whereby, in cases where there is a suspicion of circumvention or evasion of targeted financial sanctions, obliged entities must also establish whether the person acting on behalf of the customer is subject to targeted financial sanctions. This introduces a coconditional extension of the screening perimeter to persons acting on behalf of the customer. In parallel, the EBA Guidelines on restrictive measures (Section 4.1.4) set out a broader operational expectation, stating that obliged entities should, to the extent that the information is available, also screen any person purporting or being authorised to act on behalf of the customer, alongside beneficial owners identified through both ownership and control. Against this backdrop, there appears to be a potential divergence in scope between the RTS and the EBA Guidelines regarding the treatment of persons acting on behalf of the

Name of the respondent	Question	Answer
		customer within the sanctions screening perimeter. While the RTS limits such screening to cases of suspected circumvention or evasion of targeted financial sanctions, the EBA Guidelines adopt a broader baseline expectation to include such persons as part of the standard screening process. The reference to “suspicion of circumvention or evasion of targeted financial sanctions” introduces a concept that may be open to interpretation in practice. In the absence of further clarification, it is unclear what threshold or indicators should be used by obliged entities and competent authorities to determine when such suspicion arises. This may lead to divergent interpretations and inconsistent application across Member States. In addition, linking the extension of screening obligations to a suspicion-based trigger may introduce elements typically associated with AML risk assessment into the sanctions screening framework, potentially creating uncertainty as to how this threshold should be operationalised in practice. Furthermore, it would be important to clarify that the RTS does not unintentionally extend the scope of obligations beyond what is established in Level 1 of the AMLR. While RTS are intended to support the technical implementation of the framework, they should not introduce new categories of persons subject to screening requirements unless this can be clearly derived from, or is necessary to operationalise, the underlying Level 1 provisions. In this context, further clarification of the legal basis for including persons acting on behalf of the customer – albeit conditionally – would support alignment with Article 20(1)(d) AMLR and ensure consistency

Name of the respondent	Question	Answer
		with the Level 1 mandate. To ensure legal clarity and consistent implementation, it would be helpful for the RTS to clarify how the requirement to screen persons acting on behalf of the customer should be applied in practice. In particular, it should be specified whether: • the RTS is intended to introduce a minimum requirement (i.e. screening such persons at least in cases of suspected circumvention or evasion), while broader expectations under the EBA Guidelines continue to apply; or • the RTS is intended to define the full scope of the screening obligation. It would also be beneficial for the RTS to further specify the criteria, indicators, or expectations associated with “suspicion of circumvention or evasion” in order to support a more harmonised and consistent application. Art 30 Aliases, as stated in (a) iii, are not a mandatory data point to collect according to AMLR, nor the proposed RTS. As the collection of the data point “aliases” is not mandatory. Moreover, aliases cannot be collected on a structured basis, as they are not included among the reliable sources for identification and verification.
Finance Sweden	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Finance Sweden	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Finance Sweden	Do you have any comments on the Annex in the draft RTS?	No
Finance Sweden	How would you rate the proposals set out in the draft RTS overall?	Neutral
Finance Sweden	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact

Please provide concrete drafting proposals and rationale for the specific measures you would propose.	there should be a difference between "collecting" and "verifying" data. In low risk cases companies should only be needed to "collect" data (by asking the customer - eg. about nationality) - not verify it.
Finans og Leasing	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Finans og Leasing represents the Danish leasing and consumer credit, carloan and factoring industries. We fully support the objective of a harmonized European framework to combat money laundering and terrorist financing. However, with this response, we wish to highlight several critical challenges in the current draft RTS on CDD Link til RTS . Specifically, we are concerned that the new requirements for collecting and verifying data on "nationality" and "place of birth" will create significant barriers for digital onboarding and retail-based financing solutions. 2. Concerns Regarding Nationality and Place of Birth Data "Nationality" and "place of birth" must henceforth be mandatory data points in the CDD process. For the Danish credit market, this introduces substantial practical hurdles: • Physical Presence and Identification: A large volume of consumer loans in Denmark are granted in physical retail environments (e.g., electronics or computer stores). The most

Name of the respondent	Question	Answer
		common form of identification in Denmark is the digital ID (MitID). If the RTS requires verification via passport (which is the only document that holds the customers “nationality”), customers would be forced to carry and present a physical passport for everyday retail financing—a requirement that is disproportionate for low-to-medium risk products. • Barriers to Digital Onboarding: For online loan applications from home, it remains unclear how the customer is expected to provide or transmit passport data securely and intuitively, especially when existing digital identity solutions (such as the Danish MitID) do not automatically transmit these specific data points to the lender. 3. Verification vs. Collection (Risk-Based Approach) We propose that the RTS allows for greater risk-based differentiation regarding these specific attributes: • Self-Declaration for Low Risk: In low-to-medium risk scenarios, financial institutions should have the option to collect nationality and place of birth data via a customer’s self-declaration (e.g., within the application flow) without being strictly required to verify this through a passport, provided the customer’s identity is otherwise established via a secure eID like MitID. • Access to Online Databases: We furthermore encourage the AMLA (in the RTS) to explicitly recognize the use of national registers (such as the Danish CPR register) as a valid verification source. While the CPR register in Denmark contains this data, it

Name of the respondent	Question	Answer
		is currently not accessible to private entities for this purpose. EU regulation should encourage or demand the member states to provide "obliged entities" with access to such data to ensure seamless compliance. 4. GDPR and Data Security in the Retail Sector Forcing finance companies to require passport copies in a physical retail setting raises serious GDPR concerns: • Storage in Retail Outlets: Retail stores are not equipped to handle or store sensitive identity documents like passports. There is a significant risk of unauthorized access or data breaches. A process requiring the physical handling of passports in a computer store contradicts the principles of data minimization and security. 5. Recognition of National eID Solutions (MitID) It is vital for the Danish market that the use of MitID continues to be recognized as a fully compliant method for identity verification. • While MitID meets the eIDAS "substantial" assurance level, there is a need for absolute clarity that this remains sufficient under the new Regulation when meeting the specific requirements for nationality and place of birth. We urge AMLA to ensure that functioning digital infrastructures are not undermined by new technical specifications. 6. Mandate of National Competent Authorities (NCAs)

Name of the respondent	Question	Answer
		While we respect the wish to harmonize the AML-rules across the EU (via a regulation), to avoid crossborder “holes” in the AML-rules, we also find an important need for the National NCA to give some kind of guidance to obligated entities (companies under the AML). We fear the national NCAs will be reluctant to give guidance because of the the concern to give other/different guidance than the AMLA. • It is essential that NCAs maintain the mandate to provide practical interpretations that account for local digital infrastructure (such as the Danish registry culture) without this being viewed as a breach of harmonization. We request that AMLA clearly define the framework for national guidance to ensure that companies are not left in a legal vacuum. Finans og Leasing recommends that the requirements for verifying nationality and place of birth be made more flexible for low-to-medium risk products. Emphasis should be placed on digital solutions and database cross-referencing rather than physical documentation (passports). This will ensure high standards of AML/CFT compliance without compromising the digital user experience and efficiency that characterize the Danish financial market

		että ilmoitusvelvolliset noudattaisivat sääntelyä riittävällä tavalla.
Finanssivalvonta, FIN-FSA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	30
Finanssivalvonta, FIN-FSA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 30 paragraph (d) states that screening and verification should be performed “without undue delay “. It should be noted that such a requirement does not appear to meet FATF’s threshold to implement targeted financial sanctions “without delay”. Furthermore, such a requirement could cause confusion within the financial sector due to Instant Payment Regulation, which require immediate screening of customers. Finland therefore recommends removing the phrase “undue” from Article 30 paragraph (d). In addition, AMLA should elaborate what “without delay” in practice means, so that the implementation of targeted financial sanctions is consistent in all member states. Since there is also the requirement to immediately screen customers when new designations are made in the IPR, it would also be highly beneficial, if the AMLA could provide its interpretation of what “immediately” means in the IPR context. In case Article 30 paragraph (d) is not changed, AMLA should clarify what is meant with “without undue delay”.
Finanssivalvonta, FIN-FSA	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	26
Finanssivalvonta, FIN-FSA	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	FIN-FSA ehdottaa, että artiklan 26 1 b kohtaan lisättäisiin myös varojen alkuperä (source of funds) varojen määränpään lisäksi. FIN-FSA ehdottaa, että artiklan 26 c kohtaan lisättäisiin, että

		arvioinnissa ilmoitusvelvollisen tulisi ottaa huomioon myös maantieteellinen näkökulma.
Finanssivalvonta, FIN-FSA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Finanssivalvonta, FIN-FSA	Please specify which recital you refer to, and share your comments below.	RTS:n resitaalissa 5 viitataan oikeushenkilön osalta tietolähteisiin, jotka ovat luotettavia ja riippumattomia. Itse RTS-artikloissa ei kuitenkaan täsmennetä, miten oikeushenkilön olemassaolo tulisi käytännössä varmentaa.
Finanssivalvonta, FIN-FSA	Do you have any comments on the Annex in the draft RTS?	No
Finanssivalvonta, FIN-FSA	How would you rate the proposals set out in the draft RTS overall?	Neutral
FinTech Poland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We generally agree that the draft RTS may apply across a broad range of products and services offered by obliged entities. However, certain provisions should be amended to ensure that their application remains proportionate and genuinely risk-sensitive across different products, services and customer journeys. In particular, Articles 2(i), 4, 5, 18, 20(1) and 24 appear to impose requirements that may be too rigid in low-risk situations or where the relevant information is not necessary to manage ML/TF risk effectively. For example, collecting all names appearing on an identity document, detailed place of birth information or all nationalities may be disproportionate where the obliged entity has other reliable data enabling unambiguous identification and verification of the customer, such as a national

Name of the respondent	Question	Answer
		identification number, and where the customer or product has been assessed as low risk. Similarly, for certain financial products, such as buy now, pay later credit products, the purpose and economic rationale of the relationship and the amount of the transaction already follow directly from the contractual documentation. In such cases, asking the customer additional questions may create unnecessary friction and duplicate information already available to the obliged entity. We therefore propose that the RTS expressly allow obliged entities to adjust the scope of information collected to the type and level of ML/TF risk identified, provided that the customer can be unambiguously identified and the relevant ML/TF risks are appropriately managed.
FinTech Poland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Although Article 1 of the draft RTS refers to proportionality and the risk-based approach, certain detailed provisions introduce minimum information requirements that may in practice limit the effective application of that approach. In particular, the requirements to collect all names and surnames, additional information on place of birth where it appears on an identity document, and all nationalities should be made more risk-sensitive. There are situations where collecting such data does not materially improve AML/CFT controls, especially where the obliged entity already holds other reliable data enabling the unambiguous identification and verification of the customer, such as a national identification number, and the customer or product has been assessed as low risk. We therefore propose to amend Articles 2(i), 4 and 5 by adding wording that allows obliged entities to collect additional names, additional place of birth details and

Name of the respondent	Question	Answer
		all nationalities only where this is necessary in light of the type and level of ML/TF risk identified. Similarly, Articles 18 and 24 should clarify that obliged entities do not need to obtain additional information on the purpose and economic rationale of the relationship, or on the estimated amount of activities, where this already follows directly from the agreement with the customer or from the nature of the product or service. This would better align the RTS with the risk-based approach and avoid duplicative or excessive data collection.
FinTech Poland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We do not identify, at this stage, a general category of information that would be routinely unavailable in all cases. However, Article 32(1) and Annex I require clarification, as they may create practical uncertainty in digital onboarding processes relying on electronic identification means or qualified trust services. Article 32(1) may be interpreted in two different ways. First, it may mean that Annex I only sets the minimum attributes that electronic identification means or qualified trust services must have, while the obliged entity must still collect all other information listed in Article 22(1) of Regulation (EU) 2024/1624 separately. Second, it may mean that, where the electronic identification means or qualified trust service contains the attributes listed in Annex I, the requirements for identification and verification are fulfilled and the obliged entity does not need to collect additional data not included in Annex I. This ambiguity should be resolved. We propose that Article 32(1) expressly clarify whether the use of electronic identification means or qualified trust services meeting the

Name of the respondent	Question	Answer
		attributes set out in Annex I is sufficient to fulfil the relevant identification and verification requirements, or whether obliged entities must collect additional data separately.
FinTech Poland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Additional simplified due diligence measures should be introduced for low-risk situations, in particular by allowing obliged entities to limit the scope of data collected where the customer can be unambiguously identified and the ML/TF risk is low. In Article 20(1), the minimum information required for natural persons in low-risk situations should be reduced. Instead of requiring all names and surnames, place of birth and all nationalities, the RTS should allow obliged entities to collect the first name and surname, country of birth, date of birth and nationality, unless additional information is necessary based on the type and level of ML/TF risk identified. This would be more proportionate in situations where the obliged entity has access to other reliable identifiers, such as a national identification number, or where the customer is an EU national born in an EU Member State and no other higher-risk factors are present. Article 24 should also be amended to clarify that, for simplified due diligence, obliged entities do not need to obtain additional information on the intended use of the product, estimated value of transactions or source of funds where such information already follows directly from the agreement with the customer or from the nature of the product or service. This is particularly relevant for products such as buy now, pay later credit, where the purpose and amount of the credit are already defined in the contractual documentation. Such amendments would reduce unnecessary duplication,

Name of the respondent	Question	Answer
		improve customer experience and preserve the effectiveness of AML/CFT controls in low-risk scenarios.
FinTech Poland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-

FinTech Poland	Do you have any comments on the Annex in the draft RTS?	No
FinTech Poland	How would you rate the proposals set out in the draft RTS overall?	Neutral
FIPS	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 7 : Mesures de vérification effectuées à distance Le projet de RTS impose, pour la vérification à distance, le recours prioritaire à des moyens d'identification électronique conformes au règlement eIDAS. À défaut, les entités assujetties doivent recourir à des solutions alternatives satisfaisant à une liste détaillée de garanties techniques. La FIPS souligne que ces exigences sont difficilement opérationnelles pour les institutions de prévoyance, outre qu'elles pourraient conduire à exclure certaines populations ne maîtrisant pas suffisamment les outils digitaux, pour les raisons suivantes : - Les solutions eIDAS de niveau « substantiel » ou « élevé » ne sont pas encore déployées à grande échelle en France pour les personnes physiques, en particulier pour les populations

Name of the respondent	Question	Answer
		salariées couvertes par des contrats collectifs. - Les institutions de prévoyance ne nouent pas de relation directe avec chaque salarié individuel lors de la souscription du contrat collectif : c'est l'entreprise adhérente qui est la partie contractante. L'obligation de vérification électronique de l'identité de chaque assuré est donc structurellement inadaptée au modèle des contrats collectifs. - L'obligation de démontrer à l'autorité compétente pourquoi le client n'a pu être vérifié via eIDAS crée une charge documentaire disproportionnée dans le contexte de contrats collectifs pouvant couvrir des milliers de salariés. La FIPS propose d'ajouter, à l'article 7, un paragraphe reconnaissant explicitement que, dans le cadre de contrats collectifs d'entreprise relevant de produits à faible risque LCB-FT, la vérification de l'identité des salariés assurés peut être satisfaite par le recours aux données d'identification déjà détenues par l'employeur dans le cadre de la relation de travail (DSN, registre du personnel), sans qu'il soit nécessaire de procéder à une nouvelle vérification électronique individuelle. Proposition de rédaction (nouvel article 7, paragraphe 5) : « Par dérogation aux paragraphes 1 à 4, dans le cadre de contrats collectifs présentant un risque faible de blanchiment de capitaux et de financement du terrorisme et souscrits par une entreprise dont l'identité a été préalablement vérifiée, les entités assujetties peuvent satisfaire aux exigences de vérification de l'identité des bénéficiaires individuels en s'appuyant sur les informations transmises par l'entreprise souscriptrice dans le cadre de ses obligations sociales légales, sous réserve que ces informations proviennent de sources fiables et indépendantes au sens de l'article 8. » • Articles 11 et 12 : Structure de propriété et de contrôle –

Name of the respondent	Question	Answer
		Entreprises souscriptrices Ces exigences sont particulièrement lourdes dans le contexte de la prévoyance collective, pour plusieurs raisons : - Les institutions de prévoyance gèrent des contrats collectifs couvrant des dizaines, voire des centaines de milliers d'entreprises adhérentes, dont beaucoup sont des PME ou des ETI pour lesquelles l'accès aux informations sur la structure de propriété est limité. - La double vérification exigée par le projet (déclaration du client + source indépendante) se heurte à là la réalité des obligations déclaratives pesant sur les entreprises auprès des registres officiels, dont la fiabilité et l'exhaustivité sont variables selon les États membres. L'article 10 du projet, relatif à la vérification de l'identité du bénéficiaire effectif, renvoie à des sources tierces (agences de crédit, prestataires de données) dont le coût et la disponibilité ne sont pas proportionnés au niveau de risque réel pour des contrats de protection sociale complémentaire à faible risque. La FIPS propose de préciser, à l'article 11, paragraphe 1, que dans les situations à faible risque, les entités assujetties peuvent se limiter à une vérification fondée sur une source unique fiable, sans être tenues d'effectuer une double vérification systématique. • Article 19 : Identification des personnes politiquement exposées En pratique les institutions de prévoyance en France : – Ne sont pas en mesure de vérifier de manière autonome et exhaustive le statut de PPE de chaque salarié couvert par un contrat collectif, en l'absence de relation contractuelle directe avec l'assuré individuel. – Se trouvent dans une position délicate entre l'impératif de

Name of the respondent	Question	Answer
		conformité réglementaire et les contraintes pratiques de contrôle, notamment pour des produits à faible risque. La FIPS propose de préciser, à l'article 19, paragraphe 3, qu'en l'absence de risque présenté par les PPE dans les contrats des institutions de prévoyance, ces dernières soient exemptées de l'obligation d'identifier les PPE.
FIPS	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	La FIPS considère que, dans leur état actuel, les propositions du projet de RTS n'offrent pas une flexibilité suffisante pour permettre leur application proportionnée à l'ensemble des produits et services offerts par les institutions de prévoyance, en raison d'une inadéquation structurelle avec les contrats collectifs portés par celles-ci. Le projet de RTS a été conçu principalement à partir des pratiques et des contraintes du secteur bancaire et des établissements financiers traditionnels. Les exigences relatives à la collecte d'informations sur l'objet et la nature prévue de la relation d'affaires (article 18), la mise à jour périodique des données d'identification dans des situations à faible risque (article 23) et la compréhension des flux financiers et de la source des fonds (article 18, points c et d), sont difficilement transposables telles quelles aux contrats de protection sociale complémentaire, pour les raisons suivantes : – La relation d'affaires au sens du règlement est établie avec l'entreprise adhérente, et non avec chaque salarié individuellement. Les informations sur les flux financiers (cotisations prélevées sur la paie, prestations versées en complément de la Sécurité sociale) sont structurellement encadrées et connues. – La mise à jour calendaire des données d'identification est peu

Name of the respondent	Question	Answer
		adaptée à des contrats collectifs dont les paramètres ne varient qu'à l'occasion d'événements clairement identifiables (changement de dirigeant, modification de l'accord collectif, adhésion d'un nouvel établissement). – La notion de « source des fonds » est sans objet pour les cotisations prélevées sur la paie des salariés par l'employeur : le circuit financier est parfaitement tracé et réglementé par le droit social. Ø Proposition de modification rédactionnelle La FIPS demande que l'AMLA précise, à l'article 18 ou dans un considérant dédié, que dans le cadre de contrats collectifs d'entreprise à faible risque, la compréhension de l'objet et de la nature prévue de la relation d'affaires peut être présumée satisfaite dès lors que : > le contrat a été conclu avec une entreprise adhérente identifiée et dont l'activité est connue ; > les cotisations sont prélevées par voie de retenue sur salaire conformément aux obligations sociales légales ; > les prestations sont conditionnées à la réalisation du risque dûment justifié. La FIPS demande également que la fréquence de mise à jour des données (article 23) puisse, pour ces contrats, être déclenchée par événement (par exemple en raison de la modification du contrat ou de changement de situation de l'entreprise) plutôt que sur une base calendaire systématique.
FIPS	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	La FIPS ne peut pas souscrire à l'affirmation selon laquelle le projet de RTS, dans son état actuel, permet une application pleinement effective de l'approche fondée sur les risques pour les institutions de prévoyance en France. • L'approche uniforme nuit à la nécessaire proportionnalité

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	sectorielle L'AMLA a fait le choix d'un RTS uniforme, applicable à l'ensemble des entités assujetties des secteurs financier et non financier. La FIPS comprend les motivations de ce choix (cohérence réglementaire, lutte contre l'arbitrage, simplification). Toutefois, elle considère que cette approche, si elle n'est pas tempérée par des clarifications sectorielles substantielles, conduit à appliquer au secteur de la protection sociale complémentaire française des exigences calibrées sur les établissements bancaires et les prestataires de services de paiement, dont le profil de risque est sans commune mesure avec celui des institutions de prévoyance en France. L'analyse d'impact du projet de RTS confirme d'ailleurs que « les défis liés à la CDD ne sont pas principalement spécifiques à un secteur mais spécifiques au risque ». Or, si tel est le cas, les exigences minimales devraient être calibrées sur le niveau de risque effectivement identifié dans chaque secteur, et non sur le dénominateur commun le plus élevé. • L'éloignement au regard des spécificités des contrats portés par les institutions de prévoyance en France La FIPS observe que le projet de RTS ne comporte aucune disposition spécifique reconnaissant la particularité des contrats collectifs d'entreprise, pourtant fondamentalement distincts des contrats individuels en termes de : – Modalités de souscription : c'est l'entreprise, et non le salarié, qui souscrit le contrat. – Modalités de gestion : les cotisations et les prestations transitent par l'entreprise, qui agit comme intermédiaire identifié et contrôlé. – Connaissance du client : l'institution connaît l'entreprise adhérente en tant que client principal ; la connaissance des

Name of the respondent	Question	Answer
		salariés individuels est assurée indirectement par le lien de travail. – Profil de risque : le caractère obligatoire et collectif de la couverture, combiné à l'absence de valeur de rachat dans la plupart des produits, réduit drastiquement les possibilités d'utilisation à des fins de blanchiment. Ø Proposition de modification rédactionnelle La FIPS recommande que l'AMLA intègre, dans le corps du RTS ou dans ses considérants, une disposition reconnaissant explicitement que les contrats collectifs d'entreprise souscrits par des entités réglementées et présentant un risque LCB-FT faible bénéficient d'un régime de vigilance simplifié modulé, dans lequel : > la vérification de l'identité de l'entreprise adhérente vaut identification du souscripteur du contrat collectif ; > la surveillance des salariés assurés peut reposer sur les données transmises dans le cadre de la Déclaration sociale nominative (DSN) ou de tout équivalent dans les autres États membres ; > la mise à jour des données est déclenchée par événement et non par révision calendaire systématique.
FIPS	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	La FIPS identifie au moins une situation concrète dans laquelle les informations requises par le projet de RTS sont généralement indisponibles pour les institutions de prévoyance en France, et pour lesquelles aucune solution alternative n'est prévue. Il s'agit de la vérification des bénéficiaires effectifs des PME et TPE. La très grande majorité des entreprises adhérentes aux contrats collectifs de prévoyance sont des PME ou des TPE, dont la structure de propriété est simple mais pour lesquelles

Name of the respondent	Question	Answer
		l'accès aux informations sur les bénéficiaires effectifs via les registres nationaux est parfois incomplet ou non à jour. La FIPS rappelle que les registres nationaux des bénéficiaires effectifs ne sont pas encore harmonisés à l'échelle de l'Union et présentent des lacunes documentaires. Les institutions de prévoyance en France ne disposent pas toujours des moyens pour résoudre les divergences constatées entre les déclarations des clients et les données des registres, ce que le projet de RTS semble pourtant exiger implicitement. Ø Proposition de modification rédactionnelle La FIPS propose que l'AMLA intègre dans le RTS une disposition permettant, dans les cas à faible risque, de fonder la vérification du bénéficiaire effectif sur une source unique fiable (registre officiel ou déclaration de l'entreprise cliente), sans obligation de double vérification systématique.
FIPS	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	La FIPS estime que les mesures de vigilance simplifiée (SDD) définies à la section 5 du projet de RTS sont insuffisantes pour refléter le faible niveau de risque LCB-FT des contrats portés par les institutions de prévoyance en France. Elle formule les propositions concrètes suivantes. • Reconnaissance explicite des contrats collectifs de protection sociale complémentaire comme à faible risque Le projet de RTS devrait préciser que les contrats collectifs présentant les caractéristiques suivantes relèvent systématiquement du régime SDD : – Souscription par une entreprise adhérente réglementée ou soumise à des obligations légales de déclaration sociale. – Cotisations versées par prélèvement sur la paie ou virement bancaire de l'entreprise, sans possibilité de paiement en espèces.

Name of the respondent	Question	Answer
		– Prestations conditionnées à la réalisation d'un risque dûment justifié et versées en complément de la Sécurité sociale. – Absence de valeur de rachat ou valeur de rachat strictement limitée au montant des cotisations versées. – Absence de possibilité de transfert de fonds à des tiers non identifiés. • Recours aux sources institutionnelles comme sources fiables Le projet de RTS liste, à l'article 10, les sources utilisables pour la vérification de l'identité du bénéficiaire effectif (registres publics, agences de crédit, factures de services publics, etc.). La FIPS demande que soient explicitement reconnues comme sources fiables et indépendantes au sens de l'article 8 : – La Déclaration sociale nominative (DSN), qui constitue la source de référence pour l'identification des salariés dans le droit social français, ou équivalent afin de pouvoir s'adapter au contexte européen de ce projet de texte. – Les bases de données des organismes collecteurs (OPCO, anciens OPCA) pour les contrats collectifs relevant d'un accord de branche. – Les registres professionnels européens équivalents dans les autres États membres. Ø Proposition de modification rédactionnelle La FIPS propose de compléter l'article 10, point b), du projet de RTS par l'ajout suivant : « iv bis. les informations transmises par l'entreprise souscriptrice dans le cadre de ses obligations de déclaration sociale légale, notamment la Déclaration sociale nominative ou tout équivalent national, dans la mesure où elles ont été préalablement vérifiées par les autorités compétentes ; » Elle propose également d'ajouter, à l'article 21 relatif aux mesures SDD pour l'identification du bénéficiaire effectif, que

Name of the respondent	Question	Answer
		pour les contrats collectifs à faible risque, la consultation des informations transmises par l'entreprise adhérente dans le cadre de ses obligations sociales est réputée satisfaire à l'exigence de vérification par une source indépendante.
FIPS	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
FIPS	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
FIPS	Please specify which recital you refer to, and share your comments below.	La FIPS propose d'insérer dans les considérants, une clarification selon laquelle, pour les contrats collectifs d'entreprise relevant d'un profil de risque faible, la compréhension de la structure de propriété peut être satisfaite par la consultation du registre central des bénéficiaires effectifs ou du registre SIREN ou équivalent dans les autres Etats membres, sans qu'une vérification documentaire complémentaire systématique soit requise.
FIPS	Do you have any comments on the Annex in the draft RTS?	No
FIPS	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	FDR generally agrees that the proposals in the draft RTS can be applied across the range of services provided by audit and accounting firms in the non-financial sector. FDR welcomes that the draft consistently reflects a risk-based and proportionate approach, allowing flexibility in application depending on the size of the firm, customer types and risk profile.

Name of the respondent	Question	Answer
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	FDR generally agrees that the draft supports an effective and risk-based application of AML/CFT requirements. FDR particularly welcomes that the draft allows the use of different reliable and independent sources as part of the identification and verification of customers and beneficial owners, including public registers and other national public information sources. FDR considers it important that the final RTS continues to clarify that such sources may be used as part of a proportionate and risk-based approach for customers presenting normal risk, including for smaller audit and accounting firms in the non-financial sector.
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	FDR does not generally experience that the information required as part of customer due diligence procedures is routinely unavailable for audit and accounting firms in Denmark. For customers presenting normal risk, company registers, beneficial ownership registers and other public information are commonly used as an integrated part of customer due diligence procedures. FDR therefore considers it important that the final RTS continues to support a flexible and proportionate use of such reliable national sources.
Foreningen Danske Revisorer (FDR) - The	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in	At this stage, FDR does not have specific proposals for additional simplified due diligence measures. However, FDR considers it important that the risk-based

Name of the respondent	Question	Answer
Association of Danish Auditors	the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	approach continues to allow for proportionate application of customer due diligence procedures for customers and services presenting lower risk, particularly for smaller firms in the non-financial sector.
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	FDR supports the importance of ongoing monitoring and updating of customer information as part of an effective AML/CFT framework. At the same time, it is important that these requirements can continue to be fulfilled through proportionate and practically manageable procedures for smaller audit and accounting firms. FDR therefore welcomes that the RTS remains principle-based and technology-neutral, allowing firms in the non-financial sector to continue using manual and risk-based procedures where appropriate in light of the size of the firm, customer types and risk profile.
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Association of Danish Auditors		
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	How would you rate the proposals set out in the draft RTS overall?	Neutral
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	No significant additional costs

Name of the respondent	Question	Answer
Foreningen Danske Revisorer (FDR) - The Association of Danish Auditors	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	No significant additional costs
Forex AB	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	See below

Name of the respondent	Question	Answer
Forex AB	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The proposed are effective but FOREX has concerns about the ability to apply them, in particular concerning applying simplified measures for due diligence. We suggest that it is clarified that a high risk sector can apply such measures as in article 20 in order achieve the intended purpose of applying risk based measures appropriate to the transaction/customer.
Forex AB	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	FOREX is market leading in currency exchange services in Scandinavia. Due to it's size and nature of the business, many customers such as tourists are not resident in the EU. The requirements to verify the adress (article2) are in such cases practically impossible. It should be specified that verification of adress is made when "reasonably possible", or that simplified due diligence can be applied.
Forex AB	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No comment
Forex AB	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No comment
Forex AB	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Forex AB	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	20
Forex AB	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	As explained.
Forex AB	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Forex AB	Do you have any comments on the Annex in the draft RTS?	No
Forex AB	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Forex AB	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact
Forex AB	Please justify your answer to the previous question and provide evidence where possible.	There are no reasonably accessible and credible tools to verify foreign residents adresses in the implied way of AMLR and that accomodate for low risk currency exchange needs such as tourists.
France Assureurs	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i)	The changes introduced by the AML package and the draft RTS to the AML/CFT regime currently in force in France are significant and will require insurance companies to make a

Name of the respondent	Question	Answer
	explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	major effort to adapt within very tight deadlines. The deadline for implementing the Single Regulation by July 10, 2027, will place insurance companies in great difficulty, as this timeframe is far too short to allow for the necessary changes to insurance companies' procedures and IT systems, especially since many of the measures to be implemented fall under Level 2 texts and have not yet been finalized or determined. The changes to procedures and IT systems required to implement the new obligations will entail unavoidable lead times that cannot be less than 12 or 18 months from the moment the new obligations are known and definitively established, that is, once all Level 2 texts have been published in the Official Journal (it is not possible to develop IT tools based on draft texts). IT projects are complex and costly for companies and must be planned well in advance to allow for a phase of cost estimation followed by budget approval by management and a phase of technical implementation. The deadline set forth in the RTS should therefore be adjusted to account for budgetary constraints. France Assureurs suggests establishing a transition period to give insurance companies the time they need to bring their procedures and tools into compliance with the new rules set forth in the Level 1 and Level 2 texts. France Assureurs also notes that a number of measures do not sufficiently take into account the risk-based approach and appear to correspond to a high level of risk. The lack of proportionality also applies to the measures relating to Sections 5 (simplified due diligence measures) and 6 (enhanced due diligence measures). France Assureurs notes that on the ML/TF risk scale, life insurance products fall between moderate and low risk:

Name of the respondent	Question	Answer
		• Moderate risk corresponds to savings-type life insurance contracts with a cash surrender value, which in this sense meet the definition of insurance-based investment contracts; • Low risk corresponds to various types of insurance products, which may include: o contingency contracts providing temporary death coverage alone or combined with disability/incapacity coverage without a cash surrender value; o contracts with a lifetime coverage provision intended solely to finance the insured's funeral expenses; even if these contracts may have surrender values, they are not intended to generate returns on premiums paid as in a savings contract and do not include investment components; o pension plans without cash value; o insurance contracts issued by a lender to cover the risk of the borrower's death. Many life insurance products do not include investment components or cash surrender values. The draft RTS adopted pursuant to Article 28(1) of the AMLR Regulation should better reflect the risk-based approach for products classified as moderate to low risk, such as life insurance products, particularly for life insurance products without investment components or cash surrender values. Life insurance products eligible for simplified supervision under Annex II are insufficiently defined in that annex.
France Assureurs	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	Article 2 : Article 2 ii) stipulates that obliged entities are required to obtain the trade name for a legal entity. The draft RTS should not go beyond what is permitted under Regulation 2024/1624.

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Since trade names can change, the only relevant name is the one listed in the registry. Collecting this information would require an upgrade to existing tools and would therefore incur costs. Proposal: to remove the reference to the trade name in Article 2 ii). Article 5 : Proposal: to clarify Article 5 by adding the following sentence at the end of the paragraph: “Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient,” which is already included in Recital 3. Article 7 : It is important that the identity verification measures authorized by regulation in the context of establishing a relationship remotely: - be widely available; - be reasonably priced; - not be overly burdensome or complex to implement. The procedures for establishing a relationship with a customer are a crucial issue for an insurance company, and should not be called into question for reasons related to the availability or lack thereof of identity verification tools for establishing a relationship remotely.

Name of the respondent	Question	Answer
		France Assureurs notes that the alternative solution proposed in paragraph 3 of Article 7: - is based on conditions that are very difficult to implement and would represent a significant departure from the alternative solutions currently authorized in France; - would entail very high costs; - would be disproportionate for certain products, particularly those with low risk; - could make it difficult for certain categories of customers to access insurance services (such as vulnerable or elderly individuals). France Assureurs suggests maintaining the alternative solutions currently in place in France in the event that solutions based on the eIDAS Regulation are unavailable, and in particular the option to use the following two alternative measures: - Request a copy of the identity card - Require that the first payment for the transaction be made from or to an account opened in the customer's name with an entity subject to AML/CFT regulations established in a Member State of the European Union, a State party to the Agreement on the European Economic Area, or a third country imposing equivalent obligations regarding the fight against money laundering and terrorist financing Article 8 : This article imposes very onerous requirements on regulated entities regarding the burden of proof. It is not the insurer's role to conduct this type of verification, which, moreover, would have to be documented. How could regulated entities

Name of the respondent	Question	Answer
		verify that information is accurate? They will never be able to do so. How can one prove the accuracy of a reputation? This seems contradictory and impossible. Moreover, the implementation of the risk-based approach already requires regulated entities to take into account the quality of their sources. Proposal: deleting Article 8 of the draft RTS or, at the very least, amending it as follows: “In order to determine whether a source of information is reliable and independent, obliged entities shall take risk-sensitive measures to assess: (a) the official status and independence of the information source; (c) the extent to which the information is up-to-date; (d) the extent to which the source of information is accurate, based on what is reasonably verifiable by obliged entities in practice Article 11 : The measures set forth in Article 11 are not proportionate for low-risk products, such as retirement savings. These measures, which impose burdens on the client, should be adjusted to reflect the low risk involved. If this provision is not removed, what does “credible” mean? How can regulated entities verify in practice that information is credible?

Name of the respondent	Question	Answer
		Proposals: - replacing “applicable” with “available” in paragraph 3. d. - delete paragraph 4(a). Article 12 : Regulation 2024/1624 AMLR does not refer to RTS for the definition of specific measures applicable to complex corporate structures. Proposal: delete this article, or at the very least delete paragraph 1(d).
France Assureurs	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	/
France Assureurs	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Proposal for an additional article within Section 5 (Simplified Due Diligence Measures) of the draft RTS: Additional Article: Simplified Sector-Specific Measures Regarding Life Insurance 1. The following insurance products are classified as low-risk: a. Life insurance and income protection products, provided they meet the following conditions: - The policy does not provide for any cash value or include any savings or investment components; - The contract covers the risk of death alone or in

Name of the respondent	Question	Answer
		combination with supplementary coverage for disability or incapacity; - The premium amount is determined at the start of the business relationship; - Premiums paid do not result in any refund to the insured or policyholder; - Benefits are payable upon the occurrence of a covered event. b. Loan insurance products, provided they meet the following conditions: - The contract does not provide for any cash value or any savings or investment component; - The premium amount is determined at the start of the business relationship; - Benefits payable in the event of a claim are paid to the bank that granted the loan. c. Group retirement insurance products with mandatory or voluntary enrollment, provided they meet the following conditions: - The policyholder is not the participant but the employer; - The funds contributing to the contract come primarily from profit-sharing, incentive schemes, employer matching contributions, or mandatory contributions subject to a regulated financial framework, or from voluntary payments by the employee that are limited in amount and drawn from an account opened in the employee's or employer's name with a financial institution in the European Union; - The contract cannot be surrendered, except for limited exceptions provided for by regulation. d. Individual retirement insurance products, provided they meet the following conditions:

Name of the respondent	Question	Answer
		- The policy cannot be surrendered, except in limited cases provided for by regulation. e. Funeral insurance products, provided they meet the following conditions: - The policy contains no investment component; - The insured selects a guaranteed lump-sum amount and pays premiums determined based on that amount, their age, and the chosen premium payment term; - In the event of death, the specified lump-sum amount is paid out, regardless of the total amount of premiums paid, subject to contractual exclusions. f. End-of-career severance pay insurance products, provided they meet the following conditions: - The policy does not include any savings or investment components; - The policy is taken out by the employer to provide insurance coverage for a legal, contractual, or company-agreement obligation to pay the employee a retirement severance payment; - The insurance benefit is triggered exclusively by the employee's actual retirement. 2. For the insurance contracts referred to in paragraph 1, the following simplified due diligence measures apply: a. Identify the customer and the beneficial owner in accordance with the procedures set forth in Articles 20 and 21 of these RTS;; b. Establish a general system for monitoring and analyzing transactions that is tailored to the main characteristics of the customer base and the products, in order to detect any unusual or suspicious transactions.

Name of the respondent	Question	Answer
		At a minimum, France Assureurs suggests implementing the following simplified due diligence measures for low-risk life insurance products: - Regarding the identification of individual customers: limit the information to be collected to last name, first name, date and place of birth, and country of residence. The concept of country of residence should also be clarified (tax residence or postal address). - Regarding the identification of legal entities: exclude the collection of the trade name; the only relevant information is the entity's registered name and the country of registration. - With regard to customer due diligence, exclude the following data: • data regarding socioeconomic status and occupation; • the national identification number; • a description of the nature of the business relationship; • investigating the source of funds; • an estimate of the amount of the proposed transactions; • as well as the additional measures applicable to politically exposed persons (PEPs). - Apply enhanced due diligence only: • based on the "Business Relationship Assessment" score (risk profile), • based on defined thresholds, • or in the event of detected anomalies (customer profile, transaction, or geographic criteria). - Limit the application of due diligence measures—in cases where a high-risk profile is identified based on a limited scope of data—to the moment of payment of benefits or withdrawal of funds only.

Name of the respondent	Question	Answer
		- Allow customer due diligence to be updated based on a triggering event, beyond the 5-year period.
France Assureurs	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Recitals 3 and 7: The situation of stateless persons or undocumented (persons who are not able to provide an identity documents) raises significant operational challenges. What specific and practical documents should be collected in such cases? How should we deal with these people? Recital 9: Could the draft RTS provide further clarification on the legitimate circumstances in which an obliged entity may be unable to identify a natural person as the beneficial owner of its client? Recital 21: France Assureurs suggests clarifying the scope of Recital 21 by adding the following text: “There may be situations where the information to be collected under Regulation (EU) 2024/1624 and this Regulation is already available to the obliged entity or, for example, to other obliged entities within the group. This could also be the case when information is obtained, for instance, to understand the customer's investment profile, or the nature of the engagement, or as part of the audit acceptance process. Where this is the case, obliged entities should consider how such information contributes to complying with their AML/CFT

Name of the respondent	Question	Answer
		requirements, such as understanding the purpose and intended nature of the beneficial ownership or occasional transaction, before requesting similar information to avoid unnecessary duplication and reduce the regulatory burden on both the obliged entity and its customers. Where the existing information is not deemed sufficient by the entity in order to fulfil it's obligations under article 20 of Regulation (EU) 2024/1624, additional information should be obtained." Article 3: Article 3 specifies that the address details referred to in Article 22(1) of Regulation 2024/1624 include, in particular, the following information: the building number and the flat number. This information goes beyond the requirements of Regulation 2024/1624. Proposal: delete the reference to the building number and flat number Article 4: Article 4 stipulates that if the customer's identity document, passport or equivalent provides additional information on their place of birth, this information must be collected. To ensure greater legal certainty and clarity, France Assureurs suggests deleting this provision so that the data to be collected is not made dependent on the type of document provided. Article 6:

Name of the respondent	Question	Answer
		Article 6(1) stipulates that, for a document to be considered equivalent to an identity document or a passport, it must contain security features to guarantee its authenticity. France Assureurs points out that insurers do not have the means to verify whether a document contains such security features. It is up to the Member States to ensure this.
France Assureurs	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	19
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Comments on the issue of proportionality: Article 19 of the draft RTS provides for the systematic identification of politically exposed persons, which entails the implementation of specific due diligence measures for such individuals. However, for life insurance products with a low ML/TF risk (such as loan insurance, funeral insurance, etc.), the designation as a PEP has no risk implications given the characteristics of the product. For these products, the draft RTS should provide for simplified due diligence measures allowing for an exemption from PEP identification measures and additional due diligence requirements applicable to such individuals. Indeed, applying such measures to insurance products with a low ML/TF risk imposes a disproportionate burden on insurance companies and unnecessary constraints on insurers' PEP clients. France Assureurs also requests: - The provision of an official list of PPE entities:

Name of the respondent	Question	Answer
		- Targeted outreach by public authorities to PPEs to inform them of their status and remind them of the rules.
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	20
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Comments on the issue of proportionality: Proposal: Remove the reference to the trade name in Article 20(1)(b)(ii), as trade names may change; the only relevant name is the one listed in the registry. Collecting this information would require changes to the systems in place and would therefore incur costs.
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	21
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Comments on the issue of proportionality: Verifying the identity of the beneficial owner appears disproportionate in low-risk situations; it should be sufficient for an obliged entity to consult the central registry. Proposal: - Add a paragraph at the beginning of Article 21 to specify the data required to identify beneficial owners in low-risk situations: “1. In situations of low risk, obliged entities shall obtain at least the following information to identify the beneficial owner or senior managing officials: (a) all names and surnames; (b) place of birth; (c) date of birth.

Name of the respondent	Question	Answer
		(…) - Delete the last paragraph of Article 21.
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	23
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Comments on the issue of proportionality: Requiring customer information to be updated every five years is excessive for low-risk life insurance products, as it is disproportionate to the risk. Proposal: Pursuant to Article 33(1)(b) of Regulation 2024/1624, delete paragraph 2.
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	25
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Comments on the issue of proportionality: Obligation to verify the authenticity and accuracy of information regarding the customer and beneficial owners (Article 25 a)) raises questions regarding costs, the resources available to implement it, and its feasibility. Indeed, this verification obligation does not pertain to a document but to information. By what means can regulated entities verify the authenticity and accuracy of information, such as negative media reports? The resources currently made available by Member States appear insufficient. Similarly, how could regulated entities assess the reputation of a customer or a beneficial owner? Proposal: deleting points a. and b. of Article 25.

Name of the respondent	Question	Answer
France Assureurs	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	27
France Assureurs	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Comments on the issue of proportionality: The obligations set forth in Article 27, insofar as they also concern the origin of assets, are excessive. In practice, it will be very difficult to request the supporting documents mentioned, and this will create difficulties in customer relations. Applying these measures to beneficial owners is also excessive. Indeed, information on the origin of funds and the origin of the assets of beneficial owners is not available to insurers. On what legal basis could this information be requested? Furthermore, how is the collection of this information relevant to assessing the risk associated with an insurance contract? Proposal: delete the references to “, and source of wealth” and “and of the beneficial owners” in the heading of Article 27 and in its first paragraph.
France Assureurs	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
France Assureurs	Do you have any comments on the Annex in the draft RTS?	No
France Assureurs	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
France Invest	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We support the approach adopted by the AMLA in drafting proportionate, risk-based CDD measures which contribute to harmonizing the implementation of AML/CFT requirements in the EU. We welcome the aim of: - providing flexible provisions suitable to the products and services offered by obliged entities: the AMLA should take into consideration specificities in the financial sector and in particular the application of the RTS to the fund sector. We would like to reiterate that the new legislative package will apply not only to large credit institutions but also to smaller asset management companies and we propose implementing proportionality in particular with respect to the size of the obliged entity. - promoting simplification, and - enabling obliged entities to determine the most effective and proportionate measures to be applied.
France Invest	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	As far as their fundraising activity is concerned, our members perform due diligence on their investors as customers, which in particular includes the identification of beneficial owners, as well as politically exposed persons. Among the transactions subject to AML/CFT on the liabilities side are also unit/share transfers: in closed-end funds, units/shares may be transferred through secondary transactions. Most private equity funds admit only a designated type

Name of the respondent	Question	Answer
		of low-risk investor, such as regulated firms investing as a principal (e.g. life insurance companies) or corporate pension schemes. These lower risk customers tend to undergo thorough due diligence processes, including AML/CFT-related know your customer, before being accepted as investors. On the other hand, non-institutional investors (such as high-net-worth individuals) might pose a greater risk from an AML/CFT perspective due to their more complicated ownership structures (they may use complex structures to invest in funds), their effective control by a politically exposed person or the presence of trust arrangements. In general, our members' fundraising activity will mainly consist of business relations which span over a period of time. As for their transactional activity, risks may arise not only at the time of an original investment, but also throughout its ongoing ownership (follow-on investment, sale to managers, debt restructuring…) and its exit. Under national regulation, AIFMs shall assess the ML/FT risk when implementing their investments policy, as well as define procedures to control their investment choices. We welcome AMLA's objective of introducing flexible provisions that are adapted to the diversity of financial sector activities, including the specificities of the fund industry. We would like to recall that the new legislative package will apply not only to large credit institutions

Name of the respondent	Question	Answer
		but also to smaller asset management companies. It is essential to ensure that the principle of proportionality is effectively embedded in the RTS. We believe that the current framework could be further improved to ensure sufficient flexibility in practice. While the RTS aim to be product-neutral, further clarification could be provided to better reflect the specific characteristics of certain sectors, such as private equity and other collective investment undertakings. In these sectors, business models, investor profiles and transaction structures differ significantly from those of traditional banking services, which may justify tailored application of customer due diligence measures. We therefore suggest that the RTS explicitly incorporate a clearer proportionality clause, for example: Obliged entities shall apply the requirements set out in these RTS in a manner that is proportionate to their size, internal organisation, and the nature, scale and complexity of their activities, as well as to the level of ML/TF risk associated with the products and services provided. Such clarification would ensure that the RTS remain workable across different business models while preserving their risk-based nature. We propose introducing minimum thresholds in terms

Name of the respondent	Question	Answer
		of monetary amounts, applicable to natural persons, to avoid having to carry out KYC checks on individuals (e.g. portfolio managers) purchasing units/shares for small amounts. For instance, setting a threshold would help limit the need to perform CDD on numerous cross-border transactions involving management companies. A similar threshold already exists for legal entities. Moreover, under FATCA, a threshold of USD 50k applies to U.S. individual investors. We would also advocate for a proportionate, risk-based approach to be applied to clients that are also employees of the obliged entities. In the asset management sector, employees acting as managers of a specific fund may invest in that fund, to align their interests with other external investors. In such cases, the AML/CFT risk is generally lower, as these individuals are already subject to internal oversight, governance frameworks, and, in many instances, prior due diligence as part of their employment. Applying full, standard customer due diligence requirements in this context may therefore result in unnecessary duplication of controls without materially enhancing risk mitigation.
France Invest	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	France Invest supports the objective of ensuring the effective application of a risk-based approach towards compliance with AML/CFT requirements. In particular, we welcome that several provisions of the draft RTS explicitly refer to a risk-based approach, notably in relation to the understanding of ownership and control structures and the application of due

Name of the respondent	Question	Answer
		diligence measures. However, we believe that further clarification is needed to ensure that this approach can be applied effectively in practice. First, the risk-based approach should be more explicitly and consistently applied to regulated entities. In many cases, customers or intermediaries are themselves subject to robust AML/CFT frameworks, which significantly mitigates the level of risk. The RTS should therefore allow obliged entities to take this into account when calibrating their due diligence measures. Second, certain provisions may lead to a disproportionate application of enhanced due diligence requirements, without sufficiently considering the actual level of risk. For example, criteria such as the number of layers in ownership structures may result in many standard industry structures being classified as complex, even where the underlying ML/TF risk remains low. This could undermine the effectiveness of a genuinely risk-based approach. Third, the information requirements in some cases appear overly extensive and not sufficiently targeted to relevant risk factors. A more focused approach, limited to information that is materially relevant for AML/CFT purposes - such as the identification of beneficial owners - would better align with a risk-based methodology.

