Name of the respondent	Question	Answer
Anonymous 1	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Partially disagree. While the draft RTS provides a sound horizontal framework, specific provisions create disproportionate burdens for insurance distribution models. ARTICLE 7(4) – REMOTE VERIFICATION: The requirement to justify in each case why the customer could not be verified through eIDAS means (Art. 22(6) AMLR) is operationally disproportionate for digital insurance distributors. eIDAS "substantial" and "high" assurance wallets remain marginal across EU Member States in 2025-2026. In practice, Art. 7(2) (remote solutions) will be the standard pathway for digital insurance onboarding, not a derogation. The per-file justification obligation at Art. 7(4) generates significant administrative burden for high-volume digital insurers without proportionate risk mitigation value. Drafting proposal: Amend Art. 7(4) to limit the justification obligation to cases where the competent authority requests it in the context of a supervisory review ("available on request" rather than systematic). Alternatively, add a recital clarifying that where eIDAS wallets are not widely deployed, Art. 7(2) constitutes

Name of the respondent	Question	Answer
		the standard pathway and documentation may be managed at policy level rather than per file. ARTICLES 14-15 – DESIGNATED BENEFICIARIES IN LIFE INSURANCE: These articles address identification of trust beneficiaries (classes not yet ascertainable, discretionary arrangements). The same logic applies structurally to designated beneficiaries in life insurance contracts: the beneficiary may be a class (e.g. "my legal heirs") not identifiable at inception; the designation can be changed at any time by the policyholder; material events (death of initially designated beneficiary, divorce) cause a class beneficiary to become identifiable. The draft RTS does not confirm whether Arts. 14-15 apply to life insurance contracts, creating legal uncertainty. Drafting proposal: Add a recital or Q&A confirming that Arts. 14-15 apply mutatis mutandis to life insurance contracts with designated beneficiaries, and that identification and screening must occur at the latest before any benefit payment.
Anonymous 1	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not	Largely agree. The horizontal, principle-based approach (Option B, as retained in the Impact Assessment) appropriately preserves the risk-based

Name of the respondent	Question	Answer
	agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	approach and avoids prescriptive over-specification. This is supported. However, the absence of any sector-specific illustration creates a risk of divergent application across national supervisors for the insurance sector. Two specific points merit attention: ARTICLE 18(b) – ESTIMATED VALUE OF ACTIVITIES: The concept of "estimated value of activities" is structurally different in life insurance. Obliged entities in this sector reason in terms of periodic premium, surrender value and death capital — concepts absent from the draft RTS — rather than transaction volumes. Without sector guidance, supervisory expectations will diverge across Member States. ARTICLE 18(c) – SOURCE OF FUNDS: The list of eight source-of-funds categories does not explicitly cover situations frequent in insurance: (i) contract transfers (surrender proceeds from a previous insurer reinvested into a new policy); (ii) in-kind contributions (transfer of securities or assets to fund a premium, common in UHNWI life insurance); (iii) collective welfare contributions paid by an employer under a group contract. Obliged entities may over-

Name of the respondent	Question	Answer
		collect information in the absence of explicit guidance. Drafting proposal for Art. 18(c): Add a point (ix) as follows: "any other fund flows related to insurance contract transfers, in-kind contributions or collective welfare payments, supported by adequate documentation." Recommendation: AMLA should commit to publishing insurance-sector Q&As or guidelines concurrently with the entry into application of the RTS, in line with commitments made in the Impact Assessment (Section D, Option B assessment) to address remaining interpretative challenges through targeted tools.
Anonymous 1	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, in low-risk insurance contexts. Two situations arise routinely where information required under the draft RTS is unavailable and no alternative solution is provided. 1. DESIGNATED BENEFICIARIES NOT YET IDENTIFIABLE AT INCEPTION (Arts. 14-15) In life insurance, the designated beneficiary is frequently a class not ascertainable at contract inception (e.g. "my descendants in direct line"). The policyholder may have no children at the time of

Name of the respondent	Question	Answer
		subscription. Standard identification and verification of the beneficiary is therefore impossible at onboarding. Concrete example: A life insurer concludes a contract designating "my direct-line descendants" as beneficiaries. At inception, the policyholder has no children. Under which regime must the insurer manage this beneficiary? Art. 14 (class not yet ascertainable)? When must identification data be collected once a beneficiary becomes identifiable (birth of a child)? The draft RTS does not answer this. Proposed solution: Confirm that Art. 14 applies to this scenario and specify that the insurer must: (i) document the class of beneficiaries at inception; (ii) identify and verify individual beneficiaries as they become ascertainable; (iii) systematically conduct identification and screening before any benefit payment regardless of when the beneficiary became identifiable. 2. PEP/SANCTIONS SCREENING OF DESIGNATED BENEFICIARIES — TIMING UNCERTAINTY Art. 19(1)(a) requires PEP identification "before the

Name of the respondent	Question	Answer
		establishment of the business relationship". Art. 30(c)(i) requires screening "during customer onboarding". In life insurance, the designated beneficiary may not be identified until years after inception. Art. 30(c)(iii) triggers re-screening on "significant change in due diligence data" but does not explicitly include a change of designated beneficiary. Proposed solution: Specify that for life insurance contracts, screening of the designated beneficiary must occur: (i) at inception if already identified; (ii) upon any change of designated beneficiary; (iii) systematically before any benefit payment. Add "change of designated beneficiary" to Art. 30(c)(iii) examples.
Anonymous 1	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes. The draft RTS introduces a sector-specific SDD measure for credit institutions (Art. 22, pooled accounts) but contains no equivalent for the insurance sector, despite well-established precedents recognising lower ML/TF risk for specific insurance products. 1. MISSING INSURANCE-SPECIFIC SDD MEASURES The previous EU AML/CFT framework (Directive (EU) 2015/849,

Name of the respondent	Question	Answer
		Annex II, point 3(b)) explicitly recognised lower-risk factors for: life insurance policies where the annual premium does not exceed EUR 1,000 or the single premium does not exceed EUR 2,500; pension schemes with no early redemption option and non-assignable as collateral; occupational pension or employee savings schemes with defined contributions and no discretionary redemption option. These categories are maintained in AMLR 2024/1624 (Art. 33 and Annex II) and are recognised by FATF in the Interpretive Note to Recommendation 10. The asymmetry between banking (Art. 22) and insurance (no equivalent) is unjustified from a risk perspective. Drafting proposal - New Article 22bis (or extension of Art. 24): "Where a life insurance undertaking concludes a contract where the periodic annual premium does not exceed EUR 1,000 or the single premium does not exceed EUR 2,500, and where the ML/TF risk is assessed as low based on the obliged entity's risk assessment, simplified due diligence measures may be applied, provided that: (a) the contract does not include a discretionary early redemption clause; (b) proportionate ongoing monitoring is maintained; (c) identification and screening of the

Name of the respondent	Question	Answer
		beneficiary are conducted before any benefit payment." 2. GROUP INSURANCE - MISSING RELIANCE MECHANISM In group insurance (employer-employee schemes), the insurer's primary contractual relationship is with the employer policyholder, not with individual insured employees. Art. 17 provides a reliance mechanism for CIUs distributing through intermediary institutions. An equivalent mechanism is absent for group insurance, which would require insurers to collect CDD data on potentially thousands of insured employees operationally disproportionate and not justified by the risk. Drafting proposal: Provide a reliance mechanism for group contracts modelled on Art. 17: the insurer may rely on the employer policyholder's CDD measures where the employer is a supervised legal entity or an obliged entity, subject to: (a) effective supervision of the employer for AML/CFT compliance; (b) the insurer being satisfied that the employer applies robust CDD measures; (c) the insurer being able to obtain employee information without undue delay upon request.

Name of the respondent	Question	Answer
Anonymous 1	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	ARTICLE 19(3) – PEP SCREENING: PROPORTIONALITY FOR SMALL INSURANCE ENTITIES Art. 19(3) requires automated screening tools "unless the size, business model, complexity or nature of the business justifies manual checks only." This proportionality carve-out is appropriate. However, AMLA should clarify its application for small mutual insurers (professional or affinity mutuals) with low client volumes, for whom investment in automated screening tools may be economically disproportionate relative to the ML/TF risk posed. A recital example or Q&A would prevent divergent supervisory expectations across Member States. ARTICLE 30(c)(iii) – SANCTIONS RE-SCREENING: CHANGE OF DESIGNATED BENEFICIARY Art. 30(c)(iii) triggers re-screening on "significant change in due diligence data," citing name, residence, nationality or business operations changes. In life insurance, a change of designated beneficiary is a material event that fundamentally alters the identity of the person for whose benefit the transaction will be performed. This should be explicitly included as a re-screening trigger.

Name of the respondent	Question	Answer
		Drafting proposal: Add after "change of business operations": "or, in the context of life insurance contracts, a change of designated beneficiary." GENERAL REQUEST: INSURANCE SECTOR Q&As Given the horizontal approach retained by AMLA (Impact Assessment, Section D, Option B), sector-specific interpretative tools are essential to prevent divergence. AMLA is requested to commit to publishing insurance-sector Q&As or guidelines concurrently with the RTS entry into application, covering at minimum: the application of Arts. 14-15 to designated beneficiaries; PEP/sanctions screening timing in life insurance; and source-of-funds documentation for contract transfers and in-kind contributions.
Anonymous 1	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Anonymous 1	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Anonymous 1	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	ARTICLE 7(4) – REMOTE VERIFICATION: DISPROPORTIONATE JUSTIFICATION REQUIREMENT Issue: legal certainty / proportionality / technical implementation. Art. 7(4) requires obliged entities to "justify why the customer

Name of the respondent	Question	Answer
		could not be verified through the means referred to under Article 22(6)." Given that eIDAS "substantial" and "high" assurance wallets remain unavailable to most EU consumers in 2025-2026, this justification will be required systematically for virtually all digital insurance onboarding, generating significant administrative burden without proportionate risk value. Drafting proposal: Replace "they shall also be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article and they shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6)" with: "they shall also be able to demonstrate to their competent authority, upon request, that the remote verification solutions they use comply with the requirements of this Article. Where eIDAS-compliant means of identification are not available to the customer, the obliged entity shall document this at the level of its internal policies and procedures."
Anonymous 1	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	18

Name of the respondent	Question	Answer
Anonymous 1	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	ARTICLE 18(c) – SOURCE OF FUNDS: INCOMPLETE LIST FOR INSURANCE Issue: legal certainty / proportionality. Art. 18(c) lists eight source-of-funds categories. Three situations frequent in insurance are not covered: (i) insurance contract transfers (surrender proceeds reinvested); (ii) in-kind contributions (securities transferred to fund a premium); (iii) collective welfare contributions paid by an employer under a group contract. Drafting proposal: Add point (ix): "any other fund flows related to insurance contract transfers, in-kind contributions or collective welfare payments, supported by adequate documentation."
Anonymous 1	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Anonymous 1	Please specify which recital you refer to, and share your comments below.	RECITAL (7) – VULNERABLE PERSONS: NO INSURANCE PARALLEL The recital addresses flexibility for persons unable to provide standard identity documents (stateless, refugees, homeless). This flexibility is welcome. A comparable clarification would be useful for insurance-specific situations where standard documentation is structurally unavailable — notably

Name of the respondent	Question	Answer
		minor children named as designated beneficiaries in life insurance contracts, who do not hold identity documents. The recital already references birth certificates for minors acting through a parent; this logic should be explicitly extended to cover minors as designated beneficiaries (not only as customers or representatives). RECITAL (14) – COLLECTIVE INVESTMENT UNDERTAKINGS: INSURANCE ANALOGY NOT ADDRESSED Recital (14) explains the reliance mechanism for CIUs (Art. 17). The same rationale — proportionality, avoidance of duplicative CDD — applies to group insurance contracts where the employer policyholder already performs CDD on its employees. AMLA should add a recital acknowledging this parallel and indicating that equivalent guidance for the insurance sector will be addressed in Q&As or future guidelines. RECITAL (25) – TRANSITIONAL PERIOD FOR EXISTING CUSTOMERS The recital is clear and welcome. For the insurance sector, AMLA should confirm in a Q&A that the risk-sensitive update of existing policyholder files may be prioritised based on the residual contract term and risk profile,

Name of the respondent	Question	Answer
		avoiding disproportionate remediation costs for low-risk, short-term legacy contracts.
Anonymous 1	Do you have any comments on the Annex in the draft RTS?	Yes
Anonymous 1	Please share your comments below.	ANNEX I – ELECTRONIC IDENTIFICATION ATTRIBUTES FOR LEGAL PERSONS The Annex lists attributes for electronic identification of legal persons, including "other existing attributes covering the names of persons holding shares or a directorship position in nominee form." For insurance entities — particularly captive insurers, special purpose vehicles used in reinsurance structures, and insurance holding companies — nominee shareholders and nominee directors are frequently present in legitimate structures. The current formulation does not clarify how obliged entities should treat cases where the eID wallet of a legal person does not include nominee shareholder/director information (which is not systematically registered in all EU Member States' business registers). Drafting proposal: Add a clarification in the Annex or a recital that where nominee shareholder/director attributes are not available through eID means, the obliged entity shall obtain this information through the

Name of the respondent	Question	Answer
		measures set out in Art. 11-12 of the RTS (ownership and control structure, complex corporate structures), and that the absence of such attributes from the eID wallet does not constitute a deficiency in the verification process provided complementary measures are applied.
Anonymous 1	How would you rate the proposals set out in the draft RTS overall?	Good
Anonymous 2	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No. Le proposte non offrono sufficiente flessibilità per il settore notarile, perché omettono una clausola generale che codifichi espressamente il principio del perimetro funzionale: ogni soggetto obbligato applica la CDD nei limiti delle informazioni che la sua funzione gli consente di acquisire. Senza una clausola di questo tipo, il rischio è che le RTS, pur risk-based, siano applicate dai supervisori come catalogo di obblighi cumulativi indifferenziati per categoria di soggetto obbligato. Il problema si pone in modo specifico per i notai e le altre DNFBP che operano in presenza del cliente e non dispongono di sistemi automatici di profilazione e monitoraggio analoghi a quelli bancari. Il Regolamento (UE) 2024/1624 contiene già il fondamento del principio (art. 9, par. 1, e art. 10, par. 1: proporzionalità alla natura dell'attività; Considerando 29), ma le RTS lo applicano in modo non sufficientemente differenziato. Tre esempi concreti dal Draft RTS: 1 - Art. 11 - Comprensione dell'assetto proprietario e di controllo. La norma richiede misure risk-sensitive per ottenere una «comprensione complessiva» della struttura proprietaria. Per il notaio italiano questa comprensione si forma attraverso la

Name of the respondent	Question	Answer
		dichiarazione del cliente, l'esame dell'atto, i registri pubblici consultati nell'istruttoria. Non sono esigibili indagini esterne né accesso a fonti commerciali. La giurisprudenza italiana lo ha riconosciuto (CA Roma n. 765/2026; Trib. Roma n. 6190/2024). Le RTS dovrebbero esplicitare che le «risk-sensitive measures» sono limitate alle informazioni acquisibili nell'esercizio della funzione professionale. 2 - Art. 27 - Source of funds and source of wealth. La norma consente di richiedere dichiarazioni dei redditi, audited accounts, credit facility agreements, ecc. Per il notaio la richiesta di tali documenti al cliente costituisce verifica estranea alla funzione e produce un effetto autocontraddittorio rispetto allo scopo del sistema AML: alerta il cliente sul fatto di essere oggetto di valutazione di sospetto, vanificando il principio di segretezza che il sistema stesso impone (art. 73 AMLR sul divieto di comunicazione; Considerando 145). Il parallelo con il segreto investigativo del processo penale (art. 329 c.p.p. italiano) conferma la coerenza sistematica del principio. Le RTS dovrebbero precisare che le informazioni di cui all'art. 27 sono acquisite dalle DNFBP nei limiti in cui non risultino incompatibili con la naturale fenomenologia della funzione esercitata. 3 - Art. 25 - Additional information sotto EDD. Anche in regime rafforzato il perimetro funzionale del soggetto obbligato non muta. Le RTS amplificano l'intensità della verifica, non il perimetro. Andrebbe inserito un Considerando che chiarisca che la EDD non legittima il soggetto obbligato a verifiche investigative incompatibili con la sua funzione. Proposta redazionale concreta: inserire nella Section 1 (General principles), all'art. 1, un secondo paragrafo: «Quando il soggetto obbligato appartiene a categorie la cui

Name of the respondent	Question	Answer
		funzione è esercitata in presenza del cliente e senza accesso a sistemi di monitoraggio automatizzato delle operazioni, l'applicazione delle misure previste dal presente Regolamento tiene conto dei dati e delle informazioni acquisiti o posseduti nell'esercizio dell'attività istituzionale o professionale di tale soggetto obbligato, in coerenza con il principio di proporzionalità alla natura dell'attività di cui all'articolo 10, paragrafo 1, e all'articolo 9, paragrafo 1, del Regolamento (UE) 2024/1624. Le misure che richiedano informazioni o documenti che esulano dall'ambito naturale della funzione del soggetto obbligato, e la cui richiesta rivelerebbe necessariamente al cliente di essere oggetto di valutazione AML/CFT, sono da considerarsi incompatibili con il principio di efficacia del sistema AML/CFT, in linea con il divieto di comunicazione di cui all'articolo 73 e al Considerando 145 del Regolamento (UE) 2024/1624.» Tale clausola garantirebbe coerenza tra i tre principi che il Regolamento già afferma - proporzionalità, risk-based approach, effectiveness - e la specificità delle DNFBP che operano in presenza del cliente. Senza una previsione di questo tipo, l'applicazione uniforme delle RTS rischia di trasformare le DNFBP in soggetti tenuti a verifiche che la loro funzione strutturalmente non può svolgere senza compromettere lo scopo stesso della normativa.
Anonymous 2	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No, non interamente. Il Draft RTS afferma sin dall'art. 1 il principio dell'approccio basato sul rischio, ma alcune disposizioni operative introducono criteri rigidi che, nei fatti, lo svuotano. Il risk-based approach è il cardine sistematico dell'intero AMLR (Considerando 26; art. 20, par. 2, secondo cui i soggetti obbligati determinano la portata delle misure «sulla base di un'analisi individuale dei rischi, tenendo conto delle

Name of the respondent	Question	Answer
		caratteristiche specifiche del cliente»). Le RTS dovrebbero specificarlo, non comprimerlo. Tre disposizioni del Draft RTS introducono elementi di rigidità incompatibili con un genuino risk-based approach: 1. Art. 12 - Complex corporate structures. Il par. 1 definisce «complex» una struttura con «three or more layers between the customer and the beneficial owner» combinata con almeno una delle quattro condizioni indicate. Il criterio quantitativo dei tre livelli è una soglia rigida che opera come presunzione automatica di complessità, senza considerare il rischio concreto della singola operazione. Una struttura a 3 livelli interamente domestica, con assetto proprietario trasparente e finalità economica chiara, non presenta gli stessi rischi di una struttura a 2 livelli con jurisdiction off-shore e nominee directors. Il criterio quantitativo dei layer dovrebbe essere convertito in un fattore di rischio da valutare insieme agli altri, non in soglia rigida che attiva automaticamente obblighi rafforzati. Proposta redazionale: sostituire al par. 1 «where there are three or more layers between the customer and the beneficial owner and, in addition, more than one of the following conditions is met» con: «taking into account the number of layers between the customer and the beneficial owner, together with the presence of one or more of the following conditions, on the basis of an individual risk assessment». In questo modo i layer diventano fattore di rischio insieme agli altri, non condizione cumulativa rigida. 2. Art. 27 - Source of funds and source of wealth. Il par. 1 elenca documenti specifici che il soggetto obbligato «may include» per verificare l'origine dei fondi: dichiarazioni dei redditi, audited accounts, public deeds, ecc. Per le DNFBP la formulazione è ambigua: la lista appare come catalogo

Name of the respondent	Question	Answer
		orientativo ma nella prassi supervisoria può essere interpretata come standard di riferimento. Per categorie di soggetti obbligati che operano in presenza del cliente, alcuni di questi documenti (in particolare le dichiarazioni dei redditi) sono incompatibili con il principio di efficacia del sistema (art. 73 AMLR; Considerando 145), perché la loro richiesta rivela necessariamente al cliente di essere oggetto di valutazione di sospetto. Proposta redazionale: aggiungere all'inizio del par. 1 la clausola «taking into account the nature of the activity of the obliged entity and the information that can be acquired in the exercise of its function, in line with Article 9(1) and Article 10(1) of Regulation (EU) 2024/1624». La lista degli elementi documentali deve restare meramente esemplificativa e non operare come standard probatorio uniforme indipendentemente dalla categoria del soggetto obbligato. 3. Art. 19 - Identification of Politically Exposed Persons. Il par. 3 prescrive l'uso di «automated screening tools and measures, or a combination of automated screening tools and manual checks unless the size, business model, complexity or nature of the business of the obliged entity justifies the use of manual checks only». La formulazione inverte l'onere: il soggetto obbligato deve giustificare l'uso di sole verifiche manuali, anziché poter scegliere lo strumento più appropriato sulla base del rischio concreto. Per le DNFBP di minori dimensioni - incluso il singolo notaio - l'investimento in strumenti automatizzati di screening PEP è spesso sproporzionato rispetto al volume e al rischio dell'operatività. Proposta redazionale: sostituire la formulazione attuale con «obliged entities shall determine the most appropriate combination of automated and manual checks on the basis of

Name of the respondent	Question	Answer
		an individual risk assessment, taking into account their size, business model, complexity and nature of the business». La scelta dello strumento diventa così espressione del risk-based approach, non eccezione che richiede giustificazione. Queste tre correzioni allineerebbero il Draft RTS al principio cardine dell'AMLR e al mandato dell'art. 28(1), che espressamente subordina la fissazione degli obblighi al loro essere «proporzionati al rischio».
Anonymous 2	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Sì. Per il settore notarile italiano e per le altre DNFBP che operano in presenza del cliente, su prestazioni puntuali e senza sistemi automatizzati, esistono almeno quattro situazioni in cui le informazioni richieste dal Draft RTS sono sistematicamente indisponibili per ragioni strutturali. Il Draft RTS non disciplina queste situazioni e non offre soluzione alternativa coerente con il principio di proporzionalità di cui all'art. 9, par. 1, e all'art. 10, par. 1 del Regolamento (UE) 2024/1624. 1) Source of funds di operazioni pregresse all'incarico. L'art. 27 Draft RTS prescrive di acquisire informazioni sull'origine dei fondi attraverso documenti quali tax declarations, audited accounts, credit facility agreements, contract of sale. Il notaio interviene in un momento puntuale e non ha accesso ai flussi finanziari pregressi del cliente. Non dispone di sistemi di transaction monitoring. Non può ricostruire l'origine di fondi provenienti da operazioni precedenti svolte presso istituti di credito o altri professionisti. Soluzione: aggiungere all'art. 27 un paragrafo che chiarisca che, per i soggetti obbligati che intervengono su prestazioni puntuali, la verifica dell'origine dei fondi è limitata agli elementi emergenti dall'atto, dai registri pubblici consultati nell'istruttoria e dalla dichiarazione del cliente. Per i flussi

Name of the respondent	Question	Answer
		pregressi, il sistema fa affidamento sulla catena dei presìdi successivi codificata al Considerando 101 e agli artt. 49-51 AMLR. 2) Ongoing monitoring in assenza di rapporto continuativo. L'art. 20, par. 1, lett. f) AMLR richiede il controllo costante del rapporto d'affari per tutta la sua durata. Per il notaio la prestazione è di norma puntuale, si esaurisce con il rogito. Non c'è business relationship continuativa da monitorare. Il Draft RTS non distingue le DNFBP che operano su rapporti continuativi da quelle che operano su occasional transactions (art. 2(1)(11) AMLR). Soluzione: inserire all'art. 1 Draft RTS una clausola che chiarisca che, per i soggetti la cui prestazione si esaurisce in un'operazione puntuale, l'ongoing monitoring si riferisce al fascicolo dell'atto, non al monitoraggio continuativo del cliente. 3) Identificazione del rappresentato assente sulla base di procure non contemporanee. L'art. 16 Draft RTS richiede di verificare esistenza e estensione del potere di rappresentanza. Il rappresentante in stipula è identificato dal notaio. Diversa la posizione del rappresentato, assente, la cui identità si ricostruisce dalla procura. Quando la procura è risalente o estera, può non contenere i dati che l'art. 62, par. 1, lett. a) AMLR oggi richiede: cittadinanza completa, indirizzo aggiornato, codice identificativo personale unico. Il rappresentante non possiede necessariamente questi dati del rappresentato; il rappresentato, assente, non può fornirli; il notaio non può acquisirli autonomamente. Soluzione: integrare l'art. 16 con un paragrafo che chiarisca che, in presenza di procura redatta secondo lo standard dello Stato di provenienza e anteriore alla data di applicazione del Regolamento, l'identificazione del rappresentato si considera assolta sulla

Name of the respondent	Question	Answer
		base dei dati del titolo e dei registri pubblici, salvo dubbi specifici. 4) Verifica di soci minoritari in trasferimenti d'azienda complessi. L'art. 11 Draft RTS richiede una «comprehensive understanding» dell'assetto proprietario. Nella società con numero elevato di soci minoritari (cooperative, società partecipate da fondazioni, società con flottante distribuito), la verifica analitica di ciascun socio è strutturalmente impossibile nei tempi della stipula. Soluzione: integrare l'art. 11 con una clausola che consenta, per soci con partecipazioni inferiori alla soglia di rilevanza dell'art. 52 AMLR, di limitare la verifica ai dati anagrafici risultanti dal libro soci o dai registri pubblici, salvo emerga un rischio specifico.
Anonymous 2	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Il Draft RTS, agli artt. 20-24, disciplina le SDD secondo categorie generali. L'esperienza applicativa italiana suggerisce che, accanto alle SDD attualmente previste, AMLA dovrebbe includere nelle RTS due ulteriori livelli di semplificazione: (a) una clausola di esclusione dal perimetro applicativo per attività professionali strutturalmente non patrimoniali o non negoziali; (b) misure SDD aggiuntive per categorie di atti caratterizzati da rischio AML strutturalmente basso. La proposta si fonda sull'allegato II AMLR, sul Considerando 78, e sull'esperienza tecnica consolidata nel settore notarile italiano. 1. Esclusione dal perimetro applicativo per attività non negoziali o non patrimoniali. La Regola Tecnica n. 1 del Consiglio Nazionale del Notariato italiano (28 aprile 2023), elaborata ai sensi dell'art. 11, co. 2 del d.lgs. 231/2007 quale espressione tecnica dell'organismo di autoregolamentazione del Notariato, individua un nucleo di attività professionali notarili escluse dal perimetro applicativo della normativa AML,

Name of the respondent	Question	Answer
		perché strutturalmente prive di rischio di riciclaggio: attività di certificazione; atti di conferma in materia urbanistica e catastale; atti di designazione di amministratore di sostegno; atti di natura meramente dichiarativa; atti di rinuncia meramente abdicativa; atti mortis causa; atti notori; atti su delega dell'autorità giudiziaria privi di effetti patrimoniali; convenzioni matrimoniali (atti programmatici); inventari (salvo emergano circostanze ulteriori); levata del protesto; predisposizione di dichiarazioni di successione; predisposizione di ricorsi di volontaria giurisdizione; verbali di deposito di testamento olografo; verbali di pubblicazione di testamento pubblico o segreto. Si tratta di attività che, per la loro natura, non implicano trasferimenti di valore né mutamenti dell'assetto patrimoniale del cliente: il rischio AML è ontologicamente assente. Soluzione: aggiungere al Draft RTS un nuovo articolo (suggerito: art. 20-bis) che codifichi a livello europeo un elenco non esaustivo di attività professionali non negoziali o non patrimoniali per le quali, in ragione dell'assenza strutturale di rischio AML, gli obblighi di adeguata verifica si applicano in forma minima limitata all'identificazione del cliente ex art. 22, par. 1 AMLR, senza obbligo di acquisizione di documenti ulteriori sullo scopo dell'attività né di verifica dell'origine dei fondi. 2. Atti tra parti che sono entrambe enti pubblici, società quotate o enti vigilati. Le operazioni in cui entrambe le parti rientrano nelle categorie indicate al punto 1, lett. a) e b) dell'allegato II AMLR (società quotate sottoposte ad obblighi di trasparenza, amministrazioni o imprese pubbliche) presentano rischio AML strutturalmente ridotto, perché i soggetti coinvolti sono già destinatari di obblighi di trasparenza e di vigilanza prudenziale. Soluzione: aggiungere all'art. 21 Draft RTS un

Name of the respondent	Question	Answer
		paragrafo che, per atti in cui tutte le parti rientrino nelle categorie di cui all'allegato II punto 1, lett. a) e b) AMLR, consenta misure SDD per l'identificazione del TE limitate alla consultazione del registro centrale e alle informazioni fornite dal cliente ex art. 22, par. 1 AMLR. 3. Modifiche statutarie meramente tecniche o adeguamenti normativi obbligatori. Le modifiche statutarie che derivano da adeguamenti normativi cogenti o che hanno natura meramente tecnica (cambio sede infraregionale, adeguamento oggetto sociale per allineamento normativo) non comportano modifiche dell'assetto proprietario o della titolarità effettiva. Soluzione: aggiungere all'art. 23 Draft RTS un paragrafo che, in occasione di modifiche statutarie che non incidono sull'assetto proprietario, consenta l'aggiornamento limitato alla verifica della persistenza dei dati già acquisiti, senza obbligo di rinnovare l'intera procedura di identificazione del cliente e del TE. Le proposte sopra formulate sono coerenti con il Considerando 78 AMLR (le SDD non sono esenzione ma «insieme semplificato o ridotto di misure di controllo») e con la finalità complessiva del risk-based approach: concentrare le risorse di compliance sui rapporti effettivamente a rischio. La codificazione europea di un nucleo di attività professionali strutturalmente non patrimoniali è coerente con l'esperienza tecnica già sviluppata dall'autoregolamentazione notarile italiana e rafforzerebbe la proporzionalità del sistema senza compromettere l'effettività del contrasto al riciclaggio.
Anonymous 2	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	Si segnalano tre osservazioni di carattere sistematico che meritano attenzione nella stesura definitiva delle RTS. Prima osservazione - Codificazione del principio dei presìdi differenziati e successivi.

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	Il sistema AML/CFT poggia sull'architettura della catena dei presìdi: ciascun soggetto obbligato risponde di ciò che la propria funzione gli consente di conoscere, e i presìdi operano in successione, non in cumulo. Il Regolamento (UE) 2024/1624 codifica questo principio al Considerando 101 («per evitare il ripetersi delle procedure d'identificazione dei clienti, è opportuno consentire ai soggetti obbligati, fatti salvi adeguati presidi, di fare affidamento sulle informazioni relative ai clienti raccolte da altri soggetti obbligati») e lo articola operativamente agli artt. 49-51 del Regolamento sul ricorso a soggetti obbligati terzi. La giurisprudenza italiana ha riconosciuto il principio in modo esplicito: il Tribunale di Roma n. 6190/2024 ha affermato che il commercialista non è tenuto a ripetere una verifica già compiuta dal notaio rogante; la Corte d'Appello di Roma n. 765/2026 ha applicato il medesimo principio al notaio rispetto al presidio bancario anteriore. Ciascun presidio risponde entro il perimetro della propria funzione: la banca presidia i flussi finanziari, il commercialista la coerenza economico-contabile, il notaio la legalità negoziale. Il Draft RTS, però, non esplicita questo principio nel proprio impianto: alcune disposizioni (artt. 11, 25, 27) descrivono obblighi di verifica come se ciascun soggetto obbligato dovesse compiere autonomamente l'intera filiera dei controlli. Soluzione: inserire nel Draft RTS un Considerando che richiami espressamente il principio del Considerando 101 AMLR e degli artt. 49-51, chiarendo che le misure di adeguata verifica si applicano nei limiti del perimetro funzionale del soggetto obbligato e tenendo conto delle verifiche eventualmente già compiute da altri soggetti obbligati intervenuti sulla stessa operazione. Seconda osservazione - Codificazione del principio di efficacia e

Name of the respondent	Question	Answer
		segretezza del sistema AML. Il sistema AML/CFT funziona efficacemente solo nella misura in cui il cliente non sia consapevole, nel momento dell'attività preventiva, di essere oggetto di valutazione. Il principio è codificato nel Regolamento (UE) 2024/1624 attraverso il divieto di comunicazione di cui all'art. 73 e la ratio del Considerando 145. Il parallelo con il segreto investigativo del processo penale (art. 329 c.p.p. italiano e disposizioni analoghe negli altri Stati membri) conferma che si tratta di un principio strutturale dei sistemi di prevenzione e contrasto della criminalità. Da questo principio deriva un canone interpretativo: le misure di adeguata verifica esigibili sono quelle compatibili con la fenomenologia della funzione del soggetto obbligato - quelle che il cliente percepisce come ordinaria istruttoria, non come indagine. Misure documentali estranee alla naturale acquisizione informativa (richiesta di dichiarazione dei redditi, ricostruzione di flussi pregressi) costituiscono segnali espliciti di sospetto: il cliente che li percepisca rinuncerà all'operazione o la trasferirà altrove, vanificando l'effetto utile del presidio. Soluzione: inserire un Considerando che codifichi il principio: «In linea con il principio di efficacia del sistema AML/CFT e con il divieto di comunicazione di cui all'art. 73, le misure di adeguata verifica si applicano in forme compatibili con la natura dell'attività del soggetto obbligato di cui agli artt. 9 e 10. Misure che richiedano informazioni o documenti estranei all'ambito naturale della funzione del soggetto obbligato, e la cui richiesta rivelerebbe necessariamente al cliente di essere oggetto di valutazione AML/CFT, sono incompatibili con il principio di efficacia.» Terza osservazione - Distinzione sistematica tra AVC e SOS. Il Draft RTS non chiarisce la distinzione tra obbligo di AVC

Name of the respondent	Question	Answer
		(sempre dovuto, modulato sul rischio) e obbligo di SOS (eventuale, attivato dalla ragionevole prefigurabilità della provenienza criminosa). Ciò può favorire derive applicative in cui valutazioni di basso rischio in sede AVC vengano contestate come mancata SOS. La CA Roma n. 819/2025 ha codificato questa distinzione: la simulazione civile, di per sé, non integra il presupposto della SOS in assenza di ragionevole prefigurabilità della provenienza criminosa. Soluzione: inserire un Considerando che chiarisca che le misure AVC si applicano sempre in misura proporzionata, e che l'obbligo di SOS ex art. 69 ha presupposti propri. Una valutazione di basso rischio AVC documentata non costituisce violazione dell'obbligo di segnalazione, salvo emerga la ragionevole prefigurabilità della provenienza criminosa.
Anonymous 2	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Anonymous 2	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7

		costituisce il regime applicativo standard, e l'uso di mezzi non-face-to-face è facoltativo nei casi di prestazioni eccezionalmente svolte da remoto secondo la legislazione nazionale.
Anonymous 2	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
Anonymous 2	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 18, lett. d) - Destination of funds: contributo del presidio notarile e articolazione con il presidio finanziario. L'art. 18, lett. d) Draft RTS prescrive l'acquisizione di informazioni sulla destinazione dei fondi, includendo «the jurisdiction where the transactions are to be received» e «whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary». Il Notariato italiano fornisce a queste verifiche un contributo specifico e qualificato: la legislazione nazionale impone al notaio di indicare analiticamente nell'atto gli estremi dei pagamenti - modalità, importi, conti di provenienza, identificativi dell'istituto - e di conservare la relativa documentazione. Tali informazioni costituiscono evidenza primaria, di natura pubblica e non modificabile, che concorre direttamente all'efficacia complessiva del sistema AML, rendendo tracciabili i flussi che si sostanziano nel negozio. Il contributo del Notariato a questa verifica è dunque pieno per quanto attiene al perimetro proprio della funzione: trasparenza degli estremi del pagamento, identificabilità delle parti coinvolte, coerenza tra dichiarato e atto. Resta, sul piano sistematico, una distinzione strutturale: la qualificazione tecnica della natura del prestatore di servizi di pagamento utilizzato - ente creditizio tradizionale, electronic money institution, prestatore autorizzato in altro Stato membro - e la valutazione del rischio AML connesso alla catena di

Name of the respondent	Question	Answer
		intermediazione antecedente e successiva al pagamento sono verifiche proprie del presidio finanziario, che dispone degli strumenti tecnici e dell'accesso ai sistemi di monitoraggio per svolgerle. La separazione funzionale dei presìdi - codificata al Considerando 101 e agli artt. 49-51 AMLR - riflette esattamente questa architettura: ciascun presidio opera con pienezza nel proprio ambito, e il sistema funziona attraverso la complementarità. Soluzione: aggiungere all'art. 18 una clausola che valorizzi questa articolazione, chiarendo che le informazioni sulla destination of funds raccolte dai soggetti obbligati non finanziari si compongono degli elementi documentali acquisiti nell'esercizio della funzione (estremi dei pagamenti, identificativi degli istituti, dichiarazione del cliente), in coerenza con il principio dei presìdi successivi del Considerando 101 AMLR, e si integrano con le verifiche specifiche svolte dai prestatori di servizi finanziari coinvolti nella catena di pagamento.
Anonymous 2	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	5
Anonymous 2	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Artt. 5 e 6 - Documenti per la verifica dell'identità e gestione delle cittadinanze multiple. L'art. 5 Draft RTS prescrive che il soggetto obbligato acquisisca informazioni su «tutte le nazionalità» del cliente, della persona che agisce per suo conto e della persona per conto della quale viene effettuata l'operazione. L'art. 6 disciplina i documenti idonei per la verifica dell'identità, individuandone i requisiti minimi (rilascio da autorità statale, dati anagrafici, scadenza, immagine facciale, firma, elementi di sicurezza). Per il Notariato - e in generale per le DNFBP che operano in presenza fisica del cliente - la combinazione di queste

Name of the respondent	Question	Answer
		disposizioni produce un'ambiguità applicativa specifica nel caso del cliente con cittadinanze multiple. La prassi consolidata è che il cliente esibisca un solo documento di identità, generalmente quello dello Stato di residenza o quello con il quale ha richiesto la prestazione professionale. Il Considerando (3) del Draft RTS chiarisce opportunamente che, «where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient». Tuttavia, l'art. 5 nel suo testo operativo non riprende questa cautela: prescrive l'acquisizione di «tutte le nazionalità» senza specificare che la verifica documentale può essere limitata a una sola di esse. Ciò può favorire interpretazioni applicative in cui il soggetto obbligato venga ritenuto inadempiente se non ha acquisito documenti di identità relativi a tutte le cittadinanze dichiarate dal cliente - verifica che è strutturalmente impossibile in molti casi (cittadinanze acquisite per nascita o discendenza, prive di documento autonomo). Soluzione: aggiungere all'art. 5 un paragrafo che richiami testualmente il principio già espresso al Considerando (3), chiarendo che, quando il cliente dichiara in buona fede di possedere più cittadinanze, la verifica documentale dell'identità si considera assolta attraverso l'esibizione di un documento valido relativo a una sola di tali cittadinanze. La codificazione testuale del principio rafforza la coerenza tra il chiarimento del Considerando (3) e l'applicazione operativa dell'art. 5, evitando interpretazioni eccessive in sede ispettiva.
Anonymous 2	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
Anonymous 2	Please specify which recital you refer to, and share your comments below.	Si propone un'osservazione di sistema che articola insieme tre Considerando - (1) e (21) del Draft RTS, e (101) del Regolamento (UE) 2024/1624 - perché letti insieme delineano un'architettura coerente che il Draft RTS attualmente non rende esplicita. L'architettura attuale. Il Considerando (1) del Draft RTS afferma il risk-based approach e prescrive che le misure siano «proportionate to the customer's money laundering and terrorist financing risk profile». La formulazione focalizza la proporzionalità sul lato del cliente e dell'operazione. Il Considerando (21) affronta la situazione in cui le informazioni richieste siano già disponibili al soggetto obbligato o ad altri soggetti del gruppo, prescrivendo di evitare duplicazioni inutili. Il Considerando 101 del Regolamento (UE) 2024/1624 estende il principio all'intera catena dei presìdi: «per evitare il ripetersi delle procedure d'identificazione dei clienti, è opportuno consentire ai soggetti obbligati, fatti salvi adeguati presidi, di fare affidamento sulle informazioni relative ai clienti raccolte da altri soggetti obbligati». Gli artt. 49-51 AMLR codificano operativamente il ricorso a soggetti obbligati terzi. Il problema. Il Considerando (1) del Draft RTS, pur richiamando la proporzionalità, non riprende espressamente la dimensione della «proporzionalità alla natura dell'attività del soggetto obbligato» di cui agli artt. 9, par. 1 e 10, par. 1 AMLR. Il Considerando (21), affrontando le duplicazioni, le riferisce quasi esclusivamente al medesimo soggetto obbligato o al gruppo, lasciando in ombra la portata estesa del principio dei presìdi differenziati. Il Considerando 101 AMLR, infine, non è mai richiamato nel Draft RTS, pur essendo il fondamento

Name of the respondent	Question	Answer
		sistematico del principio per cui ciascun soggetto obbligato risponde nei limiti della propria funzione, in articolazione con gli altri presìdi della catena. Il risultato è che il Draft RTS, letto autonomamente, può apparire come un catalogo di obblighi cumulativi indifferenziati, mentre il sistema del Regolamento è in realtà più coerentemente costruito su un'architettura di presìdi differenziati e successivi. Il chiarimento sistematico è particolarmente rilevante per le DNFBP, settore che sotto il quadro previgente ha sofferto interpretazioni applicative espansive non sempre coerenti con il principio dei presìdi differenziati: orientamento che la giurisprudenza italiana ha cominciato a correggere. La soluzione. Si propone un duplice intervento redazionale che porta nel Draft RTS l'architettura completa. Primo intervento - Considerando (1): integrare la formulazione attuale aggiungendo, dopo «proportionate to the customer's money laundering and terrorist financing risk profile», la frase: «and proportionate to the nature of the activity of the obliged entity, in line with Recital 29 and Articles 9(1), second subparagraph, and 10(1) of Regulation (EU) 2024/1624». Tale aggiunta codifica espressamente la doppia dimensione della proporzionalità (sul lato del cliente e sul lato del soggetto obbligato) già presente nel Regolamento. Secondo intervento - Considerando (21): integrare al termine della formulazione attuale la frase: «This Regulation also operates in coherence with the principle laid down in Recital 101 and Articles 49 to 51 of Regulation (EU) 2024/1624, according to which obliged entities may rely on customer due diligence already carried out by other obliged entities, including in different sectors, in order to avoid the unnecessary

Name of the respondent	Question	Answer
		duplication of identification procedures along the chain of preventive controls». Tale aggiunta ancorerebbe testualmente il Draft RTS al Considerando 101 AMLR, codificando il principio dei presìdi differenziati come canone interpretativo esplicito anche delle norme tecniche. Effetti sistemici. Le due integrazioni, lette congiuntamente, restituiscono al Draft RTS la coerenza con l'architettura del Regolamento: la proporzionalità si esprime sia in funzione del rischio del cliente sia in funzione della natura dell'attività del soggetto obbligato; le duplicazioni sono evitate non solo all'interno del medesimo soggetto ma lungo l'intera catena dei presìdi. Il Notariato, e con esso le altre DNFBP che operano in articolazione con il sistema bancario e con altri presìdi anteriori o successivi, troverebbero nei Considerando del Draft RTS un riferimento testuale esplicito all'architettura sistemica che il Regolamento ha già scelto.
Anonymous 2	Do you have any comments on the Annex in the draft RTS?	Yes
Anonymous 2	Please share your comments below.	Allegato I - Profili problematici per la realtà notarile italiana. L'Allegato I del Draft RTS individua gli attributi minimi che i mezzi di identificazione elettronica e i servizi fiduciari qualificati devono possedere per soddisfare gli obblighi di adeguata verifica ex art. 22, par. 1 AMLR. Si segnalano due profili che meritano riconsiderazione per garantire coerenza con la varietà degli ordinamenti nazionali coinvolti. 1) Legal Entity Identifier (LEI): attributo non disponibile per la generalità delle persone giuridiche italiane. L'Allegato I, persona giuridica, lett. (iii), prevede tra gli attributi corrispondenti ai dati di identificazione il «Legal Entity Identifier (LEI)», qualificato come «(where available)». Tale precisazione è opportuna ma rischia di produrre un'aspettativa applicativa nei supervisori. Il LEI è uno standard adottato in via

Name of the respondent	Question	Answer
		principale per soggetti che operano sui mercati finanziari regolamentati: non è obbligatorio né diffuso per la generalità delle società e delle persone giuridiche italiane, e non è previsto per associazioni e altri enti privi di personalità giuridica. La grande maggioranza delle persone giuridiche che si presentano davanti al notaio italiano per la stipula di atti societari non possiede un LEI. Soluzione: confermare nell'Allegato I, attraverso una nota a margine o un Considerando dedicato, che il LEI è attributo da raccogliere esclusivamente quando esistente per il singolo soggetto giuridico, senza che la sua mancata acquisizione costituisca elemento di non conformità. 2) Nominee shareholders e nominee directors: distinzione rispetto alle società fiduciarie italiane. L'Allegato I, persona giuridica, lett. (iv), include come attributo «i nomi delle persone che detengono azioni o cariche di amministrazione in forma fiduciaria, con riferimento al loro status di nominee shareholders o nominee directors». L'istituto del «nominee» è tipico degli ordinamenti di common law e si caratterizza per l'assenza di regolazione sistematica della relazione fiduciante-fiduciario. L'ordinamento italiano disciplina invece le società fiduciarie con un regime autonomo (L. 23 novembre 1939, n. 1966 e successive modifiche), che assicura tracciabilità del fiduciante. La sovrapposizione concettuale tra «nominee» e «fiduciario» italiano può produrre incertezze interpretative. Soluzione: chiarire nell'Allegato I - attraverso una nota o un richiamo al Considerando 110 AMLR - che gli istituti di rappresentanza fiduciaria regolati dagli ordinamenti nazionali, quando assicurano la tracciabilità del fiduciante,

Name of the respondent	Question	Answer
		soddisfano gli obblighi di trasparenza in misura equivalente al regime nominee.
Anonymous 2	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Anonymous 2	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact

Anonymous 2	Please justify your answer to the previous question and provide evidence where possible.	L'impatto economico del Draft RTS sul singolo soggetto obbligato del settore notarile italiano risulta gestibile, ma non trascurabile, e si articola in due dimensioni distinte. Sui costi una tantum, l'attuazione richiederà l'aggiornamento delle procedure interne di adeguata verifica, la revisione della modulistica utilizzata per l'identificazione del cliente, del titolare effettivo e dell'esecutore, la riorganizzazione del fascicolo dell'atto in coerenza con i nuovi obblighi documentali (in particolare quelli derivanti dagli artt. 11, 13, 25 e 27 Draft RTS), e attività formative dedicate. Questi costi sono affrontabili dal singolo studio notarile, anche grazie al supporto formativo che il Consiglio Nazionale del Notariato fornisce sistematicamente alla categoria. Il Notariato italiano ha già consolidato un modello di compliance AML maturo, che facilita

Name of the respondent	Question	Answer
		l'adattamento agli standard del Regolamento e delle relative norme tecniche. Sui costi ricorrenti, l'impatto è anch'esso gestibile in termini di risorse interne, ma comporta un incremento dell'attività amministrativa connessa alla raccolta e alla verifica del dataset informativo più analitico richiesto dall'Allegato I e dall'art. 62 AMLR. Particolare rilievo assumono: la consultazione sistematica dei registri centrali del titolare effettivo (art. 22, par. 7 AMLR); la verifica della corrispondenza tra dati dichiarati e dati registrati; la documentazione del percorso analitico nel caso di applicazione del criterio residuale (artt. 13 Draft RTS e 22, par. 2 AMLR; Considerando 126 AMLR). I costi sostenuti e il tempo impiegato si riverseranno inevitabilmente sul cliente. La gestibilità complessiva dell'impatto è tuttavia subordinata a una condizione strutturale: che il Draft RTS sia interpretato e applicato in coerenza con il principio del perimetro funzionale e con il principio dei presìdi differenziati, che attraversano l'intero impianto del Regolamento. Se invece le RTS venissero applicate dai supervisori in chiave estensiva, pretendendo dal notaio verifiche non compatibili con la fenomenologia della funzione, come l'acquisizione di dichiarazioni dei redditi, la ricostruzione di flussi finanziari pregressi, indagini su fonti aperte non richieste dalla norma, l'impatto si trasformerebbe in dirompente, con effetti distorsivi sulla sostenibilità dell'attività professionale e, paradossalmente, sull'efficacia stessa del presidio AML notarile, che vive del rapporto fiduciario con il cliente e della naturale acquisizione informativa connessa alla funzione. Le proposte redazionali formulate nelle risposte precedenti, che non chiedono esoneri, ma chiarimenti sistemici dei principi

Name of the respondent	Question	Answer
		già affermati dal Regolamento, sono dunque funzionali anche al contenimento dei costi di attuazione entro il livello «gestibile». Senza tali correttivi, il rischio è la migrazione verso un livello «dirompente», particolarmente per gli studi notarili di minori dimensioni che costituiscono la struttura prevalente del Notariato italiano e di altri Stati membri.
Anonymous 3	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, I do not agree. For example, in the acquiring business, many low risk cases occur where the complete application of these RTS, especially on the beneficial owners, seem to lead to unnecessary paperwork for smaller merchants and for providers. This strict approach restricts also competition and innovation, e.g. in context to other markets around the world.
Anonymous 3	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No, I do not agree: For many EU-domestic transactions that are handled by using AML compliant EU bank account, additional beneficial owner checks, PEP checks and ID document checks seem unnecessary. A better risk-based approach, with continious input by practiniers, might make more sense. It is generally accepted that the EU has produced too much detailed regulation with unclear benefeit - less can be more! At the same time, new AML CDD risks stemming from e.g. "foreign, non-EU crypto-mixers", "AI-generated fake identity fraud", or "stolen identity fraud" seem not to be really covered here. Taken the picture of securing a family home: There seems to be

Name of the respondent	Question	Answer
		a strong emphasis on securing the garden entry door, but the garage can be wide open...
Anonymous 3	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In acquiring services, customers are usually merchants, in many cases legal persons. As the EUDI wallet and the planned European Business Wallet (EBW) for CDD purposes will not be widely available probably until 2030, the existing traditional forms of identifcation should be taken more into account.
Anonymous 3	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In case of providing acquiring service without providing an own "bank-like" payment account: If the regular payout of the acquirer is to an EU bank account of the customer, it should be enough to rely on the CDD and Beneficial owner check of this bank, especially in cases when the vast majority of incoming card and other payments are "domestic", from within the EU.
Anonymous 3	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In many EU markets, IT systems need to be substantially changed and in many cases new services might be required. Also employees and partners need to be trained to the new requirements. This cannot be done overnight. Therefore, a grace period of 24 - 36 months should be granted, where still the old national CDD requirements can optionally be applied. Also, in many markets, the EUDI wallets will be substantially delayed in mass usage: therefore also here, a grace period should be evaluated:

Name of the respondent	Question	Answer
		https://www.biometricupdate.com/202512/will-the-eudi-wallet-be-ready-in-2026-experts-say-probably-not Will the EUDI Wallet be ready in 2026? Experts say probably not
Anonymous 3	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art 6 - 1: AMLA or national regulators should provide a list of accpeted documents that usually comply with these requirements, as some cases might not be clearcut. Two examples: For a US citizen living in the EU: is a "US drivers licence with REAL-ID" o.k. or not? For an immigrant from Africa with an old national ID card: what is a sufficient "security feature to ensure authenticity"? Art 6 - 4: Who can certify a copy? and are there any security features for the copy necessary, and which? Art 6 - general: Do the documents have always be still valid, or might be there a "grace period" of e.g. 6 months? Such a grace period is possible for some cases when travelling in Europe (https://www.coe.int/en/web/conventions/full-list?module=treaty-detail&treatynum=025) Also, in cases of doubt: will there an option in these RTS to

Name of the respondent	Question	Answer
		check in official registers of e.g. of the police, if a shown document (like a an ID card or passport) has been registered to be stolen by the rightful holder? This might help to reduce "CDD identity fraud" using stolen documents.
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	As the EUDI wallet will have probably only limited availablity in mainy national EU markets in the next years, until 2030: Would it be imaginable, that AMLA or national regulators state which third party service (like providers liek WEBID, etc) fulfil generally the requirements of Art 7 3 and 4. Such a general "approval" or "acceptance" by AMLA or national regualtors would avoid a lot of unnecesary documentation paperwork, especially for smaller payment providers. Especially in the age of AI fraud, it seems to be impossible to check if an external electronic ID provider really fulfills the "state of the art" anti-fraud measures. This should be left to the authorities (likede facto currently the BaFin in the German market).
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	10
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	What does mean "consulting public register other than central registers" in the concrete case in Germany, Austria, or in Luxembourg? And who determines what a "reliable national system" is? To avoid unnessary admin tasks especially for smaller financial firms, AMLA and/or the national regulators should publish

Name of the respondent	Question	Answer
		which registers, agencies, and service providers can be used fo the puposes of these RTS. - in addition, for a dynamic market and the avoidance of oligopolies: please give also start-ups a decent chance to provide perhaps even new services. And who determines, what a "reputable credit agency" or "reputable data service Provider" is? Either there is some list of "credit agencies and data service providers" that are accepted by AMLA or national regualtors - or it should be completely left to the obliged entitiy to do business only with reliable credit agencies and reliable service providers. For a better understanding: why can uitility bills help to determine a benefecial owner? please explain, especially as with the help AI: it is very easy to fake a utility bill.
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	11
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	In the case of card acceptance with regular payments to EU bank accounts of the customer, without providing payment "bank accounts": It should be made clear that in these cases of "low risk" all the detailed requirements need not to be done completely in the context of "risk-sensitivity". This should avoid "double paperwork".
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	12
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In the case of card acceptance with regular payments to EU bank accounts of the customer, without providing payment "bank accounts":

Name of the respondent	Question	Answer
		It should be made clear that also the the Art 12 obligations should be on the EU bank that provides the EU bank accounts: It should be made clear that in these cases of "low risk" all the detailed requirements need not to be done completely in the context of "risk-sensitivity". This should avoid "double paperwork".
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	19
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	AMLA or the national regulators should publish which third party service generally fulfil the requirements of Art 19
Anonymous 3	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	33
Anonymous 3	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	As in several markets, IT systems need to be substantially changed and new services might be required, a graec period of 24 - 36 monthy should be granted, where still the old national requirements can be applied.
Anonymous 3	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Anonymous 3	Please specify which recital you refer to, and share your comments below.	Recital 18: What is the consequence and the reasoning of "Situations where credit institutions open a payment account for payment institutions or electronic money institutions will fall outside the scope of the sectoral simplified measures provision of this Regulation. Such situations would be regarded as correspondent relationships within the meaning of Article 2(22), point (b), of Regulation (EU)

Name of the respondent	Question	Answer
		2024/1624." ? - Will simplified procedure not be enough in this case? Please consider carefully to avoid unnecessary paperwork and substatial new IT developments for emoney and payment institutions and their customers, e.g. merchants. My suggestion: Until further clarification of all the consequences of such a sentence for a functioning inner-EU payments market, especially with the goals of PSR and PSD3: : Delete this sentence!
Anonymous 3	Do you have any comments on the Annex in the draft RTS?	Yes
Anonymous 3	Please share your comments below.	Annex i: Why is the (optional) tax-ID not an own standardized "minimum corresponding attribute" - it would simplify to have an own field. Looking to the current version of the EUIDas text: : https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=PI_COM:Ares(2026)1286304 : - some additional explanation to the table in Annex1 would help!

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: Recurrent costs	
Anonymous 4	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Draft RTS may consider more flexibility, when it comes to several areas such as non-face-to face verification methods. Mandatory reliance on eIDAS solutions may not be practical for all institutions or jurisdictions. Existing methods such as certified documents should remain acceptable, especially for TCNs. Clarification on equivalence & reliable is needed.
Anonymous 4	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The requirement introduced on electronic identification systems compliant with eIDAS at 'substantial' or 'high' assurance levels raises practical and operational concerns. Such solutions may not be universally available, may not be practically affordable for smaller institutions (in case retail customer database significantly lower, i.e. less than 100 customers) particularly for customers from third countries, and may create disproportionate costs on smaller institutions. Pushing towards these kind of third party solutions may also create unfair market conditions in small jurisdictions where the service providers may be limited, they are NOT obliged entities, and the Banks and Fis will still have the full responsibility, not only for AML/CFT but also for data privacy concerns. It is also unclear whether existing practices—such as reliance on certified documents or regulated intermediaries—remain acceptable. We believe that previously introduced methods should still be applicable. It is recommended that AMLA explicitly confirms the continued acceptability of alternative methods depending on the business profile of entities and provides further guidance on how to assess the equivalence

Name of the respondent	Question	Answer
		where eIDAS solutions are not readily available, or not as common as in other countries.
Anonymous 4	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The concerns on non-face-to face is explained in above questions. Further to that, it is not clear, if the verification of individuals other than individual customers are also mandatory to be done by the electronic identification systems compliant with eIDAS. Such individuals can be the beneficial owners, shareholders, authorized representatives, signatories, directors, Senior managing officials, and others. In several scenarios, the number of people need to be verified can be in large numbers, and it is not clear from the RTS if these people are also required to undergo from the electronic identification systems compliant with Eidas. The RTS introduces the concept of 'reliable and independent sources' but does not sufficiently define how such sources should be assessed. This creates uncertainty, particularly in cross-border contexts where the availability and quality of information vary. The RTS appears to suggest a move towards multi-source verification of beneficial ownership information. While this may be appropriate for the high risk scenarios, clarification is required on whether reliance on national beneficial ownership registers will remain sufficient in lower-risk scenarios. Regarding the source of wealth and funds, the RTS uses the word “one or more of the following”. So, it is to our understanding that if at least one of the documents is obtained, the requirement will be met. A further confirmation on this will remove the ambiguity regarding the level of evidence required.
Anonymous 4	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in	Regarding with the answers provided under the definition of business relationship, draft RTS 19(9), and if Bank-to-Bank relationships will be considered as a business relationship, the products between Banks and Fis (excluding correspondent

Name of the respondent	Question	Answer
	the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	banking relationship) may be considered as a low risk, and subject to SDD. Such relationships are typically non-face-to-face and involve inherent limitations in accessing detailed information on beneficial owners or senior management. Standard customer due diligence requirements, particularly those related to identity verification, may not be fully applicable in this context. It is recommended that AMLA explicitly recognizes bank-to-bank relationships (if these are considered as business relationships) and provides tailored guidance on how CDD and SDD should be applied.
Anonymous 4	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	No additional comments.

Anonymous 4	Please justify your answer to the previous question and provide evidence where possible.	Especially the non-face-to face onboarding (where a Branch only serves the customers of its head office) and the move towards EIDAS compliant solutions, may be re considered per size and business model of entities. Previous methods of certified documentation and confirmation may be considered to still apply.
Anonymous 5	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NO. We suggest targeted guidance or Q&As for the automotive sector to clarify expectations and reduce unnecessary administrative burden. About CDD, when selling a car, it means that the data underneath shall be kept actual and verified/updated from time to time? (either 1 or 5 years – both do not really make sense). It would be welcome the confirmation that CDD is only required for single car transaction above 250k €.
Anonymous 5	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, simplification is possible by providing clear, practical examples of CDD measures suitable for low-risk, non-financial businesses. The RTS could also clarify when simplified due diligence is appropriate and reduce documentation requirements for low-value, low-risk transactions typical in our sector. Further clarification is needed on how the risk based approach should operate in multi party transaction structures, such as

Name of the respondent	Question	Answer
		those involving independent dealers or regulated financial intermediaries as mentioned in prior comments.
Anonymous 5	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The diversity and operational realities of the automotive sector, including the predominance of low-risk transactions and established customer relationships, are not fully reflected. We recommend that the RTS acknowledge these factors and allow for streamlined CDD processes for routine, low-risk sales. We also operate in the luxury business selling watches, we understand here the relevant threshold is 10K EUR. We propose that in case of transactions that occur in shops, we may rely on the AML due diligence performed by the financial entities that have issued the credit cards by verifying that the name on the credit card matches with the one on clients' ID (and not be obliged to have clients to provide answers to a questionnaire and/or copies of other documents). We have concerns on the feasibility of verification of Beneficial Owners via eIDAS as per EU Regulation 910/2014, especially for non-EU subjects (most likely a dealer in some lesser structured country will not be able to have its BO electronically verified). Infact, preamble 66 states that "Where such electronic identification is not available to a customer, for example due to the nature of their residence status in a given Member State or their residence in a third country, verification should take place through relevant qualified trust services"; we need to clarify the meaning of that, whether in absence of a reliable electronic tool, it is necessary to utilize notary publics or similar.
Anonymous 5	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	We welcome commitment to technological neutrality and harmonization. To further reduce burden, we suggest ongoing dialogue with non-financial sector representatives and the

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	issuance of sector-specific interpretative guidance as new challenges arise. This will help ensure proportionate and effective compliance without unnecessary disruption to our business. Our proposal is as follows: 1) Direct clients: due diligence is performed in full only on direct clients (clients that purchase directly from us); 2) Indirect clients: a. for clients who purchase from independent third parties (dealers) due diligence is performed by the dealer itself, based on guidelines provided by OEMs to them, b. due diligence is performed by OEMs, on a risk based way, proceeding to an enhanced due diligence only on indirect clients that have residence/domicile in risky countries (from an AML perspective); c. on indirect clients that have residence/domicile in non- risky countries, data (name, surname, residence, date of birth) are run through an automated professional tool that searches matches against sanctions/AML lists, convictions, adverse media. è For indirect clients purchasing through independent dealers, the “simplified” due diligence at manufacturer level should be permitted where the dealer is itself an obliged entity and performs enhanced CDD on the end customer. 3) Furthermore, manufacturer will provide our worldwide dealers network with an AML framework that includes draft of AML policies that they shall apply, suggestions on an automated search tool to be purchased/used by them.
Anonymous 5	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	Yes, provided CDD is needed only from direct clients (clients that purchase directly from entity). We generally support the harmonized, risk-based approach. However, we request further clarification and simplification for non-financial sector obliged

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	entities, especially regarding the practical application of CDD measures. Provisions should explicitly allow for proportionality and flexibility, considering our lower ML/TF risk profile compared to financial institutions. We propose more concrete examples and sector-specific guidance for non-financial entities to reduce interpretative costs and compliance uncertainty (especially having in mind points 20, 60 and 62 of preamble of AMLR). In addition, from an implementation perspective, greater reliance on simplified due diligence and alternative evidentiary measures should be more explicitly embedded in the RTS for non financial sectors. In particular, where transactions are conducted through regulated payment channels (e.g. captive financial services entities), the RTS should clearly allow obliged entities to take account of the AML controls already performed by such intermediaries, rather than requiring duplicative information collection from customers. Explicit drafting recognizing the legitimacy of such reliance would better reflect the operational reality of many non financial business models. We also need guidance on preamble 10, to clarify whether a manufacturer, with a financial holding company as Shareholder, that also has a financial company as a subsidiary, whether the financial holding company is considered a financial institution itself.

Anonymous 5	Please justify your answer to the previous question and provide evidence where possible.	We will need to radically modify our IT Tools; these are currently set for an ordinary manufacturing company. Sales modules will need to be completely updated in order to allow customers verification. And staff will need to be hired. Plus we envisage the lost of business from non EU customers who will not understand these EU Regulations.
Anonymous 6	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, non si concorda. Le proposte contenute nella bozza di Norme Tecniche di Regolamentazione (RTS) non possono essere applicate in modo efficace e proporzionato alla professione notarile. L'approccio "orizzontale" adottato, che mira ad applicare le medesime regole a tutti i soggetti obbligati, finanziari e non, non tiene conto delle specificità della funzione notarile, che agisce come presidio di legalità preventiva e non ha una conoscenza storica del cliente essendo la prestazione notarile limitata alla specifica operazione per cui

Name of the respondent	Question	Answer
		è conferito il mandato professionale. Le principali criticità sono le seguenti: • Definizioni inadeguate: Le definizioni di "rapporto d'affari" e "operazioni collegate" (art. 2 e 3 della bozza di RTS) si basano su criteri come la durata e la ripetizione, tipici del settore bancario. Tali criteri sono inadatti alla prestazione notarile, che è prevalentemente episodica e si esaurisce con la stipula di un singolo atto giuridico. Ogni atto notarile costituisce un negozio autonomo, già soggetto a un profondo controllo di legalità da parte del pubblico ufficiale. • Mancato riconoscimento della funzione notarile: Le proposte non valorizzano il ruolo del notaio quale pubblico ufficiale e "gatekeeper", la cui attività costituisce un fattore di "mitigazione intrinseca" del rischio di riciclaggio e finanziamento del terrorismo, come riconosciuto anche dal GAFI. • Obblighi sproporzionati: L'imposizione di un'attività investigativa per l'identificazione del titolare effettivo (art. 10-12) e degli alti dirigenti (art. 13) esula dalla funzione e dai poteri del notaio. Il notaio opera sulla base di dichiarazioni delle parti, documenti e informazioni desunte da registri pubblici, senza disporre di poteri ispettivi o investigativi. Imporre tali compiti significa snaturare la professione e creare obblighi di impossibile adempimento. Proposte redazionali concrete Si propone di integrare la bozza di RTS con le seguenti disposizioni specifiche per il settore notarile: Introduzione di un principio di mitigazione intrinseca: "Le prestazioni professionali notarili relative ad atti pubblici soggetti a pubblicità legale, quali i trasferimenti di diritti reali immobiliari e gli atti costitutivi o modificativi di società, sono

Name of the respondent	Question	Answer
		considerate operazioni a rischio intrinsecamente mitigato in ragione del controllo di legalità preventivo esercitato dal notaio in qualità di pubblico ufficiale. L'applicazione delle misure di adeguata verifica deve tenere conto di tale fattore di mitigazione." Chiarimento sull'ambito della valutazione del notaio: "La valutazione del notaio ai fini dell'adeguata verifica e dell'individuazione di operazioni collegate si basa sulle informazioni, sui documenti e sulle dichiarazioni acquisite dalle parti nell'esercizio della sua funzione, nonché sulle evidenze desumibili dai pubblici registri. Non è richiesta al notaio alcuna attività di natura investigativa." Limitazione del requisito di identificazione degli SMO (Art. 13): "Limitare il requisito di identificazione di cui all'Art. 13 dell'RTS modo che l'identificazione di una sola persona a livello dirigenziale sia sufficiente a soddisfare il requisito di identificazione relativo al livello dirigenziale."
Anonymous 6	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No, non si concorda. Le proposte, nella loro forma attuale, ostacolano l'applicazione di un efficace approccio basato sul rischio per la professione notarile, imponendo un modello standardizzato e rigido che non consente la flessibilità necessaria, in contrasto con i principi guida della consultazione stessa. Sono trascurate la peculiarità e specificità della prestazione notarile, basata sull'assenza di una conoscenza storica del cliente e sull'acquisizione di dati ed informazioni all'interno di un'operazione tipicamente occasionale, prestazione che si conclude con la stesura di un atto assistito da pubblica fede, ricevuto da un pubblico ufficiale, in base ad un obbligo legale di ricevere l'atto. Le disposizioni problematiche includono:

Name of the respondent	Question	Answer
		• Mancato affidamento su altri soggetti: Gli articoli 25-28 della bozza di RTS non consentono al notaio di fare affidamento qualificato sulla verifica della provenienza dei fondi già effettuata da altri soggetti obbligati vigilati (es. enti creditizi dell'UE). Ciò crea una duplicazione inefficiente e sproporzionata di adempimenti, senza un reale valore aggiunto in termini di prevenzione. • Obblighi di aggiornamento: L'articolo 23 sull'aggiornamento dei dati del cliente non distingue adeguatamente tra rapporti continuativi e prestazioni professionali occasionali, che caratterizzano l'attività notarile. Imporre un obbligo di aggiornamento periodico per prestazioni che si esauriscono in un unico atto è un onere sproporzionato. • Conflitto con obblighi nazionali: Le proposte creano un conflitto irrisolvibile tra l'obbligo di astensione previsto dalla normativa AML e l'obbligo di ministero imposto al notaio dalla legge nazionale (art. 27 Legge Notarile). A differenza della precedente normativa, non è prevista una deroga che consenta al notaio di stipulare l'atto e procedere contestualmente con la Segnalazione di Operazione Sospetta (SOS). Questo meccanismo, riconosciuto come efficace dal GAFI per il sistema italiano, dovrebbe essere preservato per non paralizzare l'attività giuridica. Proposte redazionali concrete Per rendere l'approccio realmente basato sul rischio, si propongono le seguenti integrazioni: Introduzione del principio di affidamento qualificato: "Qualora i fondi utilizzati per un'operazione siano erogati da un ente creditizio o finanziario soggetto agli obblighi del presente Regolamento con sede nell'Unione, o comunque provengano da un rapporto continuativo intrattenuto con tale ente, il

Name of the respondent	Question	Answer
		notaio può fare affidamento sulla legittima provenienza di tali fondi ai fini dell'adeguata verifica, salvo che sussistano specifici e oggettivi indicatori di anomalia. Per i dati non verificabili, il notaio deve poter fare affidamento sulla dichiarazione in buona fede del cliente, salvo indicatori contrari." Riconoscimento della causa dell'atto notarile: "Ai fini della comprensione dello scopo e della natura della prestazione professionale, per gli atti pubblici notarili si presume che questi coincidano con la causa e il contenuto giuridico dell'atto stesso, salvo che emergano, sulla base di elementi oggettivi e concreti, dubbi di simulazione o di illiceità." Introduzione della deroga all'obbligo di astensione: "In deroga all'obbligo di astensione, i notai e gli altri professionisti legali indipendenti non sono tenuti ad astenersi dall'eseguire la prestazione professionale quando ciò sia necessario per non violare un obbligo di legge previsto dal proprio ordinamento nazionale. In tali casi, il professionista valuta l'opportunità di effettuare una segnalazione di operazione sospetta all'Unità di Informazione Finanziaria."
Anonymous 6	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Sì, vi sono diverse situazioni in cui le informazioni richieste dalla bozza di RTS sono sistematicamente indisponibili per il notaio, e le proposte non forniscono soluzioni adeguate. Ciò è dovuto all'asimmetria informativa e all'assenza di poteri investigativi in capo al professionista, che non può che basarsi su fonti documentali, registri pubblici e dichiarazioni delle parti. Esempi concreti di informazioni non sempre disponibili o verificabili includono: • Il patrimonio complessivo del cliente o la fonte della sua ricchezza.

Name of the respondent	Question	Answer
		• L'accertamento di tutte le nazionalità possedute dal cliente. • La verifica dell'autenticità di procure o altri documenti provenienti da autorità estere. • L'individuazione di legami familiari, personali o partnership occulte tra le parti. La bozza di RTS sembra imporre un obbligo di risultato nella raccolta delle informazioni, senza considerare la concreta possibilità per il notaio di ottenerle. Proposte di soluzioni alternative Si propone di ancorare la responsabilità del notaio a un obbligo di mezzi, basato sulla diligenza professionale, e di poter fare affidamento su dichiarazioni e atti di altri pubblici ufficiali. Principio della dichiarazione del cliente e della diligenza ordinaria: “La responsabilità del notaio è ancorata al principio di diligenza professionale, basata sulla verifica dei documenti prodotti e delle dichiarazioni rese dal cliente. La responsabilità per omessa o errata valutazione può sorgere solo in presenza di dubbi, incertezze o incoerenze manifeste. Per dati come le nazionalità multiple, il notaio può fare affidamento sulla dichiarazione in buona fede del cliente, salvo che emergano contrari e manifesti indicatori oggettivi ”. Affidamento su atti di altri pubblici ufficiali: "Ai fini dell'identificazione del cliente e degli altri soggetti connessi all'operazione, i dati identificativi contenuti in una procura ricevuta da un altro notaio o da altro pubblico ufficiale di uno Stato membro dell'Unione Europea sono considerati idonei e sufficienti, senza necessità di ulteriori verifiche, salvo palesi incongruenze."

Name of the respondent	Question	Answer
Anonymous 6	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Tenuto conto del mandato dell'AMLA e del principio di proporzionalità, si ritiene opportuno includere negli RTS ulteriori misure di adeguata verifica semplificata (SDD) specifiche per la professione notarile, in considerazione dei minori rischi associati a determinate tipologie di clienti e di prestazioni. Si propongono le seguenti misure di SDD: • SDD per clienti a basso rischio istituzionale: Applicare misure semplificate in via presuntiva per clienti quali Pubbliche Amministrazioni, enti creditizi e finanziari dell'UE e società quotate. La proposta redazionale è la seguente: "L'adeguata verifica nei confronti di clienti che siano Pubbliche Amministrazioni, enti creditizi o finanziari, o altri soggetti obbligati ai sensi del presente Regolamento con sede nell'Unione Europea, è effettuata con misure semplificate. Tali misure consistono nella sola identificazione del soggetto e del suo legale rappresentante, e nella conservazione dei relativi documenti, salvo che sussistano specifiche circostanze o indicatori di anomalia che suggeriscano un rischio più elevato." SDD per atti notarili a rischio mitigato: Prevedere l'applicazione di SDD per specifiche categorie di atti notarili che, per loro natura, presentano un rischio intrinsecamente basso, come atti in materia di famiglia o successioni senza significative movimentazioni finanziarie, atti di rettifica e atti societari di ordinaria amministrazione. La proposta redazionale è la seguente: "Sono soggette a misure di adeguata verifica semplificata le prestazioni notarili relative ad atti tipici che, per loro natura e per il contesto in cui si inseriscono, presentano un rischio mitigato di riciclaggio o finanziamento del terrorismo. Tali atti includono, a titolo esemplificativo, gli atti relativi a rapporti

Name of the respondent	Question	Answer
		familiari o successori senza significative movimentazioni finanziarie, gli atti di rettifica di precedenti negozi, e gli atti societari di ordinaria amministrazione." • Semplificazione della valutazione dello scopo e della natura: Per gli atti pubblici notarili, le informazioni sullo scopo e sulla natura della prestazione dovrebbero presumersi acquisite tramite la causa stessa del contratto, come accertato dal notaio. • Esenzione dall'aggiornamento periodico: Esentare esplicitamente i notai dall'obbligo di aggiornamento periodico dei dati (art. 23) per le prestazioni professionali occasionali. • Screening manuale come misura standard: Prevedere lo screening manuale per le PEP come misura standard per i professionisti non finanziari di ridotte dimensioni, rendendo facoltativo il ricorso a sistemi automatizzati.
Anonymous 6	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Sì, si desidera formulare un'osservazione fondamentale che riguarda il rispetto del principio di proporzionalità. L'assimilazione della professione notarile a un modello bancario, senza tenere conto delle sue peculiarità, risulta sproporzionata e non supera il test di "necessità" previsto dal diritto dell'Unione. In particolare, si evidenzia una criticità relativa agli obblighi di conservazione dei documenti. Il nuovo Regolamento UE 2024/1624 non riproduce le norme speciali presenti in alcune legislazioni nazionali (come il D.Lgs. 231/2007 in Italia), che riconoscevano il fascicolo di studio, gli atti notarili conservati a repertorio e i registri obbligatori come modalità idonee di adempimento degli obblighi di conservazione per i notai. Questa soluzione evita la creazione di archivi paralleli e ridondanti. Una sua esplicita conferma negli RTS garantirebbe

Name of the respondent	Question	Answer
		certezza giuridica. A tal fine, si propone la seguente integrazione: Valorizzazione degli strumenti notarili: "Per i notai, gli obblighi di acquisizione e conservazione dei dati e delle informazioni ai fini dell'adeguata verifica si intendono assolti mediante la redazione dell'atto pubblico e la conservazione dello stesso, dei suoi allegati e dei documenti raccolti nel fascicolo di studio, nonché tramite le annotazioni nei repertori previsti dalla legge." Infine, si ribadisce la necessità di risolvere il conflitto tra l'obbligo di astensione e l'obbligo di ministero del notaio. La soluzione, già testata con successo in Italia e valutata positivamente dal GAFI, di consentire al notaio la stipula dell'atto con contestuale invio di una Segnalazione di Operazione Sospetta, rappresenta il miglior bilanciamento tra le esigenze di prevenzione del riciclaggio e la garanzia della certezza e della circolazione giuridica.

		professione e generando "obblighi di impossibile adempimento".
Anonymous 7	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Připomínka k absenci proporcionality vůči menším povinným osobám. Návrh RTS je v rozporu s recitálem 32 AMLR, který výslovně požaduje zohlednit charakteristiky a potřeby menších povinných osob, a s článkem 9 odst. 1 AMLR, podle něhož musí být politiky a postupy přiměřené povaze podnikání a velikosti povinné osoby. Z hlediska podnikatelské svobody zakotvené v článku 16 Listiny základních práv Evropské unie je třeba, aby požadavky kladené na povinné osoby byly proporcionální cíli, který sledují. Návrh obsahuje řadu postupů, které významně zvýší administrativní zátěž povinných osob, aniž by adekvátně přispívaly k účinnosti boje proti praní peněz a financování terorismu. Uvádím dva konkrétní příklady: (i) Čl. 3 písm. a) návrhu RTS — formát ISO 3166. Požadavek na uvádění celého názvu státu nebo zkratky podle mezinárodního standardu ISO 3166 je z hlediska AML/CFT zcela bezúčelný. Identifikační hodnota je stejná, ať už je v dokumentaci uvedeno „Česko" nebo „Česká republika". Doporučuji tento požadavek z RTS vypustit nebo formulovat jako pouhou možnost, nikoli povinnost. (ii) Čl. 7 odst. 3 návrhu RTS — vzdálené ověření totožnosti. Návrh klade vysoké technické požadavky na vzdálenou identifikaci (časová razítka, záznam videohovoru, kontrola integrity komunikace, čitelný formát atd.). Tyto požadavky předpokládají investice do specializovaných technických řešení, které jsou pro malé povinné osoby (např. samostatně podnikající daňové poradce, advokáty nebo notáře) ekonomicky neúnosné.

Name of the respondent	Question	Answer
		Návrh řešení: doplnit do čl. 7 návrhu RTS alternativní zjednodušený postup vzdálené identifikace pro nízkoriziková spojení s menšími povinnými osobami, založený na kombinaci následujících prvků: a) předložení fotokopie dvou dokladů totožnosti klienta; b) předložení výpisu z bankovního účtu vedeného na jméno klienta u úvěrové instituce v EU/EHP; c) provedení identifikační mikroplatby z tohoto účtu na účet povinné osoby s textovou poznámkou potvrzující účel platby (identifikace klienta). Tento postup již v praxi využívají některé úvěrové instituce v EU pro otevírání účtů na dálku a poskytuje srovnatelnou míru jistoty jako videoidentifikace, přičemž je technologicky neutrální, levný a dostupný i pro malé povinné osoby.
Anonymous 7	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Nesouhlasím. Návrh RTS významně zvyšuje administrativní náročnost, aniž by úměrně přispíval k účinnosti boje proti praní peněz a financování terorismu. U malých povinných osob hrozí, že nebudou s to návrh RTS dodržovat v plném rozsahu, což může vést k plošnému nedodržování AML předpisů jako celku, a tím paradoxně ke zvýšení rizika praní peněz. Návrh RTS by tak mohl mít opačný účinek, než zákonodárce v AMLR zamýšlel. Konkrétně v článku 10 návrhu RTS uvádím dvě problematická ustanovení z pohledu české právní úpravy: (i) Čl. 10 písm. a) — chybějící odkaz na veřejný rejstřík. Návrh uvádí jako příklady spolehlivých zdrojů evidenci obyvatel, daňový registr, databázi pasů a katastr nemovitostí, avšak nezahrnuje veřejný rejstřík (v České republice upravený zákonem č. 304/2013 Sb.). Veřejný rejstřík je přitom v některých členských státech zásadním zdrojem pro zjišťování skutečného majitele — v České republice jsou v obchodním rejstříku v případě společností s ručením omezeným zapisováni

Name of the respondent	Question	Answer
		společníci, což u nejčastější formy obchodní korporace umožňuje přímou identifikaci skutečného majitele bez nutnosti získávat informace z dalších zdrojů. Návrh řešení: doplnit do čl. 10 písm. a) návrhu RTS výslovný odkaz na veřejné obchodní rejstříky a evidence skutečných majitelů členských států. (ii) Čl. 10 písm. b) bod iv) — nereálný požadavek na úřední ověření. Ustanovení požaduje listinu vydanou právnickou osobou, ve které je uveden skutečný majitel a jejíž totožnost je ověřena osobou oprávněnou k ověřování dokumentů. Takový dokument se však v české právní praxi standardně nevydává. Seznam akcionářů, který akciová společnost vede podle zákona č. 90/2012 Sb. o obchodních korporacích, není úředně ověřován. Návrh řešení: přeformulovat čl. 10 písm. b) bod iv) tak, aby jako rovnocenný zdroj připouštěl neověřený seznam akcionářů nebo zápis z valné hromady.
Anonymous 7	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Ano. Příkladem jsou informace požadované podle čl. 11 odst. 2 písm. b) bodu ii) návrhu RTS — informace o regulovaném trhu, na kterém jsou kotovány cenné papíry mezilehlé právnické osoby, a o počtu a procentu kotovaných akcií. Tyto informace nejsou běžně veřejně dostupné a problémy s jejich získáním nebudou mít pouze malé povinné osoby v nefinančním sektoru, ale i řada středních a větších povinných osob, které nemají přístup do specializovaných databází kapitálových trhů. Z širšího pohledu se domnívám, že návrh RTS dopadá nepřiměřeně na malé povinné osoby v rozporu s recitálem 32 a článkem 9 odst. 1 AMLR. Zvýšené nároky na CDD u větších klientů s komplexními vlastnickými strukturami povedou k tomu, že malé povinné osoby (samostatně podnikající daňoví poradci, advokáti, notáři, malé poradenské kanceláře) začnou

Name of the respondent	Question	Answer
		tyto klienty z důvodu rizik AML sankcí odmítat. Tito klienti budou nuceni přejít k velkým poradenským společnostem, což povede k: a) omezení hospodářské soutěže na trhu odborných poradenských služeb; b) zvyšování cen těchto služeb; c) snížení dostupnosti specializovaného poradenství pro střední a velké podniky; d) paradoxně k vyšší koncentraci AML rizik u omezeného počtu velkých poskytovatelů, kteří budou mít méně osobní vazby na klienty a omezenější schopnost odhalit anomálie. Návrh řešení: doplnit do čl. 11 návrhu RTS, že informace podle odst. 2 písm. b) bodu ii) se zjišťují pouze tehdy, jsou-li povinné osobě běžně dostupné, případně dostupné při vynaložení přiměřeného úsilí. Údaje o kotaci na regulovaných trzích a podílech kotovaných akcií totiž nejsou veřejně snadno přístupné a problémy s jejich získáním budou mít nejen malé povinné osoby, ale i řada středních a větších povinných osob, které nemají přístup do specializovaných databází kapitálových trhů.
Anonymous 7	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Žádné.
Anonymous 7	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Připomínka k absenci kvantitativního posouzení dopadů na malé povinné osoby. Hodnocení dopadů (IA/CBA) připojené k návrhu RTS je výslovně

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	označeno za kvalitativní s odůvodněním, že „kvantitativní údaje k tomuto mandátu nejsou v současné době k dispozici a cílený sběr dat by představoval pro povinné osoby nepřiměřenou zátěž". Toto odůvodnění považuji za nedostatečné. Bez kvantifikace skutečné administrativní zátěže nelze ověřit, zda návrh RTS splňuje požadavek proporcionality podle recitálu 32 a článku 9 odst. 1 AMLR, ani zda je v souladu s čl. 16 a 52 odst. 1 Listiny základních práv EU. Z vlastní praxe daňového poradce odhaduji, že stávající AML požadavky zaberou u jednoho běžného klienta několik hodin ročně. Návrh RTS tuto zátěž dále zvyšuje, zejména v důsledku nových požadavků v článcích 11 (vlastnická a ovládací struktura), 18 (účel a zamýšlená povaha vztahu) a 19 (PEP screening). Kumulativní efekt bude pro malé povinné osoby významný. Praktický důsledek je v rozporu s deklarovanými cíli AMLR i celého balíčku AML/CFT. Malé povinné osoby přestanou nabízet odborné poradenství klientům s komplexními strukturami, klienti přejdou k velkým poradenským společnostem, dojde k omezení hospodářské soutěže a koncentraci AML rizik u omezeného okruhu velkých poskytovatelů. Současně klesne konkurenceschopnost evropských povinných osob ve srovnání s poskytovateli mimo EU, kteří podobnou regulaci nemají. Návrh řešení: a) doplnit do návrhu RTS přechodné období minimálně dvou let pro malé povinné osoby v nefinančním sektoru ve smyslu doporučení EBA k jiným RTS (best-effort obligation); b) provést kvantitativní cílený dopadový průzkum u reprezentativního vzorku malých povinných osob (samostatně podnikajících daňových poradců, advokátů, notářů, účetních a

Name of the respondent	Question	Answer
		malých poradenských kanceláří) před finalizací návrhu RTS, zaměřený na měření časové a finanční zátěže AML compliance; c) zvážit zavedení dodatečné kategorie povinných osob „malá povinná osoba" (např. samostatný podnikatel nebo kancelář do 5 zaměstnanců) s redukovaným rozsahem požadavků v souladu s principem proporcionality; d) doporučuji, aby zástupci AMLA před finalizací návrhu RTS navštívili malé povinné osoby v různých členských státech a osobně se seznámili s rozsahem administrativní zátěže, kterou stávající AML rámec představuje, a s reálnými možnostmi malých povinných osob tuto zátěž absorbovat.
Anonymous 7	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: Recurrent costs	
Anonymous 7	Please justify your answer to the previous question and provide evidence where possible.	Provádění návrhu RTS bude mít pro mou kancelář rušivý dopad přesahující rámec úprav nezbytných k aplikaci kapitoly III AMLR. Nové požadavky vyžadují zásadní přebudování interních procesů (CDD postupy, dokumentace, monitoring), pořízení nebo náhradu IT řešení (PEP screening, screening sankčních seznamů, vzdálená identifikace s časovými razítky a archivací podle čl. 7), zaškolení všech pracovníků v rozšířených povinnostech a vytvoření zcela nové dokumentace (interní politiky, postupy, kontroly podle čl. 9 AMLR ve znění upřesněném tímto návrhem RTS). V přechodném období bude kancelář muset paralelně udržovat dva režimy CDD — současný a nový — u stávajících klientů, kteří podle čl. 33 návrhu RTS musí být uvedeni do souladu s novými požadavky v rizikově citlivém režimu. To si vyžádá významný čas, který nebude možné věnovat poskytování odborných služeb klientům, a zároveň reálné riziko, že některé klienty budu z důvodu nákladů na CDD nucen odmítnout. Přičemž AMLR nemá tak přísné nároky jako tento návrh RTS.
Anonymous 8	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	This response focuses on how standardisation of beneficial ownership information across the EU would help the draft RTS achieve AMLA's harmonisation objectives, and on the role the Beneficial Ownership Data Standard (BODS) should play. I broadly support the direction of the draft RTS. The move from 27 divergent national approaches to directly applicable, proportionate, risk-based CDD is welcome and Article 12's revised trigger for complex corporate structures is an improvement on the prior two-layer test.

Name of the respondent	Question	Answer
		However, the RTS will only deliver harmonised application if the beneficial ownership information obliged entities consult is itself structured, interoperable and machine-readable. Without this, identical legal rules will be applied very differently across Member States and across obliged entities of different sizes. Provisions concerned: Articles 10, 11 and 12. Rationale Article 10(a) directs obliged entities to verify beneficial ownership by consulting public registers. Recital 9 correctly notes that consulting central registers is necessary but not sufficient. In practice the quality and format of beneficial ownership register data across the EU is highly uneven. Only 17 of 30 EU/EEA jurisdictions are currently connected to the Beneficial Ownership Registers Interconnection System (BORIS); most records are only accessible as paywalled PDFs, not as structured data. Member States that do publish structured data use very different schemas (French INPI, Dutch KvK Dataservice XML, Danish CVR, Latvian Enterprise Register). For AMLA's harmonisation goal to be realised, the RTS should direct obliged entities toward a single, open, international interchange format for beneficial ownership information. The Beneficial Ownership Data Standard (BODS) is that format. BODS is the open, free-to-use data model developed by Open Ownership and endorsed or used by the UK, Canada, Latvia, Nigeria, Botswana and Armenia.

Name of the respondent	Question	Answer
		The UK government has formally adopted BODS as its open standard for exchanging BO information. Commercial compliance products including Foster Moore's Verne, NRD Companies' BOREG and EWG's Structuriser use BODS natively. Concrete drafting proposals: Amend Article 10(a): "…or other reliable national systems that contain the information necessary to verify the identity of the beneficial owner… Where beneficial ownership information is available in a structured, machine-readable format aligned with an open international data standard, obliged entities may treat it as a reliable and independent source." Amend Article 11(2)(a): "The description of the ownership and control structure may be assembled from structured beneficial ownership information, including ownership-or-control statements expressed in the Beneficial Ownership Data Standard or an equivalent open standard, provided the information is current and the source is reliable." Insert a new recital explaining that harmonised CDD depends on a harmonised beneficial ownership data format, and encouraging AMLA, the Commission and Member States to align BORIS outputs and central register APIs with BODS, consistent with AMLD6 and the Commission's beneficial ownership data formats consultation (initiative 14851). Evidence Open Ownership's publication "Analysis notebooks and

Name of the respondent	Question	Answer
		dashboards for BODS data"openownership.org/en/publications/analysis-notebooks-and-dashboards-for-beneficial-ownership-data-standard-bods-data/ demonstrates how three of the four Article 12 triggers — a trust or foundation in any layer, any layer incorporated outside the EU, and the presence of nominee shareholders or directors — can be detected automatically from a BODS dataset, together with a straightforward layer-count check. The bodsanalysis Python library (github.com/openownership/bodsanalysis) and the open-source bods-validator tool (github.com/StephenAbbott/bods-validator) provide reproducible conformance and risk checks. If obliged entities rely on free-text organigrams and PDFs, every firm re-implements these checks differently; with a common standard, the same check produces the same result. Endorsements I endorse the Global Legal Entity Identifier Foundation's (GLEIF) response, specifically its proposals to clarify the meaning of Legal Entity Identifier (LEI) "availability" in line with the ESRB Recommendation of 24 September 2020, to require that LEIs used for CDD comply with ROC policy (including annual revalidation), and to remove duplicative data requirements where LEI reference data is already available. The LEI is a key identifier in BODS entity statements and its consistent use directly supports the harmonisation goal. I also endorse the Data & Technology Compliance Alliance's (DT4C) call for more consistent recognition across the RTS of the role

Name of the respondent	Question	Answer
		of reputable third-party data providers as a legitimate source of structured beneficial ownership information.
Anonymous 8	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Broadly yes, but with a caveat on Articles 11 and 12. The overall architecture — risk-sensitive, technology-neutral, with the same CDD principles applied proportionately — is appropriate across sectors. My concern is narrower: Article 12's complexity test and Article 11's narrative description of the ownership and control structure cannot be applied consistently at scale across the full range of obliged entities without a common structured data format for beneficial ownership information. A tier-1 universal bank onboarding a multinational group, a fintech onboarding an SME through a digital flow, a notary checking the ownership of a property-holding vehicle, and an estate agent screening a corporate purchaser must all answer the same questions: how many layers are in the structure, is there a trust or foundation in any layer, is any layer incorporated outside the EU, are there nominees in the chain? These obliged entities have very different tooling and budgets. Unless there is a common structured representation of ownership for them to consume, each will build, buy or commission a bespoke parser of every Member State's register outputs — and results will diverge. This is the very fragmentation AMLA is trying to prevent. Provisions concerned: Articles 11 and 12. Rationale Article 11(2)(a) expects obliged entities to obtain "a description

Name of the respondent	Question	Answer
		of the ownership and control structure". Article 12 requires them to count layers and to assess whether nominees, trusts, or non-EU jurisdictions appear in those layers. Where this is done from free-text organigrams or PDFs, outcomes depend on each firm's in-house capacity. Smaller non-financial obliged entities do not have compliance teams able to assemble four- or five-layer ownership charts from disparate national registers. Applied literally, Article 12 will therefore be enforced patchily: high-risk complex structures may slip through for smaller firms, while bigger firms — able to count layers but not readily distinguish legitimate from obfuscatory rationale — may over-classify routine corporate groups as complex. A structured open beneficial ownership data standard resolves this. BODS represents entities, persons, and relationships as discrete, queryable statements. From a BODS dataset, counting layers, detecting legal arrangements (entityType = "arrangement" or similar), detecting non-EU jurisdictions (incorporatedInJurisdiction), and detecting nominees (interest types, control via nominee directorship) are simple deterministic queries that a small firm can run at the same cost as a large bank. Open Ownership's "Analysis notebooks and dashboards for BODS data" publication demonstrates exactly these queries, using freely available Python notebooks, against data from the UK, France, Indonesia and Norway. The bods-validator tool and pytest-bods-fixtures package provide reproducible conformance and risk checks.

Name of the respondent	Question	Answer
		Concrete drafting proposals: Add a new paragraph to Article 11: "Where beneficial ownership information is available from a central beneficial ownership register, from a register accessed via BORIS, from GLEIF Level 2 reference data, or from a reputable third-party data service provider in a structured, machine-readable format aligned with an open international data standard, obliged entities may rely on that format for the description of the ownership and control structure required under paragraph 2." Insert a new paragraph 3 in Article 12: "Where beneficial ownership information is available in a structured, machine-readable format, obliged entities may discharge the assessment required under paragraph 1 by querying that data to identify (a) the number of layers between the customer and the beneficial owner, (b) the presence of trusts, foundations or similar legal arrangements in any layer, (c) the jurisdiction of registration of each layer, and (d) the presence of nominee shareholders or directors." Add a recital acknowledging that consistent application of Article 12 across sectors and across obliged entities of different sizes requires a common data format for beneficial ownership information. Endorsements I endorse DT4C's Article 12 point that complexity should be measured by indicators of opacity rather than layer count

Name of the respondent	Question	Answer
		alone. Structured beneficial ownership data addresses this directly: the indicators DT4C highlights (nominee structures, non-cooperative jurisdictions, traceability to natural persons) are captured as discrete fields in BODS and can be assessed automatically, supplementing rather than replacing the layer test. I also endorse DT4C's Article 7 proposal that robust non-eIDAS identification solutions, including those aligned with EBA remote onboarding guidance, be recognised as equivalent rather than fallbacks - particularly important in the non-financial sector and for non-EU customers.
Anonymous 8	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, but the risk-based approach will only work in practice if obliged entities can distinguish higher-risk from lower-risk ownership structures efficiently. That efficiency depends on beneficial ownership information being structured and machine-readable. Provisions concerned: Articles 10, 11, 12 and 19. Rationale A risk-based approach requires obliged entities to concentrate scrutiny where risk is greatest. Without structured beneficial ownership data, every customer that is not a natural person requires the same manual assembly of an ownership diagram before any risk classification is possible. That is the opposite of risk-based: it imposes equal effort regardless of risk, and leaves smaller obliged entities unable to discharge Articles 11 and 12 for complex customers at all.

Name of the respondent	Question	Answer
		By contrast, where beneficial ownership data is available in a standardised format, the lowest-risk structures (single-layer wholly-domestic corporate customers) can be cleared quickly and resources focused on the subset where Article 12 triggers are genuinely present. Article 12's complexity triggers are a real improvement but contain a drafting asymmetry that risks divergent application. Conditions (a), (b) and (c) — trusts or foundations in any layer, non-EU jurisdictions in any layer, and nominee shareholders or directors — are objective and structurally knowable from beneficial ownership data. Condition (d) — "the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification" — is inherently subjective and, without guidance, will be applied very differently across firms and supervisors. Structured beneficial ownership data helps here too: indicators of opacity (number of layers, share of entities in non-cooperative jurisdictions, presence of unknown or anonymous entities in the chain, presence of nominee arrangements) can inform a repeatable risk assessment rather than being left entirely to unguided case-by-case judgment. Concrete drafting proposals. Amend Article 12(1)(d) to provide examples of what constitutes obfuscation for the purposes of a risk-based approach, drawing on structured indicators: "obfuscation includes, for example, the presence of anonymous or unknown entities in any layer,

Name of the respondent	Question	Answer
		multiple entities incorporated in jurisdictions subject to FATF monitoring, or material inconsistencies between beneficial ownership information held by the customer and independent sources". Amend Article 10 so that, where proportionate to risk, obliged entities may rely on BODS-structured beneficial ownership data obtained from a reputable third-party data service provider or from a jurisdiction's central beneficial ownership register, rather than being required to conduct the full verification exercise using a combination of other national public registers. Provide, in accompanying AMLA guidelines, worked examples of how structured beneficial ownership data supports a risk-based approach — for instance by allowing obliged entities to automatically identify the subset of customers to which Article 12 applies, freeing manual review for those cases. Evidence. The BODS risk detection proof-of-concept (openownership.org/en/publications/bods-risk-detection/) shows how structured beneficial ownership data combined with sanctions data from OpenSanctions and procurement data using the Open Contracting Data Standard can be queried to identify risk patterns across jurisdictions. The Global Energy Ownership Tracker demonstrates how BODS-aligned ownership data can be used to surface sector-specific risks, including nominee structures in fossil fuel assets. ChileCompra's operational use of beneficial ownership data for

Name of the respondent	Question	Answer
		conflict-of-interest detection — CLP 3.452bn in potential conflicts identified in January 2026 alone — shows the detection power that emerges when beneficial ownership data is available in structured form and combined with other datasets. Endorsements I endorse DT4C's Article 19 proposal on PEP screening: AMLA should include non-exhaustive examples of trigger events (elections, cabinet reshuffles, major restructures), and should explicitly caution that manual-only PEP screening is rarely sufficient at the scale and speed of global PEP changes. PEP identification is closely linked to beneficial ownership identification; BODS supports PEP flags on person statements (pepStatus, hasPepStatus) and allows PEP status to be updated through the same structured update mechanisms as other beneficial ownership fields. I also endorse DT4C's Articles 29–30 proposals: align sanctions screening with existing EBA guidance, clarify aggregate and indirect ownership expectations, and support structured, consolidated sanctions data. Aggregate and indirect ownership is precisely what BODS is built to represent, via relationship statements combined with the isComponent and componentStatementIDs fields.
Anonymous 8	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in	Yes. The most important example is beneficial ownership information itself, which is routinely unavailable in a usable form across the EU.

Name of the respondent	Question	Answer
	the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Provisions concerned: Articles 10, 11 and 12. Situation Article 10(a) contemplates verification of beneficial ownership information by consulting public registers. The draft RTS reasonably assumes that central beneficial ownership registers provide a reliable source. In practice, as of April 2026: Only 17 of 30 EU/EEA jurisdictions are technically connected to BORIS. Six Member States have records fully searchable by name or company ID. Most records accessible through BORIS are paywalled PDFs, not structured data. Where Member States publish beneficial ownership data as open data, formats are heterogeneous. Every obliged entity must build or buy parsers for each. The Court of Justice of the European Union's Sovim judgment (C-37/20, C-601/20) removed unrestricted public access. The new legitimate interest regime under AMLD6 is still being implemented. For customers with ownership structures spanning jurisdictions outside the EU, beneficial ownership information is often not available from any official source. Commercial datasets (Sayari, Dun and Bradstreet, Moody's, Kyckr, OpenCorporates, LSEG Risk Intelligence, LexisNexis Risk Solutions), together with GLEIF Level 2 and OpenSanctions, fill that gap — but the draft RTS does not clearly recognise reliance on them across the full text.

Name of the respondent	Question	Answer
		For legal arrangements (trusts, Treuhand, fiducie, fideicomiso), a central register often does not exist. Obliged entities rely on self-declaration by the trustee and on professional trustees' records. FATF R25 accepts this structural reality; the draft RTS should too. Concrete alternative solutions. Explicitly recognise, in Article 10 and Article 22, that obliged entities may rely on beneficial ownership information from reputable data service providers where it is sourced from official registers, verified, and delivered in a structured machine-readable format. This reflects DT4C's consistent call across the RTS text. Add a provision allowing obliged entities, when beneficial ownership information is unavailable from the customer's central register, to rely on structured third-party datasets - including BODS-aligned datasets - provided the source is reliable and the data current. Provide that, where beneficial ownership information is collected from the customer, obliged entities may accept submissions in structured BODS format as a reliable and independent source, including statements produced from the customer's own internal beneficial ownership record or from a reputable data service provider acting for the customer. Request that AMLA, together with the Commission, work toward BORIS publishing structured machine-readable beneficial ownership data aligned with BODS, rather than only

Name of the respondent	Question	Answer
		per-record PDFs. This is the single most impactful alternative solution to the present routine unavailability of usable beneficial ownership information across the EU. The Commission's 2024 consultation on standardised beneficial ownership data formats (initiative 14851) is the obvious route, and AMLA should reference it in the final RTS. For trusts and legal arrangements, provide that the obliged entity may rely on the trustee's beneficial ownership data where expressed in a structured standard that accommodates legal arrangements. BODS version 0.4 supports this explicitly via its entityType field (including "arrangement"), the roles of settlor, trustee, protector and beneficiary, and class-based beneficiary descriptions aligned with Articles 14 and 15 of the draft RTS. Endorsements I endorse GLEIF's response in full — in particular the proposal to remove duplicative data requirements where LEI reference data is already available, an approach that would be straightforward to apply to the Article 22 information set. I endorse DT4C's response, particularly its call for consistent recognition of third-party data and technology providers across the RTS, and for supporting structured, consolidated sanctions data aligned with existing EBA guidance. These are practical alternatives to the present situation in which obliged entities cannot obtain the information required by the draft RTS in a harmonised and usable form.

Anonymous 8	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Anonymous 8	Do you have any comments on the Annex in the draft RTS?	No
Anonymous 8	How would you rate the proposals set out in the draft RTS overall?	Good
Anonymous 9	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, I do not agree. Based on my experience managing compliance for EU-regulated businesses with extensive operations, offices, and banking partners outside of the EU, including in high-risk third countries (HRTCs), the draft RTS in its current form lacks the necessary flexibility for a modern, global financial entity. The proposals appear designed for a traditional, EU-centric banking model and do not adequately address the realities of digital, cross-border finance. (i) Why the Proposals Lack Sufficient Flexibility From my operational perspective, the rigidity of the proposals creates significant challenges in three key areas: 1. For Digital Cross-Border Services (Fintech & Crypto): Digital services are inherently borderless. Article 7's reliance on Regulation 910/2014 (eIDAS) for remote identity verification is a direct challenge. For firms with a global client base, an EU-specific solution is not viable. They rely on robust, internationally recognised standards (like NIST) and technologies that are the global norm. Furthermore, Article 27

Name of the respondent	Question	Answer
		is critically silent on verifying Source of Wealth/Funds (SoW/SoF) derived from crypto-assets. teams need clear guidance that accepts on-chain analytics as valid evidence, otherwise we risk being unable to service a legitimate and growing client segment. 2. For Clients in High-Risk Third Countries: My work involves managing risk in challenging environments. The evidential standards for SoW/SoF in Article 27, which demand formal documents like tax declarations or audited accounts, are often impossible to meet in many HRTCs where we operate. This impracticality will force firms into a position of wholesale de-risking of legitimate individuals and businesses, which is contrary to the goal of financial inclusion and is not effective risk management. 3. For EU Entities within Global Groups: A significant gap is the lack of guidance for EU entities like ours, whose group compliance functions and systems are headquartered outside the Union. The current draft creates ambiguity, forcing inefficient duplication of policies and controls rather than allowing us to leverage robust, equivalent group-wide frameworks for functions like transaction monitoring and risk management, subject to local oversight. (ii) Concrete Drafting Proposals for a More Appropriate Framework To make these RTS workable and truly risk-based, I propose the following concrete changes: 1. Amend Article 7 to be technologically neutral. It should explicitly recognise established international identity assurance standards (e.g., NIST IAL2) as equivalent to eIDAS 'Substantial'. This would allow firms to use best-in-class global solutions for identity verification.

Name of the respondent	Question	Answer
		2. Amend Article 27 to address modern financial realities. o First, add a clause permitting a corroborative, risk-based approach to SoW/SoF when traditional documents are unobtainable in HRTCs. This allows us to manage risk, not just avoid it. o Second, add a clause that explicitly recognises non-traditional evidence for crypto-assets, including reports from blockchain analytics firms. 3. Introduce a new section or annex providing a clear framework for EU entities of non-EU groups. This should establish principles for relying on equivalent group-level policies, systems, and controls, thereby promoting efficiency and consistent global risk management. These changes would provide the flexibility teams need to manage risk effectively across diverse products and jurisdictions, preventing unintended consequences like de-risking and ensuring the EU framework remains relevant in a global, digital-first world.
Anonymous 9	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	From my experience managing global compliance programs, an effective risk-based approach (RBA) relies on professional judgment to assess and mitigate risk proportionately. While the RTS states its commitment to the RBA in principle, several key provisions undermine this by substituting rigid, prescriptive rules for genuine risk-based decision-making. This creates a "check-box" compliance environment that can misdirect resources and hinder effective risk management, particularly for a business like mine with significant cross-border operations. (i) Provisions that Undermine the Risk-Based Approach 1. Article 12 - Definition of Complex Corporate Structures: This is the most significant concern. The article imposes a rigid,

Name of the respondent	Question	Answer
		mathematical formula (three or more layers plus one of four other conditions) to define complexity. This is the antithesis of the RBA. This formula forces my teams to treat many legitimate, standard international investment and holding structures as inherently complex, triggering enhanced measures without a corresponding risk-based justification. The RBA requires us to assess why a structure is complex; is it for legitimate commercial reasons or for obfuscation? Article 12 removes this critical element of professional judgment. 2. Article 27 - Evidence for Source of Funds/Wealth (SoF/SoW): An effective RBA for a high-risk client requires teams to gather sufficient and appropriate evidence to be satisfied that their wealth is legitimate. Article 27, by listing specific document types (tax declarations, pay slips), trends towards a prescriptive document-gathering exercise. For clients in many high-risk jurisdictions, these specific documents are often unavailable. A true RBA would allow my team to make a reasoned, documented assessment based on a holistic view of corroborating evidence. This article, as drafted, forces a "documentation failure" and prevents a risk-based conclusion, leading directly to de-risking. 3. Article 7 - Non-face-to-face Identity Verification: The RBA should apply to the tools I have used at an array of firms. For a client from a specific country, my risk assessment might conclude that a particular global identity verification technology provides the most robust and appropriate level of assurance. By heavily prioritising a single framework (Regulation 910/2014 - eIDAS), Article 7 restricts my ability to make a risk-based decision on the most effective tool for a given scenario, replacing it with a prescribed technological preference.

Name of the respondent	Question	Answer
		(ii) Concrete Drafting Proposals for a More Appropriate, Risk-Based Framework To restore the primacy of the RBA, I propose the following: 1. For Article 12: Replace the formulaic definition with a principles-based approach. The RTS should provide a non-exhaustive list of risk indicators that may suggest malign complexity (e.g., circular ownership, use of nominee structures without clear rationale, jurisdictions known for secrecy without economic substance). This would empower compliance professionals to use their judgment to identify genuinely high-risk structures. 2. For Article 27: Amend the text to explicitly state that the goal is to "obtain a reasonable level of assurance" regarding the legitimacy of SoF/SoW. It should clarify that where the listed documents are not reasonably available, obliged entities must document their holistic, corroborative assessment, which may be based on a combination of other sources, including client interviews, open-source intelligence, and commercial databases. This puts the focus back on the risk-based outcome, not the specific documents collected. 3. For Article 7: Re-draft the article to be technologically neutral, focusing on the required assurance level rather than the specific technology. It should recognise that international standards (such as NIST IAL2) are equivalent to eIDAS 'Substantial' for the purpose of mitigating impersonation risk in a remote context.
Anonymous 9	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	Yes, based on my direct experience managing compliance for EU-regulated businesses operating globally, there are several critical situations where the information required by the draft RTS is routinely unavailable. The proposals often lack a viable alternative solution, pushing my teams towards a binary choice

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	of non-compliance or de-risking. Here are three concrete examples: 1. Situation: Verifying Source of Wealth (SoW) for Entrepreneurs in High-Risk Third Countries • Example: I have overseen the onboarding of successful, legitimate entrepreneurs from emerging markets. Their wealth was often built over decades through informal means: cash-based businesses, family loans, and gradual reinvestment of profits, all common in their local economies. When we request SoW evidence as prescribed by Article 27 (e.g., audited accounts, tax declarations, official income statements), these documents often do not exist, are unreliable, or do not accurately reflect the individual's wealth journey. The client is legitimate, but their economic reality does not produce the specific documentary evidence the RTS anticipates. • Proposed Alternative Solution: The RTS must formally permit a holistic, corroborative assessment as a valid alternative. This should be a documented process where teams build a reasonable assurance picture of SoW based on a collection of alternative evidence. This would include detailed client interviews, a comprehensive open-source intelligence review (media, business profiles), evidence of tangible assets (property, business premises), and an analysis of the client's business activity against the economic norms of their country and sector. The focus should be on documenting a plausible and consistent narrative, not on obtaining a specific, non-existent document. 2. Situation: Verifying Source of Funds (SoF) for Crypto-Native Clients

Name of the respondent	Question	Answer
		• Example: A significant and growing client base has generated wealth entirely within the crypto-asset ecosystem. Their funds may originate from early Bitcoin mining, staking rewards, or yields from DeFi protocols. When asked for SoF under Article 27, they cannot provide "pay slips" or "credit facility agreements." Their evidence is on-chain, in the form of transaction histories and wallet addresses. The current RTS provides no guidance on how to treat this digital-native evidence, making it "routinely unavailable" in the format required. • Proposed Alternative Solution: Article 27 must be amended to explicitly recognise reports from reputable blockchain analytics firms and verifiable on-chain data as a primary and valid means of establishing SoF for crypto-assets. This would allow teams to conduct a technically sound, risk-based assessment using the correct tools for the asset class, such as tracing funds from reputable exchanges or analysing staking reward patterns. 3. Situation: Verifying Beneficial Ownership in Jurisdictions with No Public Registers • Example: I have dealt with corporate clients or family trusts from jurisdictions that have strong banking secrecy laws and no public beneficial ownership registers. While we can obtain a declaration of ownership from the client, the requirement under Article 10 to take "reasonable measures" to verify this information against independent sources hits a wall. The independent sources simply do not exist. Teams can exhaust all possible means and still only have the client's self-attestation. • Proposed Alternative Solution: The RTS should provide a "safe

Name of the respondent	Question	Answer
		harbour" for situations where independent verification is demonstrably impossible. It should clarify that after having documented the exhaustion of all available means (including searches of any available commercial databases), an obliged entity can proceed on the basis of the client's declaration. This must be coupled with a mandatory risk-rating escalation (e.g., automatically High Risk) and the application of robust enhanced ongoing monitoring, specifically looking for any activity that contradicts the declared ownership or business purpose.
Anonymous 9	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The draft RTS focuses on traditional banking products and could benefit from including additional simplified due diligence (SDD) measures tailored to the realities of modern, global, and digital finance. The following proposals target high-volume, low-risk activities where the current CDD requirements are disproportionately burdensome. 1. Proposal: SDD for Intra-Group Treasury Payments • Situation: A core service some firms provide is facilitating treasury and cash management operations for large, multinational corporate clients. After conducting comprehensive Enhanced Due Diligence (EDD) on the ultimate parent company and its entire ownership structure, we are often required to process payments between two fully-owned subsidiaries within that same vetted corporate group. Applying full CDD measures to each individual operating subsidiary as if it were a new client is redundant and inefficient. • Rationale: The ML/TF risk in this scenario is exceptionally low. The funds are not entering or leaving the pre-vetted corporate ecosystem. We have already assessed the group's overall risk, its business, and its beneficial owners. These are internal funds

Name of the respondent	Question	Answer
		movements, not transactions with unknown third parties. • Concrete Drafting Proposal: I propose a new article in Section 5: "Sectoral simplified measures for intra-group payments" "Where an obliged entity has performed customer due diligence measures on a corporate group in its entirety, it may apply simplified due diligence measures to the individual legal entities within that group for the purposes of processing payments or transactions exclusively between other legal entities of the same group, provided that: (a) The obliged entity is satisfied it understands the ownership and control structure of the entire group; (b) The group is not subject to any specific high-risk factors that would make such simplification inappropriate; and (c) The obliged entity's ongoing monitoring is calibrated to detect any transactions involving external third parties." 2. Proposal: SDD for Low-Value, Restricted-Use Digital Payments • Situation: My fintech business lines often provide payment processing for merchants selling low-value digital goods or services (e.g., in-game credits, streaming service subscriptions, digital content). These services are characterised by very low transaction values and strict limitations on how the funds can be used. • Rationale: The ML/TF risk is inherently mitigated by design. The low monetary thresholds prevent the laundering of significant sums, and the closed-loop nature (i.e., no cash-out functionality) prevents the funds from being easily integrated back into the financial system. The risk profile is far lower than a general-purpose payment account.