Name of the respondent	Question	Answer
		Fourth, minimum thresholds in terms of monetary amounts, applicable to natural persons, should be introduced in order to avoid having to carry out KYC checks on individuals (portfolio managers) purchasing units/shares for small amounts. For instance, setting a threshold of EUR 50k would help limit the need to perform CDD on numerous cross-border transactions involving management companies. A similar threshold already exists for legal entities. Moreover, under FATCA, a threshold of USD 50k applies to U.S. individual investors. Comments on article 18 It should be noted that most customers in private equity investment funds make occasional transactions and should not be considered as additional risk. In particular, the purpose and economic rationale on why the customer has chosen the obliged entities' products or services is not relevant. In this context, we welcome the clarification that the nature of the product or service provided should be taken into account when identifying the purpose and intended nature of a business relationship or occasional transaction. The reasoning behind a customer selecting an investment fund is generally difficult to challenge (track record, management team, investment strategy, etc.). As a consequence, requiring obliged entities to determine why a customer requested the obliged

Name of the respondent	Question	Answer
		entities' products or services does not bring added value in terms of AML-FT for investment funds. In the same vein, the use of products or services is not relevant for investment funds. A simplified understanding of the purpose and intended nature of the business relationship should apply to investments in private equity. Less detailed information on the client's business sector should be sufficient, especially if it involves a regulated sector. Comments on section 5 on simplified due diligence Sectoral simplified measures should apply to collective investment undertakings and in particular private equity investment funds. In particular, a simplified understanding of the purpose and intended nature of the business relationship should apply to investments in private equity. Less detailed information on the client's business sector should be sufficient, especially if it involves a regulated sector. We would like to underline that there may be difficulties in accessing central registers, even for companies with a legitimate interest. Measures should be implemented to ensure that all obligated companies can request and obtain access to the central registers of all European countries.
France Invest	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account	Considering the nature of our members' activities, there are indeed situations where the information required

Name of the respondent	Question	Answer
	your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	for customer due diligence may be difficult to obtain in practice and where the draft RTS do not always provide sufficiently workable alternatives. First, in relation to the verification of identity, obtaining certified copies of identity documents may prove challenging, particularly for customers located in third countries. This requirement may generate significant costs and practical difficulties for customers, especially where access to certification services is limited. The obligation to provide a certified copy will increase the costs borne by the customers, as they will be the ones who will have to acquire and provide such a copy for themselves, their beneficial owners or persons purporting to act on their behalf. This will be even more challenging for customers from third countries. At a minimum, it should be clearly specified that certification by an authorised solicitor is acceptable, and that third-party certification should be required only in cases of medium or high risk, not for low-risk entities subject to AML/CFT requirements (including AIFs, credit institutions, and insurance companies). In practice, documents relating to HNWIs may be certified by a solicitor (most HNWIs have a solicitor) but not necessarily by a notary. It would also be helpful to clarify which solicitors are authorised to provide such certification, as this may vary by jurisdiction. Second, access to reliable public registers is not always

Name of the respondent	Question	Answer
		guaranteed. In some third countries, registers may be inaccessible, restricted (e.g. requiring a local IP address), or only available through costly intermediaries such as local legal counsel. This makes it difficult for obliged entities to independently verify information and may result in disproportionate compliance costs. In general, all official registers accessible via the internet should be regarded as reliable and independent sources of information. In third countries, access to public registers and means to verify their information may not be available or may prove costly, for example in case the services of a local lawyer have to be used. For instance, some public registers in third countries are not accessible unless searches are conducted through an IP address located within that country (e.g., China, certain US registers, etc.). Third, obtaining detailed ownership information, such as shareholder registers or granular data on intermediary entities within complex structures, may be impractical or even impossible in certain cases. These documents are not always available or may be difficult to access, while alternative sources may provide sufficient assurance for AML/CFT purposes. Fourth, identifying ultimate beneficial owners may be particularly challenging for certain legal arrangements, such as mutual fund trusts (“fonds communs de

Name of the respondent	Question	Answer
		placement”). Finally, access to central registers across jurisdictions may be burdensome, even for entities with a legitimate interest, due to administrative barriers or costs associated with registration and access procedures.
France Invest	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Additional simplified due diligence measures should be explicitly included in the draft RTS for sectors associated with lower ML/TF risks. Sector-specific simplified measures should be introduced to reflect the lower risk profile of certain products and services, rather than applying uniform requirements across all financial activities In particular, simplified measures should apply to collective investment undertakings, including private equity, venture capital, private debt and infrastructure funds, which generally involve professional investors and are subject to robust regulatory frameworks. A simplified understanding of the purpose and intended nature of the business relationship should be permitted for investments in private equity. In practice, the rationale for investing in such funds (e.g. track record, investment strategy or management expertise) is standard and does not provide meaningful additional insight from an AML/CFT perspective. Less detailed information regarding the customer’s business sector should be sufficient, particularly where the customer operates in a regulated sector.

Name of the respondent	Question	Answer
		In addition, we highlight that practical obstacles - such as difficulties in accessing central registers, even for entities with a legitimate interest - should be addressed to ensure that simplified due diligence can be effectively implemented.
France Invest	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We fully support the introduction of article 1 which clarifies the application of proportionality and risk-based approach. More specifically, we propose introducing minimum thresholds in terms of monetary amounts, applicable to natural persons, to avoid having to carry out KYC checks on individuals (portfolio managers) purchasing units/shares for small amounts. For instance, setting a threshold would help limit the need to perform CDD on numerous cross-border transactions involving management companies. A similar threshold already exists for legal entities. Moreover, under FATCA, a threshold of USD 50k applies to U.S. individual investors. We would also advocate for a proportionate, risk-based approach to be applied to managers who invest in the funds supporting the company that employs them. In

Name of the respondent	Question	Answer
		such cases, the AML/CFT risk is generally lower, as these individuals are already subject to internal oversight, governance frameworks, and, in many instances, prior due diligence as part of their employment. Applying full, standard customer due diligence requirements in this context may therefore result in unnecessary duplication of controls without materially enhancing risk mitigation
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We welcome the flexibility introduced with regards the provision of details on addresses (postal code and street name) have to be provided where available.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	4
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	We welcome that the country name is the main piece of information required and that additional information on the place of birth should be provided only if the ID, passport or equivalent of the customer provides it.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	6
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	We fully support that certified translations are not required. Indeed, certified translations of documents may be costly and imply additional costs for investors. We welcome that obliged entities should ensure they understand the content of documents provided in a foreign language. In paragraph 5 of Art. 6, we also welcome the removal

Name of the respondent	Question	Answer
		of the obligation to provide “the original” identity document. That said, the obligation for the obliged entity to provide “the identity document, passport or equivalent, or a certified copy thereof (…)” appears excessive and does not leave room for the obliged entities to apply a risk-based approach. We would like to point out that it may prove difficult in practice to obtain the identity document, passport or equivalent from ultra-high-net-worth individuals. The obligation to provide a certified copy will increase the costs borne by the customers, as they will be the ones who will have to acquire and provide such a copy for themselves, their beneficial owners or persons purporting to act on their behalf. This will be even more challenging for customers from third countries. At a minimum, it should be clearly specified that certification by an authorised solicitor is acceptable, and that third-party certification should be required only in cases of medium or high risk, not for low-risk entities subject to AML/CFT requirements (including AIFs, credit institutions, and insurance companies). In practice, documents relating to HNWIs may be certified by a solicitor (most HNWIs have a solicitor) but not necessarily by a notary. It would also be helpful to clarify which solicitors are authorised to provide such certification, as this may vary by jurisdiction.

Name of the respondent	Question	Answer
		Therefore, we would propose the following changes in paragraph 5 of article 5 of the draft RTS: For the purposes of verifying the identity of the persons referred to in article 22(6) and article 22(7) piont (a) of Regulation 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent or act in accordance with Article 7. In case of customers posing a higher risk of ML/TF such documents will be in the original or a certified copy.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	With the increased use of online services in the financial industry, non-face-to-face interactions have become a standard business practice in many countries. Such circumstances can potentially be an example of a higher risk scenario; however, not in cases where other mitigating factors or measures apply. Our members report that, in practice, they currently do not widely use electronic identification means, as they are too cumbersome to implement. Electronic identification means which are e-IDAS compliant may not be readily available or not available at all to clients in the EU (e.g. in Member States which are not yet equipped with such solutions which should meet with highly technical specifications) or in third countries.

Name of the respondent	Question	Answer
		We therefore welcome the provision of alternative options to the use of e-IDAS compliant solutions to verify the customer in a non face-to-face context. These alternative options, which should be available in all cases, will be particularly appreciated when dealing with third-country clients. We welcome that the explicit consent of the person to be identified is not required in the case of subscription in an investment fund, as customers which provide the requested information implicitly agree to do so. The management company should be able to rely on intermediaries when intermediaries have customers face-to-face. Last, the requirement to use e-IDAS compliant solution should only relate to non-professional investors.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	8
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	We would like to note that, in France, INPI and Infogreffe registers are considered as reliable and independent sources of information. However, if the AMF's database provides public information on authorised funds, it does not cover unauthorized funds. It is therefore difficult to find information on the latter.

Name of the respondent	Question	Answer
		We suggest that ESMA's and national competent authorities' registers, as well as all official registers accessible via the internet, should be considered as a reliable and independent source of information. In third countries, access to public registers and means to verify their information may not be available or may prove costly, for example in case the services of a local lawyer have to be used. For instance, some public registers in third countries are not accessible unless searches are conducted through an IP address located within that country (e.g., China, certain US registers, etc.). More generally, all official registers accessible via the internet should be regarded as reliable and independent sources of information. We suggest adding the following clarification to article 8: ESMA's and national competent authorities' registers, as well as all official registers accessible via the internet, shall be considered as reliable and independent sources of information. Obtaining proof of address should be sufficient, in order to avoid requiring obligated companies to rely on service providers established in these countries to obtain public information, which would incur additional costs.

Name of the respondent	Question	Answer
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	10
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	While confidentiality of personal information and compliance with GDPR should be preserved, we believe that access to public registers should be facilitated. A key challenge for our members lies in identifying the ultimate beneficial owners and in particular the beneficiaries of mutual fund trusts (“fonds communs de placement”) which are not legal persons. In addition, registration on public registers may not be easy or costly in other Member States or third countries. Registers should be available freely for entities subject to this Regulation and processes should be simplified. Regarding the collection of information from other sources, we welcome that information for the verification of the beneficial owner may be collected through credit agencies and/or comparable reputable data service providers. We would appreciate if AMLA could provide a list of such reputable data service providers.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	11
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	We welcome that the AMLA requires a risk-based approach to understand the ownership and control structure of the customer. Indeed, the information collection exercise should not be excessive and be

Name of the respondent	Question	Answer
		limited to relevant information. Due diligence should be adapted to the type of investor: reinforced due diligence should not apply to all clients but should be limited to some of them. We warmly welcome the simplified requirements set out in article 11. That said, we would prefer if the AMLA set an exhaustive list of information to obtain and assess in order to increase legal certainty for market players. We therefore suggest rewording paragraph 2 of Article 11 as follows: For the purposes of the first paragraph and in situations where the customer's ownership and control structure contains more than one legal entity or legal arrangement, obliged entities shall take risk-sensitive measures to obtain and assess the following information In addition, it should not be necessary to know the number of shares held by class or type of shares for each intermediary entity. In practice, this would amount to requiring the shareholder register (a document that can be difficult to obtain in some cases), while other measures can be put in place to confirm the ownership and control chain, such as obtaining annual financial statements or an organizational chart signed by a regulated entity that details this information. Requiring information on all the legal entities and/or legal arrangements functioning as intermediary connections

Name of the respondent	Question	Answer
		between the customer and their beneficial owner does not bring any value for ML-FT perspective. The only relevant information is the beneficial owners of the customer.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	12
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	1/ We appreciate the increase to three of the number of layers between the customer and the beneficial owner to characterize complex structures. That said, the proposed provision would still result in the vast majority of ownership structures being treated as complex, as multinational companies and medium/large financial entities typically have multiple layers of ownership, and in the majority of cases, in different jurisdictions. This would not be in line with the level of AML/CFT risk posed by those structures It should be clarified that complex structures do not necessarily imply higher overall risk. Other factors should be considered to conclude as High Risk customer. For instance, the type of client, the type of investment and the type of distribution channel should be taken into account. A risk-based approach should be applied, and proportionality should be implemented depending on the relevant sector. For instance, as far as private equity (including private debt and infrastructure financing) is concerned, the due diligence that our members should perform on their clients (in the context of their fund-raising activity)

Name of the respondent	Question	Answer
		should be distinguished from the risk assessment they should perform on their investments (in the context of their transactional activity). If complex structures in the context of their fundraising activity may attract attention, complex structures in the context of their transactional activity is quite common, whereby structures may include several intermediary holdings. The proposed number of “three or more layers between the customer and the beneficial owner” remains disproportionately low. In the case of our industry, there can be multiple layers of entities in the intermediary chain; however, as they would all be regulated financial entities, the ML/TF risk posed would remain low. Therefore, the number of layers should be significantly higher and the identification of regulated financial entities should exempt the structure from being treated as complex. Furthermore, an AML letter confirming the ownership chain as reflected in the organizational chart should be considered sufficient to meet the obligation to verify the accuracy of the organizational chart (particularly given the difficulty in obtaining shareholder registers described previously). 2/ We appreciate that the customer and any legal entities present at any of these layers to be considered are those that are registered in jurisdictions outside the EU.

Name of the respondent	Question	Answer
		More broadly, we believe that customers and legal entities registered in countries that uphold the same AML/CFT standards as EU jurisdictions should also be left aside.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	13
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The requirement to obtain the same information for senior managing officials of legal entities as for the beneficial owners is disproportionate. Indeed, it may be questioned whether the level of risk associated with senior managing officials should be the same as that attached to beneficial owners and therefore justifies requiring the same set of information and verification rules for both. In this context, we welcome the flexibility offered to obliged entities to obtain the address of the registered office of the legal entity instead of the residential address and country of residence. That said, requiring the CEO of a large company to provide his ID would be disproportionate, as his/her data and identity may be easily asserted through the relevant company's registers. Such data is not necessary nor commensurate to the limited ML/TF risk that he/she would pose. In practice, some clients may refuse to provide this information (due to legal constraints, for example, or when dealing with public entities). Alternative methods

Name of the respondent	Question	Answer
		of identification or verification should be possible when reliable public sources are available (including for politically exposed persons). Most non-EU asset managers only agree to provide copies of identity documents for beneficial owners and authorized signatories who sign documentation as part of the business relationship. This requirement should be modified in order to avoid harming the competitiveness of EU asset managers and, when the ID card of a senior managing official is not available, it should be possible to instead use a certificate on its content.
France Invest	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	17
France Invest	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	We generally call for simplified measures for specific sectors or financial products or services which are associated with lower ML/TF risks such as collective investment undertakings, including private equity investment funds (including venture capital, private debt and infrastructure funds). Private equity funds tend to have a smaller number of investors. Some of them (retail funds) may, however, be distributed more widely, through a large number of distributors and sub-distributors. In such case, fund distribution involves multiple parties, such as the fund manager, the fund depositary and sub-custodians, registrars, tied agents, advisory and discretionary wealth managers or platform service providers. Certain distribution arrangements may affect how much the

Name of the respondent	Question	Answer
		fund knows about its customers: this would be the case where units or shares in the fund can be treated using Euroclear Central Securities Depositary services without the fund or fund manager being notified at the time of the trade. We therefore suggest rewording the introductory part of article 17 as follows: When a collective investment undertaking distributes its shares and units through another credit institution or financial institution that acts in its own name but on behalf of or for the benefit of one or more final investors, it may fulfil the requirement under article 20(1), point (h) of Regulation (EU) 2024/1624 if it is satisfied that a) the credit institution or financial institution is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are no less robust than those stipulated by Regulation (EU) 2024/1624; b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); c) the risk associated with the relationship with the credit or financial institution is low or standard; and d) the credit institution or financial institution applies

Name of the respondent	Question	Answer
		robust and risk-sensitive CDD measures to its own customers A list of countries that have AML/CFT requirements that are not less robust than those required by Regulation (EU) 2024/1624 should be made available. Indeed, a country-by-country analysis by each individual obliged entity would be burdensome and inefficient. It would in particular be quite challenging if the relevant countries do not have a prescriptive approach such as the approach now adopted at the EU level and instead allow for greater professional judgment. Such a list could be established and updated by the AMLA, following the example of the list that used to be made in France: https://www.legifrance.gouv.fr/loda/id/JORFTEXT000024414854#:~:text=Les%20pays%20tiers%20%C3%A9quivalents%20mentionn%C3%A9s,Mexique%2C%20Singapour%20et%20la%20Suisse. We propose clarifying letter a of article 17 as follows: The intermediary is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those required by Regulation (EU) 2024/1624 and shows on the list established by the AMLA.

Name of the respondent	Question	Answer
France Invest	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
France Invest	Please specify which recital you refer to, and share your comments below.	Comments on section 6 on enhanced due diligence First of all, we would like to note that intermediaries in a chain whereby an entity is subject to enhanced due diligence measures will also be subject to these measures, thus potentially increasing significantly their obligations in terms of AML/CFT. There should be no obligation to obtain information on close relationships in all cases of enhanced due diligence. Indeed, enhanced due diligence can sometimes be seen as intrusive, and gathering information about the families of managers in companies invested in by private equity funds may present significant challenges. It would be appropriate to reconsider the level of requirements for enhanced due diligence when a regulated intermediary in an equivalent country, such as an asset manager, is involved in the business relationship. In the same way, verifications regarding the source of funds and the source of wealth of the beneficial owners do not make sense when the managers themselves are the beneficial owners. Comment on article 25 letter b The proposed rule requires obliged entities to assess

Name of the respondent	Question	Answer
		the reputation of the customer and the beneficial owner. This requirement should be clarified and limited to their reputation in terms of AML/CFT. It should also be clarified that the assessment of the reputation is based on information available at the time of the transaction. We therefore suggest the following wording: Enable the obliged entity to assess the reputation of the customer and the beneficial owner in terms of AML/CFT, based on information available at the time of the transaction. Comment on article 26 The requirement set out in article 26 should be simplified as it could be considered intrusive and potentially compromise business confidentiality. Comment on article 30 In practice, it is very challenging to ensure that all aliases of a client or beneficial owner are subject to screening. Meeting the obligation to screen "wallet addresses" is also very difficult. In addition, we recommend defining an appropriate timeframe for sanctions lists to be updated by the authorities in the screening tool.

Name of the respondent	Question	Answer
France Invest	Do you have any comments on the Annex in the draft RTS?	No
France Invest	How would you rate the proposals set out in the draft RTS overall?	Neutral
France Post-Marché	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	A. Services liés aux titres Le secteur du post-marché travaille pour de nombreux clients directs tels que banques, institutions financières, sociétés de gestions, assets managers, fonds, émetteurs. Ces clients directs fournissent eux-mêmes des prestations de services pour leurs clients qui interviennent dans la chaîne de valeur jusqu'à l'investisseur final. Les acteurs du post-marché interviennent ensuite comme prestataires ou délégués pour enregistrer les transactions ou les avoirs de ces investisseurs finaux. Ils n'ont pas de rôle actif sur la mise en place de la transaction ou de la relation d'affaires entre son client direct et l'investisseur final. Tenue de registre de fonds (article 17) Les clients des clients (investisseurs des clients) doivent être exclus. Les Sociétés de Gestion sont responsables. Le dépositaire n'a pour client que le fonds ou la Société de Gestion. Il n'a aucune responsabilité sur les investisseurs même s'ils les inscrivent au registre par délégation. Objet de la relation d'affaires (article 18) et Vérification

Name of the respondent	Question	Answer
		de l'identité (article 20) Il faut ajouter la tenue de registre nominatif (d'émetteur ou de fonds) à la liste des activités à faible risque de blanchiment. Dans le cadre de la tenue de registre d'émetteurs, quand l'inscription au registre de l'investisseur est demandée par d'autres institutions financières qui communiquent des informations limitées (nom, prénom, adresse). C'est seulement après l'inscription que les informations sont demandées à l'investisseur. Il faut pouvoir différer l'identification et la collecte des informations complémentaires avant la 1ère opération. Identification des PEP (article 19) Dans le cadre de la tenue de registre d'émetteurs, l'identification ne fait sens que pour la surveillance des transactions mais pas lors de la création du registre (cf. article 42 de l'AMLR), qui est ouvert de facto à la demande du teneur de compte de l'investisseur ou de l'émetteur. Comptes groupés « omnibus » (article 22) La reliance n'est accordée qu'en cas de risque faible vis-à-vis d'entités régulées de l'UE ou dans des juridictions équivalentes. Il ne sera pas possible de « dégrouper » les comptes « omnibus » en cas de risque élevé ou vis-à-vis d'entités dans des pays non-équivalents. B. Services liés aux actifs numériques Nous relevons que l'article 18 du projet de RTS définit les types d'informations pouvant être obtenues pour

Name of the respondent	Question	Answer
		identifier l'objet et la nature envisagée d'une relation d'affaires ou d'une opération occasionnelle. En particulier, le paragraphe c) prévoit que les entités assujetties devraient obtenir, le cas échéant, des informations pour établir l'origine des fonds, en citant notamment le revenu d'emploi, les pensions, les prestations publiques, les subventions ou les revenus d'activité. Bien que cette liste ne soit pas exhaustive, et permette donc une certaine flexibilité dans les types d'informations pouvant être collectées, sa formulation actuelle reflète principalement des contextes financiers traditionnels et ne saisit pas pleinement les spécificités de l'activité en crypto-actifs. Par exemple, en crypto, des indicateurs « traditionnels » tels que le salaire ou les revenus professionnels peuvent ne pas, en eux-mêmes, fournir une preuve suffisante de la provenance des crypto-actifs faisant l'objet de la transaction. Dans ce contexte, il existe une distinction importante entre l'origine de la richesse et l'origine des fonds utilisés dans une transaction spécifique. En tenant compte de cela, les exemples fournis à l'article 18 se rapportent principalement à des indicateurs d'origine de la richesse, plutôt qu'à l'origine immédiate des crypto-actifs utilisés dans une transaction. Avant l'activité de trading, les opérations en crypto impliquent souvent des transferts entre portefeuilles ou des conversions entre monnaie fiduciaire et crypto-actifs. En conséquence, des indicateurs pertinents et fiables de l'origine des fonds peuvent inclure : l'historique des transactions, l'activité des portefeuilles et les relevés de comptes d'exchange.

Name of the respondent	Question	Answer
		Tout en comprenant que l'article n'est pas limitatif et permet donc de collecter davantage d'informations, nous recommandons d'étendre la liste afin d'y inclure d'autres sources fiables et confidentielles comme des extraits d'exchanges. Ceux-ci fournissent des informations plus pertinentes du point de vue des crypto-actifs, car ils permettent de voir comment les opérations ou dépôts sont effectués, en fiat ou en crypto. Ils constituent alors une véritable source de fonds pour les crypto-actifs. L'intégration de cet élément dans les RTS serait alignée sur les pratiques actuelles du marché et offrirait une plus grande sécurité juridique.
France Post-Marché	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Globalement oui, cf. remarques (question 1).
France Post-Marché	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Dans le cadre de la tenue de registre nominatif (émetteur ou fonds), les inscriptions demandées par les teneurs de comptes des investisseurs ne comportent les informations minimum demandé à l'article 20. Les seules informations transmises avec le bordereau de références nominatives (BRN) sont pour (i) les personnes physiques : nom, prénom, adresse, (ii) les personnes morales : dénomination sociale, adresse. La modification du format du BRN au niveau du marché français avec le CSD et les autres participants ne sera pas possible d'ici juillet 2027. Ce projet structurant sera

Name of the respondent	Question	Answer
		coûteux. Il faudrait pouvoir prévoir un régime transitoire en attendant, permettant de différer les diligences avant la première opération. Le régime des dépositaires et des agents de transferts n'a pas été prévu.
France Post-Marché	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Les mesures de vigilances allégées prévues dans l'annexe II de l'AMLR (article 20) devraient être étendues : 1) Facteurs de risque liés aux clients: - les établissements de crédit ou financiers, soumis à des obligations LBC/FT équivalentes dans l'UE ou dans certains pays tiers. 2) Facteurs de risque liés aux produits, aux services, aux transactions ou aux canaux de distribution: - la tenue de registre nominatif (permettant de différer les diligences avant l'exécution de la première opération)
France Post-Marché	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Non
France Post-Marché	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
France Post-Marché	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
France Post-Marché	Please specify which recital you refer to, and share your comments below.	Le considérant 18 sur les comptes groupés est plus équilibré que l'article 22 qui en limite drastiquement la portée et n'offre pas d'alternative à l'ouverture de comptes groupés "omnibus" quand le risque n'est pas ou plus faible.
France Post-Marché	Do you have any comments on the Annex in the draft RTS?	No
France Post-Marché	How would you rate the proposals set out in the draft RTS overall?	Good
France Post-Marché	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and	Disruptive impact

Name of the respondent	Question	Answer
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Den in diesen RTS-Entwürfen enthaltenen Vorschlägen stimmen wir als Spielbank Bad Homburg nur eingeschränkt zu. Zwar begrüßen wir grundsätzlich eine Harmonisierung und Klarstellung der Sorgfaltspflichten, sehen aber einige Vorschläge als überschießend und praxisfern an, speziell für den Glücksspielsektor, der ohnehin streng reguliert ist. Unsere zentralen Kritikpunkte betreffen die folgenden Bestimmungen, die wir nachstehend begründen und zu denen wir abschließend jeweils einen konkreten Formulierungsvorschlag vorlegen: (1) Umfang der zu erhebenden Identitätsdaten (Art. 4, Art. 5 und Art. 20 Abs. 1 lit. a ii. & iv. RTS-Entwurf) (2) Bestimmung Zweck der Geschäftsbeziehung oder gelegentlichen Transaktion und Mittelherkunft (Art. 18 RTS-Entwurf) (3) Bestimmung Zweck der Geschäftsbeziehung oder gelegentlichen Transaktion und Mittelherkunft bei verstärkten Sorgfaltspflichten Art. 25 ff. RTS-Entwurf Dies vorweg festgehalten, nehmen wir gerne im Einzelnen unter dem Reiter Additional input Stellung. Die Ausführungen zum geringen Geldwäscherisiko entnehmen Sie bitte "Question5. Additional observations".
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	Hier haben wir erhebliche Zweifel. Der risikobasierte Ansatz ist zwar in Art. 1 RTS-Entwurf festgeschrieben, jedoch führen die Vorschriften vielmehr dazu, dass unsere risikobasierte Flexibilität eingeschränkt wird.

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	Obwohl der RTS Entwurf den risikobasierten Ansatz ausdrücklich anerkennt, ermöglichen seine materiellen Vorgaben dessen wirksame Anwendung im stationären Glücksspiel nicht. Die Vorschriften lassen keine ausreichende Differenzierung nach Geschäftsmodell und Risikoprofil zu und führen im Spielbankbetrieb mit physischer Prämisse zu einer faktischen Gleichbehandlung mit Hochrisiko Finanzgeschäften. Ein wirksamer risikobasierter Ansatz erfordert jedoch sektorale Anpassungen, Ausnahmen oder klarstellende Anwendungshinweise. Wie bereits dargestellt, liegt dem stationären Spielbankbetrieb ein geringes Geldwäscherisiko zugrunde, gleichzeitig sehen die RTS-Entwürfe keine zweifelsfreien, klarstellenden Ausnahmeregelungen für diesen Bereich vor. Für konkrete Lösungs- und Formulierungsvorschläge verweisen wir auf unsere Antworten unter Frage 1.
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Diesbezüglich verweisen wir auf die Antwort unter Frage 1.
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example	Wie in Erwägungsgrund 17 der RTS zu Artikel 28 Absatz 1 der Verordnung (EU) 2024/1624 festgehalten, sollten stets, aber auch in Situationen mit geringem Risiko, lediglich die Informationen zu erheben sein, die in einem Ausweisdokument enthalten sind. Aus unserer

	because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Sicht ist Erwägungsgrund 17 der RTS zu Artikel 28 Absatz 1 der Verordnung (EU) 2024/1624 derzeit nicht ausreichend im RTS-Entwurf berücksichtigt. Zu den konkreten Lösungsvorschlägen und Maßnahmen verweisen wir auf unsere Antwort unter Frage 1.
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Hier liegt grundsätzlich ein geringes Geldwäscherisiko vor. Sämtliche Spieler werden bereits beim Betreten der Spielbank identifiziert. Damit ist eine wesentliche typische Voraussetzung für Geldwäsche – nämlich Anonymität – im stationären Spielbankbetrieb von vornherein ausgeschlossen.Im Vergleich zu anderen Bargeldbranchen liegt eine außergewöhnlich dichte Überwachungsstruktur vor (Videoüberwachung relevanter Bereiche, enge organisatorische Verzahnung von Spielaufsicht, Kassenpersonal und Compliance Einheiten mit kontinuierlichem Informationsaustausch und geschultem Personal, welches Spielverhalten beobachtet, Auffälligkeiten erkennt und bei Bedarf interne Prüfungen oder weitere Maßnahmen veranlasst).Für den Bereich des stationären Glücksspiels sind Schwellenwerte, insb. 2.000 Euro betreffend Sorgfaltsmaßnahmen, bereits sehr niedrig angesetzt. Geldwäsche ist auf Unauffälligkeit, Dezentralität und Distanz angewiesen. Der stationäre Spielbankbetrieb bietet strukturell das Gegenteil. Das Entdeckungsrisiko ist erheblich erhöht und wirkt bereits präventiv. Glücksspiel ist, anders als viele andere Bargeldbranchen, nicht wertstabil. Für Geldwäscher ist der Spielbankbetrieb daher ökonomisch unattraktiv.Ein „Durchschleusen“ von Geldern ohne tatsächliche

Name of the respondent	Question	Answer
		Spielteilnahme oder mit lediglich formalen Einsätzen ist aufgrund dieser Systematik leicht erkennbar, stellt ein typisches Auslöseszenario für interne Prüfungen und ggf. Verdachtsmeldungen dar.Durch den Spielbankbetrieb entsteht kein verwertbarer Herkunftsnachweis für Gelder. Gewinne werden regelmäßig in bar ausgezahlt, ohne Bescheinigung und ohne Überweisung auf Bankkonten. Eine Umwandlung von Bargeld in Buchgeld findet nicht statt. So fehlt ein zentrales Element, nämlich die Integration illegaler Gelder in den formellen Finanzkreislauf.Im Vergleich zu anderen Sektoren ist der Spielbankbetrieb ungeeignet für Strukturierungs oder Smurfing Modelle. Schwellenwerte werden besucher und tagesübergreifend überwacht, atypische Muster können unmittelbar erkannt und analysiert werden. Eine Umgehung durch bloße Aufsplittung von Beträgen ist erheblich erschwert.Identitäts und Präsenzpflichten stellen im Spielbankbetrieb eine erhebliche Hürde für potenzielle Geldwäscher dar. Die Betreiberin der Spielbank wird letztlich von der Stadt Bad Homburg kontrolliert. Staatliche Kontrolle des vorliegenden Glücksspieldienstleisters ist gegeben, womit im Sinne des Erw 63 der AML-VO ein nur geringes Geldwäscherisiko einhergeht.Die Bargeldnähe ist nicht isoliert, sondern im Zusammenspiel mit bestehenden Kontroll- und Transparenzmechanismen zu bewerten, welche hier extrem stark ausgeprägt sind.Eine Gleichsetzung von Bargeldnähe mit hohem Geldwäscherisiko greift zudem zu kurz und widerspricht dem risikobasierten Ansatz des Gesetzgebers.

Name of the respondent	Question	Answer
		Bartransaktionen werden genutzt, um Privatsphäre und informationelle Selbstbestimmung zu wahren. Sie vermeiden die automatische Erstellung detaillierter Zahlungs und Bewegungsprofile. Zudem verhindern sie eine Profilbildung durch Dritte. Die Entscheidung für Bargeld ist Ausdruck eines legitimen Interesses, selbst zu bestimmen, welche finanziellen Informationen dauerhaft gespeichert, ausgewertet oder weiterverarbeitet werden. Dieses Interesse ist besonders schutzwürdig, da das Glücksspiel typischerweise nicht Teil des alltäglichen Zahlungsverkehrs ist. Barzahlungen reduzieren das Risiko, dass sensible Zahlungs und Konsuminformationen durch Datenlecks, unbefugte Zugriffe oder Cyberangriffe in falsche Hände geraten. Vor dem Hintergrund zunehmender Digitalisierung und wachsender Datenschutzrisiken stellt die bewusste Nutzung von Bargeldein rationales und verantwortungsbewusstes Verhalten dar. Selbstkontrolle des Spielverhaltens ist ein zentraler Aspekt. Viele Spieler nutzen Bargeld, um ein Budget festzulegen, jederzeit den Überblick zu behalten und impulsives Nachladen zu vermeiden. Bargeldnutzung unterstützt aktive Selbstregulierung und entspricht den Zielen des Verbraucher und Spielerschutzes. Barbudget ist sichtbar und endlich. Die Möglichkeit, Beträge jederzeit und ohne physische Begrenzung nachzuschießen, kann zu einer Entkopplung zwischen Einsatz und gefühlter finanzieller Belastung führen. Nutzung von Bargeld unterstützt in vielen Fällen ausdrücklich die Ziele des Verbraucher und

Name of the respondent	Question	Answer
		Spielerschutzes. Ein pauschales Zurückdrängen von Bargeldzahlungen steht daher zumindest im Glückspielsektor in einem Spannungsverhältnis zur staatlich verfolgten Zielsetzung der Suchtprävention. Spieler haben ein legitimes Interesse daran, Glücksspielumsätze nicht über das eigene Konto abzuwickeln. Dies dient insbesondere der Wahrung der Privatsphäre gegenüber Dritten (z. B. Ehepartnern oder Familienangehörigen, örtlichen Bankberater). Glückspielaktivitäten können gesellschaftlich negative Assoziationen hervorrufen. Bei Personen in sensiblen beruflichen Positionen ist das Motiv, entsprechende Aktivitäten nicht offen zu legen, sozialadäquat und nicht verdächtig.
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	4
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Wie auch nach Art. 22 der AML-VO, sollen im Rahmen des Art. 20 Abs. 1 lit a ii. und iv RTS-Entwurf bei natürlichen Personen alle Staatsangehörigkeiten und der Geburtsort erfasst werden. Unabhängig davon, ob allgemeine oder vereinfachte Sorgfaltspflichten anzuwenden sind, bedeutet das im Eingangsbereich einer Spielbank Folgendes: Beim Ausweis-Scan müssen Mitarbeiter ggf. händisch noch den Geburtsort sowie weitere Staatsangehörigkeiten notieren, da diese Informationen sich nicht in jedem Fall aus dem amtlichen Ausweis ergeben. Diese Erweiterung

Name of the respondent	Question	Answer
		verkompliziert den Prozess, verlängert die Wartezeiten am Eingang, erhöht die Fehlerquote und bringt fraglichen Mehrwert. Der Geburtsort ist für die Risikobewertung eines Spielers praktisch irrelevant. Es ist nicht ersichtlich, welcher Erkenntnisgewinn im Hinblick auf das Geldwäscherisiko gewonnen wird. Es besteht vielmehr das Risiko einer mittelbaren Benachteiligung deutscher Staatsangehöriger, die im Ausland geboren wurden. Die verpflichtende Erfassung des Geburtsorts kann implizit als Risikomerkmal interpretiert werden und damit faktisch zu einer intensiveren Prüfung dieser Personengruppe führen, obwohl hierfür kein objektiver Anknüpfungspunkt besteht. Der bloße Umstand einer Geburt im Ausland lässt weder Rückschlüsse auf die wirtschaftliche oder rechtliche Verbundenheit mit Drittstaaten zu und ist für sich genommen kein belastbarer Indikator für ein erhöhtes Geldwäscherisiko. Der RTS-Entwurf verlangt, auch bei Anwendung vereinfachter Sorgfaltspflichten nach Art. 20 RTS-Entwurf, die Erhebung des Geburtsorts und aller Staatsangehörigkeiten, d.h. Angaben die nicht zuverlässig aus amtlichen Ausweisdokumenten hervorgehen (z. B. Geburtsort bei deutschen Personalausweisen) und nur durch zusätzliche mündliche Erklärungen oder Nachfragen ohne Überprüfungsmöglichkeit erhoben werden können. Dies widerspricht der Systematik der AML VO, nach der vereinfachte Sorgfaltspflichten gerade vorsehen, den Umfang der Datenerhebung auf das Erforderliche zu begrenzen. Eine standardmäßige Vollerhebung aller

Name of the respondent	Question	Answer
		Identitätsmerkmale konterkariert diesen gesetzgeberischen Ansatz. Zudem besteht Unklarheit, welche Anforderungen an die Angabe des Geburtsorts zu stellen sind. Art. 4 RTS-Entwurf spezifiziert die Angabe des Geburtsorts insoweit, als dass dieser mindestens den Ländernamen erfasst. Sofern das Ausweisdokument zusätzliche Angaben umfasst, sind diese ebenfalls zu erfassen. Hierbei ist insbesondere zu berücksichtigen, dass in einem deutschen Ausweisdokument als Geburtsort stets eine Stadt/Gemeinde und gerade kein Ländername angegeben wird. Dies führt nach wörtlicher Auslegung des Art. 4 RTS-Entwurf gerade in deutschen Spielbanken zu einem erhöhten Aufwand, da neben zusätzlich zur Geburtsstadt separat das Geburtsland erfragt und erfasst werden muss. In jedem Fall ist es deshalb praxisgerecht in Hinblick auf die Identifizierung nur solche Daten zu prüfen, die sich auch aus den gängigen Ausweisdokumenten Personalausweis/Reisepass) ergeben. Formulierungsvorschlag: Als Formulierungsvorschlag bietet sich deshalb an: Art. 4 des RTS-Entwurfs ist wie folgt zu fassen: „Die Angaben zum Geburtsort gemäß Artikel 22 Absatz 1 Buchstabe a Ziffer ii der Verordnung (EU) 2024/1624 umfassen grundsätzlich mindestens den Ländernamen. Enthält der Personalausweis, Reisepass oder ein gleichwertiger Ausweis des Kunden zusätzliche Angaben zum Geburtsort, so werden diese erhoben. Enthält der Personalausweis, Reisepass oder ein gleichwertiger Ausweis des Kunden keine Angaben zum Geburtsort, so

Name of the respondent	Question	Answer
		müssen diese nicht erhoben werden.“ Der vorliegende Formulierungsvorschlag ist im Gegensatz zum bisherigen Entwurf nicht nur für den Glückspielsektor auch angemessen, da der beabsichtigte Zweck nicht außer Verhältnis zu der Schwere des Eingriffs steht. Der vorgeschlagene Ansatz ist darüber hinaus gegenüber dem RTS-Entwurf angemessener und verhältnismäßiger, da er den Grundsatz des risikobasierten Ansatzes sowie das Prinzip der Datensparsamkeit wahrt und gleichzeitig eine wirksame Identifizierung weiterhin sicherstellt. Wie dargelegt, erfolgt durch den RTS-Entwurf kein gehobener zusätzlicher Erkenntnisgewinn bei gleichzeitig bestehendem geringen Grundrisiko. Das Geldwäscherisiko im stationären Glückspielbereich ist nämlich wie eingangs dargelegt insgesamt als gering einzustufen.

Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	18
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Die Abklärung der Geschäftstätigkeit des Kunden und der Herkunft der Mittel ist im Wesentlichen für den Spielbankbesuch unverhältnismäßig und daher nicht “erforderlich” im Sinne des Art. 18 RTS-Entwurf. a) Art. 18 lit. a Ziff. i bis iii RTS-Entwurf Die in Art. 18 lit. a Ziff. i bis iii RTS-Entwurf geforderten Informationen zum Grund der Anforderung der Dienstleistung, der beabsichtigen Verwendung der Dienstleistung und des Grundes der Durchführung der gelegentlichen Transaktion sind in Bezug auf den Spielbank-Besucher selbsterklärend. Durch die Einholung dieser Information würde sich daher kein Erkenntnisgewinn ergeben.

Name of the respondent	Question	Answer
		Es sind gesonderte Auslegungs- und Anwendungshinweise für den Glückspielsektor erforderlich. In jedem Fall sollte klargestellt werden, dass die Informationen in Art. 18 lit. a Ziff i bis iii RTS-Entwurf nicht gesondert zu erheben sind, wenn sie sich aus den Umständen ergeben. Formulierungsvorschlag: Art. 18 Unterabsatz 1 RTS-Entwurf ist daher wie folgt anzupassen: „Für die Zwecke des Artikels 20 Absatz 1 Buchstabe c und des Artikels 25 der Verordnung (EU) 2024/1624 erhalten die Verpflichteten, soweit sich diese Informationen nicht bereits zweifelsfrei aus der Geschäftsbeziehung oder gelegentlichen Transaktion ergeben, Folgendes […]“. Angemessenheit Formulierungsvorschlag betreffend Art. 18 RTS-Entwurf: Die vorliegenden Formulierungsvorschläge sind im Gegensatz zum bisherigen Entwurf für den Glückspielsektor auch angemessen, da der beabsichtigte Zweck nicht außer Verhältnis zu der Schwere des vorgeschlagenen Eingriffs steht. Der vorgeschlagene Ansatz ist darüber hinaus gegenüber dem RTS-Entwurf angemessener und verhältnismäßiger, da er den Grundsatz des risikobasierten Ansatzes sowie das Prinzip der Datensparsamkeit wahrt und gleichzeitig eine wirksame Identifizierung weiterhin sicherstellt. Zum geringen Geldwäscherisiko im stationären Glückspielbereich verweisen wir auf die Ausführungen unter 1.

Name of the respondent	Question	Answer
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	18
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Die Abklärung der Geschäftstätigkeit des Kunden und der Herkunft der Mittel ist im Wesentlichen für den Spielbankbesuch unverhältnismäßig und daher nicht “erforderlich” im Sinne des Art. 18 RTS-Entwurf. Ab 2027 wird jeder Kunde über eine Spielerkarte und ein damit verbundenes Spielerkonto verfügen müssen. Im Hinblick auf Art. 18 lit. b RTS-Entwurf wird der geschätzte Betrag der einzuzahlenden Mittel damit sichergestellt. Der Betrag der einzuzahlenden Mittel ergibt sich somit aus dem Betrag, der auf die Spielerkarte bzw. das Spielerkonto eingezahlt wird. Gerade die im physischen Glücksspiel vorliegenden ad-hoc-Geschäfte sind von einer gewissen Spontanität geprägt, sodass bei Beginn des Besuchs der geschätzte Betrag der einzuzahlenden Mittel nur schwer vorhersehbar ist. Nach unserer Erfahrung ist es die Regel, dass die einzuzahlenden Beträge im Laufe eines Spieltages weiter aufgestockt werden. Sollte in diesem Fall der geschätzte Betrag der einzuzahlenden Mittel bei jeder Aufstockung aktualisiert erfasst werden müssen, würde das zu einem erheblichen Mehraufwand führen, der den Spielbetrieb erheblich stören würde. Anders als bei der Eröffnung eines Bankkontos ist allerdings aus unserer Sicht durch die jeweilige Einzahlung von einzusetzenden Mitteln eine entsprechende Schätzung dem Spielbankbetrieb immanent und daher eine vorzeitige Abklärung bzw. spätere Aktualisierung nicht erforderlich.

Name of the respondent	Question	Answer
		Es sind grundsätzlich gesonderte Auslegungs- und Anwendungshinweise zumindest für den Glückspielsektor erforderlich. In jedem Fall sollte klargestellt werden, dass die Informationen in Art. 18 lit. b RTS-Entwurf beim Spielbankbesuch unter Verwendung eines Spielerkontos ausreichend erfasst sind und daher nicht mehr gesondert zu erheben sind. Formulierungsvorschlag: Art 18 lit. b RTS-Entwurf ist daher um den Unterabsatz 2 zu ergänzen: „Anbieter von Glücksspieldiensten, die eine physische Prämisse betreiben, sind hiervon ausgenommen.“ Angemessenheit Formulierungsvorschlag betreffend Art. 18 RTS-Entwurf: Die vorliegenden Formulierungsvorschläge sind im Gegensatz zum bisherigen Entwurf für den Glückspielsektor auch angemessen, da der beabsichtigte Zweck nicht außer Verhältnis zu der Schwere des vorgeschlagenen Eingriffs steht. Der vorgeschlagene Ansatz ist darüber hinaus gegenüber dem RTS-Entwurf angemessener und verhältnismäßiger, da er den Grundsatz des risikobasierten Ansatzes sowie das Prinzip der Datensparsamkeit wahrt und gleichzeitig eine wirksame Identifizierung weiterhin sicherstellt. Zum geringen Geldwäscherisiko im stationären Glückspielbereich verweisen wir auf die Ausführungen unter 1.

Name of the respondent	Question	Answer
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Die Abklärung der Geschäftstätigkeit des Kunden und der Herkunft der Mittel ist im Wesentlichen für den Spielbankbesuch unverhältnismäßig und daher nicht “erforderlich” im Sinne des Art. 18 RTS-Entwurf. Die Angaben in Bezug auf die Geldquelle gemäß Art. 18 lit. c RTS-Entwurf sind im Spielbankbetrieb nicht sinnvoll erfüllbar. Insbesondere sind die jeweiligen Angaben der Kunden für die Betreiber der Spielbanken nicht ohne Weiteres überprüfbar. Dies gilt insbesondere dann, wenn es sich um eine gelegentliche Transaktion handelt, also z.B. einen Kunden, der die Spielbank nur ein einziges Mal besucht. Der Geldwäscher wird regelmäßig keine Bedenken haben unzutreffende Geldquellen anzugeben, die sich im ad-hoc Spielbetrieb vor Ort nicht überprüfen lassen. Es sind grundsätzlich gesonderte Auslegungs- und Anwendungshinweise für den Glückspielsektor erforderlich. In jedem Fall sollte klargestellt werden, dass die Informationen in Art. 18 lit. c RTS-Entwurf beim Spielbankbesuch nicht erforderlich sind und mithin nicht erhoben werden müssen. Formulierungsvorschlag: Art 18 lit. c RTS-Entwurf ist daher um den Unterabsatz 2 zu ergänzen: „Anbieter von Glücksspieldiensten, die eine physische Prämisse betreiben, sind hiervon ausgenommen.“ Angemessenheit Formulierungsvorschlag betreffend Art. 18 RTS-Entwurf: Die vorliegenden Formulierungsvorschläge sind im Gegensatz zum bisherigen Entwurf für den

Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	27
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Die Einholung der im Rahmen von Art. 25 ff. RTS-Entwurf erforderlichen Informationen zu Einkünfteherkunft bei der Anwendung von verstärkten Sorgfaltspflichten ist im stationären Glücksspielsektor nicht umsetzbar. Die Beibringung einer Steuererklärung, von Gehaltsabrechnungen oder etwa Erbschaftsunterlagen wie einem Erbschein (Art. 27 lit. a und d RTS-Entwurf) kann nicht ad-hoc vor Ort von einem Spielbank-Besucher erwartet werden.