Name of the respondent	Question	Answer
		• Concrete Drafting Proposal: I propose a new article in Section 5: "Simplified due diligence for limited-network payment instruments" "Obliged entities may apply simplified due diligence measures in relation to customers using a payment instrument, including electronic money, that meets all of the following conditions: (a) The payment instrument cannot be funded with anonymous cash; (b) The instrument is restricted and can only be used to acquire goods or services from a limited and pre-approved network of merchants; (c) The instrument does not permit cash withdrawal or peer-to-peer transfers; and (d) Strict transactional and lifecycle limits are applied, not exceeding EUR 50 per transaction and EUR 150 in any given month." Including these risk-based, targeted SDD measures would be more appropriate because they would allow compliance teams to focus resources away from these demonstrably low-risk activities and concentrate efforts on the higher-risk areas of our business, such as cross-border payments from high-risk jurisdictions.
Anonymous 9	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	I have several additional comments on specific articles that present significant operational challenges and strategic oversights not fully covered in my previous responses. 1. Comment on the Critical Omission of Artificial Intelligence (AI) in the RTS • The Issue: The entire draft RTS is silent on the topic of Artificial Intelligence. This is a critical omission that risks making the RTS outdated upon publication. This technology presents both an unprecedented threat and a revolutionary opportunity for Customer Due Diligence (CDD).

Name of the respondent	Question	Answer
		• My Experience: This is particularly striking to me. My experience is twofold: as a Global Head of Compliance managing these risks daily, and as the co-founder of ChatKYC, an AI compliance tool built specifically for our profession. From this dual perspective, I see two sides: o The Threat: Generative AI can create highly convincing synthetic identities and "deepfake" videos, fundamentally challenging the verification standards in Articles 6 and 7. The RTS offers no guidance on how to mitigate this technologically advanced fraud. o The Opportunity: The work we are doing with ChatKYC demonstrates that AI can revolutionise our capabilities. It can analyse vast, unstructured datasets to build dynamic risk profiles, conduct real-time ongoing monitoring, and identify hidden networks in ways impossible for human teams alone. The RTS provides no guidance or safe harbour for using these advanced tools, which creates regulatory uncertainty and could stagnate innovation. • Proposed Solution: The RTS must be forward-looking. I propose including a new, principles-based article on technology: "Obliged entities are encouraged to leverage technological innovations, including validated artificial intelligence systems, to enhance the effectiveness of their CDD measures. The use of such technology is permitted provided the obliged entity can demonstrate to its competent authority that the system is robust, tested, and that its outcomes are consistent with the risk-based approach. AMLA shall periodically issue guidance on emerging technological risks and best practices for their mitigation and use in AML/CFT."

Name of the respondent	Question	Answer
		2. Comment on Article 6(4) - The Practicality of Foreign Language Documents • The Issue: Article 6(4) states that for documents in a foreign language, "obliged entities shall ensure that they understand their content." This is operationally ambiguous and creates a significant hidden burden, potentially requiring certified translations for every document, which is unfeasible for our high-volume, cross-border payments and crypto businesses. • Proposed Solution: The RTS should introduce a risk-based approach to translation. I propose amending the article to clarify that: "For customers assessed as low or standard risk, an obliged entity may rely on in-house or verifiable machine translation to understand key information. The requirement for a certified translation should be reserved for high-risk customers or where there are specific doubts regarding the document's authenticity." 3. Comment on Article 33 - The Transitional Measures and Remediation Challenge • The Issue: Article 33's requirement to retroactively apply these new standards to all existing clients is a monumental task. The data points now required were often not collected years ago under different regulatory regimes. • My Experience: It is often impossible to go back to a client from ten years ago and obtain a detailed Source of Wealth declaration from that period. This will force the mass closure of accounts for thousands of legitimate, long-standing clients who cannot produce historical documents that were never required at the time. • Proposed Solution: The RTS should allow for a more

Name of the respondent	Question	Answer
		pragmatic, risk-based approach to remediation. I propose adding a provision that states: "For existing customers, where required historical information cannot reasonably be obtained, an obliged entity may document this data gap. The relationship may continue provided the customer is subject to robust ongoing monitoring, with any significant deviation triggering a full refresh of the file under the new standards."
Anonymous 9	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Anonymous 9	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Anonymous 9	Please specify which recital you refer to, and share your comments below.	The recitals provide the "spirit of the law," and several of them create significant ambiguity or fail to consider the operational realities of a global, technology-driven business like mine. My comments focus on areas where the stated intention is undermined by a lack of practical, globally-aware guidance. 1. Recital (7) - The Ambiguity of "Other Credible Means" This recital laudably aims to prevent financial exclusion for vulnerable individuals who lack traditional identity documents. However, for an institution operating across high-risk countries, the phrase "other credible means" is a source of major regulatory risk. From my operational perspective, what constitutes a "credible mean" for verifying an individual in a jurisdiction with poor official record-keeping? The recital offers no examples or safe harbours. In practice, my compliance teams, facing the risk of supervisory criticism, will almost certainly default to rejecting such applicants. This well-

Name of the respondent	Question	Answer
		intentioned recital, without concrete guidance, will directly lead to the very de-risking it seeks to prevent. 2. Recital (10) - The Subjective Test for Beneficial Owner Identification This recital introduces a highly problematic and subjective distinction between finding it "difficult" to identify a beneficial owner and having "doubts" about them. As a compliance professional who must create auditable, defensible processes, this is unworkable. A complex, multi-jurisdictional structure is difficult to unravel. Does this difficulty automatically constitute "doubt"? This language replaces an objective standard ("exhausted all possible means") with a subjective one that is impossible to apply consistently across a global team. It creates a situation where my team's diligence could be re-interpreted as "doubt" by an examiner, placing us in an untenable position. 3. Recitals (19) & (20) - The Implied Standard for EDD and Source of Wealth These recitals correctly state that in high-risk situations, we must satisfy ourselves that funds are from a legitimate origin. I fully agree with this goal. The problem is that these recitals set a standard that the subsequent articles (like Article 27) make impossible to meet in many real-world scenarios. My experience with clients in HRTCs and in the crypto space shows that the traditional, document-based evidence implied here is often non-existent. The recitals should acknowledge that "satisfying oneself" can be achieved through a holistic, corroborative, and evidence-based assessment, not just by obtaining a specific list of documents that may not exist. 4. Recital (24) - The Technologically Myopic View on Identity

Name of the respondent	Question	Answer
		This recital, which underpins Article 7, explicitly aligns remote CDD with the framework of Regulation 910/2014 (eIDAS). From my perspective as both a compliance head and co-founder of the AI compliance tool ChatKYC, this is strategically short-sighted. It codifies a preference for a specific EU technology stack, ignoring the robust, equivalent, and more widely used international standards (like NIST) that my global business relies on. More importantly, it fails to look forward. It does not contemplate the challenges of AI-driven "deepfake" identity fraud, nor does it create space for the opportunities of using advanced AI for risk assessment. The recitals should set technologically-neutral principles focused on assurance levels and risk outcomes, not prescribe specific frameworks that may soon be outdated.
Anonymous 9	Do you have any comments on the Annex in the draft RTS?	Yes
Anonymous 9	Please share your comments below.	From my operational perspective as both a Global Head of Compliance and co-founder of the AI compliance tool ChatKYC, the Annex as drafted is flawed for any truly global business. The core issue is that the Annex is not merely a list of information to be collected; it is a rigid data schema explicitly tied to the European Digital Identity Wallet framework (as stated in its own footnote). This creates three immediate and severe problems: 1. It is Inherently EU-Centric and Discriminatory to Global Clients: I have worked for businesses serveing clients from across the world, including high-risk jurisdictions in Africa, Asia, and Central America. These clients do not have, nor will they have, a European Digital Identity Wallet. The Annex, by codifying the specific data attributes of this EU-only system, creates a two-tier world. It implies a seamless, digitally native

Name of the respondent	Question	Answer
		path for EU citizens and a manual, high-friction, "exception-based" process for the entire rest of the world. This is not a global standard; it is a protectionist technology mandate that will increase onboarding friction and lead to the de-risking of non-EU clients. 2. It is Practically Unworkable Due to Its Rigidity: The data attributes listed are inflexible and do not reflect global realities. For example, the requirement for attributes like resident_street and resident_house_number assumes a Western-style addressing system. My teams regularly onboard legitimate clients from jurisdictions where addresses are descriptive, non-standard, or based on PO boxes. The Annex provides no alternative for these common scenarios. This rigidity forces my teams into a situation where a client is legitimate, but we cannot collect the data in the prescribed format, leading to a "computer says no" compliance failure. 3. It is Strategically Backward-Looking and Stifles Innovation: From my work with ChatKYC, I know that modern, effective risk management relies on a dynamic and holistic view of the customer, often incorporating a wider range of data points than this static list. The Annex is completely silent on attributes relevant to the digital economy. Where is the attribute for a verified crypto wallet address? Or for other digital identifiers that are crucial for risk-assessing clients in the fintech space? By prescribing this rigid schema, the RTS discourages innovation. It prevents firms like mine from using advanced AI and data analytics to build a more accurate risk picture from a wider, more relevant set of global data. Instead, it forces us to

Name of the respondent	Question	Answer
		focus on collecting a narrow set of EU-specific attributes that may not be the most relevant risk indicators for our diverse client base. Proposed Solution: The Annex should be revised. Instead of mandating a specific data schema from an EU regulation, it should be principles-based. It should define the categories of information required (e.g., "Full Name," "Date of Birth," "Verifiable Address") and state that the obliged entity must collect the specific, relevant data attributes available in the customer's jurisdiction to satisfy these categories. The focus must be on the outcome, achieving a high degree of confidence in the customer's identity through reliable and independent sources, not on populating a rigid, EU-centric data template.

Name of the respondent	Question	Answer
Anonymous 10	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Anonymous 11	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No, we do not agree that the proposed RTS can be effectively applied across the full range of products and services provided by obliged entities. (i) Lack of sufficient flexibility While the RTS formally endorses a risk-based approach, in practice it introduces a high level of prescriptiveness that significantly constrains its application across diverse business models, customer types, and service channels. In particular: Overly detailed data requirements (e.g., extensive identity attributes, source of funds, and transaction expectations) risk becoming de facto mandatory, even in low-risk scenarios, thereby undermining the proportionality principle. The RTS does not sufficiently accommodate operational realities of different sectors, especially those with: high-volume, low-value transactions, digital onboarding models, limited direct customer interaction. The expectations regarding verification of beneficial ownership and complex structures may be disproportionately burdensome, particularly where reliable public registers already exist. The provisions on remote identification and verification impose technical and procedural requirements that may not be feasible or proportionate for smaller entities or less complex

Name of the respondent	Question	Answer
		services. There is insufficient recognition of existing due diligence already performed within groups or by other regulated entities, leading to duplication and inefficiency. Overall, the RTS risks shifting from a risk-based framework to a quasi rules-based regime, which may increase compliance costs without a commensurate improvement in risk mitigation. (ii) Proposed drafting improvements To address these concerns, we propose the following amendments: 1. Strengthen explicit proportionality safeguards Proposed addition (general clause): “Obliged entities shall not be required to collect or verify information where, based on a documented risk assessment, such information is not necessary to effectively mitigate identified ML/TF risks.” This would ensure that the risk-based approach is operational in practice, not only in principle. 2. Introduce clearer differentiation for low-risk scenarios Proposed amendment (simplified due diligence sections): Replace prescriptive minimum data requirements with:

Name of the respondent	Question	Answer
		"Obliged entities shall determine the minimum information required for identification based on the nature, purpose and risk profile of the business relationship or transaction." Current provisions still impose relatively rigid requirements even in low-risk cases, limiting the intended simplification. 3. Allow greater reliance on existing verified information Proposed addition: "Where obliged entities can reasonably rely on customer due diligence information obtained by other obliged entities within the same group or by third parties subject to equivalent AML/CFT requirements, duplication of information collection shall be avoided." This reduces unnecessary duplication and aligns with efficiency and proportionality objectives. 4. Introduce flexibility in beneficial ownership verification Proposed amendment: "Consultation of central registers, where deemed reliable and up to date, may be considered sufficient for verification purposes, unless specific risk factors justify additional measures." The current RTS undervalues the role of public registers and may impose disproportionate verification burdens.

Name of the respondent	Question	Answer
		5. Proportional application of remote verification requirements Proposed amendment: “Technical and procedural requirements for non-face-to-face verification shall be applied in a manner proportionate to the risk level, nature of the service, and size and complexity of the obliged entity.” Ensures that smaller entities and less risky services are not subject to excessive technological constraints. Conclusion In its current form, the RTS does not provide sufficient flexibility to accommodate the diversity of obliged entities and business models across the EU. Without clearer safeguards and more explicit operationalisation of the risk-based approach, there is a significant risk of over-compliance, increased costs, and reduced financial inclusion, without clear added value in terms of AML/CFT effectiveness.
Anonymous 11	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No, we do not consider that the draft RTS enables the effective application of a genuinely risk-based approach to AML/CFT compliance. While the RTS repeatedly refers to the risk-based principle, several provisions introduce implicit standardisation and prescriptive expectations that, in practice, limit the discretion of obliged entities to tailor their controls to the specific risk profile.

Name of the respondent	Question	Answer
		(i) Provisions of concern Extensive and detailed information requirements (Articles 2–6, 18) The RTS sets out granular lists of data to be collected (e.g. identity attributes, source and destination of funds, expected transaction behaviour). Although framed as risk-sensitive, these provisions are likely to be interpreted as minimum mandatory requirements, even in low-risk scenarios. Beneficial ownership verification (Articles 10–12) The requirement to go beyond central registers in most cases creates a systematic expectation of additional verification, regardless of the reliability of such registers. This weakens the proportionality principle and creates unnecessary duplication. Treatment of complex structures (Article 12) The definition and handling of “complex corporate structures” may lead to automatic escalation of due diligence measures, without sufficient room for case-by-case risk assessment. Remote verification requirements (Article 7) The detailed technical safeguards imposed for non-face-to-face verification risk becoming uniform compliance benchmarks, rather than proportionate controls based on risk, service type, and delivery channel. Enhanced due diligence expectations (Articles 25–28) The scope of additional information that may be required in higher-risk situations is very broad and may lead to over-collection of information, even where specific risks could be mitigated through more targeted measures. (ii) Proposed drafting improvements 1. Reinforce the primacy of the risk-based approach Proposed addition (horizontal clause):

Name of the respondent	Question	Answer
		"Obliged entities shall determine the type, extent and depth of customer due diligence measures based on their own documented risk assessment. The elements listed in this Regulation shall not be interpreted as mandatory in all cases." Clarifies that listed elements are indicative, not exhaustive or compulsory. 2. Limit mandatory data collection in low-risk scenarios Proposed amendment (Articles 2–6, 18): "Obliged entities shall collect only such information as is necessary and proportionate to the identified level of ML/TF risk." Prevents a checklist-based approach and supports operational proportionality. 3. Recognise central registers as sufficient in appropriate cases Proposed amendment (Article 10): "Where central registers are assessed as reliable, accurate and up to date, obliged entities may rely on them as a primary source for verification, unless specific risk indicators justify additional measures." Aligns supervisory expectations with existing public infrastructures and reduces duplication. 4. Avoid automatic escalation based on structural complexity alone Proposed amendment (Article 12): "The existence of multi-layered ownership structures shall not, in itself, be considered indicative of higher ML/TF risk without additional risk factors." Ensures that complexity is assessed in context, not treated as

Name of the respondent	Question	Answer
		inherently high risk. 5. Ensure proportionality in remote verification Proposed amendment (Article 7): “Remote identification measures shall be adapted to the level of risk, the nature of the business relationship, and the size and operational capacity of the obliged entity.” Avoids imposing disproportionate technological and operational burdens. Conclusion In its current form, the RTS risks formalising a rules-based compliance framework under the guise of a risk-based approach. Without clearer safeguards, obliged entities may default to collecting maximum information in all cases to mitigate regulatory risk, leading to inefficiencies, increased costs, and potential barriers to access, without demonstrable improvements in AML/CFT outcomes.
Anonymous 11	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are situations where the information required under the draft RTS for customer due diligence (CDD) purposes is routinely unavailable in practice, and the RTS does not provide sufficiently flexible or realistic alternative solutions. This is particularly relevant for smaller entities, service providers with limited customer interaction, and sectors dealing with individuals, vulnerable customers, or non-standard documentation contexts. (i) Examples of practical limitations Customers unable to provide standardised documentation Certain categories of customers (e.g. elderly individuals,

Name of the respondent	Question	Answer
		migrants, or persons in vulnerable situations) may not possess up-to-date or standard identification documents, proof of address, or formal evidence of income/source of funds. In such cases, the RTS does not sufficiently recognise alternative forms of evidence, creating a risk of exclusion despite low ML/TF risk. Informal or irregular sources of income Customers whose income derives from informal, seasonal, or cash-based activities may be unable to provide verifiable documentation on source of funds or wealth. The expectation to obtain formal and verifiable evidence in all cases is not aligned with the economic reality of certain customer segments, particularly in lower-risk contexts. Limited access to beneficial ownership information For certain legal entities—especially those established in jurisdictions with less developed transparency frameworks—accurate and verifiable beneficial ownership information may be difficult or impossible to obtain beyond what is available in public registers. The RTS does not provide a clear fallback where reasonable efforts have been made but full verification is not feasible. Remote onboarding constraints In non-face-to-face scenarios, particularly for smaller entities, it may not be operationally feasible to implement all the technical verification measures expected by the RTS. This creates situations where compliance becomes dependent on technological capacity rather than actual risk level.

Name of the respondent	Question	Answer
		Lack of insight into expected transaction behaviour At the onboarding stage, especially for new or occasional customers, it may not be possible to meaningfully determine expected transaction patterns or volumes. The RTS does not sufficiently acknowledge that such information may only become available over time through ongoing monitoring. (ii) Proposed alternative solutions 1. Acceptance of alternative evidence Proposed addition: “Where standard documentation is not available, obliged entities may accept alternative forms of evidence, including self-declarations, third-party attestations, or other credible information, provided that the overall ML/TF risk is assessed as low.” Promotes financial inclusion while maintaining risk awareness. 2. Recognition of reasonable effort (“best effort” principle) Proposed addition: “Where obliged entities have taken reasonable and proportionate measures to obtain and verify required information but are unable to do so, they may proceed with the business relationship where the residual risk is assessed as acceptable and adequately mitigated.” Avoids automatic refusal of customers due to practical limitations. 3. Progressive due diligence approach

Name of the respondent	Question	Answer
		Proposed amendment: “Certain elements of customer due diligence, including expected transaction behaviour, may be established and refined on an ongoing basis after the establishment of the business relationship.” Aligns regulatory expectations with operational reality. 4. Proportional reliance on available registers Proposed amendment: “Where beneficial ownership information cannot be independently verified beyond reliable public sources, obliged entities may rely on such sources, provided that this limitation is documented and considered in the risk assessment.” Introduces a pragmatic fallback mechanism. 5. Flexibility in remote verification Proposed amendment: “Where full implementation of advanced remote verification solutions is not feasible, obliged entities may apply alternative controls proportionate to the risk, including transaction limits, enhanced monitoring, or delayed verification.” Ensures that compliance does not become disproportionately technology-driven. Conclusion The absence of realistic fallback options in the RTS creates a risk of systematic exclusion of certain customer groups, operational inefficiencies, and a shift toward formalistic compliance. Introducing flexible, risk-sensitive alternatives

Name of the respondent	Question	Answer
		would better align the framework with real-world conditions while preserving AML/CFT objectives.
Anonymous 11	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The draft RTS does not go far enough in operationalising simplified due diligence (SDD) in a meaningful and usable way. While it recognises the concept of lower-risk scenarios, it fails to translate this into genuinely simplified, practical obligations, resulting in continued over-collection of data and unnecessary compliance burdens. Given the mandate under Article 28(1) of Regulation (EU) 2024/1624, additional and more explicit SDD measures should be introduced to ensure that the framework is truly risk-based, proportionate, and supportive of financial inclusion. (i) Proposed additional simplified due diligence measures 1. Reduced identification data requirements for low-risk products Proposed addition: "For products and services assessed as presenting a low level of ML/TF risk, obliged entities may limit customer identification data to core attributes necessary to uniquely identify the customer, without requiring additional supplementary information." Current provisions still imply the collection of extensive datasets even where risk is demonstrably low. This measure would ensure proportionality and reduce unnecessary data processing. 2. No requirement to verify source of funds or wealth in low-risk cases

Name of the respondent	Question	Answer
		Proposed addition: “Obliged entities shall not be required to obtain or verify information on the source of funds or source of wealth where the business relationship or transaction is assessed as low risk, unless specific risk indicators are identified.” Requiring such information systematically contradicts the principle of simplification and creates disproportionate burdens. 3. Reduced or deferred verification of beneficial ownership Proposed addition: “In low-risk scenarios, verification of beneficial ownership may be limited to consultation of reliable public registers, or may be deferred until a risk trigger event occurs.” Avoids unnecessary complexity where there is no indication of elevated risk. 4. Simplified ongoing monitoring obligations Proposed amendment: “For low-risk relationships, ongoing monitoring may be limited to periodic or event-driven reviews, rather than continuous or systematic transaction monitoring.” Aligns monitoring intensity with actual risk exposure. 5. Higher thresholds and exemptions for low-value transactions Proposed addition: “Obliged entities may apply simplified due diligence, including reduced or no verification, to transactions below defined

Name of the respondent	Question	Answer
		monetary thresholds, provided that adequate safeguards such as transaction limits and usage restrictions are in place." Low-value transactions typically present limited ML/TF risk and should not trigger full CDD requirements. 6. Explicit allowance for delayed due diligence Proposed addition: "In low-risk situations, obliged entities may complete certain elements of customer due diligence after the establishment of the business relationship, provided that appropriate safeguards are implemented." Facilitates customer onboarding while maintaining risk control. 7. Recognition of product-level risk mitigation features Proposed addition: "Where products or services include inherent risk-mitigating features (such as transaction caps, restricted usability, or closed-loop systems), obliged entities may take these features into account to justify the application of simplified due diligence." Encourages innovation and acknowledges built-in risk controls. (ii) Additional horizontal safeguard Proposed overarching clause: "Where simplified due diligence is applied, obliged entities shall not be required to implement enhanced or standard due diligence measures unless new risk factors emerge."

Name of the respondent	Question	Answer
		Prevents the erosion of SDD through overlapping or contradictory requirements. Conclusion The current draft RTS risks rendering simplified due diligence largely ineffective by maintaining substantially similar expectations across all risk levels. Introducing clearer, operational SDD measures would: reinforce the credibility of the risk-based approach, reduce unnecessary administrative and financial burdens, and support access to services for lower-risk customers. Without such adjustments, there is a significant risk that simplified due diligence remains theoretical rather than practical, undermining both efficiency and inclusion objectives.
Anonymous 11	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Yes, we would like to raise the following additional comments on specific provisions of the draft RTS: 1. Article 2–6 (Customer identification data) – Risk of excessive data collection Comment: The level of detail in the required identification data risks creating a de facto standardised checklist, irrespective of the risk level. This may lead to systematic over-collection of personal data, raising concerns not only from an AML/CFT perspective but also regarding data minimisation principles. Proposed solution: “The collection of customer identification data shall be limited to what is necessary and proportionate in relation to the identified ML/TF risk, in accordance with the principle of data minimisation.” Justification:

Name of the respondent	Question	Answer
		Aligns AML/CFT obligations with broader EU legal principles and avoids unnecessary processing of personal data. 2. Article 7 (Non-face-to-face identification) – Technological bias Comment: The RTS appears to favour advanced technological solutions (e.g. sophisticated remote verification tools), which may disadvantage smaller entities and create barriers to market entry. Proposed solution: “Obliged entities may apply alternative, non-technological or less complex verification measures, provided that these are appropriate to the level of risk.” Justification: Ensures a level playing field and avoids disproportionate reliance on costly technologies. 3. Article 10 (Beneficial ownership verification) – Duplication of efforts Comment: The requirement to systematically go beyond central registers introduces duplication and inefficiency, even where such registers are reliable and subject to regulatory oversight. Proposed solution: “Obliged entities may rely on central beneficial ownership registers as a primary source of verification, unless specific risk indicators suggest that additional verification is necessary.” Justification: Reduces administrative burden while maintaining a risk-sensitive approach.

Name of the respondent	Question	Answer
		4. Article 12 (Complex ownership structures) – Overgeneralisation of risk Comment: The RTS risks treating structural complexity as inherently high risk, which may lead to automatic escalation of due diligence measures without sufficient justification. Proposed solution: “Structural complexity alone shall not be considered indicative of higher ML/TF risk in the absence of additional risk factors.” Justification: Ensures that risk assessments remain contextual and evidence-based. 5. Articles 18 and 25–28 (Business relationship and enhanced due diligence) – Overly broad expectations Comment: The scope of information that may be required is very broad and open-ended, creating uncertainty and incentivising defensive over-compliance. Proposed solution: “Obliged entities shall determine the scope of information required based on clearly identified risk factors, and shall not be required to collect information beyond what is necessary to mitigate those risks.” Justification: Provides legal certainty and reinforces proportionality. 6. Article 33 (Updating of CDD information) – Frequency requirements Comment:

Name of the respondent	Question	Answer
		The proposed review frequencies may lead to formalistic updates that do not materially enhance risk understanding, particularly in stable, low-risk relationships. Proposed solution: “The frequency of updating customer due diligence information shall be determined based on risk, and may be replaced by event-driven reviews where appropriate.” Justification: Improves effectiveness by focusing on meaningful changes rather than periodic formalities. 7. General comment – Risk of unintended consequences Comment: Across multiple provisions, the RTS risks encouraging a tick-box compliance culture, where obliged entities prioritise completeness of documentation over actual risk understanding. Proposed solution (horizontal clause): “Obliged entities shall be permitted to apply simplified or alternative measures where these achieve an equivalent or better outcome in mitigating ML/TF risks.” Justification: Encourages innovation and outcome-based compliance rather than procedural rigidity. Conclusion Overall, the draft RTS would benefit from a stronger emphasis on proportionality, operational feasibility, and outcome-based supervision. Without such adjustments, there is a material risk of increased compliance costs, reduced accessibility of services, and limited added value in terms of AML/CFT effectiveness

Name of the respondent	Question	Answer
Anonymous 11	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Anonymous 11	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	33
Anonymous 11	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 33 – Updating of CDD information: need for a more dynamic and outcome-based approach Comment: Article 33 establishes expectations regarding the frequency and triggers for updating customer due diligence information. However, the current drafting risks promoting a formalistic and time-based approach, rather than one driven by meaningful changes in risk. In particular: The emphasis on predefined review intervals may lead to routine updates with limited added value, especially for stable, low-risk customers. There is insufficient recognition of event-driven monitoring, where relevant changes (e.g. transaction behaviour, customer activity, external risk indicators) provide more effective signals than the mere passage of time. The provision does not fully account for the increasing use of automated monitoring systems, which allow for continuous risk assessment and should reduce the need for periodic full reviews. Proposed solution: “Obliged entities shall update customer due diligence

Name of the respondent	Question	Answer
		information on the basis of risk-sensitive triggers, including significant changes in customer behaviour, risk profile, or external factors. Periodic reviews may be applied where appropriate, but shall not be mandatory where effective ongoing monitoring systems are in place." Justification: This approach would: Shift the focus from procedural compliance to effective risk detection, Reduce unnecessary administrative burden associated with low-value periodic reviews, Encourage the use of technology and data-driven monitoring, and Better reflect the principle of a risk-based and proportionate framework. Conclusion Reframing Article 33 in this way would enhance both the effectiveness and efficiency of AML/CFT controls, ensuring that resources are directed toward situations where risk is genuinely evolving, rather than maintaining static and potentially redundant review cycles.
Anonymous 11	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	18

Name of the respondent	Question	Answer
Anonymous 11	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 18 – Purpose and intended nature: risk of artificial or speculative assessments Comment: Article 18 requires obliged entities to understand the purpose and intended nature of the business relationship, including expected use, transaction patterns, and financial behaviour. While this objective is appropriate in principle, the current drafting risks encouraging speculative, standardised, or artificially constructed customer profiles, particularly at the onboarding stage. In practice: Customers—especially individuals or small-scale users—may not be able to clearly define expected transaction volumes or patterns in advance. Obliged entities may resort to generic assumptions or templates to fulfil the requirement, reducing the reliability and usefulness of the information collected. There is a risk that this requirement becomes a formalistic exercise, rather than a meaningful input into risk assessment. The provision does not sufficiently recognise that a customer's behaviour often becomes clear only over time, through actual usage. Proposed solution: "Obliged entities shall take reasonable steps to understand the purpose and intended nature of the business relationship at the outset, based on information available at the time.

Name of the respondent	Question	Answer
		Where such information cannot be meaningfully determined at onboarding, obliged entities may rely on ongoing monitoring to develop and refine their understanding of the customer's profile over time." Justification: This amendment would: Prevent the creation of low-quality or speculative data, Align regulatory expectations with realistic customer behaviour, Reinforce the role of ongoing monitoring as a core component of the risk-based approach, and Reduce unnecessary friction in customer onboarding processes. Conclusion Clarifying Article 18 in this way would improve both the quality and relevance of information collected, ensuring that it reflects actual risk rather than hypothetical expectations defined at the outset of the relationship.
Anonymous 11	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Anonymous 11	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 7 – Risk of disproportionate standardisation of remote onboarding Comment: Article 7 introduces detailed requirements for non-face-to-face identification and verification. While ensuring security in remote onboarding is essential, the current drafting risks creating a de facto standardised technological model, which

Name of the respondent	Question	Answer
		may not be appropriate across all sectors, customer types, and risk levels. In particular: The provision may be interpreted as requiring advanced or multi-layered technological solutions (e.g. biometric tools, video verification), even in low-risk scenarios. It does not sufficiently recognise that different combinations of controls (including simpler or manual processes) may achieve an equivalent level of risk mitigation. Smaller entities may face disproportionate operational and financial burdens, limiting their ability to offer remote services. There is a risk of excluding certain customer groups who may not have access to or be comfortable with advanced digital identification methods. Proposed solution: “Obliged entities shall determine appropriate non-face-to-face identification and verification measures based on the level of risk, the nature of the product or service, and the characteristics of the customer. No specific technology or method shall be required, provided that the measures applied ensure a level of reliability appropriate to the identified ML/TF risk.” Justification: This approach would:

Name of the respondent	Question	Answer
		Preserve the technology-neutrality principle, Avoid disproportionate compliance costs, particularly for smaller entities, Support financial inclusion and accessibility, and Encourage innovation and diverse solutions, rather than convergence around a single model. Conclusion Revising Article 7 to ensure greater flexibility would better align the RTS with a genuinely risk-based and proportionate framework, while maintaining robust safeguards against ML/TF risks.
Anonymous 11	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Anonymous 11	Please specify which recital you refer to, and share your comments below.	While the recitals (1) to (25) provide context and rationale for the RTS, several points could benefit from greater clarity and explicit recognition of proportionality and sectoral diversity: Recitals (5) and (6) – refer to the risk-based approach and proportionality. These recitals mention risk-based measures but do not explicitly emphasise the need for flexibility across different types of obliged entities, including smaller entities or those offering low-risk products. Without this clarification, there is a risk that the RTS could be interpreted in a rigid, one-size-fits-all manner, which may undermine proportionality. Recital (10) – highlights the role of technological solutions for identification and verification. It implies that advanced digital tools are the default solution,

Name of the respondent	Question	Answer
		which may inadvertently disadvantage smaller entities or specific customer segments who lack access to such technologies. A more balanced recital could explicitly acknowledge alternative approaches that are still effective in mitigating ML/TF risk. Recitals (15)–(17) – describe simplified due diligence measures. While these recitals recognise lower-risk scenarios, they do not provide guidance on when simplified measures are appropriate for certain products or services. Explicit examples or criteria could make the RTS more practical and consistent across sectors. Proposed language improvements: “Recitals (5) and (6) should explicitly recognise that the application of the risk-based approach and proportionality principles must reflect the nature, size, and complexity of the obliged entity, as well as the specific characteristics of products, services, and customers. Recital (10) should note that non-face-to-face identification and verification can be achieved through a range of methods appropriate to the risk, without imposing a single technological standard. Recitals (15)–(17) should provide examples of low-risk scenarios and simplified due diligence measures, to ensure practical guidance and consistency.” Justification: Improves legal clarity and reduces the risk of overly rigid

Name of the respondent	Question	Answer
		interpretation. Enhances proportionality, particularly for smaller entities and low-risk products. Supports innovation and inclusiveness in the application of identification and verification measures. Ensures the RTS is consistent with the overall objectives of AMLA, particularly Articles 28 and 29 regarding proportionality and risk-based measures.
Anonymous 11	Do you have any comments on the Annex in the draft RTS?	Yes
Anonymous 11	Please share your comments below.	The Annex in the draft RTS provides detailed templates and illustrative examples for customer due diligence (CDD) measures, reporting, and risk assessment. While it is useful for standardisation, there are several concerns: Over-prescriptiveness: The Annex is highly detailed and can be interpreted as mandatory rather than illustrative, potentially reducing flexibility for obliged entities to apply a risk-based approach. Smaller entities or those with lower-risk profiles may find some of the requirements burdensome or disproportionate, especially if the Annex is treated as a strict checklist. Lack of proportionality: Many fields in the Annex assume full access to information or technological tools (e.g., automated identity verification, extensive documentation). There is no explicit alternative for cases where such information is not available, which could hinder compliance and slow onboarding in legitimate low-risk scenarios. Sectoral applicability: Certain elements in the Annex are more relevant to specific sectors (e.g., financial institutions or high-value transactions).

Name of the respondent	Question	Answer
		The Annex does not clearly indicate which items are optional or context-specific, which could lead to unnecessary administrative burden for entities offering low-risk products or services. Proposed improvements: “The Annex should clearly indicate which fields and templates are illustrative rather than mandatory, allowing obliged entities to adapt them based on risk assessment and the nature of their customers and products. Optional pathways or alternative measures should be provided for situations where full information is unavailable, particularly for smaller entities or low-risk products. The Annex should also include sector-specific guidance or examples to clarify proportionality and applicability.” Justification: Enhances practicality and usability of the Annex. Supports a true risk-based approach and proportionality. Reduces unnecessary compliance burden on smaller or low-risk entities. Ensures that the Annex does not conflict with the broader objectives of AMLA or the risk-based approach required by Articles 28–29 of the Regulation.
Anonymous 11	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Anonymous 12	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i)	n/a

Name of the respondent	Question	Answer
	explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Anonymous 12	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	yes
Anonymous 12	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	n/a
Anonymous 12	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	n/a
Anonymous 12	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	I have an important remark regarding Art. 16 of the AMLD – Bank account registers and electronic data retrieval systems. There will be an obligation to record the data of vIBAN end-

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	users. However, there are two types of vIBANs: 1) those enabling incoming and outgoing payments, thus constituting payment accounts; and 2) vIBANs used only for reconciliation purposes, which redirect incoming payments into a master account. The second type does not constitute a payment account. Examples include vIBANs used by utility companies without a license to reconcile incoming payments for goods and services. Another example is the vIBANs used by financial institutions to collect and reconcile payments, such as credit repayments. It is not very clear if, in these last two situations, the master account providers should record the data of end-users in the register. Because the vIBANs in these cases are not payment accounts, there should not be such an obligation. However, this issue needs to be clarified.
Anonymous 12	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Anonymous 12	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Anonymous 12	Do you have any comments on the Annex in the draft RTS?	No
Anonymous 12	How would you rate the proposals set out in the draft RTS overall?	Neutral
Anonymous 13	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and	As a financial sector obliged entity operating as a management company of real estate investment funds under national supervisory oversight, we consider that the draft RTS can in principle be applied to our products and services.

Name of the respondent	Question	Answer
	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	However, certain aspects would benefit from clarification to ensure proportional application to financial institutions whose business model differs materially from retail banking or high-volume transactional environments. Our activities are characterised by: - A limited number of structured, high-value transactions; - A predominantly professional or corporate investor base; - Minimal exposure to cash; Transactions executed through regulated financial institutions and formalised legal processes. While the RTS is broadly adaptable, its structure appears calibrated primarily for high-frequency transactional models. In our sector, risk exposure arises more from structural and ownership considerations than from transaction volume or behavioural patterns. We therefore suggest clarifying that, for financial institutions operating in low-volume, highly formalised environments such as fund management, the application of the criteria should reflect the scale, transaction frequency and structural characteristics of the business model. Such clarification would enhance proportionality while preserving consistency.
Anonymous 13	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not	The draft RTS supports a structured and harmonised application of the risk-based approach (RBA), particularly through the categorisation of customer, product, channel and

Name of the respondent	Question	Answer
	agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	geographic risk factors. However, we note that the cumulative listing of structural indicators — such as multi-layered ownership, holding structures, or cross-border elements — may in practice lead to automatic high-risk classification if applied mechanically. In the real estate fund management sector, the use of: - Special purpose vehicles (SPVs); - Holding companies; - "SGPS"-type structures; - Cross-border investment vehicles, is commercially standard and often required for regulatory, fiscal or asset segregation purposes. These structural features do not, in themselves, indicate elevated ML/TF risk. To preserve the integrity of the risk-based approach, we recommend clarifying that the presence of structural complexity alone should not automatically trigger high-risk classification absent additional contextual risk indicators. This would ensure that the RBA remains genuinely analytical rather than checklist-driven.
Anonymous 13	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	In our sector, challenges may arise in situations involving: - Institutional investors investing through regulated collective investment vehicles; - Multi-layer cross-border structures where documentation flows may be delayed; - Regulated counterparties subject to confidentiality

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	frameworks. While beneficial ownership information is generally accessible through official registers, operational timing constraints may arise in cross-border contexts. In such cases, obliged entities typically rely on: - Official beneficial ownership registers; - Confirmation of regulated status; - Corporate documentation and declarations; - Information provided by supervised intermediaries. It would be helpful if the RTS clarified that, where obliged entities have taken reasonable measures and relied on official registers or regulated counterparties, this constitutes adequate compliance under the risk-based approach unless additional risk indicators are present. This would reinforce legal certainty without weakening AML/CFT standards.
Anonymous 13	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Given our profile as a financial institution managing regulated real estate investment funds, additional simplified due diligence (SDD) measures could appropriately be recognised in situations where the inherent ML/TF risk is demonstrably low. In particular, SDD could be explicitly permitted where: - The investor is a regulated EU financial institution; - The counterparty is an EU-regulated collective investment undertaking; - The investor is a public authority or supranational institution; - Transactions are executed exclusively via regulated EU credit institutions; - No cash element is involved.

Name of the respondent	Question	Answer
		We suggest clarifying that, in such circumstances and absent additional high-risk indicators, simplified measures may consist of: - Verification of regulatory status; - Confirmation of beneficial ownership through official registers; - Reliance on publicly available supervisory information; - Reduced intensity of ongoing monitoring where transaction patterns are predictable and contractually structured. In addition, from a real estate fund management perspective, we consider it important to recognise explicitly that certain low-value, low-risk contractual relationships — such as short-term or low-value lease agreements (e.g. parking spaces or storage units within regulated real estate assets) — may qualify for simplified due diligence. In practice, financial institutions managing real estate assets frequently apply full or near-full CDD measures to such relationships out of concern that simplified approaches may be considered insufficient under supervisory scrutiny. This results in disproportionate compliance burdens relative to the limited ML/TF risk exposure associated with: - Very low monetary value; - Standardised contractual terms; - Payments made exclusively through traceable banking channels; - Absence of complex ownership structures.

Name of the respondent	Question	Answer
		We therefore suggest that the RTS clarify that, where: - The contractual value is demonstrably low; - No cash payments are accepted; - No high-risk geographic or structural indicators are present; obliged entities may apply proportionate simplified due diligence measures, including streamlined identification and reduced ongoing monitoring. Such clarification would reinforce the genuine application of the risk-based approach and reduce unnecessary administrative burdens without weakening AML/CFT safeguards.
Anonymous 13	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We respectfully note that financial sector obliged entities increasingly apply enhanced due diligence frameworks not only to customers but also, in practice, to certain counterparties and service providers (e.g. property developers, asset managers, significant outsourced service providers). While the AMLR framework is clearly structured around customer due diligence, further clarification would be welcome as to whether the concepts of “business relationship” and “ongoing monitoring” under Article 28(1) are intended to apply strictly to customer-facing relationships (i.e. where the obliged entity receives funds or provides regulated services), or whether they may extend to supplier-side or operational counterparties. Absent clarification, there is a risk of divergent supervisory expectations across Member States, leading some obliged

Name of the respondent	Question	Answer
		entities to extend AML/CFT controls beyond their intended scope. Explicit confirmation that the primary focus of Article 28(1) remains customer-side ML/TF risk would enhance legal certainty and proportionality. In addition, from a real estate fund management perspective, we would like to highlight a practical issue that has arisen in the market: the application of full CDD measures to very low-value lease agreements, such as parking spaces or storage units within regulated real estate assets. These contracts are typically characterised by: - Low monetary value; - Standardised contractual terms; - Payments exclusively through traceable banking channels; - No cash acceptance; - No complex ownership structures; - Limited transactional variability. In practice, some obliged entities apply non-simplified CDD measures to such relationships due to uncertainty as to whether a simplified approach would be considered compliant with the risk-based approach. This results in disproportionate administrative burdens relative to the limited ML/TF risk exposure involved. We therefore suggest that the RTS clarify that low-value lease agreements, particularly where payments are exclusively executed through regulated banking channels and no high-risk indicators are present, may qualify for proportionate simplified

Name of the respondent	Question	Answer
		due diligence and reduced ongoing monitoring. Furthermore, we consider it important to address lease agreements entered into with public authorities or other public sector entities. Where the counterparty is: - A public authority; - A local or regional government entity; - A public body subject to EU or Member State public law; and its legal existence and status are publicly verifiable, the application of standard KYC measures should not be required beyond confirmation of official status and authorised representation. Explicit clarification that public sector counterparties do not require standard CDD measures — absent exceptional risk indicators — would enhance proportionality and avoid unnecessary duplication of verification steps in relationships where ML/TF risk is inherently low. Finally, we reiterate the importance of preserving proportionality for financial institutions whose business model involves a limited number of structured, high-value transactions rather than continuous retail transactional activity. The risk-based approach should allow such entities to calibrate controls according to their actual risk exposure, without creating incentives for defensive over-compliance.
Anonymous 13	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
Anonymous 13	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Anonymous 13	Do you have any comments on the Annex in the draft RTS?	No
Anonymous 13	How would you rate the proposals set out in the draft RTS overall?	Good
Anonymous 13	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Anonymous 13	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of	Manageable impact

Name of the respondent	Question	Answer
	Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Anonymous 13	Please justify your answer to the previous question and provide evidence where possible.	We consider that the implementation of the draft RTS would generate manageable additional costs, both at the one-off implementation stage and on a recurrent basis. While our obliged entity is already preparing for compliance with Chapter III of Regulation (EU) 2024/1624 (customer due diligence), the draft RTS introduce additional granularity and formalisation requirements that go beyond the high-level obligations set out in the Regulation itself.
Anonymous 14	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i)	I do not fully agree. The draft applies a largely uniform customer due diligence structure across all products and services, while the actual level of risk and control differs

Name of the respondent	Question	Answer
	explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	significantly between financial and non-financial sectors. In many cases – especially project-based, one-off or purely administrative engagements – there is no ongoing business relationship, no control over client funds and no effective insight into the client's financial operations. The current wording does not provide sufficient flexibility to address these differences. Proposed drafting direction: the standards should explicitly state that the depth of due diligence must be proportionate to the obliged entity's actual level of control and access to client funds or transaction decision-making. This would ensure proportional application and practical enforceability.
Anonymous 14	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	I partially agree. While the draft refers to a risk-based approach, several provisions effectively establish minimum data collection requirements that apply even in low-risk situations. This limits genuine risk-based discretion. A truly risk-based approach would allow obliged entities, on the basis of a documented risk assessment, to omit certain information where it is not relevant to the identified risk profile. Proposed clarification: the text should expressly state that, in low-risk situations and subject to proper documentation, certain data collection elements may be reduced or omitted.
Anonymous 14	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable	Yes, such situations exist, particularly for non-financial obliged entities. In many cases, full information on source of wealth, source of funds or overall financial background is not routinely available because the service provider does not handle client

Name of the respondent	Question	Answer
	and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	funds and has no visibility over the client's broader financial structure. The draft does not clearly address situations where information is objectively inaccessible. Proposed solution: where the obliged entity has no practical access to specific data, client declarations or other proportionate verification methods should be accepted, provided there are no inconsistencies or specific risk indicators.
Anonymous 14	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Additional simplified due diligence measures would be appropriate for products and services that present demonstrably lower ML/TF risk, particularly where the obliged entity does not handle client funds and does not execute transactions. Proposed drafting direction: simplified due diligence should automatically apply to services that are purely administrative, technical or advisory in nature and do not involve control over financial flows. This would enhance proportionality and reduce unnecessary compliance burdens.
Anonymous 14	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Several provisions introduce detailed data collection and documentation requirements without clearly demonstrating their direct impact on improving the effectiveness of money laundering detection. For each additional information requirement, proportionality, practical accessibility and measurable risk-mitigation value should be explicitly assessed. The objective of AML/CFT regulation should be the

Name of the respondent	Question	Answer
		management of real risks, not the expansion of administrative compliance obligations as an end in itself. The standards should therefore explicitly reinforce the scope for risk-based discretion.
Anonymous 14	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Anonymous 14	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	6
Anonymous 14	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 6 appears to assume that obliged entities have effective control over client onboarding comparable to financial institutions. This assumption does not reflect the operational reality of accounting service providers. Accounting firms typically enter into engagements after business relationships already exist and do not control client identification channels or financial transactions. Requiring accounting service providers to implement technically demanding identification and verification measures creates obligations that are disconnected from their actual role and risk exposure. The provision therefore risks transforming accounting firms into quasi-financial intermediaries without granting them equivalent access to information or control mechanisms. The article should explicitly recognise sectoral differences and limit enhanced identification requirements to entities that initiate or control financial transactions. Otherwise, the rule undermines proportionality and creates compliance obligations without corresponding risk mitigation benefits.

Name of the respondent	Question	Answer
Anonymous 14	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	11
Anonymous 14	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The concept of “complex ownership or control structure” lacks legal certainty when applied to accounting service providers. Accountants frequently work with multi-layer corporate structures that arise from legitimate tax, investment or international business considerations and do not indicate elevated ML/TF risk. The current wording risks automatic escalation of due diligence obligations based solely on structural characteristics rather than identifiable risk indicators. This encourages formalistic compliance and excessive documentation instead of meaningful risk assessment. The article should clarify that structural complexity alone does not justify enhanced measures unless accompanied by specific risk indicators accessible to the obliged entity.
Anonymous 14	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
Anonymous 14	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 18 requires extensive information regarding the purpose of the relationship and the source and destination of funds. For accounting firms, such information is often neither available nor verifiable, as accountants do not monitor transactions in real time and do not control client financial flows. The provision effectively obliges accounting firms to collect information beyond their professional access and competence, creating liability for information asymmetry rather than for risk management failures.

Name of the respondent	Question	Answer
		The article should explicitly allow reliance on client declarations and limit information requirements to data reasonably accessible within the scope of accounting services.
Anonymous 14	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	27
Anonymous 14	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The expectations regarding source of wealth and source of funds verification in higher-risk situations appear calibrated to financial institutions rather than accounting service providers. Accountants typically lack investigative powers, independent verification tools and transactional visibility necessary to substantiate wealth origin beyond reasonable professional judgment. Without clarification, the provision risks imposing an evidentiary standard approaching proof of legality, which exceeds the role of private service providers and shifts investigative responsibilities from authorities to accountants. The article should clarify that the required standard is reasonable assurance based on available information, not verification equivalent to investigative confirmation.
Anonymous 14	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Anonymous 14	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Name of the respondent	Question	Answer
	additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Anonymous 14	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS would generate significant additional costs for accounting service providers beyond those already arising from Regulation (EU) 2024/1624. One-off costs would include substantial revisions of internal AML procedures, redesign of client onboarding processes, acquisition or upgrade of identification and screening software, and extensive staff training. Accounting firms would also require external legal and compliance consultancy to interpret obligations that are calibrated primarily for financial institutions rather than professional service providers. Recurrent costs would arise from continuous monitoring obligations, repeated customer data updates, enhanced documentation requirements, and ongoing screening activities. These tasks would require allocation of additional personnel resources despite the fact that accounting firms do not control client funds or execute transactions. For small and medium-sized accounting firms, compliance activities would increasingly shift resources away from professional accounting services toward administrative risk documentation. The draft RTS therefore creates a structural compliance burden without granting accounting service providers additional investigative powers or access to financial intelligence necessary to meaningfully mitigate ML/TF risks.

Name of the respondent	Question	Answer
		As a result, the incremental compliance costs appear disproportionate to the actual risk exposure associated with accounting services and may negatively affect market access and operational sustainability for smaller obliged entities.
Anonymous 15	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Anonymous 15	Please justify your answer to the previous question and provide evidence where possible.	Our entity is a small company, with small customer base, mainly litigated leasing facilities.
A.N.T.I.C.O. - Associazione Nazionale Tutela Il Comparto Oro	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	With reference to the scope of application of the measures provided for in the draft RTS, it is generally considered that the proposed provisions are appropriate for the wide range of products and services offered by obliged entities. In particular, the rules concerning remote identification and verification of identity appear consistent with the digital evolution of services and sufficiently flexible to adapt to different operating models, including those that are predominantly online.

Name of the respondent	Question	Answer
		Similarly, the obligations relating to the collection of information on the source of funds in higher-risk cases appear, overall, proportionate and consistent with the risk-based approach envisaged by European and national legislation.
A.N.T.I.C.O. - Associazione Nazionale Tutela Il Comparto Oro	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	It is considered that the proposals contained in this draft RTS allow, on the whole, for the effective application of a risk-based approach for the purposes of compliance with anti-money laundering and countering the financing of terrorism (AML/CFT) obligations.
A.N.T.I.C.O. - Associazione Nazionale Tutela Il Comparto Oro	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	With reference to the customer due diligence (CDD) measures provided for in the draft RTS, it is noted that, while the provisions are generally acceptable, practical implementation difficulties could emerge in specific operational scenarios. This is particularly relevant for smaller-scale obliged entities or those characterized by limited organizational, financial, and technological resources. A particularly significant area concerns the use of automated tools for customer screening, verification, and monitoring activities. In certain instances, such tools may not be practically accessible to all operators, due to both high implementation and management costs and the technical complexity required to ensure their effective use in compliance with regulatory requirements. Furthermore, the reliability of automated systems can vary depending on the quality of the databases utilized, carrying the risk of generating incomplete or inaccurate results, or false positives. This risk is especially pronounced for operators that

Name of the respondent	Question	Answer
		do not have internal structures dedicated to AML/CFT compliance.
A.N.T.I.C.O. - Associazione Nazionale Tutela Il Comparto Oro	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No additional measures or proposals noted.
A.N.T.I.C.O. - Associazione Nazionale Tutela Il Comparto Oro	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	In general, the assessment of the draft RTS is overall positive. The proposed provisions appear to be consistent with the regulatory framework already in force within the Italian legal system, in particular with the provisions of Legislative Decree No. 231/2007 concerning the prevention of money laundering and terrorist financing. Specifically, the requirements envisaged for operators trading in investment gold or industrial gold are substantially aligned with the obligations already applicable to such entities under the national anti-money laundering legislation. This harmonization represents a positive element, as it will allow part of the obliged entities to operate within a regulatory framework that is already partly familiar and well established. It should be noted, however, that the extension of obligations to new categories of economic operators — such as entities trading in jewellery items, watches, and similar goods for amounts exceeding the relevant threshold — will entail significant organizational and training adjustment requirements, as these entities have not, to date, fallen within

Name of the respondent	Question	Answer
		the scope of anti-money laundering obligations. While the overall approach of the draft is shared, it is considered appropriate to highlight certain critical issues that deserve further consideration. In particular, with reference to the provisions concerning the identification and verification of the beneficial owner, a potential practical difficulty is noted in the Italian context. Currently, access to the Register of Beneficial Owners has been suspended following litigation pending before the Court of Justice of the European Union. This circumstance significantly limits the possibility for obliged entities to rely on what should represent the primary official source for verifying information relating to beneficial ownership.

	of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
ABACUS Limited	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Overall, we agree that the draft RTS can be applied across the range of services provided by our obliged entity. The RTS establishes a harmonised and risk-based framework that is, in principle, suitable for application across both financial and non-financial obliged entities, including DNFBPs. However, from a DNFBP perspective, certain provisions would benefit from clarification to ensure proportionate application across non-financial business models. (i) Areas where flexibility may be insufficient: • Certain provisions rely on structural indicators (e.g. nominee director involvement) without sufficient differentiation based on regulatory oversight or economic rationale. • Sanctions-screening expectations do not fully reflect DNFBP exposure to asset transfers.

Name of the respondent	Question	Answer
		(ii) Proposed clarifications: • Clarify that nominee arrangements should be assessed in light of the regulatory status and jurisdiction of the service provider involved. • Recognise the need for interim sanctions-screening measures where screening tools are not updated in real time based on firm-wide risk assessments. Rationale: These targeted clarifications would enhance proportionality and legal certainty for DNFBPs while preserving the effectiveness and harmonised application of the risk-based approach.
ABACUS Limited	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree that the RTS as currently formulated, consistently allows for the effective application of a risk based approach (RBA). While the RTS references proportionality and risk sensitivity, certain provisions rely on prescriptive criteria that may lead to risk mis calibration, particularly for DNFBPs. i) Provisions concerned • Article 12 – Complex structures The inclusion of nominee shareholders and directors as automatic indicators of complexity does not sufficiently distinguish between regulated, transparent arrangements (e.g. EEA regulated TCSPs) and unregulated. This approach risks treating well governed structures as inherently high risk, contrary to the RBA. Similarly, the use of legal arrangements such as trusts for family succession purposes, where trustee services are provided by EEA-regulated TCSPs, including those that may be members of the Society of Trust and Estate

Name of the respondent	Question	Answer
		Practitioners (STEP) and adhere to established best practices, is not differentiated. • Article 22 – 3rd country equivalence References to 3rd countries with AML regimes that are “no less robust” than the EU framework lack an objective determination mechanism. This introduces discretion and inconsistent application across obliged entities, undermining harmonised, risk based decision making. • Article 30 – Sanctions screening The RTS doesn’t sufficiently reflect operational constraints, like the time lag in updating commercial screening tools. For DNFBPs acting outside the traditional financial system, this creates a risk gap, despite the formal existence of screening controls. ii) Proposed clarifications & rationale • Article 12 (a) and (c) Clarify that nominee arrangements should be assessed in light of the regulatory status, jurisdiction and transparency of the service provider involved, rather than treated as an inherent risk factor. This would better align risk assessment with actual ML exposure and economic substance. Specifically, nominee arrangements provided by TCSPs should be differentiated based on: • Whether the TCSP is established within or outside the EEA and • Whether it is subject to a robust licensing and regulatory framework

Name of the respondent	Question	Answer
		TCSPs operating in mature regulatory regimes often provide additional safeguards rather than heightened risk. Treating all nominee arrangements uniformly contradicts the principles of proportionality, simplification, objectivity and most critically the RBA. Moreover, the reference to nominee directors appears unnecessary. Directors, irrespective of how appointed, remain subject to fiduciary duties and legal accountability. If the intent is to distinguish between TCSP appointed directors and others, it should be acknowledged that TCSP appointed directors are typically supported by the professional infrastructure of the licensed and regulated TCSP, whereas non TCSP directors may, in practice, pose higher governance risk. The current framing introduces an unjustified bias against TCSPs. Additionally, the provision of nominee directors by a TCSP should not be treated as a high-risk indicator by the TCSP, given the TCSP's deep operational insight and advance visibility over client decisions. A similar segregation can take place for legal arrangements like Trusts where the Trustee is an EEA licensed and regulated TCSP, that is also a STEP member and follows best practices. • Article 22 Mandate AMLA or the EU Commission to assess and publish a list of 3rd countries considered equivalent ("no less robust"), similar to the EU high risk 3rd country list. This would support consistent, risk based application and reduce discretionary

Name of the respondent	Question	Answer
		divergence. • Article 30 Explicitly acknowledge the need for interim or supplementary sanctions screening measures in high risk exposure scenarios (e.g. screening within 6 hours from publication) where screening tools are not updated in real time. This would ensure that the RBA remains effective in practice, not only in policy design. Screening frequency and depth must be calibrated based on each obliged entity's firm wide risk assessment, including geographic exposure. For jurisdictions and periods subject to frequent sanctions updates (e.g. Rus 22-24), screening controls must be intensified accordingly. This expectation should be stated, given that sanction breaches constitute national security risks. This is particularly critical for DNFBPs involved in asset transfers (e.g share transfers, vessels, aircraft, jewellery and other). The Regulation should place clearer emphasis on sanctions screening expectations based on the firm wide risk profile for all obliged entities, irrespective of size. Rationale: These targeted clarifications would strengthen the practical effectiveness of the RBA by focusing supervisory and compliance efforts on substantive risk drivers rather than structural or formal indicators, while enhancing consistency, proportionality and legal certainty across obliged entities.
ABACUS Limited	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due	No. Considering the nature, size, risk profile and complexity of our business, we do not encounter situations where the information required for customer due diligence under the

Name of the respondent	Question	Answer
	diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	draft RTS is routinely unavailable. In practice, where challenges arise in obtaining certain information at the outset, these are typically case-specific and can be addressed through the application of existing risk-based measures, including the use of alternative reliable sources, enhanced due diligence and phased or conditional onboarding, as already prescribed under Regulation (EU) 2024/1624 and the draft RTS. We consider that the draft RTS, when applied in conjunction with the overarching risk-based approach and proportionality principles embedded in the AMLR, provide sufficient flexibility to address exceptional or temporary data limitations without requiring additional alternative mechanisms. Accordingly, no further amendments or alternative solutions are proposed in this respect.
ABACUS Limited	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We do not propose the inclusion of additional simplified due diligence measures beyond those already noted in Regulation (EU) 2024/1624 and further specified in the draft RTS. In our view, the existing framework, particularly Article 33 of Regulation (EU) 2024/1624 and Section 5 of the draft RTS already provide sufficient flexibility for obliged entities to apply proportionate simplified measures in low risk scenarios, while ensuring that all core elements of customer due diligence are preserved. We therefore consider that the current drafting appropriately balances proportionality, risk sensitivity and the need for

Name of the respondent	Question	Answer
		harmonised application across sectors and Member States. Accordingly, no additional drafting proposals are recommended in this respect.
ABACUS Limited	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Yes. We have the following additional observations, which are relevant to the effective and proportionate application of the draft RTS and have not been fully addressed in the preceding responses. Article 2 – Names and identification attributes Observation: Article 2 requires obliged entities to obtain all names and surnames that appear on official identification documents. While the absence of a middle name should not prevent onboarding, where middle names are available, they can materially enhance identification and verification accuracy, particularly in cases involving common names. Rationale: From practical experience, middle names significantly reduce false positives and misidentification risk (e.g. in cases such as “Andreas Andreou” or “John Smith”), especially when screening against PEP and sanctions lists. Proposed solution: Clarify in Article 2 (or accompanying recitals) that, while not mandatory, the collection and use of middle names where available is encouraged as a good practice to strengthen identification and screening outcomes, consistent with the risk-based approach.

Name of the respondent	Question	Answer
		Article 6 – Documents for verification of identity Observation: Article 6(1)(e) refers to “security features” of identification documents but does not specify minimum standards. In addition, Article 6(2) allows for reduced documentary requirements for certain categories of persons (e.g. stateless persons) without clearly mandating compensating risk-mitigation measures. Rationale: The absence of minimum standards for security features and the acceptance of documents lacking key attributes (such as expiry date, document number or signature) may create material verification gaps and increase exposure to ML/TF risks, particularly in the current geopolitical environment. Proposed solution: Specify minimum qualitative standards for “security features” under Article 6(1)(e). Where Article 6(2) applies, explicitly require the application of Enhanced Due Diligence on ongoing monitoring procedures frequency intervals and/or additional verification measures until documentation meeting Article 6(1) standards is obtained. Article 18(e)(iii) – Regulated / obliged entity status Observation: Article 18(e)(iii) refers to whether the customer’s business activity or occupation is regulated. However, the provision does

Name of the respondent	Question	Answer
		not explicitly clarify that this includes obliged entities within the meaning of Regulation (EU) 2024/1624. Rationale: Being an obliged entity implies that the customer operates within a defined AML/CFT framework, including governance requirements, accountability mechanisms and the appointment of compliance functions. This materially affects the ML/TF risk assessment and the obliged entity's understanding of the purpose and intended nature of the business relationship. In addition, there is a substantive difference between EU-regulated obliged entities and entities subject to less mature or non-equivalent (less robust than the EU) regulatory regimes, which is not sufficiently reflected in the current drafting. Proposed solution: Amend or clarify Article 18(e)(iii) to explicitly state that references to "regulated" activities include obliged entities and to allow differentiation between EU-regulated and obliged entities and entities subject to less robust supervisory frameworks. This would support a more accurate and proportionate assessment of risk when determining the purpose and intended nature of the business relationship, in line with the risk-based approach. Overall rationale: These targeted clarifications would enhance legal certainty, reduce unnecessary operational burden and strengthen the effective application of the risk-based approach, while

Name of the respondent	Question	Answer
		remaining fully aligned with AMLA's mandate and the objectives of Regulation (EU) 2024/1624.
ABACUS Limited	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ABACUS Limited	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
ABACUS Limited	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Observation: There is an inconsistency between Article 3 and Annex I regarding the minimum address attributes to be collected. Specifically, the attribute "State" is included as a minimum requirement in Annex I but is not reflected in the requirements of Article 3. In addition, Article 3(c) allows for the inclusion of post office boxes as part of address information. Rationale: This inconsistency is not aligned with the principles of harmonisation and simplification, as it may lead to divergent interpretations and uneven application across obliged entities. Furthermore, the acceptance of post office boxes materially weakens traceability and is inconsistent with international best practices, as PO boxes are commonly used to obscure the actual location of natural or legal persons and may facilitate anonymity. Proposed solution: To ensure consistency and legal clarity, either the "State" attribute should be removed from Annex I or explicitly incorporated into the requirements of Article 3. In addition, references to post office boxes should be removed from Article

Name of the respondent	Question	Answer
		3, with address requirements limited to physical locations that enable effective identification and verification.
ABACUS Limited	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ABACUS Limited	Do you have any comments on the Annex in the draft RTS?	Yes
ABACUS Limited	Please share your comments below.	Article 3 and Annex I – Address information and minimum attributes Observation: There is an inconsistency between Article 3 and Annex I regarding the minimum address attributes to be collected. Name of the respondent	Question	Answer
		references to post office boxes should be removed from Article 3, with address requirements limited to physical locations that enable effective identification and verification.
ABACUS Limited	How would you rate the proposals set out in the draft RTS overall?	Good
ABACUS Limited	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
ABACUS Limited	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of	No significant additional costs

Name of the respondent	Question	Answer
	Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
ABACUS Limited	Please justify your answer to the previous question and provide evidence where possible.	Our AML/CTF control framework is largely aligned with the proposed CDD requirements set out in the draft RTS.
ABBL	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Respondents generally support the objectives and structure of the draft RTS. However, several provisions may prove difficult to apply consistently across the full range of products, services and operational models. Key concerns notably relate to identification requirements under Articles 2 to 8, ownership structure assessments under Articles 10 to 12, the treatment of SMOs and PPTAs, screening obligations under Articles 29 and 30 and remediation obligations under Article 33.

Name of the respondent	Question	Answer
		Respondents raised practical concerns regarding the collection of all names, surnames and nationalities, which may create technical implementation issues and relies heavily on customer self-declaration. Additional guidance would also be useful regarding multiple nationalities where different sanctions or risk implications may apply. Stakeholders also highlighted operational difficulties relating to place-of-birth requirements, noting that some official documents do not contain such information. Regarding Articles 6 and 7, respondents stressed that the RTS rely excessively on documentary verification and insufficiently recognise reliable data-based verification solutions already used across the financial sector. Mandatory documentary verification in fallback situations may create disproportionate burdens for low-risk onboarding and digital business models. Several respondents also noted that concepts relating to “reliable and independent sources” remain overly subjective and may lead to divergent supervisory expectations. Regarding Articles 10 to 13, respondents stressed that Article 11(4) may go beyond AMLR requirements, that Article 12 may capture legitimate international structures as “complex structures”, and that SMOs should not systematically be treated in the same way as beneficial owners. Further clarification is also requested regarding representatives

Name of the respondent	Question	Answer
		and PPTAs, pooled accounts, data update obligations, screening obligations and remediation timelines.
ABBL	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Respondents generally support the objective of strengthening harmonisation and AML/CFT effectiveness. However, several provisions are considered overly prescriptive and insufficiently aligned with the risk-based approach embedded in Regulation (EU) 2024/1624. Respondents therefore only partially agree that the RTS currently allow for an effective and proportionate application of the risk-based approach across all situations. Key concerns include excessive reliance on documentary verification in low-risk situations, insufficient recognition of reliable non-documentary verification methods, automatic complexity triggers based on non-EU incorporation, disproportionate treatment of SMOs and PPTAs, subjective concepts creating legal uncertainty and broad screening obligations generating operational burdens and false positives. Respondents notably consider that: • Article 7 insufficiently recognises existing reliable market solutions for remote onboarding; • Article 11(4) introduces subjective assessments that may go beyond AMLR requirements; • Article 12 may automatically classify legitimate structures as “complex structures” without sufficient risk sensitivity; • SMOs should not systematically be subject to equivalent due diligence measures as beneficial owners; • and certain provisions under Articles 24 and 26 could potentially create disproportionate obligations or implicit KYCC expectations.

Name of the respondent	Question	Answer
		Respondents therefore encourage AMLA to: • strengthen the technology-neutral and risk-based nature of Articles 6 and 7; • replace automatic complexity indicators under Article 12 with more qualitative and risk-sensitive assessments; • clarify that SMOs should not automatically be treated in the same way as beneficial owners; • allow proportionate reliance on regulated intermediaries, notably in CIU, omnibus and pooled account structures; • clarify that low-risk products and standardised business relationships should benefit from more proportionate information requirements; • and ensure that remediation obligations remain operationally feasible. These changes would improve proportionality, legal certainty, operational feasibility and consistency with the AMLR risk-based approach.
ABBL	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Respondents identified several situations where information required under the draft RTS may routinely be unavailable or difficult to obtain in practice. Respondents therefore consider that additional flexibility and clarification would be necessary in certain situations. Examples notably include: • official identity documents not containing place-of-birth information; • official documents not containing all nationalities; • refugee documents lacking facial images; • technical inability to record all names or nationalities;

Name of the respondent	Question	Answer
		• beneficial ownership registers not always being fully up to date; • difficulties obtaining information relating to SMOs or discretionary beneficiaries; • and uncertainty regarding acceptable fallback verification methods. These issues may particularly affect digital onboarding, low-risk onboarding, international customer relationships, wholesale and institutional business relationships and vulnerable or excluded individuals. Respondents therefore suggest: • accepting either the place of birth or country of birth where official documents do not contain both; • recognising technical limitations affecting names or nationalities; • allowing alternative documentary or non-documentary verification methods for refugees and vulnerable individuals; • clarifying acceptable fallback approaches where reliable information cannot reasonably be obtained; • allowing proportionate reliance on official registers notwithstanding possible delays in updates; • and recognising reliable data-based verification methods in low-risk situations. These measures would improve operational feasibility while maintaining effective AML/CFT safeguards.
ABBL	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your	Respondents consider that the RTS should include additional flexibility for low-risk onboarding and standardised products.

Name of the respondent	Question	Answer
	obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Respondents therefore encourage AMLA to introduce more proportionate simplified due diligence measures reflecting lower ML/TF risks associated with certain products, customers and business models. Suggested measures notably include: • reliable data-based verification methods for low-risk onboarding; • broader use of reliable independent open sources; • simplified remote onboarding methods where risks are low; • greater flexibility for low-value consumer credit and BNPL products; • additional financial inclusion measures for vulnerable individuals; • clearer reliance mechanisms for intermediary institutions and CIUs; • proportionate approaches for listed companies, public bodies and regulated financial institutions; • and simplified approaches for intra-group relationships and established interbank frameworks. Respondents stress that low-risk products and standardised business relationships do not always justify the same level of documentary verification as higher-risk scenarios. Respondents suggest the following drafting direction: "In low-risk situations, obliged entities should be permitted to rely on reliable and independent data-based verification methods, including trusted database-driven solutions, where these provide assurance levels comparable to traditional documentary verification measures."

Name of the respondent	Question	Answer
		Additional drafting proposals include: • clarifying acceptable reliance on reliable independent open sources; • allowing simplified remote onboarding methods where risks are low; • clarifying that customer-provided information may generally be sufficient for standardised low-risk products absent suspicion or additional risk indicators; • and recognising proportionate reliance frameworks for regulated intermediaries and CIU structures. These measures would strengthen proportionality, preserve technological neutrality and support innovation and financial inclusion.
ABBL	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Respondents provide the following additional article-specific observations that were not otherwise covered in previous responses. Article 6: clarification would be helpful regarding the notion of "consent" in non-face-to-face verification processes, including acceptable forms of consent recording and the consequences of consent withdrawal. Article 9: AMLA is encouraged to clarify how servicing institutions may differentiate virtual IBANs from non-virtual IBANs and how institutions may fulfil obligations under Article 22(3) AMLR where compliance depends on the cooperation of third-party issuing institutions.

Name of the respondent	Question	Answer
		Article 14: respondents consider that the trust deed should generally be considered sufficient for the identification of discretionary beneficiaries. Obliged entities should not be expected to assess or verify the actions of trustees or obtain letters of wishes systematically. Article 16: the notion of persons purporting to act on behalf of the customer should be clarified and limited to persons legally authorised to bind the customer. Employees acting in the ordinary course of professional duties should not automatically fall within scope. Article 17: CIUs and intermediated distribution models raise significant operational challenges. Requiring full look-through identification and verification of underlying investors behind omnibus or pooled accounts would duplicate CDD measures already performed by regulated intermediaries and could create disproportionate — and in certain cases operationally unachievable — obligations, as well as important data protection concerns. Respondents therefore encourage AMLA to focus Article 17 on whether the intermediary applies robust, risk-sensitive and equivalent CDD measures to its own customers and beneficial owners. Respondents also recommend removing any notion of “assurance liability”, which may create legal uncertainty and discourage the practical use of reliance or intermediary-based distribution models. Article 18 and Article 19: clarification is requested regarding the distinction between “lower risk”, “low risk” and “low degree of risk” terminology across the RTS and AMLR.

Name of the respondent	Question	Answer
		Article 21: respondents reiterate concerns regarding the contemplated look-through approach for CIUs and intermediary distribution models, which could significantly disrupt current EU fund distribution structures and create operational, legal and data protection challenges. Article 22: clarification would be helpful to confirm that, in low-risk situations, effective monitoring systems and absence of relevant risk triggers may justify reliance on existing customer identification data without requiring systematic refresh exercises. Article 24 to Article 27: respondents encourage AMLA to ensure that enhanced due diligence obligations remain fully aligned with Article 34 AMLR and continue to reflect a genuinely risk-based and proportionate approach. Article 29: clarification is requested regarding transliteration expectations and the operational feasibility of screening all possible combinations of names and aliases. Respondents finally encourage AMLA to ensure that future supervisory expectations remain operationally feasible, technologically neutral and proportionate across different sectors, business models and customer types.
ABBL	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ABBL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	9

Name of the respondent	Question	Answer
ABBL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 9: AMLA is encouraged to clarify how institutions may fulfil obligations under Article 22(3) AMLR in virtual IBAN structures where compliance depends on cooperation from third-party issuing institutions.
ABBL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	14
ABBL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 14: respondents consider that the trust deed should generally be considered sufficient for the identification of discretionary beneficiaries and that obliged entities should not systematically be expected to obtain letters of wishes.
ABBL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
ABBL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 18 (idem Article 19): clarification is requested regarding the distinction between “lower risk”, “low risk” and “low degree of risk” terminology across the RTS and AMLR.
ABBL	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	29
ABBL	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 29: clarification would be helpful regarding transliteration expectations and the operational feasibility of screening all possible combinations of names and aliases.
ABBL	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
ABBL	Please specify which recital you refer to, and share your comments below.	Recital 3: respondents welcome the clarification regarding multiple nationalities and identification data. However, this flexibility should also be reflected directly in the operative provisions relating to place of birth and nationality requirements. Recital 7: respondents encourage AMLA to provide additional practical examples regarding “legitimate reasons” and “other

Name of the respondent	Question	Answer
		credible means", particularly for vulnerable or financially excluded individuals. Recital 9: respondents welcome the distinction between SMOs and beneficial owners. This distinction should also be more consistently reflected throughout the operative provisions. Recital 14: respondents note potential tensions between the recital and existing CIU/intermediated distribution models. Further clarification would be useful regarding the interaction with reliance frameworks and intermediary structures. Recital 18: respondents encourage AMLA to clarify that correspondent relationships fall outside the scope of pooled account simplified due diligence provisions. Recital 25: respondents welcome the transition approach but encourage AMLA to provide additional clarity regarding trigger events occurring during remediation periods and the operational sequencing of future RTS and guidelines. Respondents generally encourage AMLA to continue using recitals to support harmonised implementation through practical and operationally realistic guidance.
ABBL	Do you have any comments on the Annex in the draft RTS?	Yes
ABBL	Please share your comments below.	Respondents did not identify major concerns regarding the Annex itself. However, several operational clarifications would be helpful to ensure consistent and proportionate implementation across sectors and business models. In particular, respondents encourage AMLA to ensure that:

Name of the respondent	Question	Answer
		examples and templates remain operationally realistic and technologically neutral; Annex-related expectations remain aligned with the AMLR risk-based approach; examples do not inadvertently create de facto mandatory practices beyond the Level 1 framework; and risk indicators remain illustrative and non-automatic. Respondents also encourage AMLA to ensure consistency between the Annex and the operative provisions, notably regarding simplified due diligence, ownership structures, screening expectations and low-risk situations. Finally, respondents would welcome additional practical examples illustrating proportionate approaches in low-risk and intermediated business models.
ABBL	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
ABBL	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Name of the respondent	Question	Answer
ACAMS Germany Chapter e.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The ACAMS Germany Chapter generally welcomes the clarifications and additional guidance provided by the draft RTS. In particular, we appreciate AMLA's efforts to strengthen harmonisation and proportionality while preserving a risk-based approach. At the same time, discussions with AML practitioners identified several provisions where additional clarification, operational guidance or further specification would be beneficial. This applies both to legal interpretation issues and to practical implementation challenges in day-to-day AML/CFT operations. In particular, several provisions may create uncertainty regarding: • the practical application of the risk-based approach, • supervisory expectations, • and the operational implementation of certain data collection and verification requirements. Detailed comments, examples and suggested clarifications are included in Annex I.
ACAMS Germany Chapter e.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Overall, the draft RTS appear generally workable for institutions operating in the banking and financial sector. However, certain areas would benefit from additional flexibility and clarification, particularly regarding: • pooled accounts, • trust and fiduciary arrangements, • and other products with demonstrably low ML/TF risk profiles. In practice, institutions frequently encounter scenarios where: • assets are clearly segregated, • the account holder is already subject to AML/CFT obligations,

Name of the respondent	Question	Answer
		• and additional formal customer due diligence measures provide limited additional AML/CFT value while generating significant operational burden. Additional clarification regarding the proportional application of simplified due diligence measures in such scenarios would therefore be welcome.
ACAMS Germany Chapter e.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The draft RTS contribute positively to strengthening the practical application of the risk-based approach. In particular, the inclusion of Article 1 on proportionality and the risk-based approach is expressly welcomed. Nevertheless, feedback from AML practitioners indicates that considerable uncertainty remains regarding: • the practical flexibility of the risk-based approach, • and the extent to which alternative but equally effective measures may be considered acceptable. In practice, many obliged entities continue to focus primarily on strict formal implementation of regulatory wording in order to minimise supervisory risk and avoid potential findings. This creates a risk that: • formal compliance considerations outweigh effective risk mitigation, • and proportionate implementation approaches are avoided despite potentially achieving better AML/CFT outcomes. Additional clarification regarding the operational application of the principle-based and risk-based approach would therefore be highly beneficial.
ACAMS Germany Chapter e.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	At this stage, we do not provide additional comments in relation to this question.

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
ACAMS Germany Chapter e.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We welcome AMLA's efforts to strengthen simplified due diligence measures and believe that additional clarifications regarding low-risk scenarios would further support proportionate implementation. In particular, additional clarification would be beneficial regarding: • low-risk trust and pooled account structures, • dormant retail accounts with limited functionality, • and certain consumer lending products. Dormant and restricted-use accounts We recommend that AMLA consider additional clarification for dormant accounts and other restricted-use relationships. In practice, institutions often maintain accounts that have been inactive for a prolonged period, have low balances, no active customer usage and restricted transaction functionality. In some cases, customer access is blocked, outgoing transactions are prevented, and only limited incoming transactions remain technically possible. Where such accounts are subject to monitoring controls and cannot be actively used by the customer, the ML/TF risk may be very limited. Requiring repeated customer outreach and full periodic data refresh for such accounts may generate substantial operational effort without meaningful risk reduction. We therefore suggest that the RTS clarify that simplified or reduced update measures may be appropriate where:

Name of the respondent	Question	Answer
		• the account is dormant or inactive; • outgoing transactions are blocked or materially restricted; • balances are low; • customer access is limited; • and monitoring is in place for unusual incoming transactions or reactivation attempts. In such cases, a full customer data refresh could be required upon reactivation or renewed customer engagement rather than during inactivity. _____ Consumer lending products Further clarification may also be useful for certain consumer lending products. Where the customer relationship is limited to a loan product, the customer's identity and financial situation are typically assessed at origination. If repayments are made from a known account and no unusual repayment patterns occur, repeated full customer data refreshes may provide limited additional AML/CFT value. This is particularly relevant where: • the loan has no flexible drawdown functionality; • repayments follow a fixed schedule; • the repayment account remains unchanged; • and no third-party or unusual foreign repayment flows occur. In such cases, enhanced review measures could be focused on specific risk events, such as: • unusually early repayment; • substantial third-party repayment; • repayment from high-risk jurisdictions; • changes to the repayment account; • or other indicators of unusual activity.

Name of the respondent	Question	Answer
		We therefore encourage AMLA to consider whether simplified ongoing due diligence measures may be appropriate for low-risk consumer lending relationships, subject to adequate transaction monitoring and trigger-based review controls.
ACAMS Germany Chapter e.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Recital 3 and Article 5 – Nationalities, statelessness and refugee or subsidiary protection status The current wording creates uncertainty regarding the relationship between nationality, statelessness and refugee or subsidiary protection status. In particular, it is unclear whether information on refugee status or subsidiary protection status is only expected to be collected where a customer is stateless, or whether such information should be collected as an additional data point irrespective of nationality. From an AML/CFT perspective, refugee or subsidiary protection status is not necessarily linked to the absence of nationality. A person may hold a nationality and nevertheless have been granted refugee or subsidiary protection status in an EU Member State. Conversely, a stateless person does not necessarily hold refugee status. This distinction is important for operational implementation. If obliged entities are expected to collect refugee or subsidiary protection status independently from nationality, this would require additional customer questioning, system fields, staff training and procedural controls. It may also raise practical and

Name of the respondent	Question	Answer
		data protection considerations, particularly where such information is not contained in standard identity documents. We would therefore welcome clarification on: • whether refugee or subsidiary protection status must be collected only where no nationality exists, • whether it must be collected independently from nationality, • and whether obliged entities may apply such questions on a risk-sensitive basis. A proportionate approach could allow obliged entities to collect such information where it is relevant for identification, risk assessment or document interpretation, rather than as a mandatory data point in all cases.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	2
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Further clarification would be helpful regarding whether customer information must always be obtained directly from the customer or whether obliged entities may also rely on reliable alternative sources. In practice, obliged entities frequently obtain or validate customer information through: • existing internal records, • public registers, • commercial databases, • trusted third-party sources, • electronic identification means, • or information received from other regulated entities. Requiring all information to be obtained directly from the customer could create avoidable friction and may reduce the efficiency of digital onboarding and periodic review processes. It may also lead to unnecessary duplication where reliable

Name of the respondent	Question	Answer
		information is already available from trusted sources. We therefore suggest clarifying that customer information may be obtained from the customer or from other reliable and appropriate sources, provided that the obliged entity can demonstrate the reliability of the source and the suitability of the information for the relevant CDD purpose.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	4
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 4 – Place of birth The requirement to collect place-of-birth information may create practical implementation challenges, particularly where the expected level of granularity is unclear. In practice, many identity documents contain only a city, municipality or region of birth, but not the country of birth. In other cases, the place of birth may refer to territories or states that no longer exist, or whose borders have changed over time. This is particularly relevant for customers born in former states or territories where current country allocation may be ambiguous. Requiring obliged entities to independently determine or reconstruct a country of birth in such cases would create operational burden and could introduce inconsistent data quality. It is also unclear whether such reconstruction would materially improve AML/CFT effectiveness. Additional complexity arises where electronic identification means are used. If eIDAS-compliant identity datasets provide only certain structured identity attributes, obliged entities should not be required to collect additional place-of-birth details separately unless this is clearly necessary and proportionate.

Name of the respondent	Question	Answer
		We therefore recommend clarifying that obliged entities may rely on the place-of-birth information available from the identity document or electronic identification dataset used for verification. Where only a city, municipality or region is available, this should be considered sufficient unless the customer's risk profile requires further clarification.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	8
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 8 – Reliable and independent sources The criteria for assessing reliable and independent sources are useful in principle. However, additional clarification would be beneficial regarding the expected depth and frequency of such assessments. In particular, it should be clarified whether the criteria in Article 8 are intended as cumulative mandatory requirements or as factors to be considered as part of a risk-based assessment. This is relevant because obliged entities may not always be able to independently verify the full technical, organisational and procedural controls of external data providers, electronic identification providers or database operators. In many cases, obliged entities rely on certifications, contractual documentation, audit reports, regulatory status or provider documentation. A requirement to independently validate all underlying provider controls in detail could be disproportionate, particularly where the provider is already subject to regulation, certification or independent audit. We therefore encourage AMLA to clarify that: • obliged entities may assess source reliability on a risk-sensitive basis;

Name of the respondent	Question	Answer
		• certifications, regulatory status, audit reports and contractual assurances may be considered relevant evidence; • reassessment should generally be required where material changes, incidents or reliability concerns arise, rather than as a continuous obligation without trigger. This would support consistent and operationally feasible implementation.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 10 – Information from other institutions We understand Article 10(b)(iii) as establishing a separate evidentiary mechanism allowing obliged entities to use information obtained from other institutions, without necessarily triggering the formal reliance framework under the AMLR. This distinction is important. In practice, obliged entities may receive or use information from other regulated institutions in a range of contexts, including account switching, correspondent relationships, syndicated lending, platform arrangements or other operational processes. If every such use of information were treated as formal reliance, this could create disproportionate contractual, procedural and liability implications. We would therefore welcome confirmation that Article 10(b)(iii) may be applied independently from the formal reliance regime, provided that the obliged entity remains responsible for its own CDD assessment and can demonstrate that the information used is appropriate and reliable.

Name of the respondent	Question	Answer
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	13
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Recital 9 and Article 13 – Senior Managing Officials Further clarification would be helpful regarding the scope of "senior managing officials" and the interaction between the RTS, Article 64 AMLR and Article 2(1)(40) AMLR. In larger organisations, a broad interpretation of "senior managing officials" could capture a large number of individuals below management board level. This may include persons with operational, regional or functional responsibilities who do not necessarily exercise ultimate control or material decision-making authority in relation to the customer or ownership structure. If all such individuals had to be identified and verified systematically, this could create substantial operational burden without corresponding AML/CFT benefit. We therefore encourage AMLA to clarify that obliged entities may apply a proportionate and risk-sensitive interpretation and focus on individuals who are genuinely relevant for understanding ownership, control or material decision-making. In particular, it should be clarified that: • not every senior employee below board level automatically qualifies as a senior managing official for CDD purposes; • the assessment should focus on actual authority and relevance for control or management decisions; • obliged entities may document the rationale for identifying relevant senior managing officials based on the specific customer structure. This would avoid unnecessary formal identification exercises and support a more meaningful application of the concept.

Name of the respondent	Question	Answer
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	12
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 12 – Complex corporate structures The draft RTS define “complex corporate structures”, while Annex III AMLR refers to “overly complex structures” as a potential risk indicator. This distinction is important. A structure may be complex for legitimate commercial, regulatory, tax, financing or governance reasons. Complexity alone should not automatically imply increased ML/TF risk. In practice, obliged entities need clarity on when a structure should be considered merely “complex” and when it becomes “overly complex” in a way that indicates potential concealment or increased ML/TF risk. Without further clarification, there is a risk that obliged entities treat all complex structures as higher risk, even where there is a legitimate rationale and transparency over ownership and control. This could result in unnecessary enhanced due diligence measures and inconsistent supervisory expectations. We therefore recommend clarifying that: • the existence of a complex structure does not automatically result in a higher-risk classification; • the risk assessment should consider whether the structure has a plausible legal, commercial or operational rationale; • “overly complex” should be linked to indicators such as lack of transparency, unnecessary layering, use of high-risk jurisdictions, nominee arrangements, bearer shares or unexplained control mechanisms. Such clarification would support a more proportionate and meaningful risk assessment.

Name of the respondent	Question	Answer
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	20
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Recital 19 / Article 20 – “High risk” vs “higher risk” and “low risk” vs “lower degree of risk” The RTS and AMLR use different risk-related terms, including “high risk”, “higher risk”, “low risk” and “lower degree of risk”. In practice, this creates uncertainty regarding the thresholds for applying standard due diligence, simplified due diligence and enhanced due diligence. This is not merely a drafting issue. In operational AML frameworks, risk categories are embedded in customer risk models, policies, systems, review cycles and escalation processes. Unclear terminology may lead to inconsistent implementation across institutions and Member States. In particular, it should be clarified whether “higher risk” refers to any risk above normal risk or only to situations that require enhanced due diligence. Similarly, it should be clarified whether a “lower degree of risk” is equivalent to “low risk” or whether it merely indicates a relative reduction within the standard risk category. We therefore encourage AMLA to provide clearer terminology and mapping between: • standard risk, • lower risk / low risk, • higher risk, • high risk,

Name of the respondent	Question	Answer
		• simplified due diligence, • and enhanced due diligence. This would support harmonised implementation and reduce unnecessary divergence between institutions and supervisors. The RTS under Article 40(2) of Directive (EU) 2024/1620 and Article 12(7) of Regulation (EU) 2024/1620 (AMLAR), requires obliges entities to report a inherent risk datapoint concerning the number of customers with 'high-risk activities' which should include at least, the activities mentioned under Annex III of AMLR which concern so-called higher risk Factors. It would be useful to understand if the presence of Higher Risk Factors pursuant to Annex III also trigger (1) an inherent high-risk rating for the costumer and (2) enhanced due diligence requirements. The same applies to data point "Total Number of customers (NP)with total assets under management over a value of at least EUR 5 000 000 AND with total assets over a value of at least EUR 50 000 000", without prior identification of a higher risk; would the presence of a HNWI as such (as defined above) entail an (1) inherent risk rating and would (2) enhanced due diligence requirements only be trigger in combination with the identification of other higher risk?"
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	22
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 22 – Pooled accounts We welcome the simplified due diligence measures introduced for pooled accounts. These provisions are helpful and recognise that certain pooled account arrangements can present limited ML/TF risk where appropriate safeguards are in place.

Name of the respondent	Question	Answer
		However, additional clarification would be beneficial regarding whether similar principles may also apply to other demonstrably low-risk pooled or fiduciary account structures. Examples may include: • rental deposit accounts, • fiduciary safeguarding accounts, • escrow-like arrangements, • statutory client money accounts, • or comparable structures where assets are segregated and the account holder is subject to professional or regulatory obligations. In such cases, full look-through CDD on all underlying parties may not always be proportionate, particularly where: • the account purpose is narrow and clearly defined; • transaction functionality is limited; • assets are segregated; • the account holder is regulated or otherwise subject to professional obligations; • and unusual transactions remain subject to monitoring. We therefore encourage AMLA to clarify that the principles underlying Article 22 may also inform the assessment of comparable low-risk pooled account scenarios, subject to appropriate safeguards and documented risk assessment.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	30
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 30 – Transliteration and original script requirements The current wording regarding original script and/or transliteration requirements creates significant operational uncertainty. Many existing banking systems are not designed to process,

Name of the respondent	Question	Answer
		store or screen customer names in non-Latin scripts. Even where such technical processing is possible, matching logic, screening tools and downstream reporting systems may not consistently support original-script data. There is also uncertainty regarding whether obliged entities are expected to obtain original-script versions of names, transliterations, or both. The practical meaning of “and/or” should therefore be clarified. Obliged entities should not be expected to independently perform transliterations where these are not provided by reliable sources. Independent transliteration may create inconsistency, false positives, false negatives and audit challenges. We therefore recommend clarifying that: • original script information should only be required where available from reliable sources and technically processable; • transliterations may be used where original script is unavailable or technically impracticable; • obliged entities are not expected to independently create transliterations without reliable source information; • implementation should be proportionate to the risk and technical capabilities of the relevant systems. This would avoid disproportionate technical implementation efforts while preserving effective screening outcomes.
ACAMS Germany Chapter e.V.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	30
ACAMS Germany Chapter e.V.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 30 – Alias names, patronymic and matronymic names Further clarification would also be beneficial regarding alias names, patronymic names and matronymic names. In practice, such names may not be contained in official

Name of the respondent	Question	Answer
		identity documents, may not be consistently structured as first or last names, and may not be reasonably obtainable or verifiable. In addition, cultural naming conventions differ significantly across jurisdictions. A broad obligation to identify all possible alias names or naming variations could create unrealistic expectations and substantial operational burden. It could also result in high false-positive volumes without materially improving screening effectiveness. We therefore encourage AMLA to clarify that obliged entities are expected to collect and use alias names, patronymic names or matronymic names where: • they are provided by the customer; • they are contained in reliable identity documents or official records; • they are otherwise known to the obliged entity; • or they are relevant based on the customer's risk profile. Conversely, obliged entities should not be expected to conduct independent investigations to identify unknown historical, cultural or informal naming variations in the absence of specific risk indicators.
ACAMS Germany Chapter e.V.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
ACAMS Germany Chapter e.V.	Please specify which recital you refer to, and share your comments below.	Recital 7 – Scope of verification obligations We understand the RTS as requiring obliged entities to collect relevant customer due diligence information, but not necessarily to independently verify every single collected data point through reliable and independent sources. This distinction is important. In our view, the core AML/CFT

Name of the respondent	Question	Answer
		objective is the reliable identification and verification of the customer's identity. Certain core identity attributes, such as name, date of birth and identity document information, are central to that objective. Other data points, such as residential address or supplementary personal information, may have different levels of relevance depending on the customer type, product, channel and risk profile. A mandatory requirement to verify every collected data point independently could create significant operational burden without necessarily improving AML/CFT effectiveness. This is particularly relevant in large-scale retail banking environments, where millions of customer records would need to be reviewed, updated and re-verified. We therefore encourage AMLA to clarify that: • not all collected data points must automatically be independently verified; • the intensity of verification may depend on the relevance of the data point and the ML/TF risk; • obliged entities may apply proportionate verification measures where the customer's identity has already been reliably established. Such clarification would support the risk-based approach and avoid disproportionate implementation efforts that do not materially enhance financial crime prevention.
ACAMS Germany Chapter e.V.	Do you have any comments on the Annex in the draft RTS?	Yes
ACAMS Germany Chapter e.V.	Please share your comments below.	Article 32 – Use of electronic identification means We welcome AMLA's support for electronic identification methods and the broader policy objective of enabling secure digital onboarding.

Name of the respondent	Question	Answer
		However, several RTS data requirements may not be fully aligned with the data structures and attributes available through eIDAS-compliant electronic identification means. This creates a practical risk that obliged entities may be required to collect additional formal data points outside the electronic identification process, even where the electronic identification means provides a high or substantial level of assurance. Such additional collection may reduce the operational benefits of digital identification and create unnecessary customer friction. This is particularly relevant where electronic identity datasets do not include all data fields required by the RTS, or where the relevant data field is available only in a different structure or level of granularity. We therefore encourage AMLA to clarify that: • eIDAS-compliant identification with an appropriate level of assurance should generally be considered sufficient for the verification of core identity attributes; • additional formal data collection should only be required where it is necessary and proportionate from an AML/CFT risk perspective; • RTS requirements should be aligned as far as possible with eIDAS identity attributes and Implementing Regulation (EU) 2024/2977. This would support both regulatory consistency and the practical use of secure digital identification solutions. _____ Recital 23 and Article 33 – Transitional arrangements and customer update timelines Further clarification is particularly important regarding Article 33 and the transitional application of customer data update

Name of the respondent	Question	Answer
		obligations. In practice, Article 33 may have a very significant operational impact. Obliged entities maintain large existing customer populations, often consisting of millions of customer records collected under previous legal and supervisory frameworks. The transition to the new AMLR and RTS framework will therefore require careful planning, system changes, data gap analysis, remediation processes, customer communication and operational capacity management. Several points require clarification. First, it should be clarified from which date the maximum customer data refresh periods start to run. In particular, it is unclear whether the relevant period starts: • from the date of the last customer review under the previous framework; • from the AMLR application date; • from the RTS application date; • or from another defined transition date. Second, it should be clarified whether existing customers become immediately overdue if their last review exceeds the new maximum periods at the time the AMLR or RTS becomes applicable. Such an interpretation would create a significant cliff-edge effect and could require large-scale remediation within an unworkably short period. Third, obliged entities require clarity on how to prioritise existing customer populations during transition. A risk-based remediation approach would be more effective than a purely chronological update obligation. Higher-risk customers and materially incomplete records should be prioritised, while low-risk, inactive or restricted-use relationships could be remediated over a longer period.

Name of the respondent	Question	Answer
		Fourth, the RTS should clarify how Article 33 interacts with ongoing monitoring obligations and trigger-based reviews. Where no material risk event has occurred and the relationship remains low risk, an immediate full data refresh may not materially improve AML/CFT effectiveness. We therefore strongly recommend that AMLA provide explicit transitional arrangements, including: • a clear start date for calculating maximum review periods; • confirmation that existing customers do not automatically become overdue solely because their last review predates the new framework; • permission to apply a risk-based remediation plan for existing customer populations; • sufficient transition periods for system and process implementation; • and clarification that trigger-based reviews and ongoing monitoring remain relevant elements of customer data maintenance. Without such clarification, Article 33 may result in extensive remediation exercises with limited additional AML/CFT value, while diverting resources away from genuinely higher-risk cases.
ACAMS Germany Chapter e.V.	How would you rate the proposals set out in the draft RTS overall?	Good
ACAMS Germany Chapter e.V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs	Disruptive impact

Accountancy Europe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Accountancy Europe welcomes the opportunity to provide feedback on the Draft Regulatory Technical Standards (RTS) on CDD under Article 28(1) of Regulation (EU) 2024/1624. We particularly appreciate that this consultation explicitly seeks input from the non-financial sector, as it is essential that the framework reflects the practical realities and risk profiles beyond financial services. Accountancy Europe brings together 49 professional organisations from 35 countries, representing close to 1 million professional accountants, auditors and advisors, and contributes their practical experience to the European policy debate. We note that the draft RTS represents a clear improvement compared to the version previously consulted on by the European Banking Authority. We welcome this progress and encourage AMLA to continue refining the RTS to ensure it is fully workable for non-financial obliged entities. To this end, we set out below our key concerns and recommendations. In several instances, we call for further clarification of specific provisions. These are needed to reduce

Name of the respondent	Question	Answer
		ambiguity and support consistent application in practice. Without sufficient clarity at EU level, there is a risk that interpretation is left to national supervisors, which could undermine the objective of the new AML legislation to establish a consistent and harmonised AML/CFT framework across the Union. Articles 18, 27 and 28 – Transaction-focused requirements and applicability to non-financial sectors The RTS remains heavily oriented towards the financial sector, despite its equal applicability to non-financial sectors. For accountancy service providers, whose services are generally relationship-based rather than transaction-driven, this approach is not appropriate and risks creating disproportionate operational burden. In particular, Articles 18, 27 and 28 are predominantly focused on transaction-specific information, which is more relevant to financial institutions such as banks. For example, Article 18(b), (c) and (d) requires information on the estimated amounts of funds, source and destination of funds, which is highly transactional in nature. While it is important for accountants to understand sources of funds and wealth as part of their KYC processes, the current wording appears focused on specific transactions rather than the broader context of client knowledge, making it difficult to apply in a meaningful and proportionate manner in our sector. Similarly, Article 28 is challenging to interpret in the context of service provision, as its requirements do not clearly align with

Name of the respondent	Question	Answer
		the operational realities and risk assessment practices of non-financial professionals. Recommendation We recommend clarifying that these requirements should be applied proportionately to the nature of the service provided, allowing obliged entities to rely on broader knowledge of the client and their activities rather than requiring transaction-specific information in all cases. In particular, we recommend revising the provisions on estimated amounts, source and destination of funds in Article 18(b), (c) and (d) to better reflect the operational reality of non-financial obliged entities. We also suggest introducing flexibility in Articles 18 and 28 by adding “where relevant” to support proportionate and practical application across sectors. In addition, clarification is needed on how obliged entities are expected to collect information on the purpose and intended nature of the business relationship under Article 18, including whether reliance on customer declarations is sufficient or if supporting evidence and documentation from the customer is required. It would also be helpful to confirm whether obliged entities may rely on information already available within a group. Clearer guidance from AMLA or sector-specific flexibility would help ensure proportionate and practical application across all sectors. Article 6(4) – Documents in a foreign language

Name of the respondent	Question	Answer
		This requirement may present practical challenges for obliged entities, in particular smaller entities in the non-financial sector that may not have the resources to systematically rely on professional translation services. Further clarity is needed regarding how obliged entities should ensure they understand the content of documents in a foreign language. Recommendation We recommend that AMLA clarifies whether obliged entities are expected to rely on professional translation services, or whether proportionate alternatives (such as machine translation tools e.g. Google translate or AI) may be used to support understanding of relevant documents.
Accountancy Europe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 1 The RTS sets out detailed CDD and ECDD measures which leaves limited scope for the consideration of the sector specific risks and the exercise of judgement. This risks undermining the AMLR's objective of enabling a proportionate and effective application of AML/CFT measures, including where the Regulation deliberately qualifies requirements by reference to necessity. Recommendation We strongly recommend that where possible in line with the Level 1 legislation, AMLA introduce clearer and more explicit risk-sensitive language throughout the RTS to ensure that detailed CDD and ECDD requirements can be applied in a proportionate manner. The RTS should clarify how obliged entities may adjust the scope, intensity, and frequency of measures based on the assessed ML/TF risk, including by explicitly allowing for the

Name of the respondent	Question	Answer
		exercise of professional judgement and consideration of sector-specific risks. This would enable obliged entities to tailor their CDD frameworks more effectively while remaining aligned with the risk-based approach set out in AMLR. Article 12 – Complex corporate structures We are concerned that requirements in Article 12 do not align with a truly risk-based approach and could create excessive administrative burden. For example, the article sets criteria for complex ownership and control structures defining them as cases with three or more layers between customer and beneficial owner, registered in different jurisdictions and with a legal arrangement or similar legal entity such as a foundation in any of the layers. This would classify many standard international group structures as 'complex', necessitating additional information gathering and assessment. Recommendation We recommend including a risk-based evaluation by obliged entities to determine whether an ownership and control structure is regarded as a complex or unusually complex corporate structure and to rewrite the article as follows (with the concept of "unusually complex" reflected as part of the risk-based assessment rather than as a separate legal category): "To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall take a risk-based approach to assess whether an ownership and control structure is a complex or unusually complex corporate structure. In any way, obliged entities shall treat an ownership and control structure as a complex structure where there are more than three layers between the customer and the

Name of the respondent	Question	Answer
		beneficial owner and, in addition, one of the following conditions is met: (a) There are nominee shareholders or nominee directors involved in the structure if those nominees were not licensed/regulated under EU AML regulation; (b) The structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification. Examples of other possible risk factors to evaluate are whether the customer and any legal entities present at any of these layers are registered in high-risk jurisdictions outside the EU." Article 13 – Information on SMOs and verifying their identity It is disproportionate to require the same level of information for SMOs as for UBOs. In many organisations, there are significantly more board members than UBOs, creating a substantial administrative burden without delivering meaningful risk mitigation. While the identification and verification of SMOs is required under Regulation (EU) 2024/1624 where no UBO is identified, the Regulation does not require the same depth or extent of information to be collected as for UBOs. Furthermore, requiring information on the source of wealth for SMOs seems disproportionate and not based on actual risk, as SMOs generally do not contribute funds to the business relationship. Imposing such requirements adds complexity and cost without improving the effectiveness of customer due diligence. Recommendation We recommend that the RTS clarifies that the extent of information collected on SMOs should be proportionate and risk-based and should not automatically mirror the

Name of the respondent	Question	Answer
		requirements applicable to UBOs. In particular, the RTS should allow obliged entities to prioritise one or more SMOs for enhanced scrutiny, where justified by risk, rather than requiring the same level of detail for all individuals. Regarding the verification of the SMOs' identity, we recommend that the RTS clarifies that such verification may be carried out on a risk-sensitive basis. We also recommend that the RTS specify that, where appropriate, obliged entities may rely on reliable and independent sources such as trade registers or publicly available information submitted to competent authorities (e.g. regulatory filings) for the purpose of verifying the SMOs' identity. This would reflect existing practices, ensure proportionality, and allow for efficient verification where the risk is lower and reliable public sources are available.
Accountancy Europe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 4 – Place of birth We recognise that information on the customer's country of birth may be of value for screening purposes. However, in practice, some official identity documents provide limited information on place of birth and may not include the country. Requiring obliged entities to obtain additional documentation solely to establish the country of birth may therefore be disproportionately burdensome, unless justified by specific ML/TF risk factors. Moreover, under eIDAS (Commission Implementing Regulation (EU) 2027/2977), only one "birthplace" data point is required, supporting a more proportionate approach.

Name of the respondent	Question	Answer
		Recommendation The RTS should clarify that the country of birth should be collected where available, and that obliged entities should not be required to obtain additional documentation solely for this purpose. Additional place-of-birth information should only be collected where available or where justified by risk. Article 6 – Identity verification While we acknowledge the objective of ensuring the integrity of identity documentation, the requirement for obliged entities to take reasonable steps to ensure that all documents obtained for identity verification are authentic and have not been forged or tampered with may be difficult to apply in practice, particularly where sophisticated verification tools or authoritative databases are not accessible. In many cases, obliged entities do not have access to authoritative sources, forensic tools, or state-level databases that would allow them to reliably detect sophisticated forgeries or document manipulation. Moreover, the level of assurance that can realistically be achieved varies significantly depending on the type of document, its issuing authority, and the features available for inspection, many of which are not standardised across jurisdictions. This measure may pose operational challenges for obliged entities, particularly smaller entities in the non-financial sector that may not have the resources to implement sophisticated authentication or detection tools to check for forged or

Name of the respondent	Question	Answer
		tampered documents. As currently drafted, the provision of the RTS risks creating an expectation of outcomes that go beyond what can reasonably be achieved through standard CDD controls and may expose obliged entities to undue regulatory risk despite acting in good faith and applying proportionate, risk-based measures. Further clarity and guidance are required on the reasonable steps that should be taken to ensure all documents obtained are authentic and have not been forged or tampered with, particularly in cases where remote/electronic identification solutions are not being used. Further clarity is also needed regarding what forgery/tampering checks should be performed for certified documents. Many obliged entities particularly in the accounting and audit sector rely on this documentation for CDD purposes. They often receive scanned copies of certified documents and may not always see the original document. A similar case can also arise with documents used to support proof of address with customers/clients often providing an online printout of a utility bill. Therefore, clarity is needed regarding what authentication checks should be performed on such documentation to confirm the documents are genuine. Recommendation We therefore recommend amending the RTS is as follows: Obliged entities shall, where there is an elevated risk of forging or tampering, take reasonable steps to ensure that all

Name of the respondent	Question	Answer
		documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with. We suggest AMLA outlines what checks obliged entities should perform to identify forged/tampered documentation and whether resources such as the Public Register of Authentic identity and travel Documents Online (PRADO) should be used by obliged entities to perform such checks.
Accountancy Europe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	General recommendations We recommend that the RTS include a simplified due diligence provision allowing obliged entities in lower risk scenarios to rely predominantly on official registers and similar sources to meet UBO and Senior Managing Official (SMO) verification requirements. In concrete terms, if a legal entity and its beneficial owners are assessed as lower ML/TF risk – taking into account factors like the customer's transparency, jurisdiction, and activity – the obliged entity should be permitted to verify the identity of each UBO by confirming the UBO's key identity details against at least one reliable independent source (for example, a national companies registry or a central UBO register), without needing additional proof of identity from the UBO directly, unless inconsistencies or higher risk indicators emerge. Where no beneficial owner is identified and a SMO is listed instead, the same simplified approach should apply to the

Name of the respondent	Question	Answer
		SMO's verification: the obliged entity could rely on official corporate records of the SMO's identity and position (e.g. an extract showing the person is a director or CEO) and use the company's registered office address in place of the SMO's personal address. This SDD measure is firmly in line with the risk-based approach set out in Article 33 AMLR and Recital 78, which emphasise that simplification means reduced scrutiny across all CDD elements but not omitting any of them. We keep all the standard elements (identifying UBOs/SMOs, verifying identities, recording required data) but propose doing so in a less burdensome manner for clearly lower risk cases. Article 20 and Article 21 – Simplified due diligence measures Article 20 and 21 measures lack elements of proportionality and a risk-based approach which will result in challenges for obliged entities. These measures do not reflect ability to rely on information collected elsewhere within the obliged entity's group. Recommendation A clearer indication in the simplified due diligence articles (Article 20 and Article 21) that if customer information is already available within the obliged entity's group, that this can be used and relied upon for performing simplified due diligence. This would support the principle of proportionality outlined in Article 1.

Name of the respondent	Question	Answer
Accountancy Europe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	General recommendation regarding information to be collected We recommend that throughout the RTS clarifications are provided outlining where it is possible that obliged entities can leverage collection of responses to self-declared questions via enquiry with customers and/or open-source search to support CDD. This includes gathering information regarding nationalities (Article 5), gathering information to support identification of the purpose and intended nature of a business relationship or occasional transaction (Article 18 and Article 26) or gathering information for enhanced due diligence (Article 25). Details regarding certified copy (Article 6(5)), certified by persons authorised for document certification purposes (Article 10(b)(iv)), and certified independent professionals (Article 27(d)) Further clarity and definitions are needed in this area across the various articles referenced above in addition to inclusion in Recital 5. This includes clarity and a definition regarding who can be a certified independent professional. Recommendation We suggest that a certified independent professional should be a reputable independent source such as a solicitor, accountant, or public notary. We suggest that a certified copy referred to in Article 6 should be one certified by this certified independent professional. Additional clarity and updated wording are needed throughout Articles 6(5), Article 27(d), and Article

Name of the respondent	Question	Answer
		10(b)(iv) regarding the area of certification of documentation by independent professionals. Article 6(6) – Electronic identification in face-to-face context The wording of this provision is unclear, and it is not evident in which situations electronic identification is intended to be used in a face-to-face context. This may create uncertainty for obliged entities when determining how to apply the requirement in practice. Recommendation Further clarification is needed on when electronic identification may or should be used in a face-to-face setting. In particular, it should be clarified whether automated or electronic solutions other than eIDAS-compliant tools (e.g. certified video identification with biometric and liveness checks) may be used in such cases where eIDAS is not utilised. In addition, the meaning of “where they are available” should be clarified. It is currently unclear whether obliged entities are expected to use electronic identification in all face-to-face situations where available, or whether they may continue to rely on traditional face-to-face verification methods and use electronic identification primarily for non-face-to-face scenarios. Providing this clarification would support consistent and proportionate implementation across obliged entities.