Name of the respondent	Question	Answer
		Hervorzuheben ist, dass es sich in stationären Spielbanken Ad-Hoc-Geschäfte getätigt werden. Hierbei können die entsprechenden Unterlagen und Nachweise unmöglich erbracht oder angefordert werden. Selbst wenn die entsprechenden Unterlagen der Spielbank vorliegen, ist es für die Verpflichteten nicht ohne weiteres möglich die Echtheit der vorgelegten Dokumente zu prüfen, insbesondere wenn es sich um ausländische Dokumente handelt. Es ist zu befürchten, dass seriöse ausländische Kunden, welche die Spielbank spontan besuchen möchten, abgewiesen werden müssen, da diese in aller Regel keinen Nachweis der Einkünfteherkunft mit sich führen werden. Dahingegen können vorgelegte gefälschte Dokumente nicht auf Echtheit untersucht werden, sodass im Ergebnis das Geldwäscherisiko nicht reduziert wird. Gleichzeitig wird durch die Einführung von Spielerkonten das Geldwäscherisiko bereits dergestalt minimiert, dass fortan ein Großteil der hohen Spieleinsätze bereits aus Buchgeld besteht. Formulierungsvorschlag: Art. 27 RTS-Entwurf ist daher wie folgt anzupassen: „Für die Zwecke des Artikels 34 Absatz 4 Buchstabe c der Verordnung (EU) 2024/1624 erhalten die Verpflichteten solche zusätzlichen Informationen über die Herkunft der Gelder und die Vermögensquelle des Kunden und der wirtschaftlichen Eigentümer, die sie davon überzeugen, dass die Herkunft der Gelder oder die Vermögensquelle aus rechtmäßigen Tätigkeiten stammt. Anbieter von Glücksspieldiensten, die eine physische Prämisse betreiben, sind hiervon ausgenommen. Diese

Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	18
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Die im Entwurf vorgesehenen technischen Regulierungsstandards sind in ihrer jetzigen Ausgestaltung nicht hinreichend flexibel, um auf das gesamte Spektrum der von stationären Spielbanken mit physischer Prämisse erbrachten Dienstleistungen sachgerecht angewendet zu werden. Zahlreiche Vorschriften sind erkennbar auf Geschäftsmodelle des Finanzsektors zugeschnitten und passen strukturell nicht auf den Präsenz- und Ad-hoc Betrieb einer Spielbank.

Name of the respondent	Question	Answer
		Im Einzelnen bestehen insbesondere folgende strukturelle Fehlanpassungen: (1) Beibringung von Nachweisen betreffend die Mittelherkunft (wie z.B. Steuererklärungen) (siehe gesonderte Anmerkung zu 27). (2) Schätzungen zu eingesetzten Mitteln (3) Finanzsektortypische Empfänger- und Zahlungslogik (4) Unrealistische Erwartungen an Verifizierbarkeit bei Gelegenheitskunden 2. Anforderung zur Schätzung von eingesetzten Mitteln Sofern, anderes als unter Frage 1 bereits dargestellt, nicht davon ausgegangen werden kann, dass eine Schätzung der einzusetzenden Mittel beim Spielbankbesuch durch die jeweilige Einzahlung der einzusetzenden Mittel ausreichend erfolgt ist, ist die Anforderung gem. Art. 18 lit. b RTS-Entwurf für den Spielbankbetrieb nicht anwendbar. Die Erwartung einer ex-ante-Präzision widerspricht der Natur des Glückspiels und ist praktisch nicht erfüllbar. Zum konkreten Lösungs- und Formulierungsvorschlag betreffend Art. 18 lit. b RTS-Entwurf verweisen wir auf den Vorschlag unter Frage 1. 3. Finanzsektortypische Empfänger und Zahlungslogik Insbesondere Art. 18 lit d RTS-Entwurf verlangt Informationen über den Empfänger von Geldern bzw. den wirtschaftlichen Zweck der Weiterleitung. Im stationären Spielbankbetrieb ist Empfänger der Mittel stets der Spielbankbetreiber selbst bzw. der physisch anwesende Kunde. Die Vorschrift ist erkennbar für Zahlungs- und Finanzdienstleister konzipiert und nicht für Glückspielanbieter mit physischer Prämisse.

Name of the respondent	Question	Answer
		Zum konkreten Lösungs- und Formulierungsvorschlag betreffend Art. 18 lit. d RTS-Entwurf verweisen wir auf den Vorschlag unter Frage 1. 4. Unrealistische Erwartungen an Verifizierbarkeit bei Gelegenheitskunden Insbesondere die Vorgaben zur Überprüfung der Mittelherkunft bzw. des Geschäftszwecks gem. Art. 18 und 27 RTS-Entwurf setzen voraus, dass Angaben kurzfristig überprüfbar sind, verlässliche Vergleichs- oder Referenzdaten vorliegen und Abweichungen regelmäßig erkannt werden können. Im Spielbankbetrieb liegen anders als im Finanzsektor entsprechende Referenzdaten regelmäßig nicht vor, es bestehen keine Mandats- oder Vertragsakten und eine kurzfristige inhaltliche Plausibilisierung ist nicht möglich. Der RTS-Entwurf verkennt, den bereits dargelegten Charakters des Spielbankbesuch als typischerweise punktuelles Freizeitgeschäft anstelle eines dauerhaften Vertrags- oder Mandatsverhältnisses, das oft spontan und ohne Wiederholung stattfindet. Die Datenerhebung erzeugt gerade im Spielbankbetrieb Formalismus ohne belastbaren Erkenntnisgewinn. Zum konkreten Lösungs- und Formulierungsvorschlag betreffend Art. 18 und Art. 27 RTS-Entwurf verweisen wir auf den Vorschlag unter Frage 1.
Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	27

(4) Unrealistische Erwartungen an Verifizierbarkeit bei Gelegenheitskunden 1. Anforderung zur Beibringung von Nachweisen betreffend die Mittelherkunft Dies gilt insbesondere hinsichtlich der Beibringung etwa einer Steuererklärung oder aktueller Gehaltsabrechnungen (Art. 27 RTS-Entwurf). Eine Anforderung derartiger Dokumente mag im Rahmen von Konteneröffnungen sinnvoll und praktikabel sein. Der Spielbankbesuch dagegen erfolgt regelmäßig ohne Vorbereitung, ist nicht zwingend auf eine längerfristige Geschäftsbeziehung angelegt, Kunden führen entsprechende Unterlagen in der Regel nicht mit sich

Name of the respondent	Question	Answer
		und schließlich ist eine Echtheitsprüfung, insbesondere von ausländischen Dokumenten vor Ort objektiv nicht möglich. Der spontane Besuch von Spielbanken, insbesondere für ausländische Kunden, wird durch diese hohen Anforderungen praktisch unmöglich gemacht. Zudem ist zu berücksichtigen, dass stationäre Spielbanken oft eine hohe Kundenfrequenz haben. Eine hohe Anzahl von Kunden muss innerhalb kurzer Zeit bedient werden. Lange Wartezeiten – etwa durch umfangreiche Dokumentenanforderungen oder Prüfprozesse – sind aus betrieblicher wie auch aus Kundensicht zu vermeiden und mit dem Geschäftsmodell einer stationären Spielbank nicht vereinbar. Darüber hinaus ist der Spielbankbesuch typischerweise kein dauerhaftes Vertrags- oder Mandatsverhältnis, sondern ein punktuelles Freizeitgeschäft, oft spontan und ohne Wiederholung. Die Anforderung entsprechender Nachweise zur Mittelherkunft ist insofern für den Kunden nicht nachvollziehbar und auch spontan nicht umsetzbar. Zum konkreten Lösungs- und Formulierungsvorschlag betreffend Art. 27 RTS-Entwurf verweisen wir auf den Vorschlag unter Frage 1. 4. Unrealistische Erwartungen an Verifizierbarkeit bei Gelegenheitskunden Insbesondere die Vorgaben zur Überprüfung der Mittelherkunft bzw. des Geschäftszwecks gem. Francois-Blanc-Spielbank GmbH Bad Homburg v.d.Höhe	Please justify your answer to the previous question and provide evidence where possible.	See comments in contribution
Franklin Templeton International Services S.à r.l.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not agree that Article 17 can be applied effectively to the collective investment undertaking (CIU) sector. The fund industry operates fundamentally differently from banking. A UCITS fund does not have branches, customer-facing staff, or direct relationships with end investors. Fund shares are distributed through multiple layers of regulated intermediaries: the Management Company (ManCo) delegates investor-facing operations to a Transfer Agent (TA), which processes orders from global distributors, who serve sub-distributors and local banks, who in turn serve end investors. In a nominee model, which represents the majority of cross-border UCITS distribution, the ManCo's customer is the intermediary, not the end investor. Under nominee structures, the ManCo has no direct contractual relationship with, and no visibility of, the end investor. Article 17, as drafted, requires CIUs to be "satisfied"

Name of the respondent	Question	Answer
		that intermediaries will provide end investor information where conditions (a)-(d) are not cumulatively met. This look-through obligation is unworkable for three fundamental reasons. First, it is legally impossible in key distribution markets. In Switzerland (Article 47, Banking Act 1934), disclosing client data to a foreign entity without client consent is a criminal offence punishable by up to three years' imprisonment; additionally regulatory consent (FINMA) is also required. In Singapore (Banking Act, Section 47) and Hong Kong (PDPO), similar prohibitions apply and we would expect local distributors to require client consent before being able to share information. These are not marginal markets: they represent a substantial proportion of non-EU UCITS distribution. The draft RTS effectively requires intermediaries in these jurisdictions either to breach their own domestic laws to comply with an EU regulation to which they are not subject or to stop distributing EU-domiciled funds. Second, it would duplicate or triplicate existing controls with no incremental benefit. End investors are already identified, verified, screened, and risk-assessed by their intermediary, itself a regulated entity applying CDD to its own clients. Importantly, we would stress that we, as a firm, require all our distributors to follow EU AML standards. Under the draft RTS, the same investor would be re-screened by the TA and re-approved by the CIU MLRO, creating three sequential approval chains for a single investor already cleared by a regulated institution. This produces triple cost with no additional risk mitigation.

Name of the respondent	Question	Answer
		Third, all costs cascade to the end investor. TA system development costs, ManCo oversight costs, distributor compliance costs, and external legal costs all flow into the fund's Total Expense Ratio (TER). This would make UCITS materially more expensive and less competitive against non-EU alternatives (Cayman, Swiss, Channel Islands funds) that impose no equivalent requirements. Non-EU distributors would rationally de-list UCITS and offer cheaper offshore products instead. The EU would lose all fund-level regulatory oversight over those assets, achieving the exact opposite of the regulation's objectives. As Article 28(1)(b) of the AMLR requires the RTS to have regard to the EU-level risk assessment conducted by the Commission, and as the Commission's SNRA (COM(2022) 554) found no shortcomings in the asset management sector, imposing look-through requirements on CIUs goes beyond the mandate of Article 28(1)(b) and is disproportionate to the identified risk. We note further that the FATF itself does not require look-through in correspondent-type relationships where the respondent institution is a regulated, supervised entity applying its own CDD. Recital 51 of the AMLR similarly supports a reliance-based approach. We urge AMLA to align Article 17 with these principles. We have provided suggested drafting together with reasoning in Section 3 of this survey
Franklin Templeton International Services S.à r.l.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT	No, we do not think that the proposals would allow a risk-based approach to compliance with AML rules. As described more fully in the response to Q1, the look-

Name of the respondent	Question	Answer
	requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	through approach required in in art. 17 when conditions (a)-(d) are not satisfied is impossible in many markets where European collective investment undertakings are distributed. Even if it were legally possible and local intermediaries and clients agreed, it would duplicate or triplicate existing controls with no incremental benefit and significant additional cost to end investors. We believe that, as a result of those increased costs, non-EU distributors would choose to stop using European structures such as UCITs and instead decide to offer alternative offshore products, resulting in a loss of visibility for the EU, the complete opposite of what these rules are trying to achieve. We think that a better approach would be to allow collective investment undertakings to fulfil Article 20(1)(h) obligations by performing robust, risk-based CDD on the intermediary itself, without requiring look-through, where the intermediary is a regulated, supervised entity applying CDD to its own clients. This is consistent with the FATF framework and Recital 51 of the AMLR. Proposed Article 17 — Revised Text "1. When shares or units of a collective investment undertaking are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more of their customers, the collective investment undertaking may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 by being satisfied that: (a) the credit institution or financial institution is subject

Name of the respondent	Question	Answer
		directly or through group-wide policies to AML/CFT obligations in an EU Member State or in a third country whose AML/CFT regime is comparable to that required under Regulation (EU) 2024/1624, or has implemented a comparable AML/CFT program, as verified by the CIU on a risk-sensitive basis; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risks associated with the relationship between the collective investment undertaking and the credit or financial institution are adequately mitigated, taking into account the applicable risk and due diligence mitigation measures; and (d) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and their beneficial owners. 2. When shares or units of a collective investment undertaking are sold through another credit or financial institution to one or more underlying investors, where the units or shares are subscribed in the name of the investor, the collective investment undertaking may fulfil the requirements under Article 20(1) of Regulation (EU) 2024/1624 by being satisfied that conditions (a) to (d) of paragraph 1 are met."
Franklin Templeton International Services S.à r.l.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	As a Management Company (ManCo) distributing funds globally through approximately 800 intermediary relationships, our firm routinely encounters situations where the information required under Article 17 is unavailable and the draft RTS provides no alternative

Name of the respondent	Question	Answer
	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	solution. Scenario I: Nominee distribution (majority of our business) In the vast majority of our distribution relationships, fund units are purchased in the name of the intermediary (nominee) on behalf of its clients. The end investor is the client of the intermediary, not the client of the fund. There is no legal, contractual, or operational relationship between our firm and the end investor. The intermediary, as an AML-obliged entity, performs full CDD on its own clients. Under the draft RTS, if conditions (a)-(d) are not met, our firm would need to obtain end investor identity data from the intermediary. In practice, this is routinely impossible because: • Intermediaries are legally prohibited from sharing client data in key jurisdictions (Switzerland, Singapore, Hong Kong, and others). Obtaining individual client consent from thousands of investors per distributor is operationally unworkable. • Intermediaries consider their client base a core commercial asset. They will not voluntarily share it with fund ManCos, and cannot be compelled to do so as, when outside the EU,they are not subject to the AMLR. • Our firm does not operate the investor register. CDD operations are delegated to Transfer Agents . None has infrastructure to receive and process end investor data from behind nominee structures. Building such systems would cost millions, passed through to the fund. • Data volumes are unmanageable. A single nominee account at a large distributor can represent thousands

Name of the respondent	Question	Answer
		of underlying investors. Across our fund range, the total could reach millions. At industry-standard false-positive screening rates of 2-5%, this would generate tens of thousands of alerts requiring manual review. Scenario II: Registered distribution (e.g. Italy, Spain) In some markets, the end investor's name appears on the fund register, but the intermediary performs all CDD. The draft RTS treats this differently from nominee distribution, yet the ML/TF risk profile is identical: the intermediary has performed full CDD on its client. Treating these scenarios differently is inconsistent with the risk-based approach. Scenario III: Exchange-Traded Funds (ETFs) Our firm manages ETFs listed on regulated exchanges. ETF units are traded continuously on secondary markets. The fund manager cannot know who holds units at any given moment. The draft RTS provides no workable solution for this EUR 2.6 trillion market segment. Scenario IV: Nordic distribution platforms In Sweden, Denmark, and Finland, fund distribution platforms function similarly to stock exchanges, enabling cost-efficient retail access. Look-through requirements would cause the collapse of these well-functioning solutions. Proposed solution: CIUs should fulfil Article 20(1)(h) obligations by performing robust, risk-based CDD on the intermediary itself, without requiring look-through, where the intermediary is a regulated, supervised AML-obliged entity applying CDD to its own clients. This is consistent

Name of the respondent	Question	Answer
		with the FATF framework and Recital 51 of the AMLR. We have provided suggested drafting together with reasoning in Section 3 of this survey
Franklin Templeton International Services S.à r.l.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	NA
Franklin Templeton International Services S.à r.l.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We wish to raise four additional points. 1. The cascade effect: all costs land on the end investor In the fund industry, costs flow upward. TA costs are charged to the ManCo as service fees. ManCo compliance costs are reflected in management fees. Distributor costs are charged as distribution fees. All are fund operating expenses included in the TER and ultimately borne by end investors. At end-2024, EUR 5.7 trillion in EU-domiciled fund assets were held by non-EU investors. If non-EU distributors reduce UCITS offerings by even 5%, approximately EUR 285 billion would leave the EU regulatory perimeter. A 10% reduction: EUR 570 billion. A 20% reduction, plausible if major Asian and Swiss distributors de-list: EUR 1.14 trillion. These assets would move to non-EU fund products distributed by the same banks to the same investors. The EU would lose all fund-level regulatory oversight.

Name of the respondent	Question	Answer
		2. The delegation model is not recognised The draft RTS places all CDD obligations on the CIU/ManCo, but the ManCo does not operate the investor register or perform CDD directly. These functions are delegated to Transfer Agents, separate regulated entities. This delegation model is standard across the EU fund industry and is explicitly permitted under Luxembourg law and the AMLR. The draft RTS does not acknowledge this structure, creating a fundamental mismatch between where the legal obligation falls (ManCo) and where the operational capacity sits (TA). Implementation would require renegotiation of every TA delegation agreement, new oversight frameworks, and dual risk-rating reconciliation processes, all at significant cost passed through to the fund. 3. ETFs require a dedicated carve-out ETFs constitute EUR 2.6 trillion in UCITS net assets and are a cornerstone of the EU's Capital Markets Union objectives. They are traded on regulated exchanges subject to MiFID II/MiFIR. The fund manager has no ability to identify holders of ETF units on secondary markets. Applying Article 17 to ETFs would be operationally impossible and would undermine the EU's own policy goals. We strongly urge AMLA to provide a clear and explicit carve-out for exchange-traded fund structures. 4. CIUs distributing exclusively through regulated EU

Name of the respondent	Question	Answer
		intermediaries Given the Commission's own SNRA finding of no shortcomings, and given that EU intermediaries are themselves AML-obliged entities supervised by EU competent authorities under the same regulatory framework, CIUs distributing exclusively through regulated EU intermediaries should qualify for simplified CDD measures. The risk profile of such relationships is demonstrably low, and the existing controls at intermediary level provide robust AML/CFT coverage without duplication.
Franklin Templeton International Services S.à r.l.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Franklin Templeton International Services S.à r.l.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	17
Franklin Templeton International Services S.à r.l.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Our firm proposes the following revised wording for Article 17, reflecting the operational reality of fund distribution and the need for a proportionate, risk-based approach consistent with the FATF framework and Recital 51 of the AMLR. Proposed Article 17 — Revised Text "1. When shares or units of a collective investment undertaking are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more of their customers, the collective investment undertaking may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 by being satisfied that:

Name of the respondent	Question	Answer
		(a) the credit institution or financial institution is subject directly or through group-wide policies to AML/CFT obligations in an EU Member State or in a third country whose AML/CFT regime is comparable to that required under Regulation (EU) 2024/1624, or has implemented a comparable AML/CFT program, as verified by the CIU on a risk-sensitive basis; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risks associated with the relationship between the collective investment undertaking and the credit or financial institution are adequately mitigated, taking into account the applicable risk and due diligence mitigation measures; and (d) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and their beneficial owners. 2. When shares or units of a collective investment undertaking are sold through another credit or financial institution to one or more underlying investors, where the units or shares are subscribed in the name of the investor, the collective investment undertaking may fulfil the requirements under Article 20(1) of Regulation (EU) 2024/1624 by being satisfied that conditions (a) to (d) of paragraph 1 are met." Rationale for key changes: • Condition (a) — "directly or through group-wide policies" and "comparable AML/CFT programme, as verified by the CIU on a risk-sensitive basis": International banking groups apply group-wide AML

Name of the respondent	Question	Answer
		standards that meet or exceed EU requirements across all subsidiaries, including in jurisdictions where local AML laws may be less developed. Without this recognition, CIUs would be penalised for distributing through regulated global banks operating in Tier II/III countries, despite those banks applying EU-equivalent controls. The addition of "as verified by the CIU on a risk-sensitive basis" ensures this is not a blanket exemption but reflects the CIU's diligent assessment process. • Paragraph 2 — Extension to Scenario II (investor name on register): Where the intermediary performs full CDD on the end investor and conditions (a)-(d) are met, the ML/TF risk is equally mitigated regardless of whose name appears on the register. Treating these scenarios differently would be inconsistent with the risk-based approach. • Removal of the obligation to obtain end investor data: The current draft requires CIUs to be satisfied that intermediaries "will provide information necessary to identify and verify the identity of the final investors without undue delay and upon request." This is unworkable due to data protection barriers, bank secrecy laws in key jurisdictions (Switzerland, Singapore, Hong Kong), and the commercial sensitivity of client data. It should be replaced with a reliance-based approach where the CIU assesses the quality of the intermediary's AML/CFT framework, consistent with the FATF's treatment of correspondent banking relationships and with Recital 51 of the AMLR.

	implementing the provisions of these draft RTS.: One-off implementation costs	
Franklin Templeton International Services S.à r.l.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact
Franklin Templeton International Services S.à r.l.	Please justify your answer to the previous question and provide evidence where possible.	In the fund industry, costs flow upward. TA costs are charged to the ManCo as service fees. ManCo compliance costs are reflected in management fees. Distributor costs are charged as distribution fees. All are

Name of the respondent	Question	Answer
		fund operating expenses included in the TER and ultimately borne by end investors. At end-2024, EUR 5.7 trillion in EU-domiciled fund assets were held by non-EU investors. If non-EU distributors reduce UCITS offerings by even 5%, approximately EUR 285 billion would leave the EU regulatory perimeter. A 10% reduction: EUR 570 billion. A 20% reduction, plausible if major Asian and Swiss distributors de-list: EUR 1.14 trillion. These assets would move to non-EU fund products distributed by the same banks to the same investors. The EU would lose all fund-level regulatory oversight. One-off implementation costs (disruptive): Equivalence assessments: No EU equivalence list exists for AML purposes. Each ManCo must perform its own jurisdiction-by-jurisdiction legal assessment (50-80+ jurisdictions), requiring external counsel with expertise in both EU and local AML law. Estimated EUR 500,000 – 2,400,000 in initial costs alone. TA system development: Current TA platforms (e.g., GTAS) process orders at nominee level and are not designed to receive end investor data. New data ingestion workflows, screening integrations, risk assessment modules and escalation workflows are needed. This is a multi-year, multi-million-euro programme. Delegation agreement renegotiation: Every TA agreement must be amended to reflect new look-through obligations. For ManCos using multiple TAs, this means multiple renegotiations with external counsel

Name of the respondent	Question	Answer
		(est. EUR 50,000-100,000 per TA agreement). Legal costs for cross-border data sharing: New data-sharing agreements with every affected distributor, addressing GDPR, Swiss bank secrecy (Art. 47 Banking Act), Singapore Banking Act S.47, Hong Kong PDPO. Risk methodology overhaul: Multi-factor risk models, IT systems, and staff training to move beyond binary country-risk ratings. Recurring costs (disruptive): Ongoing jurisdiction reviews: AML/CFT frameworks change constantly. Annual review of each equivalence assessment. Estimated EUR 200,000 – 500,000 per year for a large cross-border fund range. Additional FTE: 5-10 additional ManCo FTE for oversight, case review, governance and MLRO capacity. Annual cost: EUR 500,000 – 1,000,000. Screening cost explosion: Look-through means screening potentially millions of end investors instead of a few thousand nominees. At 2-5% false-positive rates, this generates tens of thousands of alerts requiring manual review. Triple MLRO approval bottleneck: High-risk cases would require three sequential MLRO approvals (distributor, TA, CIU), each with independent review, documentation, and sign-off. Increased TA fees: All TA costs (IT, screening, staff, training) are passed to the ManCo as increased service

Name of the respondent	Question	Answer
		fees, flowing into the fund's TER and ultimately borne by end investors.
GDF	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	GDF's membership includes CASPs providing exchange, custody, transfer, and payment services, stablecoin issuers, and infrastructure firms. We consider the draft RTS broadly capable of application across these business models and welcome the flexibility embedded in the horizontal, principles-based approach. We wish to highlight the following articles where targeted amendments would ensure more effective and proportionate application. Article 5: Nationality identification and the good faith verification standard Article 5 requires obliged entities to obtain information on all nationalities held by a natural person, while Recital 3 provides that verifying one nationality is sufficient where the obliged entity acts in good faith. The relationship between the two is not sufficiently clear, and obliged entities cannot safely rely on a recital to depart from the plain terms of an operative provision. We invite AMLA to resolve this ambiguity by amending Article 5 explicitly or by providing guidance confirming that risk-based verification of a single nationality is permissible where the obliged entity has reasonable grounds to consider this sufficient. AMLA should also provide operational indicators of what constitutes good faith, for example the absence of information suggesting a second nationality is risk-relevant, or the verified nationality being issued by an

Name of the respondent	Question	Answer
		EEA Member State. Without such anchoring, supervisory expectations risk varying significantly across Member States. Article 7: Non-face-to-face verification and digital asset business models The hierarchy in Articles 7(1) and (2) risks being read as a closed list of compliant methods, inconsistent with technology neutrality. Privacy-preserving verification technologies, including zero-knowledge proof mechanisms and other cryptographic methods, can deliver verification outcomes equivalent to or stronger than traditional document-based methods while materially reducing data minimisation and cyber risk concerns. We propose that AMLA add an explicit paragraph after Article 7(2) recognising that such technologies may satisfy the requirements of Article 7 where they achieve an equivalent assurance level and the obliged entity can demonstrate compliance to its competent authority. Article 7: Proportionality of the fallback verification requirements The safeguards in Articles 7(3) and (4) should make clear that the degree of assurance required should be calibrated to the ML/TF risk of the customer and business relationship. We also invite AMLA to clarify Article 7(3)(e), where ambiguity around "valid and up to date" and "copies" could create inconsistent supervisory

Name of the respondent	Question	Answer
		expectations in digital-first onboarding flows. Article 7(4): Categorical justification for non-eIDAS verification Article 7(4) as drafted appears to require case-by-case justification for each individual customer, which is disproportionately burdensome where reasons are structural and consistent across entire cohorts. We invite AMLA to clarify that the obligation may be discharged categorically, at the level of a customer cohort, product line, or onboarding channel, documented in policies and procedures and reviewed periodically. Articles 11(4)(b) and 12(1): Ownership structures and the definition of complexity Article 11(4)(b) risks becoming an open-ended documentary requirement without guidance on sufficient evidence of rationale. A group structure chart with a short explanation and publicly available filings should ordinarily suffice for a legitimate multinational group, with more intensive requirements reserved for situations where specific risk indicators are present. A safe harbour should also apply for structures involving entities regulated in an EEA Member State or equivalent jurisdiction or listed on a recognised exchange. Article 12(1) compounds this by treating non-EU registration at multiple layers as a standalone qualifying

Name of the respondent	Question	Answer
		condition without requiring any indicator of opacity or obfuscation. We propose that opacity, obfuscation, or nominee involvement be a necessary condition for structural complexity. This concern is particularly acute in institutional onboarding, where multi-layered structures are routine among asset managers, funds, and financial groups, and structural complexity is a poor proxy for ML/TF risk. Article 31: Application to digital asset business models Factors (h) and (i) may inadvertently disadvantage non-custodial and decentralised models, and factor (k), identifying geo-fencing and IP tracking as risk mitigants, raises proportionality and GDPR concerns. We address these in Question 3. We also encourage AMLA to clarify how the reliability and independence criteria in Article 8 apply to digital sources and third-party tools, and how responsibility allocation operates under Article 9 in intermediated structures where different parties hold different elements of the relevant information.
GDF	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	GDF is broadly supportive of the risk-based approach embedded in the draft RTS and welcomes AMLA's commitment to proportionality. We wish to flag three areas where targeted amendments would strengthen the framework. Article 31: Risk factors for electronic money instrument exemptions

Name of the respondent	Question	Answer
		GDF welcomes the non-exhaustive framing of Article 31 and the inclusion of factors reflecting digital payment ecosystems. However, we have concerns regarding three specific factors. Factor (h) enumerates electronic signatures and anti-impersonation measures as the relevant safeguards for online distribution. Cryptographic authentication mechanisms, including multi-signature authorisation, public key cryptography, and on-chain identity attestations, provide equivalent or stronger controls and should be explicitly recognised alongside electronic signatures. We propose amending factor (h) to refer to adequate safeguards "including but not limited to" electronic signatures and cryptographic authentication mechanisms. Factor (i) treats distribution through regulated intermediaries as a risk mitigant. This risks structurally disadvantaging non-custodial and decentralised models where controls are applied at issuance, redemption, and regulated on-ramp and off-ramp touchpoints rather than at each individual transfer. The absence of intermediaries does not indicate elevated risk where equivalent controls exist elsewhere in the distribution architecture. We propose amending factor (i) to recognise that equivalent risk controls applied at regulated touchpoints within the distribution architecture should satisfy this factor. Factor (k) identifies geo-fencing and IP tracking as

Name of the respondent	Question	Answer
		relevant technological tools. IP addresses can be masked through widely available tools and do not reliably evidence geographical location. Their systematic collection also engages GDPR data minimisation obligations. We propose reframing factor (k) to focus on the outcome, restriction of access from higher-risk jurisdictions, rather than prescribing specific technological methods, with an explicit proportionality and data protection qualifier. General observations on the risk-based approach The transparency and traceability of on-chain transactions, the availability of blockchain analytics, and the architecture of compliance controls at regulated touchpoints collectively provide a robust risk management framework for the digital asset sector. A genuinely risk-based approach should recognise these as relevant mitigants rather than applying CDD requirements designed for traditional financial models without adjustment. We would also encourage AMLA to clarify that Article 8 reliability and independence criteria apply to commonly used digital sources and third-party tools, and that sanctions-screening expectations under Articles 29 and 30 should remain proportionate in high-volume digital contexts, including through appropriate automation and robust false-positive management. We also note, as addressed in detail in our response to Question 2, that Articles 11(4)(b) and 12(1) require targeted clarification to avoid disproportionate

Name of the respondent	Question	Answer
		documentary obligations for legitimate multinational and institutional groups. Article 30(a)(iii): Wallet address screening GDF welcomes the recognition of wallet addresses as identifiers for sanctions screening but wishes to flag two concerns about the operational implications of Article 30(a)(iii). Unlike name-based screening, which involves probabilistic matching against multiple variants with false positives well understood and managed, wallet address screening appears deterministic. This creates a risk that supervisory expectations drift toward a zero-tolerance standard that does not account for the practical complexities of address matching, including format discrepancies, truncation, and chain-specific parsing requirements. We invite AMLA to clarify: first, that a match should be understood as a match after appropriate format validation and normalisation rather than a raw string match; second, that evidentiary expectations for match disposition should reflect the technical characteristics of wallet address screening and should not default to zero-tolerance; and third, that supervisors should assess screening adequacy by reference to the reasonableness of methodology and robustness of disposition processes rather than solely by reference to outcomes. These clarifications would support consistent and

Name of the respondent	Question	Answer
		proportionate supervisory expectations and provide obliged entities with the regulatory certainty needed to invest in robust screening processes.
GDF	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	GDF wishes to engage with this question in the context of a specific and increasingly common operational challenge: the application of standard CDD requirements to transactions involving self-hosted wallets. This is an area where required information may be genuinely and structurally unavailable, not as a consequence of any compliance failing, but as a direct result of the technical architecture of the technology involved. The structural challenge: CDD and self-hosted wallets When a CASP processes a transaction involving a self-hosted wallet, full CDD applies to the CASP's own customer. However, the counterparty, namely the holder of the self-hosted wallet, is not a customer of the CASP and has no account relationship with it. The CASP has no direct means of collecting the information required under Articles 2 to 18 in relation to that counterparty, and this cannot be resolved by applying greater compliance effort. As GDF and co-signatories including ADAN and CryptoUK set out in our joint Travel Rule report submitted to European authorities in 2025, 90% of surveyed CASPs reported significant difficulties in this context. The consequence has been that CASPs ban these transactions entirely, undermining

Name of the respondent	Question	Answer
		transparency and driving legitimate activity towards less regulated channels. The draft RTS does not address this situation. We would also encourage AMLA to clarify in relation to Article 10(a) that reliance on registers is expected only where they are practically accessible, that alternative reliable independent sources remain acceptable where they are not, and that supervisors should not treat the absence of checks against inaccessible sources as a compliance failing. The existing compliance architecture provides effective controls Transactions involving self-hosted wallets are not uncontrolled. Full CDD applies to the CASP's own customer. Blockchain analytics tools enable real-time assessment of wallet address risk profiles, identifying exposure to sanctioned addresses, darknet-linked services, and other indicators of illicit activity. Where analytics indicate elevated risk, the CASP should apply enhanced due diligence to its own customer and file a suspicious transaction report where appropriate. Other jurisdictions, including the UK following HM Treasury's 2022 consultation, have concluded that unhosted wallet transactions should not automatically be treated as higher risk. Proposed solution

Name of the respondent	Question	Answer
		We propose that AMLA include a provision clarifying that: standard CDD applies in full to the obliged entity's own customer; where a self-hosted wallet counterparty is not a customer of the obliged entity, the obliged entity is not required to obtain Articles 2 to 18 information in relation to that third party where it is not reasonably available; and in such circumstances the obliged entity should apply a risk-based assessment having regard to blockchain analytics, transaction value and pattern, and the risk profile of its own customer, applying enhanced due diligence where the assessment warrants it. This would provide legal certainty for CASPs operating in good faith and avoid the outcome of blanket transaction bans that reduce rather than strengthen supervisory oversight. We would also note that, in relation to Article 27, AMLA could usefully clarify that obliged entities may corroborate source of funds using alternative evidence proportionate to the level of risk, reserving more intensive corroboration for elevated-risk scenarios. Article 33: Phased remediation of existing client files Implementation of Article 33 may prove challenging if interpreted as requiring simultaneous re-collection of information across the entire existing customer base. For digital-first obliged entities with large legacy populations, and particularly for institutional firms whose client files are detailed, relationship-specific, and resource-intensive to maintain, a simultaneous re-

Name of the respondent	Question	Answer
		verification exercise would be disproportionately burdensome. We invite AMLA to clarify in Article 33 or accompanying guidance that phased, risk-prioritised remediation focused on material information gaps, trigger events, monitoring alerts, and periodic risk-based review cycles is a compliant approach, and to provide indicative guidance on the triggers and timelines that would be expected to apply.
GDF	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	GDF considers that there is one area in particular where the draft RTS could usefully specify additional SDD measures consistent with AMLA's mandate: contexts where on-chain transparency and blockchain analytics provide a level of transaction visibility materially higher than that available in traditional financial services, and where this elevated transparency constitutes a genuine and verifiable risk mitigant justifying reduced ongoing monitoring intensity. On-chain transparency as a risk mitigant A defining feature of public blockchain infrastructure is the transparency and immutability of transaction records. Every transaction is visible to any observer, permanently retained, and cryptographically verifiable. Where a CASP has completed standard CDD on its own customer and transactions are conducted on a public blockchain, the risk visibility available to the obliged entity and to supervisors is meaningfully higher than for equivalent transactions conducted through traditional payment infrastructure. Blockchain analytics tools

Name of the respondent	Question	Answer
		amplify this further by enabling real-time, automated assessment of transaction patterns, counterparty risk, and exposure to sanctioned or high-risk addresses. The draft RTS does not explicitly recognise these features as factors that may justify SDD measures in appropriate contexts. GDF would also encourage AMLA to consider SDD measures for clearly delimited low-risk configurations, for example where the customer is EEA-resident, funding is limited to an account held in the customer's name with an EEA-regulated institution, low transaction and holding limits apply, and withdrawals are restricted to regulated counterparties. In such configurations, AMLA could permit greater use of standardised purpose categories and deferral of more granular source of funds collection unless monitoring triggers justify escalation. Proposed SDD measure We propose a specific SDD measure for CASPs in lower-risk situations where: standard CDD has been completed at onboarding; transactions are conducted on a public blockchain subject to full on-chain transparency; blockchain analytics monitoring is applied on an ongoing basis; and the overall risk assessment of the relationship is low. Where these conditions are met, the draft RTS should permit the obliged entity to reduce the frequency of periodic CDD reviews and to rely on on-chain transaction data, including blockchain analytics

Name of the respondent	Question	Answer
		results, as a primary source of ongoing monitoring information in lieu of additional customer information requests. We propose the following addition as a new article within Section 5: "Where a crypto-asset service provider has completed standard CDD on its customer and transactions are conducted on a public distributed ledger subject to full on-chain transparency, the provider may, where the ML/TF risk is assessed as low, (a) reduce the frequency of periodic CDD reviews having regard to the continuous availability of on-chain transaction data; and (b) rely on on-chain transaction data, including blockchain analytics results, as a primary source of ongoing monitoring information in lieu of additional customer information requests, where such data is sufficient to satisfy the obliged entity that transactions are consistent with the customer's risk profile. This shall not affect the obligation to update CDD information or apply enhanced due diligence where a change in risk profile warrants it." We would also encourage AMLA to clarify that address verification in lower-risk digital onboarding contexts may rely on electronic sources and bank-account verification assessed in accordance with Article 8, rather than requiring documentary proof of address in all cases. Rationale This proposed measure is consistent with AMLA's mandate under Article 28(1) and with recital (78) of the

Name of the respondent	Question	Answer
		AMLR. It does not exempt CASPs from any component of standard CDD but substitutes a more effective and technologically appropriate ongoing monitoring mechanism for periodic information collection. On-chain transparency is a genuine and verifiable risk mitigant specific to the digital asset sector with no direct equivalent in traditional finance, and its recognition in the SDD framework is consistent with FATF's risk-based approach, which explicitly acknowledges that the transparency characteristics of specific products and services are relevant to ML/TF risk assessment. GDF would welcome further engagement with AMLA on the standards that should apply to blockchain analytics tools used for ongoing monitoring under this provision.
GDF	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	GDF is broadly supportive of the proposals set out in the draft RTS. We welcome AMLA's commitment to proportionality, the risk-based approach, and simplification as guiding principles, and consider that the horizontal, flexible framework applying across both the financial and non-financial sectors is the appropriate approach. We also welcome the decision to build on the EBA's foundational work, which provides continuity for obliged entities and supports a smooth transition. We wish to flag four areas where targeted amendments would strengthen the draft RTS. First, Article 7 would benefit from explicit recognition that privacy-preserving verification technologies, including zero-knowledge proof mechanisms and other cryptographic methods, may constitute valid and compliant verification

Name of the respondent	Question	Answer
		solutions, to avoid the hierarchy of methods being read prescriptively in a manner inconsistent with technology neutrality. Second, Article 31 requires further consideration in relation to factors (h), (i), and (k), which may inadvertently disadvantage non-custodial and decentralised business models and, in the case of factor (k), create tension with GDPR data minimisation principles. Third, the draft RTS should provide greater clarity on the application of CDD requirements where obliged entities interact with self-hosted wallets, where required information may be structurally unavailable; a risk-based approach anchored in what can reasonably be obtained, complemented by blockchain analytics, provides a proportionate framework. Fourth, Article 5 should be read consistently with Recital 3 to permit risk-based verification of a single nationality where the obliged entity has reasonable grounds to consider this sufficient, and AMLA should provide operational indicators of what constitutes good faith for these purposes. We also consider that Articles 8, 10(a), and 12 would benefit from targeted clarification: Article 8 on the reliability and independence of digital sources and specialist tools; Article 10(a) on the accessibility of registers and the availability of alternative sources where registers are not practically accessible; and Article 12 on anchoring the definition of structural complexity to ML/TF-relevant risk factors rather than structural characteristics alone.

Name of the respondent	Question	Answer
		In all areas, our proposed amendments are directed at ensuring the draft RTS delivers on its stated objectives of proportionality, risk-based application, and technology neutrality. We do not consider that any proposal would reduce the effectiveness of AML/CFT controls, and we remain committed to supporting AMLA in delivering a high-quality, workable CDD framework.

Ganado Advocates	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not believe that the proposals in the draft RTS can be applied with sufficient flexibility across the full spectrum of products and services offered by all obliged entities. In particular, the RTS appear premised on a degree of uniformity in business models and risk exposure that does not reflect how the market operates in practice, especially within the DNFBP sector. For instance, certain services—such as the provision of a registered office by company service providers—do not involve the obliged entity executing transactions, nor do they provide visibility over the customer's transactional activity. In these circumstances, requirements relating to ongoing transaction monitoring, as envisaged under Article 20 of the AMLR and reflected in the CDD RTS, cannot be effectively applied. Certain obliged entities neither process nor have access to relevant transactional data and are therefore unable to review transactions or assess whether they are consistent with the customer's profile. Imposing such obligations indiscriminately risks creating requirements that are disproportionate and, in practice, impossible to comply with. More broadly, DNFBPs provide a wide range of services,

Name of the respondent	Question	Answer
		with differing levels of client engagement and ML/TF risk exposure. Even within a single category—such as legal professionals, auditors or tax advisors—there are material differences in how services are performed and in the associated risk profiles. A uniform approach therefore risks placing unnecessary compliance burdens, particularly on smaller firms, without delivering a corresponding improvement in risk management. To mitigate these concerns, the CDD RTS should more clearly recognise the need for flexibility based on the specific product or service being provided. Requirements should apply only where appropriate to the nature of the service. This could be addressed either by clarifying certain provisions in order to enable obliged entities to tailor CDD measures according to product, service, and delivery channel (eventually supported by guidelines providing practical examples across DNFBP activities) or by introducing a new general provision acknowledging that the obligations to be applied would need to be based on the service or product being offered and that it is not in all cases that the obligations would apply. Furthermore, for legal professionals, Article 22 provides significant challenges, not the least due to the confidentiality/professional privilege which legal professionals have vis-à-vis their customers. The proposed Art. 22 (a) makes the use of pooled accounts for lawyers impossible, as the prerequisite for applying

Name of the respondent	Question	Answer
		simplified due diligence measures shall be that "the credit or financial institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, immediately after such request has been made by the credit or financial institution", which is only fulfilled for matters falling under Article 3(3)(b) AMLR. Sharing of such information with credit institutions would not only result in greater operational costs but would also impinge on the confidentiality / professional privilege obligations which lawyers have vis-à-vis their customers. For more detailed comments on this specific provision see comments under Section 3 of this feedback.
Ganado Advocates	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The terminology used in the draft CDD RTS does not always align with these the proportionality principle and the risk based approach, as in the vast majority of the instances, the rules are prescriptive and, in its current form, the CDD RTS do not sufficiently reflect the diversity of obliged entities - particularly DNFBPs. While we understand that the intention is to have a harmonised approach across in pursuit of consistency, the CDD RTS allow little leeway on how the rules may be applied on a risk-sensitive basis, by different obliged entities, depending on the risks, scenario and business model in question and operational contexts. Simply by way of example, Article 7 is rather prescriptive in the manner in which non-face-to-face verification is to be undertaken, and, irrespective of

Name of the respondent	Question	Answer
		Article 1 of the draft CDD RTS, the rules on the criteria to be satisfied in order to verify the identity of the customer allow little leeway on the means of verification to be used, thereby limiting the application of the risk based approach substantially. In our role as legal advisors, we also encounter instances, such as those linked to employee share scheme administrators, where the risk of money laundering is negligible given that the consideration for any share options is paid directly from the salary, posing no risk of money laundering or funding of terrorism on the part of the participant participating in the employee share option scheme and in respect of which the investment service is being provided. Other business models, such as those relating to credit protection insurance where the premium paid by the customers are nominal (i.e generally not more than €1,000 annually) there are very limited ML/FT risks. Notwithstanding, in the above instances the obliged entity would nonetheless have to verify the identity of the customer in the manner prescribed in the draft CDD RTS, irrespective that the risks are much lower than for other obliged entities. The prescriptive approach hampers the application of the risk based approach. The above is being provided simply to highlight examples which are clearly, and in the most absolute way, misaligned with the proper application of the risk based approach, and why, in our view, the approach taken requires some re-thinking.

Name of the respondent	Question	Answer
		In this regard, we propose that in order to enable a better application of the risk-based approach within the existing framework, the following sub-paragraph would be included under Article 1 of the draft CDD RTS. “2. Without prejudice to the obligations set out in this Regulation and in Regulation (EU) 2024/1624, obliged entities may, in case of justifiable circumstances, apply alternative measures to those prescribed herein, provided that all of the following conditions are met: a. the deviation is necessary to ensure that the application of a specific requirement does not result in a disproportionate burden relative to the identified money laundering or terrorist financing (ML/TF) risk; b. the money laundering and funding of terrorism risk associated with the customer, transaction or business relationship is demonstrably low or effectively mitigated by other measures; c. the alternative measures applied are appropriate, risk-sensitive, and achieve an equivalent level of risk mitigation as the standard requirement; d. the rational behind such deviation is documented appropriately and available to competent authorities upon request.” A further concern is the repeated use of terms such as “on a risk-sensitive basis”, “where necessary”, and “reasonable measures” without clearly distinguishing between mandatory obligations and those that may be adapted or disapplied depending on risk. This creates legal uncertainty and inconsistent supervisory and

Name of the respondent	Question	Answer
		enforcement outcomes across Member States. Greater clarity is needed to differentiate minimum requirements from those that can be calibrated, supported by practical examples illustrating acceptable risk-based applications. With regard to specific provisions these have been highlighted under Section 3 separately below. Lastly the repeated use of terms such as “on a risk-sensitive basis”, “where necessary”, and “reasonable measures” without clearly distinguishing between mandatory obligations and those that may be adapted or disapplied depending on risk. Provisions where such terminology is being used should be more ‘objective / outcome based’, clarifying (i) the objective to be reached by the obliged entity when applying such risk sensitive measures, or (ii) the instances where the information would be “necessary” in case where the term “where necessary” is being used and (iii) what constitutes reasonable measures when the term “reasonable measures” is being used. Our comments under Section 3 and Section 4 of this feedback relevant to the following recitals and articles refer (recitals – 10, articles 6, 8, 16, 18, 21, 30).
Ganado Advocates	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Given the nature of certain activities carried out by DNFBPs, there are circumstances in which some of the information contemplated by the draft CDD RTS is neither routinely available nor reasonably obtainable, and where the RTS currently provide no practical alternative.

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	This issue is particularly relevant in the context of registered office services by company service providers, where the obliged entity may have no access to, or visibility over, the customer's underlying transactions. As a result, the obliged entity may be unable to obtain or verify information relating to source of funds or to carry out meaningful ongoing monitoring. In these circumstances, the application of standard CDD measures may not be practicable, as the relevant information falls outside the scope of the obliged entity's visibility and control. Without recognition of these practical limitations, obliged entities risk being considered non-compliant despite having acted appropriately and within the confines of their role. We therefore believe that the CDD RTS should expressly acknowledge such scenarios and permit alternative measures, or justified limitations, where the required information is inherently inaccessible. Our comments under Question 1 also refer. Furthermore, the increasing complexity of multinational corporate structures, together with elevated sanctions and dual-use risks linked to the current geopolitical climate, has created practical situations in which certain customer due diligence (CDD) information cannot realistically be obtained. These challenges underline the need to consider mechanisms for more efficient sharing and re-use of verified CDD documentation, including the possible establishment of a centralised due diligence

Name of the respondent	Question	Answer
		depositary at EU level. This is particularly evident in the case of group structures where obliged entities frequently encounter customers that are part of extensive corporate groups comprising multiple subsidiaries and affiliated entities operating across numerous jurisdictions. Where a risk assessment identifies heightened sanctions exposure, export control concerns or potential dual-use risks, additional identification, verification, and screening measures may be considered necessary in relation to entities within the broader group structure, even where such entities are not themselves customers of the obliged entity. In these circumstances, practical limitations often arise because: (i) the relevant entities have no contractual relationship with the obliged entity; (ii) the customer may have only indirect ownership links without effective operational control; and (iii) the customer may not be in a position to compel those entities to provide certified documentation or other verification materials. Accordingly, certain CDD information may be objectively unavailable despite the obliged entity having undertaken reasonable and proportionate efforts to obtain it. The draft CDD RTS do not currently provide sufficient clarity on how such situations should be

Name of the respondent	Question	Answer
		addressed, particularly where enhanced measures are driven by external risk considerations rather than shortcomings in customer cooperation. In practice, obliged entities often duplicate the collection, verification, storage and periodic updating of the same CDD documentation, even where all parties involved are subject to equivalent AML/CFT requirements and supervision. This issue is especially pronounced in cross-border corporate structures and among professional service providers such as CSPs, law firms and tax advisers. In light of these challenges, whilst acknowledging that AMLA's mandate is limited in nature in terms of the AMLR, consideration should be given to the development of a Centralised or Federated CDD Depositary at Union level for standardised due diligence information and supporting documentation. Subject to appropriate safeguards relating to governance, access rights and data protection, such a system could enable obliged entities to access and rely on previously verified information while preserving their responsibility for conducting independent risk assessments and ongoing monitoring. Importantly, the use of any such mechanism should remain voluntary and risk-sensitive. It should not constitute a reduction in CDD obligations, nor a transfer of responsibility from the obliged entity. Any reliance on shared or centrally stored information would remain

Name of the respondent	Question	Answer
		subject to the obliged entity being satisfied that the documentation is accurate, current and adequate for the relevant relationship or transaction. We therefore invite AMLA to consider whether future guidance or policy initiatives could explore a Union-level approach to the structured sharing and re-use of CDD information, with a view to strengthening the effectiveness of the AML/CFT framework while reducing unnecessary operational burdens and duplication.
Ganado Advocates	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Taking into account AMLA's mandate under Article 28(1) of the AMLR, as well as the broad range of services provided by obliged entities—including DNFBPs such as CSPs, trustees, legal practitioners, and tax advisers—we believe the draft RTS would benefit from the inclusion of additional examples of simplified due diligence (SDD) measures applicable to scenarios that consistently present lower ML/TF risk, provided this is supported by an appropriate risk assessment. Current supervisory practice, including under national frameworks such as the Maltese FIAU Implementing Procedures, already recognise certain customer categories and service arrangements as lower risk where adequate safeguards are in place. Reflecting these situations more explicitly within the RTS would promote greater legal certainty, improve supervisory consistency, and better support the principle of proportionality, while remaining fully aligned with the risk-based approach underpinning the AMLR.

Name of the respondent	Question	Answer
		Proposed Additional SDD Scenarios (i) Regulated or supervised entities Where the customer is itself a regulated or supervised entity subject to AML/CFT obligations within the Union or an equivalent jurisdiction, and no higher-risk indicators are identified, simplified measures could be permitted, such as less frequent CDD reviews or reliance on publicly available regulatory information. Rationale: Existing regulatory supervision and AML/CFT obligations materially reduce residual ML/TF risk. (ii) Public authorities and public sector entities Simplified measures could apply where the customer is a public authority or public sector body with transparent governance arrangements, publicly accessible identification information, and traceable funding sources. Rationale: Public accountability and transparency reduce risks relating to ownership and control. (iii) Listed companies Where the customer is admitted to trading on a regulated market and subject to disclosure obligations ensuring transparency of ownership and control,

Name of the respondent	Question	Answer
		simplified measures could be applied in relation to beneficial ownership verification. Rationale: Regulatory disclosure obligations and market oversight reduce opacity-related ML/TF risks. (iv) Regulated collective investment vehicles and nominee/omnibus arrangements Where the customer is a regulated collective investment scheme or nominee/omnibus structure subject to AML/CFT supervision, and the obliged entity has an adequate understanding of the business model and associated exposure, simplified measures could apply without affecting ongoing monitoring obligations. Rationale: Existing layers of AML/CFT oversight reduce duplication while maintaining appropriate safeguards. (v) Low-risk professional services engagements Simplified measures could also apply to professional services involving straightforward and transparent structures, EU-based customers, no links to high-risk jurisdictions, and uncomplicated ownership arrangements, particularly in relation to the scope and frequency of verification measures. Rationale: The limited nature of the service and reduced transactional exposure lower the associated ML/TF risk.

Name of the respondent	Question	Answer
Ganado Advocates	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Our comments in relation to the draft CDD RTSs are covered under section 3 of this feedback.
Ganado Advocates	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Articles 3 - 6 Article 3 Reference is made to Article 3(c). The reference to the postal code should not be necessary. By having the other datapoint relating to the residential address (i.e building number, apartment number, street name and city), one would already have sufficient information in relation to the customer's usual place of residence. Furthermore, it is noted that Article 3 applies to both the customer itself, the persons purporting to act on its behalf, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted). Requiring the information in relation to the residential address to be obtained in respect of all such persons appears contradictory to the risk-based approach principle (e.g. when it comes to proxyholders or persons benefiting from the activity/transaction). For proxyholders acting for a legal person customer, instead

Name of the respondent	Question	Answer
		of asking the personal address, it could be considered to gather the information on the professional address only. Article 4 The last sentence of Article 4 may be deleted. If the information is included in the identity document, passport or equivalent, then the information is already being collected and hence no additional obligations 'to collect' such information should be imposed. Furthermore, the value which such 'additional information on the place of birth' would provide from a customer due diligence perspective is rather limited. This information could potentially be used for discounting of certain potential hits, however, typically, other datapoints are used for such purposes (such as date or year of birth and nationality). On this basis, we are of the view that reference to 'additional information on the place of birth' would not be needed. Article 5 The wording incorporated in this Article 5 is not entirely in line with recital 3 of the CDD RTS. Recital 3 is based on the good faith self-disclosure by the customer, whilst the wording in terms of Article 5 imposes a requirement on the obliged entity to obtain information in relation to all nationalities of the customer. The wording in Article 5 should therefore be softened, especially in view that there is no way in which an obliged entity is able to objectively verify such information. In our view, a request to the customer (through onboarding forms) to indicate his / her nationalities should be sufficient,

Name of the respondent	Question	Answer
		whilst requiring only the verification of only one of such nationalities. We therefore propose the following wording: “5. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall undertake reasonable measures to obtain information on the nationalities which the customer holds or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted.” Furthermore, with reference to “the natural person purporting to act on behalf of the customer”, it should be made clear that this does not include the legal representatives acting on behalf of a legal person (as mentioned in Article 22(b)(iii) of the AMLR)) as this would impose significant and disproportionate administrative burden on obliged entities without adding additional benefit to the CDD process. Considering that legal persons may have multiple representatives, which may also change frequently and requiring obliged entities to systematically obtain and verify the nationality information for all such representatives (particularly if this would be required in all cases and irrespective of risk) goes beyond what is reasonably necessary for AML/CFT purposes and is inconsistent with a risk-based approach of the RTS.

Name of the respondent	Question	Answer
		Article 6 The use of undefined concepts such as “reasonable steps” or “reasonable measures”, including in Article 6(3), creates uncertainty and may lead to inconsistent interpretation by obliged entities and supervisors. While flexibility is important, it should be complemented by clearer baseline expectations or illustrative guidance. Moreover, our understanding is that this section refers to a “means” and not “result” duty. Obliged entities should not be expected to prove authenticity especially in cases of sophisticated forgeries. Obliged persons should only be required to demonstrate a defensible, risk based process showing reasonable professional scepticism, even where third party verification is used.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6(5) makes reference to obliged entities obtaining, inter alia, a certified true copy of “identity document, passport or equivalent”. In our view, this is excessive and does not allow the obliged entities to apply a risk-based approach. Our comment under Question 2 of this feedback refers. Furthermore, we are of the view that the AMLR requirements (as set out in Article 22(6) of the AMLR) are being interpreted in a very restrictive manner, thereby restricting the implementation of the risk-based approach further. Article 22(6)(a) refers to “the submission of an identity document, passport or

Name of the respondent	Question	Answer
		equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer". This wording leaves room for the application of different measures based on the level of ML/FT risk presented by the customer. By limiting the verification of identity to certified documentary evidence, one would be restricting substantially the application of the risk-based approach, whilst also ignoring the provisions of Article 22(6)(a) which allow for verification to take place through other reliable and independent means. Moreover, a risk-based approach must be applied when collecting IDs to avoid unnecessary costs and burden. The effort and focus of obtaining IDs in original and/or certified form should be required only in case of inconsistencies or doubts about the customer's actual identity and therefore, in those instances which are presenting heightened risk. In our view, the CDD RTS should allow for sufficient leeway to apply different measures, whether by obtaining the relevant identity document (without it being necessarily certified), and only in higher risk scenarios, would additional measures need to be applied to verify the identity of the customer on a risk-sensitive basis. We therefore propose the following wording: "5. For the purpose of verifying the identity of the

Name of the respondent	Question	Answer
		persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities, shall obtain from that person, or from independent sources, the identity document, passport or equivalent. In case of customers posing a higher risk of ML/TF obliged entities shall apply appropriate mitigation measures, such as those referred to under Article 7.”
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	While Article 22(6) AMLR allows document-based verification in both F2F and NF2F contexts, the CDD RTS appears to favour electronic verification for non-face-to-face relationships. This restricts the flexibility intended under the AMLR, which does not prioritise one method over another. Secondly, eIDAS-compliant solutions are not yet widely available or accepted across all jurisdictions and cannot be considered universally applicable. Restricting verification methods primarily to such solutions may limit operational practicality without delivering a proportionate reduction in ML/TF risk, contrary to the principle of proportionality under the AMLR. Thirdly, cost considerations are significant. Electronic identification tools and qualified trust services require considerable investment, licensing, and technical integration, posing challenges particularly for smaller and medium-sized obliged entities. These obligations are difficult to justify where ML/TF risk is low to moderate and may conflict with the risk-based approach.

Name of the respondent	Question	Answer
		Based on the above, alternative verification methods should remain available, consistent with the AMLR, the proportionality principle, and the RBA. These should, in our view, include the use of alternative measures (such as certifications), subject to safeguards ensuring authenticity and authority of certification. Proposed wording for Art. 7: “1. To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-face situation, obliged entities shall apply one of the following measures: (a) use electronic identification means that meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels ‘substantial’ or ‘high’,, (b) use relevant qualified trust services as set out in that Regulation; (c) obtain certified true copies of identity verification documents; or (d) collect copies of multiple identity and verification documents issued by state authorities, public bodies or regulated financial institutions; (e) resort to remote solutions which meet the conditions as set out in paragraphs 4 and 5; (f) apply additional and appropriate measures, on a risk-based approach, to mitigate the inherent higher risk that this type of customer relationship may present. 2. In case where the obliged entity resorts to the measures under sub-paragraph (c) of paragraph (1), the obliged entity shall only accept documentation which

Name of the respondent	Question	Answer
		satisfy the following criteria: (a) the document has been verified by one of the following professionals: legal professional, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction; (b) the certifier shall include a statement to the effect that the individual certifying has verified the authenticity of the document and that, in the event that the document bears a photograph of the individual, that the photo is a true likeness of the holder of the identity document; (c) the obliged entity verifies the authenticity of the certification. 3. In case where ethe obliged entity resorts to the measures under sub-paragraph (d) of paragraph (1), the obliged entity shall accept such documentation provided that it has satisfied itself of the authenticity of the document. 4. When resorting to the remote solutions under subparagraph (e) of paragraph (1), obliged entities shall ensure that such solution uses reliable and independent information sources and includes, where suitable, the following safeguards regarding the quality and accuracy of the data and documents to be collected: (a) controls to ensure that the natural person presenting the customer's identity document, passport or equivalent is the person on the picture of the document;

Name of the respondent	Question	Answer
		(b) the integrity and confidentiality of the communication through the solution are ensured; (c) any images, video, sound and/or data processed through the solution are captured in a readable format and with sufficient quality so that the natural person is unambiguously recognisable; (d) where applicable, the identification process does not continue if technical shortcomings or unexpected connection interruptions are detected or there are any doubts regarding the identity of the natural person; (e) the information, documents and data verified through the remote solution are valid and up-to-date and copies are retained, time-stamped and stored securely by the obliged entity. The content of stored records, including images, videos, sound and data shall be available in a readable format and allow for ex-post verifications. 5. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article and they shall also be able to justify why the customer could verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 7, 8, 10 Article 7

Name of the respondent	Question	Answer
		We note that Article 7(4) was deleted. Potentially, this could have been due to the fact that this paragraph is relevant to legal persons, whilst the rest of the paragraphs in Article 7 relate to natural persons. In our view, this subparagraph should be reinserted or alternatively moved under another article within the CDD RTS. The acceptance of reproductions of original documents should remain as a valid option and hence why rather than deleting the paragraph, this should feature under a different article. Proposed wording to be incorporated under Article 7(5), or alternatively in a separate article. 5. Where obliged entities accept reproductions of an original document, for customers that are not natural persons, and do not examine the original document, obliged entities shall take steps to ascertain that the reproduction is reliable. Where available, during the verification process, obliged entities shall verify the security features embedded in the official document, if any, such as holograms, as a proof of their authenticity." Article 8 Article 8 sets out the criteria for determining whether a source is reliable and independent without establishing any hierarchy or clarifying whether a single source is sufficient. It is also unclear whether reputable commercial databases alone meet verification requirements or the extent to which customer-provided documentation may be relied upon. Clarification would enhance consistency.

Name of the respondent	Question	Answer
		Article 10 With regards to Article 10(b)(iv) additional clarification would be welcomed in relation to the type of documents which may be obtained in terms of point (iv). Further clarity is required in relation to the documents which are acceptable “from the legal entity or legal arrangement”. Furthermore, with regards to the reference to “persons that are authorised for document certification purposes”, it would be helpful if further clarity is included as to who is able to certify such documents. In this regard, we propose the following wording: “(iv) documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by the following professionals: lawyers, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction.”
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	12
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	With reference to the complexity of the structure, we are of the opinion that the number of layers identified (being “three or more layers between the customer and the beneficial owner”) is too low and a number of larger organisations which would have multiple layers but

Name of the respondent	Question	Answer
		which are transparent and which pose lower risks of ML/FT (such as ownership and control structures of licensed entities) could nonetheless be caught by this definition, especially if the criteria remain as per the proposed draft. It is therefore being suggested that in addition to increasing the number of layers, an additional criteria for complexity is introduced, one which would require a judgement by the obliged entity itself as to whether the structure is unusual or excessively complex or otherwise. With reference to Article 12(1)(a), we are of the view that, on its own, the fact that there is a legal arrangement or similar legal entity such as a foundation in any of the layers does not necessarily make the structure more complex. Simply by way of example, purpose foundations are often used in a legitimate manner in order to structure certain securitisation transactions. Therefore, Article 12(1)(A) should be qualified in order to focus more on the lack of rationale for having such legal arrangements or similar legal entities within the structure. Furthermore, the use of foundations in itself is not to be considered as problematic from the outset if the relevant beneficial owners have been registered with the relevant competent authorities. It is the lack of beneficial ownership registration (and verification), which makes the structure more complex and less transparent. Therefore, revisions are required in order to enable the application of a more risk-based process,

Name of the respondent	Question	Answer
		especially in case where the structure being adopted is a structure which makes commercial sense and there is a clear and transparent disclosure of beneficial owners. With reference to Article 12(1)(b), it should be highlighted that the fact that a customer's ownership and control structure involves entities which are registered outside of the EU should not, automatically signal a higher risk of complexity. In a globalised world, it is very common to have different entities forming part of the ownership and control structure of a customer to include legal entities or legal arrangements registered in non-EU jurisdictions. In our view, the focus here should be more risk-based, and the higher risks relating to the complexity of the structure should be linked to third countries categorised by the FATF as high risk countries or subject to increased monitoring or otherwise identified on the EU's list of high risk jurisdictions for ML/FT purposes. Furthermore, the requirement should also be extended to legal arrangements which are present in the ownership and control structure. Lastly, we are of the view that the reference to bearer shares should also be included as part of the complexity of a structure. We have therefore added this aspect in point (d) below. In view of the above, we propose the following wording: "1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point

Name of the respondent	Question	Answer
		(b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex, given the nature of the customer's business, to have five or more layers between the customer and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers which has not registered its beneficial owners with its competent authorities and there is no economic, legal or other rationale for the use of such legal arrangement or similar legal entity within the ownership and control structure of the customer; (b) the customer, legal arrangements and legal entities present at any of these layers are registered in third countries categorised by the FATF as high risk countries or subject to increased monitoring or otherwise identified on the EU's list of high risk jurisdictions for ML/FT purposes. (c) there are nominee shareholders, nominee directors involved in the structure; (d) the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification, such as through the use of bearer shares. 2. In the case of complex corporate structures as

Name of the respondent	Question	Answer
		referred to in paragraph 1, obliged entities shall, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an organigram. 3. Obliged entities shall take risk-sensitive measures to satisfy themselves that the information obtained is accurate.”
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	13
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 13, 16 Article 13 Article 13(a) requires obliged entities to “collect the same information as the information they would collect for beneficial owners.” The relevant information which is obtained in respect of beneficial owners is set out under Article 62(1) of the AMLR. Given that the risk posed by senior managing officials (SMOs) is not the same as the potential risk associated with beneficial owners (BOs) different sets of information may be obtained when compared to beneficial owners. This is also somewhat acknowledged in terms of recital (125) of the AMLR. Given that the information which is set out in Article 62(1) is rather extensive, and is not all applicable to senior managing officials in view of the different type of risks which a senior managing official poses when compared to a beneficial owner, we recommend that

Name of the respondent	Question	Answer
		the information to be obtained for senior managing officials should be limited to Article 62(1)(a) only, and this in view that the rest of the subparagraphs in terms of Article 62(1)(b)-(f) would not be applicable. In this regard, we propose the following wording: “In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect the same information as set out in Article 62(1)(a). Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; (b) verify the identity of senior managing officials in the same way as they would for beneficial owners.” Article 16 With respect to Article 16, although we broadly support the objectives of the draft CDD RTS and their risk-based orientation, certain provisions relating to trust CDD do not allow for a proportionate approach where the trustee is a regulated and licensed entity. This is particularly evident in the requirements concerning (i) the identification and verification of trustees, and (ii) the reliance on independent sources, including third-party certification. The CDD RTS, as drafted, do not distinguish between regulated and unregulated trustees, and therefore risk requiring the repeated collection and verification of

Name of the respondent	Question	Answer
		information even where trustees are already subject to AML/CFT supervision and professional oversight. It is proposed, therefore, that the CDD RTS introduces a clear distinction between licensed trustees subject to AML/CFT supervision and those that are unregulated, for the purpose of customer due diligence on trusts. Where a trustee is professionally regulated within the Union or in a comparable third country, the framework should enable obliged entities to adopt a more streamlined verification approach. In such circumstances, requiring full and repeated due diligence on the trustee may be unnecessary, and a proportionate approach would better reflect the reduced risk associated with supervised professional trustees. Proposed drafting : “For the purposes of applying customer identification and verification measures in respect of customers involving trusts or similar legal arrangements, where the trustee is a regulated and duly licensed trustee subject to AML/CFT supervision within the Union or in an equivalent jurisdiction: (a) the identification of the trustee may be satisfied by reference to publicly available regulatory or professional registers; and (b) a declaration issued and signed by the regulated trustee, confirming its role and authority within the trust or similar legal arrangement, details of the trust, may be considered a reliable and independent source of

Name of the respondent	Question	Answer
		information, without requiring additional third party certification." The justification for this approach is that regulated trustees are already subject to comprehensive AML/CFT frameworks, including continuous oversight and enforcement. Requiring obliged entities to duplicate full due diligence processes for such trustees, as if they were unregulated, introduces unnecessary repetition without a corresponding benefit in terms of risk mitigation. This may compromise proportionality, increase operational complexity—especially for non-financial obliged entities—and shift resources away from areas of greater risk within the trust structure, including settlors, wealth origins, and intricate control arrangements. The intention is not to eliminate obligations relating to trustee identification or the assessment of ML/TF risks at the trust level. Rather, it is to ensure that verification measures are appropriately calibrated to reflect the trustee's regulatory standing, in line with a risk-based methodology. Incorporating this distinction into the RTS would provide greater legal certainty, ensure closer alignment with existing supervisory approaches and support a more balanced and effective application of AML/CFT requirements.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	14

Name of the respondent	Question	Answer
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Clarifying the Term “Beneficial Owner” Sub-paragraph 4 of Article 22(4) of the AMLR requires obliged entities to “obtain sufficient information concerning the beneficiary so that it will be able to establish the identity of the beneficiary at the time of the payout or at the time of the exercise by the beneficiary of its vested rights. Further clarity should be provided to clarify what constitutes ‘sufficient information’ bearing in mind that in the specific context of trusts, trustee deliberations are considered to be confidential and thus not readily available for circulation. It is our view that a declaration by the trustee confirming who can benefit and/or whether a discretion has been exercised should be considered as sufficiently reliable information (especially where the trustee is regulated) and it would be helpful if the CD RTS could state this explicitly. More pertinently, we believe that the RTS may have gone out of context when pegging the verification of a beneficiary to the determination as to “whether individual beneficiaries are ascertainable and shall be treated as beneficial owners”. Whilst the principle as per the draft CDD RTS is correct, however, taking into account the definitions and articles of the AMLR, the content of Article 14 is incorrect. In Article 14(2) the reference to beneficiaries being previously identified by class or characteristics then becoming ascertainable “and thus beneficial owners” is incorrect because in terms of Article 22(4), whether a member of a class, or

Name of the respondent	Question	Answer
		identified by name, every named individual or member of a 'class of beneficiaries' is a beneficiary (ie someone who can potentially benefit under a discretionary trust, or someone with a fixed benefit under a fixed interest trust) – he does not become a 'beneficial owner' as a result of becoming ascertainable. Therefore, we propose the following revised wording: "For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities shall obtain from the trustee, legal entity or legal arrangement include: (a) a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine whether a natural or legal person in respect of which the trustee discretion is being exercised falls within the objects of a power"; Other matters relating to trusts and foundations Clarification on Foundations While the AMLR refers to foundations under "similar legal entities or arrangements", we recommend explicitly including foundations in the relevant CDD RTS articles to enhance clarity. Additionally, the expression "trusts and similar legal entities or arrangements" may erroneously imply that trusts are legal entities. A more accurate formulation would be: "trusts and similar legal arrangements or legal entities with similar functions." Definition of "Customer" – Trusts and Foundations

Name of the respondent	Question	Answer
		Trusts For third-party obliged entities (e.g. financial institutions, legal or tax advisors) who are engaging with a trust, the trustee(s) should be regarded as the customer(s). If multiple trustees are appointed, each should be individually considered in the customer risk assessment (CRA). Where the trustee is a corporate entity, to the extent that there are no higher risk indicators, obliged entities shouldn't be mandated to identify its shareholders or beneficial owners from an AML/CFT perspective, at least in those cases where the trustee is regulated. Focus should remain on the trust's settlor, beneficiaries and any protector. We are of the view that the above matters are to be taken into account in order to ensure that a risk based approach can actually be applied in practice. Foundations In contrast, within a scenario where the foundation has a separate personality, the foundation itself - not the administrator - should be treated as the customer. The foundation should be identified and verified in the same way as a corporate entity, with its country of incorporation deemed its jurisdiction for AML/CFT purposes.

Name of the respondent	Question	Answer
		Due Diligence – Corporate Trustees and Risk-Based Approach Licensed Trustees When an obliged entity is identifying and verifying beneficial owners in terms of Article 58, and the trustee is a corporate trustee which is licensed or authorised in reputable jurisdictions, obliged entities undertaking the relevant due diligence on the trust/trustee should be allowed to apply a risk-based approach in verifying the beneficial owners provided no higher risk indicators are present. In this respect, in line with the risk-based approach, obliged entities should be allowed to limit their due diligence exercise to verifying the licensing status of the trustee.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	18
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	The opening sentence of Article 18 is qualified with the phrase ‘where necessary’ being used. This may be in view that recital 13 requires the collection of the information as set out in Article 18 only in those instances where the obliged entity needs “further information in order to be satisfied that they understand the purpose and intended nature of the business relationship or occasional transaction.” On this basis, it appears that obliged entities are not mandated to apply Article 18 if they have sufficient information at hand already. However, without specifying minimum standards which obliged entities

Name of the respondent	Question	Answer
		are required to apply in relation to the purpose and intended nature of the business relationship, the harmonisation which AMLA is seeking to achieve will never be attained as each obliged entity will interpret the obligations in the way they deem fit, resulting once again in diverging interpretations. In our view, specifically obtaining the information as set out in Article 18(a)(i)-(iv) is not always applicable in respect of all obliged entities. For instance, in some cases, the reason the customer has requested the obliged entities' products or services relationship is inherent in the service or legally prescribed, making further enquiry redundant. Therefore, further clarity should be provided in Article 18 which would specifically clarify that the information in terms of (i)-(iv) would not be required in the event that the purpose and intended nature of the business relationship is self-evident. Rather, such information would be required where the obliged entity needs to understand the purpose and intended nature of the business relationship or occasional transaction, where this is not self-evident. We therefore recommend that the opening clause is qualified, thereby acknowledging the fact that the relevant datapoints do not need to be obtained in all instances by all obliged entities. Furthermore, with regards to Article 18(c) the identified 'source of funds' is not exhaustive and only capture some of many other potential 'source of funds'. By requiring obliged entities to obtain 'at least one of the following information', the CDD RTS is limiting the type

Name of the respondent	Question	Answer
		of information which may be obtained for the purposes of establishing the source of funds. In order not to limit the type of source of funds to be obtained, we recommend that the list is merely a non-exhaustive list of potential source of funds. The focus should be on understanding the legitimacy source of funds, rather than trying to fit in the source of funds within a prescriptive list. Furthermore, the reference to 'the means through which the customers funds were transferred' in the opening phrase is not clarified. Whilst the points (i)-(viii) refer to the 'sources of funds' (and therefore covering the first limb of the opening sentence under paragraph (c)), there is no clarification as to what is meant by 'the means through which the customers funds were transferred'. Given the use of the term "and", it appears that the requirements are twofold, rather than one. Therefore, further clarity is required in respect of the objective of the second limb of this paragraph. Furthermore, should this limb not be applicable in relation to certain obliged entities, we recommend that this is also duly acknowledged in the article. With respect to paragraph (d) of Article 18 reference is made to the 'destination of funds', and the type of information to be obtained, namely: "whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary". In this regard, in order to ensure consistency across the board, further clarity is required

Name of the respondent	Question	Answer
		as to the actions which would need to be undertaken when the recipient is an intermediary. Lastly, with regards to Article 18(e), from an effectiveness perspective, a number of the points which are mentioned under point (e) may be relevant in order to build the business profile of a customer. The fact that the CDD RTS only mandates that “at least one” of the datapoints is obtained for the purposes of establishing the business activity or occupation of the customer, limits the type of analysis which obliged entities should be undertaking to ensure that a business profile has been well established. By way of example, information in relation to both the industry and whether it is regulated or otherwise are both important to establish the business and risk profile of a customer. Whilst we understand that the information which is set out under points (i) – (viii) are aimed at understanding the ‘business activity or the occupation of the customer’, we are of the view that such information is limited. Hence, we recommend a more generic clause thereby aiming for an objective based rule rather than a prescriptive list which may not necessary add value.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	17
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 17, 19, 21 Article 17 We believe that in terms of Article 17 of the CDD RTS,

Name of the respondent	Question	Answer
		collective investment undertakings should be allowed to fulfil the requirements of the entire Art. 20(1) of the AMLR (and not limited to point (h)) by relying on credit or financial institutions and without requiring them to provide information on their underlying customers. This should apply in all instances provided that conditions under points (a) to (d) are met. Requiring the collective investment undertaking to undertake due diligence on an underlying customer of a credit or financial institution which invests on behalf of underlying customers, when the conditions under sub-paragraph (a)-(d) are met would be merely duplicating the measures previously applied by an already reputable credit or financial institution. Furthermore, it must be noted that the credit and financial institutions which may be investing on behalf of their underlying customers may have confidentiality and professional secrecy obligations and would therefore be precluded from providing information on the underlying customers in line with their applicable regulations. In addition, we propose that any potential applicable look-through is only applied in the event that the credit or financial institution is classified as 'high risk' (as opposed to not being low or standard risk). Article 19 Article 19(a) requires obliged entities to assess whether, inter alia, persons on whose behalf or for the

Name of the respondent	Question	Answer
		benefit of whom a transaction is undertaken is a politically exposed person, a family member of a person known to be a close associate. The only exception to this rule is Article 44 of Regulation 2024/1624. In our view, the exception to this rule should also be extended to those instances where obliged entities are undertaking due diligence on another obliged entity which is acting on behalf of an underlying customer who may be a PEP, family member of person known to be a close associate. To the extent that the obliged entity applies due diligence requirements on the underlying customer, similar to the position under Article 17, then no additional checks should be required. Article 21 In relation to Article 21, the current drafting does not fully align with standard practice, whereby information is first collected from the customer and subsequently verified against independent sources. Requiring consultation of additional sources not previously used may lead to duplication and inefficiency. It would be preferable to allow reliance on any of the sources listed in paragraph (1) not already used for identification, while clarifying that government-issued identification documents can serve both identification and verification purposes, and that customer-provided documents form part of the overall verification framework.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	22

Name of the respondent	Question	Answer
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 22 allows for simplified due diligence to be applied when the obliged entity opening the pooled account with a credit institution (such as legal professionals or stockbrokers opening an account with a credit institution), classifies the obliged entity opening the pooled account as a low risk customer. The simplified due diligence approach allows for the postponement of the identification of the verification of underlying customers depositing funds in the pooled account. Conversely, obliged entities opening pooled accounts, and which are not rated as low risk by the credit institution opening the pooled account would need to provide information and documentation on the underlying customers depositing funds within the pooled account to the credit institution opening the pooled account in the event that the obliged entity is not rated as low risk. Issues relating to legal professionals This approach poses major concerns on legal professionals bound by professional privilege/secrecy and confidentiality obligations vis-à-vis their customers. It is clear that the CDD RTSs focus on the financial sector and therefore cannot be applied directly to DNFBPs such as legal professionals. The approach being proposed is not tailored to the nature of the business of legal professionals. Furthermore, legal professionals would generally open pooled accounts for (i) debt collection, (ii) enforcement

Name of the respondent	Question	Answer
		proceedings, (iii) receipt of damages for claims arising from accidents or personal injury, (iv) settlement of payments and recoverable legal costs in civil litigation and other scenarios. All of these activities would not fall under the activities set out under Article 3(3)(b) of the AMLR and therefore the legal professional is under no obligation to undertake customer due diligence prior to receipt of such funds. This would therefore make it practically impossible for the legal professional to provide the relevant documentation to the credit institution. Issues relating to legal professionals and other DNFBPs Furthermore, DNFPBs legal are comprised are generally small(er) entities that do not possess the same amount of resources to implement time-consuming administrative CDD-measures. The application of such measures within the context of legal professionals imposes substantial administrative burdens and threatens to severely increase the cost of compliance for obliged entities. A uniform application of these standards would impose disproportionate compliance burdens on legal professionals and other DNFBPs which open pooled accounts with credit institutions, especially sole practitioners or small offices, with no added benefit in terms of AML/CFT effectiveness. Therefore, the approach should be re-thought completely within the context of DNFBPs. Issues relating to other obliged entities

Name of the respondent	Question	Answer
		Furthermore, the article as presently draft also prejudices obliged entities which are opening bank accounts with such credit institutions and where the credit institution may offer services similar to those offered by the obliged entity opening the pooled account with the credit institution (such as stockbrokers). Information in relation to the customers of the obliged entity opening the account is being shared with a competitor (being the credit institution). As such, within such context (and specifically excluding legal professionals and DNFBPs mentioned in the preceding paragraphs from this remark) these measures should be restricted to those instances where the credit institution rates the business relationship or occasional transaction with such obliged entity as being 'not high'. Whilst acknowledging that this is a simplified measure, the requirement needs to be restricted further, given (i) the major operational burden on the credit institution and the obliged entity opening the account, and (ii) the onerous obligation on the obliged entity opening the pooled account with the credit institution as the obliged entity opening the pooled account would be required to (a) disclose details of their underlying customers to credit institution and (b) provide documentary evidence in relation to underlying customers.
Ganado Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	25

Name of the respondent	Question	Answer
Ganado Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Articles 25, 30 Article 25 As an enhanced measure, Article 25(b) provides that obliged entities should 'assess the reputation of the customer and the beneficial owners'. The implication is that adverse media screening to assess a customer's reputation would only be required in case where the customer is rated as high risk and therefore within the context of enhanced due diligence. In our view, the assessment of the customer's and the beneficial owner's reputation would already have been assessed and this in view of the checks which are to be undertaken in terms of Article 20(2) of Regulation 2024/1624 and Annex I. Therefore, this point (b) may be removed. Article 30 Article 30 could be read as imposing a blanket requirement to screen digital wallet addresses. This would be disproportionate where such wallets are not linked to the services provided. The obligation should therefore be explicitly limited to cases where the wallet address is relevant to the product or service in question.
Ganado Advocates	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Ganado Advocates	Please specify which recital you refer to, and share your comments below.	Rec.5 Recital (5), does not distinguish, between regulated and licensed trustees and those trustees that are unlicensed or non-regulated, when requiring certification by an

Name of the respondent	Question	Answer
		independent and reliable professionals. The general requirement for certification by an independent third-party professional does not sufficiently reflect the existing regulatory framework applicable to regulated trustees, including their ongoing supervision, professional responsibilities and AML/CFT obligations. In consequence, the current drafting risks duplicating safeguards that may be disproportionate, particularly where information provided by a regulated trustee can already reasonably be regarded as reliable and independent. The RTS should expressly differentiate between declarations issued by regulated trustees and those provided by unlicensed or non-regulated trustees. Where the trustee is duly authorised and subject to regulatory oversight, it should be considered sufficiently independent and reliable to issue confirmations regarding the trust arrangement without requiring further certification by an external third-party professional. The following is drafting that could be used: “In the case of a trust or similar legal arrangement that may not be subject to registration, a recent copy of the trust deed, or a relevant extract thereof, together with any other document determining the exercise of any powers by the trustee(s) or similar administrators, may qualify as reliable and independent sources of information. Where such information is provided by a regulated and duly licensed trustee, the trustee’s declaration

Name of the respondent	Question	Answer
		confirming the relevant details of the trust arrangement shall be deemed to constitute a reliable and independent source of information, without the need for additional certification by a third party independent professional. Where the trustee or similar administrator is not regulated or not licensed, the documentation referred to above shall be supported by certification by an independent professional or public authority." Rec. 13 Recital 13 provides: "In situations where they need further information in order to be ....". The wording being used in this sentence suggests that the information to be obtained in terms of the CDD RTS is not mandatory in all instances. Rather, it would only be required where the obliged person needs to understand the purpose and intended nature in more detail before entering into a business relationship or performing an occasional transaction to satisfy its information needs. In certain relationships or OTs the information is rather self-evident and does not need to be obtained from the customer. Given that the wording in Article 18 suggests that this information would only be required "where necessary" (i.e where the obliged entity requires further information to establish the purpose and intended nature of the business relationship or occasional transaction) it would be merited if the recital makes reference to the fact that in case where the purpose and intended nature of the business relationship is self-

Name of the respondent	Question	Answer
		evident, then no additional information is to be obtained. The wording under Article 18 would need to make it clear that the information which is set out in Article 18 would only be required in the event that the obliged entity needs to understand the purpose and intended nature of the business relationship or occasional transaction better where the purpose and intended nature is not self-evident. Rec. 14 Recital 14 makes reference to the concept of a 'final investor' and refers to the obligation in terms of Article 20(1)(h), requiring obliged entities to undertake measures "where a transaction or activity is being conducted on behalf of or for the benefit of natural persons other than the customer, identifying and verifying the identity of those natural persons". The concept of the 'final investor' is a misnomer within the funds industry, and therefore an alternative term - such as 'underlying investor' – should be used instead. Furthermore, also in order to align with our comments within this feedback, rather than reference to 'low or standard risk', reference should be made to the risk being 'not high'. Our comments under section 2 of this feedback refers. Rec. 15 Linking in with our comments in terms of recital 14, it should be made clear that the PEP screening measures would not need to be applied within the context of the instances mentioned under recital 14 where the risk of

Name of the respondent	Question	Answer
		the credit institution or financial institution has been determined as being 'not high' (as per our comments above) and the conditions as set out under Article 17 are satisfied. Rec.21 Reference is made to an 'audit acceptance process'. It is not clear to what this is referring to. We therefore recommend a reconsideration of the wording used. Lastly, the reference to "beneficial ownership" in the penultimate sentence of this recital should read "business relationship".
Ganado Advocates	Do you have any comments on the Annex in the draft RTS?	No
Ganado Advocates	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Ganado Advocates	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in	Disruptive impact

	subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Ganado Advocates	Please justify your answer to the previous question and provide evidence where possible.	Should the RTSs remain as is, the implementation of certain tools and the manner in which the internal framework needs to be updated and refined will result in significant costs to implement appropriate tools to be able to verify customers and update risk assessments, policies and procedures. Furthermore, additional internal discussions and discussions with competent authorities will need to be undertaken to ensure that there is more alignment on the requirements given that there is lack of clarity on a number of points.
GENERAL COUNCIL OF THE NOTARIES	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	ANSWER: i. Provisions concerned In general terms, we agree with the proposals set forth in this draft of technical regulatory standards. Based on our assessment, the draft RTS provide a quite flexible and proportionate framework to allow their application across the services provided in our sector, in line with a risk-based approach. However, we consider that, with regard to Recital 21 and the possibility of "reuse" of information obtained in compliance with Regulation (EU) 2024/1624 and the technical regulatory standards that is already available to the obligated entity or to other obligated entities within the group, the concept of a "group" should not be interpreted as strictly limited to the concept of a group of companies under company law; rather, it

Name of the respondent	Question	Answer
		should be understood from a functional and teleological perspective consistent with the objectives of anti-money laundering regulations. In this regard, we consider such provisions should also extend, through a centralized mechanism, to professionals subject to mandatory membership in professional bodies—such as notaries—who, although they do not form a group of companies in the technical sense, operate within a common institutional framework, are subject to equivalent customer due diligence and professional secrecy obligations, and are governed by comparable supervisory and control standards. ii. Rationale The possibility of reusing previously obtained and verified customer information constitutes a key element in improving the efficiency of the legal system and strengthening the security of notarial services and should not be limited solely to certain scenarios, as information collected for understanding the purpose and intended nature of the business relationship or occasional transaction, but should extend to all information obtained in the course of customer due diligence obligations, including customer identification, identity verification, determination of the beneficial owner and knowledge of the source of funds. This would be consistent with AMLA's stated objective of promoting simplification, proportionality and a harmonised, risk-based framework, while avoiding unnecessary duplication of controls and reducing

Name of the respondent	Question	Answer
		regulatory burden where equivalent safeguards are already in place. In this sense, our proposal does not consist in such information being shared directly and informally between professionals, but managed and centralized by the Self-Regulatory Body or a Technical Unit within the notarial system. Such a mechanism would not exempt any obliged entity from its CDD obligations but would allow reliance on shared due diligence outputs provided that the information is accessible without undue delay, robust safeguards are in place, and the receiving obliged entity remains responsible for assessing the adequacy of the information and requesting additional information when necessary. To illustrate what we mean by a Technical Unit OCP, as a specialized AML/CFT Technical Unit, has the responsibility of providing the notaries with centralized tools such as training and assistance to be able to correctly identify the risk associated with their transactions and be able to act accordingly. In the case of the Spanish Notaries, some of the tools provided by OCP could be considered to fall within the scope of centralized due diligence. From OCP we supply notaries with updated lists such as risk jurisdictions and PEPs which they can consult immediately during the due diligence process so that they can swiftly monitor their customers as part of a proper risk-based approach. We have also produced the Beneficial Owner Database (BDTR, by its Spanish acronym), a database with beneficial owner objective data collected from notarial acts including company creations and share purchases

Name of the respondent	Question	Answer
		which they can consult to get accurate and up-to-date results to inform their decisions. The BDTR has been catalogued as good practise by the FATF and its implementation has been a great support not only for notaries, but also FIU, law enforcement and, most importantly, other obliged entities such as financial institutions. The BDTR therefore serves as a suitable example of the benefits of Centralized Due Diligence, the cross-sharing of information available to a variety of obliged entities, enables greater efficiency in the due diligence process for AML/CFT obligations given its robustness and it does not exempt them from carrying out the full process whenever necessary, it serves as a tool to guarantee part of it.
GENERAL COUNCIL OF THE NOTARIES	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	I agree
GENERAL COUNCIL OF THE NOTARIES	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	I agree

Name of the respondent	Question	Answer
GENERAL COUNCIL OF THE NOTARIES	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	I agree
GENERAL COUNCIL OF THE NOTARIES	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	I agree
GENERAL COUNCIL OF THE NOTARIES	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
GENERAL COUNCIL OF THE NOTARIES	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	33
GENERAL COUNCIL OF THE NOTARIES	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Drafting proposal It is proposed that AMLA expressly include, within the operative provisions of the draft RTS, the possibility to extend group-based information sharing and reuse mechanisms to professionals subject to mandatory membership in regulated professions through a centralized mechanism managed by a Technical Unit or the SRB, rather than addressing this issue solely in a recital. While recitals may provide interpretative guidance, they

Name of the respondent	Question	Answer
		do not create binding legal obligations and therefore lack the normative force required to ensure consistent application across Member States. Incorporating this possibility directly into the substantive provisions of the RTS would enhance legal certainty, ensure uniform implementation, and prevent restrictive interpretations limited to the corporate notion of a group. It is therefore proposed to include a new article 33 (before the final provision on entry into force): “For the purposes of compliance with Sections 2, 3, 5 and 6 of this Regulation, the information required under Regulation (EU) 2024/1624 and this Regulation may be reused where it is already available to the obliged entity or has been previously obtained and verified within a group context, including by professionals subject to mandatory membership in regulated professions. In such cases, obliged entities shall assess the extent to which such information—covering the full scope of customer due diligence, including customer identification, verification of identity, determination of beneficial ownership, understanding of the purpose and intended nature of the business relationship or occasional transaction—may be relied upon to meet their AML/CFT obligations. Where such information originates from or is intended to be reused by professionals subject to mandatory membership in regulated professions, its reuse shall be permitted only where it is collected, managed, centralized, and made accessible through a designated Technical Unit established within or for those professions and operating under institutional oversight,

Name of the respondent	Question	Answer
		ensuring that the information is accurate, up to date, and obtained in accordance with uniform standards. The receiving obliged entity remains responsible for assessing the adequacy of the information. Where the available information is not considered sufficient or adequate for the purposes of compliance, obliged entities shall obtain additional information as necessary. The Technical Unit shall ensure the information is accessible without undue delay and robust safeguards are in place, including data integrity, confidentiality and traceability of access". Closing points The consultation paper repeatedly stresses that the RTS should remain proportionate, workable and flexible, and should not impose unnecessary burden on obliged entities. In our view, our proposal is consistent with AMLA's stated objective of promoting simplification, proportionality and a harmonised, risk-based framework, while avoiding unnecessary duplication of controls and reducing regulatory burden where equivalent safeguards are already in place.
GENERAL COUNCIL OF THE NOTARIES	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
GENERAL COUNCIL OF THE NOTARIES	Do you have any comments on the Annex in the draft RTS?	No
GENERAL COUNCIL OF THE NOTARIES	How would you rate the proposals set out in the draft RTS overall?	Good

Name of the respondent	Question	Answer
GENERAL COUNCIL OF THE NOTARIES	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
GENERAL COUNCIL OF THE NOTARIES	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the	No significant additional costs

	implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
GENERAL COUNCIL OF THE NOTARIES	Please justify your answer to the previous question and provide evidence where possible.	The centralization of information (e.g., international lists, PEP lists, etc.) is already in place in Spain for all notaries. However, if we were to add the provision of more centralized information from the technical unit, this would result in savings for all Spanish notaries.
Generali Group	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Our Group offers a wide range of products and services, including those sold by life insurance, pension funds, banking, asset management and insurance intermediaries entities. Given this complexity, the current regulatory framework and the applicability of the measures set out therein do not always clearly delineate the relevance and proportionality of the

Name of the respondent	Question	Answer
	Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	individual requirements in relation to the specific type of product or service offered. In particular, within the insurance sector, certain products are, by their nature, characterised by a very low inherent ML/TF risk, as already acknowledged in Annex II of Regulation (EU) 2024/1624. This includes, inter alia, pure risk products, pension products, CPI/TCM and funeral insurance policies. For such products, additional clarity would be beneficial as regards the circumstances under which Enhanced Due Diligence (EDD) measures are expected to apply. In this context, EDD should be limited to situations where there is a suspicion of ML/TF or where specific risk factors are identified that are not linked to the intrinsic characteristics of the customer, such as, for example, the customer's status as a Politically Exposed Person (PEP). Conversely, considering the nature and the very low risk profile of these products, it should be explicitly recognised that the application of Simplified Due Diligence (SDD) measures is appropriate as a default approach, in line with the principle of proportionality and a risk-based approach. With specific reference to occupational pension, superannuation or similar scheme that provides retirement benefits to employees, where contributions are made by way of deduction from wages, and the scheme rules do not permit the assignment of a member's interest under the scheme, further clarification would be needed as to what should be understood by "interest under the scheme" for the

Name of the respondent	Question	Answer
		purposes of the regulatory framework. In our understanding, this concerns the cases where the member of a collective contract could intervene in the original product scheme (e.g. personally modify the original product's scheme underlining additional/equivalent financial instruments). Additional guidance from AMLA on product-specific risk considerations and the availability of proportionate CDD approaches for occupational pension schemes would contribute to greater legal certainty and support consistent implementation across Member States. Also, from the RTS remains unclear to what extent customer due diligence (CDD) measures are expected to be applied to third-party premium payers, which are prevalent in particular business models, notably within the insurance sector. The draft RTS do not adequately specify whether, and under which conditions, third-party payers should be subject to full CDD, or if a risk-based and proportionate approach is appropriate in instances where the payer does not exercise control over the contractual relationship (for example requirements might change in case of payments by check or bank transfer, where Bank transfers, in fact, present a lower risk, and therefore a minimal data set should be collected, especially considering that this payment method does not require the physical presence of the person initiating it). This may result in divergent interpretations and inconsistent application among obliged entities and across Member States, potentially leading to disproportionate implementation of CDD measures in

Name of the respondent	Question	Answer
		low-risk scenarios. Providing further clarification would enhance legal certainty and facilitate a more consistent, risk-based application of the RTS across various products and services.
Generali Group	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	With respect to the effective application of a risk-based approach towards compliance with AML/CFT requirements, further clarification is required regarding the scope of systematic controls in relation to targeted financial sanctions. In particular, with reference to Article 29, legal representatives are required to be identified; however, they are not currently subject to systematic sanctions screening. Clarification is therefore needed as to whether, and under which conditions, legal representatives should be included in mandatory screening controls. Additionally, concerning Remote onboarding, Articles 7(1) and (2) should be clarified, as the reference to "submission" may be interpreted as requiring physical delivery of documents. The draft RTS should explicitly confirm that the use of electronic identification means compliant with eIDAS with "substantial" or "high" assurance levels is optional and not mandatory in all remote situations. Moreover, the framework should explicitly permit the following remote verification methods for low-risk products: a) verification via a first payment from an account held with an EEA-regulated institution (or equivalent third-country institution); b) use of account information service providers (PSD2) to confirm identity based on verified account ownership and transaction data; c) biometric verification with document authenticity controls.