Name of the respondent	Question	Answer
		Article 7 – Non-face-to-face verification The requirements in Article 7 appear to assume the use of enhanced or more sophisticated verification measures in non-face-to-face situations, which may not be feasible for smaller obliged entities. For micro and small firms, implementing such measures may create disproportionate cost and operational burden. Recommendation We recommend clarifying that verification measures may be applied in a proportionate and risk-based manner, taking into account the size and resources of the obliged entity. Article 7(1) – Verification measures conducted on a non-face-to-face basis We perceive a lack of clarity and potential inconsistency between Article 7(1), which refers to electronic identification meeting the requirements of Regulation (EU) No 910/2014 (eIDAS), and Article 32, which refers to Annex 1 listing attributes required to fulfil the requirements of Regulation (EU) 2024/1624. In particular, it is unclear how the attributes set out in Annex 1 of the RTS relate to the minimum attributes defined in Annex VI of Regulation (EU) No 910/2014, as amended by Regulation (EU) 2024/1183 (eIDAS 2.0). The lists appear to differ, and in some cases the RTS and AML Regulation seem to require a broader set of attributes than those provided for under eIDAS.

Name of the respondent	Question	Answer
		This creates uncertainty as to how obliged entities should reconcile these frameworks in practice. Recommendation We recommend ensuring clear alignment between Article 7(1) and Article 32 and providing explicit clarification on how the requirements under eIDAS (Regulation (EU) No 910/2014, as amended) interact with and satisfy the attribute requirements set out in Annex 1 of the RTS. In particular, the RTS should clarify whether compliance with eIDAS is deemed sufficient, or whether additional attributes must be collected and verified to meet AML requirements. Providing this clarification would enhance legal certainty and support consistent and practical implementation across obliged entities.
Accountancy Europe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 5 – Requirement to collect details of all nationalities The obligation to collect all nationalities does not sufficiently reflect a risk based approach, as it applies uniformly regardless of the customer's risk profile. In many cases, requiring all nationalities may be disproportionate where additional nationalities do not materially affect the ML/TF risk assessment. Moreover, Recital 3 suggests that verification of one nationality

Name of the respondent	Question	Answer
		may be sufficient when multiple nationalities are declared in good faith, creating uncertainty as to which nationality information must be collected and verified. Recommendation The RTS should introduce flexibility to allow obliged entities to apply a risk-based approach when determining the extent to which multiple nationalities need to be collected and/or verified. It should also clarify that nationality information may generally be based on customer declaration and should only be subject to further verification where justified by risk factors. This approach should apply consistently to all relevant natural persons, where such information is required under the RTS.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6 – Documents for the verification of the identity Article 6 does not adequately address situations involving vulnerable individuals who do not have access to the types of identity documents envisaged in the RTS. In certain jurisdictions, including some third countries where there is no requirement to hold or carry a national identity document, individuals may not possess passports or other documents with the specified features. Without appropriate flexibility or alternative provisions, this could lead to unintended financial exclusion and may undermine the risk-based and proportionate approach required under Regulation (EU) 2024/1624. Recommendation

Name of the respondent	Question	Answer
		The RTS should provide greater flexibility and explicitly recognise alternative forms of verification where standard identity documents are not available, based on a risk-sensitive approach. In particular, AMLA should include examples of acceptable alternative documentation or verification methods, including cases where documents do not contain facial images. Reference could be made to approaches similar to those described in Recital 7 (e.g. for minors) and extended to other categories of customers where appropriate.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 7(3)(a) – Recommendation for remote solutions For smaller obliged entities, particularly those dealing with a low volume of non-face-to-face clients, we recommend that Article 7(3)(a) allows sufficient flexibility in the implementation of remote identification solutions, taking into account the size, complexity, and nature of the obliged entity. This would ensure a proportionate application of the requirements in line with the risk-based approach set out in Regulation (EU) 2024/1624. It would also be helpful if the RTS provided illustrative examples of acceptable remote onboarding and identification solutions beyond eIDAS-based tools, such as certified video identification processes incorporating biometric verification and liveness detection, where these provide an equivalent level of assurance. Article 7(4) – Verification measures conducted on a non-face-to-face basis

Name of the respondent	Question	Answer
		It is unclear how obliged entities will be expected to demonstrate that remote solutions comply with the requirements of Article 7, particularly smaller obliged entities that may not have internal assurance resources. Recommendation We suggest that further clarity and guidance is provided in this article regarding what assurance obliged entities should perform to demonstrate that remote solutions comply with the requirements of Article 7. We suggest adding wording and clarity if it will be sufficient for obliged entities to obtain assurances and certifications from third party providers that AMLA requirements have been met by their solution.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	8
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 8 – Reliable and independent sources of information The measures included in Article 8 lack sufficient clarity and precision particularly regarding how obliged entities are expected to manage reliable and independent sources of information in practice. Recommendation Further clarification would be helpful on how this requirement should be implemented. In particular, it should be clarified whether obliged entities may establish and maintain an overarching framework regarding reliable and independent sources of information (supporting a proportionate approach),

Name of the respondent	Question	Answer
		or whether this requirement must be evidenced and documented on a case-by-case basis within each individual customer file. Providing this clarification would support consistent and proportionate application across obliged entities. Article 8(d)) – Requirements related to information or data provided undergoing certain checks – Recommendation It would be helpful to provide examples if possible, regarding the checks expected in this instance.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	10
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 10 - Verification of beneficial ownership – availability of sources The RTS refers to the use of various public registers (e.g. residence registers, tax registers, passport databases, land registers) as reasonable measures for verifying the identity of the beneficial owner. However, many of these sources may not exist, are not accessible to obliged entities such as audit and accounting firms (e.g. due to legal or data protection restrictions) or are only available in certain jurisdictions. As a result, these sources do not constitute a practical or consistently reliable means of verification across Member States, which may limit the effectiveness and consistent application of the proposed measures. In addition, issues may arise regarding the reliability of information contained in public registers, as such information is

Name of the respondent	Question	Answer
		not always accurate or up to date, which can result in practical challenges when using such registers. Recommendation We recommend clarifying that obliged entities should only be expected to rely on sources that are legally and practically accessible to them, and that alternative verification measures may be used where such registers are unavailable or unreliable. This would ensure a proportionate, risk-based, and operationally feasible application across Member States. Furthermore, we suggest incorporating the principle reflected in Recital 8 into the operative text of Article 10, clarifying that consultation of central registers is necessary but not sufficient to fulfil verification requirements. Finally, Article 10(a) should be complemented with guidance on alternative verification measures in situations where there is a discrepancy between the information in the public register and verification information obtained from other sources. Article 10(b)(i) and Article 27(g) – Reasonable measures for verification of the beneficial owner and additional information on the source of funds and source of wealth General references to reputable credit agencies, data service providers, media publications, and commercially available service providers create legal and practical uncertainty for obliged entities when determining which sources may be relied upon for CDD purposes. This is particularly pertinent in a global

Name of the respondent	Question	Answer
		information environment that is increasingly vulnerable to misinformation and disinformation, as well as significant variations in the quality, reliability, and oversight of such providers across jurisdictions. In the absence of further clarification, this may lead to inconsistent application across obliged entities and Member States and may expose obliged entities to undue compliance risk despite acting in good faith. Recommendation Further clarity and guidance or definitions are needed regarding what is meant by various terminology used including reputable credit agencies, comparable reputable data service providers, reputable media publications, and reputable commercially available service providers that can be relied upon for CDD purposes. Article 10(b)(ii) – Reasonable measures for verification of the beneficial owner – requirements related to utility bills – Recommendation We suggest that additional wording is added in this article to clarify what the utility bill will be used for e.g. whether it can serve as a proof of beneficial owner's registered address. Article 10(b)(iii)) – Requirements related to up-to-date information from credit or financial institutions Further clarity is needed on how obliged entities are expected

Name of the respondent	Question	Answer
		to obtain up-to-date information from credit or financial institutions in practice. In particular, whether such information exchange is intended to be facilitated through information-sharing mechanisms or partnerships under Article 75 of Regulation (EU) 2024/1624. Recommendation It would be helpful to further specify in the RTS how obliged entities may request and receive such information from credit or financial institutions, including whether reliance on established information-sharing arrangements under Article 75 is envisaged. Providing this clarification would support consistent and operationally feasible implementation.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	14
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 14(2) – Identification and verification of beneficiaries of trusts and similar legal entities or arrangements - Recommendation We suggest that further clarity and examples are added to explain what is meant by 'timely updates, including on specific material events'. It would be helpful for obliged entities to understand what type of event constitutes a material event for example an obligation triggered to notify the obliged entity on the vesting of an interest. Article 16 – Identification and verification of the person purporting to act on behalf of the customer The RTS lacks clarity regarding the type of information and

Name of the respondent	Question	Answer
		documentation that may be used to verify the existence and scope of the power of representation. This may lead to inconsistent application across obliged entities. Recommendation: We recommend that AMLA clarifies what is meant by a “power of representation” for the purposes of this Article, including whether this refers, for example, to a formal power of attorney or whether other equivalent legal instruments or authorisations are also intended to be covered. Article 18 (e) (viii) – Information in relation to the business activity or the occupation of the customer – Recommendation It would be helpful to define stakeholders or to provide some examples of stakeholders that should be considered here.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	20
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Section 5 – Simplified Due Diligence (SDD) measures Section 5 on SDD in low-risk situations presents practical challenges. The concept of “low risk” is open to interpretation, which could lead to inconsistent approaches across firms and jurisdictions. SDD is most appropriately applied where there are no reasonable concerns regarding the existence or identity of the client for example, government bodies, agencies, or listed companies. In practice, accountants may classify clients as low risk, but the current wording risks encouraging a level of simplification that may not reflect the professional

Name of the respondent	Question	Answer
		responsibilities and oversight required in such contexts. Crucially, the RTS does not provide illustrative examples or criteria for what constitutes “low risk.” Without such guidance, firms may apply SDD inconsistently, potentially undermining the effectiveness of a risk-based approach and creating legal uncertainty. Recommendation We strongly recommend that AMLA include illustrative examples or clarifying criteria to support a proportionate, risk-based, and operationally practical application of SDD.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	22
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 22 – Sectoral simplified measures with respect to pooled accounts Accountancy firms may have pooled client accounts and may therefore be an account holder referred to in Article 22. Recommendation It would be useful to obtain further clarification as to how a financial institution will satisfy itself that the account holder “applies robust and risk-sensitive CDD measures on its clients and the clients' beneficial owners" given this will have a direct impact on accountancy firms who hold client monies and who open accounts with a credit institution in such cases.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	27

Name of the respondent	Question	Answer
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 27(b) – Additional information on source of funds and source of wealth of the customer and beneficial owners There is a potential for self-review risk and challenges regarding the ethical position, particularly for audit and accounting firms, where reliance is placed on information that has been prepared, processed, or subject to audit by another team within the same firm. Recommendation We suggest that the RTS explicitly recognises this risk and clarifies that obliged entities should not be required to rely on information that they have themselves prepared or audited, without appropriate safeguards. For example, the article could include wording such as: “excluding information that has been prepared by the obliged entity, unless appropriate safeguards are in place to mitigate self-review risks.”
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	30
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 30(a)(iii) – Screening requirements The requirement under Article 30(a)(iii) appears to assume that obliged entities have knowledge of “any other names, aliases, trade names, wallet addresses, where available in the lists of targeted financial sanctions”. In practice, obliged entities do not possess such information beyond what has been obtained through (E)CDD. As drafted, the provision is therefore not operationally feasible, as obliged entities cannot screen against identifiers they do not know.

Name of the respondent	Question	Answer
		Recommendation The RTS should clarify that obliged entities are required to screen only the customer data and identifiers obtained in the course of (E)CDD against the information contained in the lists of targeted financial sanctions. This amendment would ensure that the requirement is operationally workable and aligned with the information realistically available to obliged entities, while still achieving the objective of effective sanctions screening. Article 30(c)(iii) – Screening requirements The current formulation suggests that changes in residence, nationality, or business operations automatically constitute “significant changes” requiring an update of customer information. This approach is disproportionate and may unduly limit obliged entities’ ability to apply a risk-based approach, as not all such changes necessarily increase ML/TF risk. Recommendation The RTS should clarify that such changes should only be considered “significant” where they materially affect the risk profile of the customer, allowing obliged entities to assess their relevance on a risk-sensitive basis. This would ensure proportionality and preserve the risk-based approach, while still requiring updates where changes are genuinely relevant from an ML/TF risk perspective.

Name of the respondent	Question	Answer
		Article 30(d) – Screening and “without undue delay” The requirement to perform screening “without undue delay” lacks clarity. It is unclear whether this refers to keeping sanctions lists up to date or to re screening customers immediately following list updates. The absence of a definition creates uncertainty and risks inconsistent application across obliged entities and Member States. A strict interpretation requiring immediate or frequent re screening may also be disproportionate, particularly for low risk, long standing clients. Recommendation AMLA should clarify the meaning of “without undue delay” and confirm that the timing and frequency of re screening may be determined on a risk based basis.
Accountancy Europe	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	33
Accountancy Europe	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 33 – Entry into force The update of CDD information for existing high-risk customers to comply with AMLR and the RTS requirements may pose challenges for smaller obliged entities given the short timeframe. Such obliged entities may not have significant resources to collect information not previously required for example details regarding a customer’s nationalities, details regarding SMOs, or place of birth (as not included on all passports). Recommendation

Name of the respondent	Question	Answer
		We suggest AMLA considers adding a proportionality statement ('depending on nature, size, and complexity of the obliged entity') to this article to provide flexibility to smaller obliged entities in terms of the timelines for complying with the update of high risk customer documentation post entry into force of the RTS and the potential to provide more time to do this beyond one year. Implementation timelines and need for adequate transition periods We also have concerns regarding the implementation timelines. The Regulation is scheduled to enter into force on 10 July 2027; however, a significant part of the Level 2 and Level 3 measures has not yet been published for consultation. This creates a risk that the necessary framework for implementation will not be available in sufficient time to allow for proper preparation by obliged entities. In the absence of finalised Level 2 and Level 3 measures, there is a risk that entities may not be able to adequately adapt their systems, processes, and internal organisation to ensure timely compliance. Sufficient lead time is therefore essential to enable effective implementation. Recommendation We therefore consider it important that the relevant Level 2 and Level 3 measures are made available as early as possible and that appropriate transitional arrangements are put in place

Name of the respondent	Question	Answer
		to allow obliged entities to adjust to the new requirements in a structured manner. In this context, we refer to the Accountancy Europe publication "7 Principles for AML RTS Development," which states that RTS should be published well in advance of their application date to ensure that obliged entities and supervisors have sufficient time to prepare for compliance. It further recommends that a structured transitional framework be established, clearly defining the timeline, sequencing, and duration of implementation steps. Recital 25 & Article 33 – Practical implementation challenge In Recital 25, it is stated that the maximum periods of 1 and 5 years for updating customer information should start from the application date of this Commission Delegated Regulation for existing customers onboarded before Regulation (EU) 2024/1624 took effect. However, the RTS does not explicitly specify its application date. While it is understood that the RTS will apply from the same date as Regulation (EU) 2024/1624, the absence of an explicit reference may create uncertainty in practice, particularly in determining the starting point for the calculation of these review periods. Recommendation We recommend explicitly stating the application date of the RTS (i.e. 10 July 2027) in order to ensure legal certainty and consistent implementation.

Name of the respondent	Question	Answer
		In addition, we propose adding a line to Article 33 after paragraph 2 to clarify that references to Regulation (EU) 2024/1624 are understood as “counting from the application date of this Regulation”, to avoid any ambiguity in interpretation.
Accountancy Europe	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Accountancy Europe	Do you have any comments on the Annex in the draft RTS?	Yes
Accountancy Europe	Please share your comments below.	Annex 1 – Recommendation re Minimum attributes In Annex 1 "resident postal code, street, house number, address" is included as a minimum corresponding attribute despite not being a required data point under Article 3 of the CDD RTS because there is included “where available". We therefore recommend aligning the wording in the Annex 1 with Article 3 specifying “where available". General comment - Cost implications of the draft RTS We would like to highlight that the implementation of certain requirements in the draft RTS is likely to generate additional and potentially significant costs for obliged entities, including in the non-financial sector and especially for smaller firms. In particular, the requirements relating to the identification and verification of legal entities and arrangements, including

Name of the respondent	Question	Answer
		discretionary trusts (Article 15), may involve complex legal assessments. In practice, obliged entities may need to obtain external legal advice or formal legal opinions to ensure that customer due diligence is carried out correctly and completely. This may result in non-negligible compliance costs, which could be disproportionate for smaller entities. We also note potential cost implications in relation to: • verification of powers of representation (Article 16), where the absence of clear guidance may lead to reliance on external expertise and • requirements for non-face-to-face verification (Article 7), including the potential need to implement or access digital or technological solutions. While it is difficult to quantify these costs at this stage, it is clear that the cumulative effect of these requirements may be substantial. Recommendation We emphasise that the proposed compliance measures will have significant cost implications. In designing and calibrating the RTS, AMLA should explicitly consider the balance between the cost of implementation and the likely effectiveness of each requirement in detecting or preventing financial crime. We therefore encourage AMLA to ensure that the RTS are firmly grounded in the principles of proportionality and effectiveness, and that obligations are calibrated in a manner that is operationally feasible, particularly for smaller obliged entities and those in the non-financial sector.

Name of the respondent	Question	Answer
Accountancy Europe	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
ADAN	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We note that Article 18 of the draft RTS sets out the types of information that may be obtained to identify the purpose and intended nature of a business relationship or occasional transaction. In particular, paragraph (c) provides that obliged entities should obtain, where necessary, information to establish the source of funds, including examples such as employment income, pensions, government benefits, grants, or business revenues. While this list is not exhaustive, and therefore allows for flexibility in the types of information that may be collected, its current formulation reflects primarily traditional financial contexts and may not fully capture the specificities of crypto-asset activity. For example, in crypto, ‘’traditional’’ indicators such as salary or business income may not, in themselves, provide sufficient evidence on the provenance of the crypto-assets being transacted. In this context, there is an important distinction between source of wealth, and source of funds used in a specific transaction. Taking this into account, the examples provided in Article 18 predominantly relate to the source of wealth indicators, rather than to the immediate origin of crypto-assets used in a transaction. Prior to trading activity, crypto transactions often involve transfers between wallets or conversion between fiat and crypto-assets. As a result, relevant and reliable indicators of source of funds may include: transaction histories, wallet activity and exchange account statements.

Name of the respondent	Question	Answer
		While we understand that the article is not limitative and thus, allows for more information to be gathered, we recommend extending the list to include other reliable and confidential sources like extracts from exchanges. They provide more relevant information from a crypto-assets perspective, as they support to see how trades or deposits are done; in fiat versus in crypto. These, then work as a source of funds for crypto. Including this in the RTSs aligns with the current industry practices and will provide more legal certainty.
ADAN	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	N/A
ADAN	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	N/A
ADAN	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A

Name of the respondent	Question	Answer
ADAN	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	N/A
ADAN	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
ADAN	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ADAN	Do you have any comments on the Annex in the draft RTS?	No
ADAN	How would you rate the proposals set out in the draft RTS overall?	Neutral
ADAN	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or	Not applicable/no information available

Name of the respondent	Question	Answer
Adfiz	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We partially agree with the proposals but have reservations regarding their applicability to financial advisers who advise and intermediate in life insurance and mortgages. The draft RTS appears to have been developed primarily with larger institutions in mind. The specific position of financial advisers — who typically work with retail customers and standardized products — is insufficiently recognized. Implementation imposes a disproportionately large burden on small advisory firms relative to the actual ML/TF risk they face. We trust that the final RTS will acknowledge that financial advisers who advise and intermediate in life insurance and mortgages for exclusively or predominantly retail customers and standardized products typically face an inherently low ML/TF risk. This justifies a proportionate application of all due diligence requirements.
Adfiz	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We endorse the principle of a risk-based approach. In practice, however, the elaboration of the standards leaves little room for proportionate application by smaller entities. While the text allows for 'reasonable measures', it provides insufficient clarity on what this means in practice for a small financial adviser. The final RTS can clarify this concept through concrete practical examples and best practices. We have objections to the standard obligation in Article 4 to collect every customer's country of birth. Country of birth is in practice closely linked to ethnicity and national origin. The systematic collection and processing of this data in risk assessments can lead to indirect discrimination on grounds of

Name of the respondent	Question	Answer
		national origin. If country of birth is structurally factored into risk models, customers born outside the EU or in a region designated as 'high risk' will automatically receive a higher risk score, regardless of their individual circumstances. This can lead to potential targeted profiling that is at odds with the principle of individual risk assessment that the AMLR itself prescribes. Nationality (Article 5 of the draft RTS) is sufficient in most cases to identify risk factors related to countries. Under the GDPR principle of data minimization (Article 5(1)(c)), only personal data that is necessary for the purpose may be processed. Article 4 should be amended so that country of birth is only mandatorily collected when the identity document contains this information, or when an individual risk assessment provides specific grounds to do so.
Adfiz	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are situations in which the requested information is routinely unavailable. Country of birth is regularly absent from the customer's identity document. A driving license — a commonly used document in financial advisory practice — does not contain this information. The obligation to actively seek it elsewhere is, given the privacy risks involved, not justified as a standard measure. Article 7(1) requires the use of eIDAS electronic identification means at the 'substantial' or 'high' assurance level for remote verification. In Dutch practice, the availability of eIDAS-compliant means at this level for retail customers is limited.

Name of the respondent	Question	Answer
		DigiD Hoog — the only Dutch option meeting this level — has only recently become available, is not yet widely adopted, and requires a smartphone with NFC functionality and a passport or identity card with chip. Furthermore, DigiD is primarily a government tool; whether private parties such as financial advisers may use it for their own identification processes has not yet been fully clarified. The situation differs across Member States: in countries such as Germany and Belgium, eIDAS-compliant means have been available for considerably longer. The impact of the proposed obligation therefore varies significantly across Member States, and the Dutch sector is disproportionately affected. Although the alternative document-based route (Article 7(2)) is not entirely closed off, the current wording degrades it to an exceptional situation requiring justification. In Dutch advisory practice, however, this route is the common standard for remote onboarding — typically through a combination of a video call and the upload of an identity document. Under the draft RTS, a standard video call via a communication tool such as Microsoft Teams no longer meets the requirements of Article 7(3), as such tools do not provide automated document verification, liveness checks, or mandatory timestamped storage of images. Advisers would therefore be dependent on commercial identity verification services that do meet these requirements. The costs of such services typically range from €1 to €5 per verification, in addition to any subscription or implementation costs. For small firms and solo professionals, these are structural additional

Name of the respondent	Question	Answer
		costs that are disproportionate to the ML/TF risk profile of their practice. The final RTS should maintain the alternative document-based route as a fully valid and equivalent option, without requiring the obliged entity to justify the absence of eIDAS usage. Verification via a secure video call combined with document inspection should be explicitly recognized as an acceptable method. The obligation in Article 11 to obtain a comprehensive understanding of the ownership and control structure for all non-natural person customers is difficult to implement for small firms that occasionally serve business customers with complex structures. The final RTS should clearly establish that the depth of this investigation may be proportionate to the assessed risk.
Adfiz	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The draft RTS contains few concrete additional simplified due diligence (SDD) measures. We understand that AMLA cannot independently extend the exhaustive list of SDD situations in the AMLR, but note that the current list does insufficient justice to the position of financial advisers in life insurance and mortgages. In cases where the product provider — the life insurer or the mortgage lender respectively — itself also performs customer due diligence, duplicating extensive due diligence by the financial adviser is unnecessary. We advise AMLA to convey this signal to the European legislator, and to provide as much scope as possible in the final RTS for proportionate application

Name of the respondent	Question	Answer
		for this sector. The final RTS could, for example, include an explicit exemption for financial advisers in life insurance and mortgages who work exclusively or predominantly with retail customers and standardized products with a demonstrably low ML/TF risk.
Adfiz	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We wish to raise two additional points. First, the need for concrete practical clarity. The draft RTS are technically and legally complex. For small advisory firms without a dedicated compliance department, correctly interpreting and applying the standards is challenging. We advise AMLA to include concrete practical examples in the final RTS that clarify how the standards apply in the day-to-day practice of small, obliged entities, preferably developed in cooperation with national supervisors and sector representatives. We explicitly do not call for additional rules or standards — we call for clarification of the existing text. Second, the accessibility of the consultation process itself. The way in which AMLA solicits input — through an extensive questionnaire with technical questions and strict character limits — creates a barrier for parties that are accustomed to submitting responses in their own format or by letter. While we understand why AMLA applies this stringent format, we advise that future consultations offer more accessible forms of participation, such as an open question format, the option to submit a letter, or direct dialogue with sector representatives.

Name of the respondent	Question	Answer
Adfiz	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Adfiz	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	4
Adfiz	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The standard obligation to collect country of birth when this information is not present on the customer's identity document is disproportionate under the GDPR principle of data minimization. Nationality suffices in most cases. We propose the following alternative text: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name, where this information is available from the identity document, passport or equivalent provided by the customer. Obliged entities shall not be required to actively seek this information from other sources unless the risk assessment of the individual customer provides specific grounds to do so."
Adfiz	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
Adfiz	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The wording of paragraph 2 should be amended so that the alternative route via remote document solutions remains available as a fully equivalent option, and so that verification via a secure video call combined with document inspection is explicitly recognised as an acceptable method. We propose the following amendment: "In cases where the solution described in paragraph 1 is not available to the customer, or where the customer does not make use of such means, obliged entities may [...]."

Name of the respondent	Question	Answer
Adfiz	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	11
Adfiz	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	It is important that the final RTS clarifies that the depth of the investigation into ownership and control structures may be proportionate to the assessed risk, and that a more concise description suffices where a low risk profile has been established.
Adfiz	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	20
Adfiz	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The final RTS should include an explicit provision for financial advisers in life insurance and mortgages who work exclusively or predominantly with retail customers and standardized low ML/TF-risk products.
Adfiz	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Adfiz	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Adyen N.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i)	Whilst Adyen notes and appreciates the efforts made in this draft RTS on CDD ('RTS:CDD') to instil increased flexibility, some provisions continue to enforce a level of rigidity that may

Name of the respondent	Question	Answer
	explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	challenge application across Adyen's range of products and services. Moreover, Adyen would like to dispute the effectiveness of certain requirements in mitigating ML/TF risk. The inclusion of these requirements may be disproportionate, particularly in low-risk situations, and may lead to information collection without commensurate risk mitigation. In Adyen's view, the current draft does not provide enough possibilities to adjust customer data collection, identification and verification to its business model that is predominantly related to payments. This challenges the notion of proportionality, and more broadly challenges key principles enshrined in the Europe Union legislative framework, like data minimisation under GDPR. For all its products and services, Adyen sees an issue in the collection of information on all nationalities of a customer. Article 5 RTS:CDD imposes this requirement, and Article 20 RTS:CDD mandates it even in the context of Simplified Due Diligence ('SDD'). This information would not be readily available to Adyen, and would accordingly have to be collected from the customer during the onboarding. The crux of the issue lies in the collection of every nationality an individual may hold, as this seems disproportionate and practically unworkable. There is no central register of nationalities and as such proving fulfilment of this requirement is unlikely. Furthermore, documentation for secondary or tertiary nationalities is unlikely to exist, and even where it does, the collection would be a point of friction that is not commensurate with ML/TF risk mitigation. As such, we put forth that the focus should be on the principal nationality of the customer. The principal nationality, as declared by the customer - or as reflected on the

Name of the respondent	Question	Answer
		ID document supplied - should be sufficient in the context of fulfilling Article 5. Only where there are doubts about the accuracy of the nationality declared, or in situations requiring enhanced due diligence ('EDD'), is further investigation possibly warranted. As such, Article 5 RTS:CDD should be amended to state: "obliged entities shall obtain information on the principal nationality (…) of the customer, and to verify it only where doubts exist". This ensures sufficient flexibility for obliged entities to tailor due diligence to the information provided whilst being cognisant of other risk indicators. Furthermore, in relation to SDD under Article 20 RTS:CDD, we recommend removing the requirement to collect nationalities altogether as the mandate challenges the very notion of a simplified approach to due diligence in the context of low-risk scenarios. More generally, Adyen would like to raise its concern related to the identification of data like nationality, and the discriminatory practices that this may (unintentionally) cause. The use of such information may cause issues like risk profiling that is influenced by nationality. This may in turn lead to a more difficult onboarding for individuals from certain nationalities compared to others. This and other knock-on effects could pose a direct affront to the goal of enabling access to the financial system, and the Union's wider focus on equality. Similarly, for all its products and services, Adyen would like to pose a challenge to the collection of Place of Birth as mandated under Article 4 RTS:CDD. In the context of CDD, the importance of Place of Birth seems negligible, particularly where information has already been gathered on the customer's (principal) nationality, residence and principal place of business

Name of the respondent	Question	Answer
		address. Identification of Place of Birth is not mandated currently and, as such, this would require a significant uplift to the onboarding processes of obliged entities, with little established risk mitigation as a result. The recital references obtaining this information “from other sources”. However, in practice there are no Place of Birth registers nor is this information likely to be discoverable through other public sources. As a digital first fintech, seamless onboarding is paramount and the collection of data points without clear risk mitigation is discouraged. Adyen posits that customers should be assessed on their current (economic) footprint, and not subjected to enhanced friction based solely on where they were born. With the GDPR principle of data minimisation in mind, we therefore recommend the exclusion of this requirement, or to only collect it where the information is readily available on the primary identity document, passport, or equivalent used for identity verification. This addresses the data unavailability and otherwise inherent operational friction that collection of this data point would instil.
Adyen N.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The first concern pertains to Article 7 RTS:CDD. Whilst Adyen appreciates the importance of identity verification, limiting it to only two mechanisms is cause for concern. By requiring either (i) eID at assurance level 'substantial' or 'high' and qualified trust service providers, or (ii) an alternative remote solution for document collection with extensive safeguards and justification, insufficient flexibility is afforded to obliged entities. In lower-risk situations, there should be room for alternative solutions - for example, where a customer onboards to process a few low-volume transactions and stores funds on a closed-loop wallet or one that can only pay out to a verified

Name of the respondent	Question	Answer
		bank account. Adyen recommends that Article 7 be amended to facilitate innovation and a risk-based approach, including room for data-driven solutions subject to supervisory approval. The following language is proposed: "5. In situations of lower risk, obliged entities are allowed to utilise an alternative remote solution that does not meet all conditions under paragraphs 3 and 4, if it has proven the alternative remote solution's efficacy and it has been approved by their competent authority." The RTS on CDD should allow flexibility to develop identity verification solutions that evolve alongside emerging fraud trends, rather than stifling innovation through prescribed methods. Another concern pertains to Article 11(2) RTS:CDD, which requires obliged entities to obtain detailed information on legal entities and legal arrangements between the customer and the beneficial owner, where there is "more than one legal entity or legal arrangement" in the ownership chain. This threshold is low, as intermediate entities in corporate structures are standard practice for employment, regulatory, liability, or operational reasons. Whilst Adyen understands, and appreciates, the importance of understanding ownership the focus should remain on identifying and verifying those who ultimately hold ownership. Adyen recommends greater risk sensitivity in the trigger for collecting information on intermediate entities. As drafted, this Article risks setting an unnecessarily high bar for lower-risk situations, diminishing an obliged entity's ability to apply a risk-based approach. Article 12 RTS:CDD already sets requirements for complex ownership structures, where a deep-dive into ownership would be more proportionate. Furthermore, the mandate under Article

Name of the respondent	Question	Answer
		11(4(b)) to assess the "economic, legal or other rationale behind the structure" is disproportionate for most customers. This goes beyond understanding ML/TF risk and general legitimacy, and with the low bar of "more than one legal entity," the operational burden would be significant. This assessment seems more fit for complex ownership structures. Adyen therefore suggests that paragraph 2 and 3 of Article 11 be decreased in prescriptiveness, and that the mandate to assess the rationale behind the structure under paragraph 4(b) be made risk-sensitive. Regarding Article 12(1)(b) RTS:CDD, Adyen would like to raise an inherent limitation on the ability to apply a risk-based approach. The draft RTS defines "complex" ownership structures as those having three or more layers between the customer and the ultimate beneficial owner, in addition to meeting more than one specified condition. One such condition denotes that an intermediate entity registered outside the EU directly contributes to structural complexity. This means any non-EU intermediate entity will automatically contribute to the assessment of complex ownership, regardless of the specific AML/CFT risks of the jurisdiction. This condition is too broad, as registration outside the EU does not in itself indicate elevated ML/TF risk. It treats a structure involving a United States-, United Kingdom-, or Singapore-registered entity identically to one involving an entity in a higher-risk third country. Adjusting the provision to focus on third countries with insufficient AML/CFT standards would enable a more risk-based approach. Accordingly, the following amendment is proposed: "the customer and any legal entities present at any of these layers are registered in high-risk third countries identified pursuant to

Name of the respondent	Question	Answer
		Article 29 of Regulation (EU) 2024/1624, third countries with compliance weaknesses identified pursuant to Article 30 of that Regulation, or third countries posing a specific and serious threat identified pursuant to Article 31 of that Regulation." This incorporates the calibrated approach to third-country risk already defined under Articles 29, 30, and 31 of AMLR, better delineating complexity to jurisdictions posing higher risk due to deficiencies in their ML/TF frameworks.
Adyen N.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Adyen appreciates the opportunity to comment on information availability. Obtaining additional information can be a point of customer-friction and competitive disadvantage. This impact is most felt when the information to be collected is not available through public sources, and can solely be gathered through customer declaration. Collecting information without a strong link to risk mitigation is therefore strongly discouraged, and Adyen is concerned that this may apply to certain information outlined under Article 18(b) RTS:CDD, including intended use (when it can be derived) and estimated amounts. Whilst understanding the purpose and nature of a business relationship is fundamental, mandating the upfront collection of estimated financial volumes and transaction frequencies is unlikely to benefit this assessment. This is largely due to the fact that this self-declared information is unreliable and cannot be verified via public sources. Additionally, any monitoring baseline established on the basis of information that is declared incorrectly, whether in good or bad faith, is likely to lead to ineffective monitoring. Instead, Adyen believes that obliged entities should be able to focus on the customers' actual behaviour through event-driven and transactional monitoring. This better addresses the actual and evolving risk, rather than focusing on the hypotheticals of static information

Name of the respondent	Question	Answer
		(incorrectly) declared upon onboarding. Accordingly, the RTS:CDD should move away from mandating envisaged information, and should rather encourage sufficient and effective event-driven and transactional monitoring. We suggest adding “when deemed necessary to understand purpose and nature of the business relationship and inform monitoring” to Article 18(a) and removing the “at least one” from Article 18(a) and (b). This ensures resources are dedicated to active risk management, rather than an information gathering exercise. In Adyen’s response to Question 2, concerns were raised in relation to the data that is prescribed to understand the customer’s ownership and control structure. Adyen would also like to take the opportunity to highlight the challenge of information unavailability in this domain. The definition of Complex Ownership relies on the identification of more than 3 layers, presence of legal arrangements, registration of entities in jurisdictions outside of the EU, and nominee shareholders/directors. Much of this information is not readily available to obliged entities, as it is not often stored in central registers nor other reliable public sources. Consequently, it must be largely collected through customer’s declaration. To exacerbate this concern, bad actors are less likely to declare information that they know is likely to subject them to increased scrutiny. The challenge for obliged entities is balancing this increased data collection exercise with identification of actual bad actors. As such, Adyen emphasizes the need for this information to be more readily available in relevant central registers and public sources to ensure that the identification of relevant complex corporate structures is

Name of the respondent	Question	Answer
		forthcoming, and resources can instead be focused on the risks associated with the customer. Enablement of information sharing and informative registers is therefore paramount to a proportional implementation of these requirements, Adyen therefore implores AMLA to provide greater clarity on timelines, information sharing practices between obliged entities, and expectations of relevant registers. In relation to central registers, and the information available therein, Adyen would also like to raise the following for AMLA's consideration. In Article 16 of the RTS on CDD, obliged entities are required to verify the "existence and extent of the power of representation". Whilst Adyen acknowledges the importance of this requirement, it is important to reflect on the availability of this information. Currently, information held on legal representatives is not harmonised in the EU, or always readily accessible. Ensuring better governance of legal representatives through clear registration mandates would address data availability and prevent fraudulent misrepresentation. Moreover, it ensures that the requirement can be met at scale for large obliged entities that onboard large volumes of customers at a time. This ensures operational resources can be utilised elsewhere benefiting risk mitigation as a whole.
Adyen N.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	Adyen commends AMLA's commitment to proportionality and a risk-based approach, and appreciates AMLA's consideration of simplified due diligence as a means for accomplishing this goal. However, within its business model and customer portfolio, Adyen sees multiple lower risk scenarios that are not explicitly recognised in the draft RTS, for example, in relation to sub-customer relationships for Platform businesses. Adyen

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	consequently puts forth that to truly enable a risk-based approach within the EU AML/CTF framework, the following points should be contemplated. First, and foremost, greater flexibility must be afforded to the level of information to be collected during simplified due diligence. In its current drafting, the RTS on CDD makes little distinction between simplified and standard due diligence. Removing the enforcement of information like Place of Birth and nationalities for natural persons during simplified due diligence is one proposal that should be considered. In relation to the verification, greater risk sensitivity could also be introduced. Here, Adyen refers mainly to the limited options for identity verification and consequent exclusion of (data-driven) alternative solutions. Furthermore, whilst AMLR mandates that verification must occur within 60 days of the business relationship being established, it is worth considering whether volume threshold-based delays should also be enabled in certain contexts to further delay verification. To limit the scope of these more far-reaching simplified due diligence measures, Adyen would like to suggest AMLA to consider defining additional lower risk products (or services) for which this lower level of simplified due diligence may be applied. This would enable even greater risk-sensitivity, and ensure further proportionality. To this end, Adyen puts forth the following products for consideration. Firstly, Acquiring and settlement services. These are those provided by an obliged entity to a merchant ('the customer') for the acceptance of (card) payments in exchange for the sale of goods and/or services. In this context, the purpose of the

Name of the respondent	Question	Answer
		business relationship is clear and of a reduced scope: the acceptance of a payment in exchange of goods and services and the subsequent settlement of the acquired funds to a bank account held at another financial institution. As such, simplified due diligence could be warranted. To further restrict the application of this further-simplified due diligence, volume based-thresholds could be utilised. AMLA could indicate under which thresholds it deems an Acquiring service to be lower risk, similarly to the way it has set thresholds for High Value Goods Dealers. Secondly, e-wallet services within set parameters (such as payouts to predefined, verified and single external bank accounts in a closed-loop environment) should be considered for the explicit specification of lower risk, and could consequently be in scope of the further-simplified due diligence measures. Article 19(7) of AMLR already sets the framework for exempting e-money (and thereby wallets) from customer due diligence but sets restrictive measures. These restrictive measures include the non-reloadability and 150 EUR limit. We put forth that e-money can be considered low risk within wider boundaries also. Wallets that can only be used within a set marketplace, for example. Adyen is not seeking an exemption to customer due diligence, but does emphasize the need for greater flexibility for Acquiring and related e-wallet services. This flexibility should focus on lesser identification verification under Article 7 RTS:CDD, and limiting the need to collect information on the purpose and nature of the business relationship (where inherent controls in the service ensure the use-case is limited).

Name of the respondent	Question	Answer
		To conclude, Adyen emphasises the importance of sectoral (product) specific SDD allowances, particularly for low-level acquiring and wallets. AMLA has the opportunity to enable financial technology, and improve financial accessibility by taking these suggestions into account.
Adyen N.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Adyen applauds the further codification of proportionality and a risk-based approach through Article 1 of the draft RTS on CDD. The risk-based approach should be the backbone of AML regulation within the European Union, and Adyen acknowledges its importance in ensuring resource optimisation, proportionality and financial inclusion. Furthermore, as the risk-based approach is explicitly mandated by FATF, its inclusion throughout AMLR and this RTS ensures that the European framework aligns with this cornerstone of global AML guidance. It is, however, regrettable that whilst the spirit of AMLR and this RTS seems to echo that of FATF, little consideration is given to this interplay in the draft RTS itself. As such, Adyen would like to put forward the following consideration. Article 16 AMLR enforces group-wide policies, and Article 17 AMLR mandates that the requirements of the AMLR are enforced upon branches and subsidiaries in third countries where the minimum AML/CFT requirements are less strict than those set out in the AMLR. This means that the CDD requirements set out in this RTS transcend the borders of the European Union. Adyen posits that the impact of this should not be understated, and must be carefully considered. As such, further clarification is required on whether Article 17 AMLR refers to third countries as outlined under Article 30 AMLR - or whether the scope of this mandate is broader in regards to

Name of the respondent	Question	Answer
		CDD measures that are “less strict”. If it is the latter, this is of vital importance, as numerous non-EU countries maintain AML/CFT frameworks that are equivalent to EU standards and those set by FATF (re. FATF Equivalence). If in these countries, CDD requirements must still be applied in alignment with this draft RTS on CDD, this could pose significant issues. The first issue that is foreseen is one of practicability. By example, while Adyen strongly supports secure remote identity verification, Article 7 of the draft RTS on CDD relies heavily on European-specific technological frameworks that do not reflect the global digital identity landscape. For a global fintech operating in third countries, including those with FATF-equivalent AML/CFT regimes, these prescriptive standards could create compliance barriers. Article 7(1) of the draft RTS on CDD establishes electronic identification means meeting Regulation (EU) No 910/2014 (eIDAS) 'substantial' or 'high' assurance levels, or relevant qualified trust services, as the primary standard for remote verification. This is a distinctly European legal and technical reality. Many highly regulated, FATF-compliant jurisdictions (such as the United States, United Kingdom, Australia, and Singapore) offer their own remote identity verification solutions, but without mutual recognition they cannot be used. This could present a significant bottleneck for the utilization of eID and directly challenges this cross-border application. The secondary option of collecting an ID document, passport or equivalent using remote solutions is hampered by the strict safeguards set out. As such, a degree of equivalence for third countries and alternative verification solutions is needed and

Name of the respondent	Question	Answer
		must be more explicit. More broadly the AML/CFT framework of FATF equivalent countries must be recognised and space afforded to apply regional requirements when they can be considered equal to those in Europe. This consideration is vital to enable the workability of the overarching mandate of group-wide policies. The issue is similarly relevant to the corroboration of beneficial ownership through the use of central registers. Whilst such registers may exist in third countries, their accessibility and content differs significantly. The United States, for example, has exempted US entities from declaring their beneficial ownership. This illustrates how regional choices may challenge the application of the draft RTS on CDD. Australia does not currently have a Beneficial Ownership register, and instead simply mandates record keeping for reporting entities. In Singapore, access to the UBO Register is restricted to law enforcement. This international reality illustrates the complexity of applying the requirements set out under the draft RTS on CDD in third countries. This complexity calls for a level of mutual recognition, or equivalence, to ensure European headquartered institutions are not forced to face a severe regulatory risk in regards to the operations of their branches and subsidiaries in third countries. This regulatory conflict must be addressed, and the cross border application carefully considered. Without sufficient regard for mutual recognition, both for eIDAS solutions but also AML/CFT frameworks generally, the effects of this regulation and RTS can be detrimental. The application not only being impossible by virtue of certain regional limitations, but also

Name of the respondent	Question	Answer
		likely leading to unfair competition from local entities who can apply the local standards.
Adyen N.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Adyen N.V.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Adyen N.V.	Do you have any comments on the Annex in the draft RTS?	No
Adyen N.V.	How would you rate the proposals set out in the draft RTS overall?	Neutral
Adyen N.V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee	Disruptive impact

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: One-off implementation costs	
Adyen N.V.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Not applicable/no information available
Adyen N.V.	Please justify your answer to the previous question and provide evidence where possible.	Adyen anticipates significant costs in relation to the implementation of AMLR and the related RTS on CDD. This is due to the resources required from technical, operational and legal teams to bring about relevant changes to policies and procedures, system upgrades, and staff training. These intensive efforts are likely to be felt by any institution attempting to navigate and comply with this stringent

Name of the respondent	Question	Answer
		regulatory landscape, particularly as requirements (such as the ones in this draft RTS) are still subject to change. It is difficult to say at this junction whether recurrent costs will be disruptive, although we expect that costs related to maintaining integrations, and accessing certain registers could have an tangible impact. It is still to be seen whether this will amount to a disruptive and/or manageable impact.
AECM - European Association of Guarantee Institutions	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	For guarantee institutions acting as partners to lending banks, the customer onboarding and support processes are typically managed by the financing institution. These customers are almost exclusively corporates, and development loan operations inherently carry a low risk of money laundering. The guarantee is also linked to the underlying transaction loan, so that a failure of this customer's contractual relationship with the principal bank also prevents or terminates the customer relationship with the guarantee institution. An independent business relationship of the guarantor alone is not possible with guarantees, since guarantees are by nature accessory to the underlying loan; a separate individual fulfilment of the due diligence obligations does not appear to be expedient as the KYC measures only fulfil their purpose together with the lender. An independent business relationship without the loan as the underlying transaction is in fact legally impossible. As such, the KYC, updating and reporting obligations should only exist jointly with the principal obligated party/house bank for guarantee institutions, at least in the case of pure collateralisation, and adequate regulations should be created, as already laid down in Germany by the FIU and BaFin in their guidelines for obliged entities, in order to avoid duplicate KYC and reporting.

Name of the respondent	Question	Answer
AECM - European Association of Guarantee Institutions	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	AECM warmly welcomes the revised proposals in the draft RTS, as they now place a far stronger emphasis on proportionality and risk-based compliance with AML/CFT requirements. The new drafting introduces much more flexibility and proportionality for low-risk scenarios, ensuring that obligations are tailored to the actual risk posed by customers and transactions. This shift aligns with the AMLR's core principles and significantly reduces unnecessary administrative burdens, while maintaining robust safeguards where they are most needed. The changes reflect a pragmatic and effective approach, making compliance more achievable for guarantee institutions and other obliged entities without compromising the integrity of the AML/CFT framework. That being said, we still have targeted comments on some specific provisions from the revised RTS, as detailed in the next section of the consultation.
AECM - European Association of Guarantee Institutions	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	AECM identifies several situations where the information required by the draft RTS is routinely unavailable or impractical to obtain for promotional SME guarantees. Guarantee institutions may have no direct contact with SME beneficiaries, so it is often very hard to collect information on the customer's ownership structure or sources of funds, and most importantly, this information is already assessed by partner banks during the loan process. To address these issues, we propose to allow guarantee institutions to rely entirely on the information provided by the house bank – which is itself subject to AMLR requirements – for all customer due diligence requirements, as their CDD processes are already robust and comprehensive.
AECM - European Association of	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	N/A

Name of the respondent	Question	Answer
Guarantee Institutions	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	
AECM - European Association of Guarantee Institutions	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	N/A
AECM - European Association of Guarantee Institutions	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We support the use of established video identification solutions for customer verification in a non face-to-face context, as these solutions would provide a sufficient level of protection against identity fraud. Remote solutions can be more accessible for customers who may not have eIDAS-compliant electronic identities, such as those belonging to vulnerable groups, which is particularly important for guarantee institutions whose mission is notably to ensure financial inclusion. In that sense, we advocate for remote solutions to be a permanent alternative where e-IDAS-compliant solutions are not feasible/accessible. Moreover, we

Name of the respondent	Question	Answer
		warmly welcome the possibility for obliged entities to accept reproductions of an original document, often the easiest and most straightforward way to verify the identity of a customer in a non face-to-face context.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	8
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Further clarification is needed on what is meant by “risk-sensitive measures to assess the credibility of the source.” The current wording leaves room for different interpretations, particularly with regard to the level of due diligence expected for different risk categories.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	11
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The extensive requirements to understand the customer’s ownership and control structure in the case of complex structures go beyond the wording of the AMLR. Furthermore, it contradicts the risk-based approach that the AMLR explicitly promotes by not allowing the option of less stringent information collection in a low-risk scenario.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	12
AECM - European Association of	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	This article contains a very broad definition of “complex structures.” Many clients naturally have several layers of ownership, sometimes in different jurisdictions. Applying this

Name of the respondent	Question	Answer
Guarantee Institutions		definition without a risk-based differentiation could lead to unnecessary bureaucracy. We recommend allowing for proportionality and a risk-based assessment.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	14
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	We suggest clarifying what is meant by “sufficient information” in the context of both articles, e.g. by providing practical examples, in particular for complex trust structures or for cases where information is not publicly available.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	18
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Many of the requirements are too broad in scope in the framework of general due diligence obligations for normal risk scenarios. This contradicts the risk-based objective of Article 28 of the AMLR, as the wording of the provisions already sets out very detailed requirements and leaves no room for choice. In cases where no higher risk is apparent, this unnecessarily ties up capacity and impairs the customer relationship. In line with the reasoning and the principle of proportionality, we call for obliged entities to be given greater leeway in obtaining the relevant information, as these scenarios are explicitly not covered by the EDD. In terms of content, we often see no need to collect the documents mentioned in order to identify and understand the purpose and nature of the business relationship or occasional transaction.

Name of the respondent	Question	Answer
		Some provisions partially go beyond the legal basis in Art. 20 (1) (c) of the AMLR. Even under the EDD, obtaining detailed information about a customer's source of funds should not be a standard. It is an intrusive measure that should be applied selectively and only in clear high-risk situations. Treating it as a default requirement in any higher risk context is counterproductive and inconsistent with genuine risk prioritisation. While we understand that such information may be useful for clarification in cases of doubt or suspicion, it seems disproportionate in standard CDD scenarios such as the opening of a payment account by an individual or the execution of routine transactions. Moreover, for guarantees institutions who have no direct contact with the SMEs but work in partnership with banks/lenders, these obligations may entail an unnecessary administrative burden without providing any additional relevant information about the financial needs of SMEs. For such guarantee institutions, these measures should be risk-based and voluntary.
AECM - European Association of Guarantee Institutions	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	19
AECM - European Association of Guarantee Institutions	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	We appreciate the possibility for less complex obliged entities like guarantee institutions to rely on manual checks for the identification and verification of politically exposed persons (PEPs). This provision is particularly beneficial as it aligns with the operational realities and capabilities of guarantee institutions. By permitting manual checks as well, the draft RTS acknowledges the unique operational framework of guarantee

Name of the respondent	Question	Answer
		institutions, ensuring that they can comply with CDD obligations in a manner that is both practical and efficient, without imposing unnecessary technological or administrative burdens. However, as an improvement, we suggest a more risk-based approach in relation to relatives and related parties (RCAs) of PEPs, based on the individual scenario and the nature of the relationship. A clarification that opens the possibility to rely on information available in various provider lists (e.g. Factiva, Dow Jones, Info4c...) could be helpful in this sense. In general, it should be possible to apply a risk-based approach to domestic and EU PEPs, in line with the FATF standards on domestic and foreign PEPs.
AECM - European Association of Guarantee Institutions	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

AFG -The French Asset Manager Association	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	AFG disagrees with requirements set by article 17 of the draft RTS. The asset management industry's operational model differs significantly from banking, especially in fund unit sales and direct investor relationships. While draft RTS Article 17 acknowledges some rules for fund managers' CDD obligations, it incorrectly requires fund managers to perform CDD on intermediaries' clients. This would duplicate distributors' checks and add unnecessary costs, hampering competitiveness. This is also often legally and operationally impossible due to fund distribution methods and data privacy restrictions. Mandating these distributors substantial new data-sharing burdens, duplicate existing checks, increase costs, and likely deter retail investors, reducing investment diversity. This could lead intermediaries to limit fund offerings, potentially to in-house products, and severely disrupt some well-functioning fund markets such as Nordic markets. EU funds would struggle internationally, risking UCITS' global standing. This would harm Europe by reducing foreign investment into the real economy, contradicting EU goals. As of late 2024, non-EU investors held €5.7 trillion in EU fund assets. To address these concerns, ensure fair competition, and

Name of the respondent	Question	Answer
		acknowledge low ML/TF risk, funds should be relieved of certain obligations based on Article 20(1) AMLR. The current Article 17 proposal fails this by duplicating intermediary work. Commission and co-legislator reports, along with FATF guidance, support this relief, recognizing that financial institutions are the primary customers for funds, not their intermediaries' underlying clients. Article 17 proposed, by requiring access to intermediary client bases, does not follow a risk-based approach, misinterprets the AMLR mandate, and disregards the practical and legal realities of these relationships.
AFG -The French Asset Manager Association	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	-
AFG -The French Asset Manager Association	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	AFG disagrees with several requirements of the draft RTS because they are overly prescriptive. The Draft RTS's Article 1 emphasizes the crucial risk-based and proportionality principles for a successful AML/CFT framework, aligning with AMLR recitals and supporting a harmonized EU approach. Similarly, Recital 29 of AMLR explicitly states that policies should be proportionate to an entity's business, risks, complexity, and size, acknowledging the need to apply this approach at both the entity and sector levels. However, a mere reference to a risk-based approach is insufficient if followed by excessively detailed and prescriptive rules. For example, article 5 requires obliged entities to obtain information on “all nationalities” of the customer. This

Name of the respondent	Question	Answer
		obligation is very impractical given that obliged entities do not have access to any database that will give them such satisfaction. Moreover, identification documents, such as passports or IDs, for obvious reasons, inform only about the nationality of one country.
AFG -The French Asset Manager Association	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We confirm that information to be collected in the present version of the draft RTS will be unavailable. Retail investors in several member states like Denmark, Ireland, Sweden or France typically subscribe to funds through regulated intermediaries (banks, brokers). Fund shares are purchased in the intermediary's name on behalf of their clients. The intermediary's underlying investors are not direct clients of the fund, meaning funds and their management company have no direct relationship or visibility into these individuals. Intermediaries are restricted by data protection and professional secrecy laws from sharing client onboarding data. Furthermore, forcing funds to seek this data would be redundant as intermediaries, being AML-obliged entities themselves, already conduct full Customer Due Diligence (CDD) on their clients. Besides, this will add costs likely to affect competitiveness within the EU. Funds instead perform AML/CFT analysis on the intermediary, assessing their business, reputation, AML/CFT controls, and senior management approval, ensuring the intermediary has its own robust CDD framework for its clients. This model substantially mitigates ML/TF risk through due diligence on the regulated intermediary. Let alone other models, such as in Nordic countries with fund stock exchanges, and for ETFs traded on regulated exchanges, where identifying individual holders on secondary markets is

Name of the respondent	Question	Answer
		operationally impossible. In all these scenarios, the risk is mitigated by focusing AML efforts on the regulated intermediaries.
AFG -The French Asset Manager Association	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 17 of the Draft RTS should allow Collective Investment Undertakings (CIUs) to fulfill Article 20(1) AMLR requirements by relying on credit or financial institutions, without demanding their customer information. This should apply across all fund subscription scenarios (as detailed above) provided specific conditions are met. This approach will ensure a harmonized AML/CFT framework for asset management that respects diverse business models and subscription methods. In the current draft, any scenario where an intermediary's customer is also considered the CIU's customer would lead to duplicative CDD, disrupting the industry. Therefore, CIUs should not demand customer information from counterparties but rely on credit or financial institutions, which are already obliged entities. We suggest condition (a) should recognize the strength of AML/CFT rules within international capital groups, as their group-wide policies often meet or exceed EU standards, even in jurisdictions with less developed local laws. We suggest deleting condition (d) as the assessment of the robustness and risk-sensitiveness of CDD measures of the financial institution may be subject to various interpretations. We believe that the main risk lies with the intermediary AML-CFT program; therefore the focus should be on the due diligence performed on the intermediary. Taking all that into account, we would suggest the following changes in the wording of the Art. 17 of the Draft RTS:

Name of the respondent	Question	Answer
		"When shares or units of a collective investment undertaking distributes its shares or units are sold through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, itthe collective investment undertaking may fulfil the requirement under Article 20(1),point (h), of Regulation (EU) 2024/1624 if it isby being satisfied that the credit institution or financial institution will provide the information necessary to identify and verify the identity of any final investor without undue delay and upon request. This is provided that: (a) the credit institution or financial institution is subject directly or through group policies to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624, or has implemented an equivalent AML/CFT program; and; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); and (c) the risk associated with the relationship with the credit institution or financial institution is low or standard not high. and (d) the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners." In all other cases, the collective investment undertaking may fulfil the requirement under Article 20(1), point (h), of

Name of the respondent	Question	Answer
		Regulation (EU) 2024/1624 when it performs enhanced due diligence on the credit institution or financial institution's AML-CFT program at onboarding and periodically".

AFG -The French Asset Manager Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	It would be desirable to open it up to more methods for verifying the customer's identity
AFG -The French Asset Manager Association	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	21
AFG -The French Asset Manager Association	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	In order to respond to the risk-based approach, it seems useful to mention the exemption from the obligation to identify the beneficial owner for listed companies.

Name of the respondent	Question	Answer
AFG -The French Asset Manager Association	How would you rate the proposals set out in the draft RTS overall?	Inadequate
AFG -The French Asset Manager Association	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact

AIPB - Associazione Italiana Private Banking	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	AIPB broadly agrees but stresses that some provisions — particularly Articles 11, 18, and 27 — should include clearer gradation to ensure operational applicability across a diverse portfolio of private banking services. Introducing explicit proportionality statements, as proposed under Question 1, would allow entities to calibrate their CDD processes according to the actual ML/TF risk without undermining regulatory objectives.
AIPB - Associazione Italiana Private Banking	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	AIPB supports AMLA's commitment to a risk-based approach but believes that certain drafting elements could inadvertently result in prescriptive or one-size-fits-all obligations. Specifically: • The obligations under Articles 11(2) – (3) should be limited to higher-risk cases;

Name of the respondent	Question	Answer
		• Article 12(1)(b) should target only non-EU jurisdictions lacking equivalent AML/CFT standards; • Article 18 should explicitly allow simplified application in low-risk scenarios; and • Article 27 should clarify that extensive SOW verification is not required in every case. These amendments would better reflect the principle of proportionality and ensure consistent implementation across the Union. AIPB supports AMLA's commitment to a risk-based approach but believes that certain drafting elements could inadvertently result in prescriptive or one-size-fits-all obligations. Specifically: • The obligations under Articles 11(2) – (3) should be limited to higher-risk cases; • Article 12(1)(b) should target only non-EU jurisdictions lacking equivalent AML/CFT standards; • Article 18 should explicitly allow simplified application in low-risk scenarios; and • Article 27 should clarify that extensive SOW verification is not required in every case. These amendments would better reflect the principle of proportionality and ensure consistent implementation across the Union.
AIPB - Associazione Italiana Private Banking	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable	Certain information requested under Articles 11 (detailed mapping of intermediate entities) and 27 (comprehensive documentation of total wealth) may not be readily available or may involve third-party data beyond the customer's or

Name of the respondent	Question	Answer
	and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	institution's reach. To address this, AIPB suggests the measures in the additional input.
AIPB - Associazione Italiana Private Banking	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	AIPB recommends explicitly recognizing simplified approaches for: • Remote onboarding processes already compliant with eIDAS and EBA Guidelines, without additional verification layers; • Ownership and control mapping in low-risk cases, allowing a simplified structure description; • Purpose and intended nature assessments based on concise, essential information sufficient for effective understanding; and • Source of wealth verification limited in low-risk cases. These SDD measures would enhance proportionality, reduce unnecessary administrative burdens, and ensure consistency with AMLR's risk-based philosophy.
AIPB - Associazione Italiana Private Banking	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-
AIPB - Associazione Italiana Private Banking	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
AIPB - Associazione	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7

Name of the respondent	Question	Answer
Italiana Private Banking		
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 7(1) – Remote onboarding solutions and proportionality Rationale: AIPB emphasises the importance of consistency between the CDD framework, the eIDAS regime and the EBA Guidelines on the use of remote customer onboarding solutions. Italian private banking intermediaries have, in recent years, made significant investments to design and implement remote onboarding processes and ICT solutions that are fully compliant with those EBA Guidelines and that have proven effective in managing AML/CFT risks in practice. AIPB is therefore concerned that, if the new RTS were interpreted as requiring a material re-engineering of these recently implemented solutions – for example, by imposing additional layers of verification that go beyond the EBA Guidelines – this could result in a substantial and, in AIPB's view, unnecessary regulatory burden. Proposal: AIPB would therefore strongly encourage AMLA to: • ensure that the RTS provisions on remote identification and verification are explicitly and coherently aligned with the current eIDAS framework and with the EBA Guidelines on remote onboarding; and • establish, where appropriate, a structured dialogue with the European Commission and the EBA to confirm that the technical requirements in the RTS do not require obliged entities to overhaul eIDAS compliant and guideline compliant

Name of the respondent	Question	Answer
		onboarding processes that are already delivering strong AML/CFT outcomes.
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 11 – Understanding the ownership and control structure of the customer Rationale: While AIPB fully supports the objective of ensuring that obliged entities have an adequate understanding of the customer's ownership and control structure, in line with Article 20(1)(b) of Regulation (EU) 2024/1624 ("AMLR"). However, AIPB is concerned that some of the information requirements in Article 11, as currently drafted, go beyond what is strictly necessary to meet this objective and risk creating disproportionate operational burdens, particularly for low-risk customers and relatively simple structures. In particular, Article 11(2) and (3) require obliged entities, whenever the ownership and control structure includes more than one legal entity or legal arrangement, to obtain detailed information on all intermediate entities, including: a description of the structure; the legal form of each entity/arrangement and the existence of any nominee shareholders; the jurisdiction of incorporation or registration (or governing law for trusts); and, where applicable, the precise percentage and subdivision of shares or interests at each level. This effectively treats any multi-layer structure as inherently complex, even when it is common and low risk in practice and goes beyond the level of detail expressly required by AMLR for standard situations. Proposal: AIPB believes that Article 11 should better reflect the risk-based approach by differentiating between situations

Name of the respondent	Question	Answer
		where such granular mapping is necessary and situations where a more proportionate set of information is sufficient. AIPB would therefore invite AMLA to consider the following amendments: • clarify in Article 11(2) that the obligation to obtain a comprehensive, granular description of all intermediate entities (including legal form, jurisdiction and detailed shareholding breakdown) applies where the customer presents at least a standard or elevated ML/TF risk, or where specific risk indicators are present (for example, use of opaque vehicles, unusually long chains of ownership, or links to high risk jurisdictions in accordance with European Commission list); • allow obliged entities, in low-risk situations and for straightforward structures, to rely on a simplified description of the ownership and control structure that focuses on the identification and verification of beneficial owners in accordance with AMLR, without a systematic requirement to document every intermediate layer in detail. AIPB believes that these changes would maintain a high level of transparency and understanding of ownership and control, while avoiding a systematic expansion of documentation and analysis requirements that seems not to be clearly grounded in AMLR and that may generate significant costs and complexity without commensurate benefits in terms of ML/TF risk mitigation.
AIPB - Associazione	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	12

Name of the respondent	Question	Answer
Italiana Private Banking		
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 12(1)(b) – Reference to non-EU jurisdictions Rationale: AIPB welcomes AMLA's effort in Article 12 to define "complex corporate structures" and to link the more burdensome obligations (including the requirement to obtain an organigram) to those cases only. Nevertheless, AIPB is concerned that the wording of Article 12(1)(b), which currently refers to situations where "the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU", may be too broad and not fully aligned with the risk based and equivalence oriented approach of AMLR. Treating the mere fact that entities are registered in non EU jurisdictions as a criterion for complexity may lead to a systematic escalation of obligations for structures involving jurisdictions that have robust AML/CFT regimes and are widely recognised as equivalent or broadly equivalent to the EU framework. Proposal: AIPB would therefore respectfully suggest that Article 12(1)(b) be refined as follows (new wording in bold font): "(b) the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU that do not impose AML/CFT obligations equivalent to those set out in Regulation (EU) 2024/1624 or that are otherwise identified by the European Commission as presenting high ML/TF risks". This would ensure that the classification of "complex corporate structures" remains focused on genuinely higher risk situations

Name of the respondent	Question	Answer
		instead of automatically encompassing any structure involving non EU entities.
AIPB - Associazione Italiana Private Banking	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	18
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Rationale: AIPB would welcome additional clarification from AMLA as to the manner in which the obligation to obtain an "effective understanding" of the purpose and intended nature of the business relationship or occasional transaction should be applied in low and standard risk scenarios. As a matter of fact, while Articles 20 and 25 of Regulation (EU) 2024/1624 ("AMLR") unequivocally establish that obliged entities must, in all cases, understand the purpose and intended nature of the relationship or transaction, Article 25 expressly provides that the more detailed set of information is to be obtained only "where necessary". Article 18 of the draft RTS helpfully translates this set of information into a structured list of categories (including, inter alia, the reason for requesting the product or service, its intended use, the estimated amount of envisaged activity, the source and destination of funds, and the customer's business or occupation), but could be interpreted by certain authorities as requiring that most or all of these elements be collected systematically, irrespective of the risk profile of the customer or transaction. Proposal: In order to avoid an overly prescriptive application, and to preserve the proportionality and risk based approach

Name of the respondent	Question	Answer
		envisaged by AMLR, AIPB respectfully invites AMLA to clarify that: (i) an "effective understanding" of the purpose and intended nature may, in low and standard risk situations, be achieved on the basis of a more limited and streamlined set of information (for example, a concise indication of the main economic rationale, an indicative range of expected activity and essential information on the customer's occupation or business); and (ii) the full range of informational elements listed in Article 18 of the draft RTS is required only where justified by the ML/TF risk associated with the customer or transaction, including in the context of enhanced due diligence.
AIPB - Associazione Italiana Private Banking	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	27
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 27 – Scope of Source of Wealth (SOW) verification Rationale: With specific regard to the verification of the source of wealth for customers – natural persons and non-natural persons that do not publish financial statements – AIPB notes that, compared to the verification of the source of funds, a broad reading of SOW may open a significantly more complex and costly scenario, insofar as "wealth" in an economic sense encompasses the full set of material, immaterial and financial assets attributable to the customer, whether held directly or through intermediated structures. In practice, this could be interpreted as requiring obliged entities, in addition to income related documentation, to collect or reconstruct extensive evidence of the customer's patrimonial situation (for example, multiple land and asset registries, company and vehicle

Name of the respondent	Question	Answer
		registers, and detailed information on existing investments and other wealth components, including – in some cases – positions held with other intermediaries or even assets linked to family members), with significant operational costs, potential data protection concerns and a high risk of client resistance. Proposal: Against this background, AIPB would respectfully invite AMLA to further specify, in the RTS, the expected perimeter of SOW verification, at least in terms of the breadth and granularity of checks to be carried out as a function of the ML/TF risk level, clarifying that a more limited and pragmatic understanding of the customer's overall wealth is sufficient in low and standard risk cases, while more intrusive and document intensive SOW investigations should be reserved for genuinely high risk situations or where specific red flags are present.
AIPB - Associazione Italiana Private Banking	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	29
AIPB - Associazione Italiana Private Banking	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Rationale: AIPB has not identified any material inconsistencies between the requirements set out in Section 7 (Articles 29–30) of the draft RTS and the EBA Guidelines on internal policies, procedures and controls to ensure the implementation of Union and national restrictive measures. In AIPB's view, the two instruments are, in principle, capable of co-existing: the RTS primarily define the substantive obligations relating to TF and sanctions screening within the AMLR framework, whereas the EBA Guidelines focus on the governance and organisational arrangements that institutions should put in place to ensure effective implementation of restrictive measures.

Name of the respondent	Question	Answer
		However, AIPB is concerned that the absence of any explicit cross reference or coordination clause between the RTS and the EBA Guidelines may, in practice, give rise to overlaps, duplications and divergent supervisory expectations at national level. There is a risk that competent authorities might require obliged entities within the EBA's remit to comply fully and separately with both sets of requirements, rather than applying the EBA Guidelines as the organisational framework through which the RTS obligations are implemented, thereby creating an unnecessary "double layering" of standards on the same sanctions screening processes. Proposal: Against this background, AIPB would respectfully suggest that AMLA consider including in Section 7 of the RTS at least an explicit coordination clause, clarifying that, for entities within the scope of the EBA Guidelines on restrictive measures, the implementation of the RTS requirements on TF and sanctions screening should take place in a manner that is consistent with, and builds upon, those Guidelines. Such a clarification would enhance legal certainty, reduce the risk of unnecessary duplication and help ensure genuinely harmonized expectations across the Union.
AIPB - Associazione Italiana Private Banking	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	30

AIPB - Associazione Italiana Private Banking	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
AIPB - Associazione Italiana Private Banking	Do you have any comments on the Annex in the draft RTS?	No
AIPB - Associazione Italiana Private Banking	How would you rate the proposals set out in the draft RTS overall?	Good
Aircash	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Aircash, a licenced payment service provider operating cross-border across the EU under the passporting regime, welcomes the harmonisation of CDD requirements across the EU and the AMLR's contribution to a more consistent framework. Aircash also welcomes the recognition of eIDAS-based identification solutions as a modality for remote customer onboarding — but as one of several valid modalities, not as a single overarching solution that pre-empts all others. Article 7 as drafted goes considerably further. Art. 7(1) imposes eIDAS through mandatory language ("shall"); Art. 7(2) permits other solutions only on a vague exception ("is not available, or cannot reasonably be expected to be provided"); and Art. 7(4) requires per-customer justification of why each customer couldn’t be verified through eIDAS. It treats eIDAS as the mandatory default and relegates other (even more) compliant/robust solutions to a fallback of last resort. This runs

Name of the respondent	Question	Answer
		against two core principles of the AML/CFT framework: the risk-based approach, under which obligations are calibrated to actual ML/TF risk and obliged entities can choose proportionate measures of equivalent assurance; and technological neutrality, which has guided EU policy on remote onboarding. For cross-border providers onboarding at scale, this is practically unworkable, with unresolved questions on the relevant competent authority for “per-customer justification”. The drafting also rests on assumptions about eIDAS that no longer hold. Identity verification, biometrics, AI/ML-based assurance and fraud detection have advanced considerably since the first iteration of these RTS, while eIDAS maturity and interoperability have advanced more slowly. The EU Digital Identity framework only entered into force in May 2024; Member States must make an EU Digital Identity Wallet available by end of 2026, just months before the AMLR applies on 10 July 2027. Full pan-European interoperability by that date will not materialise, so a binding Level 2 instrument should not be set in stone around assumptions that no longer reflect operational reality. Against the EU simplification agenda, Art. 7 moves in the opposite direction: it imposes costs neither proportionate to the risk reduction achieved nor consistent with the simplification agenda. These costs are acute for firms already operating compliant solutions and would potentially fall on EU consumers. Aircash accordingly proposes the following wording of Art. 7, treating eIDAS-based solutions as a recognised "safe harbour" rather than a primary legal obligation: Article 7(1): obliged entities MAY [not "shall"] use electronic identification means meeting eIDAS requirements at assurance

Name of the respondent	Question	Answer
		levels "substantial" or "high", or relevant qualified trust services. Article 7(2): IN ADDITION, ESPECIALLY where the solution under paragraph 1 is not available or cannot reasonably be expected to be provided, obliged entities shall obtain the identity document, passport or equivalent using remote solutions meeting paragraphs 3 and 4. Article 7(4): Obliged entities shall be able to demonstrate to their competent authority that the remote verification solutions used comply with this Article. [Delete the per-customer justification under Article 22(6).] (If necessary) We further propose a review clause inserted as a new final article of the RTS: "By [date], AMLA shall, in cooperation with the Commission, review the application of Article 7 in light of the maturity and pan-European interoperability of electronic identification means under Regulation (EU) No 910/2014, and submit a report accompanied, where appropriate, by proposals to amend this Regulation." This preserves the policy direction without locking the binding text around current unrealistic assumptions. These proposals build on a proven approach. The EBA Guidelines on remote customer onboarding (EBA/GL/2022/15) have demonstrated since 2022 that an outcome-based, technology-neutral framework delivers high-assurance remote identification across the Union. Genuine harmonisation harmonises outcomes, not means per se — which is precisely what the existing framework achieves. Obliged entities have made substantial investments under it, and no evidence has been put forward to demonstrate that the existing framework has proven inadequate. The framework is also future-proof: it does not lock in any technology, and adapts as new

Name of the respondent	Question	Answer
		technologies but also threats (e.g. AI-generated synthetic identities) evolve. Having proven its robustness in the regulated financial sector, it offers a credible, well-tested standard equally suited to non-financial obliged entities newly brought within scope of the AMLR, without the disruption a wholesale shift in Article 7 would entail. For AMLA, it offers a pragmatic path to uniform high-assurance remote onboarding across an expanded obliged entity base from the date of application, without the supervisory uncertainties a binding Article 7 mandate would introduce.
Aircash	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Aircash, a licenced payment service provider operating cross-border across the EU under the passporting regime, endorses the harmonisation of AML/CFT requirements within the EU Single Market. While we share the policy objective of a robust risk-based framework, we respectfully cannot agree that the proposals — in particular Article 7 — allow for its effective application to AML/CFT compliance, as on key points the drafting does not deliver this — and indeed constrains it. Article 7 is the clearest illustration. A risk-based approach requires obligations calibrated to actual ML/TF risk and obliged entities retaining the ability to choose proportionate measures of equivalent assurance. Article 7 inverts this logic: by imposing eIDAS through mandatory language and relegating other compliant solutions to a fallback requiring per-customer justification under Art. 7(4), the draft treats identification as a binary hierarchy rather than a risk-sensitive determination. Robust remote onboarding solutions — including AI/ML-based identity verification meeting or exceeding eIDAS assurance levels, as well as widely used national solutions such as Denmark's BankID and Belgium's "itsme" - which may not involve traditional identity documents but still deliver high

Name of the respondent	Question	Answer
		assurance and are widely accepted — are presumptively non-compliant unless eIDAS is unavailable, regardless of risk. Under the current drafting all those solutions risk being treated as fallback simply because they are not eIDAS. In effect, the obliged entity is denied the very tool it needs to manage risk where it matters most: at onboarding. More fundamentally, Art. 7 as drafted constrains — and arguably contradicts — Art. 22(6) AMLR, which recognises both document-based and electronic identification as valid modalities. A Level 2 measure should not narrow options recognised at Level 1, especially not in a way that disables a risk-based determination at onboarding. This goes to the relationship between the AMLR and its implementing standards. A further point: eIDAS is an identification instrument, not a ML/TF risk detection tool. It proves identity at onboarding, not whether the customer is a victim of identity theft, a mule, or under coercion. Current solutions — liveness and deepfake detection, document authenticity, behavioural biometrics, real-time anomaly detection — address precisely those risks. Mandating eIDAS as primary and relegating these to a justified fallback reduces (not enhances) risk-relevant information at onboarding. This matters especially given the post-RTS-drafting threat landscape: generative AI and deepfake tools have changed identity fraud in real time, and the market has responded with AI/ML-based solutions to detect synthetic identities — which eIDAS was not designed to provide. Foreclosing the segment best equipped to address them is not a risk-based outcome. The same concern arises beyond Art. 7. Data points of limited AML/CFT value in low-risk scenarios (e.g. all nationalities, place

Name of the respondent	Question	Answer
		of birth) are not consistently available through widely used electronic identification solutions; their collection should remain proportionate to the customer's risk profile. The departure from a risk-based approach is not confined to Art. 7 alone. The EBA Guidelines on remote customer onboarding (EBA/GL/2022/15) already operationalise a risk-based, technology-neutral approach — with eIDAS as one option among others, proven across the financial sector since 2022, with no evidence that the framework has been inadequate. Replacing it with a binding mandate in favour of one technology is not a risk-based choice. The provision concerned is, principally, Article 7. Concrete drafting proposals (full text under Question 1): Art. 7(1): obliged entities MAY [not "shall"] use eIDAS-based electronic identification means at assurance levels "substantial" or "high", or relevant qualified trust services. Art. 7(2): IN ADDITION, ESPECIALLY where the paragraph 1 solution is not available or cannot reasonably be expected, obliged entities shall obtain the identity document, passport or equivalent using remote solutions meeting paragraphs 3 and 4. Art. 7(4): obliged entities shall demonstrate to their competent authority that the remote verification solutions used comply with this Article. [Delete the per-customer justification under Art. 22(6).] Insert a review clause as a new final article, committing AMLA and the Commission to revisit Art. 7 once eIDAS reaches the necessary maturity and pan-European interoperability. These measures are more appropriate because they: (a) align Level 2 with Art. 22(6) AMLR; (b) preserve technological neutrality, the risk-based approach, and European

Name of the respondent	Question	Answer
		competitiveness in innovation as under the EBA Guidelines (EBA/GL/2022/15); (c) align regulatory expectations with the current state of eIDAS solutions; and (d) prevent structural market distortion by ensuring equal treatment of all compliant remote onboarding solutions.
Aircash	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Aircash, a licenced payment service provider operating cross-border across the EU under the passporting regime, identifies several situations where the information required by the draft RTS — including Annex I attributes — is not routinely available in practice and the proposals do not offer alternatives. We address them below. (1) Annex I attributes are not consistently available through identity documents and electronic identification means in use across the EU The Annex I list of minimum attributes corresponding to Art. 22(1) AMLR — including all names and surnames, place of birth, all nationalities, national ID number, residential address, and tax identification number — does not match the data routinely surfaced by widely used identification means or recorded on physical identity documents accepted across the EU. A review of the Council's PRADO database shows that: - not all attributes appear on every document, Member State, or customer category (e.g. place of birth is not consistently shown on identity cards; multiple nationalities are typically not shown at all; tax identification numbers are not embedded); - attributes that do appear are not standardised in scope or structure (e.g. some Member States have removed residential address from identity cards altogether, while others record it with varying granularity — from full street with apartment number to only the city or municipality; given/family name segmentation likewise differs across documents);

Name of the respondent	Question	Answer
		- the same applies, with less consistency, to electronic identification means: eIDAS-based wallets and qualified trust services typically expose only a sub-set of attributes, with national variations. A further concern is the relationship between Annex I and Art. 22(1) AMLR itself. Art. 22(1) AMLR requires obliged entities to obtain "the usual place of residence", the tax identification number "where available", and the national identification number "where applicable". Annex I operationalises this into six discrete address fields and treats other "where available"/"where applicable" attributes as part of the standard data set. Where the AMLR allows flexibility, Level 2 should reflect that flexibility, not narrow it. As with Article 7, this raises the same structural question about the relationship between the AMLR and its implementing standards. Proposed alternative for (1): recalibrate the Annex I data set so that attributes not consistently available through accepted identification means and of limited AML/CFT value in low-risk scenarios are collected only where the risk profile so requires, not uniformly. This preserves a risk-based approach and aligns with Art. 21 and Art. 22 AMLR. (2) eIDAS-based identification means for cross-border remote onboarding For EU-licensed electronic money institutions operating cross-border in the EU/EEA, eIDAS-based identification means are not "routinely available" across the customer base. The EU Digital Identity framework entered into force in May 2024, and Member States must make an EU Digital Identity Wallet available by end of 2026 — before the AMLR applies on 10 July 2027. A substantial share of customers will not have a usable eIDAS at onboarding — particularly from Member States with

Name of the respondent	Question	Answer
		delayed wallet rollout or low qualified trust service uptake, and from underserved groups (mobile workers and migrants resident outside the Member State issuing their eID; third-country nationals lawfully resident in the EU; older customers; younger customers without an eID). An eIDAS-only default sits uneasily with the EU objectives of financial inclusion. A further consequence is a dual-stack burden, with two layers. First, because eIDAS is not universally adopted across the EU, a separate compliant onboarding solution will be required for every customer without a usable eIDAS means. Second, even where the customer has eIDAS, if it does not surface all Annex I attributes (as under (1) above), a fallback mechanism for non-face-to-face onboarding will still be required to complete the data set. Thus, creating disproportionate burden and costs on the vast list of obliged entities. Proposed alternative for (2): redraft Article 7 along the lines under Questions 1 and 2, so eIDAS-based solutions are recognised as one valid high-assurance option alongside other remote solutions meeting Art. 7(3)–(4) — including AI/ML-based verification and validated national means such as BankID and itsme. This removes the per-customer justification problem, eliminates the dual-stack burden, and aligns Level 2 with Art. 22(6) AMLR and EBA/GL/2022/15. A review clause would allow recalibration when eIDAS becomes a viable cross-border default. In both situations the underlying issue is the same: the proposals assume routine availability of information and identification means that, across documents and tools in EU-wide use, are not. The alternatives above preserve the AML/CFT objective while reflecting operational reality.

Name of the respondent	Question	Answer
Aircash	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Aircash, a licenced payment service provider operating cross-border across the EU under the passporting regime, welcomes AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624 to set out simplified due diligence measures and risk factors for the e-money exemption under Article 19(7) AMLR. We agree with the principle and direction of the proposals, but identify four areas where targeted amendments would better reflect the operational reality of the European e-money sector and a genuine risk-based approach. Aircash shares the position expressed by trade associations representing the European e-money and prepaid sector on the closely related EBA work on e-money risk factors, and considers the following points equally applicable to the present RTS: (1) Risk factors must not be cumulative. Where supervisors decide to allow an exemption under Article 19(7) AMLR, the relevant risk factors should be understood as a non-exhaustive list, and supervisors should be able to consider one or more such factors to determine the extent of the exemption — rather than applying a binary catalogue where each factor must be fulfilled in its entirety. This is essential to allow national competent authorities to apply a genuine risk-based approach and accommodate the diverse business models of e-money issuers. (2) Distribution-side and issuer-side risk factors are missing. Several of the most effective risk-mitigating measures available to e-money issuers focus on the distribution and use of the instrument over its lifecycle, not on the moment of issuance. We propose adding the following as recognised risk factors: (a) Distribution monitoring: real-time oversight and analysis of distribution and usage patterns of e-money products across distribution channels, with channel-level anomaly detection,

Name of the respondent	Question	Answer
		geographic risk monitoring, threshold and velocity controls, ongoing distributor risk profiling, and alerts feeding into case management. (b) Merchant monitoring: real-time oversight of merchants accepting payments via the e-money product, with merchant-level deviation analysis, exposure monitoring to high-risk jurisdictions or sectors, threshold and velocity controls, and ongoing merchant risk scoring. (c) Suspicious-pattern detection with automatic deactivation: capabilities allowing identification of suspicious transaction patterns and behavioural profiling, with automatic disabling of the payment instrument upon detection, and reactivation only following interaction with the issuer. (d) Adequate technological safeguards: device fingerprinting, IP address tracking, velocity checks, and similar tools to detect and prevent suspicious activity. These measures materially mitigate ML/TF risk associated with the distribution and use of e-money products and are demonstrably more risk-relevant than some of the criteria currently envisaged. (3) Certain proposed criteria should be reconsidered. In particular, criteria that effectively replicate elements of the Limited Network/Range exclusion under Article 3(k) of Directive (EU) 2015/2366 risk conditioning the e-money exemption on the product not being e-money at all, which would run counter to the legislative intent of Article 19(7) AMLR. Similarly, criteria focused on the issuer or its distribution infrastructure (rather than on the e-money instrument itself) sit uneasily with AMLA's mandate, which is directed at the instrument. (4) Account-based funding should not be a precondition.

Name of the respondent	Question	Answer
		Linking the e-money exemption to funds originating from a regulated EEA account would contradict the spirit of the Level 1 text, which is intended to cover current e-money products that are acquired in exchange for coins and banknotes (Recital 13 of Directive 2009/110/EC). The amendments outlined above are more appropriate because they (a) preserve the risk-based approach Article 19(7) AMLR is intended to operationalise, by recognising that risk-mitigation occurs across the e-money instrument's lifecycle and not only at issuance; (b) align Level 2 with the legislative intent of Article 19(7), which is to apply to e-money products as currently in market — not to redefine them through criteria borrowed from other regulatory regimes; (c) ensure AMLA's mandate is exercised in respect of the e-money instrument, consistent with the scope of Article 28(1); and (d) accommodate the diversity of compliant and existing e-money business models across the Single Market.
Aircash	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Aircash, a licenced payment service provider operating cross-border across the EU under the passporting regime, offers two additional observations to support AMLA in finalising a balanced RTS. (1) Reinforcing the Level 1 anchor. The article-specific concerns raised under Questions 1–4 share a common thread: ensuring that the implementing standards reflect the flexibility expressly recognised at Level 1 — including the document-based and electronic identification modalities under Article 22(6) AMLR, the "where available" and "where applicable" qualifiers in Article 22(1) AMLR, and the genuinely risk-based logic of Article 19(7) AMLR. We would welcome a recital in the RTS reaffirming that obliged entities and competent authorities are to apply these standards consistently with the risk-based and

Name of the respondent	Question	Answer
		technology-neutral approach the AML Regulation operationalises. This would help avoid divergent national interpretations and provide a stable interpretative anchor over the lifetime of the RTS. (2) Proportionality and the role of the EBA Guidelines. The EBA Guidelines on remote customer onboarding (EBA/GL/2022/15) have been in operation across the financial sector since 2022, achieving the AML/CFT objective through outcome-based safeguards calibrated to the modality used. Recognising that framework alongside Article 7 — rather than displacing it — would preserve technological neutrality, support the EU's competitiveness in financial-technology innovation, and ensure that the measure is no more restrictive than necessary to achieve the AML/CFT objective. A review clause committing AMLA and the Commission to revisit Article 7 once eIDAS solutions reach pan-European maturity and interoperability would allow the regime to evolve as the underlying infrastructure matures. We reiterate the article-specific drafting amendments set out under Questions 1, 2, 3 and 4 and remain available to support AMLA's work on a final RTS that is risk-based, proportionate, and operationally workable across the diverse business models of EU obliged entities.
Aircash	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Aircash	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	31
Aircash	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The risk factors proposed below have been calibrated to capture the controls that materially mitigate ML/TF risk in current e-money operations and envisaged future e-money

Name of the respondent	Question	Answer
		operations, while avoiding the addition of restrictions where the AMLR and related EU instruments already provide comprehensive safeguards. They focus on lifecycle controls — distribution, merchant acceptance, transaction monitoring, and technological safeguards — that are operationally tested across the sector and demonstrably effective. This approach preserves the risk-based logic of Article 19(7) AMLR and ensures Article 31 complements, rather than duplicates or even more restricts, the existing regulatory architecture. Please note, the relevant risk factors should be understood as a non-exhaustive list, and supervisors should be able to consider one or more such factors to determine the extent of the exemption — rather than applying a binary catalogue where each factor must be fulfilled in its entirety. This is essential to allow national competent authorities to apply a genuine risk-based approach and accommodate the diverse business models of e-money issuers. Suggested wording of Article 31: Where supervisors decide to allow for an exemption under Article 19(7) Regulation (EU) 2024/1624, based on the conditions listed in Article 19(7), points (a) to (d), of Regulation (EU) 2024/1624, supervisors shall consider one or more of the following risk factors to determine the extent of that exemption: (a) the extent to which the payment instrument has low transaction limits or thresholds to limit transaction values; (b) the nature of the goods or services that can be acquired, including the level of risks associated with these goods and services;

Name of the respondent	Question	Answer
		(c) the extent to which the transactions through the electronic money instrument are executed by an obliged entity that applies customer due diligence measures and record-keeping requirements laid down in Regulation (EU) 2024/1624; (d) the extent to which the payment instrument is available through direct channels which may include the issuer or a network of service providers which have appropriate safeguards and fraud measures in place; (e) the extent to which the payment instrument has a limited geographical distribution; (f) the extent to which the issuer applies adequate technological tools, such as geo-fencing and IP tracking, to monitor access to the payment instrument from, transfers to or receiving funds from countries that are not EU Member States nor EEA countries, in accordance with the applicable laws. (g) The extent to which the issuer has measures in place that allow for an effective monitoring of the distribution channels of the e-money product in order to detect and prevent suspicious activities. (h) The extent to which the issuer has measures in place that allow for an effective monitoring of the merchants that accept payments via the e-money product in order to detect and prevent suspicious activities. (i) The extent to which the issuer has measures in place that allow for the identification of suspicious transaction patterns and behavioral profiling and allows for disabling the payment instrument in case a suspicious activity pattern is detected. Re-activation of the product can only be done by the issuer. (j) The extent to which the issuer has adequate technological safeguards in place. Such measures could include device fingerprinting and IP address tracking to detect suspicious

Name of the respondent	Question	Answer
		activity or the use of velocity checks (e.g. number of transactions in a short period).
Aircash	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Aircash	Do you have any comments on the Annex in the draft RTS?	No
Aircash	How would you rate the proposals set out in the draft RTS overall?	Inadequate;Somewhat inadequate
Aircash	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact

Aircash	Please justify your answer to the previous question and provide evidence where possible.	As long as eIDAS solutions are not universally available and interoperable, obliged entities will be compelled to maintain parallel onboarding infrastructures — with material costs disproportionate to any potential risk reduction achieved. To illustrate the order of magnitude: in the remote retail onboarding segment, a per-customer cost increase of even a few euros translates into millions of euros at the scale of a typical user base, and the binding default under Article 7 would add to — not replace — existing onboarding costs that obliged

Name of the respondent	Question	Answer
		entities have already invested in compliant solutions. Even when pan-European interoperability eventually matures, truly integrated cross-Member-State solutions will realistically be within reach of only a small number of large-scale operators, raising legitimate concentration concerns. Moreover, even assuming full interoperability of eIDAS solutions and the emergence of intermediary service providers capable of facilitating pan-European integration, the expectation that the entirety of the obliged entity population — significantly expanded under the AML Regulation — could realistically complete such integrations within the applicable transitional timeframes appears difficult to substantiate, particularly with respect to smaller and newly in-scope entities operating with inherently limited technical and compliance resources.
ALFI (Association of the Luxembourg Fund Industry)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Draft RTS appears to have been conceived primarily from the perspective of retail banking and direct client relationships, without sufficient consideration for the specificities of the European fund industry, which represents more than EUR 22 trillion in net assets. As currently drafted, the draft RTS would undermine the long-established market practice, reduce operational simplicity and efficiency and adversely affect the competitiveness of the European fund industry which currently attracts investment globally. Three provisions in particular lack the flexibility required for effective and proportionate implementation. Article 7 is not aligned with EBA and FATF standards, which do not consider non-face-to-face onboarding to be an automatic inherent risk factor. We believe that the article is inconsistent with both the risk-based approach and the principle of technological neutrality. Article 17 does not adequately reflect the intermediated

Name of the respondent	Question	Answer
		model, in which banks and other intermediaries invest on behalf of tens of thousands of underlying investors. In this context, systematic look-through is operationally impracticable and contrary to FATF standards and guidance. Such approach could therefore incentivize formalistic compliance and undermine operational feasibility without delivering commensurate risk-mitigation benefits. Additionally, the impact to end investors as a result of increased costs of compliance may have a prohibitive impact to retail clients across the EU. Lastly, Article 12 does not adequately reflect market practice and basically, captures standard organisational arrangements within international financial groups without adequately considering whether they create genuine ML/TF risk. This results in a prescriptive “tick the box” approach rather than a risk-focused assessment targeted at truly complex structures. Our specific drafting proposals for each of these provisions are set out under the Additional Input section.
ALFI (Association of the Luxembourg Fund Industry)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No. The proposals set out in these draft RTS actually risk jeopardizing the asset management business and more broadly, EU competitiveness. While Article 1 establishes a commendable proportionality principle, the subsequent provisions fail to give it meaningful practical effect: - Article 7 imposes a predetermined verification hierarchy that does not take actual risk levels into account; - Article 12 relies on formalistic criteria (number of layers, location outside the EU) that do not reflect genuine ML/TF risk indicators or market practice; - Articles 25 to 28 prescribe mandatory EDD measures that

Name of the respondent	Question	Answer
		prevent entities from adapting their approach to the specific risk profile; As a result, the framework treats all situations as inherently risky, obscuring the focus on real, material risks. We therefore urge AMLA to consider our concrete drafting proposals, in particular for Articles 7 and 12 (see our response under the Additional Input section.
ALFI (Association of the Luxembourg Fund Industry)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The fund industry routinely encounters situations where the information required under the Draft RTS is either unavailable or cannot be obtained through the channels contemplated by the proposed provisions. These challenges do not stem from deficiencies in the obliged entities' processes but arise from the structural characteristics of the sector itself. We therefore outline below the most significant examples together with our proposals for alternative solutions. Article 5 – “All nationalities”: Obliged entities have no means of verifying with certainty whether a customer holds nationalities beyond those declared. Recital (3) provides that verifying one nationality declared in good faith is sufficient, which creates an inconsistency with the requirement to obtain “all nationalities”. Articles 14–15 – “Timely updates” regarding trust beneficiaries: As noted under Question 1, trusts are unlikely to agree to proactive notification obligations. Monitoring should therefore occur at the point of payment request, which is the most reliable and operationally feasible control. Article 6(5) – Certified copies: The baseline obligation to obtain an identity document, passport or equivalent “or a certified copy thereof” poses significant practical difficulties for global distribution and does not allow the obliged entities to apply a risk-based approach. Investors in many non-EU jurisdictions cannot easily provide certified copies. A risk-based approach

Name of the respondent	Question	Answer
		should permit the routine use of alternative reliable sources (entity websites, regulator databases, stock exchange listings). In low-risk situations, non-certified copied should also be acceptable. It is key to also note that it is not in line with provisions of the AMLR, which in Art. 22(6)(a) do not include the requirement of only originals or certified copies to be provided. Instead, it refers to "the submission of an identity document, passport or equivalent and, where relevant, the acquisition of information from reliable and independent sources, whether accessed directly or provided by the customer", which we believe gives much more room for the obliged entities to decide on how this submission and acquisition will take place, in accordance with the identified level of ML/TF risk. Article 12(2) – example of organigram: The reference to an organigram is not appropriate for illustrating ownership relationships. It shows reporting lines, departments, and the chain of command. The example should refer to "ownership structure chart", which more accurately captures the intended concept.
ALFI (Association of the Luxembourg Fund Industry)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Please refer to our comments on Article 17 of the draft RTS under the Additional Input section.
ALFI (Association of the	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	Our overarching concern is that the Draft RTS, notwithstanding the proportionality clause in Article 1, remains overly

Name of the respondent	Question	Answer
Luxembourg Fund Industry)	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	prescriptive and does not adequately reflect the specificities of the collective investment sector. Fund distribution typically relies on intermediated chains, single-purpose business relationships, and bank account-only payment flows, resulting in a risk profile that is fundamentally different from retail banking or wealth management. It is therefore essential that AMLA ensures the principle stated in Article 1 is meaningfully applied throughout the remaining provisions. Below, we provide our comments on the specific articles concerned, along with concrete drafting proposals.
ALFI (Association of the Luxembourg Fund Industry)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ALFI (Association of the Luxembourg Fund Industry)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
ALFI (Association of the Luxembourg Fund Industry)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 7(1) designates eIDAS-compliant electronic identification means as the primary method for verifying customers in non-face-to-face situations. The hierarchy that places eIDAS as the primary verification method represents our principal concern. The new obligation in Article 7(4) to justify non-use of eIDAS also introduces a compliance burden that did not exist under the EBA text. In the Fund industry, the vast majority of client relationships are non-face-to-face. Investment funds may onboard a large number of investors across numerous jurisdictions and investors types (including private individuals and institutional or corporate entities (many of which are regulated and/or

Name of the respondent	Question	Answer
		listed entities, or their subsidiaries) within limited time. The FATF standards do not treat non-face-to-face onboarding as an automatic risk factor in this context. The Draft RTS presumes that remotely onboarded customers present a higher level of risk than those met in person clients, whilst the investment fund sector, due to its cross-border nature is inherently remote. Asset Management Companies primarily interact with employees of regulated financial institutions which does not in itself increase the ML/TF risk. eIDAS-compliant solutions should be recognised as a preferred but not primary verification method. The mandatory eIDAS-first hierarchy is disproportionate in the funds context: EU domiciled funds attract a broad global investor base, of which many are non-EU residents and cannot access eIDAS-compliant means. Technological neutrality is essential to preserve a functional risk-based approach. This is important given the rapidly evolving ecosystem, including blockchain-based identity frameworks that will enable single digital identity repositories. Article 6 and Article 7 should also more clearly specify the types of investors to which they apply and distinguish between individual investors and institutional or corporate investors (including regulated financial entities). For the latter, video identification is neither relevant nor appropriate. In business relationships with legal entities, it is not consistent with the risk-based approach to impose identical requirements on customers and on persons acting on their behalf, given their fundamentally different roles and associated risks. The article should also expressly recognise other acceptable forms of verification beyond those listed. We propose the following re-wording of Article 7: “1. To comply with the requirements of Article 22(6) of

Name of the respondent	Question	Answer
		Regulation (EU) 2024/1624 in a non-face-to-face context, obliged entities shall apply additional and appropriate measures, on a risk-based approach, to mitigate the potential inherent higher risk that this type of customer relationship may present. These measures may include obtaining the identity document as contemplated in Article 6 (5) and the use of electronic identification means, which meet the requirements of Regulation (EU) No 910/2014 with regard to the assurance levels 'substantial' or 'high', or relevant qualified trust services as set out in that Regulation. 2. Alternatively to the electronic solution described in paragraph 1, obliged entities may acquire the customer's identity information or documentation using remote solutions that meet the conditions set out in paragraphs 3–4 of this Article. Such solutions shall be commensurate to the size, nature and complexity of the obliged entity's business and its exposure to ML/TF risks.3. . Obliged entities shall ensure that the solution described in paragraph 2 uses reliable and independent information sources and includes the following safeguards regarding the quality and accuracy of the data and documents to be verified : a. controls ensuring that the person presenting the customer's identity document (or equivalent) is the same person as the person on the picture of the document; b. the integrity and confidentiality of the communication through the solution are adequately ensured; c. any images, video, sound and/or data processed through the solution are captured in a readable format and with sufficient quality so that the customer is unambiguously recognisable; d. where applicable, the identification process does not continue if technical shortcomings or unexpected connection interruptions are detected;

Name of the respondent	Question	Answer
		e. the information, documents and data verified through the remote solution are valid and up-to-date and copies are retained, time-stamped and stored securely by the obliged entity. The content of stored records, including images, videos, sound and data shall be available in a readable format and allow for ex-post verifications. 4. Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with this Article and they shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU)2024/1624."
ALFI (Association of the Luxembourg Fund Industry)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	12
ALFI (Association of the Luxembourg Fund Industry)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	ALFI welcomes the amendments made by AMLA to Article 12(1), which has raised the threshold from two layers (EBA draft) to three layers and the requirement that more than one condition to be met before a structure is deemed complex. These changes represent a meaningful improvement. However, further clarification is needed regarding the concept of 'layer' for the purposes of Article 12(1). The RTS does not define this term, leaving room for multiple interpretations. Industry members have noted that, in the absence of guidance, each individual legal entity in an ownership chain could be treated as a separate layer. We consider that entities belonging to the same group — i.e. entities that are wholly or majority owned by a common parent and subject to consolidated supervision — should be treated as constituting a single layer.

Name of the respondent	Question	Answer
		The purpose of the complex corporate structure concept is to identify ownership arrangements that obfuscate beneficial ownership; intra-group relationships, which are transparent and subject to regulatory oversight, do not present that risk. Without such clarification, the layer count could be artificially inflated in a way that does not correspond to any heightened ML/TF risk and would disproportionately capture the fund industry's customer base, including regulated financial institutions with straightforward group structures. Similarly, defining as complex structures notably based on the condition that they involve entities in non-EU jurisdictions would result in categorising the vast majority of investors and clients of AMCs as complex. This is not reflective of the actual ML/TF risk or market practice. For these firms, cross-jurisdictional structures may exist for legitimate business and organisational reasons and do not per se obscure ultimate ownership information. Over-classification of customers as complex risks would divert attention from genuine ML/TF threats and encourage a tick-the-box approach rather than a meaningful risk-based approach. We propose the following re-wording of Article 12(1): To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer's business. By way of guidance, obliged entities may treat an ownership and control structure as a complex corporate structure where there are three or more layers between the customer and the

Name of the respondent	Question	Answer
		beneficial owner and, in addition, more than one of the following conditions is met: (a) there is an anomalous legal arrangement within the structure with no rationale or justification; (b) the structure presents at any of its layers legal arrangements/legal entities which are incorporated or domiciled in a jurisdiction included in the EU list of non-cooperative jurisdictions for tax purposes; (c) there are nominee shareholders and/or directors involved in the structure; or (d) there are indications of non-transparent ownership with no legitimate economic rationale or justification.”
ALFI (Association of the Luxembourg Fund Industry)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
ALFI (Association of the Luxembourg Fund Industry)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	ALFI welcomes the inclusion in Article 13 of the option for obliged entities to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence. However, the article continues to require collecting the same information for SMOs as for beneficial owners and verifying their identity "in the same way as they would for beneficial owners," which does not reflect the fundamentally different risk profile of these two categories. A clear distinction should be made between SMOs identified solely because no beneficial owners can be determined and beneficial owners stricto sensu. The money laundering and terrorist financing risks associated with a SMO are low, as they typically have neither personal financial interest in the

Name of the respondent	Question	Answer
		investment nor have control by other means over the entity. It is important to focus on the actual risk and adhere to the follow-the-money principle. In practice, the vast majority of SMO identifications concern publicly listed entities and large organisations with no controlling shareholders. Obtaining an official identity document of the CEO of a major listed company is generally not feasible for security reasons and does not meaningfully affect the customer's risk profile. A risk-based approach, consistent with Article 21, should therefore be applied. We therefore propose the following re-wording of Article 13: "In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect the information necessary for identification purposes; and (b) verify the identity of senior managing officials using risk-sensitive measures."
ALFI (Association of the Luxembourg Fund Industry)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	14
ALFI (Association of the Luxembourg Fund Industry)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 14(2) requires obliged entities to take risk-sensitive measures to ensure "timely updates, including on specific material events" that may cause beneficiaries to become ascertainable. In practice, most trusts will have beneficiaries designated upon birth of a new child or grandchild. Such events do not affect the customer's risk profile and do not render the child a beneficial owner until a payment is made. It is also unlikely that trusts will commit to proactively informing the

Name of the respondent	Question	Answer
		fund or its manager of each of such event. We therefore recommend having this control whenever a payment is requested to a beneficiary. We suggest redrafting Article 14(1): “For the purposes of Article 22(4) of Regulation (EU) 2024/1624, the information that obliged entities shall collect includes: (a) a description of the class of beneficiaries and its characteristics, which shall contain sufficient information to allow the obliged entity to determine when individual beneficiaries are ascertainable and shall be treated as beneficial owners at the point of payment request; and (b) relevant documents to enable the obliged entity to establish that the description is correct and up-to-date on a risk-based approach.” We suggest to redraft Article 14(2): “Obliged entities shall take risk-sensitive measures to ensure that the trustee, the legal entity or the legal arrangement provides, at the point of payment request, relevant information on beneficiaries previously identified by class or characteristics.”

		information such as nationality or place of residence may not be possible or be against the customer's right of privacy. We suggest the following definition: "Person purporting to act on behalf of the customer' means (i) legal representative(s) of a customer who is an unfit natural person, or (ii) any legal or natural person, other than an employee or senior managing official of a legal person, authorised to act on behalf of the customer pursuant to a mandate, or proxy agreement actually involved in the business relationship or occasional transaction with the obliged entity"
ALFI (Association of the Luxembourg Fund Industry)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	17
ALFI (Association of the Luxembourg Fund Industry)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	In the investment fund industry, intermediaries are predominantly regulated financial institutions that provide their customers with efficient and cost-effective access to financial markets. Systematic look-through on the underlying investor would duplicate efforts to collect data that is marginally relevant. Asset managers already conduct appropriate due diligence on their client, i.e. the intermediary who is the Fund's customer for which they have established the business relationship. Article 17 permits a CIU that distributes its shares or units through an intermediary acting in its own name but on behalf of, or for the benefit of final investors to consider the Article 20(1)(h) AMLR requirement as fulfilled, subject to four conditions. The information on final investors must be available "without undue delay and upon request." Recital (14) states that "CIUs do not need to obtain information on the identity of

Name of the respondent	Question	Answer
		the underlying investor in all cases and in a systematic manner", but Article 17 does not reflect this principle. The FATF Guidance for a Risk-Based Approach for the Securities Sector (par.108) provides that a correspondent institution should monitor the respondent institution's transactions to detect changes in its risk profile, unusual activity, or deviations from the agreed terms. Where concerns arise, the securities provider may request additional information about specific transaction(s), or if needed about the underlying investors, always on a risk-sensitive basis. Systematic look-through beyond the immediate intermediary is not required. Such approach defines proportionate due diligence modalities tailored to the sector's business model and risk profile. The Draft RTS diverges from it by suggesting that a CIU must be able to have access to information on any final investor at any time, even in the absence of a risk trigger. Focus should instead be on the due diligence performed on the intermediary and the robustness of its AML framework. A lack of alignment with international standards risks weakening the competitiveness of the EU asset management industry and could be detrimental to the EU Commission's strategic initiatives to deepen EU single market for financial services, as it could deter retail investment into units and shares of investment funds across the EU. At the end of 2024, EUR 5.7 trillion in net fund assets domiciled in the EU, the vast majority of which being UCITS were held by investors located outside the EU. The proposed approach would disrupt long-standing cross-border fund distribution arrangements, including also those used to service institutional investor portfolios, pension funds, sovereign wealth funds, and insurance companies outside the EU.

Name of the respondent	Question	Answer
		The Draft RTS limits the application of Article 17 to situations where the CIU “distributes its shares or units through another credit institution or financial institution”. Many financial intermediaries operate without being appointed as distributor or marketing intermediary. This “distribution” condition is neither required under the current EBA ML/TF Risk Factors Guidelines, nor under the FATF Guidance for a Risk-Based Approach for the Securities Sector. The words “without undue delay” may be interpreted as requiring near-immediate disclosure, which is operationally unworkable in intermediated distribution chains. Legal professional confidentiality regimes in certain jurisdictions complicates direct information flows, CIUs often have no direct relationship with final investors and may receive information only about a further intermediary not the end investor, and operate across jurisdictions with divergent data protection regimes. We propose the following re-wording of Article 17:(1)When a collective investment undertaking distributes its shares or units through another credit institution or financial institution that acts in its own name but on behalf or for the benefit of one or more final investors, it may fulfil the requirement under Article 20(1), point (h), of Regulation (EU) 2024/1624 subject to the following conditions: (a) the credit institution or financial institution is subject to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are no less robust than those stipulated by Regulation (EU) 2024/1624; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risk associated with the

Name of the respondent	Question	Answer
		relationship with the credit or financial institution is not high; and (d) the collective investment undertaking is satisfied that the credit institution or financial institution applies robust and risk-sensitive AML controls including CDD measures to its own customers which can be the final investors and its customers' beneficial owners.

Allen Overy Shearman Sterling LLP (German branch)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not fully agree. Although this approach promotes harmonisation and legal certainty across the Union, we believe the draft would benefit from additional clarification in certain areas to ensure that the flexibility envisaged by the horizontal approach is effectively realised for non-financial sector obliged entities, in particular for providers of legal advisory services. (i) Areas where the current proposals could provide greater flexibility Article 18 - Purpose and intended nature of the business relationship Article 18 requires obliged entities to obtain, "where necessary", information including the "estimated amount of funds to be deposited", the "anticipated number, size, volume, type and frequency of transactions", and the source and destination of funds. We acknowledge the "where necessary" qualifier, which provides a degree of flexibility. However, for obliged entities in the non-financial sector - particularly law firms - these categories do not readily correspond to the nature of the services provided. Legal advisory services do not involve the holding, transfer, or movement of client funds in the manner characteristic of financial sector business models. In practice, the purpose and intended nature of a legal advisory relationship is already documented in the engagement agreement, which records the subject matter, scope of services and parties involved. Recital 13 acknowledges that obliged

Name of the respondent	Question	Answer
		entities "should assess whether the information already at their disposal is sufficient", and Recital 21 recognises that information obtained to understand "the nature of the engagement" may already satisfy CDD requirements, cautioning against "unnecessary duplication". It would, however, be beneficial if these principles were reflected more clearly in the operative provisions themselves, so that non-financial sector obliged entities can rely on existing engagement documentation rather than creating parallel KYC records that replicate the same information in a different format. Article 16 - Persons purporting to act on behalf of the customer Article 16 requires obliged entities, in addition to obtaining identification information under Section 2, to "obtain information which enables them to verify the existence and extent of the power of representation". We support this requirement in principle. For law firms advising corporate clients, however, numerous individuals (in-house lawyers, board members, compliance officers, project managers) interact with the firm at the outset and throughout the mandate. The current wording could be more explicit in distinguishing between persons exercising legal authority vis-à-vis the obliged entity (e.g., those signing the engagement agreement or authorising instructions) and operational contact persons who merely communicate within the framework of an existing, fully onboarded client relationship. Applying the full identification and verification requirements of Section 2 to every individual who communicates on behalf of a

Name of the respondent	Question	Answer
		corporate client would be disproportionate in many cases, particularly where the corporate client is already fully onboarded, beneficial owners have been identified, and the contact persons act in the course of their professional duties. A more proportionate approach - for example, obtaining the name and professional function only - would better reflect the risk-based philosophy underpinning the regulation. (ii) Suggested clarifications We suggest the following adjustments to enhance the practical applicability of the RTS without undermining its objectives: On Article 18: It would be desirable to clarify - whether in the operative text, the recitals, or accompanying guidance - that for non-financial sector obliged entities, the purpose and intended nature of the business relationship may be sufficiently established by reference to the engagement letter or equivalent contractual documentation. This would give concrete effect to the principles already articulated in Recitals 13 and 21 and avoid creating formal compliance burdens without corresponding AML/CFT benefit. On Article 16: We would welcome a clarification that a risk-based, tiered approach applies to the identification of persons acting on behalf of the customer. Full identification and verification would remain appropriate for persons exercising legal authority on behalf of the client. For other persons communicating in the ordinary course of an existing business relationship, proportionate measures should be permissible, consistent with Recital 12.

Name of the respondent	Question	Answer
Allen Overy Shearman Sterling LLP (German branch)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree. While Article 1 of the draft RTS correctly states that the Regulation is to be applied "in accordance with the risk-based approach", certain provisions raise concerns regarding their application to non-financial sector obliged entities. (i) Provisions concerned Deferred verification for persons acting on behalf of the customer Article 33(1)(a) AMLR permits deferred verification of the customer and beneficial owner for up to 60 days in low-risk situations. This option does not appear to extend to persons acting on behalf of the customer under Article 20(1)(i) AMLR, read in conjunction with Article 16 of the draft RTS. This creates a notable asymmetry: the customer itself may benefit from deferred verification, but a contact person acting on the customer's behalf — who by any reasonable measure poses a lesser ML/TF risk — may not. It would be more consistent with the risk-based approach if AMLA were to confirm that deferred verification extends to such persons in low-risk situations. PEPs as beneficial owners - Article 19 / 42 AMLR Article 42 AMLR imposes enhanced due diligence for business relationships with PEPs, including senior management approval and documentation of the source of wealth. In the legal advisory sector, a possible scenario involves a corporate client whose beneficial owner holds a public function. Usually, the obliged entity has no direct business relationship with the PEP;

Name of the respondent	Question	Answer
		the PEP is not the client, does not instruct the firm, and may have no connection to the specific matter. The draft RTS does not clarify if, and so, which enhanced measures under Article 42 apply in this scenario and how they should be adapted. Applying the same intensity as for a direct PEP relationship - including senior management approval for every new mandate where a PEP appears in the ownership chain - creates significant procedural efforts without corresponding risk mitigation. A more proportionate approach, would better serve the objectives of the regulation. (ii) Concrete proposals On deferred verification: Where the conditions under Article 33(1)(a) are met, the option of deferred verification should also extend to persons acting on behalf of the customer, provided that their identity is collected at the outset and verified within the same timeframe applicable to the customer. On PEPs as beneficial owners: Where a PEP is identified as beneficial owner but is not the customer itself, enhanced due diligence should be proportionate to the PEP's role in the ownership structure.
Allen Overy Shearman Sterling LLP (German branch)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. We identify the following situations: (a) Verification of legal entities - register extracts vs. constitutive documents Under German law (§ 12(2) GwG), a commercial register extract (Handelsregisterauszug) constitutes a sufficient means of verifying the identity of a legal entity. Recital (5) of the draft

Name of the respondent	Question	Answer
		RTS lists constitutive documents (Memorandum and Articles of Association, certificates of incorporation) as examples of reliable and independent sources, and refers to "a recent official copy of these documents issued by the applicable public registers". However, the RTS does not explicitly confirm that a register extract alone, as distinct from a certified copy of the underlying constitutive documents, suffices as a reliable and independent source. In practice, obliged entities in the legal advisory sector routinely rely on register extracts because they contain all required identification data and are issued by a state authority after prior substantive review by notaries and courts (cf. § 15 HGB). The underlying constitutive documents may not add informational value beyond what is already contained in the register extract, and requiring their separate procurement would impose additional administrative burden without a corresponding increase in reliability. This creates an internal inconsistency within the draft RTS: Article 21(1)(a) accepts "the information contained in the central register, business or company register" as a sufficient source for the identification of beneficial owners in simplified due diligence scenarios. If register information suffices for BO identification, it is difficult to justify why an extract from the same register should not suffice for verifying the identity of the legal entity itself. Proposal: Confirm in Article 8 or Recital (5) that a public register extract constitutes a reliable and independent source for verification of legal entities, provided the register is

Name of the respondent	Question	Answer
		established by law and entries are subject to prior substantive review by public authorities. (b) Beneficial ownership in complex corporate structures Article 52(1) AMLR introduces a harmonised method for calculating indirect beneficial ownership by multiplying ownership interests across layers and adding the results of different chains. Article 11(2) of the draft RTS requires obliged entities to identify, for each intermediate entity in the ownership chain, the legal entities and legal arrangements that constitute intermediate entities between the customer and its beneficial owners. For complex corporate structures (three or more layers, Article 12 of the draft RTS), the required information - ownership percentages at each layer, the nature of intermediate entities, and beneficial ownership of legal arrangements - is often not readily available from public sources or the client itself. Recital (105) AMLR expressly recognises that "the application of the rules for identifying the beneficial ownership of legal entities can give rise to implementation questions when relevant stakeholders are confronted with concrete cases, especially in instances of complex corporate structures", and contemplates that the Commission may issue guidelines with case examples. Proposal: We recommend that AMLA issues guidance with worked examples for common corporate structures, particularly those involving intermediate legal arrangements. The guidance should clarify the extent to which obliged entities

Name of the respondent	Question	Answer
		may rely on information provided by the client or publicly available register data when the full ownership chain cannot be independently verified despite reasonable efforts.
Allen Overy Shearman Sterling LLP (German branch)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	For the legal services sector, we propose the following simplified due diligence measures. We note at the outset that AMLA has indicated it has not yet identified additional SDD measures "without creating exemptions from the obligations stemming from the AMLR." We respectfully submit that the measures proposed below do not create exemptions but rather constitute sector-specific concretisations of the existing SDD flexibility under Article 33(1)(e) AMLR, which expressly contemplates "any other relevant simplified due diligence measure identified by AMLA pursuant to Article 28." The proposals fall squarely within AMLA's mandate under Article 28(1)(b) to specify SDD measures applicable to specific categories of obliged entities, products, or services. (a) Persons acting on behalf of the customer (Article 16 of the draft RTS / Article 20(1)(i) AMLR) In low-risk situations, the draft RTS should expressly permit simplified identification of persons acting on behalf of corporate clients. Where the corporate client and its beneficial owners have already been fully identified and verified, and where the contact persons are employees or officers acting within the scope of their professional duties, the ML/TF risk emanating from those persons is negligible compared to the risk arising from the client relationship itself. We propose that the following information should be deemed sufficient in low-risk situations: (i) the name and professional

Name of the respondent	Question	Answer
		function of the contact person; (ii) a confirmation of authority issued by the client; and (iii) the contact person's professional email address, instead of full identity document verification (passport or equivalent). This is proportionate because the underlying risk is already mitigated through the full CDD performed on the client entity itself. (b) Intra-group information sharing for contact persons Article 48(1) AMLR permits reliance on third-party obliged entities for the CDD measures under Article 20(1)(a), (b), and (c). We propose that AMLA include in the draft RTS a provision that, in low-risk situations, where a group entity of a law firm has already identified and verified a contact person, that information may be shared within the group without requiring each group entity to conduct independent re-verification. This would not constitute an exemption from CDD obligations but rather a proportionate procedural simplification reflecting the reduced risk profile and the shared compliance framework within a supervised group structure. (c) Purpose and nature of the business relationship (Article 18 of the draft RTS / Article 24) For non-financial sector obliged entities, the draft RTS should confirm that the engagement letter constitutes sufficient documentation of the purpose and intended nature of the business relationship under Article 33(1)(c) AMLR, without requiring additional information on fund flows, transaction volumes, or destination of funds that are characteristic of financial sector relationships. Article 33(1)(c) expressly permits

Name of the respondent	Question	Answer
		"reducing the amount of information collected to identify the purpose and intended nature of the business relationship or inferring it from the type of transactions or business relationship established." For law firms, the type of legal service mandated (e.g., corporate advisory, litigation, regulatory compliance) inherently defines the purpose and nature of the relationship. (d) Regulated and listed entities Where the client is (i) a regulated financial institution subject to its own AML/CFT obligations and prudential supervision, (ii) a company listed on a regulated market within the EU with ongoing disclosure obligations, or (iii) a public sector body, the mandate agreement together with publicly available regulatory or stock exchange filings should be deemed sufficient CDD documentation under the SDD framework. Annex II of the AMLR expressly identifies these categories as indicators of potentially lower risk. The rationale is straightforward: these clients are already subject to comprehensive regulatory oversight, transparency requirements, and - in the case of financial institutions - their own CDD obligations. The marginal risk reduction achieved by requiring a law firm to conduct full, independent CDD on a client that is itself supervised by a financial authority is negligible and disproportionate to the compliance burden imposed. We submit that adopting these measures would give meaningful effect to AMLA's mandate under Article 28(1)(b) while respecting the boundaries of that mandate. None of the proposals exempt obliged entities from CDD; they merely

Name of the respondent	Question	Answer
		calibrate the depth and modality of CDD to the actual risk profile of the client relationship, consistent with the risk-based approach that underpins the AMLR.
Allen Overy Shearman Sterling LLP (German branch)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	(a) Transitional provisions - Article 33 of the draft RTS / Article 26(2) AMLR Article 33(2) requires existing customers' data to be brought in line with the RTS "not later than within the periods set out in Article 26(2)" of Regulation (EU) 2024/1624 - one year for high-risk customers, five years for all others. Recital (25) clarifies that these periods "should only start with the application date of this Commission Delegated Regulation for existing customers onboarded before Regulation (EU) 2024/1624 took effect." This clarification is of critical practical importance. If the one-year period were instead calculated from the last CDD review under a previous national regime, obliged entities could face an obligation to review their entire high-risk client base immediately upon the application date, imposing disproportionate front-loaded costs without a commensurate AML/CFT benefit. Anchoring the period to the application date of the Delegated Regulation allows firms to integrate the review into existing periodic review cycles. However, this essential clarification currently resides only in a non-binding recital. Given the legal and operational consequences of an alternative interpretation, we request AMLA to incorporate it into the operative text. (b) Legal hierarchy - reliance on recitals for substantive obligations

Name of the respondent	Question	Answer
		We note that the RTS, as a delegated act, cannot extend the obligations set out in the AMLR, and that recitals are interpretive aids rather than binding provisions. Several clarifications of material importance - reliable sources for verification (Recital 5), avoidance of information duplication (Recital 21), and transitional deadlines (Recital 25) - are currently found only in recitals. We request AMLA to ensure that essential interpretive positions are reflected in the operative provisions or, at minimum, in binding Q&A guidance issued pursuant to Article 50 of Regulation (EU) 2024/1620. (c) Interaction between CDD/EDD obligations and legal professional privilege The draft RTS does not address the interaction between CDD/EDD information requirements and professional secrecy obligations that apply to certain obliged entities (notably lawyers). While professional privilege does not exempt legal professionals from AML/CFT obligations, CDD/EDD measures may possibly conflict with professional secrecy duties in practice. We request AMLA to address this tension in Q&A guidance, clarifying how the principle of proportionality applies where the collection or retention of specific CDD/EDD information may conflict with professional secrecy obligations of obliged entities. (d) Q&A guidance for the non-financial sector

Name of the respondent	Question	Answer
		We welcome AMLA's indication that targeted interpretive guidance may be provided. We encourage AMLA to publish Q&As addressing: (i) verification of legal entities via public registers; (ii) beneficial ownership calculation methodology with worked examples; (iii) proportionate identification of persons acting on behalf of corporate clients; (iv) application of PEP measures where the PEP is a beneficial owner rather than the client; and (v) the interaction between CDD obligations and professional secrecy.
Allen Overy Shearman Sterling LLP (German branch)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Allen Overy Shearman Sterling LLP (German branch)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	8
Allen Overy Shearman Sterling LLP (German branch)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 8 requires obliged entities to take risk-sensitive measures to assess whether a source of information is reliable and independent, based on five criteria: (a) credibility, including reputation; (b) official status and independence; (c) up-to-dateness; (d) accuracy, based on whether information underwent checks before being provided; and (e) ease of forgery. We welcome this principles-based approach. However, we note that neither Article 8 nor Recital (5) explicitly confirms that public commercial registers maintained by law - where entries are subject to prior substantive review by courts or notaries - qualify as reliable and independent sources for the verification

Name of the respondent	Question	Answer
		of legal entities and legal arrangements. Recital (5) references "a recent official copy of these documents issued by the applicable public registers and lists" only in the context of constitutive documents, without clarifying that the register extract itself constitutes sufficient verification. We request AMLA to add a clarification - either in Article 8 itself or in Recital (5) - expressly confirming that public commercial registers which are (i) established and maintained by law, (ii) administered by a public authority or court, and (iii) subject to a prior substantive review mechanism (e.g. notarial authentication or official examination) before publication, constitute reliable and independent sources for verification of the identity of legal persons and legal arrangements under Article 22(6) and (7) AMLR. Such registers satisfy all five criteria of Article 8: (a) Credibility: Extracts are issued by a state court or public authority, providing the highest level of institutional credibility and reputation. (b) Official status and independence: The register is maintained by an independent judicial body (in Germany, the local court - Amtsgericht), with no commercial interest and a statutory mandate to ensure accuracy. (c) Up-to-dateness: Obliged persons are under a legal duty to notify the register of any material change (e.g. changes in management, share capital, registered office, or legal form) without undue delay. Failure to notify may result in fines. The

Name of the respondent	Question	Answer
		register therefore reflects the most current legally effective status of the entity. (d) Accuracy: Information entered into the register must undergo a prior verification mechanism before publication. (e) Resistance to forgery: Official electronic extracts are issued with qualified electronic signatures or seals by the court, ensuring their integrity and authenticity can be verified independently. By way of example, the German Commercial Register (Handelsregister) - maintained by local courts under the German Commercial Code (HGB) - fully meets these requirements. Section 12(2) of the German Anti-Money Laundering Act (Geldwäschegesetz - GwG) has historically recognised register extracts as the standard reliable source for verifying the identity of legal entities. BaFin's current Interpretation and Application Guidance (AuA, effective 1 February 2025) confirms that an electronic commercial register extract not older than three months constitutes a valid verification document. An explicit confirmation in the RTS would: - ensure legal certainty and a harmonised understanding across all Member States that registers meeting the above criteria are per se reliable and independent, without requiring further case-by-case assessment; - avoid imposing disproportionate burdens on obliged entities

Name of the respondent	Question	Answer
		that would otherwise need to obtain underlying constitutive documents (e.g. original articles of association or notarial deeds) which do not provide incremental reliability beyond what has already been verified through the registration process; and - align with the proportionality objective stated in the Consultation Paper, which emphasises robust and consistent requirements that are at the same time proportionate and do not impose unnecessary regulatory burden on the private sector.
Allen Overy Shearman Sterling LLP (German branch)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	12
Allen Overy Shearman Sterling LLP (German branch)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 12 - Understanding the ownership and control structure in the case of complex corporate structures Article 12(1) requires obliged entities to treat an ownership and control structure as a complex corporate structure where there are three or more layers between the customer and the beneficial owner and, in addition, more than one of four conditions is met: (a) presence of a legal arrangement or similar entity such as a foundation, (b) registration in jurisdictions outside the EU, (c) involvement of nominee shareholders or directors, or (d) the structure obfuscates transparency without legitimate rationale. Article 12(2) then requires obliged entities to obtain additional information, such as an organisational chart (organigram), and Article 12(3) requires risk-sensitive measures to verify the accuracy of the information obtained.

Name of the respondent	Question	Answer
		We welcome the structured approach of Article 12 as a basis for identifying complex structures that warrant enhanced scrutiny. However, we have three concerns: 1. Interaction between Article 12 RTS and Article 52 AMLR - need for worked examples Understanding the ownership and control structure of a customer in the case of complex corporate structures requires the application of the indirect ownership calculation method set out in Article 52(1) of Regulation (EU) 2024/1624 (AMLR). That provision mandates that indirect ownership be calculated by multiplying the shares or voting rights or other ownership interests held by the intermediate entities in the chain and adding together the results from those various chains. This harmonised calculation method represents a departure from previous national approaches. The practical interaction between Article 12 of the RTS and Articles 52–54 AMLR is complex and requires clear interpretive guidance to ensure harmonised application across the EU. We therefore request AMLA to publish supplementary FAQ guidance with worked numerical examples illustrating the application of the multiplication-and-addition method under Article 52 AMLR in the context of Article 12 RTS complex structures (multi-layered holding companies, mixed direct and indirect ownership, structures involving trusts or foundations). Such guidance would support the harmonisation objective of the AMLR and enable obliged entities to apply the calculation method with confidence and consistency from the outset.

Name of the respondent	Question	Answer
		2. Proportionality - clarity on the standard of diligence expected from obliged entities Article 12(2) requires obliged entities to obtain additional information, such as an organigram to complement the measures under Article 11. Article 12(3) further requires risk-sensitive measures to ensure the accuracy of the information obtained. However, in order to ensure consistent implementation across all Member States, we request AMLA to clarify - either in Article 12 itself or in the accompanying recitals - the standard of diligence expected from obliged entities in fulfilling their obligations under Article 12. Recital (10) of the draft RTS acknowledges that the identification of senior managing officials (SMOs) is permitted only where the obliged entity has been unable to identify beneficial owners having exhausted all possible means of identification. Recital (10) further clarifies that finding it "difficult to identify the beneficial owner, for example in cases of complex corporate structures, does not amount to 'doubts' and therefore will not provide a sufficient basis for the obliged entity to instead identify the SMOs". A clarification would be helpful on how an obliged entity has diligently exhausted all reasonably available means to obtain information on every layer of a complex structure, rather than left open to divergent supervisory interpretation. 3. Definition of "layers" - need for clarification

Name of the respondent	Question	Answer
		Article 12(1) refers to "three or more layers between the customer and the beneficial owner" as a quantitative threshold. However, neither Article 12 nor the recitals define what constitutes a "layer" for this purpose. We request AMLA to provide a definition or interpretive guidance on the term "layer" to ensure consistent application of the three-layer threshold across all Member States.
Allen Overy Shearman Sterling LLP (German branch)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
Allen Overy Shearman Sterling LLP (German branch)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 18 - Identification of the purpose and intended nature of a business relationship or occasional transaction Article 18 specifies additional information to be obtained regarding the purpose and intended nature of the business relationship, "where necessary", for the purposes of Article 20(1)(c) and Article 25 AMLR. Recital (13) clarifies that obliged entities should first assess whether the information already at their disposal is sufficient to understand the purpose and intended nature. We request AMLA to provide guidance on two points: 1. Mandate agreement as sufficient basis In the legal advisory sector, the scope, purpose and nature of the business relationship are comprehensively documented in the engagement letter at the outset of every client relationship. This agreement typically specifies the legal services to be provided and the subject matter of the engagement. We request AMLA to confirm - either in Article 18

Name of the respondent	Question	Answer
		or in Recital (13) - that where the information contained in the mandate agreement, together with any other information already at the non-financial sector obliged entity's disposal, is sufficient to understand the purpose and intended nature of the business relationship. 2. Relationship between Article 18 (standard CDD) and Article 26 (EDD) Article 26 requires obliged entities, for EDD purposes under Article 34(4)(b) AMLR, to obtain additional information on the intended nature of the business relationship — including whether the destination of funds is consistent with the stated nature of the relationship. There appears to be an overlap between the information categories in Article 18 and those in Article 26. We request AMLA to clarify the distinction between the two provisions, in particular which additional information under Article 26 goes beyond what is already required under Article 18 in standard CDD situations.
Allen Overy Shearman Sterling LLP (German branch)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	19
Allen Overy Shearman Sterling LLP (German branch)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 19 - Identification of Politically Exposed Persons Article 19(1) requires obliged entities to determine whether the customer, its beneficial owner, or the person on whose behalf a transaction is carried out is a PEP, a family member, or a close associate. We request AMLA to provide guidance on two points:

Name of the respondent	Question	Answer
		1. Application of Article 42 AMLR measures where the PEP is the beneficial owner In the legal advisory sector, one scenario is a corporate client whose ultimate beneficial owner holds a prominent public function. We request AMLA to clarify how the measures in Article 42 AMLR apply where there is no direct relationship with the PEP. 2. Risk-sensitive calibration of Article 42 measures Article 42(2)(b) AMLR acknowledges that PEP-related risks may vary by category. We request AMLA to explain if the intensity of enhanced due diligence may be calibrated on a risk-sensitive basis - for example, distinguishing between a domestic PEP in a well-governed EU Member State and a foreign head of state in a high-risk jurisdiction. This would ensure resources are directed toward genuinely higher-risk scenarios and support consistent, high-quality compliance across the EU.
Allen Overy Shearman Sterling LLP (German branch)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	33
Allen Overy Shearman Sterling LLP (German branch)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Article 33 - Transitional provisions Article 33 requires obliged entities to bring documents, data and information of existing customers onboarded before Regulation (EU) 2024/1624 took effect in line with the new requirements on a risk-sensitive basis, within the maximum periods set out in Article 26(2) AMLR (one year for higher-risk customers, five years for all others). Recital (25) clarifies that

Name of the respondent	Question	Answer
		these periods should only start with the application date of this Commission Delegated Regulation. We request AMLA to incorporate this starting point into the operative text of Article 33 itself. While we welcome the clarification in Recital (25), recitals are not legally binding and may not be given the same weight in supervisory enforcement across all Member States. Incorporating the commencement date directly into Article 33 would provide unambiguous legal certainty that the deadline for high-risk clients is 10 July 2028.
Allen Overy Shearman Sterling LLP (German branch)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Allen Overy Shearman Sterling LLP (German branch)	Please specify which recital you refer to, and share your comments below.	Recital (5) - Reliable and independent sources We request AMLA to amend Recital (5) to explicitly confirm that a public register extract, issued by a register that is established and maintained by law and subject to a prior substantive review mechanism (e.g. notarial authentication or judicial examination), constitutes a reliable and independent source for verification in its own right. This would be consistent with the clarification we have requested in respect of Article 8 and would provide legal certainty that obliged entities are not required to obtain the underlying constitutive documents separately.
Allen Overy Shearman Sterling LLP (German branch)	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Allen Overy Shearman Sterling LLP (German branch)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Allen Overy Shearman Sterling LLP (German branch)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available
Allen Overy Shearman Sterling LLP (German branch)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs	Not applicable/no information available

Name of the respondent	Question	Answer
	stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, "costs" refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Allen Overy Shearman Sterling LLP (German branch)	Please justify your answer to the previous question and provide evidence where possible.	One-off costs (1) Policy and procedure revision: The RTS introduce requirements that require a comprehensive review of existing AML policies, procedures, and onboarding workflows. (2) IT system adjustments: Client onboarding and case management systems require reconfiguration. (3) Staff training: New concepts and thresholds (e.g. Article 8 criteria, the Article 12 complex structure definition, the harmonised indirect ownership calculation) require dedicated training for the staff - both a direct cost and an indirect cost (billable time diverted to training).

Name of the respondent	Question	Answer
		Recurring costs (1) Potentially higher permanent personnel costs if the additional compliance workload generated by the RTS requirements necessitates the allocation of additional full-time equivalent resources. (2) Increased documentation requirements generate a permanent increase in documentation volume. Cost mitigation through clearer drafting A material portion of the above costs could be reduced if the RTS provided greater clarity on the points raised in our responses. Ambiguous provisions generate disproportionate implementation costs because obliged entities must build systems flexible enough to accommodate future supervisory guidance. Clearer operative provisions would enable more efficient and targeted implementation.
Allianz SE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	NA - Please refer to Question 2 and 4 which specifies Observation 1 and Observation 2
Allianz SE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not	Observation 2 1. Summary Article 34(4) of the AMLR specifies that proportionate

Name of the respondent	Question	Answer
	agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	enhanced due diligence (EDD) measures should be applied to address higher risks, which may include the measures outlined in points (a) to (g). In line with Article 1 of the RTS we propose allowing insurance undertakings to apply a RBA for Politically Exposed Persons (PEPs) in the case of low-risk insurance products. By incorporating premium-based thresholds and product-specific risk profiling, insurers can effectively align with the new EU AML/CFT framework. This approach ensures that high-risk transactions are subject to robust EDD measures, while avoiding unnecessary administrative burdens for low-risk, small-value insurance products held by PEPs, thereby upholding the principles of proportionality. 2. In detail Rationale for a Risk-Based Approach for Insurance PEPs • Inherently Lower Risk: Many insurance products—specifically non-surrenderable life insurance, temporary death cover, or pension schemes without cash value—pose inherently lower money laundering (ML) risks compared to banking products. • Proportionality Requirement: The application of Enhanced Due Diligence (EDD), such as comprehensive source-of-wealth investigations as outlined in Article 34(4)(c) of the AMLR, may be disproportionate when applied rigidly to low-value, non-surrenderable products. A more balanced approach could involve introducing thresholds-based applicability of EDD, combined with the identification of relevant trigger events, to ensure proportionality while maintaining the effectiveness of anti-financial crime measures. • Trigger for EDD: Transactions or premium payments exceeding a set amount (e.g., in a single or accumulated installment) shall automatically escalate the risk profile from

Name of the respondent	Question	Answer
		"Low/Medium" to "High," mandating the measures in Article 34(4) AMLR. • Proposal: We propose that obliged entities be permitted to classify PEPs holding only low-risk insurance products as "lower risk," allowing for streamlined, rather than enhanced, due diligence, consistent with the FATF Guidance for Life Insurance Sector. Market best practices (please see DNB Wwft Q&As and Good Practices (2024), Page 37) within the EU support this risk-based approach, emphasizing that while the presence of a PEP within a customer's structure is a factor that increases risk, it does not inherently warrant the assignment of a high-risk profile. The overall risk level is determined by a combination of factors, rather than solely the PEP status. In addition, please refer to Observation 1 submitted in section of Question 4.
Allianz SE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	NA
Allianz SE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Observation 1 1. Summary We propose that regulatory frameworks explicitly permit insurance undertakings to adopt a risk-based approach (RBA) to Customer Due Diligence (CDD) updates, according to RTS Article 1. Rather than relying on rigid, periodic reviews, insurers should be authorized to trigger data updates based on material changes or specific high-risk events, provided that effective,

Name of the respondent	Question	Answer
		documented internal safeguards and ongoing transaction monitoring are in place. The requirements outlined in Article 26(2) point (b) of the AMLR, as well as Article 1 and No. 25 of the RTS, highlight the relevance of applying a risk-based approach within the insurance sector, particularly in the context of “keeping customer data up-to-date.” Aligning with these provisions could support insurers in achieving a balanced approach that promotes proportionality and efficiency in compliance efforts, while maintaining a focus on addressing actionable risks effectively. 2. In detail To underline this statement, the following legal and operational arguments should be considered: Alignment with FATF Recommendations (Risk-Based Principle) The Financial Action Task Force (FATF) guidelines for the insurance sector emphasize that AML/CFT measures must be proportionate to the risks identified. A mandatory, blanket, periodic update for all customers (e.g., every 5 years) is often inefficient and does not align with the lower inherent risk profile of many traditional insurance products compared to banking. An RBA allows insurance undertakings to focus resources on higher-risk relationships (e.g., high-value, cross-border life insurance) while streamlining processes for low-risk customers. Apply a “Trigger-Based” key customer data update • Under an RBA, insurers should update data not just at specific time intervals, but upon the occurrence of "trigger events". These events include, but are not limited to • Significant, atypical changes in transaction behavior (e.g.,

Name of the respondent	Question	Answer
		premature surrender of policy, unusual top-up payments). • Changes in legal status/domicile. • Change in the Politically Exposed Person (PEP) status of the policyholder. The Role of Effective Safeguards The validity of a risk-based update approach is contingent on robust, documented internal controls. These safeguards must include • Initial Risk Profiling: Rigorous classification of customers at onboarding. • Continuous Monitoring: Automated systems to identify triggering events in real-time. • Documentation: Legal documentation justifying why a particular customer was determined to be low-risk Efficiency and Proportionality Implementing a RBA ensures a more balanced and targeted strategy, avoiding unnecessary measures such as the broad termination of life insurance contracts, which is legally restricted by regulators. By prioritizing targeted, event-driven updates, insurers can streamline compliance efforts, reduce operational burdens, and enhance the effectiveness of their anti-financial crime measures. This approach allows insurers to focus on addressing genuine risks.
Allianz SE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	NA

Name of the respondent	Question	Answer
Allianz SE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Allianz SE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Allianz SE	Do you have any comments on the Annex in the draft RTS?	No
Allianz SE	How would you rate the proposals set out in the draft RTS overall?	Neutral
Allianz SE	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Allianz SE	Please justify your answer to the previous question and provide evidence where possible.	CDD key customer updates following rigid, periodic reviews might not be proportionate for low-risk insurance products
ALPHA BANK S.A.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	Article 13 – Senior Managing Officials (SMOs) (i) Provision concerned: Article 13(a)–(b) (ii) Rationale: * Requires same level of information and verification as beneficial owners * In practice, SMOs are identified: as a fallback measure, not

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	due to ownership/control * Applying full BO-level CDD: is disproportionate in low/standard risk cases creates operational burden without clear risk benefit * Particularly challenging for: large corporates, listed entities Proposed drafting: Identification of SMOs should be limited to members of the management body (CEO, CFO). Simplified identification and verification measures may be applied in low-risk cases, including reliance on reliable public sources. Article 16 – Persons acting on behalf of the customer (i) Provision concerned: Article 16 (ii) Rationale: * Requires verification of the existence and extent of power of representation * No explicit flexibility on: reliance on standardised or publicly available documentation & reduced checks in low-risk situations * In practice: many cases involve routine/legal representation structures * Risk of: over-documentation and duplication Proposed drafting: Obliged entities may rely on standardised or publicly available documentation, including corporate registries or equivalent sources, to verify the existence and extent of the power of representation and may apply simplified measures in low-risk situations. Article 19 – Politically Exposed Persons (PEPs)

Name of the respondent	Question	Answer
		(i) Provision concerned: Article 19(1)–(3) (ii) Rationale: * Requires: screening before onboarding & ongoing screening at a risk-based frequency & automated tools (or justification for manual) * In practice: continuous screening expectations may become overly frequent and operationally heavy * No clear distinction between: low-risk vs high-risk customer segments * Potential: over-screening without proportional benefit Proposed drafting: Obliged entities may use automated tools / manual checks, based on their size, complexity and risk exposure Article 7 – Non face-to-face verification (i) Provision concerned: Article 7(1)–(3) (ii) Rationale: Strong reliance on eIDAS “substantial/high” solutions may be restrictive Proposed drafting: Obliged entities may use alternative remote verification solutions that ensure an equivalent level of reliability and security, based on a documented risk assessment. Article 17 – Collective Investment Undertakings (i) Provision concerned: Article 17 (ii) Rationale: * Reliance mechanism limited only to CIUs

Name of the respondent	Question	Answer
		* Does not extend to: other regulated financial institutions/ intra-group relationships * Leads to duplication of CDD controls, as multiple regulated entities perform similar checks Proposed drafting: Obliged entities may rely on customer due diligence performed by other regulated financial institutions, including within the same group, provided that they are subject to equivalent AML/CFT requirements and supervision. Article 10 – Verification of the beneficial owner (i) Provision concerned: Article 10(a)–(b) (ii) Rationale: * Requires use of at least one additional verification source, even where: reliable public registers or equivalent sources are already used * May lead to: duplication of verification steps & unnecessary burden in low-risk scenarios * Not fully aligned with the objective of simplification under SDD" Proposed drafting: Where beneficial ownership information is obtained from reliable, independent and up-to-date sources, including public registers, additional verification measures shall not be required unless inconsistencies or risk indicators are identified. Article 23 – Customer data updates in low-risk situations (i) Provision concerned: Article 23(1)–(2) (ii) Rationale:

Name of the respondent	Question	Answer
		* While allowing reduced frequency, still implies: structured/periodic updates * Does not fully reflect: event-driven monitoring approaches used in practice Proposed drafting: In low-risk relationships, obliged entities may rely primarily on event-driven monitoring to trigger updates of customer identification data, provided that monitoring systems are effective in identifying changes in risk.
ALPHA BANK S.A.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 4 – Place of birth (i) Provision concerned: Article 4 (ii) Rationale: * The requirement to collect place of birth as “at least the country name” may be overly prescriptive * In practice: information available may vary (only city or only country) & forcing collection of both elements may create unnecessary onboarding friction * For low-risk customers, this level of detail does not materially enhance ML/TF risk assessment Proposed drafting: The information on place of birth shall consist of either the country name or the city of birth, whichever is available from reliable sources. Where both are available, obliged entities may collect both on a risk-sensitive basis. Article 5 – Nationalities (i) Provision concerned: Article 5 (ii) Rationale: Requirement to collect all nationalities may be: difficult to

Name of the respondent	Question	Answer
		verify in practice & disproportionate for low-risk customers Proposed drafting: Verification of at least one declared nationality shall be sufficient in low-risk situations, unless additional nationalities are relevant to the risk assessment. Article 6 – Verification of identity (i) Provision concerned: Article 6(1)–(3) (ii) Rationale: * Not all collected data points require the same level of verification * Re-verification due to document expiry is disproportionate * Full verification of all declared nationalities is not always necessary Proposed drafting: Verification shall focus on core identity elements (name and date of birth), using reliable and independent sources. Where a customer's identity has been previously verified and remains valid, re-verification shall not be required solely due to document expiry, unless risk indicators are identified. Verification of at least one declared nationality shall be sufficient in low-risk situations, unless additional nationalities are relevant to the risk assessment. Article 10 – Beneficial owner verification (i) Provision concerned: Article 10 (ii) Rationale: * Requires additional verification even where: reliable public registers are used & leads to duplication of controls

Name of the respondent	Question	Answer
		Proposed drafting: Where full verification of beneficial ownership is not feasible, including in cross-border structures, obliged entities shall verify the available information and document the measures taken, ensuring that the level of verification remains commensurate with the identified risk. Article 13 – Senior Managing Officials (i) Provision concerned: Article 13 (ii) Rationale: * SMOs are a fallback mechanism, not a risk driver * Applying BO-level requirements is disproportionate * Scope of SMOs may be interpreted too broadly Proposed drafting: Identification of SMOs should be limited to members of the management body (CEO, CFO). Simplified identification and verification measures may be applied in low-risk cases, including reliance on reliable public sources. Articles 14–15 – Trusts (i) Provision concerned: Articles 14 and 15 (ii) Rationale: Information on beneficiaries is often: not publicly available & dependent on trustees Proposed drafting: Obliged entities may rely on information provided by the trustee as sufficient, unless inconsistencies or risk indicators are identified.

Name of the respondent	Question	Answer
		Article 27 – Source of funds / wealth (i) Provision concerned: Article 27 (ii) Rationale: Extensive documentation requirements may be: difficult to obtain & disproportionate in some cases Proposed drafting: Obliged entities may rely on a combination of customer declarations and available information, supplemented by verification where risk indicators are present. Article 29 – Screening of customers and beneficial owners (i) Provision concerned: Article 29 (ii) Rationale: * Scope of persons to be screened is unclear (SMOs, representatives) * Risk of over-extension of screening to non-risk-relevant persons Proposed drafting: Screening shall apply to customers and beneficial owners. SMOs shall not be subject to screening unless specific risk indicators exist. Article 30 – Screening requirements (i) Provision concerned: Article 30(a), (c)(iii) (ii) Rationale: * Data requirements are overly prescriptive (aliases, wallets, transliterations) * Not all data are available or relevant

Name of the respondent	Question	Answer
		* Significant change" is unclear → risk of over-screening Proposed drafting: Screening shall use available and reliable identifiers, additional data where available. Re-screening shall be triggered by material changes impacting sanctions risk.
ALPHA BANK S.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 4 – Place of birth Unavailable situation: * Greek ID cards often do not consistently include full place of birth (country) * Only city may be available Proposed solution: Accept city or country of birth, whichever is available. Article 5 – Nationalities Unavailable situation: Customers may declare multiple nationalities, but: only one is verifiable via documents & others cannot be reliably confirmed Proposed solution: Verify at least one nationality & Additional nationalities only where risk-relevant. Article 6 – Verification of identity Unavailable situation: * Customers (vulnerable, cross-border) may: lack valid ID & present expired documents * Full document criteria (signature, expiry etc.) not always met Proposed solution: Allow: alternative public sources (gov databases, tax systems) & no re-verification solely due to document expiry, unless risk indicators.

Name of the respondent	Question	Answer
		Article 10 – Beneficial owner verification Unavailable situation: BO information from registries may be: incomplete or outdated & not verifiable via additional independent sources Proposed solution: Allow reliance on: central registers & customer confirmation Additional verification only if inconsistencies arise. Article 13 – Senior Managing Officials Unavailable situation: Full BO-level data for SMOs often: not available (residential address, detailed data) Proposed solution: Allow: limited dataset (name & role) & reliance on public/company sources. Articles 14–15 – Trusts Unavailable situation: Beneficiary information:often not available upfront & depends on trustee disclosures Proposed solution: Allow reliance on: trustee declarations Updates triggered by material changes only. Articles 25–28 – Source of wealth/funds Unavailable situation: Customers cannot always provide: formal documentation (tax returns, contracts) Proposed solution: Allow combination of: customer declaration & transaction

Name of the respondent	Question	Answer
		behaviour & existing data Documents only where risk indicators exist. Articles 29–30 – Sanctions screening Unavailable situation: Data such as: aliases & transliterations & digital wallet addresses are not consistently available Proposed solution: Screen based on: available and reliable identifiers only Additional data used where available.
ALPHA BANK S.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Article 4 – Place of birth * Allow collection of either city or country of birth, whichever is available * No requirement to complete missing data in low-risk cases Proposed drafting The information on place of birth shall consist of either the country name or the city of birth, whichever is available from reliable sources. Where both are available, OE may collect both on a risk-sensitive basis. Article 5 – Nationalities * Verify only one nationality in low-risk situations * Additional nationalities only where risk-relevant Proposed drafting Verification of at least one declared nationality shall be sufficient in low-risk situations, unless additional nationalities are relevant to the risk assessment. Article 6 – Verification of identity * Allow reliance on: one reliable source only & public/digital data sources * No re-verification solely due to document expiry Proposed drafting Verification shall focus on core identity elements (name and date of birth), using reliable and independent sources. Where a customer's identity has been

Name of the respondent	Question	Answer
		previously verified and remains valid, re-verification shall not be required solely due to document expiry, unless risk indicators are identified. Verification of one declared nationality shall be sufficient in low-risk situations, unless additional nationalities are relevant to the risk assessment. Article 10 – Beneficial owner * Allow reliance on central BO registers without additional verification * No further checks unless inconsistencies arise Proposed drafting Where full verification of beneficial ownership is not feasible, including in cross-border structures, obliged entities shall verify the available information and document the measures taken, ensuring that the level of verification remains commensurate with the identified risk Article 13 – Senior Managing Officials * Allow: limited dataset (name + role) & simplified verification via public sources Proposed drafting Identification of SMOs should be limited to members of the management body. Simplified identification and verification measures may be applied in low-risk cases, including reliance on reliable public sources. Articles 14–15 – Trusts * Allow reliance on: trustee declarations * No full identification of all beneficiaries upfront * Updates only upon material changes Proposed drafting OE may rely on information provided by the trustee as sufficient, unless inconsistencies or risk indicators are identified. Article 17 – Reliance * Extend SDD to: regulated financial institutions & intra-group relationships

Name of the respondent	Question	Answer
		* Avoid duplication of CDD Proposed drafting Obliged entities may rely on customer due diligence performed by other regulated financial institutions, including within the same group, provided that they are subject to equivalent AML/CFT requirements and supervision. Article 18 / 24 – Purpose and nature * Allow purpose to be inferred from product type * No additional information for standard low-risk products Proposed drafting Where the purpose of the relationship is clear from the product characteristics, no additional information shall be required unless inconsistencies arise. Article 22 – Pooled accounts Rationale * Extend SDD to: escrow / notary / rental accounts Proposed drafting: A credit institution that opens or maintains an account in which the account holder administers funds on behalf of its clients, including but not limited to escrow, notary, or rental accounts, may be considered to comply with the requirements set out in Article 20(1)(h) of Regulation (EU) 2024/1624, provided that the purpose of the account is limited in scope and sufficient transparency regarding the underlying clients is ensured, and that all of the following conditions are met: Article 23 – Ongoing monitoring Rationale *Apply event-driven monitoring only. No periodic review unless risk indicators arise Proposed drafting: In low-risk relationships, obliged entities may rely primarily on event-driven monitoring to trigger updates of customer identification data, provided that monitoring systems are effective in identifying changes in risk.

Name of the respondent	Question	Answer
		Articles 27 – Source of funds/wealth Rationale * Allow: customer declaration & transaction behaviour * Documentation only where risk indicators exist Proposed drafting Obliged entities may rely on a combination of customer declarations and available information supplemented by verification where risk indicators are present. Article 29-30-Sanctions screening Rationale * Allow: screening based on available identifiers only. Reduced frequency for low-risk customers Proposed drafting Article 29: Screening shall apply to customers and beneficial owners. SMOs shall not be subject to screening unless specific risk indicators exist. Article 30: Screening shall use available and reliable identifiers, additional data where available. Re-screening shall be triggered by material changes impacting sanctions risk
ALPHA BANK S.A.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 7 – Non face-to-face verification (i) Provision concerned: Article 7(1)–(3) (ii) Rationale: * The requirement to use eIDAS “substantial/high” or equivalent solutions may be overly restrictive --> such solutions are not always available across all customer segments or jurisdictions * The safeguards under paragraph 3 are cumulative and operationally burdensome, limiting flexibility" Proposed drafting: Replace strict hierarchy with flexibility:

Name of the respondent	Question	Answer
		Obliged entities may apply alternative remote verification solutions, provided that they ensure an equivalent level of reliability and security, based on a documented risk assessment. Article 10 – Verification of beneficial owner (i) Provision concerned: Article 10(a)–(b) (ii) Rationale: * The provision requires multiple verification sources, even in low-risk scenarios * Not fully aligned with simplification objective * Greater recognition of reliance on existing customer due diligence information within the same group or from regulated institutions would enhance proportionality * Full verification of beneficial ownership is not always feasible, especially in cross-border structures" Proposed drafting: Add clarification: Where full verification of beneficial ownership is not feasible, including in cross-border structures, obliged entities shall verify the available information and document the measures taken, ensuring that the level of verification remains commensurate with the identified risk. Article 11–12 – Ownership and control structure (i) Provision concerned: Article 11-12 (ii) Rationale: * Requirements may be overly detailed for low or standard risk structures *Obligation to assess “economic rationale” introduces subjectivity and operational uncertainty

Name of the respondent	Question	Answer
		* Complexity definition (3+ layers) may capture legitimate structures unnecessarily Proposed drafting: Add proportionality clause: The extent of information collected and assessment performed shall be propotional to the ML/TF risk and complexity of the structure as defined. Article 17 – Reliance on financial institutions (i) Provision concerned: Article 17 (ii) Rationale: * Reliance is limited to collective investment undertakings (CIUs) * Similar conditions apply in broader financial sector relationships * Leads to duplication of CDD within regulated environments --> both entities are subject to CDD (intermediary institution & receiving institution) *Reliance on CDD performed not only in case of CIUs but also in case of entities within the same group. Proposed drafting: Extend scope: Obliged entities may rely on CDD performed by other regulated financial institutions, including within the same group, provided that they are subject to equivalent AML/CFT requirements and supervision. Article 23 – Updating customer data (i) Provision concerned: Article 23 (ii) Rationale:

Name of the respondent	Question	Answer
		* Focus still implies periodic updates, even in low-risk scenarios * Does not fully reflect event-driven monitoring practices" Proposed drafting: In low-risk relationships, obliged entities may rely primarily on event-driven monitoring to trigger updates, provided that monitoring systems are effective in identifying changes in risk. Article 24 – Low-risk purpose identification (i) Provision concerned: Article 24 (ii) Rationale: * Still requires active information gathering even where purpose is obvious * Not fully leveraging product-driven risk understanding" Proposed drafting: Where the purpose of the relationship is clearly defined from the product characteristics, no additional information shall be required unless inconsistencies arise.

AMAFI	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	See the detailed response article by article in the “additional input” section.
AMAFI	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	See the detailed response article by article in the “additional input” section.
AMAFI	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	See the detailed response article by article in the “additional input” section.

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	
AMAFI	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	See the detailed response article by article in the "additional input" section.
AMAFI	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	AMAFI is the trade association representing financial markets' participants of the sell-side industry located in France. It has a wide and diverse membership of more than 170 global and local institutions notably investment firms, credit institutions, broker-dealers, exchanges and private banks. They operate in all market segments, such as equities, bonds and derivatives including commodities derivatives. AMAFI represents and supports its members at national, European and international levels, from the drafting of the legislation to its implementation. Through our work, we seek to promote a regulatory framework that enables the development of sound, efficient and competitive capital markets for the benefit of investors, businesses and the economy in general. AMAFI thanks the AMLA for the opportunity to respond to the consultation on the draft RTS on customer due diligence mandated by the AMLR. The harmonisation of customer due diligence measures at the European level is key to foster a consistent application across the European Union and help ensure fairer competition, including by preventing forum shopping by foreign institutions seeking to establish themselves in the Union.

Name of the respondent	Question	Answer
		This harmonisation presents also an opportunity to achieve much-needed consistency of requirements applicable within financial groups and to reduce compliance costs, although such reduction will probably be negligible given the additional burden resulting from the strengthened requirements introduced by the AMLR. While combating money laundering and terrorist financing (ML/TF) is essential to safeguarding the integrity of the European economy and society, this fight must remain aligned with the European Commission's objectives of reducing unnecessary burdens and promoting simplification. Harmonisation should not mean defaulting to the most restrictive approaches but rather should involve streamlining requirements and selecting the most relevant and effective. Against this background, AMAFI notes that Article 1 of the draft RTS establishes the risk based approach as a core principle governing the application of the RTS as a whole. This principle should guide the definition of the provisions of the RTS on customer due diligence and allow obliged entities to exercise judgement in calibrating application in line with the nature, scale and ML/TF risks of their activities. In addition, notwithstanding the objective of harmonisationharmonization, certain obligations covered by the draft RTS are currently subject to differing interpretations across Member States, in particular with regard to documentation, verification standards and the application of proportionality. In this context, AMAFI underlines the importance of AMLA's role, in cooperation with national competent authorities, in ensuring supervisory convergence and supporting a consistent, proportionate and risk based

Name of the respondent	Question	Answer
		application of the RTS across the Union, including where appropriate through guidance.
AMAFI	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	21
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	AMAFI Amendment : "1. To identify the beneficial owner or senior managing officials in situations of low risk, obliged entities shall consult one of the following sources of information: (a) the information contained in the central register, business or company register; (b) any information provided by the customer, including information that obliged entities may already hold; (c) any publicly available information contained in a reliable independent open source. [Deletion of former paragraph 2] [New Paragraph 2] 2. The obliged entity is not required to identify the beneficial owner of the business relationship where the customer is: (a) a company whose securities are admitted to trading on a regulated market in a Member State of the European Union, in another State party to the Agreement on the European Economic Area or which is subject to disclosure requirements in accordance with EU law or which is subject to equivalent international standards ensuring adequate transparency of information on the ownership of capital, which the obliged entity is able to prove to the supervisory authority; (b) a subsidiary more than 75% owned by the entities referred to in point (a), or by an obliged financial entity established in

Name of the respondent	Question	Answer
		the EU or the European Economic Area, where the risk of money laundering and terrorist financing appears low and in the absence of any suspicion." Justification: > Exemption from the identification of the beneficial owner for certain listed companies : Entities subject to the obligation should not be required to identify the beneficial owners of clients that are listed companies on a regulated market in a Member State of the European Union, in another State party to the Agreement on the European Economic Area or which is subject to disclosure requirements in accordance with EU law or which is subject to equivalent international standards ensuring adequate transparency of information on the ownership of capital. These companies are subject to disclosure requirements (under stock exchange rules, law or other binding means) that provide for sufficient transparency of beneficial owners. In any case, obliged entities do not have the possibility of consulting the register to identify and verify the identity of the beneficial owner. This is because these companies are not subject to the obligation to identify their beneficial owner (AMLR, Art. 65). The European legislator has indeed considered that, for these entities, the identification and registration of beneficial owners were not necessary and that the same level of transparency could be achieved through means other than the identification of beneficial owners (AMLR, Récital 127). The same exemption should apply to subsidiaries more than 75% owned by the entities referred to in point (a), or by an obliged financial entity established in the EU or the EEA, where the risk of money laundering and terrorist financing appears

Name of the respondent	Question	Answer
		low and in the absence of any suspicion. Furthermore, due to the transparency requirements imposed on them, listed companies present a lower risk of money laundering, as recognised by the AMLR (AMLR, Annex II). > Removal of the requirement to verify the identity of the beneficial owner : In low-risk situations, while obliged entities would still identify the beneficial owner, requiring systematic verification of their identity would be disproportionate. In such cases, the identification of the beneficial owner, based on information provided by the customer and/or reliable sources, is sufficient to ensure an adequate level of transparency regarding the ownership structure. Imposing additional verification requirements, in low-risk situations, would create unnecessary operational burdens without providing a commensurate benefit in terms of ML/TF risk mitigation for the difference with the requirement in standard-risk situation (Draft RTS, art. 10) Removing the verification step for low-risk situations appears consistent with the principle of proportionality and the risk-based approach stated in the Article 1 of the RTS. In line with the risk-based approach enshrined in EU AML/CFT legislation, obliged entities should therefore be allowed to adapt the extent of verification measures, including waiving the verification of the beneficial owner's identity where the risk is demonstrably low. Consequently, the AMAFI proposes the above amendment.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	22

Name of the respondent	Question	Answer
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Expected clarification It would be welcome for AMLA to clarify the concept of “pooled accounts” and specify the situations referred to in this article, as this term is defined neither in the AMLR nor in the draft RTS.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	23
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Paragraph 1 AMAFI Amendment "1. Where, in cases with a low degree of ML/TF risk, obliged entities reduce the frequency of customer identification updates as referred to in Article 33(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall monitor the relationship in order to be satisfied that: (a) there is no change in the circumstances relevant for the assessment of the business relationship with the natural person customer; (b) no event took place which would require an information update; (c) and no suspicious and/or unusual transactions or activities were identified that are inconsistent with a low-risk relationship. " Justification It would be welcome for the AMLA to clarify the concept of “there is no change in the relevant circumstances of the customer” (Draft RTS, art. 23(1)(a)), as it may be particularly difficult to assess such a change in the situation of professional clients (institutions, large companies, etc.). Therefore, this

Name of the respondent	Question	Answer
		requirement should be limited to retail customers. Consequently, AMAFI proposes the above amendment.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	20
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	AMAFI Amendment "1. In situations of low risk, obliged entities shall obtain at least the following information to identify the customer and the person purporting to act on behalf of the customer: (a) […] (b) for a legal entity and other organisations that have legal capacity under national law: i. the legal form; ii. the registered name of the legal entity and its trade name but only if this information is available in the commercial register; iii. the address of the registered office; and iv. where available, the registration number or tax identification number, or the legal entity identifier." Justification The commercial name does not always appear in the commercial register, depending on the country. Moreover, customers may hold multiple commercial names depending on their geographical location. Therefore, AMAFI considers that this information should be collected when it appears in the commercial register. AMAFI proposes the above amendment.

Name of the respondent	Question	Answer
AMAFI	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
AMAFI	Do you have any comments on the Annex in the draft RTS?	No
AMAFI	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
AMAFI	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? AMAFI	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Paragraph 2 point (ii) AMAFI Amendment : "In relation to the name of a legal entity as referred to in Article 22(1), point (b)(i), and other organisations that have legal capacity under national law as referred to in Article 22(1), point (d)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain the registered name and the trade name where it differs from the registrered name, when such information is available in the commercial register." Justification : The collection of trade names should be limited, in line with the principle of proportionality, to those recorded in official commercial registers. Indeed, depending on the jurisdiction, trade names are not systematically included in commercial registers, and a single entity may use multiple trade names across different geographical areas. Requiring the exhaustive collection of such information would therefore lead to an unnecessary collection of data, without ensuring its reliability or providing meaningful added value. Accordingly, this obligation should be limited to trade names listed in the register. AMAFI proposes the above amendment.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	AMAFI Amendment: "The information on the address of the customer, any person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted as referred to in

Name of the respondent	Question	Answer
		provisions of Article 22(1) of Regulation (EU) 2024/1624 shall consist of the following information: (a) the full country name or the abbreviation in accordance with the International Standard for country codes (ISO 3166); (b) the city, or its nearest alternative; (c) where available, postal code, street name, post boxes, building number and the apartment number. For the purposes of Article 22(2) and 22(7) of Regulation (EU) 2024/1624, for beneficial owners and senior managing officials only, obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official's residential address and country of residence." Justification : Article 3 of this draft RTS, by reference to Article 22(1) of the AMLR Regulation, applies to the client, the person purporting to act on behalf of the client, and to the natural persons on whose behalf or for whose benefit a transaction or activity is carried out. Beneficial owners and senior management officers therefore do not fall within the scope of this article. Consequently, AMAFI proposes the above amendments.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	4
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	AMAFI Amendment: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name. Should the identity document, passport or equivalent of the natural person provide additional

Name of the respondent	Question	Answer
		information on place of birth, such information shall be collected." Justification : The obligation to collect information on the place of birth does not apply solely to the customer, but also to other natural persons in respect of whom obliged entities are required to collect such information under Regulation (EU) 2024/1624. It seems that the use of the term "customer" in the original drafting is therefore too restrictive. AMAFI therefore proposes to replace the term "customer" with the term "natural person".
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	5
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	AMAFI Amendment: "For the purposes of Article 22(1), point (a)(iii), of Regulation (EU) 2024/1624, obliged entities shall obtain information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted. For the purposes of Article 22(6) of Regulation (EU) 2024/162, where a natural person holds multiple nationalities and declares them in good faith, obliged entities shall be required to verify only one of those nationalities." Justification : While it may be relevant to collect information on all nationalities, in particular for sanctions or risk assessment purposes, requiring the verification of each nationality would be disproportionate.

Name of the respondent	Question	Answer
		In practice, this would oblige customers to provide several identity documents, thereby increasing the operational burden for obliged entities and extending onboarding timelines, without providing clear added value in terms of mitigating money laundering and terrorist financing risks. Verifying one nationality on the basis of a reliable identity document is sufficient to establish the identity of the individual, while additional nationalities may be recorded based on the customer's declarations (made in good faith), unless specific risk factors justify further verification. The amendment proposed by AMAFI, in line with Recital 3 of the draft RTS, therefore ensures effective risk mitigation, compliance with the principles of proportionality and risk-based approach, as well as operational feasibility.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	6
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Paragraph 1 point (b) : AMAFI amendment : " b. it contains at least the name and surname (and, if available, all names and surnames) and the holder's date of birth." Justification : The requirement to obtain all names and surnames may prove difficult to fulfil in practice, as some foreign identity documents do not include all of the holder's names and surnames. This would place obliged entities in an impossible position, as they would be required to ask the person to declare all their names and surnames, yet would be unable to verify that information against the identity document

Name of the respondent	Question	Answer
		presented. AMAFI therefore proposes the above amendment. Paragraph 3 AMAFI Amendment: "3. Obliged entities shall take reasonable steps and apply appropriate measures, in accordance with the risk-based approach, to verify the apparent authenticity of the documents obtained for the purposes of identity verification pursuant to Article 22(6), point (a) and Article 22(7), point (a) of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2. Such steps shall aim to detect any manifest indications of forgery or tampering." Justification : Obliged entities cannot be expected to substitute for sovereign authorities in the formal authentication of identity documents, as they neither possess the legal prerogatives nor the institutional competence required to perform such functions. Accordingly, obliged entities should be required to undertake only reasonable measures aimed at verifying the apparent authenticity of identity documents provided by customers, without extending to their formal authentication. In addition, this requirement should be implemented in accordance with a risk-based approach, ensuring that verification efforts are proportionate and that resources are allocated effectively to address money laundering and terrorist financing risks. It should also be stressed that, in the context of market activities and investment banking, clients are predominantly legal persons or regulated entities, for which the risk of fraud or document falsification is generally lower than in the retail banking sector. In this context, the modalities for implementing

Name of the respondent	Question	Answer
		such verification measures should remain at the discretion of obliged entities, based on their risk assessment. In light of the above, AMAFI proposes the corresponding amendments. Paragraph 6 : AMAFI Amendment: "6. Electronic identification means, as described in Article 7(1), can be permitted to verify the identity of the natural person in a face-to-face context where they are available to the customer, any person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being carried out." Justification: The current draft may be interpreted as imposing an obligation on obliged entities to accept electronic identification when a customer presents a digital document in a face-to-face context. This interpretation would be particularly problematic insofar as not all financial institutions are currently equipped to handle such digital processes, which would require potentially significant IT developments and investments. AMAFI therefore proposes to replace “shall be permitted” with “can be permitted”.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	10
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Regarding the procedures for verifying the identity of the beneficial owner using reasonable measures, AMAFI considers that clarifications should be provided by AMLA on the following points. 		beneficial owners and collect up-to-date information from other financial institutions. AMAFI wonder what the legal framework is governing the sharing of information between obliged entities concerning beneficial owners. Additionally, how could the practice of sharing information be compliant with the banking secrecy requirements applicable in certain countries, such as France? AMAFI considers that AMLA should provide clarifications on these matters Point (b)(iv) - Expected Clarification : AMAFI would welcome clarification by AMLA of the terms “by persons that are authorized for document certification purposes”. Moreover, as stated in article 1 of the draft RTS, it should be possible to apply a risk-based approach and adapt the due diligence depending on the client’s risk. Requiring a certified document appears not proportionate in a low or standard risk relationship, as such certification is time-consuming to obtain and costly for customers. Certification should be mandated only for high-risk customers, as per the current practice.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	12
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Paragraph 1. AMAFI Amendment: "1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities may use, in accordance with the risk-based approach, the following criteria to consider an ownership and control structure to be complex:

Name of the respondent	Question	Answer
		(a) there are three or more layers between the customer and the beneficial owner (b) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers; (c) the customer and any legal entities present at any of these layers are registered in third countries with significant strategic deficiencies or compliance weaknesses in their national AML/CFT regimes, as listed by the European Commission pursuant to Article 29 to 31 of the Regulation 2024/1624; (d) there are nominee shareholders or nominee directors involved in the structure; (e) the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale or justification" Justification : This article of the RTS defines complex ownership and control structures of the customer. The definition of a complex structure as one which has “three or more layers” - even when qualified by the conditions set out in Article 11 (1) draft RTS – is too broad, noting that multinational companies and large financial entities typically have multiple layers of ownership. Indeed, more than 50% of AMAFI members’ clients could fall within this definition, even when their activities would present only a low or moderate risk of money laundering and terrorist financing. A structure comprising more than three layers and the registration of entities in different jurisdictions outside the EU may be justified and does not appear complex in business life.

Name of the respondent	Question	Answer
		In practice, these different levels of ownership or control may be justified by legitimate economic or legal objectives (compliance with local regulations, …), and registration in different jurisdictions may be justified by the size of the company, its presence in different markets, or legitimate economic or legal objectives. The complexity of a detention structure stems more from its opacity than from the number of layers it comprises. AMAFI recommends that the assessment of complexity be under the responsibility of obliged entities, as this would allow them to apply specialist knowledge and experience to identify (and allocate resources to) cases that involve genuinely complex structures. To avoid creating complexity and bluring the specific attention to be paid on unusual complex structures, additional measures should be applied only after the assessment of the overall structure concludes that the complexity does not seem justified or is unusual, which should lead to the application of enhanced due-diligence measures». This would also allow a more efficient use of scarce resources to better advance the fight against financial crime. Furthermore, in order for the criterion relating to registration in different jurisdictions to be relevant, it should be limited to cases of registration in high-risk countries. Consequently, AMAFI proposes the above amendments.

Name of the respondent	Question	Answer
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	13
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Since SMOs are not beneficial owners, as stated in Recital (125) of the AMLR and Recital (9) of the RTS CDD, they cannot act as such: SMOs manage the legal entity, but do not personally own or control it. Article 13 of the draft RTS does not however recognise this distinction, requiring obliged entities to “collect the same information as for beneficial owners” pursuant to Article 22 (2) AMLR. Given the disparity in roles, responsibilities, benefits and degree of control, it is disproportionate to require regulated entities to collect, for SMOs, the same information as that collected for beneficial owners. The data elements to be collected for SMOs should be commensurate with the extent to which they may exercise control over the entity, in keeping with the risk-based approach. The obligation to collect ID documents should be removed. Moreover, considering that fraud is on a significant rise, the collection of identity document numbers (in addition to other information, particularly nationality) creates a risk of an increase in “fake documents” in circulation, enabling fraudsters to impersonate the SMOs (i.e., directors) of legal entities. Furthermore, obliged entities are not required to screen UBOs as provided for in Article 20(1)(d) of the AMLR. Accordingly, AMAFI advocates for a reduction of the requirements relating to the identification and verification of the identity of SMO.

Name of the respondent	Question	Answer
		Moreover, clarifications should be provided on the following provision: “Where the performance of identity verification referred to in the second subparagraph may tip off the customer that the obliged entity has doubts regarding the beneficial ownership of the legal entity, the obliged entity shall abstain from verifying the senior managing officials’ identity and shall instead record the steps taken to ascertain the identity of the beneficial owners and senior managing officials. Obliged entities shall keep records of the actions taken as well as of the difficulties encountered during the identification process, which led to resorting to the identification of a senior managing official” (AMLR, Art. 22(2)). The notion of doubt is not defined. As Recital (10) of the RTS CDD provides that «finding it difficult to identify the beneficial owner, for example in cases of complex corporate structures, does not amount to ‘doubts’», a definition of “doubt” is necessary for legal security and to avoid the risk of tipping-off. Which situations of “tipping off” does this paragraph cover? Which indicators may tip off a client to the fact that the entity is subject to doubts regarding its beneficial owner(s)? Moreover, the link between this provision and Article 13 of the draft RTS is unclear. The fact that obliged entities request the same extensive information on SMOs (as required by Article 13) as for beneficial owners could indicate that the obliged entity has doubts regarding the beneficial ownership of the legal entity. Such a request, when the beneficial owner has already been reported, may alert the client to the obliged entity’s suspicions and to the possibility that it may file a

Name of the respondent	Question	Answer
		suspicious activity report. Finally, this provision could be inconsistent with the intention not to provide regulated services/products if the regulated entity is unable to understand its ownership. This appears to be an authorisation to accept opaque entities in the EU.
AMAFI	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	16
AMAFI	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	AMAFI Amendment - Add paragraphs 2 and 3 : "1. In relation to the identification and verification of the person purporting to act on behalf of the customer as referred in Article 22 of Regulation (EU) 2024/1624, and in addition to the information to be collected pursuant to the relevant provisions of Section 2, obliged entities shall obtain information which enables them to verify the existence and extent of the power of representation. 2. The legal representative of a legal entity client should not be considered a person purporting to act on behalf of that client where they have delegated their powers, without prejudice to the obligations to identify that representative pursuant to point (b) of Article 22(1) of the Regulation. 3. Obliged entities should not be required to verify the identity of individuals purporting to act on behalf of the customer when such individuals are acting solely in their capacity as employees of a legal person customer, and within the ordinary scope of their employment duties, without prejudice to the obligation to verify the existence and extent of the power of representation." > Article 22(1) of the AML Regulation imposes an obligation to collect certain information not only on the customer, but also

Name of the respondent	Question	Answer
		on any person purporting to act on behalf of the customer. However, this latter concept not being defined in either the AML Regulation or the draft RTS, AMAFI considers it essential to provide further clarification when it is applied to legal entities clients. Such clarification will help mitigate the risk of divergent interpretations and ensure that the provision is applied when relevant. This concept encompasses both cases where the person is lawfully authorised to act and where it is not. Wholesale capital markets exclusively involve professional clients within the meaning of MiFID II (regulated and authorised entities, large companies, institutional investors). The individuals acting on behalf of the customer are strictly those who are duly authorised to do so. This is actually verified by investment firms, not primarily for AML/TF purposes, but as a precaution against legal risks and fraud. Several safeguards are in place to this effect such as the legal entity client provides an official list of authorised signatories empowered to place orders on its behalf, and access to trading systems is secured through strong technical and procedural safeguards. Investment firms are moreover subject to stringent security obligations under various regulatory frameworks, notably MiFID II/MiFIR, IFR/IFD, and DORA. Article 22 should therefore not be used to add another layer of information collection on individuals not operationally involved in the business relationships, as further explained below. The concept of “any person purporting to act on behalf of the customer” should thus be further specified to ensure it is applied when relevant. Exclusion of legal representatives of legal entities : Firstly, it should be made clear that a “person purporting to act on behalf of the client” does not include the legal representatives of client legal entities when they have delegated their power to

Name of the respondent	Question	Answer
		enter into a business relationship or to trade to an employee. Legal representatives of entities must in any case be identified during the identification phase (AMLR, Art. 22(1)(b)). The collection of information mandated under Art. 22(1) for a person purporting to act on behalf of the client should therefore not apply to legal representatives when they are not effectively engaged in the business relationships with the investment firm. The concept should rightfully apply to those persons who not only have the power to act vis-à-vis third parties, but also actually use it vis-à-vis the obliged entity. The mere mention of a person on a contract or a delegation of authority should not in itself justify identification measures. The means and resources allocated by obliged entities should be focused solely on those persons acting on behalf of the customer. Exclusion of employees acting within the scope of their duties : Employees of a legal person customer do not act independently but under the authority and control of the legal person customer, who remains the principal in the business relationship.The draft RTS should therefore clarify that: “Obliged entities should not be required to verify the identity of individuals purporting to act on behalf of the customer when such individuals are acting solely in their capacity as employees of a legal person customer, and within the ordinary scope of their employment duties”. Requiring obliged entities to identify and verify every employee interacting on behalf of a corporate customer would be disproportionate, operationally burdensome, and misaligned with the risk-based approach underpinning the AML frameworks, particularly in the context

Name of the respondent	Question	Answer
		of a business relationship with a professional client or an eligible counterparty within the meaning of MiFID II.
AMAFI	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
AMAFI	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
AMF Italia - Associazione Intermediari Mercati Finanziari	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Art. 3(1)(c): Without prejudice to the fact that, where electronic identification compliant with eIDAS 2 is used, the data referred to in point (c) will be included in the EUDI Wallet, we would appreciate clarification as to whether, in onboarding processes carried out through remote solutions (Article 7(2) et seq.), the “where available” requirement may be deemed satisfied by providing optional fields enabling customers to supply such information on a voluntary basis. Arts. 6–7: We suggest merging, or at least more explicitly aligning, the provisions on electronic identification means set out in Articles 6 and 7 with those provided under Article 32. We further recommend including an explicit reference to the provisions relating to the EUDI Wallet, which are currently only mentioned in a footnote to the Annex. Art. 19: We propose excluding from the definition of PEP those individuals acting as legal representatives of public administrations or publicly owned companies, where they do not exercise effective political decision-making powers. Art. 18: Considering that Article 25 of the AMLR requires obliged entities to understand the purpose and intended

Name of the respondent	Question	Answer
		nature of the business relationship or transaction, and in order to give practical effect to the risk-based approach (Article 1 of the RTS) as well as to the wording “where necessary” in Article 18, we seek confirmation that it is consistent to collect such information as a general rule only for customers classified as presenting medium or high risk, excluding low-risk customers within the meaning of Article 33 AMLR. We also note that, in certain operating models, the collection of additional information on the purpose and nature of the relationship is technically feasible only after the formal establishment of the relationship. We therefore request confirmation that such information may be obtained immediately after onboarding, provided that no transactions are allowed until the information set is fully completed. Art. 20(1)(b)(iv): We request clarification as to whether, in remote onboarding processes, the “where available” requirement may be fulfilled by including optional fields for the collection of information relating to “the registration number or tax identification number, or the legal entity identifier”.
AMF Italia - Associazione Intermediari Mercati Finanziari	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	NA
AMF Italia - Associazione Intermediari Mercati Finanziari	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable	Recital 3: We highlight the risk that reliance on customer declarations regarding nationalities may lead to strategic omissions aimed at circumventing operational restrictions. In this context, although obliged entities are required to verify

Name of the respondent	Question	Answer
	and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	only one nationality, they may nonetheless need to treat nationality as a relevant risk factor within the customer risk assessment process. Art. 12: We seek clarification as to whether the presence of complex corporate structures automatically results in a high AML/CFT risk classification, also in light of the obligation to collect additional information (e.g. group structure charts), or whether such assessment should be performed on a case-by-case basis in accordance with a risk-based approach. Art. 12(1)(b): We consider it appropriate to specify that the relevant jurisdictions for the purposes of this provision are those classified as high-risk jurisdictions. Art. 23: We request clarification as to whether the wording of Article 33 AMLR, points (b) and (d), allows, on the basis of a duly justified assessment, for updates of customer information to be performed beyond the five-year period for customers subject to simplified due diligence. Art. 30: Based on feedback collected from our members, we note that Switzerland currently requires, for the purposes of targeted financial sanctions screening, the screening also of intermediate entities in the chain between the customer and the beneficial owner—an obligation not provided for under Article 30. We stress the importance of AMLA engaging in a dialogue with the Swiss supervisory authority (FINMA) in order to foster greater regulatory alignment and avoid situations where Swiss intermediaries operating in the EU are subject to more stringent requirements than those set out in the EU

Name of the respondent	Question	Answer
		framework. Art. 33: With regard to existing customers, we request: • replacing the reference to the "date of publication" with the "date of application"; • explicitly clarifying, in line with what was indicated during the Open Hearing, that full alignment is not required as of the date of application, but should follow a risk-based approach, starting with high-risk customers and being completed within one year for such customers and within five years for all others (without prejudice to our comments on Article 23); • assessing the possibility of allowing a longer timeframe for the updating/reassessment of beneficial ownership in complex structures.
AMF Italia - Associazione Intermediari Mercati Finanziari	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Art. 13: We consider that the notion of "senior managing officials" is overly broad and may lead to divergent interpretations. We suggest limiting it to individuals vested with legal representation powers and/or members of the management body performing executive functions. We further note that requiring the same information to be collected for such individuals as for beneficial owners would impose a disproportionate burden. We therefore request explicit confirmation, in line with the Open Hearing clarifications, that collecting only the data necessary for identification purposes is sufficient. Art. 21: In order for public registers to constitute an effective tool, we consider it essential to promote, including through AMLA's role, greater harmonisation across jurisdictions as

ANASF	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Our request is to establish clear prerequisites where deemed essential and/or necessary for classifying high-risk individuals, because the risk is that the classification will be based on the individuals themselves, rather than on operational factors.
ANASF	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We choose not to answer to this question.
ANASF	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We agree, given the specific request made earlier (see question 1).

Name of the respondent	Question	Answer
ANASF	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The issue is whether an obliged entity has the authority to request such detailed information. The necessary basic information is already being requested. The primary regulation must be clear, so that any abuse of its application can be challenged. Furthermore, we still observe a high proportion of "under-the-table" transactions in financial dealings. For this reason, we hope that the introduction of the European digital single currency (digital euro) will be expedited, so as to reduce the presence of physical cash (which facilitates such transactions) in the economy. To this end, one could also consider establishing a reward and incentive scheme for those who use the digital euro.
ANASF	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	As for the ownership of the relationships and the resulting liabilities, with regard to the regulations issued by MiCAR, we are confident that the oversight will be definitively effective.
ANASF	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
ANASF	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ANASF	Do you have any comments on the Annex in the draft RTS?	No
ANASF	How would you rate the proposals set out in the draft RTS overall?	Neutral
ANFIA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient	NO. We suggest targeted guidance or Q&As for the automotive sector to clarify expectations and reduce unnecessary administrative burden. About CDD, when selling a car, it means that the data underneath shall be kept actual and

	flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	verified/updated from time to time? (either 1 or 5 years – both do not really make sense). It would be welcome the confirmation that CDD is only required for single car transaction above 250k €.
ANFIA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, simplification is possible by providing clear, practical examples of CDD measures suitable for low-risk, non-financial businesses. The RTS could also clarify when simplified due diligence is appropriate and reduce documentation requirements for low-value, low-risk transactions typical in our sector. Further clarification is needed on how the risk based approach should operate in multi party transaction structures, such as those involving independent dealers or regulated financial intermediaries as mentioned in prior comments.
ANFIA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The diversity and operational realities of the automotive sector, including the predominance of low-risk transactions and established customer relationships, are not fully reflected. We recommend that the RTS acknowledge these factors and allow for streamlined CDD processes for routine, low-risk sales. We also operate in the luxury business selling watches, we understand here the relevant threshold is 10K EUR. We propose that in case of transactions that occur in shops, we may rely on the AML due diligence performed by the financial entities that have issued the credit cards by verifying that the name on the credit card matches with the one on clients' ID (and not be obliged to have clients to provide answers to a questionnaire and/or copies of other documents). We have concerns on the feasibility of verification of Beneficial Owners via eIDAS as per EU Regulation 910/2014, especially for non-EU

Name of the respondent	Question	Answer
		subjects (most likely a dealer in some lesser structured country will not be able to have its BO electronically verified). Infact, recital 66 states that "Where such electronic identification is not available to a customer, for example due to the nature of their residence status in a given Member State or their residence in a third country, verification should take place through relevant qualified trust services"; we need to clarify the meaning of that, whether in absence of a reliable electronic tool, it is necessary to utilize notary publics or similar.
ANFIA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We welcome commitment to technological neutrality and harmonization. To further reduce burden, we suggest ongoing dialogue with non-financial sector representatives and the issuance of sector-specific interpretative guidance as new challenges arise. This will help ensure proportionate and effective compliance without unnecessary disruption to our business. Our proposal is as follows: 1) Direct clients: due diligence is performed in full only on direct clients (clients that purchase directly from us); 2) Indirect clients: a. for clients who purchase from independent third parties (dealers) due diligence is performed by the dealer itself, based on guidelines provided by OEMs to them, b. due diligence is performed by OEMs, on a risk based way, proceeding to an enhanced due diligence only on indirect clients that have residence/domicile in risky countries (from an AML perspective); c. on indirect clients that have residence/domicile in non- risky countries, data (name, surname, residence, date of birth) are run through an automated professional tool that searches matches against sanctions/AML lists, convictions, adverse

Name of the respondent	Question	Answer
		media. è For indirect clients purchasing through independent dealers, the “simplified” due diligence at manufacturer level should be permitted where the dealer is itself an obliged entity and performs enhanced CDD on the end customer. 3) Furthermore, manufacturer will provide our worldwide dealers network with an AML framework that includes draft of AML policies that they shall apply, suggestions on an automated search tool to be purchased/used by them.
ANFIA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Provided CDD is needed only from direct clients (clients that purchase directly from entity). We generally support the harmonized, risk-based approach. However, we request further clarification and simplification for non-financial sector obliged entities, especially regarding the practical application of CDD measures. Provisions should explicitly allow for proportionality and flexibility, considering our lower ML/TF risk profile compared to financial institutions. We propose more concrete examples and sector-specific guidance for non-financial entities to reduce interpretative costs and compliance uncertainty (especially having in mind points 20, 60 and 62 of preamble of AMLR). In addition, from an implementation perspective, greater reliance on simplified due diligence and alternative evidentiary measures should be more explicitly embedded in the RTS for non financial sectors. In particular, where transactions are conducted through regulated payment channels (e.g. captive financial services entities), the RTS should clearly allow obliged entities to take account of the AML controls already performed by such intermediaries, rather than requiring duplicative information collection from customers. Explicit drafting

Name of the respondent	Question	Answer
		recognizing the legitimacy of such reliance would better reflect the operational reality of many non financial business models. We also need guidance on recital 10, to clarify whether a manufacturer, with a financial holding company as Shareholder, that also has a financial company as a subsidiary, whether the financial holding company is considered a financial institution itself.

We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Manageable impact

Name of the respondent	Question	Answer
Antwerp World Diamond Centre	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	No. AWDC is of the opinion that several of the requirement and verification measures as foreseen for CDD in the draft RTS, whether for simplified, standard or enhanced due diligence, are causing friction with the nature of online trade of goods via e-commerce and online marketplaces. The pre-transaction KYC-onboarding procedures are very different for the online commercial transaction of goods than services (such as banking, accounting,...). The trade of goods, such as precious stones, via e-commerce will only be able to happen compliant with the AML-regulation once marketplace platforms platform start performing CDD to equivalent standards and negotiate data-sharing agreements with the companies that are using their platforms as intermediate. Therefore, AWDC asks the regulator to clearly develop separate requirements for online transactions and tools for obliged entities to act compliant without automatically excluding them from online trading. Another general yet very important question that comes to mind when performing due diligence in the context of the day-to-day business in the diamond industry is that of the definition of ‘precious stones’. Annex V of the Regulation contains a list of the regulator's interpretation of precious metals and stones, which includes “diamonds”. However, the

Name of the respondent	Question	Answer
		definition of a diamond is not further elaborated and does not include references to the relevant HS codes of the World Customs Organization. Therefore, raising questions as to whether the CDD as foreseen in the Regulation and RTS is also applicable when persons trade in synthetic diamonds (7104.21 ; 7104.91) or diamond powder (7105.10). AWDC is of the opinion that the proposals as set out in the draft RTS are only to be applied in the range of products and services that are clearly identified by the Regulation as being obliged to comply. AWDC asks the Regulator to make a clear distinction of the application of CDD, whether simplified, standard or enhanced, for relevant activities subjected to the AML-regulation. Thus, excluding all secondary or related services undertaken by the obligated entity but not specifically mentioned in the text of the law. In the case of diamonds, the regulation talks about trading precious stones as regular or principal activity. Some companies don't regularly trade diamonds, but provide services to other diamonds traders (e.g. providing grading reports of polished diamonds, selling specialized equipment such as microscopes or organizing educational programs on precious stones) as their principal activity. However, in order to perform these kinds of services, these companies on rare occasions have to buy diamonds themselves (e.g. the

Name of the respondent	Question	Answer
		purchase of “master stones” that are used to benchmark diamond color grades, or polished or rough diamonds used for educational purposes). Given that the Regulation lacks a definition of “principal or regular activity” this raises questions on the application of the CDD requirements for companies who exceptionally also purchase diamonds. In other words: according to the definition of the Regulation, these companies would not be considered obliged entities, however they would – sporadically – engage in (business) transactions that actually would be considered subject to the AMLR. Also, the service providers, as mentioned above, often receive diamonds in consignment. When receiving these precious stones to perform services (e.g. grading, tendering) they act as a custodian. In most cases the ownership of the precious stones is not transferred to the service providers, even though the physical stones are. Due to the inherent international nature of the diamond trade, verification measures are often done on a non-face-to-face-basis. In practice, diamond traders – which have been obliged entities for many years in Belgium – have adopted the practice to obtain their clients’ identity information (often in the form of a copy of the ID card), verify the authenticity and validity of this document (e.g. not expired), and verify that this identity

Name of the respondent	Question	Answer
		corresponds to the identity of the client. Art. 7 of the RTS contains provisions on the (digital) verification of identity information, such as images and video (verification in video call? This is not really clear). The Article is quite vague and we do not expect diamond traders to set up video calls (or similar measures) to verify the identity of their counterparties.
Antwerp World Diamond Centre	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, we agree with the general principles of the risk based approach but have questions regarding the identification of low and high risk factors. The AML-Regulation clearly stipulates different high-risk factors in the annex, including high-risk countries. However, it does not give a list of countries. Only some parameters, such as countries that; lack an AML/CFT framework, are subject to sanctions, are mentioned on black and grey lists of the FATF, and so on. This also leaves room for interpretation. For some diamond producing countries, the high risk is without ambiguity. But for other, more medium-risk countries that previously have been on FATF lists but where removed, the application of enhanced CDD is once again very ambiguous. The same remarks apply to factors that could indicate a low risk, as listed in Annex II of the AMLR. As to this, we have a very specific question. All diamond trading companies in Belgium need to be registered with the Federal Public Service

Name of the respondent	Question	Answer
		(Ministry) of Economy. Registered companies receive a registration number, need to submit an annual AML/CTF report and a stock declaration, and are subject to supervision and controls by the FPS Economy. Could companies registered and supervised by the government qualify as “low risk” by default? (see also question 4)
Antwerp World Diamond Centre	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. AWDC considers additional guidelines for commercial transactions with counterparts outside the OECD-jurisdictions as highly desirable as to give companies better tools to collect information of natural or legal persons in areas where there is limited access to digital infrastructure and/or few reliable digital and online registries.
Antwerp World Diamond Centre	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	As to this, we have a very specific question. All diamond trading companies in Belgium need to be registered with the Federal Public Service (Ministry) of Economy. Registered companies receive a registration number, need to submit an annual AML/CTF report and a stock declaration, and are subject to supervision and controls by the FPS Economy. Could companies registered and supervised by the government qualify as “low risk” by default given that their businesses could be identified as lower ML/TF risks?
Antwerp World Diamond Centre	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	Specific questions related to the proposals: • Art. 3 (c): can AMLA confirm that the country name and the city (or its nearest

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	alternative) is sufficient to identify the residence of a client, and hence to comply with Art. 22.1 (a) (iv) and (b) (ii) of the AMLR? And that other parameters such as postal code, street name, post boxes, building number and apartment number are additional, non-mandatory parameters? • Art. 11.2: does this provision override the threshold of “25% ownership or more” to determine UBOs? In other words: should obliged entities perform the activities in this article for entities that own less than 25%? In addition: how is “control” defined (also see Art. 11.2 (b) (i))? • Art. 18: the whole “source of funds” rationale will be difficult to implement and apply for non-financial obliged entities, in particular in (online) B2C sales. Can AMLA confirm that these checks apply to all clients, including low-risk clients? What does the wording “…where necessary:” in the chapeau clause of Art. 18 mean? How is necessity assessed? Does this refer to the General Principles in Article 1? • Art. 19.4: what does “automated screening tools and measures” mean? Does AMLA refer to digital databases such as Moody’s, or to truly automated processes that continuously or frequently search and re-search for PEP

Name of the respondent	Question	Answer
		matches? • Art. 20.1 (b): why is the UBO not listed in this article?
Antwerp World Diamond Centre	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Antwerp World Diamond Centre	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Antwerp World Diamond Centre	Do you have any comments on the Annex in the draft RTS?	No
Antwerp World Diamond Centre	How would you rate the proposals set out in the draft RTS overall?	Neutral
Antwerp World Diamond Centre	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. Arendt Investor Services	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and	As an organisation, we recognise that the draft Regulatory Technical Standards (RTS) under Regulation (EU) 2024/1624 represent a clear shift from principles-based guidance towards enforceable and granular operational standards, while remaining formally anchored in a risk-based approach.

Name of the respondent	Question	Answer
	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	In practice, the RTS raise the minimum compliance baseline even in lower-risk situations, significantly reduce discretionary interpretation particularly in areas such as complex structures and intermediated distribution models and place a strong emphasis on evidence, auditability and the explicit justification of decisions. We also acknowledge that supervisory expectations are increasingly focused not on whether policies formally refer to a "risk-based approach", but on whether risk assessments and outcomes are defensible, consistent and demonstrable in practice. Against this background, this consultation response broadly supports the objectives of the RTS, notably their ambition to enhance harmonisation, legal certainty and the overall effectiveness of the EU AML/CFT framework. The RTS constitute an important step toward greater convergence of supervisory expectations across Member States. At the same time, we identify scope for targeted refinements to ensure that the requirements are applied in a genuinely risk-sensitive, proportionate and operationally workable manner, particularly in the context of the investment fund industry, institutional investors and intermediated or omnibus distribution models. Our comments therefore focus on clarifying key concepts that are central to consistent application (such as "undue delay", "immediately" and "complex structures"), avoiding mechanical or purely structural interpretations, and ensuring appropriate differentiation where individuals are identified by default rather than through ownership or control (notably senior managing officials and PEPs in institutional contexts).

Name of the respondent	Question	Answer
		We also emphasise the importance of limited flexibility where justified by risk, explicit recognition of existing regulated reliance frameworks, and alignment with data-minimisation principles, with the objective of strengthening AML/CFT outcomes without creating unnecessary operational burden or encouraging unintended de-risking.
Arendt Investor Services	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft Regulatory Technical Standards (RTS) are broadly welcomed as supporting the effective application of the risk based approach to AML/CFT. However, several provisions most notably Article 12 and Articles 17 and 22 require clarification and recalibration to ensure legal certainty, proportionality, and operational feasibility, in line with Regulation (EU) 2024/1624. Article 12 – "Complex" Ownership and Control Structures The RTS do not provide sufficient clarity on when an ownership or control structure should be considered "complex." It remains unclear whether complexity should be determined through purely formal indicators (such as the number of entities, layers, or jurisdictions) or through a broader qualitative, risk based assessment. In particular, the notion of a "layer" is insufficiently defined. Treating each legal entity in an ownership chain as a distinct layer risks overly formalistic interpretations and outcomes disconnected from actual ML/TF risk. The mere presence of multiple legal entities should not automatically render a structure complex. Certain entity types should not, in principle, qualify as complex, including regulated financial institutions, entities within groups subject to consolidated supervision, and entities subject to robust transparency and reporting obligations where ultimate ownership and control are readily identifiable. Without clearer guidance, there is a high risk of inconsistent application across

Name of the respondent	Question	Answer
		obliged entities and supervisory authorities. Articles 17 and 22 – “Undue Delay” The use of the term “undue delay” creates significant legal and operational uncertainty. Its open ended nature invites divergent interpretations and inconsistent supervisory expectations, particularly in cross border contexts. To ensure harmonisation and legal certainty, “undue delay” should be defined by reference to clear, objective, and measurable timeframes (e.g. a specific number of hours or business days). Absent such clarification, obliged entities are exposed to increased compliance risk. Impact on the Investment Fund Industry and Omnibus Structures The “without undue delay” requirement is particularly problematic for the investment fund industry, especially where omnibus account structures are used. In such models, underlying investors are already subject to customer due diligence performed by regulated and supervised intermediaries operating under EU or equivalent AML/CFT regimes. Requiring immediate and systematic access to underlying investor documentation results in duplication of AML/CFT controls with limited additional risk mitigation benefits. Operationally, this obligation is disproportionate in high volume distribution environments, particularly where intermediaries are EU based or subject to equivalent standards, where reliance on existing due diligence should be presumed, subject to safeguards. Need for a More Explicitly Risk Based Calibration The current drafting risks imposing a one size fits all approach that insufficiently reflects the investment’s risk profile, the

Name of the respondent	Question	Answer
		intermediary's regulatory status, or the robustness of its AML/CFT framework. This is not fully aligned with the foundational risk based principles of the EU AML/CFT regime. Key recommendations include: • a clear and binding definition of "undue delay" based on fixed, measurable timelines; and • the introduction of a materiality threshold below which systematic provision of underlying investor documentation would not be required. Under this approach, documentation relating to final investors should be provided upon request and without undue delay only where a defined investment threshold (e.g. 10%) is met or specific risk indicators are present. Conclusion These targeted amendments would enhance proportionality, avoid unnecessary duplication where equivalent due diligence has already been conducted by supervised intermediaries, and preserve the operational viability of AML/CFT requirements in high volume fund distribution models, while remaining aligned with actual ML/TF risk.
Arendt Investor Services	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	he RTS primarily codifies and harmonises existing supervisory expectations rather than introducing fundamentally new obligations. However, it significantly reinforces expectations regarding the depth, evidentiary quality, and robustness of customer due diligence (CDD). Several provisions would benefit from clearer operational guidance and a more explicit anchoring in the risk-based approach to avoid inconsistent interpretation and disproportionate compliance outcomes across Member States. Article 25 – Additional information on customers and beneficial owners

Name of the respondent	Question	Answer
		While the objectives of Article 25 are supported, the provision lacks sufficient clarity on acceptable information sources and verification practices. This creates legal and operational uncertainty, particularly in cross-border contexts. It should be made explicit that CDD is not limited to documentation obtained directly from the customer, but may—and often should—be substantiated through independent, reliable, and verifiable external sources. These should explicitly include official registers (company and beneficial ownership registers), reputable commercial databases and screening tools, adverse media and open-source intelligence (OSINT), and other credible third-party information providers meeting appropriate quality standards. Clear recognition of these sources would better align Article 25 with the risk-based approach, enhance the quality and defensibility of CDD, and avoid overly conservative or divergent practices. Article 19 – Politically Exposed Persons (PEPs) and state-owned entities The RTS classifies senior officials of state-owned entities as PEPs. While legally accurate, its mechanical application in the investment fund context leads to disproportionate outcomes. In institutional fund structures, state-owned entities often invest as regulated and transparent institutional investors. Where no natural person beneficial owner can be identified, senior managing officials (SMOs) are designated by default and automatically treated as PEPs, triggering enhanced due diligence and high-risk classifications regardless of actual ML/TF or corruption risk. This conflates formal legal status with real risk and is misaligned with risk-based principles. The RTS should distinguish between PEP status arising solely from institutional investment structures and PEPs acting in a personal capacity. In

Name of the respondent	Question	Answer
		the former case, a calibrated, risk-based approach should apply, with EDD required only where additional risk factors are present. Article 13 – Information requirements for senior managing officials Where SMOs are identified as a fallback due to the absence of identifiable beneficial owners, the RTS appears to require information broadly equivalent to that collected for beneficial owners identified through ownership or control. This is neither proportionate nor conceptually appropriate. SMOs are identified by default and do not necessarily exercise ownership or ultimate control. For such cases, core identification and screening information should generally suffice, with additional data collected only where justified by specific risk factors or uncertainties. This would support proportionality, data minimisation, and more effective allocation of compliance resources. Conclusion Across Articles 13, 19, and 25, targeted revisions are needed to enhance legal certainty, reinforce proportionality, and ensure consistent application of the risk-based approach. Without such adjustments, the RTS risks generating unnecessary operational burdens and disproportionate outcomes without commensurate risk-mitigation benefits.
Arendt Investor Services	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	Article 20 constitutes a positive and timely initiative to harmonise minimum customer identification requirements in low-risk scenarios across Member States, with the aim of enhancing consistency and preventing overly permissive practices that could undermine AML/CFT effectiveness. However, in its current form, the provision raises a number of substantive conceptual and operational concerns that, if left

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	unaddressed, are likely to result in fragmented interpretation and inconsistent implementation. First, the scope of persons subject to identification remains insufficiently clear. In particular, the treatment of legal representatives of legal entities is not explicitly addressed. This omission creates ambiguity as to whether such individuals fall within the minimum identification requirements, and risks divergent practices across jurisdictions. We therefore strongly recommend that the article be amended to explicitly clarify the categories of persons in scope, including the treatment of legal representatives. More fundamentally, the current drafting appears to conflate the classification of a relationship as “low risk” with automatic eligibility for simplified due diligence (SDD). This approach is conceptually flawed. Low-risk situations are not homogeneous and should not be treated as a binary category. The absence of a more granular articulation risks encouraging a mechanical application of SDD, contrary to the graduated and risk-sensitive nature of the EU AML/CFT framework. We therefore urge that Article 20 be revised to clearly distinguish between: • the identification of low-risk scenarios; and • the conditions under which simplified due diligence measures may be appropriately applied. In addition, Article 20 is limited to initial identification and does not address ongoing monitoring or periodic review in low-risk relationships. This omission is significant, as it leaves a critical component of the AML/CFT lifecycle undefined and creates scope for inconsistent supervisory expectations and operational practices. Clarification should be introduced to ensure that ongoing monitoring obligations remain risk-based and proportionate, but nevertheless clearly articulated.

Name of the respondent	Question	Answer
		From an operational perspective, the requirement to collect a uniform set of identification data does not sufficiently account for cross-border constraints. Certain data elements are not consistently available or accessible across jurisdictions. In its current form, the article risks imposing requirements that are, in practice, not always feasible to fulfil. We therefore strongly advocate for the explicit introduction of flexibility allowing the use of equivalent or alternative data where standard information cannot reasonably be obtained, provided that the overall identification objective is met. Furthermore, the absence of differentiation between customer categories particularly regulated or institutional entities is a material shortcoming. Applying a uniform minimum dataset to entities that are already subject to robust transparency, disclosure, and supervisory frameworks (including those established within the EU or in jurisdictions with equivalent AML/CFT regimes) is disproportionate and inconsistent with a risk-based approach. The article should therefore be amended to allow for calibrated requirements that reflect the nature, regulatory status, and risk profile of the customer. We also note the lack of clarity regarding the interaction between remote onboarding practices and eligibility for simplified due diligence in low-risk contexts. Given the increasing reliance on digital onboarding channels, this is a critical gap that should be addressed to ensure both legal certainty and operational consistency. In light of the above, we strongly urge a targeted revision of Article 20 to: • explicitly clarify the scope of persons subject to identification; • introduce a clear conceptual distinction between low-risk classification and SDD eligibility;

Name of the respondent	Question	Answer
		• incorporate guidance on ongoing monitoring and periodic review; • allow for the use of equivalent data where standard information is not reasonably available; and • differentiate requirements based on customer type, particularly for regulated and institutional entities subject to EU or equivalent AML/CFT frameworks. Absent such amendments, Article 20 risks imposing a rigid, one-size-fits-all framework that is not operationally workable and is misaligned with the core principles of proportionality and risk sensitivity underpinning the EU AML/CFT regime.
Arendt Investor Services	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We emphasize that both the regulation and the RTS are narrowly confined to Client Due Diligence, leaving due diligence on other counterparties and underlying assets materially underdeveloped in the current text. This constitutes a significant gap. In light of our expertise, we firmly urge that due diligence obligations be expressly broadened to encompass underlying assets and all relevant counterparties, and that such requirements be embedded as a core, non-optional component of the obligations imposed on obliged entities.
Arendt Investor Services	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Arendt Investor Services	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Arendt Investor Services	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We acknowledge that, under the proposed RTS, the collection of official identification documentation is required as a general rule, with no explicit recognition of alternative identification methods. While we support the objective of ensuring a high level of assurance regarding the identity of natural persons, the

Name of the respondent	Question	Answer
		current approach is overly rigid and insufficiently reflective of operational realities. Based on supervisory and practical experience, the systematic collection of official identification documents can, in certain cases, prove disproportionately burdensome or even unworkable. This is particularly evident with respect to specific categories of individuals most notably U.S. persons where access to, or willingness to provide, standard identification documentation is frequently constrained. The absence of any permissible alternative in such situations risks creating unnecessary barriers to compliance without delivering a commensurate increase in risk mitigation. Against this background, we strongly urge that the RTS be amended to introduce a narrowly defined and strictly controlled flexibility, allowing obliged entities to identify a natural person in duly justified cases where official identification documents cannot be obtained. In line with our proposal, this should explicitly permit reliance on reliable, independent, and publicly available sources, provided these enable the obliged entity to reasonably and credibly establish the identity of the individual concerned. Such flexibility must, however, be accompanied by robust safeguards and clearly articulated conditions. In particular, the amended article should expressly require that obliged entities ensure that: • the information collected can be unambiguously linked to the individual concerned; • the overall identification framework achieves a level of assurance equivalent, to the extent possible, to that provided by official documentation; and • the risks of identity theft, impersonation, or misidentification

Name of the respondent	Question	Answer
		are effectively mitigated through enhanced and risk-sensitive verification measures where appropriate. We therefore call for a targeted revision of the current article to incorporate this approach. Properly calibrated, this adjustment would materially improve the proportionality and operational feasibility of the RTS, while fully preserving indeed reinforcing its core objective of robust, reliable, and risk-based customer due diligence.
Arendt Investor Services	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	13
Arendt Investor Services	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We understand that, where no natural person can be identified as a beneficial owner through ownership or control, obliged entities are required to identify and verify the senior managing officials (SMOs) of the entity. We also note that the RTS appears to envisage, for SMOs, a level of information broadly equivalent to that required for beneficial owners identified through ownership. However, we consider this approach to be neither proportionate nor aligned with the underlying rationale of the SMO concept. SMOs are identified as a fallback mechanism, not as individuals exercising ownership or ultimate control. Imposing a systematically equivalent level of data collection therefore risks creating an unjustified and excessive compliance burden, without a commensurate benefit in terms of ML/TF risk mitigation. In particular, we question the necessity of requiring certain categories of personal data such as proof of residence and tax identification numbers (TINs) in all cases involving SMOs. In many instances, such information does not materially enhance transparency, nor does it meaningfully contribute to the

Name of the respondent	Question	Answer
		assessment of the entity's ML/TF risk profile. In our view, the RTS should be amended to introduce a clear and explicit differentiation between the information requirements applicable to: • beneficial owners identified through ownership or control; and • SMOs identified as a default or proxy. For SMOs, the collection of core identification and screening data such as name, date of birth, function, and relevant sanctions/PEP screening information should generally be considered sufficient. Additional data points, including TIN and proof of residence, should only be required where justified by specific risk factors or where necessary to resolve identification uncertainties. We therefore strongly urge that the relevant article be revised to reflect a proportionate, risk-based approach, explicitly limiting the scope of personal data collected for SMOs to what is necessary and relevant. This would ensure alignment with the principle of data minimization, reduce unnecessary operational burdens, and maintain a clear focus on information that genuinely contributes to effective ML/TF risk assessment. Absent such clarification, the current drafting risks blurring the conceptual distinction between beneficial ownership and fallback identification mechanisms, leading to inconsistent implementation and disproportionate data collection practices across obliged entities.
Arendt Investor Services	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	19

Name of the respondent	Question	Answer
Arendt Investor Services	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Under the RTS, individuals holding senior positions within state-owned entities qualify as politically exposed persons (PEPs). While we fully acknowledge this legal classification, its mechanical application in the context of the investment fund industry gives rise to disproportionate and, in certain cases, unjustified outcomes. In fund structures, state-owned entities frequently act as institutional investors and are themselves subject to robust customer due diligence. Where no natural person can be identified as a beneficial owner through ownership or control, obliged entities are required by design to identify senior managing officials (SMOs) as a fallback. As a direct consequence, these individuals are automatically classified as PEPs solely by virtue of their function, not due to any ownership, control, or personal involvement in the investment. Under the current drafting, this automatic classification systematically triggers enhanced due diligence (EDD) measures and a higher inherent risk rating. We consider this approach to be overly rigid and misaligned with the risk-based principles underpinning the EU AML/CFT framework. It conflates a formal legal status with an actual risk profile, without adequately considering the specific context in which the relationship arises. In cases where: • the investor is a state-owned entity acting strictly in an institutional capacity; • the investment is made through a well-established, transparent, and professionally managed structure; and • the entity is subject to comprehensive governance, audit, and public oversight frameworks, often within the EU or in jurisdictions with equivalent AML/CFT regimes,

Name of the respondent	Question	Answer
		the incremental ML/TF or corruption risk associated with identifying SMOs as PEPs is, in practice, limited. Imposing a systematic high-risk classification and full EDD in such scenarios results in a disproportionate compliance burden, encourages unnecessary de-risking, and diverts resources away from genuinely higher-risk situations. We therefore strongly urge that the RTS be amended to introduce a clear and explicit differentiation between: • PEP classifications arising purely from institutional investment structures, where SMOs are identified as beneficial owners by default; and • PEP situations involving individuals acting in a personal capacity, whether directly or through personal investment vehicles. In the former case, the RTS should explicitly allow obliged entities to apply a calibrated, risk-based approach, under which the mere identification of an SMO as a PEP does not automatically trigger a high-risk classification or the full set of EDD measures. Instead, additional risk factors should be required to justify such escalation. Conversely, in the latter case where the individual invests personally the application of enhanced due diligence and a higher risk classification remains fully warranted and should continue to apply without qualification. Absent such clarification, the current framework effectively imposes a one-size-fits-all treatment that fails to distinguish between fundamentally different risk scenarios. This not only undermines proportionality but also creates significant operational burdens for obliged entities, particularly in high-volume fund distribution models involving institutional investors subject to EU or equivalent AML/CFT standards.

Name of the respondent	Question	Answer
		A targeted revision of the RTS to reflect this distinction would enhance legal certainty, ensure alignment with the risk-based approach, and preserve the effectiveness and credibility of the PEP regime, while avoiding unnecessary friction in legitimate institutional investment flows.
Arendt Investor Services	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	27
Arendt Investor Services	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 27 represents a constructive step toward harmonising expectations regarding the assessment of source of funds (SoF) and source of wealth (SoW), and its objective of strengthening consistency and robustness in this area is fully supported. Given the central role of SoF and SoW in mitigating ML/TF risks, greater convergence is indeed desirable. However, in its current form, the provision raises material concerns relating to scope, proportionality, evidentiary expectations, and operational feasibility, which if not addressed risk driving overly formalistic and inconsistent implementation across obliged entities. First, the articulation between the SoF of a legal entity and the SoW of its beneficial owners remains insufficiently defined. The current drafting risks encouraging a mechanical and cumulative application of both assessments, irrespective of context. This is neither conceptually sound nor operationally proportionate. The RTS should explicitly clarify that the depth and focus of the assessment must be context-driven, taking into account: • the nature and activity of the legal entity; • the purpose and size of the transaction; and • the extent to which the entity itself provides a transparent and credible explanation of the origin of funds. Absent such clarification, obliged entities may be compelled to systematically investigate beneficial owners' wealth even

Name of the respondent	Question	Answer
		where the SoF of the entity is clear, verified, and sufficient to mitigate ML/TF risk—resulting in unnecessary duplication and excessive data collection. Second, the evidentiary framework set out in Article 27 lacks sufficient critical guidance. While the inclusion of a non-exhaustive list of documents is helpful, it risks being interpreted as a de facto checklist, encouraging a document-driven approach rather than a risk-based assessment. This is particularly problematic given that: • certain listed documents are not consistently available across jurisdictions; and • some commonly used documents (e.g. bank statements) may provide limited or superficial assurance as to the lawful origin of funds. We therefore strongly recommend that the RTS explicitly recognise that the probative value of documentation varies, and that the assessment should prioritise credibility, consistency, and plausibility over the mere collection of documents. More fundamentally, Article 27 does not sufficiently embed the principle of proportionality, which is a cornerstone of the EU AML/CFT framework. In practice, the level of verification should be calibrated to: • the risk profile of the customer and beneficial owner; • the nature and purpose of the relationship or transaction; and • the amounts involved. A uniform expectation of extensive documentary evidence—even in low-risk or low-value scenarios—would create a significant and unjustified operational burden, particularly in cross-border contexts, without delivering a commensurate

Name of the respondent	Question	Answer
		increase in risk mitigation. In this respect, the notion of “satisfying” the obliged entity that funds derive from lawful activities requires further clarification. As currently drafted, it may be interpreted as requiring a quasi-absolute level of proof, which is neither realistic nor aligned with a risk-based approach. The RTS should explicitly confirm that, particularly in lower-risk scenarios, a reasonable level of assurance—based on plausibility checks, consistency with the customer’s profile, and corroboration from reliable sources—is sufficient. Additional clarification is also needed on several key operational aspects, including: • the distinction between SoF and SoW, which should not be blurred or applied cumulatively by default; • the timing of the assessment, including the ability to adopt a staged or progressive approach where appropriate; and • the acceptability of alternative or equivalent information sources, particularly in international contexts where standard documentation may not be उपलब्ध or clients may be reluctant to share sensitive personal data. Explicit recognition of such flexibility is essential to ensure that the framework remains internationally workable and does not inadvertently incentivize de-risking or exclusion of legitimate customers. In light of the above, we strongly urge that Article 27 be revised to: • clarify the interaction and respective scope of SoF and SoW assessments; • emphasise a risk-based, non-mechanical approach to evidence gathering; • explicitly embed the principle of proportionality;

Name of the respondent	Question	Answer
		• define “sufficient assurance” in a manner consistent with practical AML/CFT application; and • recognise the use of alternative and equivalent sources of information. Absent these adjustments, the current drafting risks fostering a rigid, document-centric and operationally burdensome framework that is misaligned with the risk-based principles it seeks to promote, and which may ultimately undermine both effectiveness and consistency in AML/CFT implementation.
Arendt Investor Services	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	30
Arendt Investor Services	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	We understand that the RTS does not mandate the systematic application of a four-eyes principle in the screening process, and we agree that the primary objective should be to ensure a robust, effective, and well-controlled screening framework, rather than prescribing rigid organisational arrangements. However, in its current form, the RTS lacks sufficient precision regarding the scope of persons and entities subject to screening, which creates a material risk of inconsistent implementation and overly conservative practices across obliged entities. In particular, further clarification is required as to how screening obligations should be applied across different categories, including: • senior managing officials (SMOs) of customers and counterparties; • intermediary entities involved in the business relationship or transaction chain; and • SMOs of such intermediary entities, where relevant. Absent explicit guidance, obliged entities are likely to adopt divergent interpretations, with some applying overly broad and

Name of the respondent	Question	Answer
		resource-intensive screening perimeters extending systematically to multiple layers of intermediaries and associated individuals without a clear risk-based justification. This not only generates significant operational burden, but also risks diluting the effectiveness of screening by overloading systems with low-value alerts. We therefore strongly recommend that the RTS be amended to clearly define the expected screening perimeter, explicitly linking it to a risk-based assessment. In particular, it should clarify: • which categories of persons and entities are systematically in scope; • which categories should be screened only where justified by risk indicators; and • how far along the chain of intermediaries screening obligations are expected to extend. Such clarification is essential to ensure that screening efforts remain targeted, meaningful, and proportionate, rather than becoming a purely formalistic exercise. At the same time, we strongly support maintaining operational flexibility for obliged entities in designing their screening frameworks, including the organisation of controls and escalation mechanisms. Imposing systematic requirements such as a mandatory four-eyes principle in all cases would be disproportionate and misaligned with the diversity of business models and risk exposures across the market. In this regard, the RTS should strike a clearer balance by: • preserving discretion for obliged entities to calibrate their screening workflows according to their size, complexity, and risk profile; while • providing more granular and explicit expectations as to the

Name of the respondent	Question	Answer
		scope of screening obligations. Without such clarification, the current drafting risks encouraging overly expansive and operationally burdensome screening practices, particularly in complex or intermediary-driven structures, without delivering a commensurate enhancement in AML/CFT effectiveness. We therefore call for a targeted revision of the RTS to explicitly delineate the screening perimeter in a manner that is risk-based, proportionate, and operationally sustainable, while ensuring consistent application across obliged entities
Arendt Investor Services	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Arendt Investor Services	Do you have any comments on the Annex in the draft RTS?	No
Arendt Investor Services	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Arendt Investor Services	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including	Disruptive impact

Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	Disruptive impact

Name of the respondent	Question	Answer
Arendt Investor Services	Please justify your answer to the previous question and provide evidence where possible.	The main interpretative issues arise in Articles 17 and 22, which appear to require a systematic full look-through to underlying investors when investments are made through financial intermediaries. This interpretation would have a significant and disproportionate impact on the EU fund industry. In practice, investment funds frequently receive subscriptions via EU-regulated banks as well as non-EU financial institutions that are subject to AML/CFT frameworks equivalent to EU standards. In these cases, customer due diligence on the underlying investors is already performed by regulated intermediaries that are supervised and accountable under robust regulatory regimes. Requiring a full look-through in all circumstances would duplicate existing controls without delivering commensurate additional ML/TF risk mitigation. Such an approach undermines the risk-based framework underpinning EU AML/CFT legislation and risks imposing excessive operational burdens, particularly in high-volume fund distribution models. It also creates legal uncertainty and inconsistent supervisory expectations across Member States, especially in cross-border distribution chains. We therefore consider that a systematic look-through requirement is not appropriate, particularly where investments are made through financial intermediaries that are themselves obliged entities subject to EU or equivalent AML/CFT rules. Reliance on intermediary-level due diligence should be recognised as a valid and proportionate approach, subject to appropriate safeguards and the presence of specific risk indicators. In addition, greater clarity is needed on the definition of “complex structures.” Complexity should not be assessed solely on the number of layers in an ownership or control chain. A

Name of the respondent	Question	Answer
		purely quantitative approach risks producing arbitrary and formalistic outcomes that are disconnected from actual ML/TF risk. Instead, the RTS should adopt a qualitative, risk-based definition of complexity, taking into account factors such as transparency, regulatory oversight, governance, and the ability to identify ownership and control effectively. Clearer guidance on both the scope of look-through obligations under Articles 17 and 22 and the definition of complex structures would significantly enhance legal certainty, support proportionality, and ensure consistent application of the RTS across the EU.
ARGA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree that the proposals can be applied across a range of obliged entities. However, in our view, the current draft does not always provide sufficient flexibility for entities dealing with cross-border clients, complex ownership structures or non-standard documentation. In particular, certain provisions appear to rely on a relatively formalistic approach to documentation and verification, which may not be appropriate in situations where equivalent information exists but in different formats or jurisdictions. This may lead to unnecessary operational friction and encourage overly cautious practices. To improve flexibility, we suggest clarifying that obliged entities may rely on functionally equivalent documentation and risk-based verification methods, including alternative sources of information, where these provide a comparable level of assurance. This would better reflect the diversity of business models and cross-border activity.
ARGA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not	We partially agree. While the draft RTS formally incorporates a risk-based approach, some provisions may in practice lead to a more standardised and prescriptive application of CDD

Name of the respondent	Question	Answer
	agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	requirements. In particular, where detailed information requirements are combined with limited flexibility in how they can be met, obliged entities may default to a uniform approach rather than tailoring measures to the actual level of risk. This could reduce the effectiveness of risk-based compliance and increase unnecessary costs. We suggest reinforcing that CDD measures should be calibrated to the level of ML/TF risk and that simplified or alternative approaches should be explicitly permitted where risk is demonstrably lower.
ARGA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are situations where certain information may not be readily available in practice. This is particularly relevant in cross-border contexts, where documentation standards differ, beneficial ownership information may not be centrally available, or official records are incomplete, outdated or difficult to access. Similar issues arise for clients with complex or international structures, as well as for individuals with non-standard employment or residency situations. In such cases, the absence of specific documents does not necessarily indicate higher risk, but may reflect structural differences between jurisdictions. We suggest explicitly allowing the use of alternative and functionally equivalent sources of information, including a combination of documents, publicly available data, and risk-

Name of the respondent	Question	Answer
		based verification methods, where this provides sufficient assurance.
ARGA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We consider that additional simplified due diligence measures could be introduced for situations where ML/TF risks are demonstrably lower. This could include, for example: standard retail products with limited functionality and transaction thresholds; clients with transparent and verifiable income sources; existing customers with established and monitored relationships; low-risk domestic transactions within the EU framework. We suggest clarifying that in such cases, obliged entities may apply reduced documentation requirements, simplified verification processes, or rely on existing customer data, provided that risk levels remain low and are regularly reviewed. This would better align the RTS with a genuinely risk-based and proportionate approach.
ARGA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	As a general observation, we consider that the draft RTS would benefit from greater emphasis on proportionality, operational feasibility and consistency across Member States. In particular, further clarification would be useful on: the use of alternative and equivalent documentation; the treatment of cross-border situations;

Name of the respondent	Question	Answer
		the interaction between detailed requirements and the risk-based approach. Without such clarification, there is a risk that the RTS may lead to overly cautious or inconsistent implementation in practice, including increased de-risking and reduced access to financial services for certain categories of clients. We therefore encourage AMLA to ensure that the final RTS provides sufficient flexibility for obliged entities to apply CDD measures in a way that is both effective and proportionate.
ARGA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
ARGA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ARGA	Do you have any comments on the Annex in the draft RTS?	No
ARGA	How would you rate the proposals set out in the draft RTS overall?	Good
ARGA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Mostly yes, but not as a single “one-size-fits-all” blanket. These draft RTS can be applied across the full product/service range only if they’re implemented in a risk-based, modular way, with calibrations for complexity, delivery channels, customer types, and distribution models. If you need a copy-paste answer for the form, use this: Yes, in principle. The proposals in the draft RTS can be applied across the range of products and services we provide, provided they are implemented on a risk-based and proportionate basis. A uniform approach would be impractical given differences in customer profiles, delivery channels, distribution arrangements and product risk (e.g., low-risk retail products vs. higher-risk private/complex services). We therefore support an RTS

Name of the respondent	Question	Answer
		framework that is broadly applicable but allows obliges entities to tailor specific measures (CDD depth, monitoring frequency, escalation thresholds, documentation and controls) according to the assessed ML/TF risk and materiality. Clear proportionality language and practical examples would help ensure consistent implementation across product lines without creating unnecessary burden or unintended exclusion for lower-risk use cases.
ARGA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, largely. The draft RTS appear broadly compatible with an effective risk-based approach, because they (a) anchor measures in documented risk assessment, (b) allow for differentiated CDD depth and ongoing monitoring, and (c) recognise higher-risk triggers (complex structures, unusual patterns, high-risk jurisdictions, etc.). That said, some parts read as close to “checklist compliance” and could unintentionally push obliged entities toward de facto standardisation, over-collection, and de-risking. To make the risk-based approach genuinely effective in practice, we suggest tightening proportionality language and adding explicit flexibility where measures are currently framed too prescriptively. If you consider changes necessary, the provisions concerned are those that: (i) set fixed or uniform minimum information requirements for all customers/relationships irrespective of assessed risk; (ii) require repeated refresh cycles or routine enhanced measures without clear risk triggers/materiality thresholds; (iii) treat certain indicators as automatic high-risk classifications (rather than risk factors to be weighed);

Name of the respondent	Question	Answer
		(iv) do not clearly permit reliance on equivalent existing information/controls where the data is already verified and current.
ARGA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Concrete situations where CDD info is routinely unavailable (or not reliably obtainable) and the draft RTS often does not spell out a workable alternative: Beneficial ownership in complex / cross-border structures Example: multi-layer holding chains (often 3–6+ tiers), trusts/foundations, nominee shareholders/directors, and entities in jurisdictions with weak public registers or slow/paid access. You can be legally required to "obtain" BO details, while the customer can only provide partial documents, outdated registers, or self-declarations. Alternative solution proposal: explicitly allow a staged approach and a "best efforts + corroboration" standard: (i) collect available ownership/control info, (ii) corroborate via independent sources where feasible, (iii) require documented rationale + mitigation (transaction limits, enhanced monitoring) until BO is reasonably established, and (iv) allow refusal/exit only where risk cannot be mitigated. Proof of address / residency for highly mobile individuals Example: cross-border workers, digital nomads, recently relocated customers, refugees/asylum seekers, or people in temporary housing. They often lack utility bills, formal leases, or stable addresses, especially in the first months. Alternative solution proposal: permit a broader set of "equivalent evidence" (employer letter, tax notice where available, bank correspondence, attestation of accommodation, municipal registration, mobile/internet

Name of the respondent	Question	Answer
		contract, certified statement plus corroboration) and allow "temporary address + review date" with risk-based restrictions. Source of funds / source of wealth evidence for cash-based or informal economies Example: self-employed customers paid in cash, freelancers paid through multiple platforms, gig-economy workers, or individuals from countries where payroll documentation is not standardised. Alternative solution proposal: explicitly allow a flexible evidence hierarchy: platform statements, bank inflow patterns, invoices/contracts, tax filings where available, sworn declaration combined with plausibility checks, and enhanced monitoring rather than automatic rejection. Identity verification when standard documents are unavailable or expired Example: displaced persons, people awaiting renewal, citizens of countries with delays or limited consular access. Alternative solution proposal: allow alternative ID pathways (national registry extracts, consular attestations, refugee/temporary protection documents, combination of secondary documents + biometric/remote verification where legally permitted), with time-limited validity and mandated refresh.
ARGA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	From ARGA's perspective: if the RTS is supposed to actually enable proportionality (and not just rebrand "everyone gets EDD" as "risk-based"), it should include a clearer menu of Simplified Due Diligence (SDD) options tied to genuinely lower ML/TF-risk products and use-cases. Below are concrete measures that should be explicitly permitted, with drafting-

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	style proposals and rationale. “Purpose-limited low-risk accounts” (salary / benefits / basic living) Drafting proposal (new article or paragraph under SDD measures): “Where a business relationship is limited to the receipt of salary, pension, or verified public benefits, and outgoing payments are restricted to SEPA transfers and domestic card payments, obliged entities may apply simplified due diligence by: (a) verifying identity and a single contact channel; (b) collecting purpose of account as ‘salary/benefits account’ and employer/payer identifier where available; (c) applying lower frequency CDD refresh, unless risk triggers arise; (d) applying transaction/feature restrictions (e.g., no cash deposits above [X], no international transfers outside [EEA/SEPA], no third-party funding).” Rationale: These are high-traceability inflows, predictable patterns, and low layering opportunity when features are restricted. SDD here reduces financial exclusion without reducing controls. Low-value, closed-loop e-money and payment instruments Drafting proposal: “For low-value e-money instruments with capped loading and spending limits and no (or limited) cash-out functionality, obliged entities may apply SDD by: (a) deferring collection of certain information until cumulative thresholds are reached;

Name of the respondent	Question	Answer
		(b) relying on simplified verification steps provided transaction monitoring is continuous; (c) applying enhanced monitoring to attempts to circumvent limits (multiple instruments, rapid churn).” Rationale: Low maximum value + feature limits materially reduce laundering utility. The key control becomes monitoring for structuring, not collecting a full dossier on day one. Existing customer / “verified reuse” SDD Drafting proposal: “Where a customer has been subject to CDD within the obliged entity (or within the same group) and the information remains accurate and up to date, obliged entities may apply SDD by reusing verified information, subject to: (a) confirmation of no material change (self-declaration + plausibility checks); (b) screening refresh; and (c) targeted update of only missing/high-risk fields.” Rationale: Stops pointless re-collection. Also reduces incentives for customers to “shop” between institutions just to avoid friction. SDD for regulated, low-risk savings/insurance/pension products with limited liquidity Drafting proposal: “For life insurance, pension, or long-term savings products with: (i) low premium levels and (ii) limited early surrender/cash-out and (iii) payout only to the verified account of the customer/beneficiary,

Name of the respondent	Question	Answer
		obliged entities may apply SDD by: (a) focusing on identity verification and beneficiary designation; (b) postponing granular source-of-wealth collection unless triggered by unusual top-ups/changes; (c) applying reduced ongoing review frequency." Rationale: Limited liquidity and controlled payout channels reduce placement/layering attractiveness. Risk spikes are event-driven (large top-ups, beneficiary switches), so the RTS should allow event-based CDD. SDD where funds originate exclusively from regulated EEA credit institutions (clean funding rule) Drafting proposal: "Where an obliged entity can demonstrate that funding originates exclusively from accounts held in the customer's name at EEA-regulated credit institutions, and where third-party funding is prohibited, SDD may include: (a) reduced SoF/SoW documentation; (b) reliance on bank-origin evidence (IBAN ownership confirmation + bank statement) as sufficient unless triggers arise." Rationale: You are piggybacking on upstream regulated CDD and leaving an audit trail. Not "risk-free," but materially lower for many retail scenarios. Explicit "alternative evidence" SDD for vulnerable / highly mobile persons (to avoid forced de-risking) Drafting proposal: "Where standard documentary evidence (e.g., proof of address) is not reasonably obtainable, obliged entities may apply SDD using alternative reliable evidence, including

Name of the respondent	Question	Answer
		attestations, employer letters, municipal registration, or equivalent, combined with: (a) temporary account status and (b) proportionate limits until standard evidence becomes available." Rationale: Otherwise the RTS indirectly pushes financial exclusion of refugees, recent movers, and low-risk customers with messy paperwork. That's bad policy and bad risk management.
ARGA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Yes. A few additional, article-specific points from ARGA's perspective that are worth fixing now (before they fossilize into "supervisory folklore"). Article 7(4) (non-face-to-face remote verification) Issue: Art. 7(4) requires obliged entities to "justify why the customer could not be verified" via the Article 22(6) AMLR means, each time remote solutions are used. Why it matters: In many sectors (especially digital-first onboarding), remote verification is the default, not an exception. A per-customer "why not eIDAS/QTSP" justification invites box-ticking and inconsistent supervisory expectations, without improving ML/TF mitigation. Proposed solution (drafting): Replace the last sentence of Art. 7(4) with a policy-level requirement: "Obliged entities shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with this Article and are appropriate for the ML/TF risks and the business model, including documented criteria for when each verification channel is used." Rationale: Keeps accountability, removes pointless per-file narration.