Name of the respondent	Question	Answer
		These methods are widely used across the EU and provide reliable, traceable, and auditable verification. Their recognition would enhance legal certainty, support proportional compliance, and ensure a smooth customer experience. They should generally be complemented by collection of an identity document. The framework should also preserve flexibility to accommodate established and emerging solutions, including secure video identification technologies. Article 7(3)(a) currently requires “controls to ensure that the natural person presenting the customer's ID, passport or equivalent is the person on the picture.” This wording should be revised to refer to “reasonable measures” rather than absolute checks. The current formulation implies physical presentation of documents, not reflecting remote onboarding. Aligning with a “reasonable measures” standard would ensure proportionality and better accommodate digital identification. Article 7(4) requires obliged entities to demonstrate to competent authorities that remote verification solutions comply with this Article and justify why the customer was not verified using the means set out in Article 22(6) of Regulation (EU) 2024/1624. In its current form, this requirement appears onerous and unclear, as it does not specify when eIDAS-compliant solutions should be considered unavailable or cannot reasonably be deployed. This risks inconsistent application and disproportionate burden. Clarification is needed to ensure a proportionate, risk-based approach and avoid implicit prioritisation of specific methods.

Name of the respondent	Question	Answer
		Concerning Article 9, the RTS should be complemented with guidance on identification and verification of customers using virtual IBANs and on applicability to the insurance sector. Clarification should be provided on appropriate mechanisms and channels to request and obtain necessary information and documentation. Further clarification is needed regarding Article 18, where it is unclear which information obliged entities should collect. The article provides that only “where relevant” such information should be collected and requires “at least one” item listed, even if not always linked. For example, in paragraph A) points I, II, III mitigate the same risk (reason for requesting a product or service), while point IV focuses on different information (additional business relationships with the obliged entity or group and its influence on understanding the customer). With respect to Article 6 on documents for verification of identity, further clarification would be beneficial on which documents should be considered reliable and acceptable for identifying and recording stateless persons, in line with this Article. In addition, for paragraph 3 of Article 6, guidance is needed on what constitutes “reasonable steps” to verify validity and authenticity of documentation. Finally, with reference to point (b) of Article 18, confirmation is requested as to whether it applies to the insurance sector. If so, clarification is needed on how this obligation should be implemented in practice, including whether information collected through related questionnaires may be sufficient. With reference to

Name of the respondent	Question	Answer
		point (e), clarification is also needed regarding “the occupation of the customer, including information on the customer's employment status”, in particular on the level of detail expected.
Generali Group	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Within Article 23, the RTS provides that customers information should be continuously kept up to date, with reviews conducted at least every 5 year for low-risk relationships and yearly for higher-risk cases, as well as whenever “material changes” or “new circumstances” arise. While appropriate in principle, these requirements are not well suited to the Insurance sector, which often involve long-term contracts with limited customer interaction and infrequent changes in customer information. Applying uniform review obligations across such portfolios creates a disproportionate operational burden, increases costs, and generates unnecessary customer friction without a commensurate risk-based benefit. For passive, low-risk policies with no material changes or customer-initiated transactions beyond premium payments, obliged entities would be allowed to extend review periods (over 5 year deadline) subject to safeguards such as automated monitoring systems, event-driven updates (e.g. at claim stage), and documented risk assessments. An additional amendment could be the incorporation of specific trigger events such as changes in policyholder or beneficial ownership, PEP status, policy transfer, or claim submission, should require updates, while routine events (e.g. premium payments or policy anniversaries) should be excluded. Beneficiary information would only need to be verified at key moments, rather than on an

Name of the respondent	Question	Answer
		ongoing basis, and group insurance monitoring would focus on the policyholder rather than individual members. With respect to Article 11 (3), instead, clarification is sought on the meaning and practical application of the "risk-sensitive measures" requirement. In particular, it would be helpful to understand: • the objective and intended scope of this provision; • how obliged entities should determine when and to what extent such measures are required, especially in relation to intermediate entities; • the criteria for assessing relevance and proportionality in this context. Further clarification is required with regard to Article 11(4), point (b), as it is not sufficiently clear which specific controls obliged entities are expected to perform in order to assess "the economic, legal or other rationale behind a customer's structure", and to ensure that they "understand how the overall structure impacts the ML/TF risk associated with the customer". Concerning the nature and complexity of risk related to the insurance business, when it comes to low-risk life insurance policies, in particular group life and pure protection products, further clarifications are needed in regard the application of SDD in respect of the policyholder's beneficial owner, and the determination of the ownership and control structure of the policyholder is not required. These products present inherently low ML/TF risk (e.g. case where the beneficial owner has no influence on the nature of the policy or on the premium paid, which is

Name of the respondent	Question	Answer
		fixed at inception; there is no investment component, no accumulation and no turnover of funds — only a pre-defined sum payable in case of injury or death; the real recipients of the benefit are the insured persons or designated beneficiaries, not the policyholder; premiums are typically deducted from the insured's salary by the employer-policyholder, ensuring a transparent source of funds; a large share of policyholders are employers within capital groups that would mechanically qualify as "complex structures", despite the absence of any corresponding risk). For such business, identifying and verify the ownership and control structure of the policyholder might be a disproportionate control consider the low inherent risks and nature and complexity of the product, while generating significant burden for obliged entities and unwarranted friction for customers. We therefore propose that the RTS clarify the risk-based nature of the obligation to determine the ownership and control structure of the policyholder across different types of business and products
Generali Group	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Clarification is sought in relation to Article 21, in particular as regards identification and verification of beneficial owner or SMOs in situations low level of risk. In such cases, it would be helpful to understand whether it would be considered proportionate to relieve obliged entities from the requirement to identify and verify the beneficial owners of certain legal entities as part of customer due diligence. This question is particularly relevant in light of Recommendation 127 of Reg. 1624/2024, which states that it may be

Name of the respondent	Question	Answer
		proportionate to exempt certain entities, especially bodies governed by public law of the Member States, from the obligation to identify their beneficial owners, given their higher levels of transparency and the limited added value of such identification and registration. In this context, clarification is sought as to whether, where such entities are already exempt from determining and registering beneficial ownership, imposing identification and verification requirements on obliged entities would create an unnecessary compliance burden without a corresponding risk-based justification.
Generali Group	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Within Article 16 it is currently unclear whether the term “person purporting to act on behalf of the customer” applies solely to the executor or more broadly to all legal representatives of the client, including authorized signatories and individuals entitled to use the client’s credit cards. Under Article 20(1)(g) of Regulation (EU) 2024/1624, obliged entities must determine whether the customer, the beneficial owner, and, where relevant, the person on whose behalf or for whose benefit a transaction is carried out, qualifies as a politically exposed person (PEP). Since neither the Regulation nor the RTS explicitly refer to persons acting on behalf of the customer in the context of PEP screening, we kindly request confirmation that a risk-based approach may be applied, allowing obliged entities to determine the appropriate scope of screening and any additional customer due diligence measures. Instead, with respect to Article 2(ii) of the RTS on obtaining "trade names where it differs from the

Name of the respondent	Question	Answer
		registered name", we would propose make the obligation to collect this information as optional in addition to the registered name. If this obligation is maintained, it would be necessary to: • specify the sources that may be relied upon to fulfil this requirement; the same clarification would also be appropriate for the provision set out in Article 20(1) (Only when such information is supported by official documentary evidence it can be effectively screened). • clarify whether the term “trade name” refers to a single identifier or may include multiple names. In the latter case, guidance with criteria to be applied on whether all trade names must be collected and, consequently, screened. With regard to Article 19 of the RTS, our understanding is that the use of automated screening solutions is sufficient to identify Politically Exposed Persons (PEPs) in compliance with the Regulation, requesting additional information obtained directly from customers only when needed. Still on the Article 19(1)(a), which requests to determine before the establishment of the business relationship or carrying out of the occasional transaction if the customer, the beneficial owner and, where relevant, the person on whose behalf or for benefit of whom a transaction or activity is being carried out is a politically exposed person, it would be necessary to clarify if this activity must be related to also Senior Managing Officials, considering that this subject is not qualified as ultimate beneficial owner by Regulation 2024/1624. Instead concerning article 27 of the RTS which requires

Name of the respondent	Question	Answer
		that obliged entity shall always obtain additional information on the source of funds or source of wealth of the customer and of the beneficial owners in case of EDD, we would suggest integrating the requirements with specific provision that allows the application of a risk based approach, particularly with reference to the beneficial owners of the customer. With reference to Article 14(1), point (b), concerning the identification and verification of beneficiaries of trusts and similar legal arrangements, the meaning of the provision is not entirely clear. Further clarification would therefore be beneficial. In particular, it would be helpful to specify whether the documentation required to assess the accuracy and timeliness of the information obtained should consist of constitutional documents (e.g. articles of association), or whether other types of documentation are expected to be considered, and if so, which ones. Finally, with regards to Article 20(1)(a) and Article 28 of Regulation (EU) 2024/1624 (AMLR), as further specified in the draft RTS, obliged entities are required to identify and document the purpose and intended nature of the business relationship and to establish an initial profile of expected activities. In the context especially of direct sales distribution models (no personal advisory interaction with the customer takes place and no advisory record or suitability documentation is created), clarification is requested as to how these requirements are expected to be implemented in practice. In particular, it remains unclear what level of granularity it is expects for the documentation of the purpose of the

Name of the respondent	Question	Answer
		business relationship and the baseline profile of expected activities at onboarding, and whether this may be based on product-specific characteristics and standardised assumptions, or whether customer-specific information is required in all cases. Furthermore, clarification is requested as to whether supporting evidence is required to substantiate the stated purpose and expected activity profile, how such information is to be verified in the absence of initial transaction history, and how these expectations align with the risk-based approach reflected in the draft RTS.
Generali Group	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Generali Group	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Disruptive impact

Name of the respondent	Question	Answer
	Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Generali Group	Please justify your answer to the previous question and provide evidence where possible.	All new requirements concerning KYC Data will impact both systems and the business (e.g. remediation program, ongoing monitoring). Additionally, new provision that set 5 year as maximum interval for updating the KYC/DD data of the customers, especially for inusance business creates a disproportionate operational burden, increases costs, and generates unnecessary customer friction without a commensurate risk-based benefit.
German Banking Industry Committee	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The place of birth in Art. 4 should be recorded exactly as it appears on the identification document. Some passports refer either to the country of birth or the city of birth but do not have both information. There are also countries that do not have any information on the passport regarding the place of birth. If the document contains no information at all regarding the place of birth, the obliged entity should be able to rely on the customer declaration. Art. 6(2) allows to verify a natural person's identity with an equivalent document when the natural person cannot provide an identity document for a legitimate

Name of the respondent	Question	Answer
		reason. This equivalent document has to meet certain requirements, e.g. a facial image. Recital no.7 clarifies that a birth certificate would be a credible source for the purposes of identifying and verifying the identity of a minor child. A birth certificate does not contain a facial image. Therefore, it would be helpful to align the wording in Art. 6(2) with the intentions mentioned in recital no.7 to add legal certainty. We would also welcome the acceptance of a copy of the birth certificate (as the birth certificate does not have any security features). We would like to add that there is a variety of identity documents that do not provide the mentioned features. Art. 7(2) permits the use of remote solutions for identification in cases where a solution in accordance with eIDAS is not available or cannot reasonably be expected to be provided. We propose to clarify that the wording covers situations where, at the time of the identification process, the customer is factually unable to use the prescribed electronic identification means, even though such means formally exist - in particular where the electronic identification solution cannot be effectively used at the relevant time due to practical or factual constraints beyond the customer's control. This includes, inter alia, situations where a customer is still awaiting the issuance or activation of essential credentials (e.g. a newly requested or reset eID PIN) and therefore cannot complete the identification process. Requiring customers to postpone onboarding until the electronic identification means becomes usable would,

Name of the respondent	Question	Answer
		at least temporarily, exclude affected customers from access to financial services. They would be unable to complete onboarding despite being willing and otherwise eligible, solely due to the unavailability of usable identification means at the relevant time. Additionally, Art. 7(2) could include a transitional period until qualified and certified eIDAS remote onboarding solutions are widely operational in the respective member state, which is not the case yet. In the event that the customer is a third-country national, it should be possible to resort directly to the alternative solution, as eIDAS solutions are then not "available" within the meaning of the regulation. In Art. 13, clarification is needed regarding the identification of SMOs. The term "senior managing official" should primarily refer to individuals formally constituting the management body in its management function (e.g. CEO, CFO or equivalent). In this respect, it should also be noted that the distinction between "executive members of the management body" and "natural persons (…)" in Art. 64(4) AMLR is to be understood as an alternative list. The section beginning with "as well as" is therefore intended to apply only to situations where, due to the company's legal form, the contracting party does not have a formal management body. Only in this case, other persons whose function is comparable to those of formal managing directors should be identified. A cumulative interpretation of the provision would mean that individuals below the management would

Name of the respondent	Question	Answer
		also be included in the customer due diligence; the absence of a beneficial owner would thus result in significantly higher requirements for institutions as well as interference with the personal data of far more of the customer's employees. There appears to be no objective reason for such different treatment between the identification of UBO and SMO. Regarding Art. 17, 22: To ensure consistent implementation of the AMLR requirements, AMLA should provide a list of countries with equivalent AML/CFT requirements.
German Banking Industry Committee	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	NA
German Banking Industry Committee	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	To ensure a harmonised effective implementation a common understanding of relevant legal terms is necessary. We therefore request to insert a definition in Art. 16 regarding the "person purporting to act on behalf of the customer". Proposal for definition: "A "person purporting to act on behalf of the customer" should be defined as: a) a legal representative(s) (e.g. legal guardians) of a natural person customer, in particular where the customer is unable to act on their own behalf; or b) any person, other than an internal employee or members of the management body of a

Name of the respondent	Question	Answer
		legal person, who is authorised to act on behalf of that legal person pursuant to a proxy, power of attorney, or other contractual mandate (e.g. an agent or under a bilateral proxy agreement)." Excluded are individuals acting within the ordinary course of the customer's internal operations, such as employees, senior managers, members of the management body, treasury staff, relationship managers, or cardholders. Extending the requirement to such persons would be neither proportionate nor aligned with a risk-based approach and has proven operationally burdensome without commensurate AML/CFT benefit, particularly in wholesale and correspondent banking contexts. If more than one person is authorized, only the person who makes the legally binding declaration on behalf of the customer is to be identified. The obligation to identify the person purporting to act is limited to the situation when the business relationship with the customer is established. Art. 22 limits the application of simplified due diligence requirements to situations in which the credit institution's customer is itself an obliged entity. To the extent that this implies that simplified due diligence requirements cannot be applied in any other situations, we would like to point out the significant implications this would have for large segments of the population who may be affected by specific circumstances. This applies, for example, to collective rent deposit accounts. If the simplified due diligence requirements for rent deposit accounts were to be eliminated, the full tenant

Name of the respondent	Question	Answer
		data as well as their identification details would have to be obtained and recorded in the system, even though rent deposit accounts are objectively not suitable for money laundering or terrorist financing. The amounts in question, most of which are under EUR 10,000.00, are typically deposited as a one-time payment and are released again after a certain number of years, upon termination of the lease. The tenants themselves have no access to these funds during this period. Full compliance with customer due diligence obligations for collective rental deposit accounts, despite the objectively low risk exposure, will significantly increase the costs borne by tenants. In times of housing shortages and high rents across much of Europe, this further contributes to rising rental costs. An appropriate solution is therefore needed for collective accounts with low risks. In addition to that, Art. 22 cannot be carried out in a sensible manner if the clients are obliged entities only in certain situations, if they perform a certain category of service which is only a part of their business. E.g. credit institutions cannot see if the transactions on a pooled account of their client are stemming from a service according to Art. 3(1) no. 3(a) and (b) AMLR or a different service.
German Banking Industry Committee	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures	NA

Name of the respondent	Question	Answer
	should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
German Banking Industry Committee	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Art. 21 should include a provision to simplify the UBO-identification in low-risk scenarios. In our view, there is room for relevant simplification regarding the identification and verification procedure of UBOs and SMOs of listed companies and entities governed by public law. We believe there needs to be clarity regarding the application of simplified due diligence requirements. We understand that the AMLR attaches great importance to the process of identifying ultimate beneficial owners (Art. 51–54) to ensure beneficial ownership transparency. However, if there is no prospect of the identification process leading to greater transparency, the process becomes a major bureaucratic exercise. The impact is all the greater given that the AMLR significantly expands the scope of data to be collected on UBOs and senior managing officials. This applies in particular to business relationships with listed companies whose shareholders are already subject to far-reaching transparency standards. Furthermore, given the thresholds set out in the AMLR, it is often not possible to identify a beneficial owner and the senior managing officials must therefore be identified. Obliged entities would therefore have to

Name of the respondent	Question	Answer
		carry out a comprehensive identification and documentation procedure which will generally not lead to identifying UBOs or greater transparency in general. Another use case are business relationships with entities governed by public law such as municipalities. Due to their legal nature, it will generally not be possible to identify a beneficial owner. In both cases, simplifying the process of identifying beneficial owners and senior managing officials is crucial, as the AMLR also generally classifies them as low-risk scenarios in Annex II. Besides, Art. 65 states that Art. 63 and Art. 64 AMLR do not apply to companies whose securities are admitted to trading on a regulated market (under certain conditions) and to bodies governed by public law according to Art. 2(1) no.4 of Directive 2014/24 EU on public procurement. If those institutions do not have to collect the relevant information on their UBOs or SMOs respectively and provide these information to the central register and to an obliged entity they are engaging with, obliged entities are factually unable to identify UBOs or SMOs of their prospective clients in these situations. It is consistent to refrain from identifying UBOs and SMOs in these situations. Furthermore, as Art. 65 AMLR only exempts bodies governed by public law from the obligations following from Art. 63 and Art. 64 AMLR, that could be understood that local authorities (municipalities) would have to collect information on their UBO/SMOs and

Name of the respondent	Question	Answer
		provide them to the central register and any relevant obliged entity. In terms of risk, this differentiation between bodies governed by public law on the one hand and local authorities on the other hand does not seem adequate. We therefore urgently request to clarify that obliged entities do not have to collect information on UBO/SMO when establishing a business relationship with bodies governed by public law and with contracting authorities (especially the State, regional or local authorities). We suggest that in low-risk scenarios the means of Art 21(1)(a) should also be available to verify information provided under (b) or (c). While we agree that register information should be verifiable by means of a customer declaration, it is questionable why this should not be possible in reverse order, at least by consulting a business or company register. Some of these registers have public faith, meaning that the information contained therein is legally deemed to be correct. OEs often already have customer information at their disposal, which they could then only verify through publicly accessible open sources in accordance with (c). We consider this to be an unintended deviation, as the wording puts low-risk scenarios at a disadvantage: Referring to Art. 22(7)(b) AMLR and Art. 10, 13 draft CDD-RTS OE's have more flexibility in verifying the SMOs identity in standard risk scenarios ("reasonable measures" such as usage of public registers) than in low-risk scenarios where the verification is limited to information from the customer or publicly available

Name of the respondent	Question	Answer
		information. As Art. 21 is labelled “Minimum requirements for the identification and verification of beneficial owner or senior managing officials in situations of low risk”, we assume that in such situations an identification can also be conducted by the means mentioned in Art. 22(7)(a) AMLR. Especially in situations where a natural person performs different functions for a customer, when this natural person has been identified and verified in accordance with Art. 22(6) or (7)(a) AMLR, there is no obligation to conduct a second identification following Art. 33(7)(b) AMLR in conjunction with Art. 21 draft CDD-RTS.

	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	and the reasonable measures for verification of beneficial owners (Article 10).
Gernandt & Danielsson Advokatbyrå	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Gernandt & Danielsson Advokatbyrå	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Gernandt & Danielsson Advokatbyrå	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We welcome the opportunity to provide feedback on the draft regulatory technical standards ("RTS") specifying the information and requirements necessary for the performance of customer due diligence under Article 28(1) of Regulation (EU) 2024/1624 (AMLR). The provision(s) concerned This response addresses Article 3 (Information to be obtained in relation to addresses) and Article 10 (Reasonable measures for verification of the beneficial owner). The rationale for our position and concrete drafting proposals We fully support the objectives of combating money laundering and terrorist financing. However, we wish to raise critical concerns regarding the protection of beneficial owners' personal information, in particular such information of beneficial owners facing legitimate security threats, and the proportionality of mandatory disclosure requirements.

Name of the respondent	Question	Answer
		Business leaders and high-profile individuals often face threats to their personal safety and that of their families. Many such individuals rely on protected identity status to safeguard their personal information. For these individuals, it is critical that their personal information, including protected information, is disseminated as narrowly as possible; any sharing of sensitive information increases the risk of it falling into the wrong hands. The need for protection of sensitive information and protected identities has also been recognised in the applicable EU legal framework, through Recital 52 and Article 15 of Directive (EU) 2024/1640 (AMLD6), as well as the European Court of Justice's judgment in Joined Cases C-37/20 and C-601/20. The Court established that measures interfering with fundamental rights must be limited to what is strictly necessary, holding that transparency cannot come at the cost of the right to respect for private and family life or the right to protection of personal data under the Charter of Fundamental Rights of the European Union and the Regulation (EU) 2016/679 (GDPR). The draft RTS specifies the information to be collected for identification and verification purposes, including the beneficial owner's place of residence (residential address) comprising postal code, street name, and building number (Article 3). Article 10 sets out reasonable measures for verification of the beneficial owner. The current wording of the draft RTS leaves little room for accommodating the risks for individuals

Name of the respondent	Question	Answer
		relating to the sharing of their residential address, especially the residential address of individuals with legitimate security concerns. From a Swedish perspective, disclosing residential addresses to obliged entities may also be viewed by the Swedish Tax Authority — the authority responsible in Sweden for protected identities — as careless handling of such protected information, potentially resulting in protective measures being revoked and directly endangering the individual and his/her family. The application of the draft RTS, as currently drafted, thus risks leading to unnecessary sharing of personal information in a way interfering with fundamental rights and respect for private and family life and personal data. As a consequence, the draft RTS will also limit threatened individuals' ability to serve as beneficial owners and, consequently, to conduct business activities, which ultimately may not only impact the individuals' abilities but also the overall competitiveness of business in the EU. Where the collection of a residential address – without any alternative for individuals holding protected identity status – effectively prevents such persons from serving as beneficial owners, the resulting restriction on their ability to conduct business activities would be manifestly disproportionate (see, by analogy, Case C-534/16 BB construct, EU:C:2017:820, paras. 37-42). A measure which, by reason of its requirements, deprives a person of the ability to develop economic activities

Name of the respondent	Question	Answer
		constitutes a disproportionate interference with Article 16 of the Charter. In turn, this may result in an infringement of the freedom to conduct business, including the right to engage in an economic or commercial activity as protected under Article 16 of the Charter of Fundamental Rights of the European Union in a manner that cannot be justified as necessary or proportionate to the legitimate objectives pursued in the context of combating money laundering and terrorist financing (see, by analogy, Joined Cases C-37/20 and C-601/20 WM and Sovim SA v Luxembourg Business Registers ECLI:EU:C:2022:912, paras. 83-86). [CONTINUED BELOW]
Gernandt & Danielsson Advokatbyrå	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3
Gernandt & Danielsson Advokatbyrå	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	To address these concerns whilst maintaining the effectiveness of anti-money laundering measures, we propose the following. AMLA should incorporate an alternative in the RTS under which obliged entities should not be obliged to request the residential address of individuals that are beneficial owners. The postal addresses, post boxes, or company addresses should be sufficient. This is key to protect the integrity of such individuals, and particularly important for individuals with protected identities. There is no compelling reason why beneficial owners should not be afforded the same flexibility as senior managing officials ("SMOs") under Article 13(a) of the draft RTS, which permits obliged

Name of the respondent	Question	Answer
		entities to collect the address of the registered office of the legal entity instead of the residential address when identifying SMOs. We propose that Article 3 be amended to provide explicitly that, for individuals with protected identities or legitimate security concerns, obliged entities should not collect the residential address but should instead collect alternative address information — including the address of a registered office, a postal address, or a post box address — in lieu of a residential address, for verification purposes in the individual case. This would align the treatment of beneficial owners with the flexibility already afforded to senior managing officials under Article 13(a) of the draft RTS and offer appropriate protection for individuals with security needs, while also ensuring that obliged entities retain the ability to take the necessary verification measures. In this regard, where the collection of alternative address information is not sufficient for verification purposes, obliged entities should be able to take additional measures as proposed below in relation to Article 10. Specifically, we propose adding a new paragraph to Article 3 as follows: “Where a beneficial owner is a natural person, obliged entities may decide to obtain the postal address, post box address or the address of a registered office of a legal entity with which the natural person is associated, instead of the beneficial owners’ residential address, provided that such address enables the natural person

Name of the respondent	Question	Answer
		to be reached for the purposes of Article 22(1)(a)(iv) of Regulation (EU) 2024/1624. Where a natural person has a protected identity status granted by a competent national authority, or where there are documented legitimate security concerns, the residential address should not be requested, but the requirement be fulfilled by obtaining a postal address, post box address, or the address of a registered office of a legal entity with which the natural person is associated, provided that such address enables the natural person to be reached for the purposes of Article 22(1)(a)(iv) of Regulation (EU) 2024/1624." We further propose adding a new paragraph to Article 10, as follows: "When taking reasonable measures, obliged entities may consider additional alternative measures where a natural person has a protected identity status granted by a competent national authority, or where there are documented legitimate security concerns, and the residential address is not available due to protective measures." These amendments would ensure compliance with the proportionality requirements established by the European Court of Justice whilst maintaining the effectiveness of customer due diligence measures.

Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	Article 33(1)(e) AMLR enables AMLA to define any other relevant simplified due diligence measure in the RTS. This discretion would provide legal justification for adopting the following proposals: Proposal 1:

Name of the respondent	Question	Answer
	products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	"Article XX - Sectoral simplified measures with respect to life insurance policies for pension schemes An insurance undertaking providing life insurance policies for pension schemes conducted by the employer that qualify as low-risk products in accordance with Annex II(2) points (a), (b) or (c) of Regulation (EU) 2024/1624 fulfils the requirements stipulated in Article 20(1) points (a), (b), and (i) of Regulation (EU) 2024/1624 if all of the following conditions are met: (a) the insurance undertaking establishes the identity of the customer (employer) and, if necessary, the person purporting to act on behalf of the customer in accordance with Article 20 of this Regulation; (b) takes reasonable and risk-adequate measures to verify the identity of the customer and (c) if necessary, takes reasonable and risk-adequate measures to verify that the person purporting to act on behalf of the customer is authorized to do so. For identifying and verifying the identity of beneficiaries (employees), the insurance undertaking takes reasonable and risk-adequate measures to comply with the requirements stipulated in Article 47 of Regulation (EU) 2024/1624." Rationale:

Name of the respondent	Question	Answer
		The proposal ensures that the beneficial owner or the senior management of the customer is not taken into account. This would be consistent with the current administrative practice in Germany which adequately reflects the distinct characteristics of pension schemes for retirement benefits of employees operated by direct life or annuity insurance contracts between an employer (customer) and an obliged insurer from an AML-risk perspective. Due to the specific legislation on such pension schemes as a part of German labor law, the economic interest is generally attributed to the employee. As a consequence of the aforementioned characteristics, the employer lacks any economic interest in the respective insurance contracts. If the draft RTS were adopted in their current form, beneficial owners of a significant number of employers would have to be -both ex ante and ex post- identified and verified irrespective of their non-existent economic interest in these contracts given that the business relationship is exclusively established for the benefit of the employees. This would not only impose tremendous costs on obliged insurers in a considerable seven-digit area which would be obviously not justified by the negligible exposure to AML-risk. It would also undermine the political efforts to stabilize the retirement systems both in Germany and in Europe which significantly rely on promoting occupational pension schemes. In addition, it should also be kept in mind that pension schemes for retirement benefits of

Name of the respondent	Question	Answer
		employees operated by direct life or annuity insurance contracts are essentially similar to institutions for occupational retirement provision regulated by Directive (EU) 2016/2341 except the legal form of the provider. The latter are –for good reasons– not subject to the AMLR at all. Proposal 2: “Article xx - Sectoral simplified measures with respect to life insurance contracts posed as collateral Where the benefits of a life insurance contract are assigned by the customer to another obliged entity pursuant to Article 3(1) or (2) of Regulation (EU) 2024/1624 as collateral, the obliged entity may refrain from applying due diligence measures to the assignee, as the assignment does not qualify as an activity or transaction conducted on behalf of or for the benefit of the assignee.” Rationale: Recital 51 of AMLR clarifies that, in the context of customer due diligence, the person for the benefit of whom a transaction or activity is carried out does not refer to the recipient or beneficiary of a transaction carried out by the obliged entity for their customer. The assignment is a disposition of the benefits of the life insurance contract by the customer (as assignor) to another credit/financial institution (as assignee), no

Name of the respondent	Question	Answer
		different from receiving the payout first and then forwarding it to the other credit/financial institution. In both cases, the benefits of the business relationship/transaction rest with the customer. Additionally, Article 20(1)(h) AMLR requires obliged entities to identify and verify natural persons only on behalf of or for the benefit of whom an activity or transaction is being conducted.
Gesamtverband der Deutschen Versicherungswirtschaft e. V. (German Insurance Association)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	5.1. The scope of Article 20 on simplified due diligence covers only customer identification and does not address SDD measures for customer verification. We suggest allowing the acceptance of additional documents which are issued by independent and reliable sources, as already referred to for legal entities in Recital 5 of the draft RTS. In this context, customer verification on the basis of judicial decisions plays a key role, especially where a business relationship is established by sovereign act following a final court decision, resulting in a low level of risk. For example, the division of claims arising from an insurance contract through pension rights adjustments during divorce proceedings is commonplace. In such cases, the additional business relationship is established with the entitled former spouse. Considering this, it is proportionate to grant compliance with due diligence requirements of obliged entities by recording a certified copy of the judicial decision. This approach should likewise apply to other judicial decisions, such as court orders appointing a

Name of the respondent	Question	Answer
		legal guardian or insolvency orders, allowing customer verification to be appropriately carried out on the basis of the respective judicial decision. Therefore, Article 20 should be amended as follows: “Article 20 - Minimum requirements for customer identification and verification in situations of low risk” 1…… 2. To verify the identity of the customer or the person purporting to act on behalf of the customer in situations of low risk, the obliged entity shall obtain from that person a document issued by independent and reliable sources, or a copy thereof. Documents issued by independent and reliable sources include but are not limited to: (a) for a natural person: i. birth certificates; ii. driving licences; iii. identification documents issued by a public employer; iv. judicial decisions; v. third-party sources stipulated in Article 10 points (b)(i)–(iv) of this Regulation. (b) for a legal entity and other organisations that have legal capacity under national law:

Name of the respondent	Question	Answer
		i. statutory documents of the legal entity or legal arrangement required by law, including certificates of incorporation or audited financial statements; ii. the most recent version of the constitutive documents establishing the legal entity or legal arrangement, including the Memorandum of Association and Articles of Association. 3. Paragraphs 1 and 2 shall also apply to persons on whose behalf or for the benefit of whom a transaction or activity is being carried out." 5.2. Article 23(2) on customer identification data updates in low-risk situations limits the frequency of such updates to a maximum of five years. This is not in line with Article 33(1)(b) AMLR. It explicitly allows obliged entities to reduce the frequency of customer identification updates in low-risk situations. If Article 26(2)(b) AMLR is considered definite –as assumed by AMLA– Article 33(1)(b) AMLR would have virtually no scope from the outset. In other words: Article 33(1)(b) AMLR cannot be perceived as a simplified due diligence measure if there is no different treatment of regular-risk customers and low-risk customers. This strongly suggests the intention of the legislator that Article 33(1)(b) AMLR constitutes an exception of Article 26(2)(b) AMLR. Therefore, Article 23(2) should be deleted.

Name of the respondent	Question	Answer
		5.3. In order to identify the purpose and intended nature of a business relationship, Article 18(a)(iv) requires obliged entities to determine whether the customer has additional business relationships with the obliged entity or, where applicable, its wider group, and the extent to which that information influences the obliged entity's understanding of the customer. We suggest deleting this provision as the consideration of additional business relationships with entities belonging to the same group is part of the ongoing monitoring of the business relationship pursuant to Article 26(1) AMLR. Therefore, the issue should be –if considered necessary– addressed in the guidelines according to Article 26(5) AMLR.

	measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Global Ledger	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We support the risk-based approach throughout the draft RTS. We offer the following observations. Article 30 Multi-hop proximity analysis Standard sanctions screening checks whether a specific wallet address appears on a designated list. However, sanctioned actors frequently use intermediary wallets to distance themselves from their funds, meaning that a wallet can have significant indirect exposure to sanctioned entities without appearing on any official list. Blockchain analytics tools address this gap by tracing transactions beyond the immediate wallet, identifying connections to a sanctioned addresses multiple steps back in the transaction chain. Critically, these tools do not simply flag a connection, they quantify the risk, expressing a wallet's exposure to sanctioned funds as a percentage of total transaction volume and value, and indicating how close that exposure is to the wallet being assessed. This allows obliged entities to make proportionate, evidence-based compliance decisions rather than relying solely on binary list-matching. Blockchain analytics tools also allow to identify instances where a wallet belongs to the same cluster as a sanctioned wallet, and thus flag risky activity.Merely performing sanctions screening against the list of sanctioned wallets would not allow to identify such connections.

Name of the respondent	Question	Answer
		We therefore recommend that AMLA acknowledges in its guidance that risk-based wallet screening should include this type of proximity and cluster analysis, and that using blockchain analytics tools constitutes a best practice in meeting the sanctions screening obligation. Technology-neutral recognition of blockchain analytics The draft RTS does not explicitly recognise blockchain analytics as a recommended method for meeting CDD obligations. Given that Article 30 mandates wallet address screening, and given that traditional verification methods cannot be applied to pseudonymous on-chain addresses, we recommend AMLA clarify in accompanying guidance that blockchain analytics constitutes a recognised and advisable method for fulfilling the ongoing monitoring and sanctions screening obligations under Articles 23 and 30.
Global Ledger	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We identify three situations where required information is routinely unavailable and the draft RTS provides no clear alternative. Unhosted wallets and pseudonymous counterparties Where a CASP's customer transacts with an unhosted wallet, the CASP has no direct means of obtaining information about the wallet owner through conventional CDD methods. The FATF's March 2026 report identified P2P transactions via unhosted wallets as a key vulnerability. We propose that AMLA encourages the use of blockchain analytics tools as the appropriate method for assessing the risk profile of unhosted wallet counterparties, enabling obliged entities to understand the source and destination of

Name of the respondent	Question	Answer
		funds in situations where conventional CDD information is not available. Wallet address screening: limits of official sanctions lists Official sanctions lists include only a fraction of the addresses controlled by sanctioned entities. We propose for AMLA to clarify that obliged entities are expected to extend screening to the broader network of addresses associated with sanctioned entities through blockchain analytics, as a required element of a proportionate risk-based approach under Article 30. Cross-chain transactions and traceability gaps Where funds move between blockchains through a bridge or cross-chain protocol, the transaction trail ends on the originating chain and begins with often different identifiers on the destination chain, making full tracing difficult. Such limited tracing visibility results in the fact that cross-chain bridges are frequently used to obfuscate the illicit origin of the funds, despite also having legitimate purposes. We therefore recommend that AMLA acknowledges this risk in accompanying guidance and clarifies that obliged entities should apply enhanced scrutiny to cross-chain transactions given the heightened traceability challenges.
Global Ledger	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these	N/A

	approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	
Global Legal Entity Identifier Foundation (GLEIF)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	NA
Global Legal Entity Identifier Foundation (GLEIF)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	NA
Global Legal Entity Identifier Foundation (GLEIF)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The Global Legal Entity Identifier Foundation (GLEIF) welcomes the Anti-Money Laundering Authority's (AMLA) efforts in developing Regulatory Technical Standards (RTS) on Customer Due Diligence (CDD) under Article 28 (1) of the Anti-Money Laundering Regulation (AMLR), and in particular the explicit inclusion of the ISO 17442 Legal Entity Identifier (LEI) as part of the information collected for CDD purposes. The inclusion of the LEI in the draft RTS is aligned with

Name of the respondent	Question	Answer
		AMLR Article 22(1), which requires (b) legal entities, (c) trustees of express trusts or persons holding equivalent positions in similar legal arrangements, as well as (d) other organisations with legal capacity under national law, to disclose their LEI, where available, during the customer onboarding process. As a global, interoperable, and machine-readable identifier, the LEI enhances counterparty verification mechanisms and reduces reliance on multiple jurisdiction-specific identifiers. This, in turn, streamlines administrative processes for businesses operating across borders. The design of the LEI supports more effective supervision and oversight by providing a clear and standardised view of “who is who” and “who owns who”. Ultimately, the LEI can play a critical role in improving the transparency of complex legal entity structures. The LEI’s value has already been recognised in several EU legislative frameworks, including the Transfer of Funds Regulation (TFR), Instant Payments Regulation (IPR), Markets in Crypto-Assets Regulation (MiCA), MiFID II, and the European Single Access Point (ESAP). To ensure that the LEI can be leveraged in the most efficient and effective manner within the RTS, GLEIF proposes the following enhancements: (1) Clarification of “availability” Define “availability” as “the quality of being able to be obtained”, thereby encouraging all legal entities to obtain an LEI for the purposes of complying with CDD requirements. This approach would be consistent with the European Systemic Risk Board (ESRB)

Name of the respondent	Question	Answer
		Recommendation of 24 September 2020 , which calls on relevant authorities to require or, where applicable, continue to require, all legal entities involved in financial transactions under their supervisory remit to have an LEI. (2) Data quality and revalidation requirements Specify that the entity's LEI must comply with the Regulatory Oversight Committee (ROC) policy , including the requirement for annual revalidation of the LEI and the maintenance of up-to-date associated reference data, even in the absence of changes. For example, previous EU legislative texts have included language such as: "the entity responsible for reporting shall ensure that the reference data related to its ISO 17442 LEI code is renewed in accordance with the terms of any of the accredited Local Operating Units of the Global LEI System." (3) Reduction of duplicative data requirements Where an LEI is provided, remove requirements to submit data points that are already available through the LEI reference data (e.g. name and registered address). Eliminating such duplication would reduce administrative burden and improve efficiency for obliged entities. (4) LEI as a standard identifier in structured ownership information Where beneficial ownership information is collected, exchanged or relied upon in structured and machine-readable formats, the LEI should be used as the standard identifier for legal entities within ownership and control structures. This would support consistent

Name of the respondent	Question	Answer
		matching of entities across registers, obliged entities, third-party data providers and supervisory authorities, thereby enhancing the harmonisation objective of the RTS. In this regard, GLEIF supports the broader use of interoperable and machine-readable data frameworks for beneficial ownership information. The LEI can serve as a stable and globally recognised identifier within such frameworks, helping to improve the consistency, usability and interoperability of beneficial ownership data across jurisdictions. The enhanced use of the LEI represents a cost-saving opportunity for obliged entities, legal entities, and supervisory authorities, as evidenced in the Global Digital Finance publication “LEI: Reducing the Cost of KYC/KYB” . In addition, GLEIF collaborates with financial institutions through the Validation Agent framework, enabling them to obtain and maintain LEIs on behalf of clients in cooperation with accredited issuing organisations. This approach improves onboarding efficiency, supports better data management, and accelerates digital transformation. Major EU institutions, including BNP Paribas and JP Morgan, have already adopted this role. GLEIF stands ready to support AMLA in further exploring the use of global identification standards, such as the LEI, to enhance transparency, improve the efficiency and consistency of CDD processes, and support effective supervision across the European Union.

Name of the respondent	Question	Answer
Global Legal Entity Identifier Foundation (GLEIF)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Global Legal Entity Identifier Foundation (GLEIF)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Global Legal Entity Identifier Foundation (GLEIF)	Do you have any comments on the Annex in the draft RTS?	No
Global Legal Entity Identifier Foundation (GLEIF)	How would you rate the proposals set out in the draft RTS overall?	Neutral
Grant Thornton Belgium	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	agree
Grant Thornton Belgium	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	agree
Grant Thornton Belgium	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Retrieving the personal data is often the most difficult part of the CDD, and mostly for large international organisations, NPO's and governmental institutions due to the fact that these are publicly known persons and do

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	not want to share their personal data. We see that competitors tend to accept these kinds of client without mandatory identifications data and verification documents and put the commercial aspect before the RBA and compliancy. This brings quite some competition between obliged entities who want to be compliant and others who are willing to take on more risks and take on those clients who do not wish to provide all these personal data. The most difficult personal data to retrieve is: - the place of birth: the place of birth is not mentioned on the newest Belgian ID's anymore; in the USA, Russia and a few other countries only the country or state of birth is mentioned. Please provide clarification whether the country/state is acceptable, or if the municipality of birth is required. - ID: retrieving an ID is often seen as a GDPR-breach. the larger the companies, the bigger the challenge (see above), the bigger the cost of onboarding. - Please provide clarification whether the "usual place of residence" is now a mandatory element. Previously, the personal address was mentioned to be collected if possible. Referring to the difficulty to retrieve personal data, having to retrieve the personal address of an individual in order to be compliant, will most likely result in no business relationship. Could it be possible to make this item non-mandatory but advisable? - National identifier: not all identification documents (ID) mention the national identifier of an individual. same reasoning as above. Is this a mandatory item or

Name of the respondent	Question	Answer
		can it be non-mandatory but advisable? - PEPs: Please provide clarification on how to retrieve the information of the potential PEPs present within the group of "family members". Is a declaration of the client acceptable? It is not possible to retrieve this info based on public data.
Grant Thornton Belgium	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In the future we will not apply a low risk level anymore. Low risk is mostly due to working for government but ends up in a high risk evaluation due to the presence of PEP's. Additionally, simplified measures are proposed in case of lower risk while the confirmation of lower risk couldn't have been attributed seen a risk based approach of CDD hasn't been performed yet. F.e. identity verification can be executed post-client acceptance, however, the verification could lead to a normal of high risk. Moreover, while having attributed the low risk, an increased vigilance is required until verification is executed. It all seems quite contradictory.
Grant Thornton Belgium	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Unless oversight, we're missing specific mentioning who are the UBO's of entities that fall under the government itself but also entities like autonomous municipal public enterprise, EU-agencies founded by the EU, emergency services, contractor organizations; or an exemption of UBO identification for these types of organisations, as clients.
Grant Thornton Belgium	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

	not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	group structures as “complex”, requiring additional information gathering. We recommend that the classification as a complex structure is determined by the obliged entities based on a risk-based approach. Additionally, the definition of complex structures do not consider the percentage of holding, we recommend to consider the percentage of ownership/control held, or only those with significant control (ie: more than 25% leading to UBO). As for example, the presence of a legal arrangement in the structure should not automatically requires classifying the client as “high risk” if the legal arrangement does not control the client. The Article 11 (3) letter d) of the draft RTS requires to obtain “where applicable, the shares of interest held by each legal entity or legal arrangement, its sub-division, by class or type of shares and/or voting rights expressed as a percentage of the respective total”. Could you please clarify if the "interest held by each legal entity" should be obtained regardless of the percentage of holding? We recommend to consider the percentage of ownership/control held, or only those with significant control (ie.: more than 25% that could lead up to UBO).
Grant Thornton Luxembourg	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete	Authenticity and accuracy (Articles 6, 25, 26 and 27 of the RTS) In several instances, the draft RTS requires that professionals assess the “authenticity and accuracy” of the information collected. We suggest clarifying that the requirement to assess

Name of the respondent	Question	Answer
	drafting proposals and explain why the specific measures you propose would be more appropriate.	authenticity and accuracy should focus on verifying that the information is obtained from reliable sources and is accurate and consistent when considered against the overall set of information collected. Non-face-to-face interactions (Article 7 of the draft RTS) A flexible, risk-based approach should be implemented, recognising that non-face-to-face interactions may occur where the professionals could meet in person the service providers of its client (i.e. the fund) and, potentially, meet virtually the beneficial owners or the legal representatives of its client. Such non-face-to-face interactions should not be treated as inherently higher risk.
Grant Thornton Luxembourg	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Regarding article 6.3, “obliged entities shall take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with”. Will professionals need to have specific IT tools to detect forgery? We do not know how to take reasonable step to prove that ALL documents are authentic and have not been forged or tampered with. We also recommend to include for this topic the concept of a risk-based approach basis.
Grant Thornton Luxembourg	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures	no comments

Name of the respondent	Question	Answer
	should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
Grant Thornton Luxembourg	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Regarding Article 22 (1) b) on “persons purporting to act on behalf of the customer”, we ask specific guidance to define who are the person purporting to act on behalf of the client. we do not consider this article as “risk based-approach” (ie: it could include a lot of proxies). We consider the concept of “persons purporting to act on behalf of the customer” should be clarify because it could be very large and could lead to different interpretations within the European Union. The article 10 (b) give the opportunity to get "Information from the Customer". These information are generally not considered an independent source. (ie: Would this mean that a UBO declaration signed by an authorized representative of the Customer is a mean to verify the identity of the UBO). Please note that we frequently need to justify our client request of documentation with legal support. Regarding article 29 and 30, it would be useful that AMLA further clarifies what "without undue delay" means in practice (art 30 (d)) to get same interpretation within the European Union.
Grant Thornton Luxembourg	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

	implementing the provisions of these draft RTS.: One-off implementation costs	
Grant Thornton Luxembourg	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact
Grant Thornton Luxembourg	Please justify your answer to the previous question and provide evidence where possible.	Depending how broad will be the definition of the article 22 (persons purporting to act on behalf of the customer) and the complex structure (article 12), we fear to have significant impact.