Name of the respondent	Question	Answer
		Article 10 (reasonable measures for verification of the beneficial owner) Issue: Art. 10 lists “utility bills” among third-party sources for verifying beneficial owners. Why it matters: Utility bills can help verify address/identity, but they do not verify beneficial ownership or control. Leaving them in this list risks diluting the standard and creating confusion during reviews and audits. Proposed solution (drafting): Clarify scope: Either remove “utility bills” from Art. 10(b)(ii), or Amend to: “utility bills and similar documents may be used to verify the identity attributes (e.g., address) of a beneficial owner, but shall not be relied upon to evidence ownership/control.” Rationale: Prevents misuse of weak evidence as “BO verification.” Articles 11–12 (ownership/control structure and “complex corporate structure”) Issue: Art. 12 defines “complex corporate structure” (3+ layers + additional conditions). Why it matters: The definition is helpful, but the RTS is light on what “good” looks like for mitigation, and it risks encouraging indiscriminate escalation for structures that are layered for legitimate reasons (fund structures, regulated groups, listed intermediates). Proposed solution (drafting): Add a safe-harbour + mitigation menu: Safe harbour: where intermediate entities are EU-regulated or listed on a regulated market and transparency is high, this should be an explicit mitigating factor. Mitigation menu: “organigram + rationale + verification of key

Name of the respondent	Question	Answer
		control points + targeted EDD where opacity triggers exist (nominees, non-EU opaque layers, no economic rationale).” Rationale: Supervisors get consistency; firms get a workable playbook; de-risking pressure drops. Article 23 (customer identification data updates in low-risk situations) Issue: Art. 23(1) sensibly allows reduced update frequency in low-risk cases, but Art. 23(2) still requires updating “in any case” per AMLR 26(2)(b). Why it matters: Without clearer wording, this can be read as “reduced frequency is theoretical, because you must update anyway,” which undermines SDD and creates uneven practice. Proposed solution (drafting): Add a clarifier: “Paragraph 2 does not require periodic refresh beyond the risk-based approach in paragraph 1; it requires updates when triggers arise or when maximum intervals under AMLR apply.” Rationale: Preserves event-driven updates while keeping SDD real. Article 31(k) (e-money exemption risk factors: geo-fencing/IP tracking) Issue: Art. 31 includes geo-fencing/IP tracking as a factor supervisors should consider when allowing exemptions for certain e-money instruments. Why it matters: This can push a technology mandate that is not proportionate for all issuers, may be privacy-sensitive, and can be circumvented. It risks becoming a de facto requirement even where other controls are stronger (closed loop, strict limits, no cash-out). Proposed solution (drafting): Make it explicitly optional and risk-calibrated: “Supervisors may consider technological access restrictions

Name of the respondent	Question	Answer
		(including geo-fencing/IP controls) where proportionate and effective for the specific product design; equivalent controls may be used to achieve the same outcome." Rationale: Avoids tech checkbox regulation and supports outcome-based controls.
ARGA	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
ARGA	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ARGA	Do you have any comments on the Annex in the draft RTS?	No
ARGA	How would you rate the proposals set out in the draft RTS overall?	Neutral
ASSIREVI - Association of the Italian Audit Firms	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	It is the view of ASSIREVI that the draft RTS are, in principle, also applicable to services provided by audit firms. However, the draft RTS does not always allow for sufficient flexibility when certain measures imply direct availability of transactional data, the ability to intervene in the clients' operations or real-time continuous controls. Such attributes are typical of financial intermediaries, whereas audit is a non-transactional service, carried out under stringent independence requirements, and based predominantly on documentary evidence and sample-based verifications necessarily gathered and conducted after the facts. In light of the above, ASSIREVI proposes, in particular, to clarify in Art. 18, 26, 27 and 28 that items relating to volume, frequency and destination of transactions, counterparties, source of funds and source of wealth are relevant for auditors only to the extent that they are pertinent in relation to the service offered and reasonably accessible in the context of the performance of the

Name of the respondent	Question	Answer
		engagement. To this end, it could be useful to insert wording such as: “only where relevant in relation to the service provided and reasonably accessible in the context of the engagement”. In addition, it would be highly desirable if the principle - already recalled in Recital 21 - according to which information already held by the obliged entity may be leveraged to avoid duplication, could find a more explicit operational reflection in the relevant implementing provisions for CDD, with particular regard to professional services and the audit acceptance/continuance process.
ASSIREVI - Association of the Italian Audit Firms	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	ASSIREVI fully shares and supports the objective of fostering an effective application of a risk-based approach. In the case of audit firms, the assessment of such approach should take into account that AML obligations are fulfilled through professional procedures and analyses conducted after the facts and not by means of operational and transactional monitoring controls. Therefore, the application of monitoring techniques conceived for financial intermediaries (e.g. regarding transaction amounts, volumes, counterparties) is not applicable for audit firms and, even if it were, it could translate into a disproportionate burden and a risk of over-compliance, without a corresponding increase in effectiveness. ASSIREVI proposes strengthening in the RTS the principle according to which the intensity of measures must be commensurate with the operating model of the obliged entity (i.e. transactional vs. non-transactional). Accordingly, it would be desirable that concepts such as “reasonable measures” or “risk-sensitive measures” be interpreted according to what is reasonably achievable in the context of the specific professional service and the related

Name of the respondent	Question	Answer
		engagement cycle. Art. 6(3), 19(3) and 30 of the draft RTS require obliged entities to equip themselves with specialist tools for verifying the authenticity of documents obtained or “automated screening” tools for updating “without undue delay” the identification of a PEP or the subjection of an existing client (or the beneficial owner or the persons controlling the client) to targeted financial sanctions. The adoption of such tools would lead to implementation and application burdens, that are not necessarily proportionate to the nature and role of the obliged entity. In light of the above, it is the view of ASSIREVI that for non-transactional professional services it would be useful to clarify further that an on-going screening model comparable to that of financial intermediaries is not required. In particular, it would be desirable for audit firms that periodic or event-driven controls, consistent with the engagement cycle and with the availability of new relevant information, may be considered proportionate, without prejudice to the obligation to act promptly in case of new significant events or information. With reference to Art. 26, 27 and 28, ASSIREVI considers it useful to specify that additional information on clients, contracts, business partners, funds, wealth or transactions must be requested only where relevant, proportionate and accessible for the obliged entity concerned. For audit firms, it would also be useful to clarify that such requests can be satisfied by relying, where appropriate, on information already available within their professional acceptance, continuance and engagement-related procedures.
ASSIREVI - Association of the Italian Audit Firms	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due	For audit firms, some information required by the draft RTS may not be routinely available, or may be available only indirectly, as it is connected to safeguards typical of financial

Name of the respondent	Question	Answer
	diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	intermediaries. This includes, in particular: - information on sources of funds and sources of wealth from a strictly transactional perspective; - information on the destination of funds of counterparties; - non-face-to-face identification measures based on eIDAS solutions or remote solutions built for continuous digital onboarding purposes; - “without undue delay” updates and screenings built on on-going monitoring infrastructures. In the case of auditors, such information is not normally within the obliged entity’s direct availability because it does not pertain to statutory audit activities, nor can it be obtained within the limits of the applicable auditing standard procedures without encroaching upon investigative or operational activities that are not required by the nature of the engagement. Therefore, ASSIREVI suggests that AMLA should clarify that, for audit services: - it is acceptable to base part of CDD on information already held and on documentary evidence available in the context of the engagement (financial statements, corporate documentation, public registers, acceptance and continuance related documentation); - it is acceptable to use reliable public sources and client declarations, corroborated by an appropriate risk-based assessment; - the inability to obtain typical transactional data does not constitute, in and of itself, an element of non-compliance,

Name of the respondent	Question	Answer
		provided that such inability is consistent with the nature of the service.
ASSIREVI - Association of the Italian Audit Firms	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	ASSIREVI acknowledges AMLA's position, as expressed in the document under consultation, that no additional SDD measures have been identified beyond those already provided by the AMLR, in order to avoid exemptions that go beyond its mandate. In line with this approach, ASSIREVI does not suggest new exemptions, but rather operational/sectoral clarifications for non-transactional professional services, particularly relevant for audit services. In particular, in low-risk situations, it could be made explicit that CDD can be fulfilled by means of a reduced set of information, based on corporate documentation, public registers and information already collected in the context of the engagement acceptance or continuance procedures. It could also be clarified that, for auditors, the reduction in the frequency of data updates in low-risk situations may be consistently anchored to engagement cycles, without prejudice to the obligation to update in case of new significant events or information. Drafting proposal: "In low risk situations, obliged entities providing non-transactional professional services (inter alia audit firms), may, in applying SDD, rely on information already held for professional acceptance/continuation, along with public registers and corporate documentation, without having to carry out the systematic search/collection of transaction-based information that is not reasonably accessible in the context of the service provided." It is the view of ASSIREVI that this clarification would be

Name of the respondent	Question	Answer
		consistent with Recital 21 of the draft RTS and would enable tangible simplification without creating undue exemptions.
ASSIREVI - Association of the Italian Audit Firms	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	ASSIREVI wishes to express its appreciation and support for the objectives pursued by the draft RTS; in our view, however, it would be appropriate that certain provisions be further clarified in order to avoid divergent applications, a risk of over-compliance and a reading that would fit solely on financial intermediaries. In the draft RTS, broad expressions recur in multiple provisions ("where available", "where necessary", "risk-sensitive measures", "credible means", "reliable and independent sources", "without undue delay", "comprehensive understanding"), which may generate inconsistent interpretations or expectations across sectors and among different authorities. ASSIREVI suggests to include in the draft RTS a general interpretative clause clarifying that the extent of measures must be assessed in light of the nature of the activity carried out by the obliged entity and its actual role in relation to client transactions. Drafting proposal: "In applying the requirements of these RTS, obliged entities and supervisors shall determine/establish the extent of the applicable/relevant measures taking into account the nature of the obliged entity's activity and its actual role in relation to customers' transactions, applying exclusively those provisions that are consistent with the nature and purpose of the activity performed." With reference to Recitals 5 and 6 and Art. 8, ASSIREVI considers it appropriate to list as reliable sources, in addition to documents issued by public authorities (including public bodies such as the chambers of commerce) and supervisory

Name of the respondent	Question	Answer
		authorities, also documents extracted from institutional or commercial sources recognized as reliable at local level (i.e. external providers normally used in practice). For audit firms it could be clarified that the reliability of a source can also be assessed depending on the controls already carried out by the system from which the document originates and that the use of providers or equivalent tools may be permitted where supported by a risk-based assessment of their reliability. With reference to Recital 8, ASSIREVI believes that it is important to clarify implementation expectations in cross-border cases where access to foreign central registers of beneficial owners is not fully consistent or immediately available. In such situations, it would be useful to specify that, in the event of structural obstacles or access limits, the obliged entity may supplement or replace this verification with corporate registers or other reliable documentation. With regard then to Recitals 9, 10 and 11 and Art. 13 and 21, ASSIREVI suggests avoiding wording that could imply that the obliged entity, and not the client, is required to “determine” beneficial ownership in substantive terms: the role of the obliged entity is to obtain beneficial ownership information from the client, verify its plausibility and compare it with available sources, while the declaratory and informational obligation remains primarily with the legal entity. With reference to Recital 12 and Art. 16, it could be clarified that, for the purpose of verifying representation powers: - it is sufficient to get evidence relating to the person acting in the name and on behalf of the client for the purposes of establishing the business relationship or signing the

Name of the respondent	Question	Answer
		engagement letter, without requiring a wider review of all persons holding representation powers within the legal entity; - public register records (or equivalent corporate documentation) may constitute suitable and sufficient sources. Regarding Art. 6(3), the notion of “reasonable steps” to verify the authenticity and integrity of documents, in the absence of further indications, could imply systematic recourse to advanced document verification tools, with the imposition of sometime disproportionate burdens, especially in non-transactional professional services. It would be useful to clarify that “reasonable steps” must be calibrated according to the risk, the nature of the service and the tools available to the obliged entity and that the use of qualified electronic signatures or equivalent tools may also contribute to the identification process. Likewise, regarding Art. 6(6) and 7, it should be clarified that, for services provided by audit firms, digital or remote identification measures do not imply the use of tools comparable to those available to financial intermediaries. As to Art. 11 and 12, it would be useful to specify that the notion of “complex corporate structure” does not automatically entail the attribution of a high risk and that the “organigram” requirement may be satisfied with an independent reconstruction of the shareholding chain obtained from reliable information providers. As to Article 13, we suggest to better clarify both the information perimeter required for SMOs, and the criteria for their identification, avoiding implementation uncertainties as to who may fall within that definition.

Name of the respondent	Question	Answer

ASSIREVI - Association of the Italian Audit Firms	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
ASSIREVI - Association of the Italian Audit Firms	Do you have any comments on the Annex in the draft RTS?	No
ASSIREVI - Association of the Italian Audit Firms	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	ASF fully supports the objective of strengthening the EU's anti-money laundering and counter-terrorism financing (AML/CTF) framework. Nevertheless, Regulation 2024/1624 of 31 May 2024 includes the principle of proportionality. The ASF emphasises the necessity to ensure a risk-based approach and consider in the application of the regulation the specific characteristics of low-risk specialised financing activities such as equipment leasing and consumer credit. Before this regulation, leasing and consumer credit activities have been subject to dedicated risk recognition and mitigation measures. We would like to see these provisions reintroduced. The effectiveness of the AML/CTF framework is based on the application of a risk-based approach, with a strong commitment to proportionality ensuring that rules are targeted where risks are highest and do not impose unnecessary burdens in low-risk contexts. Specialised consumer credit products, including point-of-sale financing, Buy Now Pay Later (BNPL), small-value short-term

Name of the respondent	Question	Answer
		loans and linked credit agreements, present inherently low exposure to ML/TF risks. For instance, entities offering BNPL have implemented “simplified due diligences” : they identify customers without having to check their identities. Verification of identity would be disproportionate to the real risk associated with these products characterised by low transaction values, limited duration, restricted use of funds linked to specific purchases, and use through regulated payment systems. Supervisory experience and risk assessments consistently do point to retail consumer lending as presenting significantly lower risk. Accordingly, ASF proposes to consider low risk the following activities : - BNPL transactions and credit transactions less than €1,000 ; - financing transactions for tangible assets for business use where ownership is not transferred to the customer, as in the case of long-term operational lease ; - financing transactions for tangible assets for business use where ownership can only be transferred at the end of the contractual relationship, as in the case of finance lease. - factoring. It would be better to apply verification only when type of information requiring verification is available in public data registers for leasing. It is crucial for the competitiveness of the EU specialised credit institutions and financial institutions ; they play a major role in financing the real economy in Europe. They distribute financing such as personal loans, point of sale credit, credit cards and store cards. Consumer credit facilitates access to assets and services as diverse as cars, education, furniture, electronic appliances, etc. they financed approximately €484 billion of

Name of the respondent	Question	Answer
		new loans in 2024 (more than 60 million new contracts). New loans were €257 billion worth during the first half of 2025 with outstandings reaching over €1.3 trillion euros in the same period (source Eurofinas). In 2024, leasing companies granted new leasing volumes worth €454 billion, reaching more than €1 trillion in outstandings at the end of the year. Leasing is the most preferred financing option among SMEs, particularly among high-growth, innovative, and export-oriented enterprises (source Leaseurope). It is crucial to maintain level of “time to market” with speed of processing of financing applications to meet clients’ expectations for quick and efficient service, especially in time-sensitive transactions. Delays can lead to customer dissatisfaction and lost of business opportunities, as clients may turn to faster competitors with not regulated status. With simplified due diligence processes, they can maintain a strong competitive position in the market. No check of verification of identity must be applied. Article 6 of the draft is not appropriate. The economic impact of the implementation of this rule is huge : this rule completely undermines the BNPL business model even just as entities are implementing the new rules of the Consumer Credit Directive, AI Act, …, with the consequences for the business relationship specified in Articles 20 and 21. 51% of online shoppers opt for payment in 3 or 4 instalments (source FEVAD). The abandonment rate in the customer journey could be up to 30%. Specialised consumer entities fight against risk of MLFT and fraud (see additional input).

Name of the respondent	Question	Answer
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In accordance with Article 1 of the draft of RTS, ASF has called for a real application of principle of proportionality in the RTS. Obliged entities of the sector have sufficient experience in AML/CTF to assess the risks. 1.Collecting new data and updating customer information for existing customers onboarded will require additional time from staff, at the expense of time spent on AML/CFT risk assessment. For existing customers onboarded and new data and for future business relationships, customer onboarding procedures should be simplified and these data are not relevant specially for entities specialised in financing activities such as equipment leasing and consumer credit : collecting all data is not relevant and the requirements concerns full range of products and services without further differentiation. Furthermore, the RTS should therefore introduce clearer differentiation, including explicit proportionality clauses or simplified regimes for low-risk products such as small-value consumer credit. Leasing companies acquire customers using mostly indirect sales channels through vendors and intermediaries. Collecting new data will be very difficult. Data are not available in open data sources. If new data requirements remain, they will have to be collected from the clients directly via intermediaries and vendor. This creates a gap and consequently huge operational impact on the leasing business model. At the same time existing operational setup and IT framework is not designed and equipped to collect, transfer, recognize, analyse, record in core leasing systems and retain new information and underlying documents during required retention period. Introduce simplification rules is crucial : - Cancellation of collection identifying information (art. 2(ii) and

Name of the respondent	Question	Answer
		5 of the draft RTS) : for ex. full names, and first names, the “registered name,” and “trade name”). This information should not be collected. - Cancellation of collection of the following information about «apartment number, building number, post boxes » (art. 3 (c)). - Cancellation of collection of all nationalities of a customer (art. 5). It is neither risk-based nor operationally feasible. In most cases, identification documents display only one nationality. It is very difficult, if not impossible, to gather information from identity documents due to their location for beneficial owners and the specialised distribution channel of our members. At the very least, information should be extracted from BO registers, which are reliable and independent sources of information. - Cancellation of “Specification on the provision of the place of birth” (art.4), the information on place of birth (art. 22(1)(a)(ii) of AMLR) includes both the place and the full date of birth is necessary for a natural person. Although this data is useful for natural persons, the “place of birth” was not a required element for BO or legal representatives. The same applies to the addresses of BO. This information should not be collected for them. It is disproportionate to require this data for BOs and representatives of legal entities with whom we already have an ongoing business relationship, as well as for future business relationships. Where a customer has entered into a business relationship before the entry in force of the regulation, collecting this information will be very difficult and disproportionate. We suggest that additional new data could be collected from open data sources only, when and if available, without interrupting existing business model.

Name of the respondent	Question	Answer
		ASF is questioning how the requirement to collect this new data (art. 2, 3, 4 and 5) for low-risk products fits in with the GDPR's data minimisation principle. 2. When a person is identified as a PEP, it is advisable to obtain authorisation from a senior member of their hierarchy to carry out transactions on an occasional basis or to enter into or maintain business relationships (art. 19). ASF proposes that, for these products identified as low risk, entities should be able to entities not to request authorization to enter into business relationships with PEPs in all cases. PEPs are of course identified. For consumer credit of less than €1,000 or purchases via BNPL, this requirement slows down transactions considerably, which is incompatible with operational processes. Customers will therefore have to forego services/products. Obtain this authorization is disproportionate. The challenge is also to avoid a de-risking policy that would be prejudicial to PEP customers. The period for updating customer information should be adjust for existing customer onboarded. The future RTS should be mentioned (see art. 23) not only for low risk that "it is appropriate to take account the fact that there is no change in the circumstances relevant for the assessment of the business relationship with the customer or the BO, declared by them". For instance, the natural person could have an identity card expired.
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	-Articles 6 and 7 Article 6 lists documents for the verification of identity. Further clarity should be provided, for example through a non-exhaustive list of acceptable measures, to preserve a flexibility. From a technological perspective (art. 7), each Member State will be required to provide a EU Digital Identity Wallet with

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	common specifications, which are currently being developed by a consortium (monitored by the European Commission). This wallet must be made available to users by the Member State by the end of 2026. These elements must be rolled out across Member States and within customer journeys, which will leave institutions very little time to prepare. This raises the question of how the eIDAS measures will be coordinated, given that they are due to be implemented in December 2026 and the AML/CFT package in July 2027. The deadlines will be far too tight to allow for effective and smooth implementation. As the entities cannot speed up adaptation processes of the widely used and acknowledged providers of such alternatives, this needs to be taken into consideration and accepted at least for an interim period which should correspond to the timeframe for updates on already existing customers in a risk based manner within up to 5 years after the RTS' entry into force. Article 6 (art. 22 of AMLR) does not appear to require BO to provide an identity document. However, Article 62 of the Regulation refers to the collection of the identity document number and a general description of the type of document concerned. Article 22 requires either the presentation of the identity document or the taking of reasonable steps to obtain the necessary information, documents and data. The ASF understands that it is not mandatory for the BO to present an identity document. The ASF considers it preferable to state this in the text of the RTS in order to avoid any ambiguity. Paragraph 5 of Article 6 of the draft RTS should be deleted in this case. This clarification is important for Articles 22 and 62, particularly for beneficiaries in countries where no form of identification exists (notably Denmark) or where it is not

Name of the respondent	Question	Answer
		mandatory, as in Italy. -Article 10 Reasonable measures for verification of the BO The ASF wishes to draw attention to the fact that, in some countries, there are no central registers. With regard to BO, institutions should have some discretion in assessing what constitutes reasonable measures. In this context, the list of measures should not be exhaustive. The ASF suggests inserting the word “may” before ‘include’ in the first sentence of the first paragraph, deleting ‘at least one of the following’ and finally stating ‘which may include, for example’. Not all registers in another EU Member State are accessible to entities with their registered office in France. Central registers may be non-existent or inaccessible, and reliable third-party sources may be limited. Self-declaration often becomes the only viable option, without the texts specifying under what conditions it may be considered sufficient. Clarification should be provided in the final RTS. The ASF considers it necessary to specify at the end of Article 10: “These solutions must be proportionate to the size, nature and complexity of the obliged entity’s activities, as well as to its exposure to ML/TF risks”. The draft of RTS must be consistent with Article 20(b) of the Regulation: “(b) identifying the BO and taking reasonable measures to verify their identity so that the obliged entity is satisfied that it knows who the BO is and that it understands the ownership and control structure of the customer;”. - Article 32 : Electronic identification means and relevant qualified trust services : What are the consequence in case of missing attributes ? They

Name of the respondent	Question	Answer
		must obtain by other means these. Not all natural persons and legal entities will be enrolled in such tools electronic identification / relevant qualified trust services in 2027. It will prevent accessibility to specialised financing services.
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Until now, credit and financial institutions have been able to implement simplified DD measures (identification of the customer and, where applicable, of the BO) subject to compliance with certain conditions. The risk of ML/FT is low, or the services or products must appear on the list of services or products presenting a low risk of money laundering or terrorist financing. Low risk may be applied if there is no suspicion of ML/FT for these services : 1. The financing of tangible or intangible assets for professional use where ownership is not transferred to the customer or can only be transferred on termination of the contractual relationship and where the financial rent does not exceed €15,000, whether the transaction is carried out in a single operation or in several operations that appear to be linked, and provided that the repayment is made exclusively through an account opened in the customer's name with a credit institution/financial institution established in a UE or in a State party to the Agreement on the EEA. 2. The following credit transactions, provided that repayment is made exclusively from an account opened in the customer's name with a credit/financial institution established in a UE or party to the Agreement on the EEA, consumer credit transactions (DCC Directive) up to a maximum amount of €1,000; credit transactions with a repayment period of no more than three months that are not subject to any interest or charges or only to negligible interest and charges ('BNPL') (DCC Directive).

Name of the respondent	Question	Answer
		In France, Institutions identify customers without having to check their identities when conditions allow. If BNPL products were no longer to benefit from this flexibility, industry professionals would be forced to systematically implement identity verification measures that would be disproportionate to the real risk associated with these products. These products, characterized by small amounts and payments spread over short periods, continue to justify a proportionate and streamlined regulatory approach. - Furthermore, from an economic point of view, removing the low-risk qualification for BNPLs would have the effect of significantly slowing down the customer journey, a major impact on consumers' accessibility to this service that enables them to purchase a consumer good or service and penalize a business model that is already highly competitive. The obligation to systematically check the identity of customers would increase the operating costs of obliged entities, have an impact for merchants - their sales would not be possible- (see question 1). - Lastly, for the financing of tangible assets for professional use where ownership is not transferred to the customer, in the case of long-term leasing, or can only be transferred on termination of the contractual relationship, in the case of financial leasing, the national assessment did not mention any significant risk. Leasing is not regulated in a harmonised way at European level. In France, leasing constitutes a credit transaction and entities must therefore apply the AML-CFT rules to this activity. In some European countries, this activity is not regulated. The principle “Same business, same rules” must be applied. Maintaining a low risk for the leasing is important in view of the

Name of the respondent	Question	Answer
		new requirements relating to BO. ASF recommends maintaining the low-risk classification of certain leasing and consumer credit transactions involving small amounts or meeting expressly defined criteria. Low-risk classification does not constitute an obstacle to the proper implementation of filters such as “freezing of funds” and “PEPs”, the obligation of reporting entities to ensure that there are no grounds for suspicion, the fulfilment of ongoing due diligence obligations. In addition, declarations of discrepancies between the data resulting from searches carried out via reliable sources and that declared by the customer to the registry or equivalent at European level for the BO will increase the obligations of entities for a risk that is very low and recognised as such for leasing/long-term rental transactions offered by financial institutions. Consulting the central register of BO is not one of the “reasonable measure” for verifying BO that will be an alternative to applying the measures provided for verifying the identity of the customer. ASF would like the new data to be collected for BO of the type - nationality, identity document number, home address - to be obtained and considered reliable when obtained through consultation of the register of BO. This new data should be requested systematically. ASF fears the emergence of distortions of competition. The requirement to collect more data will create more constraints in terms of data but also in terms of discrepancy reporting. Such a precaution will preserve the balance between AML/CFT rules and the need to support innovation and fair access to financial solutions for consumers and competitivity.

Name of the respondent	Question	Answer
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	- Article 7 - Verification measures conducted on a non-face-to-face basis : Even though the implementation of eIDAS is mandatory for banking and financial institutions, the use of and access to the service via eIDAS depends primarily on the customer's willingness. An alternative system must offered to ensure that there is no disruption to access to services or to commercial relationships. How should this be coordinated with the Accessibility Directive ? Furthermore, the Consumer Credit Directive don't require the use of identification, including for consulting registers such as the National Register of Household Credit Repayment Incidents. The collection of identity attributes should be possible without verifying identity for certain products such as BNPL schemes and loans of less than €1,000. Furthermore, it should be noted that in France, only 4 million people hold a digital identity (France Identité), with 750,000 of these having a certified digital identity. The solution is to be taken into consideration an interim period which should correspond to the timeframe for updates on already existing customers in a risk based manner within up to 5 years after the RTS' entry into force. The draft of RTS would prohibit the use of PVIDs (which is not the case in France). Moreover, Article 7(4) mentions the obligation for institutions to maintain an audit trail. A the end of the sentence of the paragraph 4 of the article 7, it could be necessary to add "in particular when the risk justifies it under Article 1".

Name of the respondent	Question	Answer
		Furthermore, how can entities ensure that information, documents and data are kept up to date ?
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	8
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	- Article 8 - Reliable and independent sources of information : With regard to low-risk cases, several options could be proposed : self-declaration, consultation of a register, an independent source. Furthermore, we are considering how to ensure compliance with condition (e): “the ease with which the identity information or data provided can be forged” (including for documents provided by the customer) and “(d) the accuracy of the source, based on whether the information or data provided had to undergo certain checks before being provided or is consistent with other sources”. (d) and (e) require specific guidance. Even if this measure is provided for in the contract, it is an obligation of means that is very difficult to implement. The phrase “as far as possible” should be added to (a) (d) and (e). Finally, how can we ensure in practice that this condition is met at all times ?

Name of the respondent	Question	Answer
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	17
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 20(1), point (h), of Regulation (EU) 2024/1624 requires that obliged entities identify and verify the identity of the natural person on whose behalf or for the benefit of whom a transaction or activity is being conducted. This Regulation lays down specific rules for the identification and verification of the identity of the final investors of a collective investment undertaking (CIU) that distributes its shares or units through another credit or financial institution, which acts in its own name but on behalf or for the benefit of one or more final investors. To ensure the effectiveness of customer due diligence measures and the proportionality of their application, it is appropriate to allow CIUs, where the relationship with the intermediary institution is assessed as low or standard risk, to rely on that institution for the identification and verification of the final investors, provided that strict conditions are met and that information on the final investors can be obtained without undue delay. CIUs do not need to obtain information on the identity of the underlying investor in all cases and in a systematic manner. Consistent with a risk-based approach and in line with the principle of proportionality, the extent, including frequency and timing, and rationale for obtaining such information should be determined by the specific risks to be mitigated. The business relationship with a collective investment undertaking is a mix of the relationship with the collective

Name of the respondent	Question	Answer
		investment undertaking itself, and with the relevant investment manager. If rated other than low, then the overall relationship could be out of the scope of SDD. This would mean that the RTS envisages the possibility of not performing DD on final clients only if the relationship is low (or standard). In other word, if this condition is not in place, the Asset Manager would not be able to rely on the DD performed by the distributor. This would lead to an enormous and unmanageable impacts for asset managers (which are not structured to perform DD on final retail clients – as relying on distributors has always been allowed)." Regarding recital 14, ASF would like to have confirmation of our interpretation. Deleting in the Recital 14 ", where the relationship with the intermediary institution is assessed as low or standard risk, " and a), b) and c) of the article 17 could be proposed.

Article 20 of the draft concerns the minimum

Name of the respondent	Question	Answer
		requirements for customer identification in low-risk situations. These requirements should apply to specialised financing activities such as equipment leasing. We would like obliged entities, in low-risk cases, to take reasonable measures for customer identification. They could rely on declarations or information provided by the customer or use reliable sources, as foreseen in Article 22(7)(b) of the AMLR for BO or representatives.
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	27
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	- Article 27: Additional information on the source of funds, and source of wealth of the customer and of the BO : ASF would like to draw attention to the application of the article 27 concerning PEPs. Obtaining additional information on the source of funds and source of wealth will be very difficult for obliged entities who are not the account holder of the PEP.
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	33
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	- Article 33 - Entry in force: The verification of the identity of the customer, the BO and any person must take place before a business relationship is established or an occasional transaction is carried out (art. 23 of the AMLR). Obliged entities shall ensure that the relevant documents, data or information relating to the customer are kept up to date (article 26 AMLR).

Name of the respondent	Question	Answer
		Obliged entities shall review and, where necessary, update customer information where relevant aspects of a customer's circumstances change, the obliged entity is legally required, during the calendar year in question, to contact the customer in order to review any relevant information relating to BO or to comply with Council Directive 2011/16/EU, they become aware of a relevant fact concerning the customer. If it is not possible to update the information, will it therefore be necessary to terminate the contract and recover the property being financed? Even if the risk is qualified as a low risk ? Obtaining a Kbis extract and consulting the Register of BO should be a solution. The aim is to avoid having to collect up-to-date identity documents. In relation to Article 3 the level of granularity foreseen exceeds what is necessary for effective identification or updating information about customer. It should be possible to rely on declarations from the customer and the BO stating that there has been no change (e.g. for the verification of tax residence every five years) or to considerate that they don't need to update information. We consider that the RTS should not apply immediately. A period of 18 months from their publication to assess impacts would be useful.

Name of the respondent	Question	Answer
FINANCIERES - ASF		BNPL. The credit is granted immediately, the asset is financed and acquired without delay, and the business relationship can be of very short duration. Once the asset is acquired, the client no longer has any real incentive to provide additional proof of identity. This lack of proportionality creates a manifest imbalance between the effort required of the client, the operational costs borne by the institution, and the real gain in terms of AML/CFT prevention. In the case of BNPL, where speed and simplicity are essential features of the product, the loss of fluidity calls into question the very purpose of the solution. Moreover, this results in a misalignment between the overall cost of the enhanced vigilance system and the economic value of the operations concerned, to the detriment of the overall effectiveness of the AML-CFT system. The human and technical resources mobilized for document management and mass archiving are then no longer available for the qualitative analysis of situations that are truly at risk, which runs counter to the effectiveness objective pursued by the AMLR. BNPL products combine several low-risk factors: · Customers residing in countries where there is little risk associated with establishing a business relationship · Limited transaction amounts, exclusively in euros · Short credit terms, · Instalment payments without capitalisation, · Repayments made exclusively via accounts held in the customer's name with institutions located in the EU/EEA, · No cash withdrawals, · Credit used for the purchase of a specific good or service. Effective, streamlined supervision—carried out ex ante and accompanied by targeted monitoring and trigger

Name of the respondent	Question	Answer
		mechanisms—appears to be the most balanced approach to reconciling risk management, operational efficiency and the positive contribution of BNPL to the real economy. To adjust the approach of risk : - they use for example tools or information such as : technological tools including geo-fencing and IP tracking, limited geographical distribution, information on the reasons for the intended or performed transactions and their consistency with the business relationship, consistency of the overall transactions performed during the business relationship with the activities carried out and the customer's turnover, or financial situation for a natural person, code BIN, delivery address, tools against fraud, list of PEPs, targeted financial sanctions. - They are aware of the source of funds (account of the customer's name with a credit institution established in a Member State of the EU), the financed goods or services are identified (no arms, no drinks, no drugs, only ethic products or services), the use of 3 DS secure. They maintain constant vigilance and where appropriate report their suspicions to FIU. For factoring : ASF wishes to recall that the customer/business relationship for the purpose of e.g. the AMLR and the corresponding RTS generally lies between the factoring company and the seller/assignor/factoring client of the receivables – this is where the contractual relationship exists, which is critical for the classification as customer. There is generally no contractual relationship between the factor and the (often numerous) debtors. Factoring should generally be considered as associated

Name of the respondent	Question	Answer
		with lower ML/TF risk since the main risk relevant for AML/CFT purposes is the risk of fraudulent invoices, aimed at the factoring client receiving more liquidity from the factoring company than corresponds with the services provided or goods delivered (if any). Factoring is however not well suited for actually laundering money to hide the sources or origins of certain amounts of money: Since factoring companies are well aware of the aforementioned main risk of fraudulent invoices, they keep close contact to their customers, including regular field audits, and have an intrinsic interest to know the details and background to their clients' transactions since the factoring company purchases the receivables stemming therefrom, in the majority of cases also assuming the credit/default risk of the debtor (factoring without recourse).
ASSOCIATION FRANCAISE DES SOCIETES FINANCIERES - ASF	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Association of Non-bank Financial Services Providers	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Members of Association of Non-bank Financial Services Providers (further – Association) are the biggest currency exchange offices in Latvia (bureau de change), precious metal (bullion) traders and money remittance service providers. The Association considers that certain proposals contained in the draft RTS are difficult to apply in practice within the currency exchange sector, particularly for small and medium-sized obliged entities operating transaction-based business models. Challenges arise in relation to the collection and verification of customer information, retrospective screening of historical occasional transactions, and the practical application of business relationship criteria in the context of short-term and low-value occasional transactions. The Association therefore encourages the introduction of greater flexibility and proportionality within the RTS, taking into account the specific characteristics of different sectors, business models, and the size and operational capacities of obliged entities. Further

Name of the respondent	Question	Answer
		detailed explanations regarding these operational concerns are provided
Association of Non-bank Financial Services Providers	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	1) The Association's concern relates to draft RTS Article 30(c)(ii) regarding repeated sanctions screening following updates to targeted financial sanctions lists. Continuous re-screening may be appropriate for institutions maintaining accounts, wallets, assets, or other ongoing service relationships enabling customers to transact without renewed contact with the obliged entity. However, such an approach appears disproportionate for business models based exclusively on occasional transactions, where each new transaction requires direct interaction and sanctions screening prior to execution. The Association does not see sufficient effectiveness or proportionality in the retrospective screening of occasional transactions conducted by customers who may never return to the obliged entity in the future. Such an approach appears particularly burdensome for small-scale currency exchange offices, which often lack the necessary IT infrastructure and operational resources to perform continuous re-screening of historical customer databases. In the currency exchange sector, customers cannot access stored funds or independently initiate further transactions without renewed engagement with the service provider at physical location. Therefore, sanctions checks performed at the moment of each new transaction constitute an adequate and proportionate control measure. The Association therefore proposes clarifying that, for transaction-based business models not involving ongoing customer accounts or stored assets, the obligation to conduct sanctions screening following updates to sanctions lists should apply only in relation to customers initiating or carrying out a

Name of the respondent	Question	Answer
		new transaction, rather than requiring continuous re-screening of historical customers.
Association of Non-bank Financial Services Providers	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	According to point (3) of the introductory part of the draft RTS, obliged entities should collect information necessary to understand the nationality and place of birth of customers who are natural persons. The RTS further acknowledges that not all government-issued identity documents contain information on nationality or place of birth and therefore indicates that obliged entities may need to obtain such information from other sources. The Association considers that the draft RTS lacks sufficient clarity regarding what constitutes “other sources” for obtaining or verifying information on a customer’s place of birth. In practice, this requirement creates significant operational, legal, and practical challenges, as well as disruptions to the normal pace of service provision. In particular: • The most commonly used identity document in Latvia — the national ID card — does not contain information on the holder’s place of birth. Furthermore, following the entry into force of the AMLR, driving licences may also be accepted for identification and verification purposes; however, such documents likewise do not contain information on place of birth. • Most obliged entities do not have access to national population registers that would allow them to independently obtain or verify information on the place of birth of domestic customers. The situation is even more complicated in relation to foreign customers, where no reliable and accessible independent source is available for verification purposes.

Name of the respondent	Question	Answer
		• In practice, it is unrealistic to expect currency exchange service providers, particularly in the context of occasional or low-value transactions, to request and retain documents such as birth certificates solely for AML/CFT compliance purposes. • Article 4 of the draft RTS states that information on place of birth pursuant to Article 22(1)(a)(ii) of Regulation (EU) 2024/1624 shall consist at least of the country name and that additional information should be collected where available in the identity document or equivalent document. The Association understands this provision to mean that information on place of birth should be collected where such information is available in the document used for identification. However, the RTS does not provide any operational guidance regarding the collection of such information from "other sources". • The RTS does not clarify whether a customer's verbal or written declaration regarding their place of birth would constitute an acceptable and sufficient source of information. • The Association also notes that questions regarding a person's place of birth may create communication difficulties and customer complaints, as such questions may be perceived as discriminatory or related to nationality, ethnicity, or racial origin. This issue may be particularly sensitive in Baltic States, where a significant proportion of the population was born in jurisdictions that no longer exist (e.g. former Soviet Union republics). • Furthermore, the RTS does not clearly explain the risk-assessment value or practical AML/CFT benefit of systematically collecting information on a customer's place of birth, particularly in the context of occasional low-risk transactions.

Name of the respondent	Question	Answer
		• Finally, the RTS does not provide sufficient guidance on how information regarding place of birth should be obtained and verified in non-face-to-face identification scenarios. In addition to the concerns outlined above, it would be even more unrealistic to obtain more detailed place-of-birth information, such as the city, town, or village of birth, since such information is often unavailable not only in identity documents and official registers, but in many cases even to the customer themselves. In conclusion, under the current circumstances — including the limited availability of reliable and easily accessible information on place of birth — full compliance with this requirement would only be possible in a limited number of cases. The Association therefore proposes that the RTS be amended to provide greater operational flexibility and to clarify that information on place of birth should only be collected where such information is available in the identification document or obtained from customer's explanation.
Association of Non-bank Financial Services Providers	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The Association proposes that currency exchange transactions subject to national customer identification or CDD thresholds lower than the EUR 3,000 threshold set out in Article 19(4) of Regulation (EU) 2024/1624 should, as a general rule, qualify for simplified due diligence measures, unless specific higher-risk indicators are identified. Such an approach would better reflect the risk-based principle and help avoid disproportionate compliance burdens in relation to low-value occasional transactions, particularly in Member States applying significantly lower thresholds.
Association of Non-bank	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	Additionally to the above-mentioned difficulties regarding the availability of place-of-birth information, the following practical

Name of the respondent	Question	Answer
Financial Services Providers	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	challenges are consistently present in the provision of currency exchange services. Currency exchange services are typically short-term and transaction-oriented in nature. In ordinary practice, customers visit exchange offices without prior preparation for standard or enhanced customer due diligence procedures, as average customers are generally unfamiliar with risk-based AML/CFT requirements and regulatory expectations. As a result, significant operational difficulties arise when customers are unexpectedly requested to provide additional documents or evidence for verification purposes, such as bank statements, tax declarations, salary slips, utility bills, agreements, or other supporting documentation. Furthermore, it is common, particularly among elderly customers, that they do not possess the necessary technological skills or immediate access to digital documents required to satisfy such requests within the short timeframe in which currency exchange services are normally provided. The Association would also like to emphasise that several Member States, including Latvia, apply lower customer due diligence thresholds, meaning that such requirements may arise even in the context of relatively low-value occasional transactions. In these circumstances, the Association considers it disproportionate for the RTS to imply or require verification of every piece of information obtained from the customer, particularly in low-risk and low-value scenarios. This concern is further aggravated by the fact that obliged entities in Latvia do not have access to population registers or equivalent official

Please provide	We request AMLA clarification and adjustment to ensure the RTS verification and refresh obligations remain proportionate and operable in institutional onboarding, and do not create unnecessary re-collection and retention of sensitive identity documents where this delivers limited incremental ML/TF risk mitigation.

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	1. Avoid routine re-requesting of ID copies at periodic reviews (refresh). Across the RTS identity verification of natural persons is heavily anchored in Article 6 and 7 on obtaining and retaining copies of passports/identity documents (including, in non-face-to-face contexts, via remote solutions). In practice, once an individual's identity attributes have been verified at onboarding, subsequent periodic refresh exercises often result in requests for new copies of the same government-issued document(s) merely because the original document has expired. This creates a significant operational burden and is frequently met with counterparty resistance, including on GDPR/data-minimisation grounds. We do not consider that re-requesting an expired passport/ID copy, solely to hold an "in-date" document, necessarily adds risk mitigation value where the identity attributes being verified (e.g., name and date of birth) have not changed. We therefore ask AMLA to clarify consistent with the proportionality and risk-based approach in Article 1 of the RTS, that periodic CDD reviews should not, in themselves, require obliged entities to obtain fresh copies of government-issued IDs for all previously verified individuals (beneficial owners, SMOs where applicable, and representatives) unless there is a specific trigger (e.g., a material change in identity data, emerging doubts as to veracity, or a risk-based reason to re-verify). We also ask that the RTS make clear that maintaining records of verification outcomes and keeping identity data up to date can, where appropriate, be distinguished from repeatedly collecting and storing new copies of identity documents. 2. Permit verification of BOs/SMOs/representatives by reference to central registers and equivalent official/regulated sources (especially for institutional counterparties). We are

Name of the respondent	Question	Answer
		concerned that the RTS drafting may be read as establishing a "passport/ID-first" verification model for the natural persons relevant to a legal-entity customer (beneficial owners; SMOs under Article 13; and persons purporting to act on behalf of the customer under Article 16), with non-face-to-face scenarios further directing firms to Article 7 solutions that still rely on obtaining the underlying identity document (or equivalent). This approach is not always workable for certain institutional counterparty onboardings, and it materially increases the transfer and storage of sensitive personal data, creating friction and GDPR concerns. In practice, many counterparties will not provide passport copies for beneficial owners/SMOs/authorised representatives and instead point to information held in official/central registers and similar regulated sources. We therefore ask AMLA/Commission to clarify and, where necessary, adjust the RTS so that particularly in low-risk contexts central registers and comparable official/regulated sources can be used as a sufficient basis for verification, where the obliged entity is satisfied as to reliability and independence. This would align with the RTS's own low-risk framework in Article 21, which expressly permits consultation of the central register/business or company register as an identification source and requires a second source for verification. More specifically, we request confirmation that, for beneficial owners and SMOs, verification "in the same way as for beneficial owners" (Article 13(b), read with the RTS approach to BO verification, including Article 10 and the low-risk approach in Article 21) is intended to allow verification based on authoritative register-based evidence and other independent sources, without mandating collection and retention of passport/ID copies in all cases. Similarly, for Article

Name of the respondent	Question	Answer
		16, where the obliged entity is required to identify and verify persons purporting to act on behalf of the customer and verify their power of representation, we request clarification that verification may be satisfied through reliable, independent sources (including registers and comparable official/regulated sources), again without defaulting to repeated ID-copy collection where not necessary. Overall, we encourage to make explicit in the RTS that, consistent with Article 1 (risk-based proportionality) and the low-risk framework in Article 21, obliged entities should be able to verify relevant natural persons associated with institutional counterparties using a calibrated, risk-based approach that leverages reliable register-based information, rather than requiring systematic collection and repeated refresh of passport/ID copies.
Association of Proprietary Traders	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Association of Proprietary Traders	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	In implementing Article 7(1), we would recommend that the RTS makes clear that remote identity verification can be achieved through a range of reliable and independent methods

Name of the respondent	Question	Answer
		and that firms may calibrate the method used to the risks presented by the specific customer, product, and delivery channel. The RTS should avoid a structure that operates as a prescriptive “one-size-fits-all” checklist, particularly where it has the effect of excluding widely used, government-issued documentation that is capable of supporting a robust verification outcome. It would be helpful if the RTS clarifies that the “equivalent document” conditions are intended to describe typical reliability and integrity indicators, but should not be treated as cumulative, mandatory attributes in every case where an alternative to a passport or national ID card is used. In particular, the RTS could expressly recognise that not all commonly accepted, government-issued identity documents include an expiry date. Driving licences and, in some cases, national identity documents may be issued on an open-ended basis, may have no “expiry date” in the conventional sense, or may instead be subject to administrative renewal cycles that do not necessarily correlate to the reliability of the identity data on the document. The RTS should therefore permit obliged entities to treat documents without an expiry date as capable of being “equivalent” where the obliged entity can reasonably satisfy itself as to the document’s current validity through alternative, reliable checks, such as confirmation of status through issuing authority data sources, corroboration through additional independent documentation, or electronic verification outputs that support the continued validity of the identity information. The RTS in our view should align more closely with an “identify then verify” framework that supports outcome-focused verification rather than attribute-based formalism. In this regard, the RTS could adopt language that distinguishes between the identification step (obtaining a

Name of the respondent	Question	Answer
		sufficient set of core information about the customer) and the verification step (checking some of that information against reliable, independent sources). For private individuals, the RTS should acknowledge that a baseline identification dataset such as full name, residential address, and date of birth can be sufficient for identification, and that verification can be achieved by verifying an appropriate subset of those attributes against one or more independent sources, depending on the risk assessment. This would mirror a well-established approach in UK practice and would preserve the ability of obliged entities to construct robust verification journeys using combinations of documentary and electronic measures. The RTS should expressly confirm that remote identification and the customer's location outside the EU do not, in themselves, mean that the customer is "higher risk" or that enhanced measures are automatically required. Consistent with the risk factor categories set out in the FATF Interpretive Note to Recommendation 10 and the FATF Risk-Based Approach Guidance for the Banking Sector (2014), geographic location and channel are two of four established AML risk lenses — alongside customer characteristics and product/service type — and no single lens, in isolation, is determinative of an EDD requirement. The RTS should instead require that the risk assessment reflects a holistic assessment across all four dimensions, with escalation to enhanced measures only where that assessment indicates a higher risk of ML/TF or impersonation/fraud. This clarification is important to prevent remote onboarding of non-EU residents being treated as de facto high-risk purely due to geography or channel, particularly where the obliged entity can evidence robust verification controls and reliable independent sources in the relevant

Name of the respondent	Question	Answer
		jurisdiction. The RTS should preserve method neutrality and allow obliged entities to select an appropriate mix of documentary and electronic verification steps, provided that the process achieves a reliable outcome and is supported by controls to mitigate the risks of remote onboarding (including impersonation and document fraud). The RTS should therefore avoid mandating a particular credential type or assurance-level route as the default, and instead set expectations around outcomes, governance, and evidence, which could include confirming that firms may use combinations of documents, electronic data sources, and supplementary checks, and may apply compensating controls where a particular document attribute is unavailable, so long as the obliged entity can demonstrate that the verification process remains reliable, independent, and proportionate. In the UK, the Joint Money Laundering Steering Group (JMLSG) guidance, (Part I, Chapter 5 – Customer Due Diligence is more explicitly risk-based.

Association of Proprietary Traders	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 12(1) introduces a prescriptive framework requiring obliged entities to categorise a client's ownership and control structure as "complex" where there are at least three layers between the customer and the beneficial owner and at least two additional indicators are present. We are concerned that, for institutional counterparties, the indicators in Article 12(1)(a) and (b), in particular intermediate entities registered outside the EU and the use of legal arrangements within ownership layers frequently arise as ordinary and commercially justified features of international corporate groups. These features commonly reflect legitimate commercial, tax, treasury, funding,

Name of the respondent	Question	Answer
		regulatory, or operating considerations and, in isolation, do not indicate elevated ML/TF risk. In our view, the combination of a low “three levels” threshold with these relatively common indicators risks categorising a significant proportion of institutional counterparties as “complex” by default, with a material and potentially disproportionate compliance burden, without a commensurate risk benefit. This concern is amplified because the Article 12(1) trigger is likely to capture many counterparties that EU financial services law already recognises as sophisticated and subject to robust regulatory oversight, including entities that qualify as eligible counterparties under MiFID II. MiFID II establishes a well-understood client categorisation framework (retail clients, professional clients and eligible counterparties) that reflects differing levels of sophistication, access to information, and supervisory oversight, and calibrates protections and conduct obligations accordingly. While AML obligations are distinct, the underlying regulatory insight is relevant: corporate complexity and cross-border structuring are common and expected for regulated institutional groups, and should not automatically be treated as a proxy for opacity or heightened ML/TF risk. We submit that the Article 12(1) “complex” structure criteria should be more clearly targeted at the scenarios they are intended to address namely, ownership/control arrangements that create genuine opacity or impede an obliged entity’s ability to identify and verify beneficial owners and controllers, or that otherwise present heightened ML/TF risk (for example, the use of nominees to conceal control, arrangements that prevent a clear line of sight to beneficial ownership, or structuring that lacks a credible economic rationale). Put differently, the focus should be on whether the chain is

Name of the respondent	Question	Answer
		transparent, understandable, and capable of being evidenced, rather than on layering and cross-border features that are routine for internationally active, well-regulated institutions. We therefore request that AMLA clarify that the Article 12(1) categorisation is not intended to apply indiscriminately across all business relationships, and that obliged entities may apply a risk-based approach both to the “complex” assessment and to the calibration of any resulting measures. In particular, the RTS should make clear that, for regulated institutional counterparties (including eligible counterparties under MiFID II or entities subject to equivalent prudential and AML supervision), the presence of three or more ownership layers combined with common cross-border or structural features should not automatically trigger a “complex” categorisation absent additional, case-specific indicators of opacity, concealment, or heightened ML/TF risk. In the UK, the Joint Money Laundering Steering Group (JMLSG) guidance, does not typically hard-code complexity by reference to a fixed layering threshold. It treats complexity as a risk indicator: the question is whether the ownership/control chain is transparent, understandable, and evidenced (and whether any features nominees, arrangements, offshore links, lack of rationale create opacity), with enhanced measures applied proportionately where needed rather than automatically.
Association of Proprietary Traders	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	13
Association of Proprietary Traders	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 13(a) provides that, for SMOs as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities must collect the same information as they would collect for beneficial owners. Article 13(b) provides that

Name of the respondent	Question	Answer
		obliged entities must verify the identity of SMOs in the same way as they would for beneficial owners. We request clarification on the risk-mitigation objective intended by Article 13(a) of the draft RTS, which requires obliged entities when relying on senior managing officials ("SMOs") as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624 to collect the same information as would be collected for beneficial owners. While we understand the desire for consistency, SMOs are not beneficial owners, and the identification of SMOs operates as a residual measure only where beneficial ownership cannot be established. In that context, it is not clear that collecting a full beneficial owner equivalent dataset is proportionate to the limited incremental ML/TF risk mitigation achieved by identifying SMOs. We are particularly concerned about the practical implications of Article 13(b), which requires obliged entities to verify the identity of SMOs "in the same way as they would for beneficial owners." In practice, this may be read as requiring the collection of identity documentation copies (e.g., passport/ID) for SMOs in a wide range of institutional and low-risk counterparty relationships, even where the SMO is being identified solely because the obliged entity cannot identify a natural person beneficial owner. We do not consider that this outcome is proportionate in many low-risk scenarios. We therefore recommend that the RTS clarify that, at least for low-risk counterparties, verification of SMO identities may be satisfied through reliable register-based and other independent-source checks, without requiring collection of passport/ID copies. This would align with the RTS's own low-risk provisions, in particular Article 21 (minimum requirements for identification and verification of beneficial owners or SMOs

Name of the respondent	Question	Answer
		in situations of low risk), which contemplates identification and verification by consulting specified sources (e.g., registers, customer-provided information, and reliable independent open sources), and requires verification to be carried out using a source different from that used for identification (Article 21(1)(2)). In addition, for low-risk institutional counterparties, we recommend permitting confirmation of SMO identity by appropriate senior representatives of the counterparty (for example, a director, company secretary, or in-house legal counsel), by way of written attestation (including by email), supported where appropriate by register extracts or other independent sources. This would reduce unnecessary collection of sensitive personal identity documents while maintaining a robust audit trail and preserving the risk-based approach reflected in the RTS.
Association of Proprietary Traders	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	16
Association of Proprietary Traders	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Under Article 16, in relation to the identification and verification of that person (the representative) as referred to in Article 22 of Regulation (EU) 2024/1624, the obliged entity must do two things: 1. Identify and verify the representative in the usual way, by collecting the relevant information required under Section 2 of the RTS (i.e., the standard identification/verification information requirements that apply to natural persons); and 2. In addition, obtain information enabling it to verify the existence and the extent of the representative's power of representation, i.e., evidence that the person has authority to act for the customer and what that authority covers (for example, whether it is limited or general, transaction-specific,

Name of the respondent	Question	Answer
		time-limited, etc.). Article 16 requires identification and verification of “the person purporting to act on behalf of the customer”, and in addition requires information enabling the obliged entity to verify the existence and extent of that person’s power of representation. However, it is unclear how the RTS intends obliged entities to determine which individuals fall within this category, particularly where the customer is a legal entity and is not being “provided services” by the obliged entity in the traditional sense. For example, an entity which is categorized as an “eligible counterparty” in terms of the MiFID II classifications. We would welcome clarification on whether Article 16 is limited to the individual(s) with whom the obliged entity has direct interaction or who provides instructions (e.g., signatories, deal contacts, authorised users), or whether it extends to any person who is a legal representative of the entity more generally. We would also welcome clarification on how Article 16 is intended to operate alongside (and be distinguished from) the RTS requirements relating to the identification of the customer’s legal representatives, to avoid duplicate or inconsistent identification/verification obligations in corporate onboarding scenarios.
Association of Proprietary Traders	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	21
Association of Proprietary Traders	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Under the attached draft RTS, Article 21 (low-risk cases) treats central registers as an identification source, but not as the verification source for BOs/SMOs. Article 21(1)(a): to identify the BO/SMO, the obliged entity may consult the central register / business register / company register. Article 21(2): to verify the BO/SMO, the obliged entity must consult a different

Name of the respondent	Question	Answer
		source from Article 21(1)(b) or (c) that was not used for identification (i.e., customer-provided/held information or a reliable independent open source). Practical impact: if you identify the BO/SMO using the central register under 21(1)(a), you must then verify using 21(1)(b) or (c) and you cannot "verify" solely by re-checking central register information under Article 21. The intention behind Article 21(2) regarding the use of central registers for verification is unclear. In particular, it is not clear whether AMLA intends to exclude consultation of a central register (or business/company register) as a means of verifying the identity of a beneficial owner or senior managing official in low-risk situations. While Article 21(1)(a) expressly permits use of the central register for identification, Article 21(2) appears to limit verification to sources under Article 21(1)(b) or (c) (customer-provided/held information or reliable independent open sources) that were not used for identification. We would welcome clarification as to whether this drafting is intended to preclude reliance on central registers for verification, or whether central register consultation may also be used as part of verification (for example, where a second, independent register source is consulted), provided the obliged entity is satisfied as to reliability and independence. In the UK, the Joint Money Laundering Steering Group (JMLSG) guidance states that where no beneficial owner is identified, or the firm is not satisfied, it must take reasonable measures to verify the identity of the senior person responsible for managing the body corporate. (JMLSG 5.3.170.) But JMLSG frames BO (and related) verification as "reasonable measures" determined on a risk-based approach, including use of public domain sources and customer-provided information in low-risk cases, rather

Name of the respondent	Question	Answer
		than mandating BO equivalent data collection and a fixed verification method. (JMLSG 5.3.14–5.3.15, 5.3.34.) In addition to this, JMLSG recognizes central registers and public domain records as legitimate sources for both identification and verification of beneficial ownership. Paragraphs 5.3.14 and 5.3.129A identify Companies House and equivalent public registries as reliable sources that may be consulted for verification purposes.

	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	
Assocompara	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	N/A
Assocompara	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	There are certain operational models that are present and widespread in the Union market and which, under the current AML directive and national implementing legislations, have been treated differently across Member States. Reference is made, in particular, to the activity of credit intermediaries who limit their activity to presenting credit products from a panel of multiple partner lenders and introducing potentially interested consumers to the lenders themselves, without performing any other regulated activity under the Mortgage Credit Directive or Consumer Credit Directive, obviously not holding or intermediating funds (a "Credit Presenter"). In the Italian legislation, such Credit Presenters fall into the broader category of regulated "credit brokers" (mediatori creditizi) pursuant to Italian Consolidated Banking Act, supervised by a public body (OAM) and subject to AML obligations under Italian law. An Italian credit broker is a company which puts in contact — including but not necessarily through advisory services — banks or financial intermediaries with potential customers for the purpose of granting credit, without being bound to the parties it connects by any relationship of collaboration, subordination or representation.

Name of the respondent	Question	Answer
		There are instead Member States where Credit Presenters have not been subject to AML rules so far. Under the AMLR, however, Credit Presenters – unless they operate under the responsibility of lenders or other credit intermediaries - will fall within Article 3(3)(k) as “credit intermediaries” that do not hold funds and, therefore, will be subject to the forthcoming harmonised AML rules. The activity carried out by Credit Presenters, given their typical operational model, does not really give rise to the establishment of a “business relationship” with the recipients of their service under the AMLR. Even if the services are provided through an online form or involve a registration, the elements of duration and repetition are always absent. Nor can Credit Presenters be considered to participate in the credit business relationships that may be entered between the lender and the consumers, thanks inter alia to their activity: after the referral, they lose all contacts with the consumer and the lender alike. For such reasons, Credit Presenters differ fundamentally from full-service credit intermediaries, who collect the credit application and supporting documents, assist the consumer through underwriting, and remain actively involved until loan disbursement. Rather, the activity of a Credit Presenter presents many similarities — for the purposes of the AMLR — to the broader category of providers of “services connected to a transaction” (e.g. real estate agents) and such activity, pursuant to Article 1 of the draft RTS under Article 19(9) of the AMLR (currently in consultation), should be qualified as an “occasional service”. Indeed, the same negative elements are present: there is no provision of services at different intervals, since the relationship with the consumer ends at the moment

Name of the respondent	Question	Answer
		the contact details are transmitted to the lending institution; there is no provision of different categories of services. It should further be noted that, unlike other markets (e.g. real estate), in transactions involving credit intermediation the AML oversight is structurally ensured by the financial institution that then executes the financing agreement, which is by definition an obliged entity under the AMLR. Therefore, the activity carried out by Credit Presenter structurally presents a low degree of risk. Article 28(1) subparagraph (b) of the AMLR requires AMLA to specify simplified due diligence (SDD) measures to be applied in low-risk situations. The measures proposed by AMLA would not need to be completely different to those already included under Article 33 of the AMLR. Rather, it falls within the mandate granted to AMLA by Article 28(1) of the AMLR the task to lay down rules for the identification and verification of the identity of customers in low-risk situations, including when verifications can be delayed in line with Article 33, subparagraph (a) of the AMLR. In light of the above and considering the separate requests (ref. Question 1) submitted by Assocompara to AMLA in the consultation relating to the draft RTS under Article 19(9) of the AMLR, the draft RTS under Article 28(1) of the AMLR should be extended so as to specify that, for Credit Presenters, the verification referred to in the first subparagraph of Article 23(1) of the AMLR can be delayed after the clear willingness of the customer and the lender to conclude the financing agreement emerges (when an offer is made and accepted by the parties), but before the signing of the loan contract. This mirrors, mutatis mutandis, the specification of Article 23(1) of the AMLR with respect to real estate agents, who are allowed to perform

Name of the respondent	Question	Answer
		the verification after the offer is accepted, but before the property is transferred.

Name of the respondent	Question	Answer
Assogestioni	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	-
Assogestioni	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We wish to express our concern that Articles 28(1)(b) and 33(1)(e) of the AMLR appear to have been interpreted in an unduly restrictive manner, which limits the development and application of simplified and sectorial due diligence measures. This approach reduces the flexibility required to tailor obligations to the effective risk levels, leading to a reduced ability to implement AML/CFT measures in a way that is both effective and proportionate. We view the RTS under Article 28(1) of the AMLR on Customer Due Diligence (RTS on CDD) as a unique opportunity to strengthen the effectiveness, efficiency and proportionality of AML/CFT obligations, and to remove divergences that affect entities within the same category and directly impact competitiveness. We welcome Article 17 of the draft RTS on CDD and the measures tailored to Collective Investment Undertakings (CIUs). These provisions acknowledge the sector's overall low-risk profile, which reflects its structural features and the composition of the value chain from CIUs to the investor,

Name of the respondent	Question	Answer
		usually involving other credit or financial institution subject to AML/CFT regulation. However, we are deeply concerned that the chosen approach could undermine, from the outset, the objective of a harmonised framework for the asset management sector, which should be based on the international principles of proportionality and the risk-based approach. It is essential that asset managers are enabled to allocate AML/CFT resources to areas of higher risk exposure, avoiding unnecessary overlaps in respect of low-risk investors already subject to controls performed by regulated credit or financial intermediaries, such as banks. The draft RTS appear to retain the approach established in the EBA's Guidelines( ), which allow simplified or specific measures only where units are subscribed by an intermediary in its own name on behalf of final investors. This approach already affects Italian CIUs, which are in almost all cases subscribed through an intermediary acting in the name and on behalf of the investor. We firmly believe that, where the necessary conditions are met, the measures set out in the article 17 should apply whenever an obliged entity (i.e. a credit or financial intermediary), stands between the CIU and the investor and carries out customer due diligence on the investor. This should hold true regardless of whether the units are subscribed by an intermediary acting in its own name on behalf of the investor,

Name of the respondent	Question	Answer
		or through an intermediary acting in the name and on behalf of the investor. We consider the inclusion of Article 17 in the RTS to be particularly important, as it confirms that AMLA has the power to introduce simplified measures and provisions applicable to specific categories of obliged entities, products, or services and that such measures may go beyond the general provisions laid down in Articles 33 and 22 (6) of the AMLR, offering the opportunity to implement effective and proportionate simplifications. We therefore firmly believe that the interpretation, which we fully support, that led to the introduction of Article 17, must be unequivocally extended to the entire asset management sector. If specific measures were not introduced also in cases of subscription through an intermediary and in the name of the investor, CIUs would be left with the sole option of relying on third-party customer due diligence. Under Article 49 of the AMLR, a CIU should obtain from the obliged entity relied upon all the necessary information concerning the customer due diligence measures set out in points (a), (b) and (c) of Article 20(1) of the AMLR. The third party should provide that information without delay and, in any event, within five working days. This would result in an unjustified and non-uniform application of the obligations, which is difficult to reconcile with a risk-based approach.

Name of the respondent	Question	Answer
		This approach results in greater burdens and higher costs for CIUs receiving subscriptions in the name of the investor. Changing the subscription and distribution model for CIUs would also be costly and difficult to implement. In any case, AML/CFT requirements should not drive the choice between different CIU distribution models. In the absence of such harmonisation, AML/CFT requirements, especially customer due diligence obligations, would continue to result in uneven treatment across the Union. This would create a competitive disadvantage for Italian CIUs and asset managers, which would continue to face higher compliance costs and a greater burden of controls compared with operators in other European countries.
Assogestioni	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Recital 14 and Article 17 of the draft RTS on CDD are designed exclusively for cases where CIU units or shares are subscribed in the name of the intermediary and on behalf of the underlying investors(Scenario I), without considering situations where investors subscribe in their own name through an intermediary(Scenario II). This only requires CIUs in Scenario II to obtain investor information from the distributors. While we recognise the legal distinctions between these two models, we believe that their substantial overlap provides sufficient grounds for extending the measures in Article 17 to Scenario II. In both cases: 1. investors are clients of the intermediary; 2. the intermediaries are obliged entities subject to AML/CFT requirements; 3. the intermediaries are responsible for performing risk-based CDD on the investors 4. the CIU conducts due diligence on the intermediary to

Name of the respondent	Question	Answer
		understand the distribution channel and assess AML/CFT and TFS risks. A possible distinction is that, under Scenario II, investors may redeem units or shares directly from the CIU. In practice, however, they generally regard the intermediary as their main point of contact throughout the investment process, including for redemptions. Investors also do not choose the subscription method, which depends on the parties' business arrangements and distribution agreements. The distribution model should therefore not be regarded as affecting the overall level of risk. Moreover, we believe that including sectorial measures for the Scenario II within the RTS would be appropriate in light of the following considerations: - Article 28(1)(b) states that " the draft regulatory technical standards shall specify: the type of simplified due diligence measures which obliged entities may apply in situations of lower risk pursuant to Article 33(1) of this Regulation, including measures applicable to specific categories of obliged entities and products or services, having regard to the results of the risk assessment at Union level conducted by the Commission pursuant to Article 7 of Directive (EU) 2024/1640."; - The 2022 SNRA and the related Staff Working Document explain that in the investment sector, which includes CIUs,"The main factor that mitigates the inherent risk of money laundering is the low level of cash-based transactions, despite the fact that the sector is exposed to high-risk customers, including politically exposed persons, while the volume and level of cross-border transactions are high. To have access to the investment sector, perpetrators need to introduce money through the banking system, and hiding illegal money through

Name of the respondent	Question	Answer
		opaque structures requires a high degree of expertise and/or high cost. Therefore, banks are often a first barrier that mitigates the inherent money laundering risk". Since CIUs are typically distributed by credit institutions, these considerations also apply to scenario II. The Staff Working Document specifies that the risk increases in the case of investments made through brokers. However, this is a different context from the distribution and subscription of CIUs; - the ESMA Report on the total costs of investing in UCITS and AIFs defines "Indirect distribution" as the distribution model where fund management companies sell their investment products to end investors through intermediaries such as investment firms, credit institutions, insurance undertakings, neo-brokers or other entities. The intermediary assumes responsibility for client relationships, suitability assessments, and regulatory compliance obligations toward the end investor." From ESMA's perspective, it is the intermediary and not the asset management company, that fulfils any obligations towards end investors; - differences in distribution and subscription models should not result in different risk levels for CIUs within the same category (for example, open-ended investment funds aimed at retail clients) that follow the same investment strategy; - the investor's risk exposure is not influenced by the distribution model, as it depends on the investor's individual characteristics rather than on the method used to subscribe to the CIU. - Extending the sectorial measures under Article 17 to II Scenario would not constitute an exemption. CIUs would remain required to assess the credit or financial institution

Name of the respondent	Question	Answer
		(intermediary), as well as any investors with whom they have a direct relationship. Ensuring that the entire asset management sector (first and second scenarios) is subject to the same CDD measures would also allow AMLA and NCAs to assess, in a consistent manner, the inherent and residual risk of CIUs and AMCs. In any case, it will be important to identify solutions that appropriately reflect the additional obligations and requirements to CIUs under the Scenario II (where confirmed), taking into account that the activities carried out to identify and assess all investors constitute additional relevant risk-mitigating factors
Assogestioni	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	-
Assogestioni	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	-
Assogestioni	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	17

Name of the respondent	Question	Answer
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	In light of our comments in response to Questions 3 and 4, and to ensure a uniform approach for the asset management sector, we propose amending Article 17 as follows. 1. When shares or units of a collective investment undertaking are sold through another credit institution or financial institution, the collective investment undertaking may fulfil the requirement under Article 20(1) of Regulation (EU) 2024/1624 if it is satisfied that: (a) the credit institution or financial institution is subject directly or through group policies to AML/CFT obligations in an EU Member State or in a third country that has AML/CFT requirements that are not less robust than those stipulated by Regulation (EU) 2024/1624; (b) the credit institution or financial institution is effectively supervised for compliance with obligations as provided for in point (a); (c) the risk associated with the relationship with the credit institution or financial institution is not high; and (d) the credit institution or financial institution applies robust and risk-sensitive CDD measures to its own customers and its customers' beneficial owners. Rationale: • A reference to Article 20(1) as a whole, rather than being limited to point (h), would ensure that all CIU subscription and distribution models are appropriately reflected within the scope of the provision, thereby supporting a truly harmonised framework. • In this context, we suggest removing the reference to how

Name of the respondent	Question	Answer
		the credit or financial institution operates. A general reference to Article 20(1) would be sufficient to cover all forms of distribution or indirect relationships between the CIU and the investor. • This approach would not result in any exemption for CIUs or AMCs, which would remain fully subject to CDD obligations in all cases involving direct relationships with clients, including credit or financial institutions acting as intermediaries between the CIU and the investors. • The proposed amendment to Article 17 aims to clarify that, in indirect relationships, CDD obligations should be performed exclusively by the credit or financial institution that maintains the direct relationship with the investor, without requiring a duplication of such activities at the level of the AMC or the CIU. • Consistent with this approach, the requirement for the credit or financial institution to provide investor information upon request and without delay could be reconsidered. • Overall, such a framework would promote a more consistent and proportionate application of CDD obligations across CIUs and would facilitate more coherent risk assessments under the RTS adopted pursuant to Article 40(2) of the AMLD and Article 12(7) of the AMLAR.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	11
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We are of the view that the measures set out in Article 11 are excessively prescriptive and could limit the ability to apply Article 20(1)(b) in a manner that is truly risk-based. AML/CFT rules, especially those set out in the RTS, should be framed in a way that enables obliged entities to focus their efforts and resources on customer relationships that present

Name of the respondent	Question	Answer
		higher level of risk. However, Article 11 requires obliged entities to further investigate the customer's structure whenever it includes more than one legal entity or legal arrangement, regardless of the actual level of risk. As such structures are frequently encountered in practice, this requirement could result in a disproportionate compliance burden on obliged entities. The inclusion of more than one legal entity or arrangement in the customer's structure does not, in itself, indicate a higher risk. For this reason, we believe that understanding the customer's ownership or control structure should not depend on quantitative thresholds relating to the number of entities or arrangements involved. Instead, it would be more appropriate and more consistent with a risk-based approach to leave it to the obliged entities to assess, based on the information available to them, whether the ownership structure appears unusual or excessively complex considering the nature of the customer's business. Where such elements are identified, the obliged entity should apply enhanced due diligence measures. This approach would be consistent with Annex III of the AMLR, which recognises the presence of an ownership structure that appears unusual or overly complex, considering the nature of the company's business, as a higher-risk factor.

Name of the respondent	Question	Answer
		We propose removing the reference to “more than one legal entity or legal arrangement” and including the list of information to be obtained in the case of complex structures, identified by obliged entities, among the EDD measures. At the same time, it is important that specific simplified measures are provided for cases where the customer is assessed as low-risk. In any case, it should be clarified that the “understanding of the ownership and control structure” is not required where the customer is assessed as low-risk. In particular, it is important to clarify whether further investigations are required even when the customer presents a lower risk, such as in the case of other financial intermediaries subject to AML/CFT requirements. Where the customer is a credit or financial institution subject to AML/CFT obligations, or another entity listed in Annex II of the AMLR, the requirement to obtain additional information on the ownership or control structure of the legal person does not appear to be justified.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	12
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	In line with the comments made on Article 11, we are of the view that Article 12 is overly prescriptive and does not allow for a genuinely risk-based application. From a broader perspective, it is unclear why an ownership or control structure comprising more than three layers should, by default, be classified as “complex.”

Name of the respondent	Question	Answer
		We would suggest that the requirement to obtain a customer's organigram should be limited to high-risk situations, and only where such a measure is justified based on the obliged entity's risk assessment. As previously noted in relation to Article 11, it would be more appropriate to give obliged entities greater flexibility to determine when a customer's structure should be considered complex, and to conduct further analysis only in higher-risk situations. For instance, if an ownership structure appears unusual or excessively complex given the nature of the company's business, the financial institution should consider the legal structure adopted by the customer, especially where specific elements of complexity or opacity are present that hinder or prevent the identification of the beneficial owner, the actual corporate purpose, or any ownership or financial links with entities based in high-risk geographical areas.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	13
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	In our view, it is essential to distinguish between the roles of Senior Managing Officials (SMOs) and UBOs, as the associated ML/TF risks are not equivalent. SMOs do not hold ownership or exercise control over the entity. Where such control or ownership exists, the individual should rightly be identified as a beneficial owner. In this regard, Recital 125 of the AMLR clearly acknowledges that "although they are identified in those situations, the senior managing officials are not the beneficial owners".

Name of the respondent	Question	Answer
		Therefore, applying the same identification and verification requirements to SMOs as those applied to UBOs does not appear justified, given their fundamentally different roles and levels of associated risk. Moreover, Article 63(4)(b) of the AMLR already specifies the type of information that legal persons must make available for the SMOs. Since the provision refers to information equivalent to that required under Article 62(1)(a), it would be appropriate to define a minimum standard of information to be made available for the SMOs that does not include all the information required for beneficial owners. Moreover, it would be necessary to simplify as much as possible the aspects related to the verification of their identity, in line with their role and the limited risk they represent. Finally, we would appreciate clarification on the implications in cases where one or more SMOs is a politically exposed person (PEP). Given that SMOs are not beneficial owners and do not own or controls the legal entity, we believe that the mere presence of a PEP among the SMOs should not automatically lead to an elevated risk classification of the overall relationship. Should this approach not be recognised, the relationships between financial institutions would be significantly impacted, requiring obliged entities to treat institutional clients as higher risk, even in the absence of concrete risk factors.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7

Name of the respondent	Question	Answer
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The article places disproportionate emphasis on the use of eIDAS-compliant electronic identification methods, making them a prerequisite unless such methods are “not available” or “cannot be reasonably expected to be provided.” We consider this approach unduly restrictive. While eIDAS solutions may be effective in some contexts, they are not uniformly accessible across Member States. The proposed Art. 7 would limit legitimate and secure remote onboarding solutions already in use, which do not rely on eIDAS but still meet high standards of security and reliability. The Art. 7 appears to go beyond the established EBA remote onboarding guidelines, which offered a more risk-sensitive and proportional approach. We respectfully suggest that the RTS should aim for consistency with the EBA guidelines or clarify where and why a stricter standard is deemed necessary. It is unrealistic to expect that all natural persons will have access to eIDAS in the near future, given the current level of adoption. In low-risk situations, such as when dealing with institutional clients or regulated entities (e.g. pension funds, legal persons already listed in national registers or subject to public disclosure obligations) verification through documents or reliable independent sources should be sufficient. Article 7 should be designed in accordance with the principle of risk-based approach. Not all non face-to-face relationships carry the same level of risk. As noted in recent FATF guidance

Name of the respondent	Question	Answer
		on financial inclusion, non face-to-face interaction does not inherently imply higher risk when appropriate controls are in place.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	19
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	It would be important for the RTS to provide further clarification regarding certain specific scenarios that may involve politically exposed persons (PEPs). In particular, it would be useful to clarify how the rules apply when the customer is a public administration or a state-owned enterprise. In such cases, those identified as UBOs or senior managing officials (SMOs) often fall within the definition of PEPs. However, since they are performing functions within the scope of a public administration or a state-owned entity, their status should not, in itself, lead to a higher overall risk rating for the relationship. It would be helpful to receive confirmation of this approach.
Assogestioni	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	30
Assogestioni	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 30(c)(i) of the RTS states that customer and beneficial owner screening must be carried out “during customer onboarding or before entering into a business relationship or performing an occasional transaction.” In cases where CIU units or shares are subscribed through an intermediary in the name of the investor, the screening should be carried out by the intermediary, who has direct contact with the investor.
Assogestioni	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
Assogestioni	Please specify which recital you refer to, and share your comments below.	14 We propose a revised wording of Recital 14, aligned with the proposed amendments to Article 17 This Regulation lays down specific rules for the identification and verification of the identity of the final investors of a collective investment undertaking (CIU) that distributes its shares or units through another credit or financial institution, To ensure the effectiveness of customer due diligence measures and the proportionality of their application, it is appropriate to allow CIUs, where the relationship with the intermediary institution is assessed as not high, to rely on that institution for the identification and verification of the final investors, provided that strict conditions are met and that information on the final investors can be obtained without undue delay. The collective investment undertaking shall maintain a risk-based oversight over the credit or financial institution, commensurate with the level of risk.
Assogestioni	Do you have any comments on the Annex in the draft RTS?	No
Assogestioni	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Assuralia (umbrella association of insurance and reinsurance companies operating in Belgium)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	See our response to questions 3, 4 and 5.

Name of the respondent	Question	Answer
Assuralia (umbrella association of insurance and reinsurance companies operating in Belgium)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	See our response to questions 3, 4 and 5.
Assuralia (umbrella association of insurance and reinsurance companies operating in Belgium)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	* Identification of a natural person: place of birth We understand that obliged entities should at least obtain the country of birth when identifying natural persons (see article 4 of the draft RTS). To verify a natural person's identity, an identity document, passport or equivalent may be used. In Belgium however, the country of birth is not mentioned on the physical identity card, nor is it stored on the electronic chip of the identity card. Only the city of birth is stored on that chip, but that's not sufficient to determine the country of birth as different cities in the world share the same name. We also note that art. 6 of the draft RTS does not include the place of birth as requested data in an alternative document to be considered as equivalent to an identity document. Considering the practical challenges in verifying the place of birth and its rather limited relevance from an AML perspective, we suggest that obtaining and verifying the place of birth should not be necessary in situations of low risk. This can be accomplished by removing the reference to "place of birth" in Article 20(1)(a)(ii) of the draft RTS. If this option would not be

Name of the respondent	Question	Answer
		feasible, we propose to clarify that verifying the place of birth is only a “best efforts obligation” in situations of low risk. This requires modifying Article 20 of the draft RTS: Article 20 (1) (a) (ii): ii. to the extent possible, place of birth. New Article 20 (3): The obliged entities verify the place of birth as mentioned in paragraph 1, point (a), (ii) and the trade name as mentioned in paragraph 1, point (b), (ii) on a best effort basis. * Identification of the beneficial owner or senior managing officials We observe that the data to be collected for the identification of a natural person is only simplified/reduced for the identification of the customer, not for the identification of the beneficial owner or senior managing officials. For the identification of the beneficial owner or senior managing officials, however, obliged entities are required to obtain all the identification data referred to in Article 62 of the AMLR, even in situations of low risk. From an AML perspective, we believe it is justifiable to provide for the same simplified due diligence measures for the identification of beneficial owners in situations of low risk as for the identification of customers. Moreover, this would somewhat alleviate the practical difficulties obliged entities such as insurers face in obtaining and verifying that data. We therefore suggest modifying Article 21 of the draft RTS by

Name of the respondent	Question	Answer
		adding a new first paragraph (see two options below). Based on our evaluation, this simplification proposal is allowed under Article 33(1), point (e), of the AMLR. Option 1: “1. In situations of low risk, obliged entities shall obtain at least the following information to identify the beneficial owner or senior managing officials: (a) all names and surnames; (b) date of birth; (c) nationalities of the natural person or their statelessness, refugee or subsidiary protection status.” Option 2: “1. Paragraphs 1 and 3 of Article 20 shall also apply to beneficial owners or senior managing officials in situations of low risk.” * Identification of a legal entity: trade name According to Article 2 of the draft RTS, obliged entities are required to obtain the registered name of a legal entity as well as the trade name where it differs from the registered name. The same requirement applies for customer identification in situations of low risk (see Article 20 of the RTS). We continue to believe that the draft RTS goes beyond the AMLR requirements. It may also be challenging to obtain and verify this information as it is not always mentioned in official documents. Therefore, we recommend removing the reference to “and the (its) trade name where it differs from the (its)

Name of the respondent	Question	Answer
		registered name" in both Article 2(2) and Article 20(1)(b)(ii) of the draft RTS. If this option would not be feasible, we propose to clarify that obtaining and verifying the trade name is only a "best efforts obligation". This requires modifying Article 2(2) and Article 20 of the draft RTS, for example as follows: Article 2: 2. In relation to the name of a legal entity as referred to in Article 22(1), point (b)(i), and […], obliged entities shall obtain and verify the registered name and, to the extent possible, the trade name where it appears from other reliable sources and differs from the registered name. Article 20(1)(b)(ii): ii. the registered name of the legal entity and, to the extent possible, its trade name where it appears from other reliable sources and differs from its registered name; New Article 20 (3): The obliged entities verify the place of birth as mentioned in paragraph 1, point (a), (ii) and the trade name as mentioned in paragraph 1, point (b), (ii) on a best effort basis.
Assuralia (umbrella association of insurance and reinsurance companies	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	* Customer information update Article 23(2) of the draft RTS provides that customer information should be updated at least every 5 years, even in situations of low risk. Proceeding to a customer information update every 5 years would represent a considerate

Name of the respondent	Question	Answer
operating in Belgium)	concrete drafting proposals and rationale for the specific measures you would propose.	administrative burden for life insurance companies and is in our view inappropriate for low-risk life insurance contracts such as for instance collective occupational pension insurance schemes, life insurance policies for which the premium is low (e.g. personal pension insurance policies) and pure risk insurance policies (e.g. outstanding balance insurance policies and funeral insurance policies). In such low-risk life insurance contracts, it would also make little sense considering the long duration, the absence of occasional transactions, the low number of customer contacts and the absence of leverage over customers. Furthermore, a payout typically only occurs at contract maturity (mostly at retirement age) or in the event of early death. Until that point, the funds remain locked and inaccessible. For this reason, we recommend including a sector-specific paragraph in the draft RTS to clarify that Article 23(2) of the draft RTS does not apply to low-risk life insurance, as described in Annex II of the AMLR: Article 23 new paragraph 3 3. The previous paragraph does not apply to life or other investment-related insurance business that present a low degree of risk, taking into account the risk factors set out in Annex II of Regulation (EU) 2024/1624. Based on our evaluation, it is legally permissible to implement, via a level 2 measure (RTS), an update frequency exceeding 5 years for life insurance customers representing low ML/TF risks. Article 33(1), point (b), of the ALMR clearly states that obliged entities may reduce the frequency of customer identification updates if the business relationship presents a low degree of risk. In our opinion, the reduction refers to the

Name of the respondent	Question	Answer
		standard frequency of 5 years set out in Article 26(2), point (b), of the ALMR. If the standard frequency of 5 years would be irrevocable, as apparently presumed by AMLA, Article 33 (1), point (b), of the ALMR would make no sense. If AMLA maintains its position that the five-year period set out in Article 26(2), point (b), of the AMLR cannot be extended, we believe that the obligation to update customer information can only be fulfilled on a best effort basis. In practice, insurers often have limited or no contact with their customers throughout the policy duration. In contrast to banks (who can block accounts if necessary), insurers also lack any leverage to obtain the requested information or documents from their clients. This challenge is especially evident when life insurance policies are distributed directly or via a network of insurance intermediaries.
Assuralia (umbrella association of insurance and reinsurance companies operating in Belgium)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	* Purpose and intended nature of the business relationship Article 18 of the draft RTS clarifies the obligation to understand « where necessary » the purpose and intended nature of the business relationship pursuant to Article 20(1)(c) and Article 25 of the AMLR. In this respect, we would like to highlight that, for life insurance products, the purpose and intended nature of the business relationship are deemed to be self-explanatory. They can be derived from the insurance contract signed by the customer as well as from the customer's demands and needs that are assessed by the insurance company prior to signing the contract (in accordance with Article 20(1) of the Insurance Distribution Directive).

Name of the respondent	Question	Answer
		To provide legal certainty and to avoid redundant administrative burdens, we propose that this understanding be explicitly recognised in a recital to the draft RTS. For example, a recital could clarify that, for life insurance contracts, the purpose and intended nature are considered to be sufficiently demonstrated by the demands and needs test already required under the IDD: (13b) In the context of life insurance, the purpose and intended nature can be derived from the type of life insurance policy taken out by the customer. In addition, the customer's demands and needs, which must be analyzed in accordance with article 20(1) of Directive (EU) 2016/97 on insurance distribution before taking out life insurance, contains useful information about the intended nature and purpose of the relationship. This may be sufficient to comply with article 20(1)(c) of Regulation (EU) 2024/1624.

AUCOFFRE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Les propositions s'appliquent globalement au modèle d'AuCOFFRE. Nous identifions une situation, relative aux transactions de faible montant, qui nécessiterait des clarifications ou adaptations spécifiques. Notre proposition : préciser, au titre des mesures de vigilance simplifiée de la section 5 du projet de RTS (articles 20 à 24), que les transactions de faible montant unitaire réalisées dans le cadre d'une relation d'affaires active et surveillée ne déclenchent pas d'obligation de CDD supplémentaire au-delà de la surveillance continue prévue à l'article 26 de l'AMLR.
AUCOFFRE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Sur trois points, le projet de RTS fragilise l'application effective de l'approche fondée sur les risques pour les entités non financières dont le modèle d'affaires repose sur une plateforme en ligne. 1. Section 5 (Articles 20 à 24) - Insuffisance des mesures de vigilance simplifiée pour les plateformes en ligne à faible risque La section 5 du projet de RTS ne prévoit aucune mesure de vigilance simplifiée spécifique pour les négociants en métaux précieux opérant exclusivement en ligne, sans espèces, avec des clients vérifiés à l'entrée en relation et des transactions intégralement traçables. Proposition : introduire à l'article 23 du projet de RTS (mise à jour des données en situation de faible risque) une précision

Name of the respondent	Question	Answer
		indiquant que, pour les négociants en métaux précieux opérant exclusivement en ligne sans espèces, avec clients en relation d'affaires active et des transactions intégralement traçables, la fréquence des mises à jour et l'intensité de la surveillance continue peuvent être réduites de manière proportionnée lorsque l'évaluation du risque le justifie, conformément à l'article 33(1)(b) et (d) de l'AMLR. 2.Article 19 - Criblage PPE et gestion des faux positifs L'article 19(3) du projet de RTS impose la mise en place d'outils de criblage automatisés pour identifier les PPE, conformément à l'article 20(1)(g) de l'AMLR. Dans le secteur des métaux précieux, une proportion des clients peut partager des noms avec des PPE répertoriées dans les bases commerciales, générant des faux positifs. Le projet de RTS ne précise pas les critères permettant de documenter et clôturer un faux positif. Proposition : compléter l'article 19 du projet de RTS par un paragraphe précisant que les entités assujetties peuvent clôturer un faux positif de manière documentée dès lors qu'une vérification sur la base des informations disponibles exclut raisonnablement que le client est la personne ciblée, sans qu'il soit nécessaire de déclencher l'intégralité du dispositif EDD applicable aux PPE avérés. 3. Article 25 — Informations supplémentaires concernant la vigilance renforcée et nature des métaux précieux physiques L'article 25 du projet de RTS précise les informations supplémentaires à obtenir en situation de vigilance renforcée sur le client et les bénéficiaires effectifs, conformément à l'article 34(4)(a) de l'AMLR. Il ne tient pas compte de la nature

Name of the respondent	Question	Answer
		spécifique des métaux précieux physiques comme actif d'investissement. Contrairement aux espèces ou aux crypto-actifs, les métaux précieux physiques achetés sur une plateforme constituent un actif tangible, stocké nominativement, non fongible instantanément. Leur liquidation nécessite des étapes traçables et identifiables (revente, livraison, transfert), ce qui permet de réduire le risque de blanchiment.
AUCOFFRE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	AuCOFFRE identifie deux situations concrètes où les informations requises par le projet de RTS sont structurellement indisponibles. 1. Origine des fonds pour les épargnants de long terme (Article 27 du projet de RTS) L'article 27 du projet de RTS liste les informations supplémentaires sur l'origine des fonds et du patrimoine applicables en situation de vigilance renforcée (EDD), conformément à l'article 34(4)(c) de l'AMLR. Cette liste inclut notamment les fiches de paie, déclarations fiscales et relevés de compte. Pour un client investissant en métaux précieux à partir d'une épargne constituée sur plusieurs années à partir de revenus salariaux réguliers, il n'existe pas de flux entrant unique et identifiable. Les justificatifs listés à l'article 27 peuvent être volumineux, partiels ou inaccessibles sur longue période. Le projet de RTS ne prévoit pas de solution alternative adaptée à cette situation pourtant courante dans le négoce de métaux précieux. Proposition : reconnaître explicitement à l'article 27(h) - qui

Name of the respondent	Question	Answer
		vise déjà « toute autre information pertinente » - qu'une déclaration écrite du client sur l'origine de son épargne, corroborée par des indicateurs de cohérence (revenus habituels, ancienneté de la relation, progressivité des investissements), constitue une documentation suffisante en l'absence de flux entrant unique et identifiable. 2. Vérification du bénéficiaire effectif pour des structures domiciliées dans des États tiers à registres incomplets (Article 10 du projet de RTS) Nous proposons d'ajouter à l'article 10 du projet de RTS, une disposition prévoyant qu'en cas d'indisponibilité structurelle des sources listées aux points (a) et (b), l'entité assujettie peut conclure la vérification sur la base des informations disponibles, sous réserve de documenter les démarches effectuées et les limites rencontrées, et d'en tenir compte dans l'évaluation du risque de la relation d'affaires conformément à l'article 20(2) de l'AMLR.
AUCOFFRE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	AuCOFFRE propose trois mesures de vigilances simplifiées spécifiques pour les négociants en métaux précieux opérant exclusivement en ligne, fondées sur un profil de risques structurellement faible et relevant de l'habilitation conférée par l'article 33(1)(e) de l'AMLR. 1. Réduction de la fréquence de surveillance pour les clients actifs à faible risque Proposition de rédaction à l'article 23 du projet de RTS : « Pour les entités assujetties visées à l'article 3(3)(e) du Règlement (EU) 2024/1624 opérant exclusivement en ligne sans recours

Name of the respondent	Question	Answer
		aux espèces, dont les paiements sont intégralement réalisés par virement ou carte bancaire, lorsque le client est en relation d'affaires active depuis plus de douze mois et que son profil de risque n'a pas évolué, la fréquence d'examen des transactions peut être réduite proportionnellement, sous réserve que la surveillance visée à l'article 26(1) de Règlement (EU) 2024/1624 reste suffisante pour détecter toute transaction inhabituelle ou suspecte. » 2. SDD pour les achats récurrents de faible montant Proposition de rédaction à l'article 24 du projet de RTS : « Pour les entités assujetties visées à l'article 3(3)(e) du Règlement (EU) 2024/1624, les achats récurrents programmés de faible montant unitaire réalisés par un client dans le cadre d'une relation d'affaires active et surveillée n'exigent pas de collecte d'informations supplémentaires sur l'objet et la nature de la transaction, dès lors que ces transactions sont cohérentes avec le profil de risque du client établi lors de l'entrée en relation. » 3. Reconnaissance de l'absence d'espèces et provenance des fonds de banques européennes, comme facteur de vigilance simplifié Proposition de rédaction dans les considérants du projet de RTS : « L'exercice exclusif d'une activité sans recours aux espèces, avec des paiements intégralement traçables et attribuables à un titulaire identifié, provenant d'établissements de crédit soumis aux contrôles de régulateurs européens, constitue un facteur de réduction du risque ML/TF au sens de l'annexe II de Regulation (EU) 2024/1624, justifiant, lorsque l'évaluation

Name of the respondent	Question	Answer
AUCOFFRE	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
AUCOFFRE	Do you have any comments on the Annex in the draft RTS?	No
AUCOFFRE	How would you rate the proposals set out in the draft RTS overall?	Neutral
AUCOFFRE	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
AUCOFFRE	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of	Manageable impact

Name of the respondent	Question	Answer
	Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
AUCOFFRE	Please justify your answer to the previous question and provide evidence where possible.	La mise en oeuvre des obligations LCBFT pour une entité non financière représente toujours un coût non négligeable.
AUDI AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The RTS proposals are largely not considered sufficiently tailored to the products and services of the automotive and goods trading sector. The requirements are strongly oriented towards banking type processes, which typically do not exist in trading activities. In particular, it should be clearly stated that purely ancillary or service related activities are not automatically brought within the scope of the obligations.

Name of the respondent	Question	Answer
AUDI AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS only partially enables an effective risk based approach, as it often presupposes ongoing customer relationships and continuous information flows. For the trading sector, greater emphasis should be placed on object and payment related risk indicators and on the involvement of regulated financial institutions.
AUDI AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	In practice, certain customer due diligence information, in particular regarding the source of funds or third party payers, is frequently not available in a verifiable form. The draft RTS does not currently provide sufficient alternative or plausibility based approaches for such situations, especially in the case of fully bank or leasing financed transactions.
AUDI AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The RTS should explicitly provide for additional simplified due diligence measures, in particular where payments are fully account based and processed via supervised EU credit or leasing institutions, as well as through increased use of appropriate external registers for identifying beneficial owners.
AUDI AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	A practical and legally certain implementation requires clear delineations, standardised implementation guidance and workable identification solutions. In particular, the terms "regular" and "principal" trading in high value goods should be clearly defined in order to avoid legal uncertainty.
AUDI AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
AUDI AG	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
AUDI AG	Do you have any comments on the Annex in the draft RTS?	No
AUDI AG	How would you rate the proposals set out in the draft RTS overall?	Neutral
Austrian Federal Economic Chamber - Division Bank and Insurance	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Complex corporate structures (Article 12) Article 12 provides for that an ownership and control structure is to be considered a complex corporate structure where there are three or more layers between the customer and the beneficial owner, and more than one of the conditions listed in paragraph 1 is met. Whilst the requirement that there must be more than three levels and more than one applicable criterion represents an improvement on earlier drafts, the thresholds remain relatively low and there are interpretive questions regarding Article 12(1)(d) and how this could be applied in practice. The rule-based nature of Article 12 can significantly increase the operational burden, particularly if it also triggers other enhanced due diligence measures. The AMLR does not require that a regulatory technical standard shall specify the concept of 'complex corporate structure'. Therefore, it is not legally necessary for defining this concept in the draft RTS. Although the classification as complex corporate structure per se does not lead automatically to enhanced CDD measures there are still requirements for the collection of data in relation to complex corporate structures for the purpose of the RTS under Article 40(2) AMLD6 and Article 12(7) AMLAR

Name of the respondent	Question	Answer
		(inherent risk). It is unclear what weighting this data point will have in the assessment of undertakings, and there is considerable concern that the sheer number of customers which are legal entities with complex corporate structure will be assessed as increasing risk and this will impact the risk profile of the undertakings. There is also concern that, despite the current clear distinction between the terms, an analogy will be drawn in supervisory practice, with the result that customers with a complex corporate structure (Article 12) should be treated as customers with an excessively complex ownership structure (Annex III AMLR). Recommendation: We would suggest to remove the definition of complex corporate structures. If this is not possible we would suggest the removal of lit d) of the draft proposal for Article 12 and would welcome clarification, how the relationship between "complex structures" referred to in Article 12 should be considered in conjunction with Annex III(1)(f) of the AMLR. How do the two relate to each other?
Austrian Federal Economic Chamber - Division Bank and Insurance	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	NA
Austrian Federal Economic	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the	Specific comments of the insurance sector Politically exposed persons (PEP) (Article 19)

Name of the respondent	Question	Answer
Chamber - Division Bank and Insurance	information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The requirements listed under Article 19 are to be followed regardless of the risk profile of the activity conducted. Regarding the insurance sector specifically, it imposes a disproportionate burden for obliged entities when providing low-risk life insurance products such as pure risk insurance policies or private and occupational pension schemes. For customers who buy exclusively life insurance products for which simplified due diligence measures can be applied due to the product characteristics, a balanced consideration of the risk factors should be possible. For instance, it is not understandable that a customer who has taken out a term life insurance as collateral for their mortgage loan paying a monthly premium of only EUR 25.00 represents a high risk solely because of their PEP status. There is no surrender value, and the benefit is only due in case of death. However, because of the high risk, the customer has to be monitored annually and is required to submit all the documentation regarding the source of their funds only for EUR 25.00 monthly premium payments. This creates disproportionate burden for insurance undertakings in terms of screening and onerous ongoing reviews when the products are low-risk for ML/TF purposes. Recommendation: If the product characteristics of a life insurance product implies a low ML/TF risk, it should be possible to give priority to product-specific over customer-specific risk factors (PEP characteristics) when assessing the risk in order to have a proportionate approach to AML.

Name of the respondent	Question	Answer
		Update of Customer Information (Recital 23, Articles 23) Article 23 of the draft RTS provides that customer information should be updated maximum every 1 or 5 years respectively, depending on the risk profile of the customer. In practice this will result in a mandatory update-frequency (5 years) also for the mass portfolio of low-risk life insurance customers, regardless of that Article 33 (1) (b) ALMR explicitly allows obliged entities to reduce the frequency of updates in these cases. Such an update-frequency is in contradiction to the "risk-based approach", obliged (life insurance) entities should follow to mitigate the risks of AML / TF risks Implementing customer information update every 5 years for low-risk life insurance contracts seems excessive considering: • the core principles of the risk-based approach • the low inherent and residual ML/TF risk of such a customer-portfolio • the long duration of insurance contracts • the absence of occasional transactions • the low number of customer contacts • and the absence of leverage over customers. Consequently, this frequency is deemed as inappropriate for low-risk life insurance contracts. • Life insurance is based on a comprehensive contractual agreement. The amount and frequency of premium payments, additional payments, benefits, and surrenders, as well as the term of the contract, are specified in the contract. • Payments are generally made via bank accounts (often by

Name of the respondent	Question	Answer
		direct debit), which are also subject to comprehensive provisions to prevent ML/TF, and not in cash. • Payouts are made upon the occurrence of the insured event (survival or death). Prior to payout, the contractually specified beneficiaries are checked according to the existing legislation. • During the term of the contract, no payments are made to the policyholder, except in the case of (lifetime) pension insurance. In the case of single-premium insurance products, no further payments are made by the policyholder. A life insurance contract is not comparable to an account on which transactions with different objectives and purposes take place. • Early surrender is possible under insurance law, but may result in losses, particularly in the early years, due to the business model. In addition, in Austria, early termination of a single premium products may result in significant tax disadvantages. Recommendation: A customer updates every 5 years for low-risk scenarios would lead to a high bureaucratic burden and costs for insurance companies without adding any value in terms of money laundering prevention. So, the update-frequency of low-risk customers should be based on the “trigger of event” of payout or when contract changes arise, not on a rigid period of 5 years.
Austrian Federal Economic Chamber - Division Bank and Insurance	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	NA

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	
Austrian Federal Economic Chamber - Division Bank and Insurance	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	General remarks on Simplified Due Diligence Non-exhaustive nature of Article 33 AMLR Article 33 AMLR permits obliged entities to apply simplified due diligence (SDD) where a business relationship or transaction presents a lower degree of risk, based on the factors set out in Annexes II and III. Members welcome SDD as an important tool to enable a more efficient allocation of resources, allowing greater focus on higher-risk situations while applying proportionate measures in lower-risk cases. In practice, obliged entities should be able to apply a simplified approach across all lower-risk business relationships or transactions. The Austrian Banking and Insurance industry therefore requests confirmation that Article 33 AMLR is not exhaustive in its prescribed measures, and that obliged entities may, in addition to those set out by AMLA, apply measures that are proportionate to the nature and size of the counterparty and to the risks identified. Such an approach would support the effective operation of a risk-based framework and enable resources to be directed where they are most needed. Challenge of making use of simplified due diligence in practice The application of simplified due diligence (SDD) can be challenging, as the processes, assessments, and documentation required to justify its use to auditors and supervisors are often more onerous than continuing to apply standard CDD. This creates a disincentive for obliged entities to apply SDD, even in lower-risk scenarios, and may lead to an erosion of the risk-based approach envisaged by the AMLR.

Name of the respondent	Question	Answer
		We therefore requests that AMLA clarify that the proportionate use of SDD is consistent with supervisory expectations, fosters a more intelligent use of resource to better combat money laundering and terrorist financing, and should not require such a level of justification that proves to be more burdensome than the use of standard CDD in lower-risk situations. The following constellations e.g. are currently deemed as SDD scenarios which we propose should be included. They reflect approaches currently taken in national law in certain member states and should remain possible also under AMLR. • Legal entities governed by public law (e.g. public authorities) • Public companies listed on a stock exchange and subject to disclosure re-quirements, as well as majority-owned subsidiar-ies of such companies • Pooled accounts for school classes Specific comments of the insurance sector Sector specific simplified Customer Due Diligence Measures for Life Insurance Products: For the insurance sector there should be sector specific simplified due diligence measures included in the RTS at least for the following life insurance product types: pure risk life insurance products, occupational pension products, private pension products and life insurance contracts with low premium payments where the the ML/TF risk is considered low.