Name of the respondent	Question	Answer
Groupe APICIL	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Mostly. For our Group's financial institutions, the draft RTS appear to provide a generally sound and operational framework that can be applied across the range of products and services offered. Some additional clarification may, however, be helpful for certain lower-risk insurance and retirement activities, in particular: - health mutual entities; - provident institutions offering collective death benefit, incapacity for work and disability covers; - supplementary retirement savings structures, including FRPS-type arrangements. These activities present specific structural characteristics, including collective employer-sponsored schemes, fully traceable payroll-based contributions, limited or no surrender value, and, in many cases, the absence of any savings or investment component. Accordingly, further clarification may be helpful regarding: - the potential inclusion or exclusion of certain stand-alone provident insurance products and FRPS-type arrangements within the harmonised scope of Regulation (EU) 2024/1624, notably where they may not constitute life insurance activities or other insurance activities linked to investment; or - where considered within scope, the practical application of proportionate simplified due diligence measures under Article 33 of Regulation (EU) 2024/1624. In addition, La Fédération des institutions paritaires de

Name of the respondent	Question	Answer
		protection sociale (FIPS) has submitted a separate and more detailed response to this consultation, including sector-specific analysis, detailed rationale and drafting proposals relating to these activities.
Groupe APICIL	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Mostly. For our Group's financial institutions, the draft RTS appear to provide a generally sound and operational framework for the effective application of a risk-based approach towards compliance with AML/CFT requirements. Some additional clarification may, however, be helpful for certain lower-risk insurance and retirement activities, in particular: - health mutual entities; - provident institutions offering collective death benefit, incapacity for work and disability covers; - supplementary retirement savings structures, including FRPS-type arrangements. These activities present specific structural characteristics, including collective employer-sponsored schemes, fully traceable payroll-based contributions, limited or no surrender value, and, in many cases, the absence of any savings or investment component, resulting in an intrinsically lower ML/TF risk profile. Accordingly, further clarification may be helpful regarding: - the potential exclusion of certain stand-alone provident insurance products and FRPS-type arrangements from the harmonised scope of Regulation (EU) 2024/1624; or - where considered within scope, the practical

Name of the respondent	Question	Answer
		application of proportionate simplified due diligence measures under Article 33 of Regulation (EU) 2024/1624. In addition, La Fédération des institutions paritaires de protection sociale (FIPS) has submitted a separate and more detailed response to this consultation, including sector-specific analysis, detailed rationale and drafting proposals relating to these activities.
Groupe APICIL	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	For our Group's financial institutions, the draft RTS generally appear operational. Some practical challenges may, however, arise for certain collective insurance activities, in particular those carried out by: - health mutual entities; - provident institutions offering collective death benefit, incapacity for work and disability covers; - supplementary retirement savings structures, including FRPS-type arrangements. In the context of collective employer-sponsored contracts, some customer due diligence information may be routinely unavailable in practice, in particular where: - the contractual relationship is established with the employer, rather than with each individual insured person; insured populations may cover large numbers of employees across a significant number of corporate subscribers; - no direct contractual relationship exists with each individual insured person. Concrete examples include:

Name of the respondent	Question	Answer
		- the electronic verification of the identity of each individual insured person; - the systematic identification of PEP status of each individual insured person; - the systematic collection and updating of certain ownership and control information for a large number of lower-risk corporate subscribers. AMLA may therefore consider clarifying that, for collective employer-sponsored products presenting a low ML/TF risk: - verification of the identity of the subscribing employer may satisfy the identification requirements relating to the collective contractholder; - identification and monitoring of individual insured persons may rely, where appropriate, on reliable social or institutional reporting data provided by the employer, such as the Déclaration Sociale Nominative (DSN) in France, or equivalent reliable sources in other Member States; - PEP screening and enhanced due diligence measures may be applied on a risk-triggered basis, where relevant; - periodic reviews and data updates may be triggered by material events rather than systematic calendar-based reviews. This response is, for the aspects relating to health mutual entities, provident institutions and FRPS-type arrangements, largely informed by the separate and more detailed submission made by La Fédération des institutions paritaires de protection sociale (FIPS), which

Name of the respondent	Question	Answer
		includes sector-specific analysis and concrete drafting proposals relating to these activities.
Groupe APICIL	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	For our Group's financial institutions, the simplified due diligence measures proposed in Section 5 generally appear appropriate. Some additional simplified due diligence measures may, however, be helpful for certain collective insurance and retirement activities presenting a structurally lower ML/TF risk, in particular: - health mutual entities; - provident institutions offering collective death benefit, incapacity for work and disability covers; - supplementary retirement savings structures, including FRPS-type arrangements. AMLA may therefore consider clarifying in Section 5 of the draft RTS that, for collective employer-sponsored products presenting a low ML/TF risk: - verification of the identity of the subscribing employer may satisfy the identification requirements relating to the collective contractholder; - identification and monitoring of individual insured persons may rely, where appropriate, on reliable social or institutional reporting data provided by the employer; - periodic reviews and data updates may be triggered by material events rather than systematic calendar-based reviews; - PEP screening and enhanced due diligence measures may be applied on a risk-triggered basis, where relevant, taking into account the specific characteristics of collective low-risk products.

Name of the respondent	Question	Answer
		This response is, for the aspects relating to health mutual entities, provident institutions and FRPS-type arrangements, largely informed by the separate and more detailed submission made by La Fédération des institutions paritaires de protection sociale (FIPS), which includes sector-specific analysis and concrete drafting proposals relating to these activities.
Groupe APICIL	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Across the draft RTS, and in particular in relation to Section 5 (Articles 20 to 24), additional clarification may be helpful to further support the consistent application of the risk-based approach and legal certainty across sectors. In particular, for certain lower-risk insurance and retirement activities, including collective provident insurance products and FRPS-type arrangements, further clarification regarding their potential inclusion within the harmonised scope of Regulation (EU) 2024/1624, and, where relevant, the practical application of simplified due diligence measures, may support a more proportionate and operationally consistent implementation of the draft RTS.
Groupe APICIL	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Groupe APICIL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	10
Groupe APICIL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Comment 1 on the notion of “the person on whose behalf or for the benefit of whom a transaction or activity is being carried out” Relevant provisions :

Name of the respondent	Question	Answer
		AMLR • Regulation (EU) 2024/1624: Recitals 51 and 60 • Articles 9(2)(a)(iii), 20(1)(g)(h), 22(1) Draft RTS • Recitals 14 and 15 • Articles 5, 6(6), 10, 19 and 20 Rationale: AMLR and the draft RTS impose identification, verification and PEP screening obligations in relation to "the person on whose behalf or for the benefit of whom a transaction or activity is being carried out". Recital 51 of the AMLR clarifies that: "In the context of customer due diligence, the person for the benefit of whom a transaction or activity is carried out does not refer to the recipient or beneficiary of a transaction carried out by the obliged entity for their customer". Recital 51 also provides an example of this notion, namely: "for example in situations where credit institutions or financial institutions provide accounts to legal professionals for the purposes of receiving or holding their client's funds as defined in Article 4, point (25), of Directive (EU) 2015/2366". Recital 14 of the draft RTS provides another exemple: "Article 20(1), point (h), of Regulation (EU) 2024/1624 requires that obliged entities identify and verify the identity of the natural person on whose behalf or for the benefit of whom a transaction or activity is being conducted. This Regulation lays down specific rules for the identification and verification of the identity of the

Name of the respondent	Question	Answer
		final investors of a collective investment undertaking (CIU) that distributes its shares or units through another credit or financial institution, which acts in its own name but on behalf or for the benefit of one or more final investors." While Recital 51 AMLR and Recital 14 of the draft RTS provide two examples and exclusions, additional clarification would support a consistent interpretation across sectors and business models. In particular, neither the AMLR nor the draft RTS clearly specify: • who is covered by "the person on whose behalf or for the benefit of whom a transaction or activity is being carried out"; • when this notion applies, including whether it also applies in the context of occasional transactions falling within the scope of the AMLR; • what is the extent of, and the risk-based approach applicable to, the related identification, verification and screening obligations, including sanctions and PEP screening. It would therefore be helpful that the draft RTS provides further clarification on the scope and practical application of this notion. For consideration: AMLA may therefore consider completing Section 1 – General principles of the draft RTS with additional clarification, examples and practical guidance on the scope, application and risk-based approach relating to "the person on whose behalf or for the benefit of whom a transaction or activity is being carried out", including

		the related identification, verification and screening obligations.
Groupe APICIL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
Groupe APICIL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Comment 2 on Article 5 – Specification on nationalities Relevant provisions : AMLR • Regulation (EU) 2024/1624 Article 22(2) • Article 62(1), second subparagraph, point (a) Draft RTS • Article 5 Rationale : Article 22(2) of the AMLR provides that: “For the purposes of identifying the beneficial owner of a legal entity or of a legal arrangement, obliged entities shall collect the information referred to in Article 62(1), second subparagraph, point (a).” Article 62(1), second subparagraph, point (a), includes: “all names and surnames, place and full date of birth, residential address, country of residence and nationality or nationalities of the beneficial owner, number of identity document, such as passport or national identity document, and, where it exists, unique personal identification number assigned to the person by his or her country of usual residence, and general description of the source of such number”. Therefore, it appears that the specification on nationalities provided under Article 5 of the draft RTS should also expressly cover beneficial owners. For consideration:

Name of the respondent	Question	Answer
		For consistency with Article 22(2) of the AMLR, AMLA may consider completing Article 5 of the draft RTS as follows: Article 5 – Specification on nationalities 1. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall obtain information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. 2. For the purposes of Article 22 (2), paragraph 1 shall also apply to beneficial owners. This clarification would ensure consistency between Article 5 of the draft RTS and Articles 22(2) and 62(1) of the AMLR.
Groupe APICIL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Groupe APICIL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Comment 3 on Articles 6 and 7 – Verification of identity in non-face-to-face situations Relevant provisions : AMLR • Regulation (EU) 2024/1624 Articles 22(6) and 22(7), point (a) Draft RTS • Articles 6 and 7 Rationale Article 22(6) of the AMLR leaves obliged entities with two alternatives to comply with identity verification

Name of the respondent	Question	Answer
		obligations. Article 22(7), point (a), leaves the same alternatives for the verification of the identity of beneficial owners. Draft RTS Article 6, paragraph 5, provides that: “For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7”. In addition, Draft RTS Article 6, paragraph 4, provides: “When original documents...” while paragraph 5 provides: “obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof...” This wording appears to distinguish between “original documents” and “a certified copy thereof”. However, it remains unclear whether the reference in paragraph 5 to “the identity document, passport or equivalent” should be understood as referring to the presentation of the original document, notably in a face-to-face context. Draft RTS Article 7, paragraph 1, further provides that: “To comply with the verification requirements pursuant to Article 22(6) of Regulation (EU) 2024/1624 in a non-face-to-face situation, obliged entities shall use electronic identification means (...)”. Draft RTS Article 7, paragraph 2, further provides that: “In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be

Name of the respondent	Question	Answer
		provided, obliged entities shall obtain the natural person's identity document, passport or equivalent using remote solutions (...)". This appears to confirm that, in non-face-to-face situations, the document-based verification option expressly provided by Articles 22(6) and 22(7) of the AMLR remains available, provided that the identity document, passport or equivalent is obtained using remote solutions meeting the requirements of Article 7. More generally, it remains unclear whether Article 6 is intended to set out the requirements applicable to document-based verification in face-to-face situations, while Article 7 specifies the additional requirements applicable where such verification is conducted on a non-face-to-face basis. For consideration AMLA may therefore consider expressly clarifying in Article 6 that it sets out the requirements applicable to document-based verification in face-to-face situations. AMLA may also consider clarifying Articles 6 and 7 to avoid any interpretation that could unintentionally restrict the options expressly provided by the AMLR.
Groupe APICIL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	2
Groupe APICIL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Comment 4 on Section 2 – Information to be collected for identification and verification purposes Relevant provisions AMLR • Regulation (EU) 2024/1624 Article 20 Draft RTS

Name of the respondent	Question	Answer
		• Articles 2 to 17, 19 and 29 Rationale The AMLR and the draft RTS refer throughout their provisions to multiple categories of natural and legal persons in respect of which obliged entities may be required, depending on the circumstances, to perform identification, verification of identity, sanctions screening and/or PEP screening obligations. These categories appear across different provisions of the AMLR and the draft RTS and include, inter alia: • the customer; • any person purporting to act on behalf of the customer; • the person on whose behalf or for the benefit of whom a transaction or activity is being carried out; • natural persons other than the customer where a transaction or activity is being conducted on behalf of or for the benefit of such persons; • the beneficial owner; • natural or legal persons subject to targeted financial sanctions that control the legal entity; • senior managing officials; • legal representatives of the legal entity; • persons holding shares or a directorship position in nominee form, including reference to their status as nominee shareholders or directors; • persons empowered to represent the organisation; • trustees or persons holding an equivalent position. While the relevant obligations are set out throughout the AMLR and the draft RTS, it may be operationally challenging for obliged entities to consistently identify,

Name of the respondent	Question	Answer
		for each category of person, the applicable obligations and the extent of such obligations. A consolidated overview would support consistent interpretation and implementation across sectors and business models. For consideration AMLA may therefore consider including, in Section 2 or in an Annex to the draft RTS, a consolidated table summarising, for each relevant category of person referred to in the AMLR and the draft RTS: • the minimum information to be collected for identification purposes; • whether verification of identity is required; • the applicable modalities for verification of identity; • where applicable, any simplified or adapted requirements in lower-risk situations; • whether PEP screening is required; • whether targeted financial sanctions screening is required.
Groupe APICIL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	20
Groupe APICIL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Comment on Section 5 – Simplified due diligence measures for lower-risk insurance products Relevant provisions AMLR • Regulation (EU) 2024/1624 Article 33 (Simplified due diligence measures) • Article 2 Draft RTS • Section 5 – Simplified due diligence measures

Name of the respondent	Question	Answer
		• Articles 20 to 24 Insurance framework • Directive 2009/138/EC Article 2(3) Rationale Article 2 of the AMLR subjects insurance undertakings and insurance intermediaries to AML/CFT obligations insofar as they carry out: “life insurance activities or other insurance activities linked to investment” by reference to Directive 2009/138/EC. This wording appears to suggest that the harmonised AMLR scope primarily covers insurance activities involving an investment, savings or patrimonial component, which are traditionally associated with higher ML/TF exposure. In this context, it remains unclear how the AMLR and the draft RTS should apply to certain provident insurance products, in particular: • death benefit covers; • incapacity for work covers; • disability covers; • where relevant, certain supplementary retirement-related covers; where such products: • have no investment component; • have no surrender value; • have no investment or patrimonial value; • are funded through regular periodic contributions; • generally do not allow free or exceptional contributions.

Name of the respondent	Question	Answer
		Article 2(3)(a) of Directive 2009/138/EC provides that life insurance includes: “life assurance (...) including assurance in case of death” and: “supplementary insurance underwritten in addition to life insurance, in particular bodily injury, including incapacity for employment (...) and disability resulting from accident or sickness”. While death benefit covers may fall within Article 2(3)(a)(i), it remains unclear whether incapacity for work and disability covers, which appear to fall under Article 2(3)(a)(iii), are expected to fall within the AMLR scope where they are underwritten on a stand-alone basis, as is commonly the case for provident institutions, rather than in addition to life insurance. In addition, the treatment of certain supplementary retirement savings products, including products managed through occupational retirement institutions or FRPS-type structures, remains unclear. To the extent that such structures may fall outside the prudential scope of Directive 2009/138/EC, and may not involve any investment component, surrender value or patrimonial logic comparable to the activities traditionally associated with AML risk, their inclusion within the harmonised AMLR scope may also require clarification. This appears particularly relevant where such products are not carried out by insurance undertakings within the meaning of Directive 2009/138/EC, or do not constitute life insurance activities or other insurance activities linked to investment within the meaning of Article 2 of

Name of the respondent	Question	Answer
		the AMLR. Without prejudice to the above scope considerations, the EBA, in its Response to the European Commission's Call for Advice on Six AMLA Mandates (EBA/REP/2025/35, October 2025), indicates that: "Life insurance products are defined by Article 2(3) of Directive 2009/138/EC" and identifies as low-risk contracts, inter alia: "contracts merely covering death or certain disabilities or attacks on the physical integrity of the person (...) which do not include an element of savings or investment". Accordingly, where such products are considered to fall within the harmonised AMLR scope, their structural characteristics would appear consistent with lower-risk insurance products for the purposes of Article 33 AMLR and Section 5 of the draft RTS. For consideration AMLA may therefore consider providing additional clarification in Section 5 of the draft RTS, in particular: • whether stand-alone provident insurance products, including death benefit covers, incapacity for work and disability covers, without an investment component, surrender value or investment or patrimonial value, fall outside the AMLR scope, or are expected to be treated as lower-risk products within scope; • whether provident insurance covers underwritten in addition to life insurance, within the meaning of Article 2(3)(a)(iii) of Directive 2009/138/EC, are expected to fall within scope; • whether supplementary retirement savings products,

Name of the respondent	Question	Answer
		including FRPS-type structures falling outside Directive 2009/138/EC, are expected to fall outside the harmonised AMLR scope; • where such products are considered within scope, whether simplified due diligence measures are expected to apply; • whether, for mixed contracts, simplified due diligence measures should be assessed at the level of the contract or at the level of the individual guarantees.

Name of the respondent	Question	Answer
	subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Groupe APICIL	Please justify your answer to the previous question and provide evidence where possible.	For our Group's financial institutions, implementation costs appear manageable. However, for health mutual entities, provident institutions and FRPS-type arrangements, additional costs may arise notably from: - implementation of remote identification solutions (Article 7) for collective insured populations; - additional PEP/sanctions screening infrastructure for large insured populations; - additional ownership and control data collection for large volumes of SME corporate subscribers; - IT adaptations to support event-driven monitoring / DSN integration; - potential use of external data providers.
Groupe VYV	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Nous sommes d'accord
Groupe VYV	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT	Nous ne sommes pas d'accord. I) Les propositions figurant dans le projet ne permettent

Name of the respondent	Question	Answer
	requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	pas l'application effective d'une approche fondée sur les risques. Le projet semble bien prendre en compte des situations dans lesquelles le risque présenté par le client semble particulièrement faible ; au point de prévoir des exceptions à l'application de certaines obligations de due diligence. En effet, le Règlement 2024/1624 (Article 65) prévoit bien que lorsque le client présente des garanties accrues de transparence (organisme de droit public de l'Etat Membre ; sociétés cotées…) ; des obligations telles que l'identification des bénéficiaires effectifs ne semble pas appropriée. Le règlement prévoit donc l'exemption pure et simple de cette obligation par les entités assujetties lorsque le risque client est particulièrement faible. Une telle analyse ne trouve pas d'équivalent lorsque c'est le produit fourni qui présente un risque particulièrement faible de blanchiment et de financement du terrorisme. Pourtant, il se trouve que certains produits ne sont que très faiblement exposés à de tels risques. C'est le cas par exemple des contrats d'assurance portant sur la vie mais sans dimension de capitalisation (assurance décès sans valeur de rachat, assurance natalité/nuptialité); ainsi que les produits présentant une telle dimension mais ne dépassant pas certains seuils. Le risque étant particulièrement faible, nous proposons des exemptions de certaines obligations, à l'instar de ce qui est prévu en ce qui concerne le risque « client ». Notons que de telles

Name of the respondent	Question	Answer
		exemptions existent en droit français positif pour ces produits en particulier. Ces exemptions ou a minima ces simplifications concernent les obligations suivantes : - L'obligation de vérification de l'identité : une proposition d'exemption de cette obligation lorsque le risque du produit est particulièrement faible. - L'obligation d'identification des personnes politiquement exposées : une proposition de simplification de cette obligation lorsque le risque du produit est particulièrement faible II) Proposition rédactionnelle (ajout de §III) et §IV) à l'article 2) : Article 2 – Certains produits présentent un risque particulièrement faible de blanchiment et financement du terrorisme. III) Les contrats d'assurance sur la vie ou de capitalisation dont la prime annuelle ne dépasse pas 1 000 euros ou dont la prime unique ne dépasse pas 2 500 euros ; IV) Les contrats d'assurance sur la vie ne présentant pas de dimension de capitalisation (contrats d'assurance décès, nuptialité, natalité) ou sans valeur de rachat.
Groupe VYV	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	Nous relevons que les données relatives à certaines fonctions de personnes politiquement exposées (« PPE » ci-après) peuvent s'avérer difficile à collecter en principe. Plus particulièrement, cela concerne deux

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	catégories : - La catégorie relative aux membres de la famille du PPE : en pratique, nous constatons qu'en l'absence de liste officielle de PPE, cette donnée n'est que très peu connue de nos solutions de screening. Concrètement, il est pratiquement impossible d'avoir connaissance d'un lien de parenté de notre client avec une personne politiquement exposée. o Prenons un exemple : Plusieurs PPE (un ambassadeur, un lieutenant-colonel, un juge au Conseil Constitutionnel) qui se prénomment « Michel Dupont » (noms volontairement très communs en France). Sur internet, très peu d'informations personnelles sont disponibles à leurs égard (particulièrement concernant la catégorie des hauts gradés militaires). o En parallèle, un client nommé « Adrien Dupont » souhaite souscrire un contrat. En pratique, sauf à lui demander précisément s'il a un lien de parenté avec l'ambassadeur ou le député ou le juge ; nous ne pourrons détecter si la personne est bien membre de la famille d'une PPE. Ajoutons que si les informations relatives aux descendants/ascendants des PPE ne sont que très rarement connues, l'élargissement (bien que circonscrit à une seule catégorie de PPE) que prévoit le règlement aux frères et sœurs risque d'accentuer la problématique Enfin, la situation est d'autant plus complexe lorsque le lien de parenté n'est pas marqué par le partage d'un nom de famille commun. - La catégorie relative aux « responsables » de

Name of the respondent	Question	Answer
		collectivités locales pose également une difficulté d'application. En effet, la notion de « responsable » apparait particulièrement floue : doit-on ici entendre qu'il s'agit du responsable unique de chaque collectivité ? Ou bien de l'ensemble des responsables de chacune de ces collectivités ? Selon l'une ou l'autre de ces approches, en France, le nombre de personnes concernées pourrait passer d'environ 500 à 31 000. Dans le second cas, il nous semble très difficile de procéder à une détection en pratique, tant nous disposerons que de très peu d'information publique les concernant. Aussi, nous n'aurons en général qu'un prénom/nom à faire correspondre avec nos clients, ce qui rendra particulièrement complexe l'analyse. Notons enfin que ces problématiques seront d'autant plus fortes lorsque les critères seront combinés, c'est-à-dire lorsqu'il s'agira d'identifier un membre de la famille d'un responsable d'une collectivité locale. Dans le cadre d'une approche par les risques et compte tenu du risque particulièrement faible que présentent certains produits, nous proposons que l'identification des PPE soit circonscrite à certaines catégories de PPE, celles présentant un risque particulièrement accru de BC-FT, eu égard aux futures orientations de l'ALBC en la matière – prévues au §90 des propos introductifs du Règlement) Des propositions rédactionnelles concrètes sont

Name of the respondent	Question	Answer
		présentées dans le cadre de la réponse à la question 4 de la présente consultation
Groupe VYV	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Si le règlement prévoit bien des simplifications (article 33 du Règlement), y compris une possibilité de différer la vérification de l'identité du client ; il n'est prévu aucune exemption en ce qui concerne certaines obligations qui pourtant, paraissent disproportionnées eu égard au principe d'approche par les risques. Aussi, compte tenu du risque particulièrement faible que présentent certains produits/services (cf. réponse à la question n°1), nous proposons les amendements suivants : • Proposition rédactionnelle concernant l'obligation d'identification et de vérification de l'identité (ajout d'un §3. à l'article 20) : Article 20 - Minimum requis pour l'identification d'un client en situation de risque faible Ajout : « 3. Dans le cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33, 5. du Règlement ; seule l'identification est nécessaire et l'entité assujettie n'a pas à vérifier l'identité du client [et de la personne pour le compte de laquelle il souscrit] ». Notons que cette exemption constitue une reprise de ce qui existe en droit français positif. • Proposition rédactionnelle concernant la détection des personnes politiquement exposées (ajout d'un §4. à

Name of the respondent	Question	Answer
		l'article 19) : Article 19 – Identification des Personnes politiquement exposées Ajout : « 4. Dans le cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33, 5. Du Règlement ; l'entité assujettie peut se limiter à l'identification des seules catégories PPE présentant un risque plus élevé de BC-FT » Remarque : l'identification des catégories risquées de PPE sera réalisée en lien avec les futures orientations ALBC en la matière qui doivent porter sur « l'évaluation du niveau de risque associés à une catégorie particulière de PPE, aux membres de leur famille et aux personnes connues pour leur être étroitement associées ».
Groupe VYV	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	• Concernant le recueil des prénoms : En France, si les prénoms secondaires (prénoms d'état civil) sont bien présents sur les documents officiels d'identité, seul le prénom usuel est utilisé en pratique. Aussi, il apparait peu opportun de collecter auprès du client l'ensemble de ses prénoms. Nous proposons donc que seul le prénom usuel puisse être collecté. ð Proposition rédactionnelle (amendement de l'article 2) : Article 2 - Information à collecter relatif à l'identité par le nom Modification : « En ce qui concerne les noms et prénoms d'une personne physique visés à l'article 22,

Name of the respondent	Question	Answer
		paragraphe 1, point a), i), du règlement (UE) 2024/1624, les entités assujetties doivent obtenir tous les noms figurant sur le document d'identité, le passeport ou un équivalent, ainsi que les prénoms usuels du client. » • Concernant la validation de l'entrée en relation avec des PPE : Il ne semble pas opportun de mettre en œuvre l'obligation de vigilance complémentaire lorsque le produit présente un risque particulièrement faible de BC-FT. ð Proposition rédactionnelle (ajout d'un §5 à l'article 19) : Article 19 – Identification des Personnes politiquement exposées Ajout : « 5. Les dispositions prévues à l'article 42.1 du Règlement UE 2024/16 24 ne sont pas applicables dans les cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33.5 du même règlement.» Annexe : L'évaluation de la catégorie des personnes politiquement exposées (PPE) intitulée « responsables de collectivités locales » en France repose sur l'identification des dirigeants des collectivités territoriales de taille significative, en particulier celles comptant au moins 50 000 habitants. Au niveau régional, la France compte 18 régions, chacune étant dirigée par un président de région. Cela

Name of the respondent	Question	Answer
		représente donc 18 personnes relevant de cette catégorie. À l'échelon départemental, les 101 départements sont administrés par des présidents de conseil départemental, ce qui correspond à 101 responsables supplémentaires. Concernant le niveau communal, on dénombre environ 124 communes de plus de 50 000 habitants (dont 83 comprises entre 50 000 et 100 000 habitants, et 41 dépassant les 100 000 habitants). Chacune est dirigée par un maire, ce qui représente environ 124 personnes. S'agissant des structures intercommunales, les métropoles, au nombre de 21, sont chacune dirigées par un président, soit 21 responsables. Les 14 communautés urbaines disposent également chacune d'un président, représentant 14 personnes. En outre, on recense environ 230 communautés d'agglomération de plus de 50 000 habitants, chacune présidée par un responsable, soit environ 230 individus. Enfin, les autres établissements publics de coopération intercommunale (EPCI) de plus de 50 000 habitants — principalement des communautés de communes issues de fusions — sont estimés à environ 23, correspondant à 23 présidents. Au total, l'ensemble de ces fonctions représente environ 531 personnes considérées comme responsables de collectivités locales dans le cadre de la catégorie PPE en France.

Name of the respondent	Question	Answer
		En France, le nombre d'élus siégeant dans des collectivités de plus de 50 000 habitants peut être estimé à environ 31 000, en tenant compte des différents niveaux territoriaux. Au niveau régional, on compte 18 régions, chacune composée en moyenne d'environ 110 conseillers régionaux, soit un total proche de 1 980 élus. Les départements sont au nombre de 101, avec en moyenne 46 conseillers départementaux par assemblée, ce qui représente environ 4 650 élus. Pour les communes de plus de 50 000 habitants, leur nombre est estimé à environ 124. Chaque conseil municipal comprend en moyenne 50 élus, soit un total d'environ 6 200 conseillers municipaux. Les structures intercommunales représentent également une part importante. Les 21 métropoles comptent chacune environ 100 conseillers métropolitains, soit environ 2 100 élus. Les 14 communautés urbaines rassemblent quant à elles environ 80 conseillers chacune, pour un total estimé à 1 120 élus. Les communautés d'agglomération de plus de 50 000 habitants sont les plus nombreuses, avec environ 230 structures. Avec une moyenne de 60 conseillers communautaires par structure, elles totalisent près de 13 800 élus. Enfin, les communautés de communes de cette taille sont plus rares (environ 23), avec en

Name of the respondent	Question	Answer
		moyenne 45 conseillers chacune, soit environ 1 035 élus. L'ensemble de ces niveaux de collectivités aboutit ainsi à une estimation globale d'environ 31 000 élus siégeant dans des collectivités d'au moins 50 000 habitants en France.

Growell Capital Ltd	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, we generally agree that the proposals set out in the draft RTS can be applied across the range of products and services provided by obliged entities. The initiative supports greater regulatory harmonisation and consistency in AML/CFT practices across the EU. Nevertheless, it is important that the final RTS explicitly preserve the principle of proportionality, allowing firms to implement the requirements in a manner aligned with their size, business model, and risk profile. This flexibility is particularly relevant for firms offering multiple financial services or operating in cross-border environments.

Name of the respondent	Question	Answer
Growell Capital Ltd	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, we agree that the draft RTS support the effective application of a risk-based approach to AML/CFT compliance. The framework appropriately recognises that obliged entities should tailor controls, monitoring, and due diligence measures based on their internal risk assessments. To further support consistent implementation across the sector, additional supervisory clarification or practical examples regarding the application of the risk-based approach would be beneficial, particularly for firms with complex operational structures or cross-border activities.
Growell Capital Ltd	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, obliged entities may encounter situations where certain customer due diligence (CDD) information required under the draft RTS is not readily available despite reasonable efforts. For example, customers located in certain third countries may not possess standardized proof of address documentation or may rely on documentation formats that are not easily verifiable through digital tools. Similarly, corporate customers operating through multi-jurisdictional structures may face delays in obtaining official documentation confirming ultimate beneficial ownership, particularly where beneficial ownership registries are incomplete, not publicly accessible, or not regularly updated. Additionally, in cases where customers are introduced through regulated intermediaries or professional service providers, obliged entities may not have immediate access to all primary identification documentation at the onboarding stage.

Name of the respondent	Question	Answer
		To address these operational challenges while maintaining AML/CFT safeguards, the RTS should explicitly allow obliged entities to apply a risk-based approach by accepting reliable alternative verification methods. These could include attestations from regulated intermediaries, reliance on official company registries, trusted commercial databases, or alternative documentation demonstrating residence or ownership. Providing such flexibility would support effective compliance while ensuring proportionality and operational feasibility for obliged entities.
Growell Capital Ltd	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	aking into account AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624, the RTS could further clarify and expand the application of simplified due diligence (SDD) measures for products and services presenting demonstrably lower ML/TF risks. For instance, SDD could be explicitly permitted where customers are established in EU or EEA jurisdictions subject to robust AML/CFT supervision, particularly where the products offered involve limited functionality, restricted transaction thresholds, or transparent funding mechanisms. Furthermore, the RTS could allow greater reliance on CDD measures already performed by regulated financial institutions within the EU, subject to appropriate safeguards and access to underlying documentation where necessary. Additional proportionality could also be introduced by allowing reduced frequency of ongoing monitoring for low-risk customers whose transactional behaviour remains consistent with the established risk profile.

Name of the respondent	Question	Answer
		These measures would support the effective implementation of the risk-based approach while avoiding unnecessary administrative burden for obliged entities operating in low-risk contexts.
Growell Capital Ltd	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	While the draft RTS provides important clarification regarding the application of customer due diligence measures, further guidance could enhance consistent implementation across the Union. In particular, certain provisions appear relatively prescriptive and may limit the flexibility of obliged entities to tailor their controls in line with their specific ML/TF risk assessments. Greater emphasis on the risk-based approach, as a core principle of the EU AML/CFT framework, would therefore be beneficial. Additionally, clearer guidance on the acceptable use of digital identity solutions, remote onboarding technologies, and reliable electronic databases would support financial innovation while ensuring that customer verification standards remain robust and secure. Providing further clarification in these areas would enhance legal certainty for obliged entities and contribute to more consistent supervisory expectations across Member States.
Growell Capital Ltd	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Growell Capital Ltd	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Growell Capital Ltd	Please justify your answer to the previous question and provide evidence where possible.	The draft RTS is expected to create some additional implementation and operational costs, mainly related to updating internal policies, staff training, and minor adjustments to onboarding and monitoring systems. Recurring costs may arise from enhanced verification and monitoring processes. However, as most obliged entities already maintain AML/CFT frameworks under

Zbornica računovodskih servisov (ZRS), ki deluje v okviru Gospodarske zbornice Slovenije (GZS), združuje skoraj 500 družb in samostojnih podjetnikov posameznikov, ki opravljajo dejavnost računovodskih servisov. Ne strinjamo se s tezo, da se predlogi lahko ustrezno uporabljajo za vse produkte in storitve, ki jih zagotavljajo naši člani. Spodaj je obrazloženo, zakaj sedanji predlogi ne zagotavljajo zadostne prožnosti. V skladu s 1. in 2. točko 28. člena Uredbe (EU) 2024/1624 Evropskega parlamenta in sveta z dne 31. 5. 2024 o preprečevanju uporabe finančnega sistema za

Name of the respondent	Question	Answer
		pranje denarja ali financiranje terorizma (»Uredba«) AMLA pri pripravi regulativnih tehničnih standardov (»RTS«) upošteva tudi tveganja, ki so neločljivo povezana s storitvami, ki jih zavezanci opravljajo. Po našem razumevanju bi morale biti zato v RTS upoštevane specifike storitev, ki jih izvajajo različni zavezanci. Iz same obrazložitve RTS izhaja, da so pripravljeni na osnovi dokumenta, ki ga je sprva izdelal Evropski bančni organ (»EBA«). To se odraža v vsebini RTS, ki so krojeni po meri kreditnih in finančnih institucij. Primer tega je, da je edina sektorska poenostavitev (22. člen RTS) predlagana za kreditne institucije, čeprav bi bilo z vidika sorazmernosti in tveganosti dejavnosti zavezancev bistveno bolj primerno, da bi bile sektorske poenostavitve predlagane za zavezance iz nefinančnega sektorja, kot so denimo računovodje in davčni svetovalci. Zaradi bistvenih razlik v velikosti, resursih in tveganosti med zavezanci iz finančnega in nefinančnega sektorja menimo, da bi bilo ustrezneje pripraviti ločene RTS za nefinančni sektor. To je opcija A, kot je opisana na straneh 35 do 37 osnutka RTS in ki glede na pojasnila v RTS ni bila izbrana predvsem zaradi domnevno nesorazmerno visokih stroškov priprave takšnih ločenih RTS. Specifični RTS za nefinančni sektor bi bili bolj praktični, uporabni ter bi lažje upoštevali načelo sorazmernosti, ki je v samih RTS navedeno kot eno temeljnih načel priprave RTS. Glede na administrativno breme, ki ga obveznosti iz Uredbe predstavljajo širokemu polju nefinančnih zavezancev, se zdi tudi argument o stroškovni nesorazmernosti priprave

Name of the respondent	Question	Answer
		takšnega ločenega dokumenta izrazito neprepričljiv. Pri manjših in nizko tveganih zavezancih iz nefinančnega sektorja glede obsega in načina pridobivanja dokumentacije predlagamo poenostavitve po vzoru 3. točke 19. člena RTS. Na enak način bi morala biti v 3. in 4. točki 7. člena RTS omogočena poenostavitev pri identifikaciji na daljavo. Zadoščati bi moral vpogled v kopije osebnih dokumentov in enostavna verifikacija preko video klica. Po enakem vzoru bi moralo biti v 10. členu RTS določeno, da je preverjanje dejanskega lastnika iz drugih virov potrebno le, kadar obstajajo utemeljeni razlogi za dvom v podatke, ki jih zavezanec pridobi iz registra dejanskih lastnikov. Pravna podlaga za določitev takšnih minimalnih zahtev pri manjših zavezancih in nizkem tveganju izhaja iz alineje (a) 1. točke 28. člena Uredbe. Poleg tega v alineji (b) 25. člena RTS predlagamo, da se pri zavezancih iz nefinančnega sektorja določi izjema, da tudi pri poglobljenem pregledu nimajo obveznosti presoje ugleda stranke in dejanskega lastnika. Presojo reputacijskega tveganja finančnim in kreditnim institucijam nalagajo sektorski predpisi. V svoji poslovni praksi imajo zato ti zavezanci oblikovane kriterije in postopke presojanja tovrstnega tveganja, denimo na kreditnih odborih. Pri nefinančnih zavezancih pa je to dodatna, nesorazmerna in neučinkovita obveznost.
GZS - ZBORNICA RAČUNOVODSKIH SERVISOV, Dimičeva ulica 13, 1000 Ljubljana	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify	Osnutek RTS za računovodje in davčne svetovalce ne omogoča učinkovite uporabe pristopa, ki temelji na tveganju. Mestoma določa strožje obveznosti od Uredbe in obveznosti iz poglobljenega pregleda nedopustno širi

Name of the respondent	Question	Answer
	the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	na poenostavljen in običajen pregled. V 25. členu Uredbe je navedeno, da zavezanec za namen opredelitve namena in predvidene narave poslovnega odnosa ali občasne transakcije po potrebi pridobi informacije o okoliščinah iz alinej (a) do (e). Dikcija Uredbe torej dopušča, da zavezanec v skladu s pristopom, ki temelji na tveganju, v konkretnem primeru presodi, katere sklope informacij mora pridobiti. Drugače kot 25. člen Uredbe pa 18. člen RTS v alinejah (b) do (e) za vsakega od teh sklopov informacij določa, da mora zavezanec pridobiti vsaj eno od tam navedenih podskupin informacij. To je še posebej sporno zato, ker je med njimi tudi izvor sredstev stranke. Pridobivanje informacij glede slednjega je po Uredbi predmet poglobljenega pregleda in te obveznosti z RTS ni dopustno širiti na poenostavljen in običajen pregled. Neustrezna je tudi sistematika delitve na poenostavljen, običajen in poglobljen pregled stranke. V 2. točki 20. člena Uredbe je določeno, da zavezanec določi obseg ukrepov skrbnega pregleda stranke na podlagi posamezne analize tveganja pranja denarja in financiranja terorizma glede na specifične značilnosti stranke in poslovnega odnosa ali občasne transakcije ter ob upoštevanju ocene tveganja za celotno poslovanje, ki jo je pripravil zavezanec. Podatke, od katerih je odvisna določitev načina pregleda stranke, zavezanec torej deloma pridobiva že s prvimi koraki identifikacije in pregleda stranke. Zato gre 20. člen Uredbe logično razlagati na način, da mora zavezanec začeti s poenostavljenim načinom identifikacije stranke in se

Name of the respondent	Question	Answer
		potem glede na pridobljene podatke in prvotno oceno tveganja stranke odloči, ali bo nadaljeval s poenostavljenim, običajnim ali poglobljenim pregledom stranke. V nasprotnem primeru nikoli ne bi prišel v poštev poenostavljen način identifikacije stranke, saj bi jo moral zavezanec vedno najprej identificirati po pravilih običajnega pregleda. Z vidika praktičnosti in sorazmernosti bi moralo to biti v RTS izrecno določeno. Pravna podlaga za to, da je to urejeno v RTS, je alineja (b) 1. točke 28. člena Uredbe.
GZS - ZBORNICA RAČUNOVODSKIH SERVISOV, Dimičeva ulica 13, 1000 Ljubljana	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	V 27. členu RTS je navedeno, na kakšne načine naj zavezanci preverjajo izvor sredstev (source of funds) in premoženja (source of wealth) stranke ter dejanskega lastnika. Zavezanci praviloma nimajo na voljo ustreznih načinov za preverjanje izvora premoženja strank ter dejanskih lastnikov, ki so fizične osebe. Zavezanci ne morejo poznati niti ustrezno preveriti, kakšen je dejanski obseg in izvor premoženja. Poleg tega je nesorazmerno od zavezancev zahtevati, naj preverjajo siceršnje premoženje strank in dejanskih lastnikov (source of wealth), ki presega izvor sredstev (source of funds), ki so oz. bodo predmet konkretnega poslovnega razmerja. Drugo premoženje nima zveze s storitvami, ki jih izvajajo zavezanci in zato ne obstoji tveganje, da bi s pomočjo storitev zavezancev prišlo do pranja denarja in financiranja terorizma iz tega preostalega premoženja stranke ali dejanskega lastnika. Zavezanci niso javnopravni organi pregona in ne morejo preverjati izvora premoženja strank in dejanskih lastnikov, ki nimajo zveze s konkretnimi storitvami, ki jih izvajajo za

Name of the respondent	Question	Answer
		stranke. Zato predlagamo, da se kot način preverjanja premoženja strank ter dejanskih lastnikov pri fizičnih osebah navede kvečjemu pisna izjava stranke ter dejanskega lastnika. V 10. členu RTS je navedeno, da zavezanci za verifikacijo dejanskega lastnika vpogledajo tudi v register dejanskih lastnikov. V Republiki Sloveniji je dostop do podatkov iz registra dejanskih lastnikov plačljiv. Z Uredbo se zasebnopravnim zavezancem nalagajo obveznosti preprečevanja pranja denarja, ki v osnovi spadajo v javnopravno sfero. Za izvajanje teh ukrepov bi morala biti zavezancem dodeljena ustrezna sredstva, ne pa da se jim za izvajanje teh nalog nalagajo še dodatni nepotrebni stroški. Zato z vidika učinkovitosti predlagamo, da se v RTS izrecno določi, da mora biti v državah članicah (vsaj za zavezance iz nefinančnega sektorja) dostop do podatkov iz registra dejanskih lastnikov brezplačen.
GZS - ZBORNICA RAČUNOVODSKIH SERVISOV, Dimičeva ulica 13, 1000 Ljubljana	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Kot navedeno pod točko 1 zgoraj, pri manjših in nizko tveganih zavezancih iz nefinančnega sektorja glede obsega in načina pridobivanja dokumentacije predlagamo poenostavitve po vzoru 3. točke 19. člena RTS. Na enak način bi morala biti v 3. in 4. točki 7. člena RTS omogočena poenostavitev pri identifikaciji na daljavo. Zadoščati bi moral vpogled v kopije osebnih dokumentov in verifikacija preko video klica. Pri tujih strankah iz držav članic je namreč neutemeljena zahteva, da mora biti identifikacija narejena praviloma v osebni navzočnosti, na daljavo pa zgolj s specializiranimi načini videoelektronske identifikacije, s kakršnimi

Name of the respondent	Question	Answer
		računovodje večinoma ne razpolagajo. V zvezi s tem ni jasno, kaj v 3. točki 7. člena RTS pomeni: »controls to ensure that the natural person presenting the customer's identity document, passport or equivalent is the person on the picture of the document«. Mora iti za strojni način primerjave fotografije in podatkov z dokumenta z osebo na video-klicu, ali zadošča že sam vpogled s strani zavezanca? Predlagamo, da se to zahtevo zapiše jasneje in na način, da zadošča možnost vpogleda s strani samega zavezanca. Prav tako bi moralo biti v 10. členu RTS določeno, da je preverjanje dejanskega lastnika iz drugih virov potrebno le, kadar obstajajo utemeljeni razlogi za dvom v podatke, ki jih zavezanec pridobi iz registra dejanskih lastnikov. V primerih enostavnih lastniških struktur, ki se skladajo z dotedanjim vedenjem zavezanca o stranki, je dodatno preverjanje podatkov, ki jih pridobi iz registra dejanskih lastnikov, nepotrebno in predstavlja nesorazmerno administrativno breme za zavezance.
GZS - ZBORNICA RAČUNOVODSKIH SERVISOV, Dimičeva ulica 13, 1000 Ljubljana	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Pri identifikaciji politično izpostavljenih oseb je v 3. točki 19. člena RTS predvidena možnost poenostavitev, ki so skladne z velikostjo, poslovnim modelom, kompleksnostjo ali naravo storitev zavezanca. Tak princip bi moral biti uveljavljen na več mestih v RTS, denimo tudi glede pridobivanja dodatnih informacij o izvoru sredstev in premoženja (27. člen RTS) ter glede preverjanja ciljanih finančnih sankcij (30. člen RTS).

Harmonic Fund Services Luxembourg	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree that the proposals set out in the draft Regulatory Technical Standards (RTS) under Article 28(1) can be applied across the range of products and services provided by our obliged entity, provided they are implemented in a proportionate and risk-based manner. Our AML/CTF framework is designed in line with EU and Luxembourg requirements and already applies a risk-based approach across products, services, delivery channels, customer types and geographies. In this context, the draft RTS are generally compatible with our existing governance arrangements, policies, procedures and internal controls as set out in our AML Manual.
Harmonic Fund Services Luxembourg	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree that the proposals set out in the draft RTS generally allow for the effective application of a risk-based approach to AML/CFT compliance.
Harmonic Fund Services Luxembourg	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	Considering the nature, size and complexity of our business, there are limited scenarios in which certain customer due diligence information envisaged under the draft RTS may not be routinely available. This primarily arises in the context of indirect investor relationships, or reliance on regulated intermediaries, where access to granular beneficial ownership, source

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	of funds or source of wealth information may be legally constrained or not reasonably obtainable. In such situations, we believe the risk-based approach would be better supported by clearer recognition of alternative measures, such as reliance on regulated and supervised intermediaries, the use of independent and reliable public sources, and enhanced ongoing monitoring. Further clarification in the RTS on acceptable alternatives where information cannot reasonably be obtained would ensure effective and consistent implementation without undermining AML/CFT objectives.
Harmonic Fund Services Luxembourg	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	we consider that the draft RTS could further specify additional simplified due diligence measures applicable in demonstrably low-risk scenarios, such as relationships with EU-regulated institutional clients, entities subject to equivalent AML/CFT regimes, or products with limited transactional activity. In particular, the RTS could expressly permit reliance on due diligence performed by regulated intermediaries without duplication of documentation, reduced frequency of customer data reviews, source of funds or source of wealth assessments limited to plausibility checks based on public or contractual information. These measures would reflect the lower inherent risk of such relationships, and allow compliance resources to be more effectively focused on higher-risk areas while maintaining robust AML/CFT standards.
Harmonic Fund Services Luxembourg	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Prescriptive onboarding baselines describe a one-size-fits-all onboarding standard that limits the

Harmonic Fund Services Luxembourg	Please justify your answer to the previous question and provide evidence where possible.	n/a
Haute autorité de l'audit (H2A)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The French audit regulator, the Haute Autorité de l'Audit (H2A), generally agrees that the proposals set out in these draft RTS can be applied across a broad range of obliged entities, including auditors and audit firms. This overall applicability is supported in particular by Article 1, which embeds the principles of proportionality and a risk-based approach, allowing entities to tailor the implementation of requirements to the nature, size, and risk profile of their activities. Additional flexibility is provided by provisions such as Article 8, which allows for a risk-sensitive assessment of reliable and independent sources, and Article 11, which introduces a graduated approach to the assessment of ownership and control structures. However, the application of the RTS to the audit sector must be assessed in light of the specific legal and operational characteristics of statutory audit engagements, which differ significantly from typical commercial or financial relationships. In particular: • Statutory auditors act pursuant to a legal mandate, rather than entering into a freely negotiated business relationship,

Name of the respondent	Question	Answer
		• Their engagement is defined by law, including its purpose (issuance of an audit opinion) and scope, • Auditors rely primarily on information and documentation provided by the audited entity, and do not have general powers to obtain information from third parties. These characteristics introduce structural constraints that affect the practical implementation of certain RTS provisions. In particular, Article 18 (purpose and intended nature of the business relationship) may not fully reflect the specific nature of statutory audit engagements, where the relationship is mandated by law rather than initiated by the client and the "purpose" is predefined (statutory audit opinion), limiting the relevance of some required information (e.g. transactional expectations). Furthermore, certain sector-specific provisions, such as Article 17 (collective investment undertakings) or Article 22 (pooled accounts), are not applicable to the audit sector and should be explicitly understood as such to avoid any ambiguity in interpretation. Beyond statutory audit, audit firms also provide a range of non-audit services (where permitted), such as limited assurance engagements, agreed-upon procedures, certifications, or other advisory services. These engagements are typically contractual and may, in contrast with statutory audit, more closely resemble

Name of the respondent	Question	Answer
		traditional business relationships. However, these services remain subject to strict professional, ethical and independence requirements, which limit both their scope and their commercial nature. Moreover, auditors do not act as financial intermediaries and do not execute transactions on behalf of clients. As a result, while the RTS may be more readily applicable to such services, their implementation should still be calibrated to reflect the regulated nature of the profession and the limited access to information that characterizes all audit-related activities. It should also be noted that auditors are already subject to specific professional obligations regarding customer identification. In particular, under applicable standards such as the French professional standard “NEP 9605”, auditors must take reasonable measures to identify the beneficial owner. Where such identification cannot be achieved despite these efforts, this may ultimately lead to disengagement or resignation. This demonstrates that the audit profession operates under a strict and structured framework for customer due diligence, but within clearly defined operational limits. The RTS should therefore ensure consistency with these existing obligations and avoid creating expectations that would go beyond what auditors can reasonably obtain in practice. Finally, it should be noted that the draft RTS does not provide a definition of the notion of “auditor”. This absence is regrettable, as it may create uncertainty

Name of the respondent	Question	Answer
		regarding the exact scope of application of the requirements to different types of audit-related professionals and services (statutory audit, other assurance engagements, etc.). Providing a clear and harmonized definition would enhance legal certainty and support a consistent application of the RTS across Member States and across the full range of audit activities. Proposed drafting improvement: It is recommended to amend Article 18 to explicitly recognize that, in the context of statutory audit engagements, the purpose and intended nature of the relationship may be inferred from the legal mandate. Additional information should only be required where it is strictly necessary for the assessment of AML risks and proportionate to the auditor's role and access to information. This clarification would enhance legal certainty and ensure that the requirements remain meaningful and operationally feasible for auditors.
Haute autorité de l'audit (H2A)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The H2A agrees that the draft RTS allow, in principle, for the effective application of a risk-based approach to AML compliance. This is notably supported by several key provisions: • Article 1, which clearly anchors the principle of proportionality and risk sensitivity, • Article 8, which allows obliged entities to assess the reliability of information sources based on risk considerations, • Articles 11 and 12, which introduce a differentiated

Name of the respondent	Question	Answer
		and scalable approach to the analysis of ownership and control structures, • Articles 20 to 24 (Simplified Due Diligence) and Articles 25 to 28 (Enhanced Due Diligence), which provide a structured framework for calibrating measures according to risk levels. However, for statutory auditors, the application of the risk-based approach must be understood within the inherent limitations of their mandate and access to information. In practice, auditors conduct their risk assessments on the basis of: • Information obtained in the course of the audit engagement, • Documentation and explanations provided by the audited entity, • Audit evidence gathered through procedures such as testing, analytical review, and, where feasible, external confirmations. They do not operate as investigative bodies and do not have unrestricted access to external or independent sources of information. As a result, their ability to deepen or extend due diligence measures is inherently constrained by the availability and reliability of the information provided to them. In this context, certain provisions may limit the effective application of a truly flexible risk-based approach. In

Name of the respondent	Question	Answer
		particular, Article 12 (complex corporate structures) introduces relatively prescriptive criteria, such as the presence of three layers of ownership combined with additional risk factors, that may lead, in practice, to a quasi-automatic classification as high risk and trigger enhanced due diligence measures. Such an approach could reduce the room for professional judgment and may not be fully compatible with the reality of audit engagements, where: • Access to detailed ownership information may be limited, • The auditor's role is to assess, not to reconstruct, complex structures, • The application of enhanced measures may not always be feasible or proportionate. Beyond statutory audit, similar considerations apply to other services provided by auditors, including non-audit services (where permitted under independence rules), such as limited assurance engagements, agreed-upon procedures, or other statutory or regulatory assignments. While these engagements may differ in scope and intensity, they share common structural features: reliance on client-provided information, absence of investigative powers, and a framework governed by professional standards. Consequently, the ability to implement enhanced due diligence measures remains similarly constrained, and the risk-based approach must also be interpreted in light of these operational realities.