Name of the respondent	Question	Answer
		Recommendation: It should be possible to apply the following simplified due diligence measures: • When the product characteristics result in a low ML/TF risk, it should be possible to give priority to product-specific over customer specific risk factors (e.g., PEP characteristics) when assessing the risk. • Event-driven updates of customer information for low-risk situations should be possible (Article 23). If a periodic customer update would be required, it should be possible to exceed the five-year period mentioned in article 26(2), point (b) of the AMLR. • The minimum information to be collected for the customer identification in low-risk situations should include the type of information that is usually included in a passport or identity document (Article 20 should explicitly reflect Recital 16, instead of including a detailed list of information similar to the standard due diligence requirements). • In addition, by way of derogation from general due diligence requirements, it should be possible to verify the customers identity on the basis of other documents, data or information that originate from a credible and independent source. This may include the presentation of a civil service ID card issued by a public sector institution or authority, or an electricity bill which shows the name of the person requiring identification. The obligation to obtain and verify trade names when they

Name of the respondent	Question	Answer
		differ from registered names should also be removed. • It should be sufficient, in situations of low risk, for the obliged entity to consult the central register for identification as well as for verification of beneficial owners. That would also ensure a distinction between standard due diligence measures and simplified ones. Since it is an official register that has been introduced in the framework of AML/CTF regulation, obliged entities should be able to fully rely on the information contained in the central register (Article 21).
Austrian Federal Economic Chamber - Division Bank and Insurance	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 1 - risk based approach We welcome the fact that our request to include the admissibility of the risk-based approach has been incorporated. By including it in Article 1, “Proportionality and risk-based approach,” as a general principle, its importance has been recognized, and it is thus unambiguously established as a general guiding principle for the interpretation of the RTS. It can therefore be clearly assumed that Article 1 of the RTS on CDD, in accordance with the principle repeatedly established in Regulation (EU) 2024/1624 as a directly applicable legal norm,

Name of the respondent	Question	Answer
		can and must continue to be used by obligated entities as a fundamental basis for the practical application of due diligence obligations and must always be consulted in matters of interpretation. The same applies to the principle of proportionality.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	2
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Art 2 and 3 - Information to be obtained • Article 2 - Information to be obtained in relation to names Article 2 (ii) Here is no legal definition concerning the trade name and a clarification is needed that a review of the commercial register is sufficient in order to comply with Article 2. • Article 3 - Information to be obtained in relation to addresses Article 22 (1) (a) (ii) AMLR requires obliged entities to obtain the 'place and full date of birth' for relevant natural persons. In its discussion of the changes made following consultation on its first draft of the RTS, the EBA recognised there is limited utility in interpreting 'place' to include 'city' when recording details of the birth of certain classes of persons, and the costs of doing so would likely outweigh any benefits obtained. As such, it clarified that 'place' should be interpreted to include 'at least the country of birth' (emphasis in the EBA original), and need not include 'city'.

Name of the respondent	Question	Answer
		For beneficial owners, current due diligence practice is to collect the country of residence but not the city. While the jurisdiction in which a beneficial owner is resident is recognised as a legitimate indicator of potential ML/TF risk, the individual city of residence within a particular country is unlikely to affect in any material way the ML/TF risk posed. Consequently, the value added by collecting the city of residence for due diligence assessment of beneficial owners is limited. Given this limited value added, and the analogous recognition by the EBA that the interpretation of 'place' to include city for other classes of persons is a cost without a benefit, we request that the obligation to collect 'city, or its nearest alternative' in Article 3 (b) be removed for beneficial owners, or, if AMLA does not wish to delete entirely, that the reference to 'city' be moved to and combined with (c), such that it would be collected 'where available'.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Article 5 and 6 • Clients' identification and specification on nationalities We advocate clarifying what information may be obtained through customer questioning (for example, nationality is not a requirement under Article 6 of the RTS on CDD). Obtain information and verify information: A clarification is required as to which information may be obtained through

Name of the respondent	Question	Answer
		customer inquiry (for example, nationality is not a requirement under Article 6 - Documents for the verification of identity - of the RTS on CDD). Article 5 uses the term “obtain information” and should therefore specify that, in practice, such information may be collected through direct questioning of the customer. • Article 6 - Documents for the verification of identity The Austrian Banking and Insurance industry members note that the addition of the word ‘act’ in Article 6 (5) does not in itself raise significant concerns. We note the practical efficiency benefit in permitting non-face-to-face measures (like eID or EUDI Wallets) to be used in face-to-face contexts to complete verification within seconds. We welcome measures which promote the adoption of digital solutions in all verification scenarios. Members have however identified operational uncertainty arising from the interaction between Article 6 (3) and the practical processes used to obtain and verify identity documents. In practice, institutions are exploring a range of solutions to address these challenges, including the use of digital verification technologies or external service providers capable of validating machine-readable identity documents. However, members emphasise that clear and consistent supervisory expectations are necessary to ensure that such approaches are recognised across the EU as fulfilling the requirements of Article 6. We would welcome clarification that the verification

Name of the respondent	Question	Answer
		requirement is limited to confirming the identity of the relevant natural person, and therefore only extends to those data points necessary for that purpose, and does not extend to additional information that is not required to establish identity. The Austrian Banking and Insurance industry considers that this reflects the intent of the co-legislators, as set out in Recital 4.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 7 – verification measures conducted on a non-face-to-face basis The Austrian Banking and Insurance industry notes AMLA's editing of what is now Article 7 (3) (e) inserts 'valid and…' immediately before 'up-to-date'. It is not clear what this insertion is intended to signify, or whether AMLA intends there to be a distinction between the two (which the use of both may imply). The Austrian Banking and Insurance industry would welcome clarification that the verification requirement focuses on confirming the identity of the relevant natural person in non-face-to-face situations and does not impose any requirement (such as a requirement to re-verify any previously collected data where no substantive change has occurred) beyond this purpose. Furthermore, we would like to note that currently, Members States apply an inconsistent approach to their expectations in this area, specifically in respect of 'equivalent' documentation, and we support AMLA in facilitating a harmonised,

Name of the respondent	Question	Answer
		proportionate and risk-based approach across the Union. We urge AMLA to work with National Competent Authorities to ensure consistent application of supervisory expectations.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	9
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Art. 9 - identification and verification of the identity of the natural or legal persons using a virtual IBAN We would appreciate a more detailed description of the obligations. Article 9 does not currently make it sufficiently clear whose identity has to be verified (besides the customer's identity also the identity of the person the vIBAN is used for?).
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	11
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Article 11 and 12 – Understanding the ownership and control structure • Article 11 – Understanding the ownership and control structure of the customer We welcome the adoption of a risk-sensitive approach, recognising the importance of proportionate measures when assessing ownership and control structures. Members note that the wording is technology neutral, allowing obliged entities to apply manual, automated, or AI-supported processes in carrying out such assessments. Members would welcome confirmation that the term 'assess' is intended in the

Name of the respondent	Question	Answer
		context of proportionality and risk-based principles, permitting firms to utilise technology-supported assessment solutions, provided that outcomes are appropriate and satisfy supervisory expectations. • Article 12 - Understanding the ownership and control structure of the customer in the case of complex corporate structures Proportionate treatment of multi-layered structures The Austrian Banking and Insurance industry notes the overarching principles of proportionality and following a risk-based approach now set out in Article 1. With these in mind, the Austrian Banking and Insurance industry requests AMLA to clarify that the presence of non-EU entities should only be relevant where those jurisdictions present heightened ML/TF risk. Criterion 1 (b) should refer to high-risk third countries as defined in the AML Regulation, rather than to all non-EU jurisdictions.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	13
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 13 – Information on Senior Managing Officials The Austrian Banking and Insurance industry reiterates their concern regarding the current scope and practical interpretation of ‘senior managing official’ (SMO) under Article 63 AMLR. The Level 1 definition extends beyond members of the

Name of the respondent	Question	Answer
		management body in its management function to 'natural persons who exercise executive functions […] and are responsible, and accountable to the management body, for the day-to-day management' of the entity. In practice, this supplementary clause remains insufficiently precise and risks being interpreted too broadly, potentially capturing multiple layers of senior employees below the formal management body. The Austrian Banking and Insurance industry understands this clause to operate as a fallback, for example where there is no clearly identifiable management body, which would be consistent with a proportionate, risk-based approach. We note that, as a result, the collection of SMO data under Article 13 may become disproportionate, particularly for wholesale institutions operating complex group structures. Overly broad interpretations would significantly increase the number of individuals subject to identification, verification, and ongoing CDD obligations, without delivering a commensurate improvement in ML/TF risk mitigation. The Austrian Banking and Insurance industry recognises that AMLA's mandate under the RTS is limited and that substantive amendments to the Level 1 definition would need to be addressed by the co-legislators. Nevertheless, members consider it important to emphasise the operational challenges and risks of inconsistent interpretation across Member States. In the absence of legislative amendment, The Austrian Banking and Insurance industry encourages AMLA to issue Level 3

Name of the respondent	Question	Answer
		guidance to provide supervisory clarity on the practical scope of the SMO concept. Such guidance could help ensure a proportionate and harmonised approach until the Level 1 framework is revisited, reducing the risk of inconsistent reporting to transparency registers and avoiding undue operational burden for obliged entities.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	17
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 17 and 18 - Identification • Article 17 - Identification and verification obligations for collective investment undertakings Information and Evidence Article 17 imposes unrealistic AML obligations on CIUs and custodian banks without direct investor relationships. It goes beyond AMLR by creating an upstream AML obligation that is incompatible with established market practice and therefore should be amended to explicitly exclude publicly offered funds from end investor identification by CIUs and custodian banks. Article 17 of the draft RTS on CDD can and should, from a legal perspective, only be understood as a provision designed to facilitate situations in which the management company or the CIU is already subject to a primary CDD obligation towards the investor in question. Therefore it should be formulated as a mere facilitative provision. A general look-through approach would not be appropriate

Name of the respondent	Question	Answer
		from a risk-based perspective and would often be impossible in practice. The current draft RTS should be amended to remove the clearly stated obligations regarding the identification and verification of the end investors of a public fund, or to include a provision stating that these obligations do not apply to public funds. However, a merely risk-based qualification in Recital 14 is not sufficient for that purpose. So long as the operative wording of Art 17 creates the impression that the CIU must secure the availability of identification data relating to underlying investors, the systemic misunderstanding remains. What is required, therefore, is a clarification in the directly binding text of Art 17 itself, and not merely in the recitals. Therefore, the scope of the current Art 17 should be amended to clarify that it applies exclusively where a CIU or management company has a direct CDD obligation due to direct investor contact. Any wording that could be interpreted as imposing such obligations indirectly, should be removed. Intermediary institutions already perform effective AML and CDD measures for fund investors. The idea of intermediaries acting as qualified third parties for CIUs remains, at present, operationally and legally unrealistic and might have data protection and liability concerns. Conversely, Art 17 should expressly not apply to those retail public funds that are distributed exclusively through credit institutions or financial institutions and in which the CIU has no direct AML-relevant business relationship with the end investor.

Name of the respondent	Question	Answer
		In summary, Art 17 should be understood and designed as a limited, risk-based relief provision for CIUs, and not as the basis for a general look-through approach to end investors in intermediary-based retail fund structures. Such a clarification would be more consistent with Union law and would provide significantly greater legal certainty in practice. It would also prevent the RTS from unintentionally impairing market structures in Member States without generating any corresponding AML/CFT added value. • Art. 18 - identification of the purpose and intended nature of a business relationship or occasional transaction We would like to note that we would welcome a more detailed clarification as to which information on the purpose and intended nature is to be obtained in the case of a business relationship and which information is to be obtained in the case of an occasional transaction.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	20
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Art 20 – 22 – Simplified Due Diligence Measures • Article 20 – Minimum requirement for customer identification in situations of low risk The Austrian Banking and Insurance industry notes that, in practice, the application of simplified due diligence (SDD) can be challenging, as the processes, assessments, and documentation required to justify its use to auditors and supervisors are often more onerous than continuing to apply

Name of the respondent	Question	Answer
		standard CDD. This creates a disincentive for obliged entities to apply SDD, even in lower-risk scenarios, and may lead to an erosion of the risk-based approach envisaged by the AMLR. We therefore request that AMLA clarify that the proportionate use of SDD is consistent with supervisory expectations, fosters a more intelligent use of resource to better combat money laundering and terrorist financing, and should not require such a level of justification that proves to be more burdensome than the use of standard CDD in lower-risk situations. • Article 21 – Minimum requirements for the identification and verification of beneficial owner or senior managing officials in situations of low risk Use of central registers for beneficial owner verification in simplified due diligence We are concerned that Article 21 of the revised RTS significantly limits the practical ability to rely on central registers, including Transparency Registers and commercial registers, when applying simplified due diligence. As drafted, obliged entities may use these registers only for identification, but must verify the information using a different source, often by requesting confirmation from the customer. In many Member States including Austria, company and commercial registers carry legal effect and are widely recognized as independent, reliable sources of corporate information. Requiring firms to disregard such registers for verification purposes introduces unnecessary bureaucracy, undermines the purpose of simplified due diligence, and provides no additional assurance. Members also question the

Name of the respondent	Question	Answer
		logic of requiring customers to confirm information they themselves provided to a public register, which adds process burden without improving the quality or reliability of the data. We request that AMLA revise Article 21 to permit obliged entities to use central registers as both identification and verification sources in low-risk scenarios, where those registers carry legal reliability in the relevant jurisdiction. We also request reconsideration of the restrictions created by Article 21 (2), which narrow the available verification channels in a way that is inconsistent with a genuinely simplified approach. Allowing reliance on central registers for both identification and verification would maintain proportionality, reflect Member State legal realities, and avoid unnecessary customer outreach and friction. • Article 22 - Sectoral simplified measures with respect to pooled accounts The Austrian Banking and Insurance industry notes that Article 22 (a) requires account holders to be obliged entities in order to fall within scope of this provision. This may have the unintended consequence that certain types of pooled accounts – such as rent deposit accounts or school class accounts – which are currently subject to SDD would fall outside of scope. Members consider that this would not support an efficient and effective allocation of resource and is unlikely to reflect the intention of the co-legislators. We have noted elsewhere that the measures set out in Article 33 (1) AMLR and in Section 5 of the draft RTS should be understood as illustrative rather than exhaustive. Given that no

Name of the respondent	Question	Answer
		regulatory framework can anticipate all possible customer types, account structures, or risk scenarios, it is important that obliged entities retain the ability to apply appropriate, risk-based measures according to the circumstances of the situation at hand. With this in mind, the Austrian Banking and Insurance industry requests that AMLA clarify this point to ensure that low-risk account types currently subject to SDD may continue to be treated as such, and that a proportionate, risk-based approach can be applied to analogous accounts and situations that may arise in future. With regard to the requirement that credit institutions must be satisfied that the account holder will provide funds 'immediately' – we have also noted previously that if taken literally, this provision would be close to impossible to fulfil. We therefore suggest that it be amended to 'promptly' or 'without undue delay' to ensure a shared understanding of the limits of practical applicability.
Austrian Federal Economic Chamber - Division Bank and Insurance	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	27
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Article 27 - Additional information on the source of funds, and source of wealth of the customer and of the beneficial owners There is an inconsistency between Regulation (EU) 2024/1624 and the current draft of the RTS on customer due diligence.

Name of the respondent	Question	Answer
		Article 34(4)(c) of Regulation (EU) 2024/1624 requires obliged entities, in situations of increased risk, to obtain “additional information” on the source of funds and the source of wealth of the customer and the beneficial owners. The Regulation therefore refers explicitly to the collection of additional information and does not establish a general requirement to obtain or verify formal documentary evidence. By contrast, the draft RTS (Article 27) contains wording and examples that predominantly refer to documentary evidence (e.g. tax declarations, pay slips, contracts or extracts from public registers). This may create the impression that obliged entities are always required to obtain and verify documented proof of the source of funds or source of wealth. However, a distinction should be made between information and evidence. Information may originate from various sources, including customer explanations, publicly available registers, reputable media sources or other reliable sources. Verification, on the other hand, constitutes a specific form of documented proof and goes beyond of collecting information. To ensure consistency with Regulation (EU) 2024/1624 and to preserve the risk-based approach, the RTS should therefore also refer primarily to the collection of additional information. Supporting material could continue to be mentioned as possible examples of information sources, without creating the impression of a general requirement to obtain formal proof.
Austrian Federal Economic	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	33

Name of the respondent	Question	Answer
Chamber - Division Bank and Insurance		
Austrian Federal Economic Chamber - Division Bank and Insurance	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Articles 33 – Entry into force Members of the Austrian banking and insurance industry strongly support EU and AMLA efforts to design and implement an effective and efficient EU AML/CFT regime. We welcome the efforts of the EBA and AMLA to clarify the timelines for the treatment of customers and business relationships entered into prior to the entry into force of the AML Regulation and associated technical standards. However, industry is concerned that delays in finalising the RTS, without corresponding adjustments to their entry into force, may result in rules being developed under compressed timelines, without sufficient opportunity to fully assess their implications, and may leave insufficient time for obliged entities to implement the necessary systems and controls. Several authorities have referred to the need for 'proportionate' and 'appropriate' supervision in the initial years of application. While this is welcome, it may give rise to differing interpretations across Member States, particularly for entities subject primarily to national supervision and only indirectly to AMLA oversight. In this context, the Austrian Banking and Insurance industry requests that AMLA recognise the limited timeframe available to industry to develop and implement systems and controls, and that supervisors across Member States adopt both high standards and a proportionate, pragmatic approach during the

Name of the respondent	Question	Answer
		implementation phase as obliged entities work to meet the new requirements. The public and private sectors are partners in the fight against financial crime. By working together in a spirit of ambition and good faith, we can maximise the effectiveness of the EU AML package and strengthen the prevention of money laundering and terrorist financing, both within Europe, and beyond. Lastly, we noticed that Article 33 still refers in the second paragraph to 'publication date' rather than 'application date' as the starting point. We assume AMLA means 'application date' (as mentioned in the Recital 25) and would be grateful if this could be confirmed in Article 33.
Austrian Federal Economic Chamber - Division Bank and Insurance	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Austrian Federal Economic Chamber - Division Bank and Insurance	Please specify which recital you refer to, and share your comments below.	Recitals 10, 12 and 21 Recital 10 The Austrian Banking and Insurance industry support the intention to ensure that the identification of SMOs remains a measure of last resort. The Austrian Banking and Insurance industry continues however to face significant uncertainty regarding the practical interpretation of the SMO concept itself. The Level 1 text defines SMOs as follows: '[f]or the purpose of this paragraph, 'senior managing officials' means the natural

Name of the respondent	Question	Answer
		persons who are the executive members of the management body, as well as the natural persons who exercise executive functions within a legal entity and are responsible, and accountable to the management body, for the day-to-day management of the entity.' This formulation, in particular the conjunctive 'as well as' and the broad reference to natural persons exercising executive functions, risks an overly expansive interpretation. In practice, this could extend identification and verification obligations beyond members of the formal management body to multiple layers of senior employees involved in operational management, particularly within complex wholesale structures. This would significantly increase Customer Due Diligence (CDD) requirements without delivering a commensurate improvement in Money Laundering or Terrorist Financing (ML/TF) risk mitigation. In the absence of legislative amendment – which could take several years – the Austrian Banking and Insurance industry requests that AMLA provide supervisory clarification on the practical interpretation of the SMO concept through Level 3 guidance. Such guidance could help to promote a consistent and proportionate approach across Member States until such time as the co-legislators may revisit the issue in the Level 1 framework. We also note the concept of 'doubts' referenced in Recital 10 is not defined in the Regulation, which may lead to divergent supervisory expectations and market practices regarding when recourse to SMO identification is appropriate. It would be

Name of the respondent	Question	Answer
		helpful if AMLA could provide guidance on this concept, the better to ensure shared understanding and consistent practice from obliged entities. Recital 12 The Austrian Banking and Insurance industry requests confirmation that this Recital reflects AMLA's intended interpretation of relevant AMLR requirements, and that the PPTA concept applies solely to persons exercising a legally conferred authority (we refer AMLA to the suggested PPTA definition we have previously submitted in our consultation response to the EBA, and in later direct interaction with AMLA). Individuals who merely act in the course of their professional duties for the customer should not be captured, ensuring consistent implementation across Member States and avoiding a disproportionate expansion of CDD obligations. If AMLA cannot provide this clarity at Level 2, The Austrian Banking and Insurance industry requests that AMLA provide Level 3 supervisory guidance to harmonise interpretation and support proportionate implementation. Recital 21 The Austrian Banking and Insurance industry welcomes newly-inserted Recital 21, , the recital however underscores ongoing uncertainty regarding the definition of 'group,' particularly for entities with non-EU headquarters. The Austrian Banking and Insurance industry requests that AMLA clarify that 'group' may include subsidiaries and branches in third countries, provided that they apply AML/CFT

Name of the respondent	Question	Answer
		standards equivalent to those required under the EU framework. This would reflect the reality of cross-border banking groups and support the effective use of information already collected within the group, including at global level. Moreover we would like to note that obliged entities would need to operate within applicable data protection requirements, including GDPR, and ensure that appropriate safeguards are in place for the sharing of information across jurisdictions. Furthermore we also note that the recital refers to understanding 'for instance, the purpose and intended nature of the beneficial ownership or occasional transaction' and 'as part of the audit acceptance process.'. Members have not identified a clear interpretation of these references and would welcome clarification of the intended scope and meaning in practice. Overall, the Austrian Banking and Insurance industry supports the principle that existing information should be leveraged wherever possible to avoid duplication. We would welcome the principles reflected in this recital being carried through to the subsequent operative articles, the better to ensure information is used effectively to meet AML/CFT requirements while minimising unnecessary administrative burden.
Austrian Federal Economic Chamber -	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Division Bank and Insurance		
Austrian Federal Economic Chamber - Division Bank and Insurance	How would you rate the proposals set out in the draft RTS overall?	Neutral
Austrian Federal Economic Chamber - Division Bank and Insurance	Please justify your answer to the previous question and provide evidence where possible.	NA
automobili lamborghini spa	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes, provided CDD is needed only from direct clients (clients that purchase directly from entity). We generally support the harmonized, risk-based approach. However, we request further clarification and simplification for non-financial sector obliged entities, especially regarding the practical application of CDD measures. Provisions should explicitly allow for proportionality and flexibility, considering our lower ML/TF risk profile compared to financial institutions. We propose more concrete examples and sector-specific guidance for non-financial entities to reduce interpretative costs and compliance uncertainty (especially having in mind points 20, 60 and 62 of preamble of AMLR). In addition, from an implementation perspective, greater reliance on simplified due diligence and alternative evidentiary measures should be more explicitly embedded in the RTS for non financial sectors. In particular, where transactions are conducted through regulated payment channels (e.g. captive financial services entities), the RTS should clearly allow obliged

Name of the respondent	Question	Answer
		entities to take account of the AML controls already performed by such intermediaries, rather than requiring duplicative information collection from customers. Explicit drafting recognizing the legitimacy of such reliance would better reflect the operational reality of many non financial business models. We also need guidance on preamble 10, to clarify whether a manufacturer, with a financial holding company as Shareholder, that also has a financial company as a subsidiary, whether the financial holding company is considered a financial institution itself.
automobili lamborghini spa	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes, simplification is possible by providing clear, practical examples of CDD measures suitable for low-risk, non-financial businesses. The RTS could also clarify when simplified due diligence is appropriate and reduce documentation requirements for low-value, low-risk transactions typical in our sector. Further clarification is needed on how the risk based approach should operate in multi party transaction structures, such as those involving independent dealers or regulated financial intermediaries as mentioned in prior comments
automobili lamborghini spa	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	such situations and your proposals for alternative solutions. The diversity and operational realities of the automotive sector, including the predominance of low-risk transactions and established customer relationships, are not fully reflected. We recommend that the RTS acknowledge these factors and allow for streamlined CDD processes for routine, low-risk sales. We also operate in the luxury business selling watches, we understand here the relevant threshold is 10K EUR. We propose that in case of transactions that occur in shops, we

Name of the respondent	Question	Answer
		may rely on the AML due diligence performed by the financial entities that have issued the credit cards by verifying that the name on the credit card matches with the one on clients' ID (and not be obliged to have clients to provide answers to a questionnaire and/or copies of other documents). We have concerns on the feasibility of verification of Beneficial Owners via eIDAS as per EU Regulation 910/2014, especially for non-EU subjects (most likely a dealer in some lesser structured country will not be able to have its BO electronically verified). Infact, preamble 66 states that "Where such electronic identification is not available to a customer, for example due to the nature of their residence status in a given Member State or their residence in a third country, verification should take place through relevant qualified trust services"; we need to clarify the meaning of that, whether in absence of a reliable electronic tool, it is necessary to utilize notary publics or similar
automobili lamborghini spa	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We welcome commitment to technological neutrality and harmonization. To further reduce burden, we suggest ongoing dialogue with non-financial sector representatives and the issuance of sector-specific interpretative guidance as new challenges arise. This will help ensure proportionate and effective compliance without unnecessary disruption to our business. Our proposal is as follows: 1) Direct clients: due diligence is performed in full only on direct clients (clients that purchase directly from us); 2) Indirect clients: a. for clients who purchase from independent third parties (dealers) due diligence is performed by the dealer itself, based on guidelines provided by OEMs to them, b. due diligence is performed by OEMs, on a risk based way,

Name of the respondent	Question	Answer
		proceeding to an enhanced due diligence only on indirect clients that have residence/domicile in risky countries (from an AML perspective); c. on indirect clients that have residence/domicile in non- risky countries, data (name, surname, residence, date of birth) are run through an automated professional tool that searches matches against sanctions/AML lists, convictions, adverse media. è For indirect clients purchasing through independent dealers, the “simplified” due diligence at manufacturer level should be permitted where the dealer is itself an obliged entity and performs enhanced CDD on the end customer. 3) Furthermore, manufacturer will provide our worldwide dealers network with an AML framework that includes draft of AML policies that they shall apply, suggestions on an automated search tool to be purchased/used by them.
automobili lamborghini spa	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We suggest targeted guidance or Q&As for the automotive sector to clarify expectations and reduce unnecessary administrative burden. About CDD, when selling a car, it means that the data underneath shall be kept actual and verified/updated from time to time? (either 1 or 5 years – both do not really make sense).
automobili lamborghini spa	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Name of the respondent	Question	Answer
	of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
automobili lamborghini spa	Please justify your answer to the previous question and provide evidence where possible.	the costs depends on the details about how to implement the new regulation. the disruptive effect (in terms of privacy needs from the customer more than costs itselves) might be in countries where aml legislation is not advanced as in EU
Banco de Sabadell	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	They cannot be applied in a fully proportionate manner across the entire range of products and services, in particular with respect to low risk products (such as basic payment accounts). Therefore, in general terms, the obligations set out in the RTS should be adjusted to ensure a proportionate application aligned with the risk based approach. The proposed specific wording is as follows: “The measures and criteria established in this RTS shall be applied in a proportionate and risk based manner, taking into account the type of product or service, the distribution channel, the customer profile and the business model of the

Name of the respondent	Question	Answer
		obliged entity. Their application shall not result in a uniform or automatic treatment of all products and services.”
Banco de Sabadell	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In general terms, the draft allows for the application of a risk based approach; however, such approach is not fully ensured where the provisions are interpreted in a uniform or prescriptive manner. To reinforce it, it would be necessary to explicitly clarify that customer due diligence requirements should be applied in a proportionate and flexible manner, taking into account the product, distribution channel, customer profile and business model, while avoiding automatic approaches and ensuring that the measures applied are commensurate with the actual AMLCFT risk. Furthermore, we consider that there are certain provisions that could be adjusted to ensure a proportionate application aligned with the risk based approach, in particular: 1.Article 6 – Verification through equivalent documents: “[…] complies with the majority of the conditions […] or provides, either on its own or in combination with other reliable and independent sources, an equivalent level of assurance.” 2.Adjustment to Article 12 (complex ownership structure): “[…] three or more layers […] unless, following a risk based analysis, the obliged entity determines that the structure is transparent and serves a legitimate economic purpose.” 3.Article 18: “The information referred to in this Article shall be obtained only to the extent necessary and proportionate, taking into account the level of risk and the characteristics of the customer, product, service and delivery channel.” The proposed specific wording is as follows: “The criteria set out in this Article shall be applied exclusively

Name of the respondent	Question	Answer
		on the basis of the information that the obliged entity has or can reasonably be expected to have available, in line with its business model, service delivery channels and applicable regulatory obligations. The application of these criteria shall not entail an obligation to collect additional information from the customer nor to implement controls that are characteristic of transaction monitoring or ongoing monitoring of business relationships, which fall outside the scope of this RTS."
Banco de Sabadell	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are situations in which the information required under the draft RTS is not normally available, or cannot be reasonably obtained, particularly considering the diversity of customers, jurisdictions and business models. For example, customers from third countries may hold official documents that do not include a signature or an expiry date. In addition, regarding beneficial ownership in international structures (Articles 11 and 12), reliable beneficial ownership registers are not always accessible, and the information available may be incomplete or not up to date. Furthermore, there may also be cases involving occasional or low risk customers, particularly in digital channels, where not all information on certain links or future behavioural patterns is available. For these reasons, and as indicated in previous questions, we consider it appropriate to explicitly reinforce that the requirements should be applied in a proportionate and risk based manner, considering the product, delivery channel, customer profile and operating model, while avoiding automatic approaches.
Banco de Sabadell	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	We consider that the draft RTS could be strengthened by incorporating additional simplified due diligence measures for products and services that present an inherently low AML/CFT

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	risk, such as those with limited functionalities or that are subject to strict limits on amount and usage. By way of example, and taking Spanish regulation as a reference, listed companies whose securities are admitted to trading on a regulated market in the European Union or in equivalent third countries, as well as their branches and majority owned subsidiaries, are eligible for the application of simplified due diligence measures, such as not identifying the beneficial owner. However, pursuant to Article 65 of Regulation (EU) 2024/1624, the exemption from beneficial ownership identification for listed companies is subject to cumulative conditions that, in practice, would prevent the application of this exemption in all cases. This is because, for a company listed on a regulated market, it is highly unlikely that all the conditions for not identifying the beneficial owner would be met simultaneously, given that such companies are rarely controlled exclusively by a single natural person holding voting rights and usually involve additional legal entities or legal arrangements as part of their ownership or control structure. Proposed wording: “Where, on the basis of a risk assessment, it is determined that a customer, product or service presents a low risk of money laundering or terrorist financing, obliged entities may apply additional simplified due diligence measures, including a reduction in the scope of information collected or a lower frequency of customer data updates, provided that such measures are consistent with the identified risk profile.”
Banco de Sabadell	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	We could not find Question 1 [Do you agree with the proposals set out in these draft RTS?]; therefore, we include our response to this question below: In general terms, the entity agrees with the proposals included

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	in the draft RTS. However, we consider that certain provisions could be adjusted to ensure a proportionate application aligned with the risk based approach. 1. Article 6 – Requirements for equivalent documents:The requirement to meet all conditions cumulatively may prove restrictive, particularly in the case of customers from third countries whose official documents do not include all the required elements (for example, the absence of a signature or an expiry date). This may lead to financial exclusion or unnecessary onboarding difficulties, without delivering a proportionate benefit in terms of risk mitigation. 2. Article 12(1) – Definition of “three or more layers” between the customer and the beneficial owner: This quantitative criterion may result in the classification of ownership structures as complex even where they are transparent and driven by legitimate economic reasons (for example, multinational groups with standardised structures). This may give rise to unnecessary compliance burdens without enhancing risk identification. 3. Article 18 – Scope of information on purpose, activity and funds (points a–e): The level of detail required may be excessive in low risk scenarios, generating friction in the customer experience and reducing efficiency from a risk management perspective. In this context, consideration should be given to the extent to which institutions forming part of a group may rely on a “single customer view” for the purposes of complying with Article 18 of the RTS. In particular, the ability to leverage customer information obtained and verified by other entities within the same group could contribute to a more comprehensive and

Name of the respondent	Question	Answer
		coherent understanding of the purpose and intended nature of the business relationship, while reducing unnecessary duplication of efforts and fostering greater consistency in risk assessments across the group. However, the current draft RTS does not explicitly clarify whether, and under which conditions, such an approach is permissible. This gives rise to potential uncertainty in the interpretation and application of the requirements. Considering the above, it is proposed to seek clarification through the public consultation on the following point: Should the RTS explicitly recognise the possibility for institutions to rely on a group-wide “single customer view” for the purposes of complying with Article 18, including the use of customer information obtained by other entities within the same group, and, if so, what minimum conditions and safeguards (e.g. data quality, governance, accountability, and data protection requirements) should be established to ensure its appropriate use?

Bank of Cyprus	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The draft RTS appears to move toward a highly prescriptive CDD framework, which may reduce flexibility in applying the risk-based approach. Such excessive standardisation may lead to a “tick-box” approach, and difficulty in tailoring CDD depth to genuinely low-risk customers. We suggest that it is clearly stated that the RTS requirements are minimum baselines, not exhaustive checklists, while institutions are allowed to scale CDD measures based on documented risk assessments.
Bank of Cyprus	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Article 23 - Customer identification data updates in low-risk situations: In light of the Bank’s efforts to enhance efficiency through stronger systems and controls and a more effective risk based approach, the RTS should clarify that, for low risk customers, obliged entities may choose to rely on perpetual reviews—supported by continuous data analytics, behavioural transaction monitoring triggers, and the ongoing updating of expired KYC data—as an alternative to conducting customer

Name of the respondent	Question	Answer
		reviews at fixed periodic intervals. This would also improve client service for low risk customers.
Bank of Cyprus	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	no
Bank of Cyprus	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Please see my reply to question 2.
Bank of Cyprus	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 5 – Specification of nationalities: There may be practical difficulties in obtaining all nationalities of a customer. What is the liability of an obliged entity if a customer fails to disclose all nationalities? Article 6 -Documents for verification of identity (par 4): The RTS states that "when original documents are in a foreign language, obliged entities shall ensure that they understand their content". Further clarification should be provided as to what is meant by "understand their content". Would a translation using an AI tool suffice?

Name of the respondent	Question	Answer
Bank of Cyprus	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Bank of Cyprus	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Bank of Cyprus	Do you have any comments on the Annex in the draft RTS?	No
Bank of Cyprus	How would you rate the proposals set out in the draft RTS overall?	Good
Bank of Cyprus	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact

Bank of Cyprus	Please justify your answer to the previous question and provide evidence where possible.	Several systemic changes will need to be made to capture the new KYC information. Also significant time will be spent to update KYC on existing clients.
Bank of Valletta p.l.c.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more	N/A - No feedback pertaining to this question.

Name of the respondent	Question	Answer
	appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Bank of Valletta p.l.c.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	A. Article 8 - We recommend that Article 8 be amended to clarify that a person empowered to certify documents within the relevant jurisdiction, when acting in their professional (and personal) capacity shall be considered as fulfilling the requirements of an independent professional, irrespective of other considerations. Imposing other considerations may result in unnecessary burden and cost on obliged entities and their customers. We suggest re-wording Article 8(b) as follows: "In order to determine whether a source of information is reliable and independent, obliged entities shall take risk-sensitive measures to assess: … b) the official status and independence of the information source. A person empowered to certify documents within the relevant jurisdiction in a professional capacity shall be considered as an independent and reliable source." B. Article 6(2) - Article 6(2) sets out a basic set of requirements for documents used to verify identity in cases involving stateless persons, refugees, or those with subsidiary protection. Given the basic nature of the listed details (name, surname, date of birth, and facial image), these are typically present in documents issued by a state/public authorities in such contexts. Therefore, the inclusion of the final sentence, which allows obliged entities to seek this information through “other credible means” if the document lacks any of the listed elements, appears barely applicable. In practice, the primary purpose of such documents is to confirm the applicant’s legal

Name of the respondent	Question	Answer
		status and right to remain in a country during the procedure. These documents are not standardised at EU level, and their content is determined by national law. Considering the vulnerability of these individuals and the central protecting role of the state in issuing such documents, it is highly unlikely that the obliged entity could get further reliable identification information elsewhere. Moreover, if a document fails to meet requirement (a) being issued by a state or public authority it is unclear how an obliged entity could credibly obtain or verify the remaining information. As such, the provision appears impractical and we suggest considering the removal of the following within Article 6(2): "If the document provided does not include information stipulated in the points of the first subparagraph, obliged entities shall use other credible means to obtain this information." C. Article 7 - Where the solution described in Article 7, paragraph 1 is not available or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person's identity document, passport, or equivalent, using remote solutions that meet the conditions set out in paragraph 3. In such cases, obliged entities shall be able to demonstrate to their competent authority that the remote verification solutions used comply with the requirements of paragraph 3 and shall justify why the customer could not be verified using the means referred to in Article 22(6) of Regulation (EU) 2024/1624. To clarify this approach, it is suggested that Article 7(2) be amended to refer only to the conditions set out in paragraph 3 and delete reference to paragraph 4, and that paragraph 4 be amended to clearly state that the demonstration and justification mechanism applies exclusively

Name of the respondent	Question	Answer
		to alternative remote solutions used pursuant to paragraph 2. References to both paragraphs 3 and 4, together with the lack of a clear specification of the alternative remote solutions described in paragraph 3, may otherwise give rise to misinterpretation of the alternative procedure provided for under this Article. “2. In cases where the solution described in paragraph 1 is not available, or cannot reasonably be expected to be provided, obliged entities shall obtain the natural person’s identity document, passport or equivalent using remote solutions that meet the conditions set out in paragraphs 3. … 4. Obliged entities using remote solutions other than those described in paragraph 1, and meeting the conditions set out in paragraph 3, shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of paragraphs 2 and 3 of this Article. They shall also be able to justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624.” D. Article 10(b)(iv) - Documents issued by the legal entity or legal arrangement identifying the beneficial owner are an appropriate and commonly used source for verification. However, as these documents originate from the customer itself, we do not consider it appropriate to categorise them as third party sources. Moreover, such documents should, in themselves, be considered sufficient to verify the identity of the beneficial owner, provided that they are assessed as reliable. ... continued in Question 3 below.

Name of the respondent	Question	Answer
Bank of Valletta p.l.c.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	... continued from Question 2 above re Article 10(b)(iv): The additional requirement that "the identity of the named person is certified by persons authorised for document certification purposes" does not appear practical in all cases. Certification typically requires the certifier to identify the individual in person by reference to an identity document, a step which is not necessarily embedded in standard corporate or legal arrangement documentation. We therefore consider that the focus should be placed on the reliability and authenticity of the document itself, rather than requiring a further certification of the beneficial owner's identity. We suggest rewording Article 10(b)(iv) as follows: "Reliable documents from the legal entity or the legal arrangement identifying the beneficial owner" Reply to Question 3: Article 6(4) - Article 6(4) clarifies the following: "When original documents are in a foreign language, obliged entities shall ensure that they understand their content." This provision raises the following questions: • Does this understanding need to be formally documented? • Is a screenshot of an automated translation sufficient? • Must the responsible officer sign the translation to confirm their understanding? To ensure the practical applicability of this provision, we propose adding the following clarification:

Name of the respondent	Question	Answer
		"If the translation is carried out by an officer within the obliged entity, they should sign or e-sign the translated document to confirm their understanding. In cases where an automated translation is used, a screenshot of the translation, accompanied by the signature or e-signature of the responsible officer, shall be considered sufficient to demonstrate that the content of the foreign-language document has been understood by the obliged entity."
Bank of Valletta p.l.c.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	N/A - No feedback pertaining to this question.
Bank of Valletta p.l.c.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1. Article 4 - We suggest a slight amendment to the wording of Article 4 of the current RTS with respect to the indication of the country name. For consistency purposes, and in order to allow obliged entities to apply a uniform approach within their systems when collecting and categorising information of the same nature (in this case, country-related information), Article 4 should cross-refer to Article 3. Article 3 already clarifies how such information is to be collected and categorised within the systems of obliged entities. A cross-reference would therefore reduce ambiguity and ensure alignment across the RTS. "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the full country name or its abbreviation as referred to

Name of the respondent	Question	Answer
		in Art. 3(a) of this Regulation. Should the identity document, passport or equivalent of the customer provide additional information on place of birth, such information shall be collected." 2. Article 11(4) - We suggest amending this provision to make it easier to apply in practice and easier to demonstrate to supervisors. Compliance should not be based only on the obliged entity's judgement but should also be supported by evidence that can be shown to supervisors when requested. While the risk-based approach remains important, Level 2 legislation should give clearer direction on how legal requirements are to be applied and documented in practice. In this context, we suggest replacing Article 11(4) as follows: "4. When obliged entities assess the ownership and control structure, they must be satisfied that: (a) the information describing the ownership and control structure is reasonable and adequately understood by the obliged entity; (b) the structure reflects an identifiable economic, legal or commercial rationale; and (c) the ownership and control structure has been taken into account in the assessment of the money laundering and terrorist financing risk associated with the customer." 3. Article 12(1)(d) - Article 11 requires obliged entities to assess whether there is an economic, legal or other legitimate rationale underpinning the ownership and control structure of the customer. In practice, where such rationale cannot be established, this would preclude the establishment or continuation of the business relationship, and the obliged entity should consider submitting a report where the circumstances give rise to suspicion. At the same time, Article 12(1)(d), refers to structures that obfuscate or diminish

Name of the respondent	Question	Answer
		transparency of ownership with no legitimate economic rationale or justification, appears to be allowed and obliged entities should repeat this assessment. This duplication may create ambiguity as to whether a separate or additional test is required under Article 12. Thus, the below amendment to Article 12(1) is being proposed also with the purpose to align the language with provisions under Art. 34(2)(d) of the AMLR: "(d) the structure does not have an apparent economic or lawful purpose." 4. Article 18(2) - We suggest clarifying that the information listed under Article 18(2)(a) is not intended to be fully alternative, and that only points (ii) and (iii) should be treated as alternatives to each other. In particular, the information required under point (i) should be obtained cumulatively together with the information under point (ii) or point (iii), as applicable, in order to enable the obliged entity to properly understand the purpose and intended nature of the business relationship or occasional transaction. Furthermore, the assessment envisaged under point (iv) (additional business relationships), where applicable, appears to constitute a separate and additional assessment, to be conducted in addition to the information collected under points (i) and (ii) or points (i) and (iii), respectively. As currently drafted, this cumulative application and the distinction between alternative and non-alternative elements are not sufficiently clear. We therefore suggest the following clarification: Article 18 - Identification of the purpose and intended nature of a business relationship or occasional transaction: "For the purposes of Article 20(1), point (c), and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, where necessary: (a) in relation to the purpose and economic rationale of the

Name of the respondent	Question	Answer
		occasional transaction or business relationship, taking into account the nature of the product or service provided, the following information: i. the reason the customer has requested the obliged entities' products or services; and ii. either the intended use of such products or services or, where the relationship is limited to an occasional transaction, the purpose of that transaction; and iii. whether the customer has additional business relationships with the obliged entity or its wider group, and such information is consistent with the obliged entity's understanding of the customer."

Name of the respondent	Question	Answer
	allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Bank of Valletta p.l.c.	Please justify your answer to the previous question and provide evidence where possible.	Overall the draft RTS is well structured and generally well explained. The provisions largely build on already existing requirements and align quite closely with current supervisory expectations, which facilitates their application. Certain sections could benefit from further clarification and refinement of wording (hence our feedback for clarifications), particularly where wording may be open to interpretation, these should be more clearly explained. One-off implementation costs The implementation of the draft RTS is expected to result in manageable costs, primarily driven by some system enhancements, procedural and policy updates, and staff adaptation requirements, rather than a fundamental overhaul of the existing framework. Recurrent costs In terms of recurrent costs, there could be a limited increase potentially, particularly in relation to for example enhanced monitoring and periodic review activities (now that they are going to be fixed periodic reviews). However, we think that these recurring costs can remain proportionate and will not continue to increase given BOV's current level of staff resources, knowledge and alignment with our local FIAU expectations.

Name of the respondent	Question	Answer
Banque de Patrimoines Privés	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We broadly agree that the draft RTS can be applied across the range of products and services provided by our institution, including private banking, depositary, custody, fund administration and transfer agency services relating to collective investment structures. However, certain provisions would benefit from additional clarification to ensure effective and proportionate application, particularly in the Luxembourg investment fund industry where structures are frequently cross-border, multi-layered and distributed globally. Provisions relating to remote customer identification appear to implicitly favour eIDAS-compliant electronic identification means. While appropriate in some contexts, many investors in Luxembourg investment funds are located outside the European Union and do not have access to such tools. Documentary verification methods combined with robust AML/CFT controls therefore remain an essential onboarding mechanism. We therefore suggest clarifying that, where eIDAS-compliant electronic identification means are not reasonably available, obliged entities may rely on documentary verification methods and other reliable and independent sources of information, provided that the measures applied remain commensurate with the ML/TF risk identified. This would better reflect Article 22(6) of Regulation (EU) 2024/1624, which does not establish a hierarchy between verification methods. In relation to Article 6(3), while obliged entities should take

Name of the respondent	Question	Answer
		reasonable steps to ensure that identification documents are authentic and have not been forged or tampered with, the practical expectations should remain proportionate to the expertise, tools and resources reasonably available to obliged entities. Additional AMLA guidance on the specific elements, features or red flags to be reviewed would improve consistency and legal certainty. Article 6(5) would also benefit from clarification as to whether the requirement to obtain the identity document “from that person” means that the document must be provided directly by the person concerned, or whether it may also be provided by a duly authorised proxy, representative or intermediary, particularly in fund distribution and investor onboarding contexts. Several provisions also appear primarily designed around traditional bilateral customer relationships and do not sufficiently reflect the operational realities of collective investment structures. In practice, AML/CFT understanding often derives from the overall structure and the interaction between multiple stakeholders, including the fund vehicle, AIFM, sponsor/initiator, intermediaries, distributors and investors. We therefore suggest clarifying that, in the context of collective investment undertakings and similar structures, obliged entities may apply a proportionate approach taking into account the characteristics of the structure, the role of the parties involved and the nature of the services provided.

Name of the respondent	Question	Answer
		In relation to Article 10, it should be clarified that the reasonable measures referred to concern the verification of the identity of the beneficial owner. The reference to utility bills would also benefit from further explanation, as such documents are generally more relevant to verify an address than to verify identity. Further clarification would also be useful regarding the interaction between Article 11(2)(a) and Article 12(2), in particular the distinction between the description of the ownership and control structure and the additional information required for complex corporate structures. Practical guidance on the documents expected and their purpose would support consistent implementation. Similarly, the minimum attribute framework in Annex I appears mainly designed for the identification of single natural or legal persons in a digital identity context and does not sufficiently capture the interconnected nature of investment fund structures. It should therefore be clarified that the minimum attributes do not prevent obliged entities from collecting additional structural, governance or contextual information where necessary to appropriately assess ML/TF risks. Finally, Article 28 would benefit from clarification as to its scope of application. Given its inclusion under Section 6 on enhanced due diligence measures and its reference to Article 34(4) of Regulation (EU) 2024/1624, it should be confirmed that the requirement applies in enhanced due diligence situations and does not create a systematic obligation under simplified or standard due diligence.

Name of the respondent	Question	Answer
		Overall, additional clarification on proportionality, documentary verification, complex fund structures and the scope of certain enhanced due diligence requirements would improve legal certainty and operational applicability while remaining aligned with the objectives of the AML package.
Banque de Patrimoines Privés	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We broadly agree that the draft RTS are intended to support the effective application of a risk-based approach to AML/CFT compliance and that many provisions appropriately promote greater harmonisation and consistency across the EU framework. However, certain provisions may unintentionally reduce the flexibility necessary for obliged entities to tailor controls to the specific ML/TF risks identified, particularly in the context of cross-border investment fund structures and globally distributed investor bases. Provisions relating to remote customer identification and verification appear to place significant emphasis on eIDAS-compliant electronic identification means. While these tools may enhance reliability and efficiency in some contexts, many investors in Luxembourg investment funds are located outside the European Union and may not have access to such solutions. Documentary verification methods combined with additional risk-based controls therefore remain necessary and effective. We therefore suggest clarifying that obliged entities may apply alternative documentary or non-eIDAS verification methods where appropriate, provided that the measures applied remain

Name of the respondent	Question	Answer
		commensurate with the ML/TF risks identified and allow the obliged entity to obtain reasonable assurance as to the customer's identity. This would better reflect Article 22(6) of Regulation (EU) 2024/1624, which does not establish a hierarchy between verification methods. In relation to Article 6(3), the obligation to ensure that documents are authentic and have not been forged or tampered with should remain proportionate to the expertise, tools and resources reasonably available to obliged entities. Additional AMLA guidance on relevant security features, controls and red flags would improve consistency and support a more effective risk-based application. Article 6(5) would also benefit from clarification as to whether identity documents may be provided through duly authorised proxies, representatives or intermediaries, particularly in cross-border fund distribution models. Several provisions also appear primarily designed around traditional bilateral customer relationships and may not sufficiently accommodate the complexity of collective investment structures. In practice, AML/CFT risk assessments in the investment fund sector often require consideration of multiple interconnected parties, including the fund vehicle, AIFM, sponsor/initiator, intermediaries, distributors and investors. We therefore suggest clarifying that, in the context of collective investment undertakings and similar multi-party structures, obliged entities may apply a proportionate and risk-sensitive approach taking into account the nature of the structure, the

Name of the respondent	Question	Answer
		role of the parties involved and the services provided. In relation to Article 10, it should be clarified that the reasonable measures referred to concern the verification of the identity of the beneficial owner. The reference to utility bills would also benefit from further explanation, as such documents are generally more relevant for verifying an address than identity itself. Further clarification would also be useful regarding the interaction between Article 11(2)(a) and Article 12(2), particularly regarding the distinction between the description of the ownership and control structure and the additional information required for complex corporate structures. Practical guidance on the documents expected and their purpose would support consistent implementation while preserving proportionality. Similarly, the minimum attribute framework in Annex I appears primarily focused on the identification of individual natural or legal persons and may not sufficiently capture the broader governance, ownership and structural elements relevant for assessing ML/TF risks in investment fund structures. It should therefore be clarified that obliged entities may collect additional structural, governance or contextual information where justified by the ML/TF risks identified. Finally, Article 28 would benefit from clarification as to its scope of application. Given its inclusion under Section 6 on enhanced due diligence measures and its reference to Article 34(4) of Regulation (EU) 2024/1624, it should be confirmed

Name of the respondent	Question	Answer
		that the requirement applies in enhanced due diligence situations and does not create a systematic obligation under simplified or standard due diligence.
Banque de Patrimoines Privés	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Certain categories of information contemplated by the draft RTS may not always be routinely available, particularly in the context of cross-border investment fund structures and globally distributed investor bases. In some situations, the draft RTS do not sufficiently clarify the alternative measures that obliged entities may apply where such information cannot reasonably be obtained despite appropriate and documented efforts. A first example relates to remote customer identification and verification. Many investors in Luxembourg investment funds are located outside the European Union and may not have access to eIDAS-compliant electronic identification means or equivalent digital identity solutions. In practice, documentary verification methods, certified documentation, reliance on regulated intermediaries and additional risk-based controls are frequently used to obtain an appropriate level of assurance regarding the customer's identity. We therefore believe the RTS should expressly clarify that, where specific electronic identification solutions are unavailable, obliged entities may rely on alternative documentary or non-digital verification methods, provided that these are supported by risk-sensitive mitigating measures and allow the obliged entity to obtain reasonable assurance as to the customer's identity. In relation to Article 6(3), obliged entities may also face

Name of the respondent	Question	Answer
		practical limitations in assessing the authenticity of foreign identification documents where no specialised tools, databases or expertise are available. Additional AMLA guidance on relevant security features, red flags and reasonable verification expectations would therefore be beneficial. Article 6(5) would also benefit from clarification regarding whether identity documents may be provided through authorised representatives, intermediaries or proxies, particularly in the context of investment fund distribution models involving nominees, distributors or regulated intermediaries. A second example concerns complex investment fund structures involving multiple intermediaries, nominees, distributors or omnibus arrangements. In such situations, certain information relating to underlying investors, governance arrangements or structural relationships may not always be directly accessible to the obliged entity at onboarding stage, particularly where regulated intermediaries are involved across multiple jurisdictions. In these cases, the RTS would benefit from expressly recognising that obliged entities may apply alternative risk-based measures, including: reliance on regulated intermediaries subject to equivalent AML/CFT requirements; obtaining confirmations or representations from regulated counterparties; collecting information progressively based on trigger events or

Name of the respondent	Question	Answer
		risk indicators; and applying enhanced ongoing monitoring and escalation measures where appropriate. Similarly, in relation to Article 10, certain documentation listed as possible verification measures for beneficial owners may not always be available or appropriate in practice. Further clarification regarding acceptable alternative documentation and the distinction between identity verification and address verification would therefore improve operational applicability. Additional clarification would also be useful regarding the interaction between Article 11(2)(a) and Article 12(2), particularly regarding the distinction between the description of the ownership and control structure and the additional information required in complex corporate structures. In practice, it may not always be clear which specific documents are expected or how far obliged entities are expected to go in obtaining information relating to intermediate layers located in multiple jurisdictions. Similarly, the minimum attribute framework in Annex I appears primarily designed for the identification of single natural or legal persons and may not sufficiently capture the broader governance, ownership and structural elements necessary to assess ML/TF risks in investment fund structures. Additional contextual or structural information may therefore still need to be obtained through alternative means depending on the nature and complexity of the structure. More generally, we believe the RTS should more explicitly

Name of the respondent	Question	Answer
		recognise that, where specific CDD information cannot reasonably be obtained despite appropriate and documented efforts, obliged entities may apply alternative risk-sensitive measures and compensating controls, provided that: the rationale is documented; residual risks are assessed and mitigated; and appropriate monitoring or escalation measures are implemented where necessary. Such clarification would better reflect the practical realities of cross-border financial services and investment fund activities while remaining fully consistent with the principles of proportionality and the risk-based approach underpinning the EU AML/CFT framework.
Banque de Patrimoines Privés	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Considering the nature of the investment fund industry, involving multiple regulated actors operating on a cross-border basis (including fund vehicles, AIFMs, management companies, distributors, nominees, transfer agents and depositaries), we believe the draft RTS could further clarify the application of simplified due diligence measures in low-risk situations where equivalent AML/CFT controls are already performed by regulated entities within the structure. In particular, we believe the RTS could clarify that, subject to a documented risk assessment and the absence of higher-risk indicators, obliged entities may: avoid unnecessary duplication of information already obtained and verified by another regulated obliged entity; place greater reliance on official registers, regulated offering

Name of the respondent	Question	Answer
		documentation and confirmations from regulated counterparties; apply proportionate refresh or reverification measures for long-standing low-risk regulated relationships; calibrate the extent of information collection to the specific role performed by the obliged entity within the structure; and rely on alternative documentary verification methods where eIDAS-compliant electronic identification means are not reasonably available, provided that appropriate risk-sensitive mitigating measures are applied. Additional clarification would also be welcome regarding the practical application of Articles 6(3) and 6(5) in lower-risk situations, including the extent of the verification measures reasonably expected in relation to foreign identification documents and the possibility to obtain documentation through duly authorised representatives, intermediaries or regulated distributors. Similarly, in relation to Article 10, the RTS could clarify that, in low-risk situations, obliged entities may rely on proportionate and risk-sensitive measures for the verification of beneficial owners, including alternative forms of documentation where standard evidence is not reasonably available. Further clarification regarding the interaction between Article 11 and Article 12 would also be beneficial in low-risk or well-regulated structures, particularly to avoid unnecessary duplication of documentation relating to ownership and control structures where equivalent information is already available through reliable and independent sources.

Name of the respondent	Question	Answer
		In addition, the minimum attribute framework in Annex I could expressly recognise that, in low-risk situations, obliged entities may adapt the extent of additional structural or governance-related information collected depending on the nature, complexity and transparency of the structure involved. Such clarifications would not reduce AML/CFT safeguards but would instead promote greater operational efficiency, reduce unnecessary duplication and better reflect the practical organisation of regulated cross-border investment fund structures, while remaining fully aligned with the principles of proportionality and the risk-based approach underpinning Regulation (EU) 2024/1624.
Banque de Patrimoines Privés	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We do not have additional observations beyond those already provided above.
Banque de Patrimoines Privés	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Banque de Patrimoines Privés	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Banque de Patrimoines Privés	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Banque de Patrimoines Privés	How would you rate the proposals set out in the draft RTS overall?	Neutral
Banque de Patrimoines Privés	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Manageable impact
Banque de Patrimoines Privés	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? Name of the respondent	Question	Answer
	rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Banque de Patrimoines Privés	Please justify your answer to the previous question and provide evidence where possible.	The implementation of the draft RTS is expected to generate manageable one-off and recurrent costs for our institution. One-off costs would mainly relate to updates to AML/CFT policies and procedures, onboarding and CDD frameworks, staff training, internal guidance documentation and potential adjustments to IT systems and data collection processes. Recurrent costs may arise from additional operational analysis, ongoing monitoring requirements and periodic updates to customer information collection processes, particularly in the context of complex cross-border investment fund structures. At this stage, the precise impact remains difficult to fully quantify as the RTS are still in draft form and certain

Name of the respondent	Question	Answer
		implementation expectations remain subject to further clarification.
Belgian National Chamber of Notaries	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Yes. In principle, the draft RTS can be applied across the range of services provided by the Belgian notarial profession. However, in order to ensure effective, proportionate and legally certain application in practice, several clarifications would be beneficial. First additional flexibility is needed for cases in which customer information cannot reasonably be obtained in documentary form, despite the absence of elevated ML/TF risk. This issue arises in particular in succession matters, family law matters, estate planning files and certain judicial or statutory appointments. In such contexts, historical source documentation may simply no longer exist, may never have existed in formal documentary form, or may be objectively inaccessible. The RTS should therefore clarify that a documented and reasoned plausibility assessment, based on the consistency of the information available and the legal and factual context of the file, may suffice where documentary evidence is objectively unavailable. Second, the RTS should better reflect the specific position of obliged entities whose intervention is mandated by law. In the majority of Belgian notarial matters, the notary cannot freely choose whether to enter into the relationship and cannot always refuse or postpone the intervention in the same way as a commercial service provider (most type of Obliged Entities). In such cases, compliance cannot be based solely on the logic of client selection or refusal, but must rely on enhanced due

Name of the respondent	Question	Answer
		diligence, appropriate documentation, and, where necessary, reporting obligations. The RTS should explicitly acknowledge this distinction.
Belgian National Chamber of Notaries	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Yes. Overall, the draft RTS appropriately preserve the role of professional judgement, provided that such judgement is documented, reasoned and capable of being reviewed by supervisors. This is consistent with the way AML/CFT obligations are currently applied and supervised in the Belgian notarial profession. That said, the risk-based approach would be strengthened by clarifying that the objective unavailability of certain documents should not automatically be equated with a higher ML/TF risk. In practice, there is an important distinction between, on the one hand, the absence of documentary evidence due to the historical, familial or legal nature of a matter and, on the other hand, inconsistencies, opacity or indicators of concealment that genuinely point to increased risk. The RTS should make this distinction more explicit. Otherwise, there is a real risk that the framework will be applied too formalistically, with the absence of documents being treated as a risk indicator in itself, irrespective of the actual circumstances. A risk-based approach should not be reduced to a checklist exercise. It should remain possible for obliged entities to rely on a combination of official registers, authentic instruments, legal context, the nature and purpose of the legal act, and reasoned explanations provided by the parties, where this allows the obliged entity to reach a sufficiently reliable conclusion. We therefore support the overall approach of the RTS, while encouraging AMLA to clarify that the risk-based methodology must remain genuinely substantive, proportionate and compatible with situations in

Name of the respondent	Question	Answer
		which legal certainty can be achieved through means other than standard documentary evidence.
Belgian National Chamber of Notaries	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes. Due to the nature of notarial activities, there are recurring situations in which certain information required under standard customer due diligence cannot always be obtained in documentary form, despite the absence of elevated ML/TF risk. Concrete examples include: Succession and inheritance files, where the source of wealth may relate to assets built up over several decades or generations and where historical documentation is no longer available; Family law and estate planning matters, where assets are reorganised, allocated or regularised rather than newly introduced into the financial system; Judicial or statutory appointments, where the notary intervenes by operation of law and not at the initiative of the client. In these situations, Belgian notaries apply a risk-based plausibility assessment, relying on: the consistency of information across official and public registers; the legal and factual context of the transaction or legal act; the nature and purpose of the file; the internal coherence of the explanations provided by the parties; the notary's own legal assessment, based on professional

Name of the respondent	Question	Answer
		knowledge, experience and statutory verification duties. We therefore suggest that the RTS or accompanying guidance explicitly clarify that: A reasoned assessment of plausibility and consistency may suffice where documentary evidence is objectively unavailable; The absence of historical documentation should not, in itself, automatically constitute a higher-risk indicator; Supervisory expectations should remain proportionate and should not encourage a purely formalistic or box-ticking approach to CDD.
Belgian National Chamber of Notaries	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	1. Explicit recognition of existing statutory verifications Where identification and verification are already performed under mandatory notarial law (e.g. identity checks, verification of legal capacity, consultation of public registers), these verifications should be explicitly recognised as fulfilling equivalent AML due diligence requirements, so as to avoid duplication. 2. Broader reliance on public and official registers In low-risk cases involving Belgian or EU legal persons, consultation of authoritative public registers (e.g. business register, land register, population register) should be sufficient without requiring additional corroborating documents. 3.Recognition of authentic instruments as reliable and independent sources Authentic instruments drawn up by legally regulated public officers should be expressly recognised as reliable and independent source documents, unless there are specific and documented reasons to doubt their accuracy or relevance. This

Name of the respondent	Question	Answer
		would reflect their evidentiary value and the legal guarantees attached to their preparation.
Belgian National Chamber of Notaries	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The Belgian notarial profession wishes to underline the importance of explicitly recognizing the specific role of notaries as legally regulated public officers acting as preventive gatekeepers. Indeed, the Belgian notarial profession operates under a dual mandate: notaries are simultaneously public officers appointed by the State and AML-obliged entities. This dual status has direct consequences for the application of Customer Due Diligence requirements that the draft RTS does not currently reflect with sufficient precision. In this respect, the following amendments are proposed: 1. Article 8 lists criteria for assessing reliability and independence of information sources but does not reference authentic instruments issued by legally regulated public officers. An authentic notarial deed satisfies all five criteria of Article 8 simultaneously by definition: it is drawn up by a State-appointed officer (8(a) and 8(b)), dated at execution (8(c)), personally verified and attested by the notary (8(d)), and protected by stringent security frameworks (8(e)). Legal certainty requires explicit recognition. Proposed addition of an Article 8(2): "Authentic instruments drawn up by a legally regulated public officer subject to AML/CFT obligations under Regulation (EU) 2024/1624, including notarial deeds, may be considered reliable and independent sources of information for the purposes of paragraph 1." “This amendment is intended to provide legal certainty and harmonised recognition of a source that in practice already meets the Article 8 criteria, without removing the risk-based approach.”

Name of the respondent	Question	Answer
		2.Unlike financial institutions, which retain full discretion to block a transaction when (enhanced) CDD requirements are not fully satisfied, notaries operating under a statutory duty to act cannot always refuse to draw up a deed even when certain information remains unavailable or unsatisfactory. This is not a question of deferral: Belgian notaries are independently required by notarial law to verify identity before drawing up any deed and cannot defer that obligation. The issue is strictly one of outcome: the RTS, as currently drafted, implicitly assumes that incomplete information will or can lead to refusal of the transaction. This assumption does not hold for notaries subject to a mandatory obligation to act. The draft RTS does not acknowledge this structural difference between obliged entities that retain full transactional autonomy and those — such as notaries — whose autonomy to refuse is legally constrained by their statutory function. Without such acknowledgment, the RTS risks creating an unworkable standard for notaries in high-risk situations, where full satisfaction of all (enhanced) CDD requirements before proceeding is not always legally or practically achievable. Proposed addition of Article 1(2) of the draft RTS: "Where an obliged entity is subject under national law to a statutory duty to perform an act or transaction and does not retain full autonomy to refuse or suspend that act, the inability to obtain complete enhanced due diligence information required pursuant to Section 6 of this Regulation shall not automatically require refusal of the transaction where such refusal would itself be unlawful or cause disproportionate

Name of the respondent	Question	Answer
		harm. In such cases, that obliged entity shall: (a) document the enhanced due diligence information gaps identified and the legal constraints under national law preventing refusal or suspension of the act; (b) apply enhanced monitoring to the transaction and the business relationship concerned. This paragraph shall not affect any other obligations of the obliged entity under Regulation (EU) 2024/1624 or under applicable national law." Proposed insertion of a new recital (18a), after current recital (18) before recital (19) on enhanced due diligence: "(18a) Certain obliged entities, in particular notaries and other legally regulated public officers subject to a statutory duty to act, do not retain the same autonomy as other obliged entities to refuse or suspend a transaction solely on the ground that not all client due diligence information could be obtained. In such cases, the inability to obtain complete (enhanced) due diligence information shall not automatically require refusal of the transaction where such refusal would itself be unlawful or cause disproportionate harm. Those obliged entities shall apply enhanced monitoring to the transaction and the business relationship concerned, in accordance with the risk-based approach and the principle of proportionality underlying this Regulation."
Belgian National Chamber of Notaries	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Bitkom eV	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	We welcome AMLA's initiative to specify the criteria for Simplified Due Diligence (SDD) and thereby strengthen the risk-based approach. Currently, however, SDD often fails to provide

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	actual time and effort savings compared to standard KYC processes, which undermines its regulatory intent. The resource-intensive "pre-check" required to qualify for SDD often drives obliged entities to default to standard due diligence to avoid legal uncertainty. The primary obstacle in the process is the complexity of the UBO drill-down, particularly regarding legal entities. This exhaustive identification process for corporate structures is the leading cause of SDD underutilization. To ensure that SDD becomes an operationally viable tool, we propose the following: AMLA should provide a list of low-risk factors for SDD (e.g. specific entity types in specific geographies) that are determinable at the very beginning of a business relationship. If a client meets these predefined criteria, obliged entities should be able to apply SDD measures immediately. Without such clarity, SDD offers no practical added value, as the most resource-intensive KYC work would have already been performed
Bitkom eV	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would also like to provide additional observations regarding the risk factors associated with electronic money instruments under Article 31 and Section 8 of the draft RTS under Article 28(1). In this context, we support the changes introduced by the EBA to the risk factors that NCAs should consider when determining the extent of the CDD exemption for e money products, compared to the first draft presented by the EBA (Draft RTS under Article 28(1) – Section 8: Risk factors associated with features of electronic money instruments; Article 31: Risk factors). The EBA has clarified that the risk factors set out in the RTS constitute a non-exhaustive list of examples, which do not

Name of the respondent	Question	Answer
		need to be met cumulatively or in their entirety. NCAs are instead expected to consider the extent to which one or more of these risk factors are present. These clarifications are important, as they enhance legal certainty for both market participants and NCAs. However, we would encourage AMLA to reassess the risk factors in terms of their practical relevance and usability. For example, “the extent to which the payment instrument is issued at a nominal or no charge” is, in our view, not a factor that determines the risk of an e money product being misused for money laundering or terrorist financing purposes. Furthermore, Article 31 points (d) and (e) set out risk factors that closely resemble the criteria applied to products falling under the so-called “limited network / limited range exemption” provided for in the Second Payment Services Directive. Such products fall outside the definition of e money. In our view, the extent to which an exemption for e money products can be applied should not depend on criteria that largely replicate those determining whether a product qualifies as e money in the first place. In addition, we encourage AMLA to remove the risk factor relating to whether the entity distributing an e money product is itself an obliged entity (point (i)). By definition, the CDD exemption provides for the possibility of not applying certain CDD measures. Whether the entity refraining from carrying out specific CDD measures is itself an obliged entity is, in this context, irrelevant. This risk factor is also inconsistent with the EBA’s statement that risk factors should focus solely on the e money product, not on the issuer or its organisational set up. Whether a distributing entity is itself an obliged entity does not relate to the characteristics of the e money product.

Name of the respondent	Question	Answer
Bitkom eV	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Bitkom eV	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	21
Bitkom eV	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	i. Provision concerned: Article 3(1)(c) and (d) of the RTS under Article 19(9), as well as Article 21(1)(b) of the RTS under Article 28(1), in conjunction with the corresponding recitals ii. Rationale for the position: The draft RTS under Article 19(9) and Article 28(1) both require obliged entities to take into account data or information “available to the obliged entity” or “any information provided by the customer, including information that obliged entities may already hold” in different provisions. This includes Article 3(1)(c) and (d) RTS under Article 19(9) as well as Article 21(1)(b) RTS under Article 28(1). The recitals provide further details on the kind of information covered by these provisions. For example, recital (12) of the RTS under Article 19(9) refers to “information available that customers are connected via family ties”, while recital (13) refers to IP addresses, device identifiers and geolocation. In most cases, these kinds of information will constitute personal data within the meaning of Article 4 or even Article 9 GDPR (e.g. sexual orientation may be indicated by family ties). However, the draft RTS do not provide a sufficient legal basis for the processing of such data in accordance with Article 6(c) GDPR, but only require obliged entities to “take into account” such data. Personal data that is already “available to an obliged entity” has been collected for a different purpose and in accordance with a distinct legal basis. As a result, the obliged entity is not

Name of the respondent	Question	Answer
		free to use it for any other purpose as it deems appropriate, in particular without informing the data subject accordingly. iii. Drafting proposal: We therefore suggest deleting the requirement to "take into account" or "consult" such data in the respective RTS. The alternative, a general requirement to obtain such data for AML purposes would lead to an excessive burden of the obliged entities as well as their customers
Bitkom eV	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	22
Bitkom eV	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Timeliness of information provision i. Provision concerned: Article 22 (a) ii. Rationale for the position: "Immediately" is not defined in the RTS or the AMLR. In a digital environment, a supervisor might interpret this as "real-time API access," whereas an operational reality might involve a longer retrieval window for older archived files. In this context, "Immediately" is highly subjective and creates significant legal uncertainty for obliged entities. It creates a risk of technical non-compliance if an obliged entity cannot prove "instant" access to its supervisor. iii. Drafting proposal: Article 22 (a): “(a) the credit institution is satisfied that the account holder will provide the information and documents required pursuant to Article 20(1)(h) of Regulation (EU) 2024/1624 in relation to clients for whom it administers their funds, without undue delay after such request has been made by the credit institution;” Effective supervision requirement i. Provision concerned: Article 22 (c) ii. Rationale for the position: This provision establishes as a condition that the account holder must be “effectively supervised for compliance with obligations as provided for in point (b)”. The issue is that there is no clarity as to what

Name of the respondent	Question	Answer
		“effectively supervised” means. Like the term "satisfied," this is a subjective standard that is not defined in the AMLR or the RTS. Therefore, there is no legal certainty on how an obliged entity (or the account holder itself) shall prove effective supervision. This leaves it to the discretion of the obliged entity and its local auditor to judge whether the supervisor provides "effective" oversight. A supervisor in one member state might consider the supervisory practices of another member state to be insufficient, leading to the rejection of the simplified due diligence (SDD) measures entirely. If "effective supervision" cannot be objectively verified, obliged entities will likely default to full CDD to avoid regulatory risk, rendering the simplification in Article 22 useless in practice. iii. Drafting proposal: Article 22 (c): “(c) the account holder is subject to supervision by a supervisory authority as defined in Article 2(1), point (46), of Regulation (EU) 2024/1624, or, in the case of a third country, is subject to equivalent supervision by a competent authority.” Risk threshold for simplified due diligence i. Provision concerned: Article 22 (d) ii. Rationale for the position: The requirement that the ML/TF risk must be "low" is inconsistent with the threshold established in Article 17(1)(c) for Collective Investment Undertakings, which allows for simplified measures in "low or standard" risk scenarios. Both provisions address fundamentally similar structures where an intermediary manages third-party funds. Restricting Article 22 to "low" risk relationships creates an unlevel playing field and imposes a disproportionate burden on obliged entities. It forces them to justify a "low" risk

Name of the respondent	Question	Answer
		categorization for entities that are already subject to robust EU supervision and CDD requirements. This subjectivity will lead to a fragmented application of the standards, as different supervisors will have varying expectations for what constitutes "low" risk in a cross-border context. iii. Drafting proposal: Remove such a requirement; or “(d) the ML/TF risk associated with the business relationship is low or standard;” Assessment of due diligence standards i. Provision concerned: Article 22 (e) ii. Rationale for the position: Another condition for the application of Article 22 is that the obliged entity must be satisfied that the account holder applied robust and risk-sensitive due diligence measures. However, the terms "satisfied" and "robust" are highly subjective and do not provide the legal certainty required for a harmonized AML/CFT framework. This provision risks creating an unsustainable administrative burden for both credit institutions and the account holders (in such a scenario). Without clear, Union-wide standards for what constitutes "satisfaction," there is a significant risk that credit institutions will default to full, redundant CDD to mitigate potential supervisory criticism, thereby rendering the simplified measures for pooled accounts ineffective. To achieve the AMLA’s objective of operational efficiency and harmonisation, the RTS should specify objective evidence that an obliged entity can use to meet this requirement. This should leverage existing institutional safeguards, such as independent audits or the status of being a regulated obliged entity within the Union.

Name of the respondent	Question	Answer
		iii. Drafting proposal: Article 22 (e): "(e) the credit institution obtains evidence that the account holder applies customer due diligence measures in compliance with Regulation (EU) 2024/1624. Such evidence may include independent AML audit reports or certifications."
Bitkom eV	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Bitkom eV	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Verification of nationality i. Provision concerned: Article 5 in conjunction with Recital 3 (Nationality) ii. Rationale for the position: The current draft lacks internal coherence between the operative provisions and the recitals. Article 5: "…obliged entities shall obtain information on all nationalities…" Recital 3: "Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient." iii. Drafting proposal: Verification of one single nationality shall be considered sufficient. iv. Explanation: The discrepancy creates legal uncertainty for obliged entities regarding the extent of their verification duties. Streamlining the criteria to a single nationality reduces the administrative burden on obliged entities. Given that other geographical risk-based criteria provide more meaningful insights into a customer's risk profile (e.g. country of residence, centre of economic activity, or country of registration), focusing on multiple nationalities is disproportionate to the actual risk-mitigation value it provides. Obliged entities should however retain the discretion to investigate further nationalities on an individual case basis

Blockchain for Europe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We do not fully agree that the proposals set out in the draft RTS provide sufficient flexibility for application across the full range of products and services offered by obliged entities in the digital finance and crypto-asset sectors. Article 7(2)-(4): The requirement in Article 7(4) for obliged entities to justify non-use of eIDAS means should be satisfiable on a categorical basis (for example, by customer segment, jurisdiction, or product type), rather than requiring case-by-case documentation. This would reflect operational realities where eIDAS solutions are not universally available and avoid unnecessary administrative burdens. We recommend amending Article 7(4) to state: “Where eIDAS means are not available for a given customer segment, jurisdiction, or product type, a categorical justification shall suffice.” Article 10(a): The obligation to consult state registers “to the extent accessible” must be clarified to confirm that “reasonable measures” do not require access to non-accessible databases. Supervisors should not treat the absence of checks on inaccessible databases as a deficiency. We recommend adding: “Obliged entities are not expected to access state registers or

Name of the respondent	Question	Answer
		databases that are not publicly or operationally accessible, and the absence of such checks shall not be considered a compliance failure." Article 11(4)(b): The requirement to be satisfied of an "economic, legal or other rationale" for ownership structures risks becoming an open-ended documentary exercise. The RTS should specify what constitutes sufficient evidence (such as a group structure chart, short explanation, and publicly available filings), identify risk triggers for further documentation, and provide a safe harbour for regulated or listed groups. We recommend including: "For listed or regulated group structures, a group chart and public filings shall be sufficient unless risk factors indicate otherwise." Article 12(1): The current definition of "complex structure" (three or more layers plus one of several conditions, including non-EU registration) may over-capture legitimate multinational groups. Opacity or obfuscation, particularly nominee involvement, should be a necessary condition for complexity, not merely non-EU incorporation. We recommend revising Article 12(1) to require that opacity or nominee arrangements be present before a structure is deemed complex. These changes would ensure the RTS is proportionate, operationally feasible, and aligned with Recital 3's emphasis on risk-based implementation and proportionality.
Blockchain for Europe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	We do not fully agree that the draft RTS enables the effective application of a risk-based approach in all respects. Article 5: The operative text requires collection of all

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	nationalities, while Recital 3 states that verifying one nationality is sufficient if done in good faith. We recommend aligning Article 5 with Recital 3 by explicitly permitting risk-based verification of a single nationality, with “good faith” defined operationally (for example, verifying the nationality most relevant to the risk assessment). Additional nationalities should only be verified where risk factors are present. Article 24(c): Including source-of-funds information in simplified due diligence (SDD) blurs the distinction between SDD and standard CDD. We recommend removing source-of-funds from Article 24 and reserving it for standard or enhanced due diligence, in line with the principle of proportionality. Article 3(d)/18: The requirement to obtain information on the destination of funds could be interpreted as mandating ex-ante counterparty whitelisting. The RTS should clarify that real-time collection and risk assessment at transaction initiation is a fully compliant approach, and that predefining or whitelisting counterparties is not required. Article 20: TIN collection and validation requirements should be explicitly aligned with DAC8 (Directive (EU) 2023/2226), which mandates TIN validation from 1 January 2028 using OECD CARF-aligned standards. The RTS should not impose stricter standards than DAC8, should permit self-certification where official validation is not possible, and should allow risk-based follow-up. These amendments would ensure the RTS supports a genuinely

Name of the respondent	Question	Answer
		risk-based and proportionate approach, consistent with Recital 3 and international best practices.
Blockchain for Europe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are situations where the information required for CDD under the draft RTS is routinely unavailable, and the RTS does not provide adequate alternative solutions. Article 9 (virtual IBANs): In virtual IBAN programmes where the issuing EMI or payment institution has no direct relationship with the end-user (with CDD performed by the platform or CASP), requiring the vIBAN issuer to independently verify end-user information is not operationally feasible. The RTS should clarify that Article 9(a) may be satisfied through reliance on CDD performed by another obliged entity under the AMLR reliance framework. Article 20: TINs may not exist or be obtainable for customers outside jurisdictions with a TIN system. The RTS should allow risk-based alternatives, including self-certification with a statement that no TIN is applicable, consistent with DAC8. Article 10(a): Many listed databases are not publicly accessible by private obliged entities. The RTS should explicitly confirm that “to the extent accessible” means there is no obligation to access unavailable databases. Article 13: Collecting private residential addresses of senior management officers is often difficult for multinational groups with executives across multiple jurisdictions. The flexibility to use registered office addresses should be extended more broadly wherever SMO identification functions as a fallback.

Name of the respondent	Question	Answer
		We invite AMLA to consider these operational realities and to clarify the RTS accordingly, ensuring that obliged entities are not held to impracticable standards.
Blockchain for Europe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We propose the following additional simplified due diligence (SDD) measures to reflect lower ML/TF risks and operational realities: Article 24(c): Amend to read: "the purpose and intended nature of the business relationship or occasional transaction and, where relevant, an indication of the expected value and frequency of transactions." This removes the requirement to collect source-of-funds information in SDD contexts. Single Nationality Verification: Explicitly recognise risk-based verification of only one nationality in low-risk contexts, giving operative effect to Recital 3. Reliance on Third-Party CDD: Recognise reliance on third-party CDD in distributed models (such as the vIBAN model) as a valid SDD-equivalent measure in appropriate low-risk contexts. LEI Reference Data: Recognise the use of GLEIF LEI reference data as a simplified CDD tool for lower-risk legal entity relationships, allowing obliged entities to rely on LEI data (including parent entity data) without prejudice to enhanced measures where risk factors arise. These measures would enhance proportionality, reduce

Name of the respondent	Question	Answer
		unnecessary burdens, and support effective AML/CFT outcomes in low-risk scenarios.
Blockchain for Europe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Article 3(d)/18 (TFR and TAP): The intermediary determination in Article 3(d)(iii) should be clarified to confirm that an obliged entity need only identify its own role in the transaction chain, not map the entire chain prior to transaction initiation. The Travel Rule framework already provides sequential transparency. AMLA should also recognise operational models such as the Transaction Authorization Protocol (TAP), which enables progressive counterparty discovery in crypto-asset transfers. Article 9 (TFR interaction): The RTS should explicitly confirm that Article 9's objective is to identify the virtual IBAN assignee (which may differ from the TFR originator), not to duplicate information already transmitted under Regulation (EU) 2023/1113. Article 11 (LEIs): The RTS should acknowledge that obliged entities may rely on GLEIF LEI reference data, including information on direct and ultimate parent entities, as a tool for mapping ownership and control structures. Article 30 (wallet screening): Article 30(a)(iii) requires digital wallet address screening without defining what constitutes a "match." The RTS (or AMLA guidance) should define the expected standard of match (including whether normalisation is required), address evidentiary expectations for match disposition under Article 30(b), and acknowledge the technical specificity of wallet address screening compared to traditional

Name of the respondent	Question	Answer
		name and identifier screening. We urge AMLA to address all obliged entities.
Blockchain for Europe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Boekenbon	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient	We do not fully agree that the proposals can be applied across the range of products and services provided by our organisation. (i) Lack of flexibility

Name of the respondent	Question	Answer
	flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The draft RTS does not provide sufficient flexibility for low-risk e-money products such as book vouchers. Our products are typically low value (≤ EUR 150), non-reloadable, restricted to a limited network and specific goods (books), not redeemable for cash, and not linked to payment accounts. These features significantly mitigate ML/TF risk. However, the RTS effectively requires either full CDD or reliance on case-by-case exemptions by national supervisors. This removes the practical usability of simplified due diligence (SDD) that existed under AMLD5 and introduces legal uncertainty and fragmentation. As highlighted in the legal analysis, AMLR replaces automatic SDD with discretionary exemptions, creating operational challenges for issuers . For retail-based distribution without an ongoing customer relationship, applying full CDD at the point of sale is disproportionate and often impracticable. (ii) Drafting proposals We propose introducing an explicit provision allowing simplified treatment without prior supervisory approval: “Obliged entities may apply simplified due diligence measures, including exemption from customer identification, where all of the following conditions are met: (a) the instrument is non-reloadable; (b) the maximum stored value does not exceed EUR 150; (c) the instrument is limited to the purchase of goods or services within a defined network or category; (d) the instrument cannot be redeemed for cash or transferred; and (e) the issuer applies transaction monitoring.”

Name of the respondent	Question	Answer
		This would restore proportionality, ensure harmonisation, and reduce reliance on divergent supervisory practices.
Boekenbon	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not fully agree that the proposals allow for the effective application of a risk-based approach. (i) Provisions concerned The concern relates to Section 8 and article 31 of the draft RTS: • the absence of automatic SDD for low-risk e-money instruments; • reliance on case-by-case supervisory exemptions; • insufficient recognition of product-specific risk mitigants. Although AMLR recognizes, under recital 58, that low-value prepaid products may present low ML/TF risk, this is not operationalised effectively in the RTS. (ii) Drafting proposals To enable a genuine risk-based approach, the RTS should better reflect inherent product characteristics. In particular, it should: • explicitly treat limited network or closed-loop instruments as lower risk; • recognise restriction to specific goods (e.g. books) as a mitigating factor; • provide a tiered framework for CDD. Suggested wording: “In assessing ML/TF risk, supervisors shall give significant weight to restrictions on usability, including limited network acceptance and limitation to specific goods or services.” In addition, the RTS should allow simplified due diligence (including no customer identification) for instruments meeting low-risk criteria (low value, non-reloadable, restricted use, no cash redemption).

Name of the respondent	Question	Answer
		This would align regulatory requirements with actual risk exposure and ensure proportionality.
Boekenbon	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, there are situations where the required CDD information is routinely unavailable and no adequate alternative is provided. Book vouchers are sold within the Netherlands for 85% through physical retail channels (e.g. bookstores) to walk-in customers without any ongoing relationship between issuer and purchaser and the remaining is sold through the online website of the Boekenbon. Since the book voucher is a gift card, it is typically purchased to be given to another person. The recipient of the voucher will then redeem it at a bookstore in the Netherlands. In these cases, collecting and verifying identity information (such as name, date of birth, and address) is not feasible. Concrete example: A customer purchases a €25 book voucher in a bookstore as a gift. The transaction does not involve account creation, direct interaction with the issuer, or any practical means of conducting identity verification. Importantly, the purchaser is not the end user of the voucher. The voucher is typically given to another person—for example, as a birthday present. The recipient then redeems the voucher at a bookstore, meaning the individual using the voucher is different from the original purchaser. Given this model, where vouchers are transferable and redeemed by third parties without prior registration or issuer interaction, it is not feasible to perform identity verification in a practical or reliable manner. Requiring full CDD in such situations would:

Name of the respondent	Question	Answer
		• disrupt standard retail processes, especially for a product of cultural value such as books, • create disproportionate friction for low-risk transactions, • potentially eliminate the product's desirability and consequent usability The RTS does not currently provide an adequate alternative for such distribution models. Proposed solution: The RTS should allow alternative measures where low-risk conditions are met: "Where products are distributed via retail channels without an ongoing business relationship, and meet low-risk criteria (e.g. low value, non-reloadable, restricted use, no cash redemption), obliged entities may apply transaction-based monitoring in lieu of customer identification." This approach maintains AML/CFT safeguards while ensuring operational feasibility fully in line with the conditions set under recital 58 of the AMLR.
Boekenbon	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Additional simplified due diligence measures should be included for low-risk e-money products such as book vouchers. We propose that the RTS explicitly allow simplified due diligence, including exemption from customer identification, where the following conditions are met: • the instrument is non-reloadable; • the maximum value does not exceed EUR 150; • the instrument is usable only within a limited network or for a restricted range of goods or services; • the instrument cannot be redeemed for cash or converted into other monetary value; • the issuer applies transaction monitoring.

Name of the respondent	Question	Answer
		Drafting proposal: “Obliged entities, operating with low-risk e-money products, may apply simplified due diligence, including omission of identity verification, where the product meets all of the above criteria.” Rationale: These measures reflect the inherently low ML/TF risk of such products, as recognised in AMLR. They also align with the previous AMLD5 framework, which allowed simplified treatment for low-value e-money. Without such provisions, issuers must rely on case-by-case supervisory exemptions, creating legal uncertainty and fragmentation across Member States. Introducing clear, harmonised SDD criteria in the RTS would ensure proportionality, consistency, and effective application of a risk-based approach.
Boekenbon	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Reiterating the points raised above, our concerns remain with the current wording under article 31, Section 8 of the RTS. We emphasise the importance of alignment between the RTS and broader EU payment legislation, particularly PSD3/PSR and the Limited Network Exclusion (LNE). Currently, products falling within the LNE remain outside AML/CFT scope, while those outside it face increased uncertainty under AMLR. The RTS should therefore avoid creating indirect inconsistencies with the treatment of limited network instruments. We also note that AMLA does not have a mandate to grant general exemptions. This increases the importance of clearly defined, harmonised criteria within the RTS itself. Without such

Name of the respondent	Question	Answer
		clarity, the framework risks divergent supervisory practices and fragmentation within the internal market. Proposed solution, include a provision such as: “The application of these RTS should ensure consistent treatment of low-risk e-money instruments across Member States, minimising reliance on discretionary exemptions and supporting the functioning of the internal market.” This would enhance legal certainty, support proportionality, and ensure that low-risk products such as book vouchers remain viable while maintaining AML/CFT objectives.
Boekenbon	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Bundesnotarkammer (German Federal Chamber of Notaries)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	While the ambition to harmonise the fragmented field of anti-money laundering legislation with a “one-size-fits-all”-approach is welcomed, in the notarial practice several articles of the draft RTS cannot be applied across the full range of notarial acts. Such provisions should be reviewed and either deleted, reduced in their scope of application or at least be made more flexible to ensure a risk-based application in line with Art. 1 Draft RTS. 1) There are certain provisions, e.g. Art. 10, 25, 26, 27 Draft RTS, that might trigger an obligation for notaries, as obliged entities, to conduct active research. These investigative duties would be incompatible with notarial professional law and criminal law. Notaries are generally obligated to strict confidentiality under sec. 18 of the German Federal Code for Notaries (Bundesnotarordnung). If a notary were to inquire third parties about customer data, they would have to reveal

Name of the respondent	Question	Answer
		the identity of the customer or perhaps other personal data, therefore breaching their professional obligation. Breaching the confidentiality obligation would be punishable as a criminal act under sec. 203 of the German Criminal Code and might trigger the notary's removal from their office. In these situations, it would be impossible for notaries to act in compliance with the law, because they would either violate the professional law or the anti-money laundering provisions, thereby rendering the RTS unapplicable. While notaries are required and willing to report suspicious cases to the relevant authorities in order to support the ongoing fight against money laundering, these reporting obligations should not be confused with active investigative duties. It is therefore strongly recommended that these provisions be amended to clarify that obliged entities are not subject to active research duties requiring them to disclose their clients' identity to third parties. This would ensure that obliged entities can fulfill their CDD obligations without being subject to such research duties. 2) With regard to Art. 18 Draft RTS, which specifies the provisions of Art. 20(1)(c), 25 AMLR, it is unclear in what cases they should be applied. Art. 20(1)(c) and 25 AMLR stipulate that the respective information is to be collected "where necessary" or "if appropriate". Without any guidelines, the provision is unapplicable to obliged entities. It would leave room for supervisory capriciousness in its application, and may lead obliged entities to collect extensive information for compliance purposes, in contradiction to the risk-based approach. Following the principle set forth in Recital 13 Draft RTS, Art. 18

Name of the respondent	Question	Answer
		Draft RTS should include a provision that clarifies that the information they either already had or that was made available to them is generally sufficient, unless the specific circumstances of the individual case require further inquiry. Without undermining necessary safeguards, this would provide clear guidance for obliged entities.
Bundesnotarkammer (German Federal Chamber of Notaries)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The Draft RTS do not allow for an effective application of a risk-based approach, as there are several excessive or disproportionate criteria. Such provisions should be either deleted or amended in line with the principle set forth in Art. 1 Draft RTS. Most of the problems connected to effectiveness can be traced back to sectoral specificities. The drafting process of these provisions was apparently directed at the financial sector. The financial sector is mostly composed of banks and similar financial entities, which employ at least dozens, in many instances hundreds of employees or more while managing a large quantity of financial transactions, usually from recurring clients and usually conducted with automated systems. The structural differences between financial and non-financial entities, especially notaries, are enormous. Notaries run small-sized offices, often with less than ten employees in rural areas, and while they conduct at least several hundreds of real estate or share transactions each year, they usually have non-recurring clients, as buying real estate or company shares is usually not an everyday activity. As a result, contact between notaries and their clients is short-term and typically one-off. Unlike a bank transfer, transactions are non-repetitive, individual and unrelated, meaning that synergies are virtually nonexistent. The performance and execution of these contracts, while mostly digitalised, are still conducted

Name of the respondent	Question	Answer
		manually. This manual oversight is by design, ensuring legal certainty. In light of these sectoral specificities, many CDD provisions are excessive in scope, contradict the risk-based approach and cannot be applied effectively. 1) Some provisions would lead to unnecessary duplication, especially if the provision requires identification before the notarial authenticating act itself. The unambiguous identification of clients during authentication is one of the core duties of any notary in accordance with section 10 of the German Notarial Recording Act (Beurkundungsgesetz). It must be secured regardless of AML provisions. Before the authenticating act, the transaction is not legally valid. Therefore, a specific money-laundering risk cannot arise, as is implied in AMLA's own Recital 8 Draft RTS regarding Art. 19 (9) AMLR. It is therefore fully sufficient if identification takes place prior to authentication. Thus, provisions (in particular Art. 19 Draft RTS) should be reviewed with regard to unnecessary duplication. 2) Some provisions, in their current wording, may require the obliged entity to conduct active research. This contradicts the risk-based approach set forth in Art. 1 Draft RTS. Rather, duties should generally include plausibility checks, while simultaneously requiring the obliged entity to collect further information as soon as it appears necessary based on available information. This specifically applies to Art. 8, 10, 11, 18 and 30 Draft RTS, where it is unclear if the obliged entity shall obtain data beyond what is already available to them. If entities were

Name of the respondent	Question	Answer
		obliged to conduct further inquiries, it would create inefficiencies without adhering to the risk-based approach. The solution is to clarify the risk-appropriate scope by creating a general rule. Therefore, Art. 1 Draft RTS should include an additional paragraph as follows: "(2) Unless stipulated otherwise, obliged entities fulfil their verification duties if the data they have collected is subject to plausibility checks." 3) Finally, several provisions require the obliged entity to obtain excessive and sometimes unnecessary data points that would require additional disproportionate effort and create a burden for notaries. Specifically, this concerns the following provisions: a) Art. 2-6 Draft RTS stipulate several disproportionate data points, e.g. country of birth, country of residence, or trade name. It should be emphasized that the notarial profession is characterized by a strong local and regional focus, with the vast majority of clients being local and the notary generally prohibited from performing notarial acts outside their district. It is therefore not typically necessary to obtain these data points. b) When assessing the Ownership and Control Structure (Art. 11 Draft RTS), information on the “jurisdiction” of entities or on the “rationale” behind a corporate structure is not necessary to understand the structure or the associated ML/FT risk. c) When obtaining information about senior managing officials (SMOs), Art. 13 Draft RTS, the broad definition in Art. 2(1)(40) AMLR might require obtaining information of dozens of people. The CDD duties should therefore be limited.

Name of the respondent	Question	Answer
		In conclusion, while notaries already play an important role in combating money laundering and are willing to continue to do so, proportionality should be taken into account to reduce administrative burden and to ensure that customer due diligence can be carried out in the most efficient way.
Bundesnotarkammer (German Federal Chamber of Notaries)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	There are some data points that may routinely be unavailable for notaries while performing CDD. 1) Some data points may be unavailable to the notary due to a lack of insight, since notaries perform their duties as neutral, public officials without insider knowledge about their client's internal structure. The contact between the notary and their clients is usually limited to a single, specific interaction, as the interaction between notary and client is determined by law. Because notaries are public officials, they do not engage in business relationships at their commercial discretion; rather, they perform notarial acts as their official duty. Any "relationship" with a client automatically ends after the execution of a notarial act, just as a "relationship" between a plaintiff and a court would end after a judgment was issued and executed. Therefore, notaries are not equipped to gather information that require in-depth knowledge about the client's financial or other insights. A concrete example of a situation where in-depth knowledge may be required is the identification of Senior Managing Officials (SMOs) in accordance with Art. 13 Draft RTS. While identifying the managing director of an SME is certainly reasonable, the current SMO definition might entail that in a large corporation potentially dozens of people fulfil the criteria listed in Art. 2(1)(40) AMLR. In order to even assess the

Name of the respondent	Question	Answer
		management structure, the notary – an outsider who accompanies a single transaction and conducts the notarial act as part of a public duty – would have to perform extensive examinations of the corporation involved, with most of the relevant data not even being available to them due to a lack of reliable information. It is therefore proposed that obliged entities should not be required to inquire into the internal structure of customers. Instead, a plausibility check shall generally be sufficient. 2) Some data points may be unavailable to the notary because they are related to persons who do not (routinely) appear before the notary. For a notarial act, it is generally required that the persons who are making the declaration of will appear directly before the notary. The high level of quality and reliability associated with notarial acts is, among other reasons, derived from the notarial duty to directly identify the person appearing before them in accordance with section 10 of the German Notarial Recording Act (Beurkundungsgesetz). For that reason, people who appear before a notary will always and routinely be identified by means of an official identity document, as the notarial identification before authentication is one of the core duties of any notary. For people who are not directly appearing before the notary, however, the data points required for identification purposes are not routinely available. This will cause problems, for example when SMOs who are not present during the authentication have to be identified. As elaborated, the data collection process for SMOs is an ex-tensive task, especially for larger corporations, and disproportionate given that notarial

Name of the respondent	Question	Answer
		activity is confined to single transactions with regularly non-recurring clients. Because every point of personal data may be present at the authentication, notaries would be forced to stop or delay the process, which proves disproportionate as the entire transaction would have to be rescheduled, potentially losing several weeks. This would cause significant harm to the single market and European competitiveness. This burden could be significantly mitigated either by delaying the moment where SMOs have to be identified or by reducing the information to be collected. While the identification of SMOs not physically appearing before the notary remains an essential Due Diligence measure, it appears nonetheless risk-proportionate if it is permissible to identify these individuals even after the authorisation takes place. If identification were to take place within a specific time-frame, for example within two weeks after authorisation, the notarial transaction would still be far from being executed, as this thorough process often takes several months. In case subsequent identification fails, further AML measures could still be triggered effectively. Alternatively, the amount of data to be collected for SMOs could be significantly reduced, either by reducing the necessary data points, e.g. to the name, date of birth, nationality and city of residence, or by reducing the number of SMOs to be identified. The remaining data would still allow a reliable comparison with data in a cen-tral register while administrative burden would be reduced significantly.
Bundesnotarkammer (German Federal Chamber of Notaries)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in	Simplified Due Diligence measures should be reduced, in line with the risk-based approach. Name of the respondent	Question	Answer
	the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	underlying criteria, as proposed in Art. 23 Draft RTS, it should suffice to have data reviewed – unless the available information requires a different frequency – every five years, which may still be permissible even for regular customers in accordance with Art. 26(2)(b) AMLR. Furthermore, the provisions in Art. 24 Draft RTS should be amended so that it is generally required to obtain information on the nature of the business relationship only if special circumstances necessitate it. Finally, it should be considered that the data to be collected by the obliged entity may be obtained even after the transaction itself (in accordance with Art. 33(1)(a) AMLR), for example within four weeks afterwards. In the context of notarial acts, the AML risk would not notably increase due to this change, because transactions that are authenticated by notaries would still not be fully executed, as the execution of a notarial act is a thorough process that takes regularly several months. In case subsequent identification fails, it would still be possible to take further AML measures. At the same time, flexibility and the risk-based approach would be taken into account.
Bundesnotarkammer (German Federal Chamber of Notaries)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The term “customer” remains undefined. Without this definition, the scope of the corresponding due diligence remains unclear, creating legal unclarity. Therefore, it is recommended to provide a clear delimitation of the scope with regard to the term “customer” to ensure a uniform applicability. Firstly, it should be noted that while the term “customer” does not fall within the legal mandate of Art. 28(1) AMLR, which

Name of the respondent	Question	Answer
		empowers AMLA to develop this set of RTS, it still has a mandate to specify the performance of customer due diligence. Therefore, since AMLA is mandated to develop provisions that determine under which circumstances the obligations to identify the customer are fulfilled, this may also include specifications of the term “customer” itself. Accordingly, it should be clarified that when the party relevant to a transaction is a natural person, it is generally sufficient if the person who is making the statement or the declaration of will is identified and treated as the customer. This is already strongly implied in Art. 20(1)(h), Art. 22(1) AMLR which distinguish between the “customer” and the “natural person other than the customer” on whose “behalf or for the benefit” of whom the transaction or activity is conducted. While this distinction clearly indicates that in cases where a natural person is represented by another person, only the person making the statement shall be considered a customer, be-cause the distinction in Art. 20(1)(h), Art. 22(1) AMLR would otherwise be superfluous, it is still not sufficiently explicit and should be clarified to avoid different interpretations or applications in practice. Recital 7 Draft RTS also appears to distinguish accordingly, as it implies that for minor children, a customer may act on behalf of them. Despite these strong indications, the wording should leave no room for interpretation. For the notarial sector specifically, any other interpretation would cause major disruptions and would severely hurt the economic workflow without providing any notable benefit.

Name of the respondent	Question	Answer
		To illustrate, it should be considered that notarial clients who are entering a contract are legally required to appear before the notary simultaneously and in person. This ensures, among other reasons, clear identification. For that reason, it is efficient and practical to treat the people making the declaration of will and appearing before the notary as (sole) customers. This is why in previous AML-legislation, the German legis-lator explicitly clarified that the terms 'contracting party' and the 'person acting on behalf of the contracting party' are to be understood as referring to the same person in the context of notarial practice, and that the obligations only apply to the person appearing before the notary (Bundestagsdrucksache 18/7204, p. 99). It would be neither practical nor consistent to treat a represented person as a customer. Treating a represented person as a customer would cause major disruptions since Art. 6 Draft RTS in conjunction with Art. 22(6) AMLR would require identification by means of an original identity document or a certified copy. This requirement would often not be met because the represented person is absent for a reason, typically because appearing in person is not possible due to distance. Nor would it be possible to send the identity document instead. As a result, the act of authentication would have to be delayed, potentially causing severe economic damage. This would especially hurt companies that are operating across borders as the identification requirements for shareholders, who have to formally approve the notarial act and are commonly represented on the basis of a power of attorney, would be even harder.

Name of the respondent	Question	Answer
		At the same time, it would be unjustified to treat represented persons as customers, as their role as passive beneficiaries of transaction mimics that of beneficial owners. For beneficial owners, the AMLR clearly states that they are not to be treated or identified as customers, but rather in accordance with Art. 22(7) AMLR. It would be an unequal treatment without justification if represented persons were to be identified as customers just because they act through a natural person as a representative rather than through a legal entity. It would also completely undermine the risk-based approach and lead to severe inconsistencies. To avoid these risks of unjustified and inconsistent application, Art. 1 Draft RTS should contain a separate paragraph as follows: "For natural persons, obliged entities shall consider the acting person as the customer for the purposes of Customer Due Diligence as provided for in these Regulatory Technical Standards." At the very least, it should be clarified in a recital that only the acting person, not the represented person, is subject to "Customer" Due Diligence measures, while the represented person is subject to Due Diligence measures in accordance with Art. 22(7)(b) AMLR.
Bundesnotarkammer (German Federal Chamber of Notaries)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	The first comment refers to Article 2(i). The wording of Art. 2(1) Draft RTS implies that every natural person as referred to in Art. 22(1)(a)(i) AMLR must be identified by the obliged entity by obtaining all names and surnames featured on the respective identity document. This is in direct contradiction with the structure of Art. 22(1) AMLR in conjunction with Art. 22(6), (7) AMLR. Art. 22(7) AMLR regulates that for certain natural persons, identification does not necessarily have to be conducted via an identity document (physical or digital), in accordance with Art. 22(6) AMLR, but may also take place by other means instead. Therefore, as is already provided for in the AMLR, it is valid that certain natural persons may be identified by other means, e.g. as set out in Art. 22(7) AMLR, a natural person may be represented by another natural person (“person on whose behalf or for the benefit of whom a transaction or activity is being carried out”) and therefore not be directly in contact with the obliged entity. It is therefore necessary and mandatory to allow identification through other means. It should also be noted that this scenario was already reflected in the previous AML rulebook. However, if natural persons may be identified in these cases without providing an identity document, it is inconsistent when Art. 2(i) Draft RTS specifies that the obliged entity has to obtain all names featured in the identity document, as the identity document may not be available to the obliged entity, making an alignment impossible. The provision should therefore be rephrased to make sure this

Name of the respondent	Question	Answer
		requirement does not apply to natural persons who are not identified via an identity document. It is therefore proposed to rephrase Art. 2(i) Draft RTS as follows: “In relation to the names and surnames of a natural person, as referred to in Article 22(1), point (a)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain all names and surnames that feature on the identity document, passport or equivalent, if the identification is conducted in accordance with Article 22(6) of Regulation (EU) 2024/1624.” The second comment refers to Article 2(ii). While the term “trade name” is not sufficiently defined, regardless of its definition, it remains unclear what added value this additional information would provide in the context of anti-money laundering prevention. For anti-money laundering purposes, the name entered in the commercial or company register is fully sufficient, as it unambiguously gives certainty about the identity of the legal entity. This is also reflected in Art. 22(1)(b)(i) AMLR, which refers solely to a single name to be collected (“name of the legal entity”) – as opposed to natural persons, where the wording refers to „all names“. Against this background, the requirement set out in Art. 2(ii) Draft RTS appears excessive and thus disproportionate. It works against a risk-based approach, as there is no indication that a company that uses a trade name has a higher AML risk, and creates an unnecessary burden for obliged entities. Without a clear definition, it would even cause legal uncertainty. It ultimately misses the pur-pose of Art. 22(1)(b)(i) AMLR as there is no better or more precise way to identify a legal entity than by verifying the name under which the company is registered,

Name of the respondent	Question	Answer
		especially in conjunction with the additionally required registration number (Art. 22(1)(b)(iii) AMLR). It is therefore proposed to delete the second half sentence of Art. 2(ii) Draft RTS and to formulate the provision as follows instead: „In relation to the name of a legal entity as referred to in Article 22(1), point (b)(i), and other organisations that have legal capacity under national law as referred to in Article 22(1), point (d)(i), of Regulation (EU) 2024/1624, obliged entities shall obtain the registered name.“
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	The first comment refers to Art. 6(1) Draft RTS. Identity documents should generally be deemed sufficient if they are authentic identity documents issued by a Member State authority. While the attempt to provide pragmatic and proportionate solutions for documents that are suitable to verify an identity under Art. 22(6),(7)(a) AMLR without undermining certainty and security is expressly welcomed, the provided criteria pursuant to Art. 6(1) Draft RTS are only partly suitable. In practice, obliging notaries to review if the respective document shall be considered an equivalent to an identity document or passport by reviewing the listed criteria is an excessive administrative burden. If every authentic identity document issued by a Member State authority were deemed to an equivalent in accordance with Art. 6(1) Draft RTS, or if at least a list or database of documents that meet these criteria

Name of the respondent	Question	Answer
		were to be provided, administrative burdens would be reduced in a proportionate way while legal clarity would be strengthened, as the current wording leaves insufficiently clear what "security features" pursuant to Art. 6(1)(e) Draft RTS would constitute authenticity. Regarding proportionality, it should be considered that the majority of notaries run small-sized offices in rural areas with mostly local clients, which makes extensive authenticity checks especially burdensome and disruptive. While the notarial profession is equipped to continuously perform a vital and important task in the anti-money laundering framework, proportionality and efficiency must be ensured. It is therefore proposed to amend Art. 6(1) Draft RTS to include an additional sentence as follows: "Any identity document issued by a Member State shall be considered equivalent if it is found to be authentic by the obliged entity." The second comment refers to Art. 6(3) Draft RTS. It should be clarified that, unless there is an indication for inauthenticity, the obliged entity shall have no active duty to verify the authenticity of the document. In the current wording, the obliged entity is required to "take reasonable steps" to ensure that the document has not been forged. It is unclear what this entails, as obliged entities are generally no experts in technical forgery. While the flexibility of undefined legal terms may rightfully ensure that sectoral specifics are taken into account on a supervisory level, it should nonetheless be the general rule that a document containing the characteristics as described in Art. 6(1) Draft RTS, without indication of forgery or inauthenticity, shall not trigger any

Name of the respondent	Question	Answer
		active obligation to take further measures to ensure authenticity. This would increase legal clarity for the obliged entity and reduce administrative burdens without notably sacrificing integrity. It is therefore proposed to amend Art. 6(3) Draft RTS as follows: "If there is an indication that the document obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, may have been forged or tampered with, obliged entities shall take reasonable steps to ensure that all documents are authentic." The final comment refers to Art. 6(6) Draft RTS: The provision is ambiguous and may give rise to practical and legal uncertainties. It should therefore be deleted. It is unclear why electronic identification means, which are legally defined in Art. 7(1) Draft RTS for a non-face-to-face context, should be admissible in a face-to-face setting. Their intended function is to provide a secure and reliable alternative when no physical presence is available. By suggesting their applicability in a face-to-face scenario, the line between face-to-face and remote identification is blurred, risking to undermine the very basis for distinguishing between these two contexts. We therefore propose deleting Art. 6(6) Draft RTS. Instead, it may be clarified that additional identification requirements must not circumvent stricter professional rules. Where professional law imposes higher identification standards, these should continue to apply alongside the anti-money laundering requirements, leaving room for securing high identification standards and ensuring legal certainty, especially in the vulnerable context of electronic identification.

Name of the respondent	Question	Answer
		Finally, it is contradictory to have “natural persons on whose behalf or for the benefit of whom a transaction or activity is being carried out” included in Art. 6(6) Draft RTS. They are to be identified not pursuant to Art. 22(6) AMLR, but rather Art. 22(7) AMLR, as they are not classified as customers, but more akin to beneficial owners under the AMLR. It is inconsistent to have these persons listed in Art. 6(6) Draft RTS in that context, whereas beneficial owners are being omitted. Instead, any reference to natural persons who are represented or who are beneficiaries should be erased.
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 7(2) in conjunction with Art. 7(3),(4) Draft RTS should be removed entirely, without replacement. Firstly, their content is not covered by Art. 28(1)(d) AMLR. According to this provision, the RTS may only specify “reliable and independent sources of information that may be used to verify the identification data of natural or legal persons”. The standard refers to the information to be obtained from reliable and independent sources in accordance with Art. 22(6),(7)(a) AMLR. However, since the framework provided by Art. 22(6) AMLR for the way obliged entities have to obtain the necessary information, documents and data is exhaustive, it allows only two alternate methods: Either (a) the submission of an identity document, passport or equivalent (and, where relevant, additional information), or (b) the use of electronic identification means or qualified trust services under Regulation (EU) No. 910/2014.