Name of the respondent	Question	Answer
		More broadly, across all these activities, auditors are required to apply AML obligations consistently with their professional standards and legal framework. This includes situations where, despite reasonable efforts, certain key information (e.g. beneficial ownership) cannot be obtained – cases in which professional standards may require reconsideration or termination of the engagement ("NEP 9605"). This illustrates that the risk-based approach, in the audit context, is inherently linked to feasibility and access to information, and cannot be interpreted as requiring exhaustive or investigative measures. Proposed drafting improvements: • It is recommended to clarify in Article 12 that the listed criteria are indicative rather than prescriptive, and should not override a holistic, risk-based assessment, • The RTS should also explicitly acknowledge that obliged entities, including auditors, may face constraints in accessing information due to their legal mandate, and that this should be taken into account when determining the scope and depth of due diligence measures, • More generally, it would be useful to reaffirm that the risk-based approach must remain compatible with the professional standards governing auditors' activities, across both audit and non-audit services.
Haute autorité de l'audit (H2A)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes	Yes, in the audit sector there are a number of situations where the information required under the draft RTS may be routinely unavailable, and where the current

Name of the respondent	Question	Answer
	of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	provisions do not sufficiently take into account the specific nature and constraints of statutory audit engagements. Statutory auditors operate under a distinct legal and professional framework, which directly affects their ability to collect and verify customer due diligence (CDD) information: • They are appointed under a legal mandate to express an audit opinion, not to establish or manage a commercial relationship, • Their work is based primarily on information and documentation provided by the audited entity, • They do not have autonomous investigative powers to obtain information from third parties, • They cannot compel clients, shareholders, or beneficial owners to provide information beyond what is necessary for the audit engagement. As a result, their access to information is inherently dependent on the cooperation, completeness, and reliability of client disclosures. These structural characteristics create practical and recurring limitations in the application of several provisions of the draft RTS. 1. Beneficial ownership and ownership structure Relevant provisions: Articles 10, 11 and 12.

Name of the respondent	Question	Answer
		In practice, auditors rely primarily on information provided by management, corporate documentation (e.g. share registers, statutes), and publicly available information where accessible. They generally do not have direct access to foreign beneficial ownership registers, nor the ability to independently reconstruct or verify complex, multi-layered ownership structures, especially across jurisdictions. This limitation is particularly acute in situations covered by Article 12 (complex corporate structures), where the depth and granularity of information required may exceed what is reasonably accessible within an audit engagement. In addition, under applicable professional standards (notably NEP 9605 in France), auditors are required to take reasonable measures to identify the beneficial owner. However, where such identification is not possible despite these efforts, this may ultimately lead to disengagement or resignation. This illustrates that auditors already operate under a stringent framework regarding customer identification, but within clearly defined limits. The RTS should therefore avoid creating expectations that would go beyond what is operationally feasible within this framework. 2. Source of funds and source of wealth Relevant provisions: Article 18(c) and Article 27.

Name of the respondent	Question	Answer
		Statutory auditors do not systematically collect or verify detailed information on the source of funds involved in transactions, or the source of wealth of beneficial owners or shareholders. Their work focuses on financial statements, accounting records, and supporting documentation of the audited entity, not on the personal financial situation of individuals. Moreover, auditors lack both the mandate and the legal authority to request or obtain sensitive personal financial information from beneficial owners where it is not directly relevant to the audit. As such, this information will often be unavailable in practice. 3. Purpose and intended nature of the relationship Relevant provision: Article 18. In statutory audit engagements, the purpose of the relationship is defined by law (issuance of an audit opinion), not by a commercial or transactional objective. Therefore, certain information listed in Article 18 (e.g. transactional expectations or intended use of services) may be unavailable or lack relevance in the audit context. This situation is not limited to statutory audit strictly speaking but also extends to other assurance and related services performed by auditors, such as limited assurance engagements, agreed-upon procedures, or regulatory assignments. In these contexts, including

Name of the respondent	Question	Answer
		under professional standards and ethical rules applicable to auditors, the nature of the engagement is predefined by mandate or contract, and does not necessarily align with the concept of a customer-driven "purpose of relationship". The RTS should therefore ensure that expectations remain aligned with the actual nature of these professional services. 4. Verification through independent sources Relevant provision: Article 8. While auditors do use external and independent sources where appropriate, their ability to do so is constrained by the scope and objectives of the audit engagement, time and materiality considerations, and the principle of proportionality. They cannot systematically obtain independent confirmations for all CDD elements, nor conduct extensive external investigations beyond what is necessary to support their audit opinion.
Haute autorité de l'audit (H2A)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The H2A considers that additional simplified due diligence (SDD) measures could usefully be introduced in the draft RTS to better reflect the specific characteristics and risk profile of statutory audit engagements. The current framework set out in Articles 20 to 24 provides a solid basis for the application of SDD in lower-risk situations. However, it does not explicitly

Name of the respondent	Question	Answer
		address scenarios where the nature of the activity, combined with an existing regulatory and transparency framework, significantly mitigates ML/TF risks, such as in the case of statutory audits. In this respect, the H2A proposes the introduction of a specific SDD regime tailored not only to statutory audit engagements in their strict sense, but more broadly to audit-related services provided by auditors, including statutory audit, limited assurance engagements, agreed-upon procedures, and other regulatory or legally mandated assignments. Across these activities, the common features are a predefined mandate, reliance on audited or client-provided information, and strict professional and ethical constraints, which justify a differentiated SDD treatment. This SDD regime could apply where the following cumulative conditions are met: • The entity is subject to EU transparency, accounting, and reporting obligations, • Its financial statements are subject to statutory audit or equivalent assurance procedures, and relevant financial information is publicly available, • The engagement is carried out by an auditor appointed under national law and operating within a regulated professional framework. In such cases, the RTS could explicitly allow for adapted or reduced requirements, in particular with regard to: • Article 18 (purpose and intended nature of the

Name of the respondent	Question	Answer
		business relationship): the purpose of the relationship may be deemed to be established by law (i.e. the issuance of an audit opinion), thereby removing the need to collect additional information that would not provide meaningful risk insight, • General SDD calibration principle: for audit and assurance services, reliance on existing audit evidence and regulated disclosures should be explicitly recognized as a sufficient basis for simplified measures, provided that such reliance is consistent with professional standards applicable to auditors. Rationale: this proposal reflects the intrinsically lower ML/TF risk profile associated with statutory audit engagements and audit-related services, due to several cumulative factors: • The existence of robust transparency and disclosure obligations at EU and national levels, • The public availability of audited financial information, • The fact that auditors operate under strict professional standards, ethical requirements, and public oversight, • The inherent information asymmetry, whereby auditors rely on client-provided data and do not have autonomous investigative powers. It is also important to note that, in the audit context, professional obligations such as those arising from NEP 9605 require auditors to take reasonable steps to identify beneficial owners and to assess the consequences where identification is not possible,

Name of the respondent	Question	Answer
		including potential disengagement. This existing framework already provides a structured risk control mechanism, which supports the appropriateness of a simplified due diligence regime at EU level. In this context, imposing full due diligence requirements identical to those applicable to financial institutions may lead to disproportionate and formalistic compliance, without a corresponding increase in effectiveness. A tailored SDD regime would therefore enhance both proportionality and operational relevance.
Haute autorité de l'audit (H2A)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The H2A would like to submit the following additional observations to further improve the clarity, proportionality, and operational feasibility of the draft RTS. • Explicit recognition of audit-specific constraints (Articles 8) While Recital (22) acknowledges that obliged entities may rely on existing information, this principle is not sufficiently reflected in the operative provisions of the RTS. In particular, provisions such as Article 8 (reliable and independent sources) should explicitly recognize that, in the context of statutory audit and other assurance services provided by auditors: o Auditors primarily rely on information and documentation provided by the audited entity or client, o They do not have general investigative powers or

Name of the respondent	Question	Answer
		unrestricted access to third-party data, o Their ability to obtain independent information is limited and context-dependent, including in non-audit services. Proposed solution: introduce an explicit clarification in Article 8 stating that the assessment of reliability and independence of sources should take into account the legal mandate, professional standards, and practical access to information of the obliged entity. This would enhance legal certainty and ensure consistent application across sectors and across audit-related services. • Alignment with audit regulation (Article 27) Certain provisions, in particular Article 27 (source of wealth), may go beyond what statutory auditors and audit firms can reasonably obtain within the scope of their professional engagements. Auditors are not in a position to systematically investigate or verify the personal wealth of shareholders or beneficial owners, especially where such information is not directly relevant to the audit or assurance engagement. This limitation applies across statutory audit as well as other services performed by auditors, including limited assurance engagements or agreed-upon procedures, where the scope is strictly defined and does not include investigative powers. Imposing such requirements could create operational

Name of the respondent	Question	Answer
		impracticalities, given limited access to such information, potential conflicts with professional standards (including engagement scope limitations), and duplication of efforts where similar checks are already performed by other obliged entities (e.g. financial institutions). Proposed solution: clarify that the application of Article 27 should be strictly risk-based and proportionate, and limited to situations where such information is available within the normal course of the engagement or where specific risk indicators justify further inquiry. • Politically Exposed Persons (PEP) screening (Article 19) The requirements set out in Article 19 are appropriate in principle and aligned with international standards. However, their application in the audit sector should explicitly reflect the principle of proportionality. In practice, auditors rely on available data and standard screening tools, do not have access to enhanced intelligence or investigative databases, and cannot systematically verify complex networks of relationships beyond the information available to them. These constraints are not limited to statutory audit but also affect other assurance and related services provided by audit firms, where the nature of the engagement does not include continuous monitoring or investigative procedures.

Name of the respondent	Question	Answer
		Proposed solution: proportionality should be emphasized – clarify that PEP identification and verification requirements should be applied on a best-efforts basis, taking into account the tools, data availability, and role of the auditor, and should not imply an obligation to conduct in-depth investigations beyond accessible information. • Ensuring consistent proportionality across the RTS More broadly, the H2A considers that the RTS would benefit from a clear and consistent horizontal clarification that all obligations: o Must be applied in line with the nature, role, and legal mandate of the obliged entity, o Should take into account the entity's actual ability to access and verify information, o Should not lead to de facto obligations of result, particularly in contexts where access to information is inherently limited. This is particularly important for statutory auditors and audit firms, whose activities include statutory audit, limited assurance engagements, and other regulated services. Across these activities, the role remains fundamentally one of assessment and opinion based on available evidence, rather than investigation or reconstruction of underlying financial or transactional flows. Proposed solution: include a general provision or

Name of the respondent	Question	Answer
		reinforce Article 1 (proportionality and risk-based approach) to clarify that obligations apply within the limits of the obliged entity's role, legal mandate, professional standards, and actual ability to access information.
Haute autorité de l'audit (H2A)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Issue identified: Technical implementation. Observation: Article 7 introduces detailed requirements for remote identification solutions, including technical safeguards, storage and traceability of data (images, video, etc.). This level of technical specification is primarily designed for financial institutions with dedicated onboarding systems. For the audit sector, such systems are generally not used, and implementing them would represent a disproportionate operational burden, without clear added value for AML purposes. This concern also extends beyond statutory audit strictly speaking to other services provided by auditors (e.g. assurance engagements, agreed-upon procedures, or advisory services subject to AML obligations), where client acceptance processes are typically risk-based and documentation-driven rather than technology-intensive. Proposed amendment: Clarify that the requirements

Name of the respondent	Question	Answer
		relating to remote identification solutions should apply only where such solutions are used by the obliged entity, and should not impose an obligation to develop or implement such systems where they are not part of the entity's operational model.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	19
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Issue identified: Operational proportionality. Observation: Article 19(3) requires automated screening tools, or a combination of automated tools and manual checks. While the provision allows some flexibility, further clarification would be beneficial for smaller or less technology-intensive obliged entities. In practice, statutory auditors and audit firms (including in non-audit services) rely on risk-based procedures, professional databases where available, and manual verification. The obligation to use automated tools may therefore not reflect the operational reality of many audit practices, particularly for non-audit engagements or smaller structures. Proposed amendment: Clarify that the use of manual checks alone remains acceptable where justified by the size, nature and operational model of the obliged entity, including audit firms and other professionals performing AML-relevant services.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	21

Name of the respondent	Question	Answer
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Issue identified: Internal consistency. Observation: Article 21(2) requires using a different source for verification than for identification. In practice, in low-risk situations, the same source (e.g. a reliable public register) may be sufficient for both identification and verification, requiring a second source may introduce unnecessary complexity without materially improving risk mitigation. This issue is particularly relevant for auditors across statutory audit and other assurance services, where access to multiple independent data sources may be limited and reliance is often placed on audited financial information, statutory filings, and regulated disclosures, in line with professional standards such as NEP 9605, which already impose structured but proportionate verification obligations. Proposed amendment: Allow that in low-risk situations, a single reliable and independent source may be used for both identification and verification, where justified.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	30
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Issue identified: Scope and proportionality. Observation: Article 30 introduces detailed screening requirements, including transliteration of names, screening of aliases and digital wallet addresses. For the audit sector, such data is not always available, and auditors do not typically process crypto-related

Name of the respondent	Question	Answer
		identifiers. More broadly, these requirements may also be difficult to apply in non-audit services provided by audit firms, where the nature of the engagement does not involve transactional monitoring or systematic processing of such identifiers. Proposed amendment: Clarify that screening obligations should be limited to the information reasonably available to the obliged entity and relevant to its activities, including where services are provided outside statutory audit.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	31
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Issue identified: Relevance to audit sector. Observation: Article 31 concerns risk factors related to electronic money instruments. This provision is not relevant to the audit sector and is only marginally relevant, if at all, to other services provided by auditors, depending on their nature. Proposed amendment: Clarify that Article 31 applies only to obliged entities for which electronic money instruments are relevant to their products or services, and is not intended to apply to audit or audit-related professional services.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	32

Name of the respondent	Question	Answer
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Issue identified: Technical applicability. Observation: The detailed list of attributes for electronic identification means is highly technical and primarily relevant for digital identity frameworks. For auditors, such tools are not commonly used, neither in statutory audit nor in most non-audit services. Proposed amendment: Clarify that these requirements apply only where electronic identification means are used in practice by the obliged entity in the context of its professional services.
Haute autorité de l'audit (H2A)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	1
Haute autorité de l'audit (H2A)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Issue identified: Consistency with professional sectors. Observations: o While the recitals refer to proportionality and flexibility, they do not explicitly mention professional sectors such as auditing, nor do they adequately reflect situations where access to information is inherently constrained across both statutory audit and other services provided by audit firms. o In addition, the draft RTS does not define the term “auditor”, despite its use in practice and its relevance for determining the scope of application of certain obligations. This absence may create legal uncertainty, particularly in Member States where audit firms provide a range of services beyond statutory audit, including assurance and related engagements.

Name of the respondent	Question	Answer
		Proposed amendments: o Add a recital clarifying that certain obliged entities, such as statutory auditors and audit firms, operate under legal mandates and may rely primarily on information provided by their clients, including in non-audit services, o Consider introducing a clarification or definition of "auditor" to ensure consistent interpretation across Member States and avoid divergent application of the RTS in the audit and assurance sector.
Haute autorité de l'audit (H2A)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Haute autorité de l'audit (H2A)	Do you have any comments on the Annex in the draft RTS?	No
Haute autorité de l'audit (H2A)	How would you rate the proposals set out in the draft RTS overall?	Good
Hilton Global Associates Inc.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	From the perspective of a cross border investigative due diligence provider supporting customer due diligence frameworks, the proposals set out in the draft RTS are capable of being applied across a wide range of verification contexts. The draft RTS appropriately recognize that effective customer due diligence may rely on multiple categories of information, including documentary identification evidence, corporate registry data, transactional documentation, and contextual information supporting verification of identity, beneficial ownership, and the nature and purpose of the relationship. This flexibility is

Name of the respondent	Question	Answer
		particularly important where the availability, structure, and reliability of official records differ across jurisdictions. In practice, establishing confidence in identity and control relationships frequently requires reconciliation across multiple registry systems, verification of address history and affiliations, authentication of identity documents such as passports and national identification records, and review of transactional documentation supporting source-of-funds analysis. It would be helpful if implementation guidance clarified that identity resolution analysis and multi-registry reconciliation represent appropriate verification approaches in higher-risk or multi-jurisdictional scenarios where reliance on a single official source may not be sufficient to establish confidence in identity or ownership.
Hilton Global Associates Inc.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS support effective application of a risk-based approach by recognizing that the nature and depth of verification measures should reflect customer characteristics, ownership complexity, intermediary involvement, and jurisdictional transparency. In investigative due diligence practice, verification frequently requires reconstruction of layered ownership structures, reconciliation of registry information across multiple jurisdictions, and contextual assessment of both source of funds and source of wealth. The flexibility reflected in the draft RTS appropriately

Name of the respondent	Question	Answer
		accommodates these realities and supports proportionate implementation across different customer risk profiles. Effective risk-based implementation also depends on the ability to maintain confidence in customer information over time. In practice, this includes monitoring adverse media reporting, sanctions exposure, litigation developments, regulatory actions, and changes in corporate affiliations that may affect previously established identity or control relationships. In higher-risk or opaque environments, these monitoring activities may be complemented by structured local-source enquiries where appropriate. Recognition of monitoring as a component of maintaining reliable customer due diligence outcomes would further support consistent implementation across international operating contexts.
Hilton Global Associates Inc.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In cross border customer due diligence practice, certain categories of information referenced in the draft RTS are not consistently available from a single authoritative source. This occurs most frequently in jurisdictions where corporate registry transparency is limited, beneficial ownership registers are incomplete or not publicly accessible, or historical address verification documentation is not centrally maintained. In these environments, verification of identity and beneficial ownership is typically achieved through structured reconciliation of multiple complementary

Name of the respondent	Question	Answer
		sources. These include corporate registry extracts across jurisdictions, historical affiliation records, intermediary disclosures, authentication of documentary identification (such as passports, national identity cards, and address-verification documentation), transactional documentation supporting source-of-funds analysis, and identity resolution research linking individuals and entities across records. Assessment of source of wealth similarly requires evaluation of the broader economic narrative supporting accumulated assets over time rather than reliance solely on documentation relating to a single transaction. The draft RTS appropriately allow reliance on alternative corroborating information where primary documentation is unavailable. Clarifying that multi-source registry reconciliation and contextual investigative verification represent acceptable approaches would further support consistent implementation across complex international structures. In addition, in jurisdictions where registry disclosures are incomplete or not regularly updated, monitoring of adverse media reporting, sanctions exposure, litigation developments, regulatory actions, and changes in corporate affiliations frequently provides important indicators supporting ongoing confidence in identity and control relationships.

Name of the respondent	Question	Answer
		Structured monitoring using publicly available information and, where appropriate, locally obtained contextual verification therefore plays an important role in maintaining the accuracy of customer due diligence assessments over time.
Hilton Global Associates Inc.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Simplified due diligence measures are most effective where identity and beneficial ownership can be confirmed through consistent information obtained from multiple reliable official sources within jurisdictions that maintain established transparency standards. Simplified approaches may also be appropriate where the ownership structure is not multi-layered, intermediary involvement is limited, and the nature and purpose of the relationship can be independently verified through transparent institutional, employment, or publicly documented commercial activity. Clarifying that simplified due diligence measures may appropriately rely on consistency across several authoritative registry sources - rather than reliance on a single extract alone - would support proportionate implementation while maintaining confidence in verification outcomes.
Hilton Global Associates Inc.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	An operational consideration that would benefit from additional clarification within the draft RTS concerns the distinction between documentary collection and verification sufficiency in international customer due diligence environments.

Name of the respondent	Question	Answer
	supported by evidence. Where necessary, comments should also include a proposed solution.	In practice, establishing confidence in identity, beneficial ownership, and source-of-funds information frequently requires integration of multiple complementary sources, including registry analysis across jurisdictions, authentication of documentary identification records, identity resolution research linking individuals and entities across affiliations, and review of transactional documentation supporting declared economic activity. This is particularly relevant in cases involving layered ownership structures, intermediary-facilitated engagements, or customers with economic activity spanning several jurisdictions, where reliance on a single document or registry extract may not provide sufficient assurance regarding control relationships or accumulated wealth. Ongoing monitoring also plays an important role in maintaining confidence in previously verified customer information. In practice, this includes review of adverse media reporting, sanctions exposure, litigation developments, regulatory actions, registry updates, and other contextual indicators relevant to identity and ownership. In higher-risk scenarios, these monitoring activities may be complemented by structured locally obtained verification where appropriate. Clarifying that corroborative multi-source verification and monitoring approaches are consistent with the

Name of the respondent	Question	Answer
		objectives of the RTS would support effective implementation across complex international structures and strengthen confidence in customer due diligence outcomes over time.
Hilton Global Associates Inc.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Hilton Global Associates Inc.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6
Hilton Global Associates Inc.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	With respect to Article 6, paragraph 1, it would be helpful to clarify that verification of beneficial ownership in cross border customer due diligence environments may appropriately rely on reconciliation across multiple registry systems and complementary sources where a single beneficial ownership register does not provide complete or current information. In particular, where available, consultation of primary corporate registry sources across relevant jurisdictions may be necessary to establish confidence in ownership and control relationships. In practice, beneficial ownership identification frequently requires structured comparison of corporate registry extracts across jurisdictions, review of historical affiliation records, consideration of intermediary roles within ownership structures, and authentication of documentary identification supporting control relationships. Differences in disclosure thresholds, nominee arrangements, and registry transparency across jurisdictions mean that reliance on a single

Name of the respondent	Question	Answer
		registry extract or secondary repository alone is not always sufficient to establish confidence in beneficial ownership. In complex international structures, verification may also depend on integration of additional corroborating information, including transactional documentation supporting source-of-funds analysis, adverse media and regulatory exposure review, sanctions screening, and identity resolution research linking individuals and entities across affiliations and jurisdictions. In higher-risk or opaque environments, these verification activities may appropriately be complemented by locally obtained contextual information, including structured inquiries with knowledgeable sources and interviews where appropriate, to support clarification of control relationships not fully reflected in registry disclosures. In some circumstances, specialist source and deep web research may also assist in identifying undisclosed affiliations or risk indicators relevant to ownership and control. Clarifying within Article 6 that multi-source registry reconciliation, including consultation of primary registry sources where available, together with contextual investigative verification, represent acceptable verification approaches would improve legal certainty for entities contributing to customer due diligence frameworks in complex cross border structures and

Name of the respondent	Question	Answer
		regulated intermediaries - including in the context of structured investment migration programs such as citizenship-by-investment and residence-by-investment (CBI/RBI) processes - the draft RTS largely reflect verification approaches already applied in complex international identity, beneficial ownership, and source-of-funds assessment. As a result, the proposals are not expected to generate significant additional implementation costs beyond those already associated with supporting customer due diligence processes across jurisdictions. In practice, documentary authentication, beneficial ownership reconstruction across multiple registry systems, source-of-funds and source-of-wealth analysis, and monitoring of adverse media reporting, sanctions exposure, litigation developments, and regulatory indicators already form part of established investigative verification methodologies used to support obliged entities and competent authorities operating in higher-risk or multi-jurisdictional environments, including structured application-based due diligence frameworks. The clarifications proposed in earlier responses relate primarily to supporting legal certainty and consistent interpretation of verification sufficiency across jurisdictions rather than to operational feasibility or implementation burden.
Holland Quaestor	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and	NA

Name of the respondent	Question	Answer
	services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Holland Quaestor	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 11 (as well as 17, 22, 23 & 25): The requirement for obliged entities to be "satisfied" introduces an indeterminate standard, the practical application of which is unclear. It is not specified how this threshold should be operationalised or assessed by competent authorities. Art 12: The introduction of a fixed threshold whereby structures exceeding three layers between the customer and the beneficial owner are deemed complex, and subject to enhanced measures, may result in a disproportionate application of requirements. Aligning the provision more closely with the risk-based approach would require enabling obliged entities to conduct a qualitative assessment of risk, in addition to any structural indicators. The RTS would benefit from clarifying that the identification of a "complex structure" does not constitute an automatic trigger for enhanced due diligence. Absent such clarification, there is a risk of overlap with the notion of "excessively complex ownership structures," which are treated as higher-risk

Name of the respondent	Question	Answer
		factors under Annex III of the AMLR. Art 18: Notwithstanding the improvements introduced through the “where necessary” qualifier and the “at least one of” construct, the extensive numeration of information items, e.g. setting out numerous alternatives relating to source of funds and occupation or business activity, may give rise to a de facto checklist approach in implementation. Art 23(2): The RTS should clarify that, for customers not classified as high risk, ongoing due diligence obligations may be satisfied through automated monitoring in the absence of trigger events or risk indicators requiring further action. Obliged entities should not be required to proactively obtain updated customer information unless there are substantiated reasons to doubt its accuracy. Where no material changes are identified through a properly calibrated monitoring system, the customer file should be deemed reviewed. Art 26(1): Sub-point (c), requiring consistency between expected transactions and declared business activity, source of funds, or source of wealth, may require clarification to ensure proportionality and sufficient flexibility. Art 26(2) The scope of additional information, including details on clients’ key clients, contracts, business partners, and associates (including those of the beneficial owner), appears broad even within an EDD

Name of the respondent	Question	Answer
		context. This risks extending AML obligations to the assessment of third-party business relationships beyond the intended risk-based perimeter. Deletion or narrowing of this requirement may therefore be appropriate.
Holland Quaestor	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	NA
Holland Quaestor	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In paragraph 3.3 ("Rationale"), AMLA concludes that no additional simplified due diligence (SDD) measures are warranted beyond Article 33 AMLR. This appears to insufficiently reflect that certain categories of customers, products, and services present inherently low ML/TF risk. Listed companies, SWIFT RMA relationships, bodies governed by public law, and government-related entities in non-high-risk jurisdictions operate within established transparency and oversight frameworks that may justify simplified CDD. This position may be reconsidered. Recital 127 AMLR provides that listed companies and Member State public bodies benefit from sufficient transparency regarding ownership and control such that beneficial ownership requirements are not necessary. It is therefore proposed that obliged entities be exempted

Name of the respondent	Question	Answer
		from BO identification in these cases, and that SDD be explicitly permitted.
Holland Quaestor	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Art 6: With reference to Recital 2, harmonisation and a level playing field are key objectives. The RTS should clarify that identity verification is limited to full name and surname and date of birth. It should further specify that verification of identity does not require validation of all collected data points for natural or legal persons, nor address verification. In line with Recital 3, a declaration in good faith by the customer should suffice for data points other than name and date of birth. The RTS should also clarify the scope of “certified” and who may provide such certification. “Certified” should be understood as confirmation that a copy corresponds to the original, with flexibility for obliged entities to determine the means and provider of certification, as well as to assess its reliability. Art 25: The additional information obligations required through EDD (throughout articles 25-28) risk further constraining the application of a risk-based approach. This may lead to a disproportionate expansion of mandatory information collection, including in situations where it is not warranted by the customer risk profile. It is therefore suggested that AMLA reconsider these provisions to ensure a more risk-based approach by allowing risk-sensitive measure determined by the obliged entity as enhanced due diligence measures, and

Name of the respondent	Question	Answer
		thereto to explicitly allow obliged entities to determine, on a case-by-case basis, which additional information is necessary and sufficient in light of the assessed risk. Art 33: We request AMLA to confirm that the one-year period for updating the files should commence only once all relevant RTSs and guidelines have been finalised and published and, in any event, only after the AMLR becomes applicable. If agreed, from a practical point of view it would be appreciated if AMLA notifies OE's of this moment. Further, article 33 refers to "publication" as the starting point of the grace period, whereas Recital 23 refers to the "date of application". This inconsistency should be resolved in favour of the date of application. AMLA should preferably also clarify that the five-year grace period under Article 33 applies to non-high-risk clients subject to standard CDD as well.
Holland Quaestor	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	What kind of information or documentation, other than a confirmation from the (representative of) the customer itself, can satisfy that the provided nationality information is complete (disclosing all nationalities)?

Name of the respondent	Question	Answer
		What is the reasonable certainty that an obliged entity has obtained all nationalities?
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	It is not clear in the draft RTS that Article 6 is the standard and it should explicitly label Article 7 as a derogation, in order to arrange that Article 6 always applies first and can be used in a face-to-face or non-face-to-face context. Article 7 is conditional, not discretionary. Suggested wording Article 6, sub 1 For the purposes of verifying the identity of the natural persons referred to in Article 22(6) point (a) and Article 22(7) point (a) of Regulation (EU) 2024/1624, including: the customer, any natural person purporting to act on behalf of the customer, and the beneficial owner or, where applicable, the senior managing official, obliged entities shall apply the verification measures set out in this Article as the standard method for identity verification, regardless of whether the verification is performed in a face to face or non face to face context. For the purposes of paragraph 1, a document shall be considered equivalent to an identity document or passport where it fulfils all of the following conditions:[ ] Suggested wording Article 7, sub 1 Add “By way of derogation from Article 6,” [ ]

Name of the respondent	Question	Answer
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	With reference to paragraph 3: “Obliged entities shall ensure that the solution described in paragraph 2 uses reliable and independent information sources and includes the following safeguards regarding the quality and accuracy of the data and documents to be verified”. The last word “verified” was “collected” in the previous draft. Can AMLA confirm that there is no requirement to keep such documents on file or what is expected in light of evidence keeping?
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	8
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	In order to determine whether a source of information is reliable and independent, obliged entities shall take risk-sensitive measures to assess the outlined matter in (a) until (e). May we ask to provide specific criteria that can be relevant and used to make this assessment. Please also note the increasing use of AI tools capable of manipulating documents in a highly sophisticated manner.
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	12
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	One of the criteria for complex corporate structures is formulated as “there is a legal arrangement or a similar legal entity such as a foundation in any of the layers”.

Name of the respondent	Question	Answer
		We kindly ask AMLA to remove the reference to a foundation in the RTS and, if desired, to replace it with a reference to the “List of trusts and similar legal arrangements governed under the law of the Member States as notified to the Commission”. (2019/C 360/05). For your information: A Dutch foundation (NL: Stichting) has neither shareholders nor members. Pursuant to Article 285 (1) of Book 2 of the Dutch Civil Code, a foundation is a legal entity with no members. It is existing for the sole purpose of the object mentioned in the articles of a foundation. Thus, a foundation is not owned by anyone, and it can only act within the scope of its object clause. Pursuant to Article 285 (3) of Book 2 of the Dutch Civil Code the object of a foundation may not include the making of distributions to its founders (incorporators) or to those who are participating in its bodies or to others, except, as regards the latter, when these distributions are made for charitable (philanthropic) or social purposes. For the sake of completeness, the Dutch foundation is not included in European Commissions list of trusts and similar legal arrangements. Suggested is to delete in article 12 (1) (a) the text: “such as a foundation”.
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	13

Name of the respondent	Question	Answer
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	SMOs serve as a fallback solution where no beneficial owner can be identified and should not, in themselves, be regarded as a source of risk. Accordingly, imposing the same identification and verification requirements as for BOs would be disproportionate under Articles 13 and 21. For identification purposes, it should be sufficient to collect the individual's name, date of birth and business address. For non-high-risk cases, we believe that an extract from the trade registry should be sufficient for identification and verification of the SMO. Requiring additional information is neither proportionate nor risk-based. The RTS should state that OEs may rely on the most reliable information available in case of cross-jurisdictional situations with no or unreliable registries. AMLA should confirm that the information requested for SMO's as stipulated in Article 13 applies to the various requirements of Section 2 only. Additional information required due to Article 27 is not relevant for SMO's.
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	23
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Please clarify whether the term 'low degree of risk' should be deemed to have the same meaning as 'low risk.' We would prefer consistent terminology as to avoid divergent interpretations and ensure uniform application.

Name of the respondent	Question	Answer
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	27
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	We ask AMLA to reaffirm that SMO's are not the same as UBOs and that art. 27 is not applicable to SMO's. Recital 9 specifically confirms that SMO's are not beneficial owners but this is in relation to the purposes of identification and verification measures. There is no rationale to submit SMO's to the requirements of article 27.
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	28
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	The RTS lacks the definition of transaction and clarification as what is to be deemed as an intended transaction. We assume that this is up to the obliged entity to assess. We request AMLA to affirm this assumption. What is meant by 'use of assets representing higher ML/TF risks'? Please clarify whether this is intended to refer to specific asset classes or assets in specific sectors. Please confirm that the reference to 'higher risks in respect of the parties involved' does not create an obligation to perform CDD on the client's counterparties. This would go beyond the scope of AML/CFT requirements.

Name of the respondent	Question	Answer
Holland Quaestor	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	29
Holland Quaestor	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	AMLA is requested to confirm that SMO's do not fall within the scope of sanctions screening requirements. The rationale would be that the SMO does not qualify as a beneficial owner.
Holland Quaestor	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Holland Quaestor	Please specify which recital you refer to, and share your comments below.	Recital 5: The recital reads as non-exhaustive list of independent and reliable sources, which includes the following line "(…) or a recent official copy of these documents issued by the applicable public registers and lists or an unofficial copy thereof certified by an independent professional or a public authority". In this context, may we kindly ask to clarify the following: • Is the term "official copy" understood to mean an original document issued by the applicable authority, bearing the original signature of the issuing authority? If yes, the term "original document" seems more appropriate than the term 'official copy'. • Is the term "unofficial copy" understood to mean a true copy of a seen original document certified by an independent professional (e.g. notary) or public authority? If yes, the term "certified copy" seems more appropriate than the current term "unofficial copy". It should be noted that a certified copy is equivalent to an

Name of the respondent	Question	Answer
		original document. • Next to “independent professional or public authority”, can a document also be certified by a qualified employee of the obliged entity? Obliged entities have currently the flexibility to establish their internal criteria and processes in this respect, e.g. when they have met the client’s representative in person and made a copy of the original ID document. Recital 6: The recital stipulates that obliged entities must assess the reliability and independence of the data sources used across multiple clients. This assessment is among others key to substantiate by which means the criteria of ‘authentic and accurate’ as referenced in e.g. various EDD measures have been fulfilled. Next to a validity timeframe, may we ask to indicate other criteria than can be relevant to make this assessment. For example, document categorization (original, certified, copy/scan), a combination of sources, and/ or level of direct access to the source, etc. Please also note the increasing use of AI tools capable of manipulating documents in a highly sophisticated manner. Recital 25: This recital provides that an obliged entity must periodically update customer information, with an interval ranging from one to five years depending on the customer’s risk classification. For existing customers, this period starts from the moment the Commission Delegated Regulation enters into force.

Name of the respondent	Question	Answer
		In this context, it is noted that the Netherlands appears to be considering designating the entire trust or company service provider sector as subject to enhanced customer due diligence (EDD), pursuant to Article 34(6) of the Regulation. This raises a question as to the interaction between such a designation and the updating intervals set out in Recital 25. In particular, it is unclear whether—if such a designation is made—all customers of obliged entities within the trust sector should automatically be treated as high-risk for the purpose of updating obligations, thereby requiring the update of customer information within one year of the entry into force of the Commission Delegated Regulation. Alternatively, it could be interpreted that obliged entities should retain discretion to determine the frequency of updates based on their own risk assessment of individual customers, even within a sector that is generally considered higher risk. This ambiguity creates legal uncertainty and may lead to divergent supervisory expectations and inconsistent application across Member States. It is therefore recommended that AMLA clarify whether a sector-wide designation under Article 34(6) automatically triggers the highest update frequency for all customers of obliged entities within that sector; or whether the risk-based approach allows obliged entities

Name of the respondent	Question	Answer
		to differentiate update intervals at the level of individual customers, notwithstanding such designation. Providing clarity on this point would support a consistent application of the risk-based approach and ensure proportionality in the implementation of customer due diligence requirements.
Holland Quaestor	Do you have any comments on the Annex in the draft RTS?	No
Holland Quaestor	How would you rate the proposals set out in the draft RTS overall?	Good
Holland Quaestor	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software	Manageable impact

Name of the respondent	Question	Answer
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We, a coalition of (networks of) civil society organisations and public benefit foundations (Human Security Collective, Civil Society Europe, Philanthropy Europea Association, European Fundraising Association, Goede Doelen Nederland, and the European Center for Not-for-Profit Law), take this opportunity to share input from the perspective of non-profit organisations (NPOs). Before answering the questions, we would like to emphasize we very much welcome this opportunity to respond to the draft RTS, after the earlier EBA consultation. We also greatly appreciate the fact that many recommendations put forward by us and other respondents to the earlier consultation have been in taken into account by the EBA. We particularly welcome the new article 1, which emphasizes a risk-based approach. On the first question: Art. 27 requires obliged entities to “obtain such additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, that will satisfy them that the source of funds or source of wealth is derived from lawful activities.” The list of type of information that may be obtained includes tax declarations and pay slips. For many NPOs, board members are considered BOs. They often serve on a voluntary basis. Their sources of wealth or income do not stem from the NPO and are not relevant to assess the level of risk associated with the organisation. Furthermore, some public-benefit organisations (those

Name of the respondent	Question	Answer
		similar to express trusts or constituted as express trusts and similar legal arrangements) may potentially even be required to list individual beneficiaries as beneficial owners, but it is impossible to provide information on their income and wealth. Furthermore, information on source of funds and source of wealth should not be systematically asked for. We therefore recommend reformulating the first sentence of article 27 to; “For the purposes of Article 34(4), point (c), of Regulation (EU) 2024/1624, obliged entities shall obtain such additional information on the source of funds, and source of wealth of the customer and of the beneficial owners, that is necessary to satisfy them that the source of funds or source of wealth is derived from lawful activities.”
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Art. 4 and 5: While we acknowledge that the AMLR establishes an obligation to collect information on customers’ place of birth and nationality, we note that the underlying rationale for these requirements remains unclear. It is not evident how these data points contribute meaningfully to risk-based customer due diligence. Moreover, the systematic collection and use of place of birth and nationality data may give rise to unintended consequences, including increased risks of discriminatory outcomes and financial exclusion. We consider this requirement not in line with a risk-based approach and suggest to remove the requirement to collect the customers’ place of birth and nationality.

Name of the respondent	Question	Answer
		Recognizing this requires amendment of the AMLR, we encourage in the meantime further clarification on: the specific risk indicators that place of birth and nationality are intended to capture; and the circumstances under which this information should be considered relevant in a risk-based approach. Art 12: We understand the desire to bring more transparency into complex corporate ownership and control structures, but we oppose the singling out the involvement of a foundation in any of the layers as a criterion for a complex corporate structure. As a matter of fact, there are a variety of different legal arrangements and legal entity tools that can be used in different layers to create complex corporate structures and these should either be listed all or there should a general description of using different legal arrangements and structures in different layers of corporate structures. Moreover, Member States, including the Netherlands, have indicated that foundations are not considered to be similar to express trusts (Art.57(3)). Therefore, we recommend deleting paragraph 1 (a). Art. 14: We recommend adding a provision to ensure synergy with art. 59 (2) AMLR to avoid obliged entities require information on individual beneficiaries when NPOs and foundations similar to express trusts or constituted as express trusts and similar legal arrangements do not need to list individual beneficiaries as BOs based on art. 59 (2) AMLR. We suggest

Name of the respondent	Question	Answer
		implementing this in the legal text as follows: “1. For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information obliged entities shall obtain from the trustee, legal entity or legal arrangement include: (a) a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine whether individual beneficiaries are ascertainable and shall be treated as beneficial owners, in accordance with the conditions laid out by Article 59(2) on the identification of a class of beneficiaries: [...]” Art. 25 sets out types of information an obliged entity should obtain on the customer in the context of enhanced CDD. This includes information to assess the reputation of the customer and the beneficial owners. To avoid overly broad or subjective interpretations, and to mitigate the risk of unwarranted de-risking, we recommend clarifying that any assessment of “reputation” should be strictly limited to considerations relevant to ML/TF risks. In practice, we observe that non-profit organisations (NPOs), particularly those with a more outspoken profile, including those working on human rights, migration, and environmental issues, are increasingly subject to smear campaigns and stigmatisation. Such external narratives, which may reflect political or societal disagreement rather than objective risk, should not be relied upon in customer due diligence assessments. Diverging views on an organisation’s mission or activities must not lead to financial exclusion. Reputation is a vague concept that

Name of the respondent	Question	Answer
		can lead to arbitrariness. Moreover, there are known examples of fabricated ML/TF accusations issued by authoritarian regimes against human rights defenders and political opponents. Therefore, we recommend: - Reformulating paragraph (b) to “assess the reputation of the customer and the beneficial owners in relation to ML/TF risks”, and - Issuing clear guidance to help ensure that due diligence remains risk-based, proportionate, based on objective criteria and correct information, and aligned with fundamental rights. Art.26 (2) specifies that additional information may consist of information on the client’s key clients, contracts, business partners and associates, including the beneficial owner's business partners or associates. We consider this requirement to be overly broad. It can be extremely difficult or even dangerous for NPOs to provide this information, e.g. those that provide humanitarian relief in conflict zones or those that support human rights defenders. For example, an international NGO operating in conflict zones reported they are now asked to provide full residential addresses of local staff members by their bank before transactions are processed. We recommend deleting this requirement.
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association,	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these	n/a

Name of the respondent	Question	Answer
Goede Doelen Nederland, European Center for Not-for-Profit Law	draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Under the new AML/CFT package, crowdfunding intermediaries will become obliged entities. This includes donation-based platforms that pursue public benefit objectives rather than private commercial interests. We welcome the clarification in the recitals to the draft RTS on criteria for identifying business relationships, occasional and linked transactions and lower thresholds that one-off donations made through crowdfunding intermediaries constitute occasional transactions. As a result, customer due diligence (CDD) measures would only apply where transactions exceed EUR 10,000, including linked transactions exceeding that threshold. However, certain crowdfunding intermediaries also facilitate recurring monthly donations. Requiring these platforms to apply full CDD measures to donors solely because donations recur over time would impose a significant compliance burden that is not proportionate to the level of risk involved. It would also likely have a chilling effect on charitable giving, as donors may be discouraged from committing to modest recurring donations if this requires the provision of extensive personal data, including identity documents. We therefore primarily recommend that commitments to recurring monthly donations should not, in themselves, be considered to establish a business

Name of the respondent	Question	Answer
		relationship, taking into account the specific characteristics of donation-based crowdfunding: the public benefit objective and the absence of reciprocity. We refer in this regard also to our response to the draft RTS on criteria for identifying business relationships, occasional and linked transactions and lower thresholds. Should crowdfunding intermediaries nevertheless be required to apply CDD measures to donors making recurring donations, we recommend issuing explicit guidance clarifying that CDD obligations only arise where recurring monthly donations cumulatively exceed the EUR 10,000 threshold over a rolling period, or alternatively only from a specified monthly donation amount (for example EUR 500 per month). Another option would be to issue explicit guidance confirming that only light, simplified due diligence measures are required in such situations (see below). This would be justified for several reasons. First, available research has found no significant or consistent evidence that European donation-based crowdfunding platforms are misused for terrorism financing purposes. Second, recurring donations are generally of very low value, typically ranging from EUR 5 to EUR 25 per month. Third, crowdfunding intermediaries already apply due diligence measures to persons and entities seeking funding through their platforms, thereby helping ensure that fundraising activities pursue legitimate purposes and reducing the risk of misuse. Finally, donations are generally made through bank

Name of the respondent	Question	Answer
		accounts held with regulated financial institutions that already conduct robust CDD measures. Even where no formal reliance arrangements pursuant to Articles 48–50 AMLR are in place, this nevertheless provides a degree of assurance that donors have already undergone identification and verification procedures by another obliged entity within the regulated financial system. More specifically we recommend that simplified due diligence include: - an exemption from the requirement to obtain information on the donor's place of birth and nationality, and from the requirement to verify identity through an identification document; - explicit guidance confirming that, pursuant to Article 33(1)(c) AMLR, the purpose and intended nature of the business relationship may be inferred from the nature of the relationship itself, namely charitable donations made through a donation-based crowdfunding platform; - an exemption from the requirement to obtain information on the source of funds and the donor's business activity or occupation.
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible,	We would welcome more guidance on the concept of "the natural person on behalf of or for the benefit of whom" a transaction is carried out, which is introduced in art. 20 (1) (h) AMLR, to avoid an overly broad

Name of the respondent	Question	Answer
Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	supported by evidence. Where necessary, comments should also include a proposed solution.	interpretation. Furthermore, we support the recommendation put forward by several participants during the public hearing to include a principle “once identified, always identified” in the articles on identification of customers. If a customer has been properly identified and verified during onboarding, it should not be necessary to obtain a new identity document at a later stage when the document expires. Identification of Senior Management Officials is a fall-back scenario in case no Beneficial Owner can be identified. However, SMOs do not own the legal entity and therefore do not pose the same level risk. Requiring the same level of identification and verification as for BOs, including nationalities and place of birth, is disproportionate. Name and surname, date of birth and a business address should suffice for identification purposes. Moreover, we recommend that in low-risk cases the trade registry extract should suffice for both identification and verification of the SMO and this should also be sufficient for the beneficial owner, the BO/SMO information is already verified by the trade registry. For those situations, requiring additional information is neither proportionate nor risk-based. We recommend that AMLA publish, prior to final adoption of the RTS:

Name of the respondent	Question	Answer
		- A dedicated GDPR impact assessment developed in coordination with the EDPB. This assessment should clarify key data protection aspects of the draft RTS, in particular: (i) the proportionality of data collection under Simplified Due Diligence, ensuring alignment with the data minimisation principle and defining what constitutes strictly necessary data in low-risk scenarios; (ii) the legal basis and transparency requirements for processing personal data of third parties (beneficial owners, key stakeholders, business partners and associates based on article 18(e)(viii) of the draft RTS), including how obligations under Articles 13 and 14 GDPR should be fulfilled; and (iii) the proportionality of automated PEP screening (Article 19 of the draft RTS), which involves the processing of data relating to political opinions, which constitutes a special category of personal data under Article 9 GDPR. While the legal basis under Article 9(2)(g) GDPR is available, its application must remain proportionate to the risk profile of the customer. especially for long-standing low-risk customers, by allowing risk-based screening frequencies rather than systematic high-frequency checks. - A fundamental rights impact assessment developed by or in coordination with the Fundamental Rights Agency. Such an assessment is essential to ensure that the customer due diligence obligations are proportionate and do not result in unjustified interference with fundamental rights as enshrined in the Charter of

Name of the respondent	Question	Answer
		Fundamental Rights of the European Union, including not only the rights to privacy and data protection, but also other rights such as non-discrimination. These impact assessments should be regularly updated after the adoption of the RTS.
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	Do you have any comments on the recitals? Name of the respondent	Question	Answer
European Center for Not-for-Profit Law		
Human Security Collective, Civil Society Europe, Philanthropy Europe Association, European Fundraising Association, Goede Doelen Nederland, European Center for Not-for-Profit Law	How would you rate the proposals set out in the draft RTS overall?	Neutral
Iberclear	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Iberclear, as a central securities depository (CSD) authorized under Regulation (EU) No 909/2014, falls within the scope of obliged entities for the purposes of Regulation (EU) 2024/1624. Iberclear agrees that, in principle, the draft RTS are designed to be applied across a wide range of products and services, including those offered by Central Securities Depositories (CSDs), as long as they are applied in a risk-sensitive and proportionate manner. That said, it should be noted that: - CSDs operate as market infrastructures, not as customer-facing financial intermediaries; - their services are highly standardized, regulated and transparent by design; - CSDs typically maintain institutional relationships with regulated financial entities, rather than commercial relationships with end-investors or retail customers. In our specific case, every participant is a regulated

Name of the respondent	Question	Answer
		financial institution. Requiring the CSDs to replicate or deepen ultimate ownership analysis of transactions already performed by participants would result in duplication of controls without commensurate risk reduction and with a significant operative impact. Therefore, certain CDD requirements — particularly those relating to: - Scrutiny of transactions, - the understanding of ultimate beneficial ownership of the clients of our participants, may therefore be excessive and systematically very difficult to operationalize in the CSD context without further clarification, given that: a) the CSD does not control the commercial relationship between its participants and their underlying clients (this control must rely on the participants); b) the CSD's role is limited to the provision of settlement, safekeeping and notary-type services under mandatory regulatory frameworks. Iberclear therefore considers that, for CSDs, and given the regulated services provided, reliance on the regulated status and supervision of participants should be sufficient to apply a simplified due diligence, unless specific ML/TF risk indicators are identified.