Name of the respondent	Question	Answer
		Art. 7(1) Draft RTS honours this consistency with Art. 22(6)(b) AMLR while Art. 7(2) in conjunction with Art. 7(3), (4) Draft RTS does not. Designed as an exception to Art. 7(1) Draft RTS, the provisions are unlawful as Art. 22(6)(b) AMLR provides no basis for them. Specifically, Art. 7(2)–(4) Draft RTS do not specify how other reliable sources of information may look like, but rather introduce a new identification procedure using "remote verification solutions" in addition to electronic identification. This is indicated in the wording of Art. 7(4) Draft RTS, according to which the two identification procedures (i.e. under Art. 7(1) and Art. 7(2)–(4) Draft RTS) are referred to collectively as "remote solutions". However, Art. 22(6) AMLR does not authorize the creation of new categories of information or sources. Instead, the AMLR deliberately limits the means of verification to the two methods listed, reflecting a closed system without the basis for an opening clause. The lack of a legal basis alone is sufficient cause to delete Art. 7(2)–(4) Draft RTS. Beyond that, the provisions should also be deleted for substantive reasons. There is a categorical difference in the quality of identification between Art. 7(1) and Art. 7(2) Draft RTS. To avoid gaps in protection, it is essential that remote identification is subject to security standards equivalent to those applicable to in-person identification. Against this background, the option to identify based solely on a copy or visual reproduction of an ID card via video communication system raises considerable concerns. This is because the authenticity, integrity and validity of the ID document cannot be reliably verified by such means. In a

Name of the respondent	Question	Answer
		remote context, it is not possible to verify the security features of the ID document by a visual check. A technical check can also not be performed. This seems especially inconsistent given physical identity documents demand a thorough authenticity check pursuant to Art. 6(3) Draft RTS. In reality, online identity checks bear a much larger fraudulent potential. Money launderers may easily conceal identities and obscure the true actors behind a transaction. If insufficient requirements are imposed for remote identification, the otherwise high level of security is undermined. The substantial differences in quality between the two identification procedures set out in Art. 7(1) and Art. 7(2) Draft RTS cannot be compensated by the requirements listed in Art. 7(3) Draft RTS. Identification based on Art. 7(2) Draft RTS is therefore unreliable and not suitable for AML/CFT purposes. The identification based on the requirements of Art. 7(3)(a) Draft RTS, whereas it must be verified that the person presenting the identity document is also the person on the picture of the document, is an inadequate attempt at compensating the categorical differences in quality. Ensuring concordance cannot be reliably achieved on the basis of a mere image of the identity document shown e.g. during a video call. It would only be reliable if the photo was read through technical means. Furthermore, the requirement of Art. 7(3)(b) Draft RTS, whereas audio-visual communication is protected so that integrity and confidentiality are ensured, permitting only end-to-end encryption for the secure transmission of data, is insufficient. While this requirement is a necessity, it merely prevents the interception or manipulation of data during the transmission process. End-to-end encryption does not

Name of the respondent	Question	Answer
		guarantee that the data has not already been falsified prior to the transmission. Even the requirement of Art. 7(3)(e) Draft RTS, whereas the information verified during remote identification must be up to date, while being strictly necessary, is insufficient since the obliged entity is not able to carry out a corresponding verification. They can neither physically nor technically check the identity document and there-fore cannot establish with certainty when the document was issued, leaving a significant risk of forgery.
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The first comment refers to the title of Art. 10 Draft RTS. The title of the provision should be amended to accurately reflect Art. 22(7)(b) AMLR. Art. 10 Draft RTS only refers to “beneficial owners” in its title. This is misleading, because Art. 22(7)(b) AMLR not only includes the verification of beneficial owners but also of “the persons on whose behalf or for the benefit of whom a transaction or activity is being carried out”. It is presumed that Art. 10 Draft RTS is referring to every identification process conducted in accordance with Art. 22(7)(b) AMLR, not only the ones involving beneficial owners. This is reflected in the wording of Art. 10 Draft RTS, in which the “reasonable measures referred to in Article 22(7), point (b)” AMLR are associated without any specification of a restricted application to beneficial owners. Therefore, the title of Art. 10 Draft RTS should be amended, either by adding “Reasonable measures for verification of the beneficial owner or the person on whose behalf or for the

Name of the respondent	Question	Answer
		benefit of whom a transaction or activity is being carried out", or by preferably using an umbrella term, e.g. "Reasonable measures for verifi-cation of the beneficial owner or a represented natural person". The second comment refers to Art. 10(a) Draft RTS. With regard to Art. 10(a) Draft RTS, public company registers (commercial, company, and transparency registers, etc.) should be included as additional sources. It must be emphasised that notaries, like other legally recognised professionals such as lawyers, tax advisors and auditors, are bound by a criminally sanctioned duty of confidentiality (Section 18(1) of the Federal Code for Notaries – Bundesnotarordnung). Collecting information from external sources beyond those publicly acces-sible is therefore generally prohibited under professional law as it would violate the confidentiality duty and trigger repercussions both under professional and criminal law. This significantly limits the feasibility of the measures envisaged under Art. 10 Draft RTS for legal professions. Therefore, Art. 10(a) Draft RTS should be amended as follows: (a)"consulting public registers, other than the central registers, or other reliable national systems that contain the information necessary to verify the identity of the beneficial owner, or the person on whose behalf or for the benefit of whom the transaction or activity is being carried out, such as the business register, residence register, tax register, passport database and the land register, but only to the extent that these are accessible to obliged entities; or"
Bundesnotarkammer (German	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11

Name of the respondent	Question	Answer
Federal Chamber of Notaries)		
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	The first comment refers to Art. 11(1) Draft RTS. It should be clarified that, in line with the risk-based approach, providing the ownership and control structure and the relevant beneficial ownership information is the responsibility of the customer. Otherwise, it would entail additional, potentially extensive duties for the obliged entity. It should be considered that notaries typically lack insight into the internal structure of a legal entity as they only provide notarial acts for singular transactions and do not continuously assist the legal entity as part of an ongoing relationship. While this renders the necessity to understand the ownership and control structure even more important, providing the relevant data should be an obligation by the client, not an active research duty by the notary, in order to ensure applicability and efficiency. Art. 11(1) Draft RTS should therefore be amended to include an additional sentence: “The ownership and control structure shall be provided entirely by the customer.” The second comment refers to Art. 11(3)(b) Draft RTS. It should not be required to obtain information on the jurisdiction of incorporation or registration of the legal person or legal arrangement. Therefore, Art. 11(3)(b) Draft RTS should be deleted without replacement. While the requirements set out in Art. 11 Draft RTS on obtaining information on legal entities for the purposes of understanding the ownership and control structure are generally welcomed as reasonable means to achieve this objective, some information is not necessary to identify the

Name of the respondent	Question	Answer
		beneficial owner and assess the ML/TF risk, even under consideration that measures shall be carried out in a risk-sensitive way. In particular, it seems generally overreaching and disproportionate when juxtaposed to its benefit to include information on the jurisdiction of incorporation or registration of the legal person or legal arrangement. This imposes disproportionate administrative burdens without any discernible benefit as the control structure can easily be identified without this additional data point. Art. 11(3)(b) Draft RTS should therefore be deleted. The final comment refers to Art. 11(4) Draft RTS. The provision, in its current wording, would cause significant and disproportionate burden and should therefore be amended. The requirement to assess the “economic rationale” of an ownership structure, pursuant to Art. 11(4)(b) Draft RTS, is not sufficiently defined. Without a clear definition, obliged entities may be forced to adhere to extensive investigative activity in order to ensure compliance with the provision. This seems especially disproportionately burdensome for smaller entities, like notaries. As explained in further detail in our contribution regarding the effectivity of the draft RTS, many notaries run small-sized offices, and they have usually non-repeat clients since transactions are individual and unrelated. Therefore, synergies are virtually nonexistent and superfluous administrative or investigative burden proves particularly heavy. At the same time, notwithstanding the current lack of a clear definition, a “rationale” is not a suitable criterion to determine

Name of the respondent	Question	Answer
		the owner and control structure and ML/FT risks associated with it, as even (seemingly) illogical corporate structures are permissible and legitimate. If anything, while a (seemingly) illogical rationale might cause suspicion or warrant further measures, it is not a feasible criterion to determine the owner and control structure of a corporate entity. It might be even argued that a criterion is unfit to determine the beneficial owner does not fall within the scope of Art. 28(1) AMLR, rendering its inclusion into the Draft RTS overall unlawful. The same argument applies to Art. 11(4)(c) Draft RTS, where it is also unclear what level of understanding between the structure and the risk associated with the customer is required. The provision is therefore insufficiently defined and could entail arbitrary application. Instead, plausibility should be the criterion for understanding the ownership and control structure, as it is applicable with legal clarity. It is therefore proposed to rephrase Art. 11(4) Draft RTS as follows: "(4) When obliged entities assess the ownership and control structure, they must be satisfied that the information included in the description pursuant to paragraph 2, point (a), is credible and plausible."
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	13
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Due to an insufficient definition of the term “senior managing officials” (SMOs), the provision should be significantly reduced in scope in order to ensure a risk-based and effective application.

Name of the respondent	Question	Answer
		Pursuant to Art. 2(1)(40) AMLR, the term “senior management” includes “members of the management body […] as well as officers and employees with sufficient knowledge of the obliged entity’s money laundering and terrorist financing risk exposure and sufficient seniority to take decisions“. It remains unclear who that entails. In large, publicly listed corporations, this might result in the obligation to identify and verify the identity of several dozen people. This would prove highly time-consuming and disproportionate, especially regarding information on the place of birth and any document number, which are often arduous to obtain while unnecessary for unambiguous identification. As a consequence, transactions would be delayed or more expensive, or even impossible to conduct, resulting in harming European competitiveness. Notaries are even more affected by disproportionality as they run comparatively small offices and do not accompany corporations for a longer period, but rather provide legal assistance for individual, non-repetitive transactions. At the same time, duties might even be inapplicable for notaries, as reliably examining which natural persons from the corporate structure have sufficient risk exposure and seniority requires sufficient insight, which may not be the case for entities only assisting singular transactions. With limited insight and an unspecific definition, the duties are virtually impossible to reliably fulfil, rendering the exercise ultimately pointless while raising transaction costs. It is therefore proposed to significantly limit the burden. This could be achieved by either delaying the moment where SMOs have to be identified or by reducing the amount of information to be collected.

Name of the respondent	Question	Answer
		In terms of a delay, from a notarial perspective, it appears risk-proportionate to identify SMOs after the authorisation. Identification could take place e.g. within two weeks after notarial authorisation. If subsequent identification fails, further AML measures would still be possible and effective, as the execution of the notarial contract regularly takes several months. This would also be in line with Art. 23(1) AMLR, which does not mandate when SMOs must be identified. Art. 13 Draft RTS could therefore include a second paragraph as follows: "(2) For the identification, it is sufficient if senior managing officials are identified and their identity is verified in accordance with paragraph 1, two weeks after the business relationship is established or the occasional transaction is carried out." To reduce the necessary information, the amount of data points to be collected could be limited to, e.g. full name, nationality, date of birth and the address of the registered office. Alternatively, the number of people to be identified could be limited. Despite Art. 22(2) AMLR stipulating all natural persons who are SMOs shall be identified, this would not be a contradiction, as Art. 28(1)(a) AMLR allows to specify requirements for obliged entities and information to be obtained to fulfil due diligence obligations. For these RTS, many provisions state that among several data points, the collection of at least one generally suffices (e.g. Art. 10, 11, 18, 26 Draft RTS). This regulatory technique, which successfully balances responsibility with flexibility, should also be applied to SMOs. A revision could therefore look like this: "In relation to senior managing officials as referred to in Article

Name of the respondent	Question	Answer
		22(2), second subparagraph, of [AMLR], obliged entities shall, for in general at least one senior managing official: […].” If it is deemed necessary to identify every SMO, the administrative burden should at least be limited. At least one SMO could be identified and verified, as set out in the current draft, while the CDD regarding every additional SMO would include only a limited amount of data points. This would lower administrative burden while generally maintaining a high degree of reliability. A revision could therefore look like this: “In relation to senior managing officials as referred to in Article 22(2) [AMLR], obliged entities shall: (a) collect information in the following way: (aa) for at least one senior managing official: collect the same information as the information they would collect for beneficial owners. (bb) for other senior managing officials: collect at least the following information: all names and surnames, full date of birth, residential address and nationality or nationalities. Obliged entities may decide to obtain the ad-dress of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; (cc) verify the identity of senior managing officials in the same way as they would for beneficial owners."
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18

Name of the respondent	Question	Answer
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Since the information to be obtained pursuant to Art. 18 Draft RTS shall only be collected "as appropriate" or “where necessary” in accordance with Art. 20(1)(c) and 25 AMLR, these rules would cause enormous legal unclarity. Therefore, a provision should be added to ensure that obliged entities fulfilling certain criteria are generally acting in compliance with the provision. It is not specified if and under what circumstances information must be obtained to meet the criterion “appropriate” or “necessary” set out in Art. 20(1)(c) and 25 AMLR. Recital 13 Draft RTS also merely stipulates that obliged entities should “assess” whether available information is “sufficient” to be “satisfied”. Furthermore, it is unclear under which circumstances it is appropriate or necessary to obtain additional information. Art. 18 Draft RTS repeatedly states that “at least” one piece of enumerative information must be obtained, but it does not set rules or provide examples for situations in which multiple points of information should be collected. In practice, this makes the provision inapplicable, leading the way for a heavily fragmented and arbitrary application. While the risk-based approach of Art. 1 Draft RTS is rightfully adhered to, Art. 18 Draft RTS does not provide any guidance on what information has to be obtained and under what circumstances. 1) The proposed solution expands on Recital 13 Draft RTS, which rightfully presupposes that a risk-based approach requires the obliged entity to be satisfied with information that is either obtained or already available. To ensure legal clarity, the Draft RTS should provide that the information obliged entities either already had or that was provided to them is

Name of the respondent	Question	Answer
		sufficient with regard to the AML/CFT provision, unless the specific circumstances of the individual case require further measures. Without undermining the importance of precautions, obliged entities would have clear guidance while it would be ensured that the necessary diligence is performed and precautions are taken. It is therefore proposed to amend Art. 18 Draft RTS by adding a second paragraph as follows: (2) “Unless there is a specific indication whereas the collection of additional information is necessary, obliged entities act in accordance with Article 20(1)(c) and Article 25 of Regulation (EU) 2024/1624 when they assess only information already available to them.” 2) Alternatively, the principle of proportionality should at least limit the requirement of further information, at least on a general basis, in line with the risk-based approach. For notaries, who typically operate in small-sized offices that lack the resources to perform wideranging information-gathering activities, the imposture of additional obligations would effectively prevent them from carrying out their core judicial and public service tasks, as they would be compelled to spend a disproportionate amount of time collecting ancillary data that may neither be relevant to the specific transaction nor easily obtainable. A risk-based approach should ensure that without indication, the obligations under Art. 20(1)(c) and 25 AMLR are fulfilled if a certain number of data points are either collected or already obtained, ensuring legal clarity and predictability for the obliged entity while harmonising and unifying standards across the entire range of obliged entities. It is proposed to set a

Name of the respondent	Question	Answer
		standard where the respective duties are generally fulfilled when at least three data points are or have been made available to the obliged entity, with the possible necessity to acquire further information if the specific situation requires it. This would be in line with the risk-based approach. Therefore, a provision could be added as Art. 18(2) Draft RTS, stipulating the following: (2) “Unless there is a specific indication whereas the collection of additional information is necessary, obliged entities act in accordance with Article 20(1)(c) and Article 25 of Regulation (EU) 2024/1624 when they have obtained at least one of the information set out in paragraph (1) in three different categories, without prejudice that fewer information may be necessary.”
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	19
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	The first comment refers to Art. 19(1)(a) Draft RTS. While the identification rules for politically exposed persons (PEPs) are generally proportionate, the requirement to determine PEP status before establishing a business relationship or carrying out an occasional transaction is not practical. It should therefore be loosened. If notarial acts were considered to be business relationships, which is still unclear from the current drafts, identification processes would have to take place during the initial contact, disrupting workflows without gaining any notable benefit. In the initiation of a notarial real estate purchase contract or a company share deal, notaries will be contacted by the parties and mandated to prepare the contract. After the draft is

Name of the respondent	Question	Answer
		finalised, the parties will meet in the notary's office for authentication. It is only in this moment the contract becomes binding and that AML risks arise, because now a notarial contract exists that might give legitimacy to an illicit transaction. Following the authentication, the contract is executed under the supervision and guidance of the notary, i.e. concerning the transfer of ownership in the land registry, the transfer of company shares in the commercial register, or the payment of consideration. After final execution, the relationship ends. Conversely, the notary will not perform any acts prior to the authentication, apart from preparation. Therefore, there is no basis for notaries to perform any PEP checks. Instead, it should be ensured that the determination of PEPs takes place prior to the authenticating act. At this point, AML-specific risks arise, making the determination immediately before the authentication necessary, but also sufficient. It is therefore proposed to amend Art. 19(1)(a) Draft RTS as follows: "(a) Before the establishment of the business relationship or the carrying out of the occasional transaction, if the customer […] is a politically exposed person, a family member, or person known to be a close associate; with the exception of the situations referred to in Article 44 of Regulation (EU) 2024/1624, or if the obliged entity conducts the determination immediately before directly providing the first service for the customer; and" The second comment refers to Art. 19(2)(a) Draft RTS. Conducting customer reviews at "frequent" intervals is not suitable for the notarial sector, even if the intervals are

Name of the respondent	Question	Answer
		determined by a risk-based approach. It should therefore be amended. As laid out in our contribution regarding Art. 3, the notarial sector in particular is structurally different from the financial sector. Notarial offices are usually small-sized with only a handful of employees. At the same time, they perform several hundred AML relevant notarial acts each year, usually for non-recurring clients, and any entanglement automatically ends upon the final execution of the transaction. This renders any investigative duties more burdensome by comparison. Considering these circumstances, notaries would have to conduct extensive reviews of thousands of people while operating in small-sized offices. These reviews would serve no purpose, as the contact between notaries and their clients may already have been finalised at the point of review. While the risk-sensitive approach is in-tended to avoid these disproportionalities, the provision still leaves legal unclarity. It should be clarified that only continuous, long-term relationships shall be subject to repeated checks. If the customer only interacts with the obliged entity as part of an occasional transaction or a short-term relationship, there should not be any frequent reviews. It is therefore proposed to amend Art. 19(2)(a) Draft RTS as follows: “(a) with a frequency established on the basis of a risk-sensitive approach, whereas a review shall only be required if a continuous relationship between the obliged entity and the customer exists and is designed to be long-term;” The final comment refers to Art. 19(3) Draft RTS. This provision is misguided, at least for the non-financial sector,

Name of the respondent	Question	Answer
		and should be deleted without replacement. While digital reviews are efficient, they should not be mandated by law. Rather, it should be left to the discretion of the obliged entity, as its forced implementation offers no advantages. The obliged entity has a strong self-interest in finding a pragmatic solution and will therefore opt for an efficient system. In the case of notaries, it should be emphasised again that most offices are small organisational units that may lack the infrastructure for a digital solution, while at the same time handling a relatively large quantity of clients. While the option for manual checks is taken into account in the draft, the rule-exception-structure creates the false impression that an exemption from the obligation to use a digital solution can only arise in exceptional cases, which it should not.
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	4
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	With regard to specifying the place of birth in accordance with Art. 22(1)(a)(ii) AMLR, it is disproportionate to require obliged entities to obtain the name of the country of birth when obtaining information on the address of a customer on a general basis. When considering the scope and size of notarial offices and their client structure, it should be noted that the majority of German notaries maintain small offices in rural areas with only a handful of employees. At the same time, the vast majority of clients are local, as a notary typically serves as a direct point of in-person contact for the local population. In practice, in the

Name of the respondent	Question	Answer
		vast majority of cases, the notaries and their clients have the same sole country of birth and residence and transactions involve no cross-border reference. While a growing internationalisation and freedom of movement does lead to a growing number of citizens living outside their country of origin or holding a nationality not congruent with their country of residence, for notarial practices it is the exception rather than the rule to have non-local clients involved in a transaction. The principle of notarial locality is reflected in the provisions of the notarial professional law of Germany. For example, notaries are generally prohibited from performing notarial acts outside their administrative district. This underlines that, first and foremost, notarial acts are provided for a local community. Therefore, in most cases, it is self-evident that the country of birth is identical to the country of current nationality or residence, leav-ing no room for misinterpretation or options to conceal an identity. While obliged entities may still be diligent enough to obtain the country of birth even in these cases, it brings no value having to obtain the country the natural person was born in. At the same time, it creates an additional administrative burden, since some identity documents may not feature this specific data point, leaving obliged entities with the arduous and futile task of manually obtaining it, which proves disproportionate, especially if they operate in small offices, like most notaries do. This requirement seems especially excessive when the transaction in-volves no cross-border reference. Given that an unambiguous identification appears easily possible without this specific data point at all, since obtaining the full name, the full date of birth, every nationality and the full place of residence leaves little room for mistaken identities,

Name of the respondent	Question	Answer
		the optimal alternative would be to delete the requirement to obtain the country of birth entirely, given it can hardly be justified to classify the failure of obtaining information on the country of birth as a violation of CDD. This was rightfully recognized for situations of low-risk pursuant to Art. 20 Draft RTS, but should be extended to all situations where it is unneccessary. At the very least, in the event that the country of birth matches the country of current residence or nationality, the duty to separately obtain such information should not be exercised. Instead, the name of the city of birth, as it is typically included in most European identity documents, appears to be sufficient. Finally, it should be clarified that information derived from an identity document shall only be collected if the identification is conducted with that identity document, which is not required if the identification is conducted in accordance with Art. 22(7)(b) AMLR. It is therefore proposed to delete Art. 4 Draft RTS entirely, alternatively amending it as follows: "1. The information on the place of birth as referred to in Article 22(1), point (a)(ii), of Regu-lation (EU) 2024/1624 shall consist of at least the country name. 2. Should the identity document, passport or equivalent of the customer provide additional information on place of birth, such information shall be collected if the identification is conducted in accordance with Article 22(6) of Regulation (EU) 2024/1624. 3. Art. 4(1) shall not apply if the person to be identified (a) resides in the same country they were born in or (b) is a citizen of the same country they were born in."

Name of the respondent	Question	Answer
		It should finally be noted that the same argument applies to Art. 3(a) Draft RTS concerning the country of residence. Due to a mostly local client structure and following a risk-based approach, only in the event where the country of residence differentiates from the nationality of the client or from the obliged entites' country of residence, it should be collected.
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	25
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The general objective to gain a deeper understanding of the customer in cases of higher risk situations is expressly supported. However, the provision in its current wording remains partially unclear, which is why it should be revised accordingly. Firstly, the phrase “shall obtain one or more of the following additional information” is misleading. The rationale of the provision is not to gather the “following” information (as listed in (a)–(c)), but rather to gather information to gain understanding about one of the following criteria (as listed in (a)–(c)). The provision should be amended accordingly. The same inaccurate wording also was used in Art. 26 and 28. Secondly, Art. 25(b) Draft RTS contains a vague criterion that is open to vast interpretation. While in line with a risk-based approach, the lack of any guidelines what is constitutive for assessing a customer’s or beneficial owner’s “reputation” will create massive unclarity and an arbitrary application. The criterion should therefore be either deleted or supplemented

Name of the respondent	Question	Answer
		by guidelines as to what constitutes a “reputation” for a customer. From a present perspective, the reputation of a legal or natural person would be inherently dependent on the sources consulted and may therefore produce misleading or one-sided results. While trustworthy official sources can supplement a risk assessment, subjective criteria should be avoided. Moreover, any sufficiently objective reputational assessment would require a disproportionate number of sources, thereby contradicting Art. 34(4) AMLR and the principle of proportionality. Finally, it should be emphasised that notaries are bound by a criminally sanctioned duty of confidentiality (Section 18(1) of the Federal Code for Notaries – Bundesnotarordnung). Collecting information from external sources beyond those publicly accessible is therefore generally prohibited under professional law as it would violate the confidentiality duty if they would be required to disclose personal data which they obtained during their official duties, triggering repercussions both under professional and criminal law. This significantly limits the feasibility of the measures envisaged under Art. 25 Draft RTS. The provision should therefore be congruent so that obliged entities are not forced to act in violation of professional and criminal law. It is suggested to change the provision as follows: “For the purposes of Art. 34(4), point (a), of Regulation (EU) 2024/1624, obliged entities shall in accordance with professional law obtain additional information that will allow them to fulfil at least one of the following criteria: (a) be satisfied that the information they hold on the customer and the beneficial owners or the ownership and control

Name of the respondent	Question	Answer
		structure of the customer other than a natural person is authentic and accurate; or (b) identify and assess in a comprehensive way ML/TF risks associated with the customer, the beneficial owners or any close relationships known to the obliged entity or that are publicly known." Art. 26, 27, and 28 face the same issue of confidentiality and should therefore also be amended accordingly.
Bundesnotarkammer (German Federal Chamber of Notaries)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	30
Bundesnotarkammer (German Federal Chamber of Notaries)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	The first comment refers to Art. 30(a) Draft RTS. There are certain elements that might cause disruptions without gaining proportionate benefit. The provision should therefore be amended to enhance efficiency. Additionally, there should be no requirement for automated screenings. The screening of names and surnames should be limited to names known to the obliged entity or obtained during CDD proceedings. Furthermore, there should be no need to actively request information. This especially applies to aliases and trade names. Notarial clients never identify themselves by an alias or a trade name. In-stead, they are legally required to appear in front of the notary and identified via an official identity document. It would not only be unusual, but impermissible to appear on the sole basis of a trade name before a notary. The very purpose of a notarial identification is the actual identification by a public official, ensuring authenticity, in accordance with section 10 of the German Notarial Recording Act. For that reason, notarial acts are considered public records

Name of the respondent	Question	Answer
		with a higher evidentiary value, section 415 German Code of Civil Procedure. Inquiring customers about aliases or trade names would therefore be meaningless as the very idea of official identification requires verifying a real name. Unless explicitly known, it would be disruptive to ask about additional aliases or trade names which, for legal reasons, are not used during a notarial proceeding. It should suffice to limit the screening to information already known to the obliged entity, without being required to ask about aliases or trade names. Additionally, there should not be any duty to conduct the screening through automated checks. While digital solutions are efficient, they should not be mandated by law. Art. 30(a) Draft RTS should therefore be rephrased as follows: "(a) screen at least the following information, provided they are known to the obliged entity, on customers, beneficial owners and the entities or persons which control or meet the ownership conditions over such customers: […].” The second comment refers to Art. 30(c) Draft RTS. Some terms are unspecific, superfluous or disproportionate. They should therefore be removed, while it should be clarified that the obliged entity generally has no duty to actively search for information. The term “regular” should be deleted. From its wording, it appears that even occasional transactions might require “regular” screenings, despite having limited interaction between obliged entity and customer. Even in long-term relationships, the categories listed under Art. 30(c)(ii), (iii) Draft RTS ensure that checks are repeated on a basis sufficient to avoid loopholes for sanctioned individuals. In line with a risk-based approach, limiting repeat screenings to necessary

Name of the respondent	Question	Answer
		instances reduces unnecessary burden without significantly increasing risks. Additionally, the criterion „change of residence" should be removed. It would mean a disproportionate burden, especially for notaries who typically run small-sized offices. They perform at least several hundred real estate transactions each year, usually with non-repeat clients. Many of these clients may change their residency over the course of the notarial proceeding, as this change is quite literally the purpose of the real estate transaction. The requirement to re-screen clients would be superfluous since the notary will already know about the background after authenticating the transaction. Furthermore, beneficial owners may commonly change their residence without raising suspicion. Overall, this criterion is not significant enough to justify another screening. Finally, it should be clarified that for the purposes of Art. 30(c)(iii) Draft RTS, only information already available to the obliged entity should be considered. Art. 30(c) Draft RTS should therefore be rephrased as follows: "(c) screen their customers, beneficial owners and entities or persons which control or meet the ownership conditions under Article 20(1), point (d) [AMLR], at least under the following circumstances: i. during customer onboarding or before entering into a business relationship or performing an occasional transaction; ii. when there is a change in any of the existing designations, or a new designation is made pursuant to Article 26(4) [AMLR]; iii. there is a significant change in the due diligence data of an existing customer, beneficial owner or entity, or person which controls or meet the ownership conditions under Article 20(1), point (d) [AMLR], such as but not limited to a change of name,

Name of the respondent	Question	Answer
		nationality or change of business operations, which may have a potential impact on the designation as a listed person, body or entity. For these purposes, they shall only consider data already available to them, unless there is an indication to obtain additional data;"

Bundesrechtsanwaltskammer - German Federal Bar	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Der Entwurf der RTS ist rechtswidrig und verletzt die anwaltlichen Kernwerte, insbesondere das Berufsgeheimnis und die Berufsausübungsfreiheit. Er berücksichtigt nicht die Besonderheiten des Nichtfinanzsektors und dass Rechtsanwälte nicht per se Verpflichtete nach Art. 3 Nr. 3 der GwVO sind. Viele Vorschriften sind vor allem für Kreditinstitute und größere Unternehmen konzipiert und von „kleineren Unternehmen“ (wie z. B. Einzelanwältinnen und -anwälten) nicht leistbar. Es gibt keine Aus-nahmeregelungen, so dass diese ihre Sorgfaltspflichten nicht reduziert vornehmen können. Der RTS-Entwurf ist insgesamt überbordend, überreguliert und unverhältnismäßig. Die Regelungen sind nicht aus sich heraus verständlich. Unbestimmte Rechtsbegriffe werden mit weiteren unbestimmten Rechts-begriffen erklärt. Die Regelungen gehen teilweise über den Inhalt ihrer Rechtsgrundlage, der GwVO, hinaus. Die Regelungen für Sammelkonten (v. a. Art. 22 RTS-E) sind unpraktikabel, verletzen das Berufsgeheimnis und könnten dazu führen, dass das Produkt von den Banken in Zukunft nicht mehr angeboten werden könnte. Dies wäre für die Anwaltschaft, die Sammelanderkonten für die Ausübung ihres Berufs benötigen, fatal.Dem Entwurf kann in seiner derzeitigen Form nicht uneingeschränkt zugestimmt werden. Zwar enthält er eine Reihe sinnvoller Konkretisierungen. Für Rechtsanwälte als Verpflichtete fehlt jedoch eine hinrei-chend klare und systematische Kopplung an Art. 3 Nr. 3 lit. b) GwVO sowie an die Art. 19 bis 34 der GwVO. Für problematisch werden insbesondere die Art. 7, 10 bis 12, 18, 19, 22 und 25 bis 30 des RTS-Entwurfs gehalten.Die Regelungen sind nicht eindeutig und

Name of the respondent	Question	Answer
		dürften für die meisten – nicht juristisch ausgebildeten – Verpflichteten nicht verständlich sein, sie werden daher keine Harmonisierung bewirken.Es werden zu wenig Unterscheidungen zwischen dem Finanz- und Nichtfinanzsektor gemacht. Die Besonderheiten des Nichtfinanzsektors und einzelner Verpflichteter (v. a. Berufsgeheimnisträger) werden nicht berücksichtigt.Es gibt keine Ausnahmeregelungen für „Kleinunternehmen“ (Einzelanwältinnen und -anwälte), so dass diese die Sorgfaltspflichten nicht in reduzierter Version vornehmen dürften. Dies könnte deren Geschäftstätigkeit aufgrund des immensen administrativen und unbezahlten Aufwandes faktisch unmöglich machen. Daher bestehen erhebliche Bedenken im Hinblick auf die Berufsfreiheit Art. 12 GG (vgl. Art. 15 GRCh). Die Art. 7, 19 und 30 RTS-E sollten deutlicher anerkennen, dass manuelle, doku-mentierte und risikoadäquate Verfahren für kleinere nichtfinanzielle Verpflichtete ausreichend sein kön-nen.Es bedarf ausdrücklicher Regelungen, dass die anwaltliche Verschwiegenheit und die Funktionsfähig-keit vertraulicher Rechtsberatung gewahrt bleiben. Banktypische Prüf- und Dokumentationslogiken dür-fen nicht schematisch auf die anwaltliche Tätigkeit übertragen werden. Bei Sammelkonten bedarf es einer ergänzenden Regelung, die bereits bestehende Aufsichten von Berufsgeheimnisträgern berücksichtigt. Die Anforderungen des Art. 22 RTS-E sollten als erfüllt gelten, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mit-gliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Art. 20 Abs. 1 lit. h) GwVO entspricht.Dass ein verhältnismäßiger und wirksamer Ansatz (so Erwägungsgrund 1 RTS-E) postuliert wird, bedeutet nicht,

Name of the respondent	Question	Answer
		dass dies tatsächlich der Fall ist. Es entsteht der Eindruck, dass die Geldwäschepräven-tion einerseits vornehmlich der Privatwirtschaft auferlegt wird, andererseits jedoch erhebliche Zweifel am Willen und oder der Fähigkeit der Verpflichteten bestehen, eine ordentliche Identifizierung und Ve-rifizierung vorzunehmen. Daraus resultieren detaillierte Pflichten, die Ressourcen beanspruchen, was wiederum dazu führen kann, dass sich die Verpflichteten gerade nicht auf die tatsächlich problemati-schen Kunden bzw. Mandanten konzentrieren und diese besonders intensiv prüfen. Auffällig ist der sehr hohe Detaillierungsgrad der Regelungen, welche die ebenfalls bereits detaillierten Art. 20 ff. der GwVO nochmals ergänzen. Letztlich ist es der Übersichtlichkeit abträglich, dass die der Entwurf der RTS nicht aus sich heraus verständlich ist, sondern stets in Verbindung mit der GwVO gelesen werden muss. Diesbezüglich ist auch daran zu erinnern, dass die meisten Verpflichteten des Nichtfinanzsektors keine juristische Ausbildung genossen haben. Aus den Erläuterungen ergibt sich nicht, dass Planspiele zu typischen Konstellationen durchgeführt wurden.
Bundesrechtsanwaltskammer - German Federal Bar	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Nein. Es gibt keine Ausnahmeregelungen für „Kleinunternehmen“ (Einzelanwältinnen und -anwälte), so dass diese die Sorgfaltspflichten nicht in reduzierter Version vornehmen dürften. Dies könnte deren Geschäftstätigkeit aufgrund des immensen administrativen und unbezahlten Aufwandes faktisch unmöglich machen. Daher bestehen erhebliche Bedenken im Hinblick auf die Berufsfreiheit Art. 12 GG (vgl. Art. 15 GRCh). Die Art. 7, 19 und 30 RTS-E sollten deutlicher anerkennen, dass manuelle, dokumentierte und risikoadäquate Verfahren für kleinere nichtfinanzielle Verpflichtete ausreichend sein können.Der Entwurf ist zudem

Name of the respondent	Question	Answer
		nicht ohne weiteres auf die gesamte Palette anwaltlicher Dienstleistungen anwendbar. Er ist deutlich am Finanzsektor orientiert und berücksichtigt nicht hinreichend, dass anwaltliche Tätigkeit häufig punktuell, mandatsgebunden und berufsgeheimnisgeschützt ist.Der vorgelegte Entwurf begegnet in seiner derzeitigen Fassung erheblichen systematischen, berufsrechtlichen und verfassungsrechtlichen Bedenken, soweit er auf rechtsberatende Berufe und insbesondere auf Rechtsanwältinnen und Rechtsanwälte Anwendung finden soll. Auch sind viele Regelungen vorhanden, die auf Verpflichtete des Finanzsektors passen, jedoch nicht die Besonderheiten der Verpflichteten des Nichtfinanzsektors berücksichtigen. Einige Vorschriften sind für Rechtsanwälte und kleinere Verpflichtete nicht praktikabel und beinhalten einen unzumutbaren, überbordenden, unverhält-nismäßigen wie unwirtschaftlichen Aufwand. Für die Anwaltschaft bedarf der Entwurf einer deutlich sorgfältigeren Abstimmung auf die besondere, rechtsstaatlich geschützte Funktion anwaltlicher Tätig-keit. Ohne entsprechende Präzisierungen besteht die Gefahr, dass technische Standards, die vor allem für den Finanzsektor entwickelt wurden, im anwaltlichen Bereich zu Rechtsunsicherheit, unverhältnis-mäßigen Belastungen und Konflikten mit Berufsrecht und Verfassungsrecht führen. Dies betrifft vor allem die fehlende hinreichende Vereinbarkeit des RTS-Entwurfs mit den Artikeln 19 bis 34 der GwVO, die unzureichende Berücksichtigung der besonderen Stellung der Rechtsanwalt-schaft nach Art. 3 Nr. 3 lit. b) der GwVO, die Gefahr einer unverhältnismäßigen Ausweitung anwaltlicher Prüf- und Dokumentationspflichten in Konflikt mit dem Berufsgeheimnis, der Mandatsfreiheit sowie die ungeklärte Rollenverteilung zwischen Verpflichteten, Kreditinstituten und

Name of the respondent	Question	Answer
		anwaltlicher Selbstverwaltung, insbesondere im Zusammenhang mit Sammelanderkonten.Der Entwurf setzt die konsequente Umsetzung des risikobasierten Ansatzes voraus (siehe z. B. die Erwägungsgründe Nr. 1, 13, 16, 19, 21, 24 und 25). In den zugrunde liegenden Artikeln des RTS-Entwurfs wird dieser jedoch nicht konsequent umgesetzt. Für den Anwendungsbereich anwaltlicher Tätigkeit fehlt es vielfach an einer klaren dogmatischen Rückbindung an die Primärnormen der GwVO.Der RTS-Entwurf ist nicht vereinbar mit Art. 3 Nr. 3 GwVO. Er erweckt den Eindruck, dass Rechtsan-wälte unabhängig von einer vorgelagerten Prüfung ihrer Verpflichtetenstellung dieselben Prüfungsin-tensitäten wie natürliche oder juristische Personen entfalten müssten, die per se Verpflichtete sind. Jede Konkretisierung durch RTS darf den Anwendungsbereich der GwVO weder faktisch erweitern noch die berufsrechtlich geschützte Vertrauensbeziehung zwischen Anwalt und Mandant aushöhlen. Dies ist bei dem vorliegenden Entwurf jedoch der Fall. Die RTS müssen sich im Rahmen der Vorgaben zu Art. 19 bis 34 der GwVO bewegen und dürfen nicht über die Rechtsgrundlage hinausgehen. Die Kundensorgfaltspflichten regeln bereits detailliert die Aus-löser der Sorgfaltspflichten, den Zeitpunkt ihrer Erfüllung, Inhalt und Intensität der Standard-, verein-fachten und verstärkten Sorgfaltspflichten, die laufende Überwachung, die Identifizierung wirtschaftlich Berechtigter, die Behandlung politisch exponierter Personen sowie die Anwendung gezielter Finanz-sanktionen. Die RTS dürfen nicht dazu führen, dass schon die abstrakte Möglichkeit einer transaktionsbezogenen, anwaltlichen Tätigkeit oder die bloße Unterhaltung eines Mandatsverhältnisses als hinreichend für die Annahme der

Name of the respondent	Question	Answer
		Verpflichtetenstellung verstanden wird. Der Entwurf arbeitet jedoch weitgehend mit Rechtsbegriffen wie „Kunde“, „Geschäftsbeziehung“, „gelegentliche Transaktion“ und „beabsichtigte Art der Beziehung“, ohne die Besonderheit zu beachten, dass bei Rechtsanwälten vorgelagert zu prüfenist, ob die konkrete anwaltliche Tätigkeit überhaupt unter Art. 3 Nr. 3 lit. b) GwVO fällt und ab welchem genauen Zeitpunkt diese Schwelle überschritten wird. Hierzu verweisen wir auch auf die im Zusammen-hang mit der Konsultation zu Art. 19 GwVO abgegebenen Stellungnahme. Die fehlende Differenzierung ist ein Grundproblem des gesamten Entwurfs.
Bundesrechtsanwaltskammer - German Federal Bar	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Nur eingeschränkt. Der Entwurf beruft sich auf den risikobasierten Ansatz, normiert in Teilen aber faktisch verdichtete Standardpflichten. Für den Nichtfinanzsektor und besonders für Rechtsanwälte fehlt es an ausreichender Flexibilität und klaren Schutzklauseln.Der Entwurf setzt die konsequente Umsetzung des risikobasierten Ansatzes voraus (siehe z. B. die Erwägungsgründe Nr. 1, 13, 16, 19, 21, 24 und 25). In den zugrunde liegenden Artikeln des RTS-Entwurfs wird dieser jedoch nicht konsequent umgesetzt. Für den Anwendungsbereich anwaltli-cher Tätigkeit fehlt es vielfach an einer klaren dogmatischen Rückbindung an die Primärnormen der GwVO.
Bundesrechtsanwaltskammer - German Federal Bar	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Ja. In der anwaltlichen Praxis sind insbesondere Informationen zu wirtschaftlichen Eigentümern in komplexen Auslandsstrukturen, zu Trust-Begünstigten, zu umfassenden Mittelherkunfts- und Vermögens-nachweisen sowie zu Geschäftspartnern und Endbegünstigten häufig nicht routinemäßig verfügbar. Der Entwurf sollte hierfür ausdrücklich alternative, abgestufte und zumutbare Lösungswege vorsehen.

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Es sollten weitergehende vereinfachte Maßnahmen für Berufsgeheimnisträger vorgesehen werden, ins-besondere bei punktuellen, eindeutig eingegrenzten Tätigkeiten mit geringem Risiko, bei bereits aus anderen verlässlichen Quellen vorliegenden Informationen sowie in Fällen, in denen berufsrechtliche Verschwiegenheit einer weitergehenden Informationsbeschaffung entgegensteht.Bei Sammelkonten bedarf es einer ergänzenden Regelung, die bereits bestehende Aufsichten von Berufsgeheimnisträgern berücksichtigt. Die Anforderungen des Art. 22 RTS-E sollten als erfüllt gelten, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Art. 20 Abs. 1 lit. h) GwVO entspricht.
Bundesrechtsanwaltskammer - German Federal Bar	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	22
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Wir sprechen uns dagegen aus, dass die Prüfung von Sammelanderkonten allein den Banken überlassen bleiben soll. Rechtsanwälte werden so gezwungen, der anwaltlichen Verschwiegenheit unterliegende Informationen den Kreditinstituten gegenüber zu offenbaren, damit diese ihre Prüfpflichten erfüllen können. Problematisch ist in diesem Zusammenhang, dass mit den in dem Regelungsentwurf vorgesehenen Bedingungen, die ein Kreditinstitut zu prüfen

Name of the respondent	Question	Answer
		hat, impliziert wird, dass diese Prüfungen auch kontinuierlich bei bereits bestehenden Sammelkonten erfolgen sollen. Nach Art. 22 soll das Kreditinstitut die Anforderungen aus Art. 20 Abs. 1 lit. h) der GwVO nämlich als erfüllt ansehen können, wenn es sich davon überzeugt hat, dass der Kontoinhaber die erforderlichen Informationen und Unterlagen zu seinen eigenen Kunden unverzüglich bereitstellen wird und weitere Voraussetzungen erfüllt sind. Das bedeutet, dass erwartet wird, dass das Kreditinstitut in Bezug aufSammelkonten sämtliche Sorgfaltspflichten des Art. 20 der GwVO zusätzlich zu den in Art. 22 des RTS-Entwurfs aufgeführten Prüfvoraussetzungen laufend in Bezug auf jeden wirtschaftlich Berechtigten kumulativ erfüllen wird. Dies ist weder nachvollziehbar noch verhältnismäßig und entspricht auch nicht dem risikobasierten Ansatz. Es ist schon vom Wortlaut nicht ersichtlich, welche Prüfpflichten im Verhält-nis zu den allgemeinen Sorgfaltspflichten reduziert werden sollen und wenn sich Art. 22 auch nur auf die Eröffnung von Sammelkonten beziehen soll.Für anwaltliche Anderkonten ist die angedachte Regelung insbesondere aus berufsrechtlichen Gründen problematisch: Rechtsanwälte unterliegen Verschwiegenheitspflichten, die in der Regel einer pauschalen Herausgabe solcher Informationen entgegenstehen (§ 43a Abs. 2 BRAO, § 2 BORA). Das Kreditinstitut wird durch Art. 22 indes verpflichtet, Informationen über Mandanten eines anwaltlichen Kontoinhabers anzufordern, obwohl diese Informationen dem besonderen Schutz anwaltlicher Vertraulichkeit unterliegen können. Damit entsteht ein struktureller Konflikt zwischen den AML/CFT-Pflichten des Kreditinstituts einerseits und der Pflicht zur anwaltlichen Verschwiegenheit des Anwalts andererseits. Hinzu kommt, dass bei anwaltlichen Fremdgeldkonten nicht

Name of the respondent	Question	Answer
		jeder Zahlungsvorgang bzw. jede Geldbe-wegung über ein Anderkonto automatisch eine Verpflichtetenstellung des Rechtsanwalts auslöst. Insoweit hat die BRAK in ihrer Stellungnahme zu dem RTS-Entwurf zu Art. 19 GwVO gefordert, dass eine Verpflichtetenstellung von Rechtsanwälten bei dem Verwalten von Fremdgeld auf einem Anderkonto erst ab dem in Art. 19 GwVO verankerten Erreichen des Schwellenwerts in Höhe von 10.000 EUR bei gelegentlichen bzw. verbundenen Transaktionen begründet wird.Die geldwäscherechtliche Aufsicht über Transaktionen von Rechtsanwälten, die als Verpflichtete anzu-sehen sind, obliegt den Rechtsanwaltskammern als Aufseher. Dieser Verpflichtung kommen sie bereits jetzt nach. Darüber hinaus ist zu berücksichtigen, dass derzeit eine gesetzliche Regelung in Vorberei-tung ist, nach der alle Fremdgeldtransaktionen über anwaltliche Anderkonten abzuwickeln sind. Sofern dafür Sammelanderkonten genutzt werden, wird das Gesetz vorsehen, dass sämtliche Transaktionen durch ein von der Bundesrechtsanwaltskammer bereitzustellendes System in einem automatisierten Verfahren auf gesetzlich näher zu definierende Auffälligkeiten geprüft werden. Sollten Auffälligkeiten auftreten, erfolgt eine automatisierte Meldung an die zuständige Rechtsanwaltskammer, die verpflichtet sein wird, die Transaktion zu prüfen und ggf. weitere Maßnahmen einzuleiten. Auch in anderen Mitgliedstaaten bestehen bereits Systeme der für Rechtsanwälte zuständigen Aufseher (der Rechtsanwaltskammern), die Transaktionen auf anwaltlichen Sammelanderkonten prüfen. Gemeint sind damit zum Beispiel Systeme, wie die französische CARPA oder der Betrieb eines elektronischen Systems, wie es von den

Name of the respondent	Question	Answer
		Rechtsanwaltskammern in Belgien betrieben wird und wo Transaktionen auf Sammelanderkonten täglich überprüft werden.Die BRAK schlägt daher vor, dass anwaltliche Sammelanderkonten von der Prüfpflicht des Art. 22 RTS-E grundsätzlich ausgenommen werden. Mindestens muss aber ausdrücklich vorgesehen werden, dass eine Ausnahme von der Prüfpflicht durch die Kreditinstitute dann besteht, wenn alle Transaktionenauf anwaltlichen Sammelkonten einer Überprüfung durch die Aufseher unterliegen. Ergänzungsvorschlag: „Die Anforderungen der Buchstaben a) bis e) gelten als erfüllt, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedsstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Artikel 20 Absatz 1 Buchstabe h der Verordnung (EU) 2024/1624 entspricht.“
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Grundsätzlich begrüßen wir die geplanten Regelungen. Die geplanten Regelungen sind ein wichtiger Schritt auf dem Weg der Digitalisierung. Sie begegnen jedoch einerseits erheblichen Bedenken hin-sichtlich der praktischen Umsetzung durch die Anwaltschaft als Verpflichtete sowie hinsichtlich der Überprüfung auf Einhaltung der geldwäscherechtlichen Vorgaben durch die Rechtsanwaltskammern als Aufsichtsbehörden. Die Regelung des Art. 7 ist stark am Finanzsektor orientiert. Die Anforde-rungen in Abs. 3 und 4 sind für viele Verpflichtete im Nichtfinanzsektor, insbesondere kleinere Kanzleien und Einzelanwälte, operativ und finanziell

Name of the respondent	Question	Answer
		nicht leistbar und daher unverhältnismäßig. Aus diesem Grund bestehen auch verfassungsmäßige Bedenken hinsichtlich der Berufsausübungsfreiheit, wenn faktisch technische Standards verlangt werden, die nur große Marktteilnehmer erfüllen können. Die Möglichkeiten der Fern-Identifizierung von Mandaten und der für diese auftretenden Personen werfen in der Praxis immer wieder Fragen auf. Insoweit bestehen derzeit Rechtsunsicherheiten. Der Bedarf in der Anwaltschaft für eine Fern-Identifizierung ist groß, da Mandate in Zeiten von Video-Tele-fonie und zunehmender Digitalisierung, spätestens seit der Corona-Pandemie, häufiger als zuvor ohne persönlichen Kontakt vor Ort in der Anwaltskanzlei geschlossen werden. Immer häufiger werden spezi-alisierte Anwälte fernab des eigenen Wohn- oder Geschäftsorts mandatiert, nicht nur bei Firmen-Mandaten. Aktuell weichen die Rechtsanwälte als Verpflichtete in solchen Fällen auf die bisherigen Mög-lichkeiten der Delegation (Erfüllung der Sorgfaltspflichten durch Dritte) aus. Rechtsanwälte erfüllen ihre Identifizierungspflichten etwa durch Inanspruchnahme geeigneter externer Dienstleister für Video-Iden-tifikationen oder andere Verfahren. In Anbetracht der erforderlichen, sehr hohen technischen und struk-turellen Anforderungen – die vor allem für den Finanzsektor vorgesehen waren und überwiegend von Banken genutzt werden – ist eine Durchführung der Videoidentifizierung durch verpflichtete Rechtsan-wälte selbst bzw. deren Kanzleien derzeit faktisch ausgeschlossen, da eine solche für Anwaltskanzleien in der Regel bereits wirtschaftlich nicht darstellbar ist.Wir unterstellen, dass die Selbstdurchführung der Identifizierung durch den Verpflichteten gegenüber jeder Form der Delega-

Name of the respondent	Question	Answer
		tion grundsätzlich vorteilhafter ist: Für den Verpflichteten selbst bedeutet dies in der Regel geringere Kosten, da er keine externen Dienst-leister beauftragen und vergüten muss. Insoweit besteht zusätzliches Missbrauchspotential, das dem Verpflichteten zugerechnet wird, für das ihn aber tatsächlich ggf. gar kein Verschulden trifft. Für den Mandanten als Geschäftspartner des Verpflichteten bedeutet die Identifizierung durch den Verpflichteten selbst, dass der Mandant seine personenbezogenen Daten nicht Dritten gegenüber offenbarenmuss, was zum einen unter dem Gesichtspunkt des Gebots der Datensparsamkeit und zum anderen in Bezug auf das erforderliche Vertrauensverhältnis zwischen Anwalt und Mandant von Bedeutung ist. Und schließlich ist die ordnungsgemäße Einhaltung der Identifizierungspflichten durch die Aufsichtsbe-hörde in Fällen der Delegation teils nur schwer und aufwändig, teils gar nicht zu überwachen, was bei den Aufsichtsbehörden Kapazitäten bindet bzw. eine effektive Kontrolle sogar unmöglich machen kann. Beispielhaft sei hierzu etwa die Möglichkeit der Identifizierung im „klassischen“ Post-Ident-Verfahren genannt, in dem der Verpflichtete aber keine Möglichkeit hat, die Zuverlässigkeit der von der Deutschen Post AG betrauten Post-Partnerfilialen, etwa in Schreibwaren- oder Lebensmittelgeschäften, zu über-prüfen. Genannt sei auch die Delegation der Identifizierung auf einen im Ausland ansässigen Rechts-anwalt, Notar oder Patentanwalt, hinsichtlich dieser die Aufsichtsbehörde faktisch gar keine Möglichkeit hat, die Ordnungsmäßigkeit der Identifizierung zu überprüfen. Der unter Nr. 3 im Zusammenhang mit der Speicherung geregelte Zeitstempel erscheint nicht erforder-lich. Bei der Speicherung elektronischer Dokumente werden Datum und

Name of the respondent	Question	Answer
		Uhrzeit generell gespeichert. Das in Nr. 4 bestimmte Erfordernis, begründen zu können, warum der Kunde nicht mit den in Art. 22 Abs. 6 GwVO genannten Mitteln überprüft werden konnte, erscheint interpretationsbedürftig. Insbeson-dere zur Vermeidung von Missverständnissen sollte dieses Erfordernis gestrichen werden oder es sollte klargestellt werden, dass keine Unmöglichkeit oder Unzumutbarkeit einer Präsenzüberprüfung verlangt wird. Im letztgenannten Fall müsste die Formulierung lauten: „(…) und sie müssen auch begründen können, warum der Kunde nicht mit den inwarum der Kunde nicht mit den in Artikel 22 Absatz 6 der Verordnung (EU) 2024/1624 genannten Mitteln überprüft wurde.“
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Art. 6 RTS-E knüpft an die Erwägungsgründe Nr. 4, 5 und 7 an. Der Grundansatz ist sachgerecht. Positiv ist die Öffnung für alternative Dokumente in vulnerablen Fällen. Gleichwertigkeit ist im Hinblick auf einen Ausweis oder Reisepass unter Nr. 1 definiert. Die Regelung unter Nr. 2 erscheint verzichtbar. Im Vergleich zu Nr. 1 fehlen dort die Angaben zum Ablaufdatum und eine Dokumentennummer sowie Sicherheitsmerkmale, um die Echtheit zu gewährleisten. Weiter heißt es: „Enthält das vorgelegte Dokument keine Angaben gemäß den Punkten des ersten Unterabsatzes, so müssen die verpflichteten Stellen andere glaubwürdige Mittel nutzen, um diese Angaben zu erhal-ten.“ Welche Mittel das sein könnten, erschließt sich nicht. Es stellt eine begrüßenswerte Erleichterung dar, dass unter Nr. 5 geregelt ist,

Name of the respondent	Question	Answer
		dass die Einholung einer beglaubigten Kopie eines Ausweisdokumen-tes ausreicht. Bei der Formulierung des Art. 6 Nr. 5 RTS-E ist allerdings unklar, was ein „gleichwertiges Dokument“ sein kann. Hier wird vorgeschlagen, Beispiele aufzunehmen und den folgenden Satz zu ergänzen: „Gleichwertige Dokumente können z. B. EU-Führerscheine, EU-Krankenkassenkarten, behördliche Dienstausweise, Amtliche Ausweise verkammerter Berufsangehöriger, wie z. B. Anwaltsausweise, Geburtsurkunden Minderjähriger in Verbindung mit der Überprüfung der Identität des gesetzlichen Ver-treters, Bestellungsurkunden des gesetzlichen Vertreters bei gesetzlich betreuten Personen oder ver-gleichbare Dokumente sein.“ Das Erfordernis der Regelung des Art. 6 Nr. 6 RTS-E erschließt sich indes nicht, da die Fernüberprü-fungsmaßnahmen in Art. 7 RTS-E geregelt sind und es eine Selbstverständlichkeit darstellt, dass eine Überprüfung nur zulässig ist, sofern die Technik zur Verfügung steht.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	10
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Für Rechtsanwälte ist problematisch, dass Art. 10 lit. b) RTS-E zusätzliche Informationsquellen wie Versorgungsrechnungen, aktuelle Informationen von Finanzinstituten oder Dokumente mit Bestätigung durch Zertifizierungsbefugte als Mindestmaßnahmen aufführt. Dies kann in der anwaltlichen Praxis un-verhältnismäßig sein und zu Konflikten mit der Pflicht zur Verschwiegenheit und praktischer Verfügbar-keit führen. Die Vorschrift sollte deshalb stärker betonen, dass die Auswahl dieser Maßnahmen strikt risikobasiert und nur insoweit erfolgt,

Name of the respondent	Question	Answer
		als sie im konkreten Berufs- und Tätigkeitskontext angemessen und zumutbar ist.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	11
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In Fällen komplexer Gesellschaftsstrukturen ist ein Verständnis der Eigentums- und Kontrollstruktur er-forderlich. Problematisch ist jedoch die Reichweite der verlangten Informationen, insbesondere über Zwischenebenen, Stimmrechte, Nominee-Strukturen und wirtschaftliche Gründe der Struktur. Bei Rechtsanwälten kann die Grenze zwischen zulässiger risikobasierter Prüfung und unzulässiger Ver-tiefung in vertrauliche Mandats- oder Strukturierungsberatung überschritten werden. Die Regelung sollte deshalb klarstellen, dass kein Vollständigkeits- oder Plausibilitätsgutachten über die gesamte Konzern- oder Beteiligungsstruktur geschuldet ist. In Art. 11 Nr. 1., Nr. 2 und Nr. 3 RTS-E sollte der Begriff „risikosensitiv“ durch „risikobasiert“ ersetzt werden. Während nach Art. 20 Abs. 1 b) GwVO genügt, dass die Verpflichteten „davon ausgehen kön-nen, den wirtschaftlichen Eigentümer zu kennen und die Eigentümer und Kontrollstruktur des Kunden zu verstehen“, wird in Art. 11 Nr. 1 RTS-E die Sicherstellung eines umfassenden Verständnisses der Eigentums- und Kontrollstruktur des Kunden verlangt. Die RTS kann jedoch Art. 20 Abs. 1 b) GwVO nur präzisieren, nicht erweitern oder ergänzen. Die Regelung in Nr. 1 RTS-E ist daher entweder von der Rechtsgrundlage nicht mehr gedeckt oder verzichtbar, da sie keinen weiteren Aussagegehalt als Art. 20 Abs. 1 b) GwVO besitzt. Während in Art. 22 Abs. 1 b) iv) GwVO allgemein nominelle Anteilseigner genannt werden, werden in Art. 11 Nr.

Name of the respondent	Question	Answer
		3 a) RTS-E Nominee-Aktionäre erwähnt. Die Anforderung in Art. 11 Nr. 4. b) RTS-E, sich davon zu überzeugen, dass es wirtschaftliche, rechtliche oder andere Gründe für die Struktur gibt, erscheint als generelle Anforderung überzogen. Diese Pflicht liefe auf eine Motiverforschung für die Wahl der Eigentums- und Kontrollstruktur hinaus. Es erscheint ausreichend, eine entsprechende Pflicht auf komplexe Strukturen bzw. Hochrisikofälle zu beschränken.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	12
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Die Definition komplexer Unternehmensstrukturen über „drei oder mehr Ebenen“ plus weitere Kriterien ist zu schematisch. Die Komplexität von Unternehmen sollte nicht per se ein Missbrauchsindikator sein.Für internationale Holding- oder Familienstrukturen kann eine Mehr-Ebenen-Struktur wirtschaftlich üb-lich sein. Es besteht die Gefahr, dass die Vorschrift faktisch einen Automatismus zur Vertiefung der Prüfung erzeugt. Dies ist mit dem risikobasierten Ansatz der Art. 20, 25 und 34 der GwVO nicht vereinbar.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Die umfangreichen in Art.18 RTS-E genannten Daten-Listen enthalten sämtliche denkbaren Informati-onen, die im Einzelfall alternativ und nicht kumulativ einzuholen sind. Um dies deutlich zu machen, sollte der Begriff „erforderlichenfalls“

Name of the respondent	Question	Answer
		nicht nur zu Beginn des Artikels genannt werden, sondern unter jedem Buchstaben. Die Vorschrift ist jedoch in ihrer Breite für Rechtsanwälte problematisch. Sie listet umfangreiche Infor-mationen zu Zweck, wirtschaftlicher Begründung, Umfang geplanter Aktivitäten, Herkunft und Verwen-dung der Gelder sowie Geschäftstätigkeit oder Beruf des Kunden (Mandanten) auf, die im Finanzsektor üblich sind, jedoch nicht im Nichtfinanzsektor. Für die anwaltliche Tätigkeit ist zu beachten, dass nicht jedes Mandat eine so weitreichende Vorabaufklärung erlaubt oder erfordert, die anwaltliche Tätigkeit häufig anlassbezogen, punktuell und transaktionsspezifisch erfolgt und die Erhebung tiefergehenderwirtschaftlicher Informationen in Konflikt mit dem Vertrauensverhältnis zum Mandanten und der Pflicht zur Verschwiegenheit geraten kann. Art. 18 RTS-E geht über Art. 25 der GwVO hinaus und impliziert eine faktische Vollerforschung der wirtschaftlichen Verhältnisse des Mandanten. Dies ist mit den berufsrechtlichen Pflichten des Anwalts unvereinbar, verfassungsrechtlich bedenklich und unverhältnismäßig. Es sollte ausdrücklich klargestellt werden, dass nur diejenigen Informationen einzuholen sind, die im konkreten Fall zur Erfüllung der ge-setzlichen Pflichten (risikobasiert) erforderlich und für Verpflichtete nach Art. 3 Nr. 3 GwVO auch be-rufsrechtlich zulässig sind.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	19
Bundesrechtsanwaltskammer -	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Der zusätzliche Regelungsgehalt des Art. 19 Abs. 1 RTS-E erschließt sich nicht. Dass nach Abs. 2 lit. c) RTS-E die Festlegung, ob es sich um politische exponierte Personen

Name of the respondent	Question	Answer
German Federal Bar		handelt, auch nach der Identifi-zierung jeweils unverzüglich bei Änderungen und Ergänzungen der Liste der bedeutenden öffentlichen Funktionen nach Art. 43 Abs. 5 der GwVO erfolgen soll, ist nicht praktikabel. Der Einsatz automatisierter Screening-Tools wird in Art. 19 Abs. 3 RTS-E als Regelfall definiert. Für viele (kleinere) Anwaltskanz-leien ist dies operativ nicht umsetzbar. Zwar enthält die Vorschrift eine Öffnung für manuelle Überprü-fungen, diese ist jedoch nur unter (zu) engen Voraussetzungen möglich. Es widerspricht auch der Sys-tematik, da in Art. 19, 23 und 26 Abs. 2 der GwVO abschließend geregelt ist, wann eine Prüfung statt-findet. Gerade bei kleineren und mittleren Kanzleien sollte deutlicher hervorgehoben werden, dass ma-nuelle, dokumentierte Verfahren ausreichend sein können, wenn sie risikoadäquat und effektiv sind. Andernfalls droht eine indirekte Privilegierung großer Anbieter und eine unverhältnismäßige Belastung kleiner Berufsträger, was verfassungsrechtlichen Bedenken begegnet.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	25
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Problematisch ist jedoch die Weite der möglichen Zusatzinformationen, insbesondere zur Reputation und zu „engen Beziehungen“. Ohne klarere Eingrenzung droht ein überschießender Prüfungsmaßstab. Für Rechtsanwälte ist besonders problematisch, dass aus dem Wortlaut der Regelung umfassende Recherchepflichten abgeleitet werden könnten, die in der Praxis nur schwierig von mandatsbezogener Sachverhaltsaufklärung zu unterscheiden wären.

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	26
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Die Vorschrift verlangt zusätzliche Informationen über Hauptkunden, Verträge, Geschäftspartner und verbundene Unternehmen. Für anwaltliche Mandate kann dies tief in vertrauliche Geschäftsunterlagen des Mandanten eingreifen. Dieser breite Anwendungsbereich ist nur dann verhältnismäßig, wenn klar-gestellt wird, dass derartige Informationen ausschließlich risikobasiert und nur soweit dies berufsrecht-lich zulässig ist nur in dem Maße eingeholt werden dürfen, wie sie zur konkreten AML/CFT-Bewertung erforderlich sind.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	27
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Die Regelung des Art. 27 RTS-E halten wir für verfassungsrechtlich bedenklich. Die Norm nennt eine breite Palette möglicher Belege, darunter Steuererklärungen, Gehaltsnachweise, Kaufverträge, Regis-terinformationen und Medienberichte. Die Vorschrift kann zu einer quasi forensischen Vermögensauf-klärung führen. Sie berührt hochsensible personenbezogene und wirtschaftliche Daten. Sie kollidiert potenziell mit der anwaltlichen Pflicht zur Verschwiegenheit und dem Vertrauensverhältnis zum Man-danten. Die Norm sollte daher klarstellen, dass keine generelle Pflicht zur Vorlage bestimmter Doku-mente besteht und dass berufsgeheimnisgeschützte Beziehungen gesondert zu behandeln sind.

Name of the respondent	Question	Answer
		Zu Art. 27 a) i) RTS-E erscheint zudem nicht verständlich, weshalb dort nur Steuererklärungen, nicht jedoch Steuerbescheide genannt sind.
Bundesrechtsanwaltskammer - German Federal Bar	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Bundesrechtsanwaltskammer - German Federal Bar	Please specify which recital you refer to, and share your comments below.	siehe weitere Ausführungen in der seprerat per Mail an die AMLA versandten Stellungnahme
Bundesrechtsanwaltskammer - German Federal Bar	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Bundesrechtsanwaltskammer - German Federal Bar	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Registernummer: 25412265365-88 s. separat übersandtes Positionspapier, insbesondere zu Art. 22: Zu Art. 22 unterbreiten wir den folgenden Ergänzungsvorschlag: Ergänzung: „Die Anforderungen der Buchstaben a) bis e) gelten als erfüllt, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Artikel 20 Absatz 1 Buchstabe h der Verord-nung (EU) 2024/1624 entspricht.“ Art. 22 ist für die Anwaltschaft besonders relevant. Er beruht auf Erwägungsgrund Nr. 18 RTS-E, der für Kreditinstitute bei der Eröffnung von Sammelkonten (vermeintlich) vereinfachte Sorgfaltspflichten vorsieht.

Name of the respondent	Question	Answer
		Die BRAK spricht sich dagegen aus, dass die Prüfung von Sammelanderkonten allein den Banken überlassen bleiben soll. Rechtsanwältinnen und Rechtsanwälte werden so gezwungen, der anwaltlichen Verschwiegenheit unterliegende Informationen den Kreditinstituten gegenüber zu offenbaren, damit diese ihre Prüfpflichten erfüllen können. Problematisch ist in diesem Zusammenhang zudem, dass mit den in dem Regelungsentwurf vorgesehenen Bedingungen, die ein Kreditinstitut zu prüfen hat, impliziert wird, dass diese Prüfungen auch kontinuierlich bei bereits bestehenden Sammelkonten erfolgen sollen. Nach Art. 22 RTS-E soll das Kreditinstitut die Anforderungen aus Art. 20 Abs. 1 lit. h) der GwVO nämlich als erfüllt ansehen können, wenn es sich davon überzeugt hat, dass der Kontoinhaber die erforderlichen Informationen und Unterlagen zu seinen eigenen Kunden unverzüglich bereitstellen wird und weitere Voraussetzungen erfüllt sind. Das bedeutet, dass erwartet wird, dass das Kreditinstitut in Bezug auf Sammelkonten sämtliche Sorgfaltspflichten des Art. 20 der GwVO zusätzlich zu den in Art. 22 des RTS-Entwurfs aufgeführten Prüfvoraussetzungen laufend in Bezug auf jeden wirtschaftlich Berechtigten kumulativ erfüllen wird. Dies ist weder nachvollziehbar noch verhältnismäßig und entspricht auch nicht dem risikobasierten Ansatz. Es ist schon vom Wortlaut nicht ersichtlich, welche Prüfpflichten im Verhält-nis zu den allgemeinen Sorgfaltspflichten reduziert werden sollen und wenn sich Art. 22 RTS-E auch nur auf die Eröffnung von Sammelkonten beziehen soll. Für anwaltliche Anderkonten ist die angedachte Regelung des Art. 22 RTS-E insbesondere aus berufs-rechtlichen Gründen problematisch: Rechtsanwälte unterliegen

Name of the respondent	Question	Answer
		Verschwiegenheitspflichten, die in der Regel einer pauschalen Herausgabe solcher Informationen entgegenstehen (§ 43a Abs. 2 BRAO, § 2 BORA). Das Kreditinstitut wird durch Art. 22 RTS-E indes verpflichtet, Informationen über Mandanten eines anwaltlichen Kontoinhabers anzufordern, obwohl diese Informationen dem besonderen Schutz anwaltlicher Vertraulichkeit unterliegen können. Damit entsteht ein struktureller Konflikt zwischen den AML/CFT-Pflichten des Kreditinstituts einerseits und der Pflicht zur anwaltlichen Verschwiegenheit des Anwalts andererseits. Hinzu kommt, dass bei anwaltlichen Fremdgeldkonten nicht jeder Zahlungsvorgang bzw. jede Geldbe-wegung über ein Anderkonto automatisch eine Verpflichtetenstellung des Rechtsanwalts auslöst. Insoweit hat die Bundesrechtsanwaltskammer in ihrer Stellungnahme zu dem RTS-Entwurf zu Art. 19 der GwVO gefordert, dass eine Verpflichtetenstellung von Rechtsanwälten bei dem Verwalten von Fremdgeld auf einem Anderkonto erst ab dem in Art. 19 der GwVO verankerten Erreichen des Schwel-lenwerts in Höhe von 10.000 Euro bei gelegentlichen bzw. verbundenen Transaktionen begründet wird. Die geldwäscherechtliche Aufsicht über Transaktionen von Rechtsanwälten, die als Verpflichtete anzu-sehen sind, obliegt den Rechtsanwaltskammern als Aufseher. Dieser Verpflichtung kommen sie bereits jetzt nach. Darüber hinaus ist zu berücksichtigen, dass derzeit eine gesetzliche Regelung in Vorberei-tung ist, nach der alle Fremdgeldtransaktionen über anwaltliche Anderkonten abzuwickeln sind. Sofern dafür Sammelanderkonten genutzt werden, wird das Gesetz vorsehen, dass sämtliche Transaktionen durch ein von der Bundesrechtsanwaltskammer bereitzustellendes System in

Name of the respondent	Question	Answer
		einem automatisierten Verfahren auf gesetzlich näher zu definierende Auffälligkeiten geprüft werden. Sollten Auffälligkeiten auftreten, erfolgt eine automatisierte Meldung an die zuständige Rechtsanwaltskammer, die verpflichtet sein wird, die Transaktion zu prüfen und ggf. weitere Maßnahmen einzuleiten. Der Rechtsanwalt wird berufsrechtlich zur Mitwirkung verpflichtet werden.Damit wäre auch sichergestellt, dass im Falle der laufenden (kontinuierlichen) Überwachung sämtlicher auf Sammelkonten befindlichen Transaktionen durch die Aufseher (Rechtsanwaltskammern) ein geringes Geldwäscherisiko im Sinne des Art. 22 RTS-E lit. e) angenommen werden kann und deshalb auch keine weiteren Transaktionswertgrenzen (unterhalb derer Kreditinstitute die aufgezählten Sorgfaltspflichten evtl. nicht erfüllen müssten) benötigt werden.
Bundesrechtsanwaltskammer - German Federal Bar	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Nein. Der Entwurf ist nicht ohne weiteres auf die gesamte Palette anwaltlicher Dienstleistungen anwendbar. Er ist deutlich am Finanzsektor orientiert und berücksichtigt nicht hinreichend, dass anwaltli-che Tätigkeit häufig punktuell, mandatsgebunden und berufsgeheimnisgeschützt ist. Ergänzung der Ausführungen zu Frage 1 (siehe oben): Einer Prüfung durch die Kreditinstitute mit der Verpflichtung, sich über die wirtschaftlichen Eigentümer informieren zu lassen, bedarf es daher angesichts der lückenlosen Prüfung sämtlicher über Sammelan-derkonten abgewickelten Transaktionen nicht. Berufsrechtliche Aufsichtspflichten der Rechtsanwalts-kammern dürfen nicht durch bankaufsichtsrechtliche Regelungen überlagert werden. Auch in anderen Mitgliedstaaten bestehen bereits Systeme der für Rechtsanwälte zuständigen Aufseher (der

Name of the respondent	Question	Answer
		Rechtsanwaltskammern), die Transaktionen auf anwaltlichen Sammelanderkonten prüfen. Gemeint sind damit zum Beispiel Systeme, wie die französische CARPA oder der Betrieb eines elektronischen Systems, wie es von den Rechtsanwaltskammern in Belgien betrieben wird und wo Transaktionen auf Sammelanderkonten täglich überprüft werden. Die Bundesrechtsanwaltskammer schlägt daher vor, dass anwaltliche Sammelanderkonten von der Prüfpflicht des Art. 22 RTS-E grundsätzlich ausgenommen werden. Mindestens muss aber ausdrücklich vorgesehen werden, dass eine Ausnahme von der Prüfpflicht durch die Kreditinstitute dann besteht, wenn alle Transaktionen auf anwaltlichen Sammelanderkonten einer Überprüfung durch die Aufseher unterliegen. Ergänzung: „Die Anforderungen der Buchstaben a) bis e) gelten als erfüllt, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Artikel 20 Absatz 1 Buchstabe h der Verord-nung (EU) 2024/1624 entspricht.“ Damit wäre auch sichergestellt, dass im Falle der laufenden (kontinuierlichen) Überwachung sämtlicher auf Sammelkonten befindlichen Transaktionen durch die Aufseher (Rechtsanwaltskammern) ein geringes Geldwäscherisiko im Sinne des Art. 22 RTS-E lit. e) angenommen werden kann und deshalb auch keine weiteren Transaktionswertgrenzen (unterhalb derer Kreditinstitute die aufgezählten Sorgfaltspflichten evtl. nicht erfüllen müssten) benötigt werden.

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Nur eingeschränkt. Der Entwurf beruft sich auf den risikobasierten Ansatz, normiert in Teilen aber fak-tisch verdichtete Standardpflichten. Für den Nichtfinanzsektor und besonders für Rechtsanwälte fehlt es an ausreichender Flexibilität und klaren Schutzklauseln.
Bundesrechtsanwaltskammer - German Federal Bar	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Ja. In der anwaltlichen Praxis sind insbesondere Informationen zu wirtschaftlich Berechtigten in kom-plexen Auslandsstrukturen, zu Trust-Begünstigten, zu umfassenden Mittelherkunfts- und Vermögens-nachweisen sowie zu Geschäftspartnern und Endbegünstigten häufig nicht routinemäßig verfügbar. Der Entwurf sollte hierfür ausdrücklich alternative, abgestufte und zumutbare Lösungswege vorsehen.
Bundesrechtsanwaltskammer - German Federal Bar	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Es sollten weitergehende vereinfachte Maßnahmen für Berufsgeheimnisträger vorgesehen werden, ins-besondere bei punktuellen, eindeutig eingegrenzten Tätigkeiten mit geringem Risiko, bei bereits aus anderen verlässlichen Quellen vorliegenden Informationen sowie in Fällen, in denen berufsrechtliche Verschwiegenheit einer weitergehenden Informationsbeschaffung entgegensteht. Allgemeine Anmerkungen: Der Entwurf der RTS ist rechtswidrig und verletzt die anwaltlichen Kernwerte, insbesondere das Berufsgeheimnis und die Berufsausübungsfreiheit. Er berücksichtigt nicht die Besonderheiten des Nichtfinanzsektors und dass Rechtsanwälte nicht per se Verpflichtete nach Art. 3 Nr. 3 der GwVO sind. Viele Vorschriften sind vor allem für Kreditinstitute und größere Unternehmen konzipiert und von „kleineren

Name of the respondent	Question	Answer
		Unternehmen“ (wie z. B. Einzelanwältinnen und -anwälten) nicht leistbar. Es gibt keine Ausnahmeregelungen, so dass diese ihre Sorgfaltspflichten nicht reduziert vornehmen können. Der RTS-Entwurf ist insgesamt überbordend, überreguliert und unverhältnismäßig. Die Regelungen sind nicht aus sich heraus verständlich. Unbestimmte Rechtsbegriffe werden mit weiteren unbestimmten Rechtsbegriffen erklärt. Die Regelungen gehen teilweise über den Inhalt ihrer Rechtsgrundlage, der GwVO, hinaus. Die Regelungen für Sammelkonten (v. a. Art. 22 RTS) sind unpraktikabel, verletzen das Berufsgeheimnis und könnten dazu führen, dass das Produkt von den Banken in Zukunft nicht mehr angeboten werden könnte. Dies wäre für die Anwaltschaft, die Sammelanderkonten für die Ausübung ihres Berufs benötigen, fatal. Es bedarf ausdrücklicher Regelungen, dass die anwaltliche Verschwiegenheit und die Funktionsfähigkeit vertraulicher Rechtsberatung gewahrt bleiben. Banktypische Prüf- und Dokumentationslogiken dürfen nicht schematisch auf die anwaltliche Tätigkeit übertragen werden. Bei Sammelkonten bedarf es einer ergänzenden Regelung, die bereits bestehende Aufsichten von Berufsgeheimnisträgern berücksichtigt. Die Anforderungen des Art. 22 RTS-E sollten als erfüllt gelten, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Art. 20 Abs. 1 lit. h) GwVO entspricht.
Bundesrechtsanwaltskammer - German Federal Bar	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	22
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Art. 22 ist für die Anwaltschaft besonders relevant. Er beruht auf Erwägungsgrund Nr. 18 RTS-E, der für Kreditinstitute bei der Eröffnung von Sammelkonten (vermeintlich) vereinfachte Sorgfaltspflichten vorsieht. Die BRAK spricht sich dagegen aus, dass die Prüfung von Sammelanderkonten allein den Banken überlassen bleiben soll. Rechtsanwältinnen und Rechtsanwälte werden so gezwungen, der anwaltlichen Verschwiegenheit unterliegende Informationen den Kreditinstituten gegenüber zu offenbaren, damit diese ihre Prüfpflichten erfüllen können. Problematisch ist in diesem Zusammenhang zudem, dass mit den in dem Regelungsentwurf vorgesehenen Bedingungen, die ein Kreditinstitut zu prüfen hat, impliziert wird, dass diese Prüfungen auch kontinuierlich bei bereits bestehenden Sammelkonten erfolgen sollen. Nach Art. 22 RTS-E soll das Kreditinstitut die Anforderungen aus Art. 20 Abs. 1 lit. h) der GwVO nämlich als erfüllt ansehen können, wenn es sich davon überzeugt hat, dass der Kontoinhaber die erforderlichen Informationen und Unterlagen zu seinen eigenen Kunden unverzüglich bereitstellen wird und weitere Voraussetzungen erfüllt sind. Das bedeutet, dass erwartet wird, dass das Kreditinstitut in Bezug auf Sammelkonten sämtliche Sorgfaltspflichten des Art. 20 der GwVO zusätzlich zu den in Art. 22 des RTS-Entwurfs aufgeführten Prüfvoraussetzungen laufend in Bezug auf jeden wirtschaftlich Berechtigten kumulativ erfüllen wird. Dies ist weder nachvollziehbar noch verhältnismäßig und entspricht auch nicht dem risikobasierten

Name of the respondent	Question	Answer
		Ansatz. Es ist schon vom Wortlaut nicht ersichtlich, welche Prüfpflichten im Verhält-nis zu den allgemeinen Sorgfaltspflichten reduziert werden sollen und wenn sich Art. 22 RTS-E auch nur auf die Eröffnung von Sammelkonten beziehen soll. Für anwaltliche Anderkonten ist die angedachte Regelung des Art. 22 RTS-E insbesondere aus berufs-rechtlichen Gründen problematisch: Rechtsanwälte unterliegen Verschwiegenheitspflichten, die in der Regel einer pauschalen Herausgabe solcher Informationen entgegenstehen (§ 43a Abs. 2 BRAO, § 2 BORA). Das Kreditinstitut wird durch Art. 22 RTS-E indes verpflichtet, Informationen über Mandanten eines anwaltlichen Kontoinhabers anzufordern, obwohl diese Informationen dem besonderen Schutz anwaltlicher Vertraulichkeit unterliegen können. Damit entsteht ein struktureller Konflikt zwischen den AML/CFT-Pflichten des Kreditinstituts einerseits und der Pflicht zur anwaltlichen Verschwiegenheit des Anwalts andererseits. Hinzu kommt, dass bei anwaltlichen Fremdgeldkonten nicht jeder Zahlungsvorgang bzw. jede Geldbe-wegung über ein Anderkonto automatisch eine Verpflichtetenstellung des Rechtsanwalts auslöst. Insoweit hat die Bundesrechtsanwaltskammer in ihrer Stellungnahme zu dem RTS-Entwurf zu Art. 19 der GwVO gefordert, dass eine Verpflichtetenstellung von Rechtsanwälten bei dem Verwalten von Fremdgeld auf einem Anderkonto erst ab dem in Art. 19 der GwVO verankerten Erreichen des Schwel-lenwerts in Höhe von 10.000 Euro bei gelegentlichen bzw. verbundenen Transaktionen begründet wird. Die geldwäscherechtliche Aufsicht über Transaktionen von Rechtsanwälten, die als Verpflichtete anzu-sehen sind, obliegt

Name of the respondent	Question	Answer
		den Rechtsanwaltskammern als Aufseher. Dieser Verpflichtung kommen sie bereits jetzt nach. Darüber hinaus ist zu berücksichtigen, dass derzeit eine gesetzliche Regelung in Vorberei-tung ist, nach der alle Fremdgeldtransaktionen über anwaltliche Anderkonten abzuwickeln sind. Sofern dafür Sammelanderkonten genutzt werden, wird das Gesetz vorsehen, dass sämtliche Transaktionen durch ein von der Bundesrechtsanwaltskammer bereitzustellendes System in einem automatisierten Verfahren auf gesetzlich näher zu definierende Auffälligkeiten geprüft werden. Sollten Auffälligkeiten auftreten, erfolgt eine automatisierte Meldung an die zuständige Rechtsanwaltskammer, die verpflichtet sein wird, die Transaktion zu prüfen und ggf. weiteggf. weitere Maßnahmen einzuleiten. Der Rechtsanwalt wird berufsrechtlich zur Mitwirkung verpflichtet werden. Einer Prüfung durch die Kreditinstitute mit der Verpflichtung, sich über die wirtschaftlichen Eigentümer informieren zu lassen, bedarf es daher angesichts der lückenlosen Prüfung sämtlicher über Sammelan-derkonten abgewickelten Transaktionen nicht. Berufsrechtliche Aufsichtspflichten der Rechtsanwalts-kammern dürfen nicht durch bankaufsichtsrechtliche Regelungen überlagert werden. Auch in anderen Mitgliedstaaten bestehen bereits Systeme der für Rechtsanwälte zuständigen Aufseher (der Rechtsanwaltskammern), die Transaktionen auf anwaltlichen Sammelanderkonten prü-fen. Gemeint sind damit zum Beispiel Systeme, wie die französische CARPA oder der Betrieb eines elektronischen Systems, wie es von den Rechtsanwaltskammernin Belgien betrieben wird und wo Transaktionen auf Sammelanderkonten täglich überprüft werden.

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	22
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Die Bundesrechtsanwaltskammer schlägt daher vor, dass anwaltliche Sammelanderkonten von der Prüfpflicht des Art. 22 RTS-E grundsätzlich ausgenommen werden. Mindestens muss aber ausdrücklich vorgesehen werden, dass eine Ausnahme von der Prüfpflicht durch die Kreditinstitute dann besteht, wenn alle Transaktionen auf anwaltlichen Sammelanderkonten einer Überprüfung durch die Aufseher unterliegen.Ergänzung: „ Die Anforderungen der Buchstaben a) bis e) gelten als erfüllt, wenn die Verwaltung fremder Gelder auf Sammelanderkonten einer Überprüfung durch die in den Mitgliedstaaten zuständigen Aufseher unterliegt, die den Anforderungen gemäß Artikel 20 Absatz 1 Buchstabe h der Verord-nung (EU) 2024/1624 entspricht.“ Damit wäre auch sichergestellt, dass im Falle der laufenden (kontinuierlichen) Überwachung sämtlicher auf Sammelkonten befindlichen Transaktionen durch die Aufseher (Rechtsanwaltskammern) ein gerin-ges Geldwäscherisiko im Sinne des Art. 22 RTS-E lit. e) angenommen werden kann und deshalb auch keine weiteren Transaktionswertgrenzen (unterhalb derer Kreditinstitute die aufgezählten Sorgfalts-pflichten evtl. nicht erfüllen müssten) benötigt werden.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7

Name of the respondent	Question	Answer
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Die geplanten Regelungen sind ein wichtiger Schritt auf dem Weg der Digitalisierung. Sie begegnen jedoch einerseits erheblichen Bedenken hin-sichtlich der praktischen Umsetzung durch die Anwaltschaft als Verpflichtete sowie hinsichtlich der Überprüfung auf Einhaltung der geldwäscherechtlichen Vorgaben durch die Rechtsanwaltskammern als Aufsichtsbehörden. Die Regelung des Art. 7 RTS-E ist stark am Finanzsektor orientiert. Die Anforde-rungen in Abs. 3 und 4 sind für viele Verpflichtete im Nichtfinanzsektor, insbesondere kleinere Kanzleien und Einzelanwälte, operativ und finanziell nicht leistbar und daher unverhältnismäßig. Aus diesem Grund bestehen auch verfassungsmäßige Bedenken hinsichtlich der Berufsausübungsfreiheit, wenn faktisch technische Standards verlangt werden, die nur große Marktteilnehmer erfüllen können. Die Möglichkeiten der Fern-Identifizierung von Mandaten und der für diese auftretenden Personen werfen in der Praxis immer wieder Fragen auf. Insoweit bestehen derzeit Rechtsunsicherheiten. Der Bedarf in der Anwaltschaft für eine Fern-Identifizierung ist groß, da Mandate in Zeiten von Video-Tele-fonie und zunehmender Digitalisierung, spätestens seit der Corona-Pandemie, häufiger als zuvor ohne persönlichen Kontakt vor Ort in der Anwaltskanzlei geschlossen werden. Immer häufiger werden spezi-alisierte Anwälte fernab des eigenen Wohn- oder Geschäftsorts mandatiert, nicht nur bei Firmen-Man-daten. Aktuell weichen die Rechtsanwälte als Verpflichtete in solchen Fällen auf die bisherigen Mög-lichkeiten der Delegation (Erfüllung der Sorgfaltspflichten durch Dritte) aus. Rechtsanwälte erfüllen ihre Identifizierungspflichten etwa durch Inanspruchnahme geeigneter externer Dienstleister für Video-Iden-tifikationen

Name of the respondent	Question	Answer
		oder andere Verfahren. In Anbetracht der erforderlichen, sehr hohen technischen und struk-turellen Anforderungen – die vor allem für den Finanzsektor vorgesehen waren und überwiegend von Banken genutzt werden – ist eine Durchführung der Videoidentifizierung durch verpflichtete Rechtsan-wälte selbst bzw. deren Kanzleien derzeit faktisch ausgeschlossen, da eine solche für Anwaltskanzleien in der Regel bereits wirtschaftlich nicht darstellbar ist. Die Bundesrechtsanwaltskammer unterstellt, dass die Selbstdurchführung der Identifizierung durch den Verpflichteten gegenüber jeder Form der Delega-tion grundsätzlich vorteilhafter ist: Für den Verpflichteten selbst bedeutet dies in der Regel geringere Kosten, da er keine externen Dienst-leister beauftragen und vergüten muss. Zudem führt jede Form der Delegation auf Dritte zu einer ge-wissen Anonymität, gerade bei großen Dienstleistern, und zu gesteigerten Überwachungspflichten für den Verpflichteten, die zusätzlichen Aufwand auslöst und eine lückenlose Kontrolle, anders als bei der eigenen Durchführung, gar nicht zulässt. Insoweit besteht zusätzliches Missbrauchspotential, das dem Verpflichteten zugerechnet wird, für das ihn aber tatsächlich ggf. gar kein Verschulden trifft. Für den Mandanten als Geschäftspartner des Verpflichteten bedeutet die Identifizierung durch den Verpflichte-ten selbst, dass der Mandant seine personenbezogenen Daten nicht Dritten gegenüber offenbarenmuss, was zum einen unter dem Gesichtspunkt des Gebots der Datensparsamkeit und zum anderen in Bezug auf das erforderliche Vertrauensverhältnis zwischen Anwalt und Mandant von Bedeutung ist. Und schließlich ist die ordnungsgemäße Einhaltung der

Name of the respondent	Question	Answer
		Identifizierungspflichten durch die Aufsichtsbe-hörde in Fällen der Delegation teils nur schwer und aufwändig, teils gar nicht zu überwachen, was bei den Aufsichtsbehörden Kapazitäten bindet bzw. eine effektive Kontrolle sogar unmöglich machen kann. Beispielhaft sei hierzu etwa die Möglichkeit der Identifizierung im „klassischen“ Post-Ident-Verfahren genannt, in dem der Verpflichtete aber keine Möglichkeit hat, die Zuverlässigkeit der von der Deutschen Post AG betrauten Post-Partnerfilialen, etwa in Schreibwaren- oder Lebensmittelgeschäften, zu über-prüfen. Genannt sei auch die Delegation der Identifizierung auf einen im Ausland ansässigen Rechts-anwalt, Notar oder Patentanwalt, hinsichtlich dieser die Aufsichtsbehörde faktisch gar keine Möglichkeit hat, die Ordnungsmäßigkeit der Identifizierung zu überprüfen. Vor diesem Hintergrund sollte eine Regelung geschaffen werden, die dem Rechtsanwalt als Verpflich-teten die Fern-Identifikation seines Geschäftspartners bzw. der für diesen auftretenden Person in prak-tikabler und wirtschaftlich tragfähiger Weise ermöglicht und zugleich der zuständigen Aufsichtsbehörde eine effektive Überwachung der Ordnungsmäßigkeit dieser Fern-Identifizierung. Dabei sollte den Be-sonderheiten des anwaltlichen Mandats Rechnung getragen werden.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7
Bundesrechtsanwaltskammer -	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Denn anders etwa als bei Begrün-dung und Unterhaltung eines Online-Bankkontos, besteht zwischen Mandant und Anwalt eine enge, auf stetiger Unterrichtung und Absprache beruhende Verbindung, die insbesondere Unklarheiten

Name of the respondent	Question	Answer
German Federal Bar		hinsicht-lich der Geschäftsart und des Geschäftszwecks schon gar nicht zulässt. Insoweit erscheinen unter-schiedliche Anforderungen an die Fern-Identifizierung, abhängig von den jeweiligen Verpflichteten-Gruppen, zweckmäßig und insbesondere Bereichsausnahmen geboten, um die Fern-Identifizierung tat-sächlich auch für die Anwaltschaft praktikabel zu machen. Schließlich gebietet auch das Erfordernis der Erhaltung einer pluralistischen Anwaltschaft, dass dem Rechtsanwalt die Erfüllung seiner geldwäscherechtlichen Pflichten mit vertretbarem Aufwand selbst möglich sein muss. Für kleinere Einheiten nicht selbst erfüllbare Anforderungen bewirkten einen weite-ren Druck zur Verdichtung der Anwaltschaft auf größere Einheiten. Der unter Nr. 3 im Zusammenhang mit der Speicherung geregelte Zeitstempel erscheint nicht erforder-lich. Bei der Speicherung elektronischer Dokumente werden Datum und Uhrzeit generell gespeichert. Das in Nr. 4 bestimmte Erfordernis, begründen zu können, warum der Kunde nicht mit den in Art. 22 Abs. 6 GwVO genannten Mitteln überprüft werden konnte, erscheint interpretationsbedürftig. Insbeson-dere zur Vermeidung von Missverständnissen sollte dieses Erfordernis gestrichen werden oder es sollte klargestellt werden, dass keine Unmöglichkeit oder Unzumutbarkeit einer Präsenzüberprüfung verlangt wird. Im letztgenannten Fall müsste die Formulierung lauten: "und sie müssen auch begründen können, warum der Kunde nicht mit den in Artikel 22 Absatz 6 der Verordnung (EU) 2024/1624 genannten Mitteln überprüft wurde.“
Bundesrechtsanwaltskammer -	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	33

Name of the respondent	Question	Answer
German Federal Bar		
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Für bereits vor Inkrafttreten der Regelung bestehende Geschäftsbeziehungen sollte klargestellt werden, dass keine rückwirkende oder flächendeckende Neuidentifizierung ohne konkreten Anwendungsanlass verlangt wird. Für die Erfüllung der Pflichten nach der Verordnung sollte maßgeblich sein, ob die Ge-schäftsbeziehung vor oder nach deren Inkrafttreten begründet wurde. Hingegen sollte nicht auf die Ver-öffentlichung der Verordnung abgestellt werden. Dass die Dokumente, Daten und Informationen in „Altfällen“ risikosensitiv an die Anforderungen dieser Verordnung anzupassen sind, ist einerseits unklar und andererseits nicht erforderlich. Vielmehr genügt ein Abstellen auf die in Art. 26 Abs. 2 der GwVO genannten Fristen, wodurch gewährleistet ist, dass bei erhöhtem Geldwäscherisiko bereits nach einem Jahr eine Anpassung erfolgen muss. Während in Art.1 RTS-E der Begriff des „risikobasierten“ Ansatzes verwendet wird, taucht in Art. 33 RTS-E der Begriff „risikosensitiver“ Maßnahmen auf. Es sollte jedoch einheitlich der Begriff „risikobasiert“ verwendet wer-den, wenn das gleiche gemeint ist.
Bundesrechtsanwaltskammer - German Federal Bar	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	11
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	In Fällen komplexer Gesellschaftsstrukturen ist ein Verständnis der Eigentums- und Kontrollstruktur er-forderlich. Problematisch ist jedoch die Reichweite der verlangten Informationen, insbesondere über Zwischenebenen, Stimmrechte, Nominee-Strukturen und wirtschaftliche Gründe

Name of the respondent	Question	Answer
		der Struktur. Bei Rechtsanwälten kann die Grenze zwischen zulässiger risikobasierter Prüfung und unzulässiger Ver-tiefung in vertrauliche Mandats- oder Strukturierungsberatung überschritten werden. Die Regelung sollte deshalb klarstellen, dass kein Vollständigkeits- oder Plausibilitätsgutachten über die gesamte Konzern- oder Beteiligungsstruktur geschuldet ist. In Art. 11 Nr. 1., Nr. 2 und Nr. 3 RTS-E sollte der Begriff „risikosensitiv“ durch „risikobasiert“ ersetzt werden. Während nach Art. 20 Abs. 1 b) GwVO genügt, dass die Verpflichteten „davon ausgehen kön-nen, den wirtschaftlichen Eigentümer zu kennen und die Eigentümer und Kontrollstruktur des Kunden zu verstehen“, wird in Art. 11 Nr. 1 RTS-E die Sicherstellung eines umfassenden Verständnisses der Eigentums- und Kontrollstruktur des Kunden verlangt. Die RTS kann jedoch Art. 20 Abs. 1 b) GwVO nur präzisieren, nicht erweitern oder ergänzen. Die Regelung in Nr. 1 RTS-E ist daher entweder von der Rechtsgrundlage nicht mehr gedeckt oder verzichtbar, da sie keinen weiteren Aussagegehalt als Art. 20 Abs. 1 b) GwVO besitzt. Während in Art. 22 Abs. 1 b) iv) GwVO allgemein nominelle Anteilseigner genannt werden, werden in Art. 11 Nr. 3 a) RTS-E Nominee-Aktionäre erwähnt. Die Anforderung in Art. 11 Nr. 4. b) RTS-E, sich davon zu überzeugen, dass es wirtschaftliche, rechtliche oder andere Gründe für die Struktur gibt, erscheint als generelle Anforderung überzogen. Diese Pflicht liefe auf eine Motiverforschung für die Wahl der Eigentums- und Kontrollstruktur hinaus. Es erscheint ausreichend, eine entsprechende Pflicht auf komplexe Strukturen bzw. Hochrisikofälle zu beschränken.
Bundesrechtsanwaltskammer -	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	1

German Federal Bar		
Bundesrechtsanwaltskammer - German Federal Bar	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Ein Mehrwert dieser Regelung gegenüber Art. 22 Abs. 1 a) iii) GwVO ist nicht ersichtlich. Dass alle Staatsangehörigkeiten zu erheben sind, ergibt sich bereits aus dem dort genannten Begriff der Staats-angehörigkeiten im Plural. Statt der Beschreibung von Vertretern als „Person, die vorgibt im Namen des Kunden zu handeln“, erscheint die in § 10 Abs. 1 Nr. 1 des deutschen Geldwäschegesetzes (GwG) verwendete Formulierung der „für den Kunden auftretenden Person“ vorzugswürdig. Andernfalls kann der Eindruck eines Generalverdachts der Täuschung entstehen.
Bundesrechtsanwaltskammer - German Federal Bar	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Bundesrechtsanwaltskammer - German Federal Bar	Do you have any comments on the Annex in the draft RTS?	No
Bundesrechtsanwaltskammer - German Federal Bar	How would you rate the proposals set out in the draft RTS overall?	Inadequate
Bundessteuerberaterkammer KdöR	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more	Wir begrüßen grundsätzlich das Ziel der vorgeschlagenen technischen Regulierungsstandards, ein EU-weit einheitliches und klareres Rahmenwerk für die Durchführung kundenbezogener Sorgfaltspflichten zu schaffen. Insbesondere die Konkretisierung bislang uneinheitlich ausgelegter Anforderungen kann zu mehr Rechtssicherheit, höherer

Name of the respondent	Question	Answer
	appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Transparenz und einer verbesserten Vergleichbarkeit der Aufsichtspraxis innerhalb der Europäischen Union beitragen. Positiv hervorzuheben ist insbesondere die stärkere Harmonisierung bei der Identifizierung natürlicher und juristischer Personen, bei der Überprüfung wirtschaftlich Berechtigter sowie bei der Behandlung komplexer Eigentums- und Kontrollstrukturen. Auch die Konkretisierung der Anforderungen an Fernidentifizierungsverfahren, elektronische Identifizierungsmittel sowie die laufende Überwachung von politisch exponierten Personen (PEP) und Sanktionslisten trägt grundsätzlich zu einem höheren Schutzniveau gegen Geldwäsche und Terrorismusfinanzierung bei. Gleichzeitig bestehen erhebliche Bedenken hinsichtlich der praktischen Umsetzbarkeit einzelner Vorschriften, insbesondere für kleine und mittlere Verpflichtete sowie Angehörige Freier Berufe. Betroffen sind insbesondere: • Artikel 11 und 12 (Verständnis komplexer Eigentums- und Kontrollstrukturen), • Artikel 19 (PEP-Screening), • Artikel 29 und 30 (Sanktionsscreening), • sowie die Anforderungen an fortlaufende Überwachung und automatisierte Screening-Systeme. Die vorgeschlagenen Regelungen führen faktisch zu einer weitgehenden Verpflichtung zum Einsatz technischer und automatisierter Lösungen. Gerade kleinere Verpflichtete verfügen jedoch häufig weder über die finanziellen noch über die organisatorischen Ressourcen, um komplexe Screening- und Monitoring-Systeme zu implementieren und dauerhaft aktuell zu halten. Die Anforderungen erscheinen daher teilweise unverhältnismäßig und laufen Gefahr, den

Name of the respondent	Question	Answer
		risikobasierten Ansatz durch einen faktischen Vollharmonisierungs- und Vollautomatisierungsansatz zu ersetzen. Kritisch sehen wir insbesondere, dass die Entwurfsfassung an mehreren Stellen sehr detaillierte und dokumentationsintensive Prüfpflichten vorsieht, ohne zugleich ausreichend zu berücksichtigen, ob diese Anforderungen in der täglichen Praxis tatsächlich umsetzbar sind. Dies betrifft insbesondere die Pflicht zu einem „tiefen Verständnis“ komplexer Eigentums- und Kontrollstrukturen sowie die kontinuierliche ereignisbezogene Überwachung von PEP- und Sanktionsdaten. Wir regen daher an: 1. den Grundsatz der Verhältnismäßigkeit ausdrücklich stärker zu berücksichtigen und Erleichterungen für kleine und mittlere Verpflichtete vorzusehen; 2. klarzustellen, dass bei Verpflichteten mit geringem Risikoprofil auch angemessene manuelle Verfahren weiterhin zulässig bleiben müssen; 3. den Umfang der fortlaufenden Überwachungs- und Dokumentationspflichten stärker am konkreten Risiko der Geschäftsbeziehung auszurichten; 4. zusätzliche Leitlinien und praxisnahe Umsetzungsbeispiele bereitzustellen, insbesondere für Freie Berufe und kleinere Marktteilnehmer; 5. Übergangsfristen und praktikable Mindeststandards für den Einsatz technischer Lösungen vorzusehen. Aus unserer Sicht sollte das Ziel der Harmonisierung nicht dazu führen, dass Verpflichtete unabhängig von Größe, Geschäftsmodell und Risikoprofil denselben technisch-organisatorischen Anforderungen unterliegen. Ein wirksames AML/CFT-Regime setzt voraus, dass die Anforderungen

Name of the respondent	Question	Answer
		risikoorientiert, praktikabel und verhältnismäßig ausgestaltet bleiben.
Bundessteuerberaterkammer KdöR	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Wir stimmen den vorgeschlagenen technischen Regulierungsstandards nur teilweise zu. Zwar ist das Ziel eines unionsweit harmonisierten und risikobasierten Rahmens für kundenbezogene Sorgfaltspflichten grundsätzlich zu begrüßen. Die derzeitigen Vorschläge bieten jedoch aus unserer Sicht nicht in allen Bereichen ausreichende Flexibilität, um der Vielfalt der Verpflichteten, ihrer Geschäftsmodelle sowie der unterschiedlichen Risiko- und Produktstrukturen angemessen Rechnung zu tragen. Insbesondere kleinere und mittlere Verpflichtete sowie Angehörige Freier Berufe werden durch die vorgeschlagenen Anforderungen teilweise unverhältnismäßig belastet. Die Standards orientieren sich erkennbar an den organisatorischen und technischen Möglichkeiten großer Kredit- und Finanzinstitute und lassen nur begrenzten Raum für vereinfachte oder alternative Verfahren bei risikoarmen Geschäftsmodellen. Dies betrifft insbesondere: • die umfangreichen Anforderungen an die Analyse komplexer Eigentums- und Kontrollstrukturen (Artikel 11 und 12); • die faktische Verpflichtung zum Einsatz automatisierter Screening-Tools bei PEP- und Sanktionsprüfungen (Artikel 19, 29 und 30); • die intensiven Anforderungen an fortlaufende Überwachungs- und Aktualisierungspflichten; • sowie die hohen technischen Anforderungen an Fernidentifizierungs- und elektronische Identifizierungssysteme (Artikel 7 und 32). Die aktuellen Vorschläge berücksichtigen aus unserer Sicht

Name of the respondent	Question	Answer
		nicht ausreichend, dass sich Art, Um-fang und Risiko der angebotenen Dienstleistungen zwischen den verschiedenen Verpflichteten-gruppen erheblich unterscheiden. Gerade bei Tätigkeiten mit geringem inhärentem Geldwäscherisiko erscheinen die vorgesehenen Anforderungen teilweise zu starr und zu technologiegetrieben. Wir regen daher an, die Standards stärker proportionalitäts- und risikoorientiert auszugestalten. Insbesondere schlagen wir folgende Klarstellungen bzw. Ergänzungen vor: „Die Verpflichteten können Art und Umfang der eingesetzten Identifizierungs-, Überwachungs- und Screeningmaßnahmen unter Berücksichtigung von Größe, Art, Komplexität und Risikoprofil ihres Geschäftsmodells sowie der konkreten Geschäftsbeziehung angemessen ausgestalten.“ Ferner sollte ausdrücklich klargestellt werden: „Der Einsatz automatisierter Screening- oder Monitoring-Systeme ist nicht verpflichtend, sofern Verpflichtete mit geringem Risikoprofil nachweisen können, dass angemessene manuelle Verfahren ein gleichwertiges Risikomanagement gewährleisten.“ Darüber hinaus sollte bei den Anforderungen an die laufende Überwachung ergänzt werden: „Die Häufigkeit und Intensität der Aktualisierung sowie der laufenden Überwachung sollen sich am konkreten Risiko der Geschäftsbeziehung orientieren und insbesondere bei risikoarmen Geschäftsbeziehungen angemessen reduziert werden können.“ Aus unserer Sicht würden diese Ergänzungen den

Name of the respondent	Question	Answer
		risikobasierten Ansatz stärken und gleichzeitig sicherstellen, dass die Standards auch von kleineren und mittleren Verpflichteten praktisch umsetzbar bleiben. Die Effektivität geldwäscherechtlicher Maßnahmen hängt maßgeblich davon ab, dass die Anforderungen nicht nur theoretisch umfassend, sondern auch praktisch erfüllbar sind. Eine zu starre oder technologisch überfrachtete Regulierung birgt die Gefahr, dass Ressourcen auf formale Prozesse konzentriert werden, anstatt auf tatsächlich risikobehaftete Sachverhalte. Daher sollte den Ver-pflichteten ausreichend Flexibilität verbleiben, um ihre Sorgfaltspflichten risikoorientiert, verhältnismäßig und entsprechend ihrer konkreten Geschäftsstruktur umzusetzen.
Bundessteuerberaterkammer KdöR	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Wir stimmen den vorgeschlagenen technischen Regulierungsstandards nur teilweise zu. Die Entwürfe enthalten zwar zahlreiche Elemente, die grundsätzlich geeignet sind, einen risikobasierten Ansatz zur Einhaltung der AML/CFT-Anforderungen zu stärken. Insbesondere die stärkere Harmonisierung der Kundenidentifizierung, die Konkretisierung der Anforderungen an wirtschaftlich Berechtigte sowie die differenzierte Ausgestaltung vereinfachter und verstärkter Sorgfaltspflichten können zu mehr Rechtssicherheit und einer konsistenteren Anwendung innerhalb der Europäischen Union beitragen. Gleichzeitig bestehen jedoch erhebliche Zweifel daran, ob die vorgeschlagenen Regelungen in ihrer derzeitigen Ausgestaltung tatsächlich eine wirksame und verhältnismäßige Anwendung des risikobasierten Ansatzes ermöglichen. Zahlreiche Vorschriften sind sehr detailliert, formalisiert und technologieorientiert ausgestaltet und lassen den Verpflichteten nur begrenzten Raum für eine eigenständige

Name of the respondent	Question	Answer
		risikoorientierte Bewertung. Dies betrifft insbesondere: • Artikel 11 und 12 (Eigentums- und Kontrollstrukturen), • Artikel 18 (Zweck und beabsichtigte Art der Geschäftsbeziehung), • Artikel 19 (PEP-Screening), • Artikel 23 (laufende Aktualisierung bei geringem Risiko), • Artikel 25 bis 28 (verstärkte Sorgfaltspflichten), • sowie Artikel 29 und 30 (Sanktionsscreening). Die genannten Vorschriften enthalten umfangreiche und teilweise sehr detaillierte Mindestanforderungen, die unabhängig vom konkreten Risikoumfang faktisch zu standardisierten Vollprüfungen führen können. Dies birgt die Gefahr, dass der risikobasierte Ansatz in der praktischen Anwendung durch einen weitgehend regelbasierten und dokumentationsorientierten Ansatz verdrängt wird. Besonders kritisch sehen wir die faktische Verpflichtung zum Einsatz automatisierter Screening- und Monitoring-Systeme. Die Entwürfe gehen erkennbar davon aus, dass kontinuierliche Überwachung, ereignisbezogene Aktualisierung und komplexe Screening-Prozesse technisch automatisiert erfolgen. Dies ist insbesondere für kleinere und mittlere Verpflichtete sowie Freie Berufe nur eingeschränkt umsetzbar und steht nicht immer in angemessenem Verhältnis zum tatsächlichen Risiko der jeweiligen Geschäftsbeziehung. Darüber hinaus besteht die Gefahr, dass Verpflichtete erhebliche Ressourcen auf formale Dokumentations- und Aktualisierungspflichten verwenden müssen, anstatt ihre Kapazitäten auf tatsächlich risikobehaftete Sachverhalte zu konzentrieren. Ein wirksamer risikobasierter Ansatz setzt jedoch voraus, dass Verpflichtete ausreichenden Spielraum

Name of the respondent	Question	Answer
		behalten, um Intensität und Umfang ihrer Maßnahmen flexibel am konkreten Risiko auszurichten. Wir regen daher folgende Klarstellungen und Ergänzungen an: „Die Verpflichteten sollen Art, Umfang und Intensität der kundenbezogenen Sorgfaltspflichten unter Berücksichtigung des konkreten Risikos der Geschäftsbeziehung, der Art der angebotenen Dienstleistungen sowie der Größe und Komplexität ihres Geschäftsmodells angemessen ausgestalten können.“ Ferner sollte klargestellt werden: „Die in diesen technischen Regulierungsstandards genannten Maßnahmen stellen Mindestanforderungen dar. Verpflichtete sollen bei nachweislich geringem Risiko vereinfachte oder alternative Maßnahmen anwenden können, sofern diese geeignet sind, die mit der Geschäftsbeziehung verbundenen Risiken wirksam zu steuern.“ Im Hinblick auf automatisierte Screening- und Monitoring-Systeme schlagen wir folgende Ergänzung vor: „Der Einsatz automatisierter Systeme soll risikoorientiert erfolgen. Verpflichtete mit geringem Risikoprofil und überschaubarem Kundenbestand sollen weiterhin angemessene manuelle Verfahren einsetzen dürfen, sofern diese ein wirksames Risikomanagement gewährleisten.“ Zudem sollte ausdrücklich klargestellt werden, dass Umfang und Häufigkeit der laufenden Überwachung sowie der Aktualisierung von Kundendaten an das tatsächliche Risiko angepasst werden können. Diese Ergänzungen würden aus unserer Sicht den risikobasierten Ansatz stärken, ohne das an-gestrebte hohe Schutzniveau gegen Geldwäsche und Terrorismusfinanzierung zu beeinträchtigen. Gleichzeitig würden sie sicherstellen, dass

Name of the respondent	Question	Answer
		die Anforderungen praktikabel, verhältnismäßig und auch für kleinere Verpflichtete realistisch umsetzbar bleiben.
Bundessteuerberaterkammer KdöR	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Ja. Aus unserer Sicht gibt es – insbesondere mit Blick auf kleinere und mittlere Verpflichtete sowie Angehörige Freier Berufe – mehrere Situationen, in denen die in den Entwürfen vorgesehenen Informationen im Rahmen der kundenbezogenen Sorgfaltspflichten routinemäßig nicht oder nur mit unverhältnismäßigem Aufwand verfügbar sind. Die vorgeschlagenen technischen Regulierungsstandards enthalten hierfür teilweise keine ausreichend praktikablen oder flexiblen Alternativlösungen. Dies betrifft insbesondere folgende Situationen: 1. Komplexe Eigentums- und Kontrollstrukturen (Artikel 11 und 12) Die vorgeschlagenen Anforderungen verlangen ein sehr tiefgehendes Verständnis komplexer Eigentums- und Kontrollstrukturen, einschließlich Informationen über Zwischenebenen, wirtschaftliche Gründe der Struktur, Nominee-Aktionäre sowie ausländische Rechtskonstruktionen. In der Praxis sind solche Informationen jedoch häufig nicht vollständig verfügbar, insbesondere: • bei internationalen Unternehmensgruppen, • bei Drittstaatenstrukturen, • bei Trusts oder vergleichbaren Rechtskonstruktionen, • oder wenn Verpflichtete keinen direkten Zugang zu ausländischen Registern oder verlässlichen Quellen haben. Gerade kleinere Verpflichtete verfügen regelmäßig weder über die tatsächlichen Ermittlungsbefugnisse noch über die technischen und personellen Ressourcen, um komplexe internationale Strukturen umfassend zu analysieren. Wir schlagen daher folgende Ergänzung vor:

Name of the respondent	Question	Answer
		„Soweit Informationen über Eigentums- und Kontrollstrukturen trotz angemessener risikobasierter Maßnahmen nicht vollständig verfügbar sind, sollen Verpflichtete alternative und risikoorientierte Maßnahmen anwenden können, einschließlich plausibilitätsbasierter Bewertungen, dokumentierter Kundenerklärungen und der Nutzung verfügbarer öffentlicher Quellen.“ 2. Herkunft von Geldern und Vermögenswerten (Artikel 27) Die Entwürfe sehen umfangreiche Nachweise zur Herkunft von Geldern und Vermögenswerten vor, darunter Steuerunterlagen, Gehaltsabrechnungen, Kaufverträge oder Nachlassdokumente. In vielen praktischen Fällen stehen solche Unterlagen jedoch nicht oder nicht kurzfristig zur Verfügung, insbesondere: • bei älteren Vermögenswerten, • bei langjährig aufgebautem Privatvermögen, • bei internationalen Sachverhalten, • oder bei Kunden mit komplexen Einkommens- und Vermögensstrukturen. Die Entwürfe enthalten keine ausreichende Klarstellung, welche alternativen Nachweise in solchen Fällen akzeptabel sind. Wir schlagen daher folgende Klarstellung vor: „Wenn formale Nachweisdokumente zur Herkunft von Geldern oder Vermögenswerten nicht verfügbar sind, sollen Verpflichtete alternative glaubwürdige Informationen und risikoorientierte Plausibilitätsprüfungen berücksichtigen dürfen, sofern keine konkreten Anhaltspunkte für erhöhte Risiken vorliegen.“ 3. Automatisierte Screening- und Monitoring-Systeme (Artikel 19, 29 und 30)