Name of the respondent	Question	Answer
		Specifically, regarding scrutiny of transactions, in a CSD context of settlement instructions: - transactions are technical settlement movements, not discretionary economic transactions; - the CSD does not control nor initiate transactions, but merely records, settles or safekeeps securities; - information on source of funds or wealth is structurally unavailable to a CSD and is already addressed at participant level. - Information is already analyzed and scrutinized by the involved participant, which is always a financial institution. Therefore, when the Draft RTS mentions that "recital (78) of the Regulation clarifies that SDD measures are not an exemption from or absence of standard due diligence measures, but are rather, a reduced set of scrutiny measures that should '...address all components of the standard due diligence procedure.', we would need to know if the mentioned obligations (scrutiny of transactions and transaction monitoring) are applicable to CSDs and to which extent, or if they can be considered already covered by the participants and through cooperation and supervision of them by the CSDs.
Iberclear	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify	Iberclear agrees that the draft RTS are conceptually aligned with the risk-based approach underpinning Regulation (EU) 2024/1624 and explicitly recognize proportionality as a guiding principle.

Name of the respondent	Question	Answer
	the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	However, effective application of the risk-based approach requires that: - the nature, role and systemic function of the obliged entity are taken into account; - low-risk, infra-structural activities are not subject to the same intensity of CDD scrutiny as higher-risk, customer-driven activities. In the case of CSDs: - ML/TF risks are primarily indirect and mitigated upstream, through regulated participants that are themselves subject to full AML/CFT obligations (including customer onboarding, transaction monitoring and sanction screening) - the CSD's exposure to ML/TF risk differs fundamentally from that of banks or payment institutions: a CSD functions as a post‑trade infrastructure, not as a financial intermediary engaging with customers' funds or economic activities. In this context, Iberclear considers that the RTS should be interpreted so that: 1. the risk-based approach allows materially lighter or simplified CDD and ongoing monitoring obligations for CSDs in low-risk scenarios; 2. the absence of direct customer control is recognized

Name of the respondent	Question	Answer
		when assessing compliance with provisions such as Articles 11, 12, 18 and 25–28. Without such clarification, there is a risk that supervisors may expect bank like AML frameworks from CSDs, contrary to the principle of proportionality.
Iberclear	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	From the perspective of a CSD, there are specific situations where certain information required under the draft RTS may be routinely unavailable or disproportionate, including: - place of birth request is not always easy to comply with. From customer perspective, it can be considered as invasive and in a simplified due diligence it probably does not add significant value. Besides, nationality is already collected. - granular information on the source of funds or source of wealth in cases where: a. the CSD does not have, nor can reasonably obtain, insight into the underlying economic transaction, b. the CSD does not maintain a commercial relationship with the ultimate beneficiary (a client of its participant). While the RTS provide some flexibility through risk-based measures, the CSD considers that additional practical examples or clarifications would be useful to confirm that:

Name of the respondent	Question	Answer
		- reliance on existing regulatory status, authorization and supervision of participants is acceptable; - scrutiny of transactions and beneficial ownership verification over the underlying clients of the participants is part of the participant obligations, and not of the CSD. (Article 20.h) of AMLR and article 22 of the Draft RTS, about pooled accounts) Such clarification would be consistent with the RTS' own proportionality objective and reduce divergent supervisory interpretations.
Iberclear	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Iberclear considers that AMLA could explicitly confirm, through the RTS or accompanying guidance, that the following practices are compatible with the simplified due diligence framework in low-risk situations: - reliance on the regulated status and ongoing supervision of CSD participants established in the EU and equivalents countries, especially for the verification of their clients and its ultimate beneficial ownership; - proportionate application of ongoing monitoring obligations, reflecting: a. the standardized and regulated nature of CSD services, b. the absence of discretionary account management or transaction initiation by the CSD. c. the participants are already AML obliged subjects,

Name of the respondent	Question	Answer
		and therefore, sanctions screening of transactions and transaction monitoring are already covered by them. d. the CSD cannot access to the whole information of a settlement instruction. Clarifying these points, specially who owns the duty of transaction monitoring and sanction screening in a CSD environment, would enhance legal certainty, facilitate consistent application across Member States, and ensure that simplified due diligence measures remain faithful to the risk-based approach without undermining AML/CFT objectives.
Iberclear	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Iberclear would like to highlight that, for entities such as CSDs that were not previously considered financial institutions for AML/CFT purposes, the AMLR introduces a significant regulatory transition, leading to the application of a comprehensive set of CDD obligations that were primarily designed with traditional financial intermediaries in mind. In that regard, this consideration of CSDs at the same level of a traditional financial institution could lead to disproportionate obligations for market infrastructures if provisions are applied without sufficient and rightful differentiation. In particular, Iberclear notes that: • As CSD, it does not establish or manage customer business relationships in an economic sense, but

Name of the respondent	Question	Answer
		provides regulated infrastructure services under mandatory financial legislation (e.g. CSDR); • its participants are regulated financial institutions subject to full AML/CFT obligations, including CDD, ongoing monitoring and sanctions screening. CSDs, already regulated by CSDR 909/2014, perform non banking, non payment and non cash handling functions, which differ fundamentally from those of traditional financial institutions that are typically exposed to ML/TF risks through the movement of funds. Accordingly, consideration should be given to ensuring that the application of Regulation (EU) 2024/1624 to CSDs appropriately reflects: • their distinct functional role in the financial system, • the absence of banking or payment services, when applicable, and • the existence of a fully developed, sector specific supervisory framework under CSDR. At a minimum, this supports a systematic classification of such entities as low risk obliged entities, for which simplified due diligence should be the default approach. Within this context, while we agree with the structure and overall logic of the draft RTS, we consider that

Name of the respondent	Question	Answer
		additional clarification on the proportional application of certain CDD obligations (i.e. Articles 11, 12, 25–28) would be necessary, taking into account that key AML/CFT controls are already performed upstream by CSD participants.
Iberclear	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Iberclear	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Iberclear	Do you have any comments on the Annex in the draft RTS?	No
Iberclear	How would you rate the proposals set out in the draft RTS overall?	Neutral
Iberclear	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments.	Disruptive impact

Name of the respondent	Question	Answer
	Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	
Iberclear	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. Name of the respondent	Question	Answer
	substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Iberclear	Please justify your answer to the previous question and provide evidence where possible.	Iberclear, as other CSDs, was not previously considered financial institution for AML/CFT purposes until AMLR. Therefore, the AMLR and its draft introduces a significant regulatory transition, leading to the application of a comprehensive set of CDD obligations and implementation of policies, procedures and controls that were primarily designed with traditional financial intermediaries in mind. Because of that, the impact is significantly relevant in costs, efforts and operational terms. Moreover, the potential obligation of implementing a sanction screening process in CSDs and transaction monitoring system (guidelines still pending) would be, again, critical from cost, time and resources perspective, without adding a real value in the AML-CTF chain already covered by its participants.
IMTF Siron GmbH	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree with the proposals set out in the draft Regulatory Technical Standards. The RTS provide a coherent and operational framework for applying customer due diligence measures under Regulation (EU) 2024/1624 and appropriately emphasise: • the risk-based approach • proportionality across different obliged entities • technological neutrality • the use of reliable and independent information sources These principles are essential to ensure that the RTS remain workable across a wide range of business models and sectors.

Name of the respondent	Question	Answer
		However, we believe that additional clarification would improve legal certainty and supervisory convergence in relation to the use of reliable external intelligence sources when assessing customer reputation and ML/TF risks. Provision concerned Articles 8, 25 and 27 of the draft RTS. These provisions address: • the assessment of reliable and independent information sources (Article 8) • the collection of additional information for reputation and ML/TF risk assessment (Article 25) • the use of information sources for verifying source of wealth and source of funds (Article 27). Rationale In practice, obliged entities frequently rely on credible external intelligence sources when performing customer due diligence and enhanced due diligence. These sources may include: • reputable media publications • investigative reporting • enforcement and litigation reporting • curated external intelligence services used for AML/CFT risk monitoring. Such information often provides important contextual indicators of potential ML/TF risks, including links to corruption, fraud, organized crime or sanctions-related activity. While Article 27 already recognizes that information from reputable media publications or commercially available service providers may be used, the RTS do not

Name of the respondent	Question	Answer
		explicitly clarify that such sources may also support: • reputation assessments under enhanced due diligence • verification of contextual risk indicators • risk-based reassessment of existing customer relationships. Without clarification, obliged entities and supervisors may interpret the scope of permissible external intelligence sources differently across Member States. Suggested clarification We do not propose introducing additional prescriptive obligations. Instead, we suggest clarifying the existing provisions to explicitly recognize that reliable publicly available information may contribute to risk-based assessments where it meets the reliability criteria defined in the RTS. Proposed drafting clarification (interpretative) Article 8 — Reliable and independent sources of information Add a clarifying sentence: “Reliable and independent sources of information may include publicly available information from reputable media publications or other external information providers, provided that such sources meet the criteria of credibility, independence and accuracy set out in this Article.” Proposed clarification in Article 25 Add the following wording: “Additional information used for assessing the reputation of the customer or beneficial owner may include credible publicly available information relevant to potential ML/TF risks.”

Name of the respondent	Question	Answer
		Proposed clarification in Article 27 Clarify that: “Information from reputable media publications or commercially available information providers may be used where it supports the verification of the customer’s source of wealth or source of funds and meets the reliability criteria defined in this Regulation.” Why this approach would be more appropriate These clarifications would: • strengthen the risk-based approach by recognising relevant contextual risk indicators • improve supervisory consistency across Member States • reduce divergent interpretations of acceptable external information sources • avoid introducing additional regulatory burden or new obligations. The proposed clarification therefore supports the objectives of the RTS while maintaining proportionality and technological neutrality. Conclusion We support the overall structure and intent of the draft RTS. Clarifying the role of credible external information sources within the existing provisions would further strengthen the practical application of customer due diligence measures and support consistent implementation across the Union.
IMTF Siron GmbH	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT	We agree that the proposals set out in these draft RTS are generally capable of being applied across the range of products and services offered by obliged entities. The

Name of the respondent	Question	Answer
	requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	RTS appropriately rely on a risk-based and technology-neutral framework, allowing entities to determine the most appropriate measures depending on their business model, service channels and risk exposure. The principles set out in the RTS — particularly proportionality, risk sensitivity and flexibility in selecting reliable sources of information — provide a workable structure that can be applied to both traditional financial services and digital or remote service models. Practical observation In practice, obliged entities operate across a wide spectrum of products and delivery channels, including: • traditional face-to-face banking services • remote or digital onboarding models • intermediary-based distribution structures • pooled or platform-based services. For such environments, the RTS correctly allow entities to rely on a combination of information sources and verification methods depending on the risk profile and operational context. However, in digital service environments in particular, risk assessments often rely on contextual information derived from external intelligence sources already available within an institution's monitoring environment, including credible publicly available information relevant to potential ML/TF risks. Clarifying that such information may legitimately support CDD and EDD assessments would further strengthen the flexibility already embedded in the RTS. Suggested clarification (non-normative) Netlive does not consider it necessary to introduce

Name of the respondent	Question	Answer
		additional prescriptive requirements. However, AMLA may consider clarifying within the RTS or accompanying recitals that: “Obliged entities may rely on reliable publicly available information already available within their risk monitoring environment when assessing ML/TF risks associated with customers or beneficial owners, provided that such sources meet the reliability criteria defined in this Regulation.” Why this clarification would be appropriate This clarification would: • reinforce the risk-based approach embedded in the RTS • ensure that the framework remains applicable across diverse service models, including digital services • promote supervisory consistency across Member States • avoid introducing additional regulatory burden while recognising established AML/CFT practices. Conclusion Overall, we consider the RTS sufficiently flexible to apply across different products, services and delivery channels. Clarifying the role of reliable external information sources within risk assessments would further support consistent and proportionate implementation across sectors without expanding the scope of regulatory obligations.
IMTF Siron GmbH	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes	We agree that the proposals set out in these draft RTS generally enable the effective application of a risk-based approach towards compliance with AML/CFT

Name of the respondent	Question	Answer
	of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	requirements. The RTS appropriately emphasize that the scope, intensity and frequency of customer due diligence measures should be proportionate to the ML/TF risk associated with the customer, business relationship or transaction. This approach is consistent with the objectives of Regulation (EU) 2024/1624 and aligns with established international AML/CFT standards. In particular, the draft RTS support the risk-based approach through: • flexibility in selecting reliable and independent information sources • proportionality in simplified and enhanced due diligence measures • risk-sensitive monitoring and updating of customer information • the possibility to rely on a range of verification methods and information sources. These elements allow obliged entities to tailor their compliance measures to the specific risks they identify. Practical observation In operational AML/CFT frameworks, the effective application of the risk-based approach often depends on the ability of obliged entities to incorporate contextual risk indicators obtained from reliable external information sources when assessing customer risk profiles. Such information may include publicly available reporting concerning: • enforcement actions • litigation or regulatory proceedings

Name of the respondent	Question	Answer
		• corruption or fraud allegations • other information relevant to potential predicate offences. These sources can provide early contextual indicators that support the identification of higher-risk relationships and may therefore inform decisions regarding the application of enhanced due diligence measures. While the draft RTS implicitly allow the use of such information where it meets the reliability criteria defined in the Regulation, clarifying this point could further strengthen the practical implementation of the risk-based approach. Suggested clarification (interpretative) We do not consider that additional prescriptive requirements are necessary. However, AMLA may consider clarifying that: “When assessing the ML/TF risk associated with a customer or beneficial owner, obliged entities may take into account reliable publicly available information already available within their risk-monitoring environment, provided that such information meets the reliability criteria set out in this Regulation.” Why this clarification would be appropriate This clarification would: • strengthen the practical application of the risk-based approach • promote consistent supervisory expectations across Member States • recognize established AML/CFT risk-assessment practices

Name of the respondent	Question	Answer
		• avoid introducing additional regulatory obligations while improving interpretative clarity. Conclusion We consider that the draft RTS provide a sound framework for applying the risk-based approach under the AMLR. Clarifying that risk assessments may take into account reliable publicly available information already available within an obliged entity's monitoring environment would further support effective and proportionate implementation across sectors.
IMTF Siron GmbH	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We consider that, in most cases, the information requirements proposed in the draft RTS can be obtained by obliged entities using the combination of sources and verification methods already described in the Regulation. The provisions allowing the use of reliable and independent information sources, as well as alternative verification mechanisms in specific circumstances, provide a workable framework. However, based on operational AML/CFT practice, there are certain situations in which the full set of information required for customer due diligence may not be routinely available through traditional documentation or official registries, particularly in higher-risk or complex scenarios. Situation 1 — Complex ownership structures across multiple jurisdictions In cases involving complex corporate structures, particularly where intermediate entities are incorporated in multiple jurisdictions, official registry information may not always provide a complete or up-

Name of the respondent	Question	Answer
		to-date picture of the ownership and control structure. For example: • corporate entities registered in jurisdictions with limited disclosure requirements • nominee shareholders or layered holding structures • beneficial ownership information not publicly accessible or not regularly updated. Practical implication In such situations, obliged entities may be unable to fully corroborate ownership information using only official registries or customer-provided documentation. Alternative solution Entities frequently supplement registry data with other reliable sources of information already available within their risk-assessment processes, including: • corporate disclosures • litigation records • enforcement announcements • credible publicly available reporting concerning ownership or control relationships. Suggested clarification AMLA could clarify that where official registries do not provide sufficient information, obliged entities may rely on other reliable information sources meeting the criteria defined in Article 8 to corroborate ownership or control information. Situation 2 — Verification of source of wealth or source of funds In some cases, particularly for high-net-worth individuals or privately held businesses, documentary evidence of source of wealth may not always be

Name of the respondent	Question	Answer
		available in a standardized format. Examples include: • historical asset sales or inheritance events • private business transactions • settlements or compensation payments. Practical implication Traditional documentary evidence may be incomplete or difficult to obtain, especially where the underlying transaction occurred many years earlier. Alternative solution Obliged entities may use other reliable information sources already available in their monitoring environments to support their assessment of the legitimacy of wealth or funds, including credible publicly available information where relevant. This approach is already partially reflected in the RTS provisions allowing information from reputable media publications or commercially available information providers when assessing source of wealth. Situation 3 — Identification of contextual risk indicators When conducting enhanced due diligence, institutions may need to assess whether customers or beneficial owners are associated with higher-risk activities or environments. In certain situations, the relevant contextual indicators may not be reflected in official registries or customer documentation but may instead appear in other credible public sources. Examples include: • enforcement investigations or regulatory proceedings • corruption or fraud allegations

Name of the respondent	Question	Answer
		• litigation or sanctions-related reporting. Such information can provide contextual indicators relevant to ML/TF risk assessments. Suggested clarification Netlive does not propose expanding the scope of information requirements. However, AMLA may wish to clarify that: “Where the information required for customer due diligence is not available through official documentation or registries, obliged entities may rely on other reliable and independent sources of information meeting the criteria defined in this Regulation.” Why this clarification would be appropriate This clarification would: • support the risk-based approach embedded in the RTS • recognize practical situations where official documentation may be incomplete or unavailable • promote consistent supervisory interpretation across Member States • avoid imposing additional documentation requirements where alternative reliable sources exist. Conclusion Overall, we consider the information requirements proposed in the draft RTS to be broadly workable. Clarifying that obliged entities may rely on alternative reliable sources of information where traditional documentation is unavailable would further support effective and proportionate implementation of the customer due diligence framework.

Name of the respondent	Question	Answer
IMTF Siron GmbH	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We agree with AMLA's general approach to simplified due diligence as set out in the draft RTS. The RTS correctly emphasize that SDD represents a reduced level of scrutiny rather than an exemption from customer due diligence obligations, which is consistent with the principles established in Regulation (EU) 2024/1624. The proposed minimum information requirements and the flexibility afforded to obliged entities already provide a workable framework for applying simplified due diligence measures in lower-risk scenarios. At this stage, Netlive does not propose introducing additional sector-specific simplified due diligence measures beyond those already envisaged in the draft RTS. However, we believe that the effective application of SDD could be further supported by clarifying how existing risk monitoring mechanisms may be used as compensating safeguards where reduced identification measures are applied. Practical observation In low-risk scenarios, obliged entities often rely on a combination of reduced onboarding requirements and ongoing monitoring controls to manage ML/TF risk. These monitoring controls may include: • transaction monitoring systems • sanctions and PEP screening tools • customer risk scoring mechanisms • monitoring of reliable publicly available information relevant to the customer or beneficial owner. Such monitoring mechanisms can provide additional reassurance that potential risk indicators will be detected even where simplified identification measures

Name of the respondent	Question	Answer
		are applied. Suggested clarification (interpretative) We do not propose adding new prescriptive SDD measures. Instead, AMLA may consider clarifying that: "When applying simplified due diligence measures, obliged entities may take into account the presence of ongoing risk monitoring mechanisms capable of identifying changes in the customer's risk profile during the course of the business relationship." Why this clarification would be appropriate This clarification would: • reinforce the risk-based approach underlying simplified due diligence • ensure that reduced onboarding requirements are balanced by effective monitoring mechanisms • support the application of SDD in digital and low-risk service environments • avoid introducing additional regulatory complexity or sector-specific rules. Conclusion We consider that the simplified due diligence measures proposed in the draft RTS are broadly appropriate. Clarifying the role of ongoing monitoring mechanisms as safeguards supporting simplified due diligence would further strengthen the proportionality and effectiveness of the SDD framework without expanding regulatory requirements.
IMTF Siron GmbH	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
IMTF Siron GmbH	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
IMTF Siron GmbH	Do you have any comments on the Annex in the draft RTS?	No
IMTF Siron GmbH	How would you rate the proposals set out in the draft RTS overall?	Good
INREV	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	INREV is the European Association for Investors in Non-Listed Real Estate Vehicles, representing institutional investors, investment managers and other participants in the European non-listed real estate investment industry. In principle, the RTS can be applied across the range of products but some provisions are overly prescriptive and insufficiently flexible for the investment fund and real estate investment model. Proportionality and risk-based application The RTS correctly emphasise that DD measures should be applied on a risk-sensitive basis. However, in practice, the application of AML/CFT requirements can result in disproportionate compliance burdens relative to the underlying risk profile of the activity, creating significant operational challenges for the non-listed real estate investment industry. In particular, the framework should ensure that compliance resources are not disproportionately directed towards repeatedly collecting and verifying documentation that has already been obtained by other regulated parties involved in real estate transactions, such as notaries, lawyers, lenders and banking

Name of the respondent	Question	Answer
		institutions. Excessive duplication of documentation and verification processes risks diverting compliance functions away from activities that may provide greater value from an AML/CFT perspective, including the identification and assessment of potentially suspicious activities, behaviours or transaction patterns. Real estate investment structures, particularly those involving institutional capital and regulated investors, typically present no or low money laundering and terrorist financing risk. Nevertheless, they are often subject to extensive and resource-intensive due diligence requirements that are disproportionate to that risk profile. In this context, it is important that the final RTS ensure that proportionality is not only reflected at a conceptual level but also embedded in supervisory expectations and day-to-day application. This should include sufficient flexibility to allow for simplified and streamlined approaches in demonstrably low-risk scenarios, ensuring that compliance efforts remain aligned with actual risk rather than driven by formalistic distinctions between different due diligence categories. Simplification and usability We welcome AMLA's objective to deliver simplification without undermining effectiveness. Ensuring that the framework is workable in practice will be critical to achieving this aim. In particular, the RTS should provide clear and operational guidance that can be applied consistently across Member States, thereby reducing the scope for

Name of the respondent	Question	Answer
		divergent national interpretations. Greater clarity and coherence at EU level would contribute to a more predictable regulatory environment and support more efficient implementation by market participants. At the same time, the level of operational detail included in parts of the RTS risks becoming overly prescriptive. This is particularly relevant in areas such as the specification of trusted services or the detailed characteristics of tools used for remote verification. While the RTS repeatedly emphasise that proportionality should continue to apply, the practical effect of highly granular requirements is likely to be a significant increase in implementation, documentation and evidentiary burdens. In practice, such detailed requirements will need to be reflected throughout internal AML/CFT frameworks, including policies, procedures, oversight mechanisms, onboarding documentation and control processes. They will also create additional expectations from internal audit and supervisory review functions regarding evidence of implementation and compliance. This may result in substantial operational and compliance costs without necessarily leading to proportionate improvements in AML/CFT risk mitigation. In anti-money laundering and sanctions compliance reporting, some Member States require that every investment fund is obligated to submit its plan for ensuring appropriate compliance to the National Supervisory Authorities. This is true even though those funds may be part of an investment management group that has a group compliance policy and therefore all its

Name of the respondent	Question	Answer
		funds must submit essentially identical compliance plans, which are then also subject to separate audit. We recommend that guidance be issued confirming that investment management groups with established group compliance policies should be permitted to submit their group-wide compliance plans to National Supervisory Authorities on behalf of the funds and other investment vehicles they manage. This would ensure a more efficient and coherent approach to demonstrating compliance across entities operating under the same governance framework. This is especially relevant in light of the increasing cost, complexity and resource intensity associated with AML/CFT compliance in recent years, which has not always translated into proportionate improvements in risk mitigation.
INREV	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The RTS conceptually refer to proportionality but several provisions remain overly prescriptive in practice. Please find below and in other sections comments on specific provisions of the draft RTS: Article 6(5) – Certified identification documents Article 6(5) may introduce disproportionate operational burden by requiring certified identification documents even in the context of standard customer due diligence. In current market practice, certification requirements are generally reserved for higher-risk situations or enhanced due diligence measures. Applying such requirements systematically risks undermining the risk-based approach underpinning the EU AML framework. In addition, the incremental assurance provided by certified copies has become

Name of the respondent	Question	Answer
		increasingly uncertain in a digital environment where sophisticated image manipulation and AI-generated documents can replicate traditional certification features with high realism. As a result, mandatory certification may generate significant administrative burden without a commensurate reduction in AML/CFT risk. We therefore consider that obliged entities should retain discretion to determine, based on their AML/CFT risk assessment, when certified documentation is necessary and proportionate. Mandatory certification requirements would be more appropriate in enhanced due diligence or other specifically identified higher-risk scenarios. Article 7 – Verification measures conducted on a non-face-to-face basis The hierarchy established in Article 7, which places eIDAS-compliant solutions as the primary verification method, remains unchanged compared to the previous EBA draft. In addition, Article 7(4) introduces a new obligation to justify the non-use of eIDAS, creating an additional compliance burden that did not exist under the EBA text. More fundamentally, Article 7 appears to presume that customers onboarded remotely present a higher level of AML/CFT risk than customers onboarded in person. This assumption does not reflect the business model of the investment fund industry, which due to its inherently cross-border nature operates predominantly through remote onboarding arrangements.

Name of the respondent	Question	Answer
		We therefore consider that eIDAS-compliant solutions should be recognised as a preferred, rather than primary, verification method. Obliged entities should retain flexibility to apply alternative verification measures where these are appropriate to the risk profile and operational model of the business relationship. Article 13 – Senior managing officials Article 13 continues to require obliged entities to collect the same information for senior managing officials as for beneficial owners and to verify their identity "in the same way as they would for beneficial owners." In our view, this approach does not sufficiently reflect the fundamentally different role and risk profile of these two categories. Senior managing officials are identified as a fallback mechanism where no beneficial owner can be identified, and therefore do not present the same AML/CFT considerations as beneficial owners themselves. A more proportionate approach would allow for simplified verification requirements in the case of senior managing officials, consistent with the distinct purpose of their identification under the AML framework.
INREV	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so,	In short, in cross-border institutional structures, obtaining and verifying information through all ownership layers may become operationally difficult or disproportionate. Information may technically exist but be difficult to obtain within reasonable timelines. Moreoverm some structures involve regulated intermediaries where look-through is not operationally

Name of the respondent	Question	Answer
	please provide concrete examples of such situations and your proposals for alternative solutions.	realistic or risk-appropriate. Practical implementation in complex ownership structures The RTS introduce detailed requirements regarding the identification of beneficial owners and the understanding of ownership and control structures, including in complex corporate arrangements. While the objective of enhanced transparency is fully supported, practical implementation raises several challenges. As mentioned before, real estate investment structures frequently rely on multi-layered vehicles across jurisdictions. In such cases, the process of obtaining and verifying information across all layers can become operationally burdensome and may, beyond a certain point, provide limited additional insight into beneficial ownership or risk exposure. As reflected in INREV's previous response to the consultation by the European Banking Authority in May 2025, compliance requirements can become overly complex and resource-intensive without necessarily improving outcomes. We therefore encourage AMLA to ensure that supervisory expectations remain firmly risk-based and focused on meaningful outcomes. The framework should allow obliged entities to exercise judgement and avoid situations where information is pursued beyond what is reasonably necessary to understand ownership, control and associated risks. Please find below specific comments to draft RTS Article 12:

Name of the respondent	Question	Answer
		Article 12 – Complex corporate structures Further clarification would be beneficial regarding the concept of a “layer” for the purposes of Article 12(1). In the absence of additional guidance, there is a risk that each individual legal entity within an ownership chain could be treated as constituting a separate layer. We consider that entities belonging to the same group should be treated as constituting a single layer for the purposes of assessing structural complexity. This clarification would be beneficial regarding the treatment of legal arrangements and foundations under Article 12(1). Not all such structures should automatically be treated as indicators of complexity. In practice, this approach risks capturing a significant number of institutional investors, including common pension structures used in jurisdictions such as Germany and the Netherlands, without this necessarily corresponding to elevated AML/CFT risk. Similarly, defining structures as complex solely on the basis that they involve entities established outside the EU risks capturing the vast majority of investors and clients of asset management companies. In the investment fund industry, cross-border structures frequently reflect legitimate operational, legal and investment considerations and should not automatically be interpreted as indicators of elevated AML/CFT risk. In this context, we consider that the geographical criterion should be more narrowly targeted towards entities established in high-risk third countries rather than all non-EU jurisdictions. A broader approach risks creating unintended barriers to international

Name of the respondent	Question	Answer
		investment into EU funds and holding structures at a time when the EU is actively seeking to attract foreign investment into sectors such as infrastructure, real estate and business financing.
INREV	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Avoidance of duplicative compliance requirements A practical constraint arises from the duplication of AML/CFT controls across different actors involved in the same transaction chain. In real estate investment, financial flows are typically channelled through regulated banking institutions that are already subject to comprehensive AML/CFT obligations. At the same time, investment managers are required to carry out due diligence on the same counterparties, often covering substantially the same information. In practice, this leads to parallel verification processes being applied to identical parties, resulting in a repetition of checks and a material use of resources without a meaningful improvement in risk mitigation. This points to a structural inefficiency in the framework and contributes to the overall heavy compliance burden faced by the sector. Against this background, it would be beneficial for the final RTS to provide clearer operational guidance on the use of reliance mechanisms and the extent to which existing due diligence can be leveraged. Ensuring that the framework is applied in a manner that limits unnecessary duplication would support a more efficient allocation of compliance efforts, while preserving the integrity and effectiveness of AML/CFT controls. Comments to Article 17 – Reliance on intermediaries

Name of the respondent	Question	Answer
		and look-through requirements In the investment fund industry, intermediaries are predominantly regulated financial institutions that provide their customers with efficient and cost-effective access to financial markets. Imposing systematic look-through obligations to the underlying investor would duplicate efforts to collect information that is only relevant to a limited extent, while asset managers already conduct appropriate due diligence on their direct customer, namely the intermediary with whom the business relationship is established. Such duplication of identification and verification obligations would significantly increase compliance costs, which are ultimately borne by investors, while also undermining the competitiveness of the EU financial sector. Where an intermediary subscribes in its own name on behalf of underlying investors, the business relationship for AML/CFT purposes is established between the obliged entity and the intermediary. In this respect, Article 17 does not appear fully aligned with the FATF Guidance for a Risk-Based Approach for the Securities Sector (October 2018), which recognises the role of regulated intermediaries within the securities distribution chain. INREV stands ready to continue engaging constructively with AMLA and other stakeholders as implementation progresses. We remain supportive of a proportionate and risk-based AML/CFT framework that reflects the

		operational realities and actual risk profile of institutional real estate investment structures.
INREV	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	N/A
INREV	How would you rate the proposals set out in the draft RTS overall?	Neutral
Insipia Limited	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	yes
Insipia Limited	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	yes
Insipia Limited	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft	yes

Name of the respondent	Question	Answer
	RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
Insipia Limited	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	none
Insipia Limited	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 18 requires obliged entities to obtain information on the estimated level of activity (point (b)) and the source of funds (point (c)) in order to understand the purpose and intended nature of the business relationship. However, the RTS do not explicitly clarify how obliged entities may establish a holistic baseline of the customer's financial capacity against which expected activity can be assessed. In practice, indicative information on the customer's financial situation, such as an income range, can support a more effective assessment of whether the envisaged level of activity is plausible and consistent with the customer's profile, thereby facilitating the identification of unusual or potentially suspicious behaviour. We propose that Article 18 clarify that, where appropriate and proportionate to the ML/TF risk, obliged entities may use indicative, non-verified

Name of the respondent	Question	Answer
		information on the customer's financial situation, such as an income range, as part of the assessment under points (b) and (c). This would support the establishment of a reasonable expectation of customer activity and enhance the effectiveness of ongoing monitoring, without introducing an obligation to systematically collect additional financial information. Such clarification would provide greater legal certainty for obliged entities, including remote gaming companies, while remaining consistent with the risk-based and proportionate approach underpinning Regulation (EU) 2024/1624. Article 7 promotes the use of electronic identification means for customer verification. In practice, however, certain widely used electronic identification solutions (e.g. BankID) do not provide obliged entities with information on the expiry date of the underlying identity document. As a result, obliged entities may not have visibility of when identity documentation expires, which may create uncertainty when determining appropriate triggers for updating customer identification data in line with Article 23. We propose that the RTS clarify how obliged entities may approach the updating of customer identification data where electronic identification means are used and information on the expiry date of the underlying identity document is not available. In particular, the RTS could confirm that, where appropriate and proportionate to the ML/TF risk, obliged entities may

Name of the respondent	Question	Answer
		rely on risk-based review cycles or the continued validity of the electronic identification means, rather than document expiry, as a trigger for updating customer information. This would enhance legal certainty while supporting the effective use of electronic identification solutions in line with the risk-based approach underpinning Regulation (EU) 2024/1624. Article 7 priorities the use of electronic identification means with 'substantial' or 'high' assurance levels. However, in practice, the usability of such solutions may vary due to technical, operational or limitations. In some jurisdictions, restrictive interpretations have emerged whereby fallback verification methods are not permitted if a customer possesses an electronic identification means (e.g. a chip-enabled ID), even where such means cannot reasonably be used in practice. In reality, electronic identification means may not be reasonably usable in situations such as lack of compatible device, cross-border interoperability limitations, technical failures or service unavailability, lack of activation of the electronic identification functionality, or accessibility barriers affecting the customer. The absence of clear guidance may lead to inconsistent application across Member States and unnecessary onboarding friction without a corresponding increase in ML/TF risk mitigation We propose that the RTS clarify that fallback verification solutions may be used where electronic identification

Name of the respondent	Question	Answer
		means, although available in principle, cannot reasonably be used by the customer due to practical, technical, or accessibility limitations. To support consistent application, the RTS could provide non-exhaustive examples of such situations, including technical incompatibility, cross-border usability limitations, temporary technical failure, or inability of the customer to complete the authentication process. This would ensure a harmonised and proportionate application of verification measures while maintaining a high level of assurance and aligning with the risk-based approach underpinning Regulation (EU) 2024/1624
Insipia Limited	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Insipia Limited	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	27
Insipia Limited	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	In the context of the non-financial sector, specifically the online gaming industry, the relationship with the customer is recreational. Consequently, requests for highly sensitive financial documents, such as tax declarations or payslips, under Enhanced Due Diligence measures are frequently met with severe customer reluctance due to privacy concerns, leading to unwarranted friction and drop-offs. To align with the risk-based approach and the principle of technological neutrality, while ensuring the robust verification of the source of funds and wealth, we respectfully suggest explicitly recognizing secure, data-driven alternatives. Open Banking solutions provide highly reliable,

Name of the respondent	Question	Answer
		independent, and verifiable financial data directly from the customer's payment service providers. Furthermore, leveraging a customer's transactional history within a strict closed-loop environment - where withdrawals are securely routed back to the exact same verified payment method used for deposits - provides a highly accurate and verified trail of the source of funds. Recognizing these methods would allow obliged entities to mitigate ML/TF risks effectively, ensuring a high degree of reassurance without relying exclusively on traditional, paper-based documentation. We kindly propose amending Article 27, point (h) to explicitly acknowledge technologically advanced and closed-loop verification methods. We suggest expanding the wording as follows: (h) any other relevant information from independent and reliable sources, providing a high degree of reassurance that the customer's and beneficial owners' source of funds, and source of wealth are not the proceeds of criminal activity and are consistent with the obliged entities' knowledge of the customer and the nature of the business relationship. Such information may include, but is not limited to, verifiable financial data obtained via Open Banking solutions directly from the customer's payment service providers, or a comprehensive analysis of the customer's historical net deposit and withdrawal activity within the obliged entity's closed-loop ecosystem.

Name of the respondent	Question	Answer
Insipia Limited	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Insipia Limited	Do you have any comments on the Annex in the draft RTS?	No
Insipia Limited	How would you rate the proposals set out in the draft RTS overall?	Good
Insipia Limited	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when	Manageable impact

Insipia Limited	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS is expected to generate limited but manageable additional costs for obliged entities that already maintain established AML/CFT frameworks and risk-based customer due

Name of the respondent	Question	Answer
		diligence procedures. Many of the measures reflected in the draft RTS, including customer due diligence, ongoing monitoring, sanctions and PEP screening, enhanced due diligence procedures, and internal controls, are already part of existing compliance frameworks and operational processes. However, some one-off implementation efforts may be required to align existing policies, procedures, systems, and documentation with the final RTS requirements. This may include reviewing remote identity verification processes, updating internal governance and documentation standards, refining screening and monitoring procedures, and implementing additional measures relating to the identification of the purpose and intended nature of the business relationship, including expected customer activity and source of funds information. Recurring costs are expected to remain limited, as ongoing monitoring, periodic customer reviews, sanctions and PEP screening, enhanced due diligence, and compliance oversight are already performed as part of existing AML/CFT obligations. Overall, the operational impact is expected to be manageable and not disruptive.
Institut des réviseur d'entreprises	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific	1- Definition of complex structures (Article 12 of the Draft RTS) Article 12 of the Draft RTS under 28(1) states that : “To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat

Name of the respondent	Question	Answer
	measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	an ownership and control structure as a complex corporate structure where there are three or more layers between the customer and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers; (b) the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU; (c) there are nominee shareholders or nominee directors involved in the structure; (d) the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification". The Article 12 does not align with a truly risk-based approach and could create excessive administrative burden. Indeed, the criteria set for complex ownership and control structure would classify many international group structures as "complex", requiring additional information gathering. Additionally the definition of the complex structure does not consider the percentage of holding. Recommendation that the classification as a complex structure should be determined by the obliged entities based on a risk-based approach. As for example, the presence of a legal arrangement in the structure should not automatically requires classifying the client as "high risk" if the legal arrangement does not control the

Name of the respondent	Question	Answer
		client. 2- Understanding the ownership and control structure of the client (Article 11 of the Draft RTS) The Article 11 (3) letter d) of the draft RTS requires to obtain “where applicable, the shares of interest held by each legal entity or legal arrangement, its sub-division, by class or type of shares and/or voting rights expressed as a percentage of the respective total”. Could you please clarify if the "interest held by each legal entity" should be obtained regardless of the percentage of holding? Such an approach does not seem to follow a risk-based approach. In addition, could you please explain how the sentence “to the extent that it is relevant” should be interpreted? 3- Screening requirements (Article 30(a)(iii) of the draft RTS) The requirement under Article 30(a)(iii) appears to assume that obliged entities have knowledge of “any other names, aliases, trade names, wallet addresses, where available in the lists of targeted financial sanctions”. In practice, obliged entities do not possess such information beyond what has been obtained through (E)CDD. As drafted, the provision is therefore not operationally feasible, as obliged entities cannot screen against identifiers they do not know. We recommend clarifying that obliged entities are

Name of the respondent	Question	Answer
		required to screen only the customer data and identifiers obtained in the course of (E)CDD against the information contained in the lists of targeted financial sanctions. This amendment would ensure that the requirement is operationally workable and aligned with the information realistically available to obliged entities, while still achieving the objective of effective sanctions screening.
Institut des réviseur d'entreprises	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	1- Verification of the senior managing officials (Article 13 of the RTS) We recommend that the RTS clarifies that verification of the identity of senior managing officials may be carried out on a risk-sensitive basis. We also suggest that the RTS specify that, where appropriate, obliged entities may rely on reliable and independent sources such as trade registers or publicly available information submitted to competent authorities (e.g. regulatory filings) for the purpose of verifying the identity of senior managing officials. This would reflect existing practices, ensure proportionality, and allow for efficient verification where the risk is lower and reliable public sources are available. 2- Authenticity and accuracy (Articles 6, 25, 26 and 27 of the RTS) / Certified copies (Article 6 of the RTS) • Authenticity and accuracy In several instances, the draft RTS requires that professionals assess the “authenticity and accuracy” of

Name of the respondent	Question	Answer
		the information collected. This formulation appears to go beyond what obliged entities can reasonably ensure in practice. We suggest clarifying that the requirement to assess authenticity and accuracy should focus on verifying that the information is obtained from reliable sources and is accurate and consistent when considered against the overall set of information collected. • Certified copies In addition, Article 6 of the Draft RTS under 28(1) states that: “For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7”. Could you please clarify what “certified copy” means? How should it be checked? Based on the above-mentioned provision, it seems that the RTS would require to collect a certified copy if the identity document has not been obtained directly. Such an approach does not appear to be consistent with the objective of a risk-based approach. 3- Non-face-to-face interactions (Article 7 of the draft RTS) A flexible, risk-based approach should be implemented, recognising that non-face-to-face interactions may occur where the statutory auditor would typically meet in person the service providers of its client (i.e. the

Name of the respondent	Question	Answer
		fund) and, potentially, meet virtually the beneficial owners or the legal representatives of its client (i.e. the fund). Such non-face-to-face interactions should not be treated as inherently higher risk per se, but should be assessed in line with recent FATF guidance.
Institut des réviseur d'entreprises	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	No comment
Institut des réviseur d'entreprises	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No comment
Institut des réviseur d'entreprises	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1- Identification and verification of the identity of the legal persons – Provisions regarding legal representatives included in the Article 22(1)(b)(iii) of the AML Regulation 2024/1624 Article 22(1)(b)(iii) of the AMLR requires obliged entities to identify the legal representatives of a legal entity in the context of their customer due diligence. In addition,

Name of the respondent	Question	Answer
		article 22(6) of the AMLR sets out the verification obligation: “the obliged entity shall obtain the information, documents and data necessary for the verification of the identity of the customer and of any person purporting to act on their behalf”. However, RTS does not make a reference to legal representatives. Questions raised: First question: Could you please clarify if the obligation to verify the identity of the customer includes the obligation to verify the identity of all the legal representatives of a legal person? This does not appear to serve the objective of an effective AML/CTF supervision. Indeed, such an obligation would result in having to verify, depending on the legal structure, the identity of many individuals who are not necessarily involved in the business relationship. As for example, a local non-profit organisation may have more than 20 members, registered as legal representatives in the Companies Register. In addition, such a requirement does not appear to be consistent with the objectives of a risk-based approach. Finally, Article 22 (6) of the AMLR requires to obtain an identity document, passport or equivalent or to use electronic identification means when verifying the customer’s identity, which may include, depending on the answer to the previous question, using these means to verify the identity of all legal representatives of a legal person. This would result in more extensive due diligence measures being applied to legal

Name of the respondent	Question	Answer
		representatives, potentially not involved in the business relationship, than to beneficial owners (given that the Article 22(7) of the AMLR provides with the option either to verify the identity of beneficial owners in accordance with Article 22 (6) of the AMLR or to take "reasonable measures to obtain the necessary information, documents and data from the customer or other reliable sources, including public registers other than the central registers"). Both approaches seem inconsistent. Please note in addition that the obligation to verify the identity of all legal representatives would create discrepancies with non-EU countries (such as UK) if they do not apply a similar approach. Second question: Could you please clarify if "legal representatives" as referred to in Article 22 (1) b) have to be considered as "persons purporting to act on behalf of the customer"? For the sake of clarity, we would recommend as well that the RTS gives a clear definition of persons purporting to act on behalf of the customer 2- Determining whether a Senior Managing Official ("SMO") is a politically exposed person (Article 20 (1) g) of the AML Regulation (EU) 2024/1624) Article 20(1)(g) of the AMLR states that "For the purpose of conducting customer due diligence, obliged entities shall apply all of the following measures: […] (g) determining whether the customer, the beneficial

Name of the respondent	Question	Answer
		owner of the customer and, where relevant, the person on whose behalf or for the benefit of whom a transaction or activity is being carried out is a politically exposed person, a family member or person known to be a close associate". Based on a literal reading of the Article 20(1) g), the above provisions do not apply to SMOs. Would it be possible to specify in the RTS if specific due diligence measures must be carried out to identify SMO who are PEP (screening obligations, etc.)? Indeed, the lack of clarity might lead to discrepancies between countries and between obliged entities.
Institut des réviseur d'entreprises	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