Name of the respondent	Question	Answer
		Die Entwürfe gehen weitgehend davon aus, dass Verpflichtete automatisierte Screening- und Monitoring-Systeme einsetzen. Für kleinere Verpflichtete oder Freie Berufe stehen solche Systeme jedoch häufig nicht oder nur zu unverhältnismäßig hohen Kosten zur Verfügung. Insbesondere kleinere Praxen verfügen oftmals nicht über: • eigene Compliance-Abteilungen, • technische Integrationsmöglichkeiten, • oder Zugang zu professionellen Screening-Datenbanken. Die Entwürfe bieten hierfür keine ausreichenden alternativen Lösungen. Wir schlagen daher folgende Ergänzung vor: „Verpflichtete mit geringem Risikoprofil und begrenzter Größe sollen angemessene manuelle Ver-fahren anwenden dürfen, sofern diese geeignet sind, die relevanten AML/CFT-Risiken wirksam zu identifizieren und zu steuern.“
Bundessteuerberaterkammer KdöR	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Wir begrüßen grundsätzlich die Zielsetzung, durch die RTS ein unionsweit einheitliches Mindestniveau für vereinfachte Sorgfaltspflichten zu schaffen. Allerdings zeigen insbesondere die Artikel 20 bis 24 des RTS-Entwurfs, dass auch bei Geschäftsbeziehungen mit geringem Risiko ein erheblicher Umfang an Informationen erhoben, überprüft und fortlaufend überwacht werden muss. Die vorgesehenen Regelungen führen damit faktisch zu einer erheblichen Annäherung der verein-fachten an die regulären Sorgfaltspflichten. Dies betrifft insbesondere: • die verpflichtende Erhebung umfangreicher Identifizierungsdaten, • die Nutzung unterschiedlicher Quellen zur Identifizierung und Überprüfung wirtschaftlich Berechtigter, • die fortlaufende Überwachung auch bei geringem Risiko,

Name of the respondent	Question	Answer
		• sowie die Anforderungen an die regelmäßige Aktualisierung der Kundendaten. Vor diesem Hintergrund sollten zusätzliche vereinfachte Maßnahmen vorgesehen werden, um den risikobasierten Ansatz und den Grundsatz der Verhältnismäßigkeit wirksam umzusetzen. Aus unserer Sicht sollten insbesondere folgende ergänzende vereinfachte Maßnahmen aufgenommen werden: 1. Anlassbezogene Aktualisierung bei dauerhaft geringem Risiko Bei langjährigen und stabilen Geschäftsbeziehungen mit unverändert geringem Risiko sollte eine Aktualisierung der Kundendaten grundsätzlich anlassbezogen erfolgen können. Artikel 23 RTS-E sieht zwar reduzierte Aktualisierungsintervalle vor, verlangt jedoch weiterhin eine laufende Überwachung der Geschäftsbeziehung. Für kleinere Verpflichtete kann dies trotz geringer Risikolage einen unverhältnismäßigen Aufwand verursachen. 2. Erleichterungen bei transparenten nationalen Unternehmensstrukturen Für Kunden mit einfachen und transparenten Eigentums- und Kontrollstrukturen, insbesondere bei inländischen juristischen Personen ohne grenzüberschreitende Beteiligungsstrukturen, sollten vereinfachte Anforderungen an die Überprüfung wirtschaftlich Berechtigter vorgesehen werden. Dies gilt insbesondere dann, wenn aktuelle Informationen aus öffentlichen Registern verfügbar sind. 3. Erweiterte Möglichkeit zur Nutzung vorhandener Informationen Verpflichtete sollten bei Geschäftsbeziehungen mit geringem Risiko ausdrücklich auf bereits vorhandene, weiterhin aktuelle

Name of the respondent	Question	Answer
		und valide Informationen zurückgreifen dürfen, ohne diese erneut er-heben oder überprüfen zu müssen. Dies würde Doppelprüfungen vermeiden und den Verwaltungsaufwand reduzieren. 4. Vereinfachungen für Verpflichtete mit geringem Geschäftsvolumen und geringer Risikostruktur Die RTS sollten klarstellen, dass bei kleinen Verpflichteten mit geringer Komplexität und geringem Risikoprofil weiterhin überwiegend manuelle und nicht automatisierte Verfahren zulässig bleiben. Dies betrifft insbesondere die laufende Überwachung sowie PEP- und Sanktionsprüfungen. Andernfalls besteht die Gefahr, dass die RTS mittelbar einen erheblichen faktischen Druck zur Implementierung kostenintensiver automatisierter Systeme erzeugen. 5. Vereinfachte Maßnahmen bei regulierten Berufsgruppen Bei Mandanten, die selbst GwG-Verpflichtete oder anderweitig regulierte Berufsgruppen sind, sollte ausdrücklich berücksichtigt werden können, dass bereits regulatorische Transparenz- und Aufsichtspflichten bestehen. Dies sollte im Rahmen vereinfachter Sorgfaltspflichten risikomindernd berücksichtigt werden dürfen. Wir regen daher an, die RTS dahingehend zu ergänzen, dass der risikobasierte Ansatz nicht nur auf dem Papier erhalten bleibt, sondern auch praktisch zu einer spürbaren Entlastung in Niedrigrisikofällen führen kann.
Bundessteuerberaterkammer KdöR	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Bundessteuerberaterkammer KdöR	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Bundessteuerberaterkammer KdöR	Do you have any comments on the Annex in the draft RTS?	No
Bundessteuerberaterkammer KdöR	How would you rate the proposals set out in the draft RTS overall?	Neutral
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Bundesverband der Zahlungs- and E-Geld-Institute (BVZI) e.V. (BVZI) represents the collective interests of its members, which include payment institutions and e-money institutions licensed in Germany as well as branches of comparable institutions headquartered abroad. BVZI welcomes the opportunity to comment on the AMLA Consultation Paper – Draft Regulatory Technical Standards (RTS) under Article 28(1) of Regulation (EU) 2024/1624 (AMLR). Due to technical constraints of the electronic submission system (5.000 characters), it is not possible to address all provisions comprehensively. The present response therefore focuses on those aspects that are considered most material from a legal and operational perspective. Recitals versus Articles In order to avoid legal uncertainty and divergent supervisory interpretations, it is essential that regulatory concepts and intended interpretations set out in the recitals are consistently reflected in corresponding legally binding provisions. Where this is not the case, there is a risk that recitals lack operational relevance and cannot be reliably applied by obliged entities when implementing customer due diligence requirements. Article 1 RTS

Name of the respondent	Question	Answer
		The risk based approach laid down in Article 1 RTS must apply coherently across all subsequent provisions. Obliged entities must retain discretion to determine proportionate measures based on their individual business model and risk exposure. This discretion must be appropriately documented and should not be substituted by supervisory authorities or auditors without a legally substantiated justification. Interpretation must not be derived solely from standards applicable to credit institutions but must reflect the heterogeneous structure of obliged entities. Article 2 RTS All terms used in the RTS must be clearly defined. While the (registered) “legal name” is a well-established and legally grounded concept across all Member States, the notion of a “trade name” lacks a consistent legal definition and common understanding. Its meaning and relevance vary significantly and it is often not formally registered or verifiable. The inclusion of a “trade name” does not enhance identification, as the (registered) “legal name” already constitutes a reliable and unique identifier. Instead, it introduces complexity, increases operational burden and risks inconsistent application. Against this background, the requirement to collect a “trade name” is neither legally justified nor operationally necessary and should therefore be deleted. Article 3(b) RTS The wording proposed in Article 3(b) RTS lacks sufficient precision and does not constitute a reliable legal definition. To avoid inconsistent application, the provision should either be

Name of the respondent	Question	Answer
		clarified or deleted. Article 4 RTS Requirements relating to the “place of birth” create significant administrative burden without corresponding risk mitigating benefit. It should be sufficient to document the country of birth, irrespective of whether the identification document specifies the precise place of birth. No additional analysable data field should be required. Article 5 RTS In the absence of publicly available official registers, obtaining the relevant information directly from the customer should be recognised as an appropriate measure. There should be no obligation to independently verify such information, as this is not feasible in practice. Article 6(3) and (5) RTS The RTS should include a clear and practicable definition of “verification”. Verification should be limited to comparing the photograph on the identity document with the person identified. Obliged entities are not law enforcement authorities and lack access to issuing authority databases. Requirements exceeding this standard go beyond the mandate of Article 28(1) AMLR. Article 7(2) RTS Article 7(2) RTS should reflect that only payment service providers are currently subject to a legal obligation to accept EUDI wallets. For other obliged entities, the availability of corresponding identification solutions cannot be assumed in

Name of the respondent	Question	Answer
		the near term. Article 16 RTS For the purpose of EU wide harmonisation, the concept of the “person purporting to act” (PPTA) must be defined in a legally clear manner. Customers may explicitly authorise a legal entity to act on their behalf; in such cases, that legal entity must qualify as the PPTA, not its individual representative. The PPTA is not the customer but a person acting recognisably on the customer’s behalf. The PPTA may be a natural or legal person. Where the PPTA is a legal entity, only that entity must be identified. The obliged entity is required to identify only the PPTA that actually appears and acts vis à vis it. Registration in a commercial register does not automatically qualify a person as a PPTA.
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	No. The draft is primarily shaped by the perspective of the EBA and AMLA and their understanding of the business models of credit institutions. Article 18(b) RTS lists four categories of information, at least one of which must be obtained. At least three of these categories are typically associated with banking services. The holding of deposits constitutes a regulated banking activity requiring a licence. Payment institutions and e-money institutions do not hold deposits and are legally prohibited from doing so. Consequently, the information referred to in Article 18(b)(i) RTS can only be obtained by credit institutions. Another example illustrating the strong focus on the financial sector is Article 19(3) RTS. While many obliged entities in the

Name of the respondent	Question	Answer
		financial sector make use of automated screening tools in practice, a binding legal obligation to implement such systems under German law currently exists only for credit institutions. In particular, obliged entities in the non financial sector are not subject to any comparable statutory requirement. When applied to all categories of obliged entities in the financial sector and in the non-financial sector, such requirements are generally not feasible and would merely create additional administrative burdens, negatively affecting competitiveness. There is no corresponding obligation in the AMLR mandating the mandatory use of automated screening tools.
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The RTS must provide sufficient operational flexibility to enable a genuinely risk-based interpretation of the requirements, taking into account the business model of the obliged entity and the risks it faces. Where obliged entities are required to take “risk-sensitive measures” under the proposed rules, these rules are nevertheless combined with either fixed lists of required information or minimum information sets. This approach effectively reflects a “one-size-fits-all” and rule-based methodology, which is inconsistent with the heterogeneity of business models among obliged entities and the principles of a risk-based approach. For example, the response to Article 18(c) RTS for payment and e-money institutions will invariably be the customer’s business revenues. Requiring the documentation of this information constitutes a box-ticking exercise rather than providing meaningful, risk-sensitive insight for the prevention of money laundering or terrorist financing. The majority of customers of payment and e-money institutions use the cashless payment services provided in the context of their commercial activities to offer and process cashless payments vis-à-vis their own customers. Given the

Name of the respondent	Question	Answer
		sheer number of transactions involved, the occurrence of unusual transactions can never be entirely excluded. However, such unusual transactions are generally not driven by the customers of payment and e-money institutions themselves, but by their contracting parties. The list set out in Article 23 RTS would, by implication, render it impossible even for a public authority to qualify as a low-risk customer. The relevant consideration is therefore not whether no unusual transactions have occurred, but whether such irregularities can be attributed to the conduct of the customer itself. Article 10 RTS The current drafting does not sufficiently enable the effective application of a risk-based approach. While Article 22(7)(b) AMLR requires the use of at least one additional source alongside central registers, it does not specify that such sources must go beyond reliable and readily available official information. Interpreting this requirement as necessitating multiple independent and potentially intrusive verification steps in all cases would introduce a de facto uniform standard and limit the flexibility required for a risk-sensitive application. Such an interpretation would result in disproportionate operational burden, particularly in business models where no direct relationship with the beneficial owner exists. It would also lead to duplication of verification steps without a corresponding increase in the effectiveness of AML/CFT controls. In low- or medium-risk scenarios and in the absence of risk indicators, verification should therefore be considered sufficient where it is based on customer-provided information, a consistent entry in a central register, and corroboration through available and reliable official sources such as

Name of the respondent	Question	Answer
		commercial or company registers or, alternatively, a confirmation obtained from the legal entity itself. BVZI therefore considers it essential to clarify that the requirement to use an additional source can be satisfied in a proportionate manner. Without such clarification, Article 10 RTS risks constraining the application of the risk-based approach by introducing implicit minimum verification expectations that apply irrespective of the underlying risk profile. Article 13 RTS The current drafting does not sufficiently support a risk-based application with regard to senior managing officials (SMOs). SMOs are intended as a fallback solution in cases where no beneficial owner can be identified. While this last-resort function is recognised in Recital (125) AMLR, it is not adequately reflected in the operative provisions, creating a risk of overly broad and non-risk-sensitive application in practice. In addition, the concept remains insufficiently defined, particularly in light of the broad notion of “senior management” and its extension in Article 63(4) AMLR. Without further clarification, there is a risk that the scope of SMOs is interpreted too widely, leading to inconsistent supervisory expectations and to requirements that go beyond what is justified from a risk perspective. Applying the same level of data collection and verification requirements as for beneficial owners would not be proportionate and would undermine the risk-based approach. In the absence of risk indicators, identification based on a limited core set of information, supported by reliable and

Name of the respondent	Question	Answer
		independent sources such as commercial or company registers, should generally be sufficient. Otherwise, Article 13 RTS risks introducing disproportionate obligations that increase operational burden without materially improving AML/CFT risk mitigation.
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	There are several situations in which the required information is not available in practice. In particular, there appears to be a misunderstanding regarding the chain of parties involved in the processing of a card payment transaction or a payment initiation and the information available to each party. The initial contractual relationship is established between the payer and the payee (merchant). The merchant is primarily a trader in goods and, in most cases, is not classified as an obliged entity. The payment or e-money institution maintains a contractual relationship solely with the merchant and generally has no direct contact with the payer. Payment transactions are executed within seconds, leaving no opportunity to request additional information, particularly where the payer's payment instrument was issued by a payment service provider established in a third country falling within the scope of Articles 29 to 31 AMLR. It is neither feasible to revert to the merchant to request information under Article 34 AMLR nor under subsequent provisions, as long as the merchant itself is not an obliged entity and has neither access to such information nor a legal obligation to obtain it. This has direct implications for all individuals, as each of us acts as a payee on a daily basis. Requiring such information would be equivalent to a cashier in a supermarket asking a customer about the source of funds used to pay for groceries. The same applies to payment initiation services, where providers have only limited, transaction-specific access to information and cannot obtain or

Name of the respondent	Question	Answer
		verify CDD information that is not available within the payment initiation flow. In other words, there is generally no closed chain of information across all involved parties. Consequently, it is not possible for obliged entities in all situations to fulfil the envisaged legal expectations. A driving licence issued by an EU Member State constitutes an equivalent identity document within the meaning of Article 22(6) AMLR and Article 6 RTS. However, such documents do not contain information on the country of birth as required under Article 4 RTS. Moreover, Article 6 RTS does not even require that an identity document contain information on the place of birth. Accordingly, the only way to obtain this information is by asking the person concerned directly. The same applies to information on nationality. Each obliged entity must therefore rely on the accuracy of the information provided by the individual. It must be the standard approach to trust the customer and to rely on the information provided by him. Once an obliged entity has identified a person, that person remains identified for the purposes of the obliged entity. A person's identity itself does not change; only the validity or number of an identity document may change. A change in name likewise does not imply a change in identity. It should therefore be clarified that the principle "once identified, always identified" applies. Otherwise, there is a risk that Article 26(2) AMLR will be misinterpreted as requiring periodic reassessment of identity documents and identification processes (for

Name of the respondent	Question	Answer
		example every five years) without any corresponding risk-mitigating benefit. These examples illustrate the practical gaps, administrative burdens, and lack of specificity in certain provisions, which allows for divergent interpretations.
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The level of documentation required when applying simplified due diligence measures has become disproportionately significant. In practice, documenting the rationale for each individual case is extremely time-consuming. As a result, it is often operationally easier to apply standard due diligence measures, which do not entail additional documentation requirements. Furthermore, the actual operational benefit of applying simplified due diligence measures, as compared to the general customer due diligence regime, is limited when weighed against the risk of incorrectly classifying a customer as low risk.
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Bundesverband der Zahlungs- und E-Geld-Institute (BVZI) e.V.	Please specify which recital you refer to, and share your comments below.	In order to avoid legal uncertainty and divergent supervisory interpretations, it is essential that regulatory concepts and intended interpretations set out in the recitals are consistently reflected in corresponding legally binding provisions. If so, please provide concrete examples of such situations and your proposals for alternative solutions.	1. Pflicht zur Erhebung der Nummer eines Ausweisdokumentes des wirtschaftlich Berechtigten Der BDL weist darauf hin, dass die in der EU-Geldwäscheverordnung (AMLR) vorgesehene Verpflichtung zur Erhebung der Personalausweisnummer wirtschaftlich Berechtigter in der Praxis regelmäßig nicht erfüllbar ist und es daher einer rechtlichen Klarstellung im RTS bedarf. Leasing-Gesellschaften - wie auch andere Verpflichtete - stehen typischerweise ausschließlich in Geschäftsbeziehungen zu natürlichen oder juristischen Personen, nicht jedoch zu deren wirtschaftlich Berechtigten, sodass es an der für die Datenerhebung erforderlichen unmittelbaren Interaktion fehlt. Zudem bestehen weder rechtliche noch tatsächliche Möglichkeiten, sensible Ausweisdaten von diesen Personen zuverlässig zu erlangen, zumal auch externe, grundsätzlich verlässliche Quellen wie Wirtschaftsauskunfteien entsprechende Informationen aus datenschutzrechtlichen Gründen nicht erheben oder speichern dürfen. Gleichzeitig greifen Leasing-Gesellschaften bereits auf etablierte und bewährte Identifizierungsverfahren, insbesondere unter Nutzung von KYC-Daten aus vertrauenswürdigen Quellen, zurück, die ein angemessenes Niveau der Geldwäscheprävention gewährleisten. Eine

Name of the respondent	Question	Answer
		darüberhinausgehende Pflicht zur Erhebung der Personalausweisnummer würde erhebliche administrative Mehrbelastungen verursachen, ohne einen entsprechenden zusätzlichen Erkenntnisgewinn zu bieten. Vor diesem Hintergrund fordert der BDL eine Klarstellung, wonach die Erhebung der Personalausweisnummer wirtschaftlich Berechtigter nur insoweit erforderlich ist, als eine unmittelbare Identifizierung anhand von Ausweisdokumenten tatsächlich erfolgt. 2. Artikel 3 RTS-E - Geburtsland Der BDL spricht sich dafür aus, die im RTS-Entwurf vorgesehene Verpflichtung zur Erfassung des Geburtslands von natürlichen Personen zu streichen. Diese Angabe ist in der Praxis schwer umsetzbar, da das Geburtsland in der Regel nicht auf standardmäßigen Ausweisdokumenten (z. B. Personalausweis, Reisepass) vermerkt ist. Eine verlässliche Erhebung dieser Information würde in vielen Fällen eine zusätzliche Nachfrage beim Kunden oder die Vorlage ergänzender Dokumente erfordern, was den Erfassungsprozess unverhältnismäßig verkompliziert und die Effizienz der Kundenannahmeprozesse insbesondere bei standardisierten Produkten erheblich beeinträchtigt. Zudem ist kein konkreter geldwäscherechtlicher Mehrwert dieser Angabe erkennbar – insbesondere nicht im Verhältnis zum damit verbundenen operativen Aufwand.
Bundesverband Dt. Leasing-Unternehmen e.V.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower	Artikel 19 RTS-E - Ermittlung des wirtschaftlich Berechtigten bei geringem Risiko Der BDL spricht sich ausdrücklich dafür aus, im RTS klarzustellen, dass bei Kunden mit geringem Risiko die Einsichtnahme in das Transparenzregister zur Ermittlung des

	ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	wirtschaftlich Berechtigten ausreichend ist – ohne dass zusätzliche Überprüfungsmaßnahmen erforderlich sind, sofern sich keine konkreten Anhaltspunkte für Unstimmigkeiten ergeben. Das Transparenzregister wurde mit dem Ziel geschaffen, zentrale Informationen zur Eigentums- und Kontrollstruktur transparent, behördlich überprüft und leicht zugänglich bereitzustellen. Wenn selbst im Fall gering eingestufter Risiken eine weitergehende Prüfung oder Verifizierung der Angaben erforderlich wäre, würde dies den praktischen Nutzen und die regulatorische Zielsetzung des Registers unterlaufen. In der Konsequenz würde das Transparenzregister faktisch gänzlich entwertet. Aus Sicht des BDL ist es daher essenziell, dass bei fehlenden Auffälligkeiten und geringem Risiko die Einsichtnahme in das Transparenzregister als ausreichend gilt und nicht durch zusätzliche Maßnahmen ergänzt werden muss.
Bundesverband Dt. Leasing-Unternehmen e.V.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Artikel 11 (3) RTS-E – rechtliche oder andere Gründe Die zusätzlich vorgesehene Bezugnahme auf „rechtliche oder andere Gründe“ ist demgegenüber zu unbestimmt und führt zu erheblichen Auslegungsschwierigkeiten in der Praxis. Während der Begriff „wirtschaftliche Gründe“ einen klaren risikoorientierten Prüfungsmaßstab vorgibt, öffnet die Erweiterung um „rechtliche oder andere Gründe“ den Anwendungsbereich ohne hinreichende Kontur und erschwert eine einheitliche, rechtssichere und überprüfbare Anwendung der Sorgfaltspflichten. Insbesondere bleibt unklar, welche Fallkonstellationen unter „andere Gründe“ fallen sollen und welche Anforderungen an deren Nachweis zu stellen wären. Dies würde zu einer erheblichen Rechtsunsicherheit bei den Verpflichteten führen. Vor diesem Hintergrund sollte die

BVI	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more	BVI commends AMLA for pursuing a harmonised approach to the application of the new AMLR via Regulatory Technical Standards according to Article 28(1) of said Regulation. To us it seems, however, that the draft RTS at hand do not yet sufficiently account for the specificities of collective investment undertakings (CIU). Hence, the answer to Question 1 is “no”.

Name of the respondent	Question	Answer
	appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	It is important to note that this is not due to a lack of flexibility of the current proposals, as lit. (i) of the Question suggests. The problem lies rather in the fact that Article 17 of the draft RTS, which is specifically intended to take account of the particular characteristics of CIUs and their investors, only partially fulfils this role. In Germany, like in many other EU Member States, shares in retail funds are generally structured as bearer shares. There is no such thing as an investor register. Therefore, fund companies have virtually no way of identifying their end investors in retail funds, who often number several hundred thousand, in some cases more than a million mostly natural persons. With respect to effective anti-money-laundering measures, this is also not necessary: As long as a regulated credit or financial institution is positioned between the CIU and the end investor and the identification of the investor is ensured, the investment company must be relieved of impossible double checks. This is where Art. 17 of the draft RTS comes in. It aims at enabling CIUs that do not know their investors to comply with their identification obligations under Art. 20(1) AMLR by relying on the account-keeping entities, which are themselves "obliged entities" within the meaning of the AMLR. However, it is limited to a distribution model in the sense of Art. 20(1) lit. (h) AMLR, in which the beneficiary of a transaction is not at the same time the customer of the obliged entity, in this case the CIU. The goal is, therefore, to make the KYC requirements practical

Name of the respondent	Question	Answer
		for all common intermediary structures for investment funds. The decisive factor for the privilege should not be the legal construction of the distribution model, but rather the allocation of roles: As long as a regulated credit or financial institution is positioned between the fund company and the end investor and the identification of the investor is ensured, the investment company must be relieved of double checks which are impossible for them to perform. Please refer to our answer to Question 3 where we provide a proposal for a solution.
BVI	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We have no comment at this stage.
BVI	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As set out in our response to Question 1, Article 17 of the draft RTS, while being well-intended, does not fully meet its purpose and leaves out relevant situations in which it does not provide an alternative solution. We welcome that AMLA acknowledges the specific business model of collective investment undertakings (CIU) and tries to provide a pragmatic solution for CIU to comply with their AML duties as obliged entities without compromising the high safety standards of the AMLR. The reasoning laid out in recital 14 of the draft RTS clearly shows that AMLA sees the problem and has certain CIU varieties and distribution models in mind which would be difficult to handle under AMLR Level 1 alone, and for

Name of the respondent	Question	Answer
		which Article 17 of the draft provides practical relief. However, the solution found so far falls short of covering all relevant constellations which are standard practice within the EU, and all of which feature variations of the same issue. More specifically, we see mainly two problems with the current proposal: 1. Identity of the „customer“ By providing a solution for fund distribution in cases of lit. (h) of Article 20(1) of AMLR only, the scope of Article 17 of the draft RTS is limited to cases where the end investor who acquires a CIU via an intermediary is _not_ considered a “customer” within the meaning of Article 20(1) of AMLR. Even though all being subject to the UCITS and AIFM Directives, EU Member States opted for different approaches to the legal quality of the relationship between the CIU on the one hand and the end investor on the other. In several Member States, including Germany, upon investing in the CIU the two parties automatically enter into a contractual relationship under civil law. This contract, specified by the fund rules, constitutes the framework that governs, for example, how the fund‘s assets are invested, what costs are incurred, and how investors’ rights are structured. Hence, depending on the legal perspective and in the absence of a legal definition of the term “customer” in ALMR, the end investor himself might be considered a “customer” of the CIU. In other Member States there is no contractual relationship, hence the investor would definitely

Name of the respondent	Question	Answer
		not be considered a “customer”. While the intermediary himself might well be considered a “customer” in probably all jurisdictions, it would ultimately depend on the civil law situation of each Member State whether also the end investor qualifies as “customer” or not. This leads to the situation that in some cases, CIUs might be obliged to identify the end investor under lit. (a) of Art. 20(1) AMLR already, whereas in other cases they would not. This result is obviously unreasonable since under the aspect of efficiently preventing money laundering, the civil law quality of the relationship between CIU and investor does not make any difference whatsoever. The current EU AML framework, including the “Risk Factor Guidelines” provided by EBA, leave enough flexibility to find pragmatic solutions for all of these varieties to the effect that the end investor would not have to be identified by the CIU under certain conditions. However, there is a risk that this will no longer be the case under AMLR and the RTS in their current draft shape. In order to remedy this problem, we propose extending the scope of Art. 17 of the draft RTS beyond lit. (h) to the whole paragraph (1) of Article 20 AMLR. 2. “in its own name but on behalf of” As a matter of fact, when distributing investment funds, some intermediaries act in their own name but on behalf of their clients which will become the end investors. This model, in

Name of the respondent	Question	Answer
		Germany called ”Kommissionsgeschäft” (commission business), might benefit from the relief provided by Art. 17 of the draft RTS. In other distribution models, however, the intermediary acts not only on behalf of, but also in the name of the client. This can be the case of “reception and transmission of orders” or “execution of orders on behalf of clients” according to No. (1) and (2), respectively, of Annex I Section A of MiFID. Since such transactions would not be executed in the name of the intermediary, but of the client, they would not be covered by Article 17 of the draft RTS. 3. Wording proposal In order to remedy these issues, we suggest that paragraph 12 begin as follows: “When a collective investment undertaking distributes its shares or units through another credit institution or financial institution, it may fulfil the requirement under Article 20(1) of Regulation (EU) 2024/1624 [...]”
BVI	4. Considering AMLA’s legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities’ products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We have no comment at this stage.

BVI	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We have no additional comments at this stage.
BVI	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
BVI	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
BVI	Do you have any comments on the Annex in the draft RTS?	No
BVI	How would you rate the proposals set out in the draft RTS overall?	Neutral
Caisse des dépôts et consignations	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Please see our answer below on question 1 Do you agree with the proposals set out in these draft RTS? If you do not agree, please specify: (i) the provision(s) concerned; and (ii) the rationale for your position. Please provide concrete drafting proposals to resolving the issue and explain why the measure you propose would be more appropriate. Many thanks
Caisse des dépôts et consignations	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Caisse des Dépôts et Consignations (CDC) Group appreciates the opportunity to provide feedback in response public consultation Draft RTS under Article 28(1) of Regulation 2024/1624 on customer due diligence. Please find below the consolidated answer to the 1rst general question mentioned in the draft - regarding the proposals set

Name of the respondent	Question	Answer
		out in the RTS (that will have to be divided due to character limitation) We remain at your disposal should the paper need to be communicated. I. Verification of identity of clients and beneficial owners A. Verification of identity of natural persons 1) Document for identity verification Article 6(1) (equivalence criteria for identity documents) would require to clarify the scope: does Article 6 apply only to the customer who is a natural person, or also to beneficial owners and to natural persons acting ? Article 6(3) (“reasonable steps” to ensure identity documents are authentic and not forged/tampered with): Would it be possible to define the “reasonable steps” to avoid inconsistent practices and supervisory expectations (e.g., mandatory use of document verification tools vs. manual checks; need for notarization/certified copies) ? It is also unclear how to reconcile this with GDPR/data protection constraints when obliged entities upload/store identity documents (customers, prospects, and related persons) in third-party tools for verification (roles, data transfers, retention, security measures). Article 6(4) (“When original documents are in a foreign

Name of the respondent	Question	Answer
		language”): The wording could lead to divergent practices (informal understanding vs systematic certified translations) and disproportionate burden for cross-border cases. It would be needed to have explicit confirmation whether AI/machine translation is acceptable. GDPR impact must be addressed (use of external/cloud tools, processor obligations, confidentiality, potential international transfers/DPIA). We suggest mentioning that “Obliged entities shall ensure they understand the content of foreign-language documents. This may be achieved through reliable translation tools, including machine translation, provided its use complies with data protection requirements (incl. confidentiality, processors and international transfers where applicable). Where the document is material for CDD/EDD conclusions or in high-risk cases, an appropriately qualified human translation or equivalent assurance measures shall be used.” It would ensure harmonized application, keep a risk-based approach, avoid unnecessary certified translations, and make AML compliance compatible with GDPR constraints. 2) Place of birth a. Collection of the place of birth Article 4 appears to make the collection of the place of birth (at

Name of the respondent	Question	Answer
		least the country) systematic and to require collecting additional place-of-birth information when shown on an ID document, but it is unclear how this aligns with Article 22(1)(a)(ii) of Regulation (EU) 2024/1624, which seems to link certain CDD information requirements to at least moderate ML-TF risk. This lack of clarity may lead to a de facto obligation to collect place of birth also in low-risk situations, creating disproportionate burden. We suggest to clarify in Article 4 (or via an explicit cross-reference to Article 22(1) that the obligation to collect place of birth (and any additional place-of-birth details shown on the ID document) applies from the risk level foreseen in Article 22(1) (i.e., at least moderate risk) and that for low-risk business relationships a risk-based/best-efforts approach applies (collect only where available or where risk indicators justify it). b. Place of birth and nationality Recital (3) on collecting/understanding and verifying nationality and place of birth should clarify what constitutes acceptable evidence to verify nationality. Indeed, not all government-issued documents prove nationality (e.g., a driving license may be issued without nationality and should not be accepted as standalone proof). In addition, for low-ML-TF-risk relationships (e.g. EU/EEA listed companies, EU/EEA regulated financial institutions, EU/EEA public sector bodies), identification/verification of beneficial

Name of the respondent	Question	Answer
		owners/legal representatives/senior managing officials is often done via reliable public sources (company registers, official registers) that do not include nationality or place of birth. Requiring systematic collection/verification from the business relationship would be disproportionate and often impracticable and it is unclear whether a declaration from the business relationship would be sufficient for verification.
Caisse des dépôts et consignations	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We suggest to amend recital (3) to : (i) specify that nationality should be verified using documents that explicitly state nationality (passport or national ID card) or another reliable independent source explicitly confirming nationality, and that documents not evidencing nationality (e.g., driving licence) are not sufficient on their own; (ii) allow, regarding low-risk situations and where reliable public registers used for identification do not provide nationality/place of birth, a “best efforts” approach where nationality/place of birth may be recorded based on a good-faith declaration/available sources, with documentary evidence requested only where risk indicators arise; (iii) keep the principle that where multiple nationalities are declared in good faith, verifying one nationality is sufficient (aligned with the approach of collecting an ID document for only one nationality). Article 5 1) states that the entity must collect all the nationalities of the client or beneficial owner. However, collecting this data regarding all the nationalities of the customer / beneficial owner can be difficult for the concerned entities.

Name of the respondent	Question	Answer
		We therefore suggest including the notion of best effort or to clarify which are the excepted means to collect this information. Furthermore, in low-risk situation, we suggest not including the collection of all the nationalities, within article 12. Article 6(1) (equivalence criteria for identity documents) would require to clarify the following elements point b. Indeed, it lists names/surnames and date of birth but does not mention place of birth, whereas Article 4 requires collecting place of birth where available on the document B. Legal persons – Understanding the ownership structure 1) Analysis of the ownership structure Article 11(2)(b)(ii) 11(3)(a) (information to be obtained for intermediate entities within multi-layer ownership/control structures, incl. regulated market listing details and legal form/nominee shareholders) should be more proportionate and the scope be clarified. - It is uncertain whether the regulated-market information must be collected for all intermediate entities in the chain (including minority holdings such as 5% or 15%) or only above a given ownership threshold/level. As drafted, this could require extensive checks on a potentially large number of entities and make the exercise unduly burdensome. - In addition, Article 11(3)(a) may be interpreted as requiring collection of constitutional documents/statutes for each entity in the chain, which is difficult to implement for complex, multi-

Name of the respondent	Question	Answer
		tier structures. More documentation is expected, along with a deeper analysis of risks and structures. - Furthermore, regarding the fact that entities must assess the ownership and control structure of complex entities, the economic justification for a legal arrangement (or the use of a nominee) needs to be defined. - A clarification on (i) whether Article 11(2)(b)(ii) applies to all intermediate entities or only above a specified ownership threshold / materiality criterion, and whether a minimum threshold should apply; (ii) what evidence is expected under Article 11(3)(a) to determine legal form and nominee shareholders, and whether obtaining statutes for every intermediate entity is required or whether alternative reliable sources are acceptable. - The due diligences to be applied are more thorough than what is currently required under French law for listed companies, particularly regarding the number and the percentage of shares traded when not all of the company's securities are listed on a regulated market. - Regarding the interpretation of economic and legal motives, would it be possible to specify what are the requirements for analyzing the economic reasons provided by clients or corporate structures? - We wonder how financial institutions should identify control powers not linked to share ownership (such as shareholder agreements), given that these elements are rarely public and

Name of the respondent	Question	Answer
		often unknown to distant subsidiaries within large groups. - Since there is no automatic exemption from identifying beneficial owners or governance structures for listed companies, a detailed analysis of the shareholding structure is required (collecting articles of association, documenting the absence of a shareholder BO, identifying key executives). - An alternative solution should be mentioned when it is impossible to document certain elements (e.g., in cases of refusal to provide information or lack of transparency in structures). It would ensure harmonised and risk-based application, avoid disproportionate requirements for long/shareholder chains with multiple minority holdings, and provide operationally feasible expectations on the type of documentation/sources to be used.
Caisse des dépôts et consignations	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	2) Complex ownership structures We suggest taking into account at least two following cumulative criteria: – the structure should be without commercial or operational basis (empty shell), a trust or opaque, and owned above 25% (or 10% for high-risk clients) – a presence in several high-risk countries, including outside the European Union or European Economic Area that are not deemed equivalent. – a lack of transparence on the owners (shareholder) or on the person detaining the effective control The last two conditions also appear complex to implement,

Name of the respondent	Question	Answer
		regarding the nominee shareholders and nominee administrators / assessment of the economic rationale or justification of the owner ownership. We suggest requesting clarification whether jurisdictions outside the EU that are deemed equivalent (e.g., under relevant EU equivalence/low-risk determinations) should be treated differently under point (b) or explicitly carve them out. Indeed, as drafted the provisions of article 12(1)(b) on complex corporate structure where the customer and any legal entities in the layers are registered in jurisdictions outside the EU) treat any non EU jurisdiction uniformly, while some third countries have equivalent transparency/AML frameworks. This would preserve a risk-based approach, improve proportionality and avoid automatic escalation for non EU structures that do not increase opacity or AML-CFT risk. In general, regarding article 12 1) of the project of RTS, in order to consider a structure as complex when identifying the ownership and control structure of the client, a risk-based approach should be adopted. C. Legal and natural persons 1) Non-face-to-face identification The scope of article 7 (Verification measures conducted on a non-face-to-face basis) should be clarified because it is not clear whether it covers only customers who are natural persons or also beneficial owners and persons acting on behalf of a legal person (authorized representatives). ubject to verification under customer due diligence ?

Name of the respondent	Question	Answer
		This ambiguity may lead to divergent interpretations and inconsistent verification frameworks. 2) Form We believe that the wording is too general and might create uncertainty on (i) what other forms of information are acceptable for CDD purposes (e.g. data extracted from official registers, screenshots, electronic queries/results, attestations, recorded statements) and (ii) how obliged entities are expected to evidence and archive such “non-documentary” information in a way that is compliant and auditable. We suggest adding a clarification that “information” may include data obtained from reliable independent sources (e.g. official registers/public authorities) and specify, at least at a high level, acceptable formats and record-keeping expectations (e.g., saving an extract, timestamped screenshot, reference number/link, query log, or other traceable evidence). This suggestion intents to provide operational clarity to adapt procedures and tools, ensures consistent supervisory expectations, and supports robust audit trails. 3) Addresses As drafted, Article 3 on Information to be obtained in relation to addresses does not specify whether the address requirements apply in the same way to (i) customers that are natural persons and (ii) to natural persons linked to a legal person customer (beneficial owners, legal representatives,

Name of the respondent	Question	Answer
		senior managing officials). Collecting and maintaining the personal residential address of all beneficial owners/legal representatives/senior managing officials of a legal person customer may be disproportionate, operationally difficult, and not always relevant. In many cases only a professional/work address is available and appropriate. We suggest clarifying that a natural person's residential address should be collected where the natural person is the customer/business relationship, while for beneficial owners, legal representatives and senior managing officials of a legal person customer, obliged entities may collect a professional/work address (e.g., business address/registered office). The residential address could be collected only where justified by higher ML-TF risk, specific legal requirements or other risk indicators. D. Beneficial owners 1) Reasonable measures Article 10 (Reasonable measures for verification of the beneficial owner), in particular the exclusion of "central registers" from point (a) and the possibility to rely on "information from the customer or other sources" in point (b) should be clarified because it is unclear :

Name of the respondent	Question	Answer
Caisse des dépôts et consignations	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	(i) what distinction is intended between “public registers” and “central registers” (ii) why central registers would be excluded from acceptable means to verify the identity of the beneficial owner (iii) whether a simple declaration by the legal representative/customer can be considered sufficient for “verification” of the beneficial owner’s identity (iv) whether “verification” implies an obligation to check the accuracy of the information and, if so, how obliged entities are expected to do so in practice (especially where access to reliable databases/registers is limited). We therefore suggest to clarify : - the definition/scope of “public registers” vs “central registers” and the rationale for excluding the latter; - whether information collected from the customer/legal representative can satisfy “verification” on a standalone basis or only as supporting evidence; - whether “verification” includes an accuracy check obligation and what acceptable methods/sources are expected (risk-based approach, availability/access constraints). 2) SMOs i. Identification of SMOs Recital (9) mentions that equivalent information for SMOs should be collected, when no beneficial owner can be identified. Article 63(4) of AMLR defines SMOs broadly (executive members of the management body and any natural persons

Name of the respondent	Question	Answer
		with executive functions responsible for day-to-day management and accountable to the management body. Applying this as a “default BO” approach may require identifying a large number of individuals (often more than 10 persons in regulated financial institutions or listed companies), which : (i) significantly complicates KYC processes, (ii) may lead to non-meaningful risk uplifts, (iii) materially increases ongoing screening workload. It also creates uncertainty on risk classification: since the Regulation requires risk uplift where a BO is a PEP, if multiple SMOs are collected “as BO equivalents”, the likelihood of identifying a PEP among them increases. Would this systematically trigger a risk uplift even though SMOs are not BOs? We therefore suggest to clarify in the delegated act that, where SMOs are identified under the fallback, that obliged entities should identify only a limited set of persons, e.g. the single legal representative with the broadest powers to represent the company (as per statutes/official register) or, alternatively, introduce an exhaustive/closed list of roles that qualify as SMOs for this purpose (e.g., CEO/Managing Director and equivalent). Furthermore, it should be specified that the PEP-driven risk uplift applies to BOs and should not automatically apply to SMOs identified under the fallback unless other risk indicators are present. It seems more appropriate because it preserves the fallback

Name of the respondent	Question	Answer
		mechanism while ensuring proportionality, operational feasibility, and consistent risk-based outcomes. Article 13 (Information on senior managing officials) and Article 14(2) (timely updates for beneficiaries of trusts and similar arrangements). (i) Article 22(2) (EU) 2024/1624 applies only when no beneficial owner can be identified through ownership; clarification is needed on whether the identification of the legal representative remains a separate obligation (e.g. under Article R. 561-5-4 French Monetary code) and, if yes, under which practical modalities. (ii) The category “senior managing officials” is broad (cf. Art. 63(4)); a clearer list/examples of relevant functions is needed to ensure consistent implementation. (iii) Clarification is needed on whether a PEP status of a senior managing official should have the same risk impact as for a beneficial owner. (iv) For Article 14(2), expectations on “timely updates” should be operationally feasible; We suggest to clarify : (1) the continued applicability and modalities of the distinct legal representative identification obligation (2) the scope/list of positions covered as “senior managing officials” (3) the risk treatment where a senior managing official is a PEP

Name of the respondent	Question	Answer
		(4) whether a written request (and its retention), particularly to the trustee/legal arrangement, at periodic review can be considered adequate evidence of having sought up-to-date information under Article 14(2), when updates are not proactively provided It would ensure harmonized interpretation, avoids over-collection/over-classification driven by an overly broad definition, align AML obligations with existing national requirements, and make the “timely updates” obligation auditable and workable in practice. ii. Trusts and similar arrangements Article 15(1)(b) The notion of “relevant documents” is not defined and is overly open-ended.
Caisse des dépôts et consignations	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Caisse des dépôts et consignations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	15
Caisse des dépôts et consignations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	This creates legal uncertainty for trustees and obliged entities and is likely to lead to divergent supervisory expectations and market practices across Member States (ranging from excessive document demands to insufficient verification). It is also unclear what is required to evidence that information is “up-to-date” (e.g., what sources are acceptable and when/ how refresh should occur), especially where beneficiaries are described as a class and may evolve over time.

Name of the respondent	Question	Answer
		We suggest replacing Article 15(1)(b) with a clearer risk-based formulation specifying a non-exhaustive list of acceptable documentary sources, for example: “(b) documentary evidence sufficient to enable the obliged entity to verify that the information referred to in point (a) is accurate and up-to-date, including, as applicable, the trust deed and any amendments, trustee resolutions or other governance documents (including any letter of wishes where relevant), and any other documentation evidencing subsequent changes to the class of beneficiaries, objects of powers or default takers. The extent of such documentary evidence shall be proportionate to the assessed ML/TF risk and the availability of documents to the trustee.” It would provide a harmonised baseline across Member States, reduce inconsistent interpretation and supervisory divergence, avoid disproportionate or unnecessary document requests and preserve flexibility through a risk-based approach while making clear what types of documents can substantiate accuracy and currency. E. Beneficial owners, customers and specific requirement A. Listed companies on low-risk situations Regarding Article 21, the deletion of the exemption for the listed companies or portfolio companies makes the collect more thorough since there are from now on, two sources of verification to identify the beneficial owner and verify its identity.

Name of the respondent	Question	Answer
		We suggest lightening this obligation to only one source, that could be an attestation drawn from the client himself. B. Politically Exposed Persons 1)General scope Recital (15) on scope and consequences of PEP identification should be amended to clarify how PEP-driven risk uplift should apply to public sector customers, in particular local authorities. In our case, a significant share of business relationships are French public bodies (e.g., French local authorities) whose legal representatives/beneficial owners are frequently PEPs by nature of their functions. Systematically upgrading the ML-TF risk rating solely on this basis would lead to a largely automatic reclassification of a substantial part of the portfolio, without necessarily reflecting higher inherent risk, while we already perform daily screening of all customers and their legal representatives/beneficial owners and only apply a risk uplift when additional risk indicators arise (e.g., adverse media). We therefore suggest clarifying, in recital (15) (or the relevant operative provisions), that for EU/EEA public sector entities (including local authorities), the identification of a PEP among legal representatives/beneficial owners should not automatically require a higher overall customer risk rating where the customer is a public body and no other risk factors are present.

Name of the respondent	Question	Answer
		A risk-based exemption/derogation should be granted. The risk uplift would then be applied only when combined with additional indicators (e.g., adverse media, unusual transactions, higher-risk geographies). It would preserve mandatory PEP identification and monitoring while avoiding an automatic, non-discriminating risk uplift for inherently public/transparent customers and support a consistent risk-based approach.
Caisse des dépôts et consignations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	15
Caisse des dépôts et consignations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	This creates legal uncertainty for trustees and obliged entities and is likely to lead to divergent supervisory expectations and market practices across Member States (ranging from excessive document demands to insufficient verification). It is also unclear what is required to evidence that information is “up-to-date” (e.g., what sources are acceptable and when/ how refresh should occur), especially where beneficiaries are described as a class and may evolve over time. We suggest replacing Article 15(1)(b) with a clearer risk-based formulation specifying a non-exhaustive list of acceptable documentary sources, for example: “(b) documentary evidence sufficient to enable the obliged entity to verify that the information referred to in point (a) is accurate and up-to-date, including, as applicable, the trust deed and any amendments, trustee resolutions or other governance documents (including any letter of wishes where relevant), and any other documentation evidencing subsequent

		apply to public sector customers, in particular local authorities. In our case, a significant share of business relationships are French public bodies (e.g., French local authorities) whose legal representatives/beneficial owners are frequently PEPs by nature of their functions. Systematically upgrading the ML-TF risk rating solely on this basis would lead to a largely automatic reclassification of a substantial part of the portfolio, without necessarily reflecting higher inherent risk, while we already perform daily screening of all customers and their legal representatives/beneficial owners and only apply a risk uplift when additional risk indicators arise (e.g., adverse media). We therefore suggest clarifying, in recital (15) (or the relevant operative provisions), that for EU/EEA public sector entities (including local authorities), the identification of a PEP among legal representatives/beneficial owners should not automatically require a higher overall customer risk rating where the customer is a public body and no other risk factors are present. Aa risk-based exemption/derogation should be granted. The risk uplift would then be applied only when combined with additional indicators (e.g., adverse media, unusual transactions, higher-risk geographies). It would preserve mandatory PEP identification and monitoring while avoiding an automatic, non-discriminating risk uplift for inherently public/transparent customers and support a consistent risk-based approach.

Name of the respondent	Question	Answer
		2) Identification of PEPs The scope of Article 19(1)(a)-(b) on identification of PEPs covering the customer, the beneficial owner and, where relevant, the person on whose behalf/for whose benefit a transaction is carried out) is unclear regarding legal representatives and senior managing officials identified as BO “by default”. This may lead to divergent interpretations on whether their PEP status must trigger the same risk escalation/EDD as for a customer/beneficial owner. Clarification is needed in particular where only the legal representative is a PEP, to avoid automatic and disproportionate risk uplift when the representative is not the customer/BO. Would it be possible for the legislator/supervisor to clarify whether Article 19 covers legal representatives and senior managing officials (incl. BO by default) and—if the only PEP is the legal representative — confirm that this should not automatically require reclassifying the relationship as higher risk (absent other risk factors). It would ensure harmonised application, avoid disproportionate risk escalation based solely on a representative’s status and keep the approach aligned with a risk-based framework.
Caisse des dépôts et consignations	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	25

Name of the respondent	Question	Answer
Caisse des dépôts et consignations	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	C. Additional information on the customer and the beneficial owners The concepts of “authentic” and “accurate” in article 25 a) are not defined and may be interpreted differently across obliged entities and supervisors. In practice, “authentic” could be read as requiring verification of provenance/genuineness (e.g., document integrity, issuance, non-alteration), while “accurate” could refer to factual correctness and consistency with other sources. Without clarification, this may lead to divergent practices (e.g., expectations of document forensics or systematic recourse to paid databases) and uncertainty about what level of assurance is expected, particularly where information is obtained from registers, digital sources or intermediaries. This undermines harmonisation and may result in disproportionate operational burdens, without clear risk-based added value. We suggest clarifying that Article 25 by (i) defining the expected outcome (“sufficient assurance”) and (ii) specifying non-exhaustive examples of measures/sources that can demonstrate authenticity and accuracy, in a risk-based manner. For example, amend point (a) along the following lines: - replace “authentic and accurate” with: “genuine (i.e., originating from the claimed source and not altered) and factually correct”; and - add: “Such additional information may include, as applicable

Name of the respondent	Question	Answer
		and proportionate to ML-TF risk: information from official registers and public authorities; corroboration from reliable and independent sources; certified copies or qualified electronic attestations; cross-checks against the customer's corporate documentation (e.g., constitutional documents, shareholder registers, group structure charts) and, where available, beneficial ownership registers; and evidence of recent updates/changes." It would provide a common baseline and shared understanding of what "authentic" and "accurate" mean, support consistent supervisory expectations, limit gold-plating and unnecessary verification steps, and keep the requirement aligned with a risk-based approach while still enabling robust corroboration where risks warrant it. D. Intragroup sharing of information Recital (21) states that information already available within the obliged entity or within the group may be used in order to avoid duplication. However, the text is not clear on whether this creates an obligation or merely an option to rely on KYC information held by another obliged entity within the same group. It is also unclear what level of reliance is acceptable in practice (full sharing of underlying evidence vs. a simple confirmation/attestation). Indeed, today, KYC documents are generally not shared between intragroup entities, which force obliged entities to

Name of the respondent	Question	Answer
		request the same information again from customers to meet their own CDD obligations, contrary to the objective of reducing duplication. We therefore suggest to clarify in recital (21) (or the relevant operative provisions) that, subject to data protection/confidentiality rules, obliged entities within the same group may rely on CDD information already collected by another group entity and specify the minimum audit trail required (e.g., either access to copies/extracts of the underlying evidence, or a formal internal attestation including source, date, scope of checks performed, and confirmation that information is up to date) and the conditions under which additional information must still be obtained (e.g., gaps, different risk classification, higher-risk triggers). It would enable effective intragroup reliance, reduce repeated customer outreach and provide clear supervisory expectations while maintaining verifiable CDD records. II. Provisions outside the RTS proposal Regulation (EU) 2024/1624, Annex II, point 1(c) (customer risk factors – customers residing/established in “lower-risk” geographical areas). Considering that being located in a “low-risk” country is, in itself, an indicator of potentially lower customer risk is debatable and may lead to an inappropriate downgrade of the risk assessment. A private non-listed company established in a lower-risk

Name of the respondent	Question	Answer
		jurisdiction (e.g. France) may still be used for ML-TF purposes, including in non-inherently risky sectors (e.g. a bakery). A geography should not, on its own, drive a “low risk” classification, but the other mitigating factors should be considered. Such customers should typically be assessed as moderate risk and subject to standard CDD. A clarification at Regulation level could be provided to mention that “lower-risk geography” should be only treated as a mitigating element and should not automatically qualify a private customer as low risk. It would preserve a genuinely risk-based approach, avoid systematic downgrading based solely on geography and reflect that ML-TF risks also exist domestically in lower-risk jurisdictions.
Caisse des dépôts et consignations	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Caisse des dépôts et consignations	Do you have any comments on the Annex in the draft RTS?	No
Caisse des dépôts et consignations	How would you rate the proposals set out in the draft RTS overall?	Neutral

Name of the respondent	Question	Answer
Caixa Geral de Depósitos, SA	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Concordamos que as propostas constantes no projeto de Norma Técnica de Regulamentação (NTR) são aplicáveis à generalidade dos produtos e serviços prestados por instituições de crédito de natureza universal. Não obstante, entende-se que determinadas disposições beneficiariam de maior flexibilidade, de modo a assegurar uma aplicação proporcional à diversidade de produtos, canais e perfis de risco existentes numa instituição de grande dimensão e relevância sistémica. Em particular, a aplicação uniforme de requisitos de diligência a produtos padronizados e de risco reduzido, bem como a relações com entidades sujeitas a regimes AML/CFT equivalentes, poderá gerar encargos operacionais desproporcionados, sem acréscimo relevante na mitigação do risco de BC/FT. Assim, considera-se importante reforçar, no texto das NTR, a possibilidade de ajustamento das medidas de diligência com base em avaliações de risco devidamente documentadas, em linha com o princípio da abordagem baseada no risco consagrado no Regulamento (UE) 2024/1624.
Caixa Geral de Depósitos, SA	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Concordamos que o projeto de NTR reflete, de forma global, os princípios da abordagem baseada no risco, ao reconhecer a necessidade de calibrar as medidas de diligência em função do risco de BC/FT identificado. No entanto, algumas disposições apresentam um grau de obrigatoriedade elevado, podendo, na prática, limitar a margem de discricionariedade das entidades obrigadas na

Name of the respondent	Question	Answer
		calibração dos seus modelos internos de risco e na definição de controlos proporcionais. Neste sugere-se uma clarificar, ao longo do texto da NTR, que as listas de elementos de diligência constituem apenas referenciais, permitindo às entidades justificar abordagens alternativas com base em avaliações de risco documentadas.
Caixa Geral de Depósitos, SA	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Não. O projeto de NTR apresenta diversas alternativas de recolha de informação para efeitos de diligência quanto à clientela.
Caixa Geral de Depósitos, SA	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Tendo em conta o mandato legal da PBC/CFT e os produtos e serviços prestados por instituições de crédito de risco inerente reduzido, sugerimos a inclusão de medidas adicionais de diligência simplificada, nomeadamente: – Redução da frequência de atualização de dados para entidades públicas nacionais e da União Europeia; – Possibilidade de dispensa de recolha de informação já disponível em registos públicos oficiais ou em sistemas internos fiáveis e atualizados. Estas medidas permitiriam uma utilização mais eficiente dos recursos de compliance, reforçando o foco em áreas de maior risco efetivo, sem comprometer os objetivos de prevenção do BC/FT.

Name of the respondent	Question	Answer
Caixa Geral de Depósitos, SA	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Não foram identificadas observações adicionais pertinentes para o projeto que não tenham sido abordadas nas questões anteriores.

If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	In cases where identity of persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624 could be verify using reliable and independent sources of information, we propose to envisage the acquisition of documents as a voluntary fulfilment, not a binding obligation, considering that, due to the very low risk associated with these situations, there is not significant risk mitigation in acquiring documents from clients where the identity is already verified. The adoption of such approach, in line with the proportionality principle, would imply greater efficiency in fulfilling the Customer Due Diligence obligations, while simultaneously contributing to the reduction of potential delays arising from direct interaction with clients, without compromising the overall effectiveness of control measures. Obliged entities should therefore adopt reasonable measures aimed at acquiring relevant information from reliable and independent sources, without the need for direct retrieval of the

Name of the respondent	Question	Answer
		identification document, which, especially in large entities, could entail operational complexities without providing any added value. In consideration of the above, we propose to modify Article 6 (5) of these draft RTS as follow: “5. For the purposes of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation (EU) 2024/1624, obliged entities shall obtain from that person the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7, except in cases where it is possible to identify and verify the identity of that person using reliable and independent sources of information.”
Cassa Depositi e Prestiti S.p.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Considering the specific business of certain Financial Institutions, a limited number of operations are conducted with national or international ministries as well as governmental and supranational entities. Operations with institutional counterparts are generally characterized by a low-risk profile and usually we face significant difficulties in requiring and acquiring identification documents from this kind of client. Therefore, we propose to evaluate the possibility of simplifying the Customer Due Diligence process and its periodic update related to national and international institutional counterparts, envisaging the possibility of using data based on publicly available information, avoiding, where possible, the need to directly request data or documentation to the client. In these cases, specific sectoral Simplified Due Diligence measures would thus be consistent with the risk-based approach and would promote more efficient management of regulatory

Name of the respondent	Question	Answer
		obligations, without compromising the effectiveness of the measures to prevent the ML/FT risk.
Cassa Depositi e Prestiti S.p.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The current Italian legislation (Article 24 of Dlgs 231/2007) states that "Obliged entities always apply enhanced due diligence measures for Clients and their Beneficial Owners who are Politically Exposed Persons, unless the aforementioned Politically Exposed Persons act in their capacity as officials of public administrations". In line with this principle, in order to avoid the adoption of Enhanced Due Diligence measures that are not proportionate to the actual risk identified, it is proposed, in accordance with the definition of PEP and the aforementioned Italian legislation, to foresee the exclusion of the obligation to apply Enhanced Due Diligence measures in cases where the Beneficial Owner is classified as a PEP solely due to their role as an official of a public administration – such as, for example, in the case of Mayors of municipalities – and where no significant risks arise in relation to the operation that would justify the adoption of such measures. Therefore, we propose to extend Simplified Due Diligence measures to situations in which the politically exposed persons act in their capacity as officials of public administrations. In this respect, we propose to modify: - Point (15) of the premises adding the following statement: "except in cases where the politically exposed persons act in their capacity as officials of public administrations", and - Article 19 adding the following paragraph: "4. With respect to occasional transactions or business relationships with politically exposed persons, obliged entities shall apply enhanced due diligence measures, pursuant to Article 42 (1), of the Regulation (EU) 2024/1624, except in cases where the

CCMO MUTUELLE	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	En France, l'assurance non-vie est intégrée aux activités relevant de la réglementation sur la LCB-FT. Un régime allégé permet néanmoins d'appliquer des mesures proportionnées au niveau de risque de ces contrats/activités. Le marché français est inquiet quant aux incidences potentielles du règlement AMLR et de ces textes dérivés, dont le projet de RTS objet de cette consultation, sur le dispositif applicable en France à l'assurance non-vie. Aussi il nous parait opportun de prévoir un article ou un considérant précisant que lorsque les Etats membres font le choix d'inclure d'autres activités que celles identifiées dans le champ d'application de la présente règlementation, alors les Etats membres peuvent prévoir des dispositions dérogatoires pour ces activités. Dans le cas contraire, l'assurance non-vie pourrait se voir appliquer des règles renforcées sans que cela ne soit justifié par le niveau de risque en matière de BC-FT.
CCMO MUTUELLE	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Les propositions figurant dans le projet ne permettent pas l'application effective d'une approche fondée sur les risques. Concernant le risque « client » : le projet semble bien prendre en compte des situations dans lesquelles le risque présenté par le client semble particulièrement faible ; au point de prévoir des exceptions à l'application de certaines obligations de due diligence. Le Règlement 2024/1624 (Article 65) prévoit bien que lorsque le client présente des garanties accrues de transparence (organisme de droit public de l'Etat Membre ; sociétés cotées…) ; des obligations telles que l'identification

Name of the respondent	Question	Answer
		des bénéficiaires effectifs ne semble pas appropriée. Le règlement prévoit donc l'exemption pure et simple de cette obligation par les entités assujetties lorsque le risque client est particulièrement faible. L'article 28 du Règlement 2024/2624 prévoit que le RTS objet de la présente consultation contienne des dispositions permettant d'appliquer des mesures de vigilance simplifié pour des catégories spécifiques de produits ou services. Or, le projet de RTS ne contient aucune disposition couvrant cette situation. Pourtant, il se trouve que certains produits ne sont que très faiblement exposés à de tels risques. C'est le cas par exemple des contrats d'assurance portant sur la vie (assurance décès sans valeur de rachat, assurance natalité/nuptialité) mais sans dimension de capitalisation ; ainsi que les produits présentant une dimension de capitalisation mais ne dépassant pas certains seuils. Un certain nombre de produits étant en vigilance simple aujourd'hui présente un risque faible en matière de BCFT et qu'il serait disproportionné de les passer en vigilance standard. (à titre d'exemple les produits de la branche 20, 21). Les entités assujetties identifient dans le cadre de leur classification des risques, lorsque cela est pertinent, les garanties et contrats présentant par nature un plus faible niveau de risque.
CCMO MUTUELLE	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Pour les nationalités : L'obtention de l'ensemble des nationalités d'un client peut engendrer des difficultés opérationnelles qui ne semblent pas justifiées par le bénéfice apporté par le recueil de ces informations supplémentaires.

Name of the respondent	Question	Answer
CCMO MUTUELLE	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Si le règlement prévoit bien des simplifications (article 33), y compris une possibilité de différer la vérification de l'identité du client ; il n'est prévu aucune exemption en ce qui concerne certaines obligations qui pourtant, peuvent paraitre disproportionnées eu égard au principe d'approche par les risques. Aussi, compte tenu du risque particulièrement faible que présentent certains produits/services (cf. réponse à la question n°2), nous proposons les amendements suivants : ● Concernant l'obligation d'identification et de vérification de l'identité : Proposition Article 20 - Minimum requis pour l'identification d'un client en situation de risque faible Ajout : « 3. Dans le cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33, 5. Du Règlement ; seule l'identification est nécessaire et l'entité assujettie n'a pas à vérifier l'identité du client [et de la personne pour le compte de laquelle il souscrit] ». Notons que cette exemption constitue une reprise de ce qui existe en droit français positif. ● Concernant la détection des personnes politiquement exposées Proposition Article 19 – Identification des Personnes politiquement exposées Ajout : « 4. Dans le cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33, 5. Du Règlement ; l'entité assujettie peut se limiter à l'identification des seules catégories

Name of the respondent	Question	Answer
		PPE présentant un risque plus élevé de BC-FT » Remarque : l'identification des catégories risquées de PPE sera réalisée en lien avec les futures orientations ALBC en la matière qui doivent porter sur « l'évaluation du niveau de risque associé à une catégorie particulière de PPE, aux membres de leur famille et aux personnes connues pour leur être étroitement associées ». ● Concernant l'actualisation de la connaissance client : Limiter l'actualisation à un nombre restreint d'information
CCMO MUTUELLE	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	● Concernant la validation de l'entrée en relation avec des PPE : Afin de respecter une approche proportionnée aux risques en matière de BC-FT, il ne semble pas opportun de mettre en œuvre l'obligation de vigilance complémentaire lorsque le produit présente un risque particulièrement faible de BC-FT. Proposition : Article 19 – Identification des Personnes politiquement exposées ⇨ Ajout : « 5. Les dispositions prévues à l'article 42.1 du Règlement UE 2024/16 24 ne sont pas applicables dans les cas où le produit présente un risque particulièrement faible de BC-FT et en l'absence de l'une des situations décrites à l'article 33.5 du même règlement. » ● Remarque générale : La catégorie relative aux « responsables » de collectivités locales pose une difficulté d'application. En effet, la notion de « responsable » apparait particulièrement floue : doit-on ici entendre qu'il s'agit du responsable unique de chaque collectivité ? Ou bien de l'ensemble des responsables de

Name of the respondent	Question	Answer
		chacune de ces collectivités ? Selon l'une ou l'autre de ces approches, en France, le nombre de personnes concernées pourrait passer d'environ 500 à 31 000. Dans le second cas, il nous semble très difficile de procéder à une détection en pratique, tant nous disposerons que de très peu d'information publique les concernant. Aussi, nous n'aurons en général qu'un prénom/nom à faire correspondre avec nos clients, ce qui rendra particulièrement complexe l'analyse. Cette notion mériterait donc d'être précisée dans le cadre de la future orientation AMLA.
CCMO MUTUELLE	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

CENSE AG	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	CENSE AG ("CENSE" or "we") supports the objective of achieving more harmonised and operationally consistent customer due diligence (CDD) requirements across the Union. CENSE operates as a RegTech and advisory provider specialising in the analysis of crypto-asset activity for onboarding purposes (including source of funds (SoF) and source of wealth (SoW)) as well as investigations. Based on our experience, while the RTS aim to specify how obliged entities should apply CDD in practice, the current proposals do not sufficiently reflect the structural characteristics of crypto-asset activity. In particular, they do not fully capture situations where SoF, SoW and financial behaviour can only be properly understood through a structured and holistic assessment of a customer's broader crypto-asset portfolio, rather than through isolated documents, accounts or wallet addresses. In our view, the draft RTS do not sufficiently enable a complete and accurate assessment of crypto-asset activity, particularly in relation to Articles 18(c), 19, and 25–28. The current drafting appears to assume that customer activity can be assessed through stable identifiers, that reliable and independent information is consistently available, and that SoF and SoW can

Name of the respondent	Question	Answer
		be verified through discrete data points. Based on our experience, these assumptions do not fully hold in crypto-asset environments. Crypto-asset activity is often distributed across multiple wallets, virtual asset service providers and blockchain networks (e.g. Bitcoin, Ethereum, Solana), fragmented between centralised and decentralised environments, and partially observable, with historical data sometimes incomplete. As a result, it is not always possible to form a complete and reliable assessment at the level of a single wallet, account or service provider. A strictly granular approach may therefore result in a fragmented and potentially misleading understanding of the customer relationship, particularly when assessing the origin of funds, the consistency of activity with the customer profile, and overall ML/TF risk. In practice, we observe cases where customers transfer crypto-assets across multiple service providers and unhosted wallets for legitimate purposes (e.g. trading or off-ramping). In such cases, transaction histories are inherently fragmented and no single data point provides a complete view. When assessed holistically, however, activity may be coherent and consistent with a low-risk profile. More broadly, relevant information may exist but is distributed across multiple sources and may require reconstruction through analysis. In some cases, full reconstruction may not be possible due to data limitations.

Name of the respondent	Question	Answer
		In our experience, these constraints can lead to inconsistent application of CDD, reliance on partial indicators, and increased dependence on manual investigation. This may reduce the effectiveness of the risk-based approach by encouraging formalistic compliance rather than substantive risk understanding. In light of the above, it would be helpful for the RTS to clarify that, where customer activity is inherently fragmented across multiple channels or infrastructures, obliged entities may apply a holistic and consolidated assessment to ensure accurate CDD. It would also be beneficial to recognise that, in certain cases, complete information may not be available and that obliged entities may rely on a risk-based assessment using available data, including blockchain analytics, transactional patterns and customer-provided information. For example, the RTS could include language such as: 1. “For the purposes of Articles 18(c), 19 and 25 to 28, where a customer’s financial activity is conducted across multiple accounts, relationships or technological environments, obliged entities may assess source of funds, source of wealth and transaction behaviour on a consolidated and holistic basis.” 2. “Where complete or fully reliable information is not available, obliged entities may rely on a risk-based and holistic assessment using available data, provided that the assessment enables a coherent and sufficiently complete understanding of the customer’s activity.”

Name of the respondent	Question	Answer
		Such clarifications would support a more accurate application of the risk-based approach, provide greater legal certainty, and enhance the effectiveness of AML/CFT controls. They would also improve the quality and usefulness of suspicious activity reporting by enabling a more comprehensive understanding of customer activity and transaction patterns by financial intelligence units.
CENSE AG	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We partially agree. We support the objective of ensuring the effective application of a risk-based approach (RBA) to AML/CFT compliance, as reflected in the inclusion of simplified and enhanced due diligence measures in the draft RTS. However, in our view, the RTS would allow for a more effective application of that approach if they more clearly addressed how the depth and structure of analysis should be applied in practice, in particular where customer activity is inherently fragmented. This concern arises in particular in relation to Article 18(c) and Articles 24–28 of the draft RTS. While the RTS distinguish between different levels of risk, in practice, they may lead to an implicit expectation that customer due diligence should be performed at a highly granular level (e.g. at the level of individual accounts, wallets, or transaction chains), regardless of whether such granularity is necessary to achieve a complete understanding of the customer's activity. This may not fully align with the RBA, as it can result in an approach that focuses on the level of detail of individual

Name of the respondent	Question	Answer
		elements rather than on the overall coherence and risk profile of the customer relationship. In particular, where customer activity is distributed across multiple accounts, relationships, or technological environments, an assessment limited to isolated elements may provide only a partial view and may not allow obliged entities to form an accurate understanding of: the purpose and intended nature of the business relationship; the source of funds and source of wealth; and the consistency of the customer's activity with their risk profile. Such structural characteristics do not, in themselves, indicate elevated ML/TF risk. However, where risk factors are present, a fragmented assessment may reduce the effectiveness of the overall analysis. To support the effective application of the RBA, we suggest that the RTS clarify how obliged entities should approach situations where customer activity is distributed or fragmented. In particular: Focus on completeness rather than granularity The RTS could clarify that the objective of CDD is to achieve a coherent and sufficiently complete understanding of the customer's activity, rather than requiring analysis at the level of each individual element, where this does not add value. Recognition of consolidated assessment, where appropriate Where necessary to understand the customer relationship,

Name of the respondent	Question	Answer
		obliged entities should be able to assess activity on a consolidated basis across multiple accounts, relationships, or environments. Alignment with risk levels already defined in the RTS Such an approach would complement existing SDD and EDD provisions by ensuring that the structure of analysis, not only its intensity, is aligned with the level of risk. Suggested drafting For example, in higher-risk situations requiring enhanced customer due diligence, a holistic assessment may be necessary to achieve a complete and reliable understanding of the customer's activity. Based on our experience, this may arise where activity is distributed across multiple accounts, relationships, or technological environments. In such cases, an assessment limited to individual elements may not provide sufficient insight into the origin of funds, the economic rationale of transactions, or the consistency of activity with the customer profile. A consolidated assessment enables obliged entities to identify relevant linkages and form a coherent view of the overall risk, in line with the risk-based approach. For example, the RTS could include language along the following lines: "For the purposes of Articles 18 and 19, obliged entities shall apply customer due diligence measures with the objective of achieving a coherent and sufficiently complete understanding of the customer's activity, commensurate with the level of risk identified." "For the purposes of Articles 24 to 28, the level of detail and granularity of customer due diligence measures shall be

Name of the respondent	Question	Answer
		proportionate to the level of risk identified and shall not require uniform analysis of individual elements in all cases." "Where higher risk is identified, or where necessary to achieve a sufficiently complete understanding of the customer's activity, obliged entities shall apply enhanced analysis commensurate with the level of risk." We believe that such clarification would strengthen the practical application of the RTS by ensuring that the RBA is applied not only in terms of intensity but also in terms of the structure of analysis. This would support a more accurate, coherent, and effective understanding of customer activity while remaining fully aligned with the existing framework of simplified and enhanced due diligence, and will also assist further investigation into suspicious activity reporting by financial intelligence units.
CENSE AG	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Yes, in certain situations, information required for the purposes of customer due diligence (CDD) may not be available in a conventional or directly verifiable format, and the draft RTS do not always provide a sufficiently clear alternative approach. CENSE AG ("CENSE") operates as a RegTech and advisory provider specialising in the analysis of financial activity for onboarding (including source of funds (SoF) and source of wealth (SoW)) and investigations. Based on our experience, the issue is often not that relevant information is unavailable in substance, but that it is not available in a standardised, document-by-document format. In practice, we observe several recurring scenarios: 1. Distributed activity across multiple relationships and

Name of the respondent	Question	Answer
		channels: A customer's financial activity may be spread across multiple accounts, service providers, platforms, or other infrastructures. In such cases, SoF and SoW cannot be established through a single account statement or isolated record. The relevant information exists, but it is fragmented across different parts of the customer's overall activity. 2. Absence of conventional ownership documentation: In certain environments, there may be no formal document evidencing ownership or control of specific accounts or instruments. Instead, ownership may need to be established through alternative means, such as technical verification, transactional linkages, or other reliable indicators. 3. Incomplete or inaccessible historical data: Certain records may not be retrievable due to platform limitations, account closures, or data retention constraints. As a result, a fully documented transaction history may not be available. 4. Limitations in independent verification: Reliable and independent documentation may not exist for all elements of a customer's activity, particularly where activity spans multiple jurisdictions or technological environments. These situations do not necessarily indicate higher ML/TF risk. However, they may prevent compliance where CDD is interpreted as requiring complete documentation for each individual element. In our experience, these limitations can lead to: 1. inconsistent application of CDD across obliged entities; 2. over-reliance on partial indicators or formal documentation that does not reflect the full activity; 3. increased reliance on manual investigation; and

Name of the respondent	Question	Answer
		4. barriers to onboarding, even where the overall risk is understood and manageable. They may also reduce the effectiveness of downstream measures. For example, when suspicious activity is identified from a limited subset of available information, the resulting report may be less useful than one based on a structured, comprehensive understanding of the customer's activity. To address these situations, we suggest that the RTS explicitly recognise that, where information is not available in a conventional or fully verifiable form, obliged entities may rely on a holistic and risk-based assessment using available data, provided that the overall understanding remains sufficiently complete and reliable. In particular, the RTS could clarify that: 1. Obliged entities are not required to obtain information that is not reasonably accessible or does not exist in documentary form; 2. A combination of sources may be used, including transactional analysis, behavioural patterns, and customer-provided information; and 3. Information may be collected and assessed on a consolidated basis where activity is distributed. For example, the RTS could include: 1. "For the purposes of Articles 18(c) and 24 to 26, where a customer's relevant financial activity is distributed across multiple accounts, relationships, platforms or other channels, obliged entities may collect and assess information on a

Name of the respondent	Question	Answer
		consolidated or portfolio basis to the extent necessary to satisfy customer due diligence requirements, including source of funds, source of wealth, and the purpose and intended nature of the business relationship." 2. "For the purposes of Articles 24 to 28, where certain information is not reasonably available or cannot be obtained in a verifiable documentary form, obliged entities may rely on a risk-based assessment using available information, provided that the assessment enables a sufficiently complete and reliable understanding of the customer's activity." Clarifying these points would improve consistency and support the effective application of the risk-based approach. It would not reduce AML/CFT standards; rather, it would enhance the accuracy, completeness, and operational usefulness of CDD by ensuring that assessments reflect the full scope of customer activity rather than isolated data points.
CENSE AG	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	We support the objective of specifying simplified customer due diligence (CDD) measures in line with Article 28(1) of Regulation (EU) 2024/1624, where lower ML/TF risks have been identified. Based on our experience, the draft RTS could be further strengthened by clarifying how simplified measures may be applied in situations where customer activity is transparent, traceable, and presents a demonstrably low-risk profile, even where such activity is distributed across multiple relationships or technological environments. In the context of customer relationships involving digital asset exposure, simplified customer due diligence measures may be appropriate where the overall activity presents a demonstrably

Name of the respondent	Question	Answer
		low-risk profile. Based on our experience, this may be the case where all of the following conditions are met: 1. The activity is limited in scale and operational complexity; 2. The customer has declared the relevant accounts or relationships used for such activity; 3. Funds are transferred between accounts held in the customer's name with regulated or supervised counterparties; 4. The relevant counterparties are authorised or supervised entities subject to equivalent AML/CFT requirements; and 5. There are no indicators of complexity, heightened risk, including the use of obfuscation techniques, anonymity-enhancing services, sanctions exposure, or links to high-risk jurisdictions. In such cases, the customer's activity is typically transparent, traceable, and conducted within regulated environments, allowing obliged entities to form a sufficiently reliable understanding of the source of funds and the nature of the activity without the need for granular verification of each individual transaction or element. For example, the RTS could include language along the following lines: 1."Obliged entities may apply simplified customer due diligence measures where the customer's activity presents a low ML/TF risk and is conducted through regulated relationships or counterparties subject to equivalent AML/CFT requirements, provided that the activity is transparent, traceable, and free from indicators of higher risk."

Name of the respondent	Question	Answer
		2. “In simplified customer due diligence, obliged entities may rely on consolidated or summary-level information to establish a sufficiently reliable understanding of the customer’s activity, without requiring detailed verification of each individual transaction or relationship, provided that no indicators of higher risk are present.” We believe that explicitly recognising these additional simplified due diligence measures would enhance the practical application of the RTS and support a more effective, proportionate, and risk-based AML/CFT framework.
CENSE AG	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We support the objective of specifying simplified customer due diligence (CDD) measures in line with Article 28(1) of Regulation (EU) 2024/1624, where lower ML/TF risks have been identified. Based on our experience, the draft RTS could be further strengthened by clarifying how simplified measures may be applied in situations where customer activity is transparent, traceable, and presents a demonstrably low-risk profile, even where such activity is distributed across multiple relationships or technological environments. In the context of customer relationships involving digital asset exposure, simplified customer due diligence measures may be appropriate where the overall activity presents a demonstrably low-risk profile. Based on our experience, this may be the case where all of the following conditions are met: 1. The activity is limited in scale and operational complexity; 2. The customer has declared the relevant accounts or relationships used for such activity; 3. Funds are transferred between accounts held in the

Name of the respondent	Question	Answer
		customer's name with regulated or supervised counterparties; 4. The relevant counterparties are authorised or supervised entities subject to equivalent AML/CFT requirements; and 5. There are no indicators of complexity, heightened risk, including the use of obfuscation techniques, anonymity-enhancing services, sanctions exposure, or links to high-risk jurisdictions. In such cases, the customer's activity is typically transparent, traceable, and conducted within regulated environments, allowing obliged entities to form a sufficiently reliable understanding of the source of funds and the nature of the activity without the need for granular verification of each individual transaction or element. For example, the RTS could include language along the following lines: 1. "For the purposes of Article 23, obliged entities may apply simplified customer due diligence measures where the customer's activity presents a low ML/TF risk and is conducted through regulated relationships or counterparties subject to equivalent AML/CFT requirements, provided that the activity is transparent, traceable, and free from indicators of higher risk." 2. "For the purposes of Articles 23 and 24, in the application of simplified customer due diligence, obliged entities may rely on consolidated or summary-level information to establish a sufficiently reliable understanding of the customer's activity, without requiring detailed verification of each individual transaction or relationship, provided that no indicators of higher risk are present."

Name of the respondent	Question	Answer
		We believe that explicitly recognising these additional simplified due diligence measures would enhance the practical application of the RTS and support a more effective, proportionate, and risk-based AML/CFT framework.
CENSE AG	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
CENSE AG	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
CENSE AG	Do you have any comments on the Annex in the draft RTS?	No
CENSE AG	How would you rate the proposals set out in the draft RTS overall?	Good
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	CEPI and IVD welcome the harmonised foundation laid by the draft RTS. While the core architecture is sound, several provisions do not transfer well to the operational reality of real estate brokerage and other DNFBPs. Targeted refinements are needed. 1) Article 7 (non-face-to-face verification): For micro-entities (2–10 staff), eIDAS-compliant electronic identification means at "substantial" or "high" assurance levels are de facto inaccessible. Vendors typically require minimum monthly volumes that micro-entities cannot achieve (a typical broker conducts 10–30 transactions per year). The fallback solution under paragraph 2 is similarly demanding (anti-spoofing, integrity, ex-post storage). Without proportionality calibration, Article 7 forces micro-entities back to face-to-face verification — impractical for clients located cross-border or for cross-Member-State engagements. Proposal: introduce a proportionality clause permitting the use of EU-supervised

Name of the respondent	Question	Answer
		video identification providers operating eIDAS-equivalent procedures on a per-use service basis. 2) Article 5 (Nationalities): The duty to obtain "all nationalities" is operationally unworkable for clients holding multiple (occasionally up to 5) nationalities. There is no methodical way for a broker to confirm the absence of further nationalities. Recital (3) (verifying one nationality is sufficient) is inconsistent with the operative wording. Proposal: align Article 5 with Recital (3) by requiring identification and verification of one declared nationality, supplemented by a good-faith declaration covering further nationalities held; for high-risk profiles, up to two further nationalities should be obtained. 3) Article 18 (Purpose & intended nature): Several sub-items reflect financial-sector concepts (e.g., "amount of funds to be deposited") that have no equivalent in real estate brokerage. The information needed to understand purpose and economic rationale is typically already embedded in the brokerage mandate (object, price range, intended use, financing setup). Proposal: a recital should clarify that for sectors operating through bounded mandates (real estate brokerage among them), the brokerage agreement constitutes sufficient evidence of purpose and economic rationale by default; the listed sub-items apply only where the mandate document does not provide that information. 4) Article 22 (Pooled accounts SDD): The provision is restricted to credit institutions. DNFBP-side equivalents (notary trust accounts, lawyers' client accounts) are structurally similar and should benefit from a parallel sectoral SDD measure. 5) Article 32 / Annex (eIDAS attributes): The attribute list is structured around financial-sector use cases. Several attributes (LEI, VAT registration number) are routinely irrelevant for retail

Name of the respondent	Question	Answer
		real estate transactions. The Annex should be tiered — one attribute set for financial-sector standard CDD, and a leaner set for non-financial standard CDD applicable to retail-customer interactions. 6) Article 23(1) AMLR creates a sector-specific timing rule for real estate agents (verification "after offer accepted by seller/lessor, before funds or property transferred"). The draft RTS should expressly reflect this trigger and avoid imposing earlier verification expectations through Articles 6–7. 7) Sanctions screening (Articles 29–30): The default position that automated screening tools "or" combination of automated/manual checks is required is not realistic for a 3-staff agency processing 10–30 transactions per year. An explicit recognition that micro-entities may rely on documented manual screening against the consolidated EU sanctions list is needed. In summary, the draft RTS can be applied across our sector only with the targeted refinements set out above. Without proportionality calibration, the practical outcome will be either de facto non-compliance among micro-entities or a regulatory burden that is disproportionate to the empirical ML/TF risk.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	The draft RTS embeds the risk-based approach (RBA) as a guiding principle (Article 1) and through repeated "at least one of the following" structures (e.g., Article 18). In practice, however, this construction generates legal uncertainty without delivering operational risk-sensitivity, especially for non-financial obliged entities. Targeted improvements are required. 1) Methodology gap. The "at least one" formula does not specify when one item is sufficient and when multiple are required. A small real estate brokerage cannot derive a defensible decision from this wording alone. Proposal: AMLA

Name of the respondent	Question	Answer
		should publish, alongside the RTS, sector-specific application notes with decision matrices linking risk tiers (low / standard / high) to the minimum information set required at each tier. Without such notes, supervisors and obliged entities will diverge in their interpretations and the RTS' harmonisation purpose will be undermined. 2) Article 18(e) — business activity / occupation. The eight sub-items range from "occupation of the customer" (sub-item i) to "key stakeholders of the customer" (sub-item viii). For natural persons (private real estate buyers/sellers), only items (i)–(iii) are operationally meaningful; for legal entities, items (vi)–(viii) become relevant. Furthermore, "occupation" is ambiguous: does it require the concrete profession (e.g., "physician at hospital X"), the employment status (employed / self-employed / pensioner), or the broad sector of activity? Proposal: split Article 18(e) into two sub-paragraphs — (e-1) for natural persons (concrete profession, employment status, sector), (e-2) for legal entities — and clarify in a recital that the "occupation" item is satisfied by recording the occupation as declared by the customer in a structured format (sector and employment status). 3) Verification of beneficial owners in low-risk situations (Article 21). The provision requires consultation of two distinct sources of information for verification. Many real estate agents do not have subscription-based access to commercial KYC databases. The combination of central register consultation with self-declaration is the realistic pathway for micro-entities. Proposal: explicitly recognise the combination of central beneficial ownership register consultation plus a written customer declaration as sufficient for low-risk verification. 4) Sectoral risk lens missing. AMLA should issue a dedicated

Name of the respondent	Question	Answer
		implementation note for real estate brokerage identifying the dominant ML/TF risk vectors: (i) third-country UBO; (ii) third-party payments and unusual financing setups; (iii) off-market transactions; (iv) significant under/over-valuation; (v) opaque legal structures (intermediate entities, foundations, trusts); (vi) investment migration nexus; (vii) sanctions evasion. The RBA for brokerage should be calibrated against these factors rather than against generic financial-sector indicators. 5) Update cycles. The 1-year and 5-year update cycles (anchored in Article 26 AMLR and reflected in Article 33 of the draft RTS) are designed for ongoing financial relationships. For real estate brokerage, mandates conclude within months. Proposal: clarify in a recital that for obliged entities operating predominantly through occasional transactions, the update obligation crystallises only when the historical client returns for a new mandate. 6) Proportionality for micro-entities. The RTS should expressly state that obliged entities qualifying as micro-enterprises within the meaning of Commission Recommendation 2003/361/EC may apply a simplified three-tier risk classification methodology accompanied by AMLA sector templates. Without this, the financial-sector default will dominate interpretation. 7) Transaction-pattern recognition. For sectors with bounded mandate structures (real estate brokerage, legal mandates, accounting engagements), the RTS could clarify that the mandate agreement itself constitutes the principal documented expression of purpose, intended nature, and source-of-funds context. These adjustments would transform the RBA from a stated principle into an operational reality for the non-financial sector

Name of the respondent	Question	Answer
		— without diluting effectiveness against the empirically known ML/TF risk patterns.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	For real estate brokerage, several pieces of information specified in the draft RTS are routinely unavailable, and the current draft does not always provide a workable alternative pathway. Concrete examples and proposals follow. 1) Source of funds for natural-person buyers (Article 18(c)). Real estate brokers are not the actor through which the funds flow — notaries and credit institutions handle the actual financial transaction. A broker may know the agreed purchase price but typically has no insight into how the buyer assembles the funds (savings, mortgage, family loan, asset sale). Asking a private buyer for tax declarations or pay slips at the brokerage stage is widely perceived as invasive and inconsistent with the relationship logic. Proposal: in a recital and in Article 18, recognise that for real estate brokers, source-of-funds information may be satisfied through (a) the buyer's structured self-declaration of the broad source-of-funds category combined with (b) a written confirmation from the financing bank or notary that the financial transaction is being processed under their CDD obligations. 2) Source of wealth in EDD (Article 27). The list of evidence (tax returns, payslips, employment documentation) is calibrated for ongoing financial relationships rather than one-off real estate transactions. Proposal: tie EDD source-of-wealth evidence to specific risk triggers (third-country residence, complex legal structures, transactions exceeding threshold X, PEP / sanctions nexus), and require detailed evidence only in those scenarios. 3) Verification of beneficial owners in foreign / third-country structures (Articles 11, 12). Real estate agents frequently encounter buyers structured through foreign holdings.

Name of the respondent	Question	Answer
		Verification of UBO information through public registers or commercial third-party data providers is typically possible only for EU-incorporated entities. For third-country structures, the obligations are practically not fulfillable for a 2- to 10-person brokerage. Proposal: in such cases, the broker should be entitled to require, before further engagement, a notarised UBO declaration from the customer or a structured CDD letter from a credit institution that has already onboarded the customer. 4) Power of representation (Article 16). The "existence and extent" of the power can usually be derived from a power of attorney or commercial register extract. For private clients buying for parents/relatives, the legal documentation is often informal. Proposal: clarify that for retail occasional transactions (e.g., a parent buying a flat for a child or vice versa), a written declaration accompanied by the identity document of the actual beneficiary is sufficient — mirroring the treatment for minors anticipated in Recital (7). 5) Sanctions screening tooling (Articles 29, 30). Article 30 requires "automated screening tools or solutions, or a combination of automated screening tools and manual checks". For a 3-staff agency processing 20–30 transactions per year, dedicated automated screening solutions are not financially proportionate. Proposal: explicitly recognise that micro-entities may rely on documented manual screening against the consolidated EU sanctions list for occasional transactions, provided the screening is consistently applied, time-stamped, and retained. 6) Information already verified by other obliged entities. A typical real estate transaction sequentially involves a real estate agent, a notary, and a bank (mortgage). All three

Name of the respondent	Question	Answer
		perform CDD on the same parties. The broker's CDD is the first in line and at the lowest information density. Proposal: build a structured intra-EU reliance pathway. Where the underlying notary or credit institution has performed CDD on the same parties for the same underlying transaction, the broker should be entitled to receive a written CDD confirmation and rely on it under Articles 47–49 AMLR. This is consistent with the AMLR's reliance regime and avoids duplicative customer experience. 7) Reproduction of identity documents (Article 7(4)). For DNFBPs receiving copies of legal-entity documents (commercial register extracts, articles of association) in cross-border contexts, the requirement to "ascertain that the reproduction is reliable" is operationally vague. Proposal: clarify that obtaining documents from a recognised commercial register portal or via a regulated intermediary (notary, EU-supervised credit institution) is presumed to satisfy the reliability test. 8) "Places of birth" requiring more than country (Article 4). For some third-country jurisdictions, only country-level information is reliably available. The current text accepts this but should be explicit about the interaction with Annex attributes. The proposals above preserve the integrity of CDD while avoiding asking obliged entities to deliver information they structurally cannot obtain.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	CEPI/IVD see significant scope to add SDD measures for real estate brokerage scenarios where the empirical ML/TF risk is demonstrably low. Each proposal preserves the risk-based reassessment requirement under Article 33 AMLR. 1) Standard residential transactions below a defined value threshold with EU-domiciled natural-person customers and EU-bank financing. Where the transaction concerns residential property below e.g. EUR 400,000, the buyer is an EU-domiciled

Name of the respondent	Question	Answer
		natural person, and the financing is arranged through an EU-regulated credit institution, the broker should be permitted to apply a streamlined identification procedure aligned with Article 20, without requirement to obtain source-of-funds evidence beyond the customer's structured declaration. This typology corresponds to the dominant transaction pattern in the EU residential market. 2) Letting (rental) mandates with EU-domiciled natural-person tenants. For brokers facilitating residential lettings where the role is limited to introducing landlord and tenant, an SDD procedure restricted to identification of the parties and the rental object should be permitted. Brokers facilitating residential lettings have no role in the rental cash flow, which is processed bank-to-bank. 3) Repeat customers from previous low-risk engagements. Where a broker has previously performed CDD on a natural-person customer, the customer initiates a new mandate within 5 years, and the risk profile has not changed, the broker should be permitted to rely on the previous CDD documentation, supplemented by a brief refresh confirmation. Real estate transactions are episodic and rebuilding the full CDD file for each engagement is operationally disproportionate to the risk. 4) Customers who have undergone CDD by another EU obliged entity for the same underlying transaction. Where the underlying transaction is also being processed by a notary, credit institution, or financial institution that has performed CDD, the broker should be permitted to receive a structured CDD confirmation and rely on it. This implements the AMLR's reliance regime (Articles 47–49) into a workable SDD scenario for DNFBPs. 5) Listed legal entities (regulated market in EU/EEA or

Name of the respondent	Question	Answer
		equivalent third country). Permit SDD information collection limited to entity name, registration number, and verification through regulated-market disclosures. Aligns with established practice and Recital (16/17). 6) Estate transactions involving inheritance proceedings. Where the customer is an heir established through a court certificate of inheritance, a streamlined identification procedure should be allowed. The underlying source of property has been established by judicial process. 7) Pooled / trust account scenarios for DNFBPs (mirroring Article 22). Permit a sectoral SDD measure for the operation of regulated trust accounts (notarial trust accounts, lawyers' client accounts) where the operator is itself an obliged entity subject to AML/CFT obligations applying robust CDD on the underlying client base. 8) EU-domiciled customers represented by EU-regulated mortgage intermediaries. Where the financing is arranged by an EU credit institution or financial intermediary that has performed CDD on the customer, the broker should be permitted to receive a CDD confirmation and apply SDD. 9) Public-sector counterparties. SDD should expressly cover transactions where the customer is a public authority, a state-owned enterprise of an EU/EEA Member State, or a body governed by public law. 10) Transactions with EU credit/financial institutions as customers. Where the customer is itself an EU-supervised credit/financial institution acting in its own name, SDD should apply. 11) Structured pre-onboarding. Where a customer's identity has been verified by another obliged entity within the same group or via a centralised KYC utility recognised by AMLA, SDD

Name of the respondent	Question	Answer
		should permit use of the existing record. In every case, SDD is not a permanent exemption but is subject to the obliged entity's risk-based reassessment. The intended effect is to allow brokers to focus the CDD effort on the genuinely higher-risk transactions (third-country UBO, complex structures, off-market patterns, sanctions/PEP nexus) — which is also where the empirical ML/TF risk concentrates.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	1) Operationalising proportionality. Article 1 of the draft RTS establishes proportionality as a guiding principle. The substantive provisions, however, do not embed proportionality features for micro-entities. Proposal: insert an explicit proportionality clause: "Obliged entities qualifying as micro-enterprises within the meaning of Commission Recommendation 2003/361/EC may apply this Regulation by reference to AMLA's sector-specific application notes, provided that the outcomes specified in this Regulation are achieved." Without this, the financial-sector maximalist interpretation will dominate. 2) Sector-specific application notes. For the largest DNFBP categories (real estate brokers, mortgage credit intermediaries, notaries, lawyers, accountants, football agents), AMLA should publish concise application notes translating horizontal CDD obligations into sector-specific transaction patterns. For real estate, this should include: (a) information collected through the brokerage agreement; (b) sector-typical risk indicators (third-country UBO, off-market transactions, valuation gaps, investment migration); (c) decision matrices for SDD/standard/EDD calibration; (d) practical templates compatible with EU-wide harmonisation. 3) Templates and tooling layer. A 2- to 10-person brokerage cannot replicate the compliance infrastructure of a credit

Name of the respondent	Question	Answer
		institution. AMLA should provide a baseline template set: CDD form for natural persons / legal entities; occasional transaction documentation; risk classification template; EDD trigger checklist; suspicious transaction red-flag catalogue. Such templates would not be mandatory but would set a "presumption of compliance" baseline reducing interpretive divergence. 4) eIDAS access for DNFBP micro-entities. As long as eIDAS-compliant electronic identification means at "substantial" / "high" assurance levels remain de facto inaccessible to micro-entities (no commercial offering at viable price points / minimum volumes), Article 7(1) will operate as a formal compliance hurdle without delivering its intended effect. AMLA should engage with the EU Digital Identity Wallet rollout and the Commission to ensure that DNFBP micro-entities have access pathways through pooled-procurement or recognised intermediary models. 5) FIU feedback loops for DNFBPs. The empirical situation in real estate (260 STRs from 35,000+ German real estate agents in 2023, totalling under 0.1 percent of the total STR volume) reflects in part a feedback gap. Reporting quality and sector learning effects depend on FIUs returning typology insights to the sector. AMLA should use its FIU coordination mandate (Article 10 of Regulation (EU) 2024/1620) to drive sector-specific feedback for DNFBPs. 6) The triad ML / TF / Targeted Financial Sanctions. The draft RTS partially addresses sanctions screening (Articles 29–30). The operational interaction between ML/TF CDD and TFS screening for DNFBPs is not yet sufficiently clarified. AMLA should develop an integrated implementation note clarifying when sanctions screening alone, ML/TF CDD alone, or both are

Name of the respondent	Question	Answer
		required, and how findings interact (e.g., when does a TFS hit also trigger an STR?). 7) Existing customer files in episodic sectors (Article 33 entry into force; AMLR Article 26). Real estate brokers typically have closed customer files within months of mandate conclusion. The 1- and 5-year update cycles do not match the sector's logic. The RTS should clarify, in a recital, that a closed brokerage mandate does not create an "existing customer file" for transitional purposes; the obligation crystallises only when the historical client returns for a new mandate or where a multi-year mandate (e.g., letting administration, property management) remains active on the application date. 8) Definition of "existing customer". For sectors operating predominantly through occasional transactions, AMLA-level interpretive guidance is needed to delineate when a relationship qualifies as an "existing customer" subject to ongoing CDD versus a closed historical file. This affects review cycles and supervisory expectations. 9) Sector-specific risk-factor catalogue. AMLA should publish, alongside the RTS, a non-exhaustive catalogue of real-estate-specific risk factors derived from FATF typologies, EU SNRA, and national risk assessments. This would replace the current implicit reliance on the EBA-issued ML/TF risk-factor guidelines that were originally calibrated for the financial sector. 10) Implementation timeline. The application date of the RTS should provide an adequate transition window for non-financial sector implementation (minimum 12 months from publication). The non-financial sector starts from a lower baseline than the financial sector and requires more time to embed the new require.

Name of the respondent	Question	Answer
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	5
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Issue. Article 5 obliges entities to obtain information on "all nationalities" of the customer, the person purporting to act, and the person on whose behalf or for the benefit of whom the activity is conducted. A meaningful minority of natural persons hold multiple (occasionally up to 5) nationalities. There is no methodical way for an obliged entity — particularly a 2- to 10-person brokerage — to confirm the absence of further nationalities once one or more have been declared. The duty of inquiry is conceptually open-ended. Inconsistency with Recital (3). Recital (3) states: "Where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient." The recital therefore acknowledges good-faith declaration as the operational pathway, but the operative Article 5 still mandates obtaining information on "all" nationalities. The two provisions are not aligned.

Name of the respondent	Question	Answer
		Proposed amendment. Replace the current Article 5 with the following wording: "For the purposes of Article 22(1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall obtain information on at least one nationality of the customer, of any natural person purporting to act on behalf of the customer, and of the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted, supplemented by a written declaration by that person covering all further nationalities held in good faith, where applicable, the statelessness or refugee or subsidiary protection status. Where the ML/TF risk profile is high, obliged entities shall obtain information on up to two further nationalities." Rationale. This amendment (a) aligns the operative provision with Recital (3); (b) provides a clear, auditable threshold; (c) preserves risk-sensitivity by triggering broader collection in higher-risk situations; (d) avoids unworkable open-ended inquiry duties for SMEs.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	7
CEPI — European Real Estate Professional Association & IVD —	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Issue. Paragraph 1 mandates eIDAS-compliant electronic identification means at "substantial" or "high" assurance levels. Current commercial offerings for these means are designed for high-volume use cases (banks, insurance, telecoms). Vendors typically require minimum monthly volumes that micro-entities

Name of the respondent	Question	Answer
Immobilienverband Deutschland		cannot meet — a typical broker conducts 10–30 transactions per year and obtains no commercial contract on viable terms. Paragraph 2 (the "fallback" remote solution) imposes a parallel set of technical requirements (anti-impersonation, integrity, ex-post storage, time-stamping) that, although technically sound, are typically operable only through a third-party provider — itself with similar access barriers. In practice, this leaves micro-entities with an unworkable gap: eIDAS at scale is not commercially available to them, and the fallback solution requires investments that do not match transaction volume. The likely outcome is regression to face-to-face verification or the use of non-compliant solutions. Proposed amendments. Insert a new paragraph 1a: "Where the obliged entity qualifies as a micro-enterprise within the meaning of Commission Recommendation 2003/361/EC and the use of electronic identification means under paragraph 1 is not commercially available on a per-use service basis, the obliged entity may comply with paragraph 1 through a video identification service operated by an EU-supervised provider applying procedures that are equivalent in outcome to eIDAS assurance level 'substantial', evidenced by an attestation issued by the provider." Add an interpretive recital: "For obliged entities that are micro-enterprises and where a customer has already been identified and verified by an EU-supervised credit or financial institution acting in the same underlying transaction (e.g., the financing bank or the notary in a real estate transaction), the obliged entity may rely on a documented confirmation of that verification, in line with Articles 47 to 49 of Regulation (EU) 2024/1624."

Name of the respondent	Question	Answer
		Refine paragraph 4 (data protection): "Obliged entities using remote solutions shall be able to demonstrate to their competent authority that the remote verification solutions they use comply with the requirements of this Article and with applicable data protection legislation, and they shall justify why the customer could not be verified through the means referred to under Article 22(6) of Regulation (EU) 2024/1624." Rationale. The proposals (a) preserve the high security objective of Article 7; (b) deliver an outcome-based pathway for micro-entities; (c) build on the AMLR's existing reliance regime; (d) avoid de facto exclusion of large parts of the DNFBP sector from non-face-to-face verification.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Issue. The structure "obliged entities shall obtain, where necessary, at least one of the following information" repeated across (a)–(e) creates substantial ambiguity. There is no decision rule for when one piece of information is sufficient and when additional items are required. The reflex answer ("the risk-based approach decides") is correct in principle but unworkable for micro-entities without compliance specialists. Sector-specific applicability concerns: (a) Purpose / economic rationale: Information is generally embedded in the brokerage mandate (object, price range, intended use, financing structure). Sub-items (i)–(iv) are partly

Name of the respondent	Question	Answer
		redundant for real estate brokerage. (b) Estimated amount of envisaged activities: Sub-items (i)–(iv) are structured around financial transactions (deposits, transaction frequency). For brokerage, the meaningful equivalent is the brokerage commission and the underlying property transaction value, both already in the mandate. (e) Business activity / occupation: The eight sub-items mix natural-person concepts (occupation, employment status) with legal-entity concepts (key stakeholders, geographical presence). 'Occupation' itself is ambiguous — the concrete profession (e.g., "physician at hospital X") versus employment status (employed / self-employed / pensioner) versus broad sector of activity is undefined. Proposed amendments. (1) Insert a recital: "For obliged entities operating through bounded transaction-specific mandates (including real estate agents and other DNFBPs whose customer engagement is limited to a specific object or matter), the information required under Article 18(a) is satisfied by the underlying mandate document. Sub-items (i) to (iv) of point (a) apply only where the mandate document does not contain sufficient information on purpose and economic rationale." (2) Restructure point (e) into two sub-paragraphs: (e-1) for natural persons: collect at least the occupation including employment status (employed / self-employed / pensioner / other) and the broad sector of activity; (e-2) for legal entities: collect at least the sector / industry, the geographical presence, and information on the main sources of revenue. (3) Replace "at least one of the following information" with "at least the following information, applied risk-sensitively in accordance with the obliged entity's risk classification

Name of the respondent	Question	Answer
		methodology, and supplemented by AMLA's sector-specific application notes". Rationale. These changes preserve the RBA while delivering operational clarity, align with the bounded-mandate logic of DNFBP services, and remove ambiguity on "occupation".
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	21
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Issue. Paragraph 2 requires that, for verification of beneficial owner / SMO identity in low-risk situations, the obliged entity consults "one of the sources of information listed in paragraph 1, points (b) or (c), that was not used for identification purposes". Paragraph 1 lists: (a) the central register; (b) information provided by the customer (including held information); (c) any publicly available reliable independent open source. For DNFBPs without subscription-based access to commercial KYC databases, paragraph 1(c) "any publicly available information contained in a reliable independent open source" can be challenging to operationalise. Free-of-charge open sources are uneven in quality across Member States. Real estate brokerage micro-entities frequently lack the trained staff to assess source reliability under Article 8. Proposed amendment. Insert a new paragraph 3 in Article 21: "For obliged entities that are micro-enterprises within the meaning of Commission

Name of the respondent	Question	Answer
		Recommendation 2003/361/EC, the combination of (a) consultation of the central register or business / company register and (b) a written declaration by the customer regarding the beneficial owner identity shall satisfy the verification requirement in low-risk situations, provided that the obliged entity records the consultation result and any inconsistencies between the declaration and register data." Rationale. The proposal recognises the realistic source set available to DNFBP micro-entities, preserves the central-register-as-primary architecture of the AMLR, and provides a defensible pathway that does not require commercial KYC subscriptions.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	22
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Issue. Article 22 is limited to "credit institutions" opening pooled accounts. Real estate brokers, notaries, lawyers, and accountants frequently encounter functionally similar arrangements: a notary trust account, a lawyer's client account, or an escrow arrangement holding funds related to a real estate transaction. The operator of such an arrangement is itself an obliged entity subject to AML/CFT obligations and applies CDD on the underlying clients. The exclusion of these scenarios from the SDD pathway creates duplicative CDD with no material risk reduction. Proposed amendment.

Name of the respondent	Question	Answer
		Replace the chapeau of Article 22 with: "A credit institution that opens an account, or another obliged entity that operates a regulated trust or escrow account (including notarial trust accounts, lawyers' client accounts, accountants' escrow accounts, or equivalent arrangements under national law) in which the account holder administers the funds of its clients, fulfils the requirements stipulated in Article 20(1), point (h), of Regulation (EU) 2024/1624, if all of the following conditions are met: …" Adjust point (e) to read: "the credit institution or other obliged entity is satisfied that the account holder applies robust and risk-sensitive customer due diligence measures on its clients and the clients' beneficial owners." Rationale. The amendment extends the SDD pathway to economically and functionally analogous DNFBP arrangements, preserves the safeguard architecture (point a–e), and avoids regulatory arbitrage between sectors with structurally similar exposures.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	33
CEPI — European Real Estate Professional Association & IVD —	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Issue. Article 33 establishes a 5-year cycle for bringing existing customer documents into line with the new requirements, taking into account the customer risk profile. This is well calibrated for ongoing financial relationships. For real estate brokerage operating predominantly through bounded

Name of the respondent	Question	Answer
Immobilienverband Deutschland		mandates (typically completed within 12 months), the notion of "existing customer files" is largely inapplicable. Without sector-specific clarification, real estate brokers will face two risks: (1) supervisory expectation to apply the 5-year update logic to historical mandates that have been closed for years, with no economic relationship remaining; (2) inconsistent supervisory interpretation across Member States. Proposed amendments. Insert a new recital: "For obliged entities operating predominantly through bounded transaction-specific mandates (including real estate agents and similar DNFBPs), the transitional rule under Article 33 of this Regulation applies only to customer files where a business relationship continues to exist on the application date of this Regulation, including multi-year letting administration mandates and property management mandates. Closed historical mandates do not create ongoing CDD obligations; CDD obligations re-crystallise where the historical client returns for a new mandate." Insert in Article 33, third paragraph: "For obliged entities operating predominantly through occasional transactions, the documents, data and information relating to closed mandates that have terminated more than 12 months before the application date of this Regulation shall not be subject to the update obligation in this paragraph. Where a historical client of such obliged entity initiates a new mandate, the obliged entity shall apply this Regulation as of that date in line with the risk-based approach." Rationale. The amendment delivers (a) sector-specific applicability; (b) legal certainty for SMEs; (c) consistency across Member States; (d) avoidance of disproportionate retroactive update obligations.

Name of the respondent	Question	Answer
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please specify which recital you refer to, and share your comments below.	Recital (3) Issue. The recital states that "where a person holds multiple nationalities and declares them in good faith, verifying one nationality will be sufficient". The recital therefore acknowledges good-faith declaration as the operational pathway. However, the operative provision (Article 5) still requires obtaining information on "all" nationalities, generating an inconsistency between the recital and the binding provision. Proposal. Align the operative wording of Article 5 with this recital (see article-specific comment on Article 5). The recital itself is welcomed and should be retained. In addition, the recital should clarify that for obliged entities classifying the customer relationship as low risk, a customer's good-faith declaration of nationalities suffices for both identification and verification, subject to identity-document verification of one nationality. Recital (7) Issue. The recital introduces appropriate flexibility for asylum seekers, refugees, persons without residence permits whose repatriation is impossible, the homeless, vulnerable persons, and minors. This is welcomed and aligned with the AMLR's broader objective of avoiding unwarranted de-risking and

Name of the respondent	Question	Answer
		financial exclusion. Proposal. Extend the same flexibility expressly to elderly customers without traditional ID documentation (a recurring real-estate scenario where elderly sellers with expired or never-issued passports require a flexible identity-verification pathway). The recital should clarify that obtaining a national ID, a residence permit, a driving licence, or another state-issued document containing facial image and date of birth is acceptable in such cases, supplemented by a written declaration by a relative or legal representative where applicable. Recital (8) Issue. The sentence "consultation of central registers for information on beneficial owners is necessary but not sufficient to fulfil the verification requirements" creates ambiguity for DNFBPs that have limited access to alternative sources. Without sector-specific application notes, the recital risks being interpreted by supervisors as a categorical requirement to combine central-register consultation with paid commercial KYC databases — a financial-sector default that is operationally disproportionate for DNFBP micro-entities. Proposal. Insert a clarifying sentence at the end of the recital: "AMLA will publish sector-specific application notes for designated non-financial businesses and professions, identifying the proportionate combinations of sources that satisfy the verification requirement, taking into account the size, business model, and risk profile of the obliged entities concerned." Recital (10)

Name of the respondent	Question	Answer
		Issue. The recital states that "finding it difficult to identify the beneficial owner, for example in cases of complex corporate structures, does not amount to 'doubts' and therefore will not provide a sufficient basis for the obliged entity to instead identify the SMOs". The threshold of "exhausting all possible means of identification" is unrealistically high for DNFBPs facing genuinely opaque foreign structures. Proposal. Add a clarifying sentence: "For obliged entities, in particular DNFBP micro-entities without specialised cross-border investigation capability, 'all possible means of identification' is to be interpreted by reference to the means commercially and operationally available to the obliged entity, taking into account its size, complexity, and the nature of its business. Where the obliged entity has consulted the central beneficial ownership register, requested information directly from the customer, and consulted publicly available sources without resolving the beneficial ownership, this shall normally be considered sufficient to invoke the SMO pathway." Recital (16) / (17) Issue. Recital (16/17) clarifies that minimum SDD requirements should include the type of information usually contained in a passport or ID document. This is welcomed for natural persons. For legal entities, however, the equivalent baseline is not articulated. Proposal. Add a sentence: "For legal entities in low-risk situations, the minimum information requirement is satisfied by the registered name, registration number, and registered office, supplemented for listed entities by reference to the regulated market disclosure record."

Name of the respondent	Question	Answer
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Do you have any comments on the Annex in the draft RTS?	Yes
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Please share your comments below.	This section provides feedback on the Annex (List of attributes referred to in Section 9), for the AMLA online consultation field 'Do you have any comments on the Annex in the draft RTS?'. Issue. The Annex (List of attributes) is structured around eIDAS / Digital Identity Wallet attributes that are primarily relevant for financial-sector use cases. For DNFBPs and especially real estate brokerage: (a) Several attributes (notably LEI and VAT registration number) are typically not relevant for retail real estate transactions or are unavailable for many private-customer scenarios. (b) The "personal_administrative_number" attribute is jurisdiction-dependent and inconsistently available across Member States, creating uncertainty as to when it applies and when it does not. (c) For low-risk natural-person verification (Article 20 / Section 5 of the RTS), the passport-equivalent attribute set is sufficient. Requiring full attribute parity with standard / enhanced CDD adds complexity without commensurate risk benefit. (d) The footnote reference to Commission Implementing Regulation (EU) 2024/2977 anchors the attribute list to the EU Digital Identity Wallet specification, which is itself in early implementation. There is a risk of operational mismatch between the RTS attribute requirements and the actual rollout

Name of the respondent	Question	Answer
		of EUDI Wallets across Member States during the early years of AMLR application. Proposed amendments. (1) Restructure the Annex into two tiers: Tier 1 — Standard / enhanced CDD attribute set (current Annex content), applicable to financial-sector standard CDD and to DNFBP-side standard CDD where commercially available. Tier 2 — Streamlined attribute set for non-financial-sector standard CDD and for low-risk SDD across all sectors, limited to: - name (family_name, given_name) - place and date of birth (birth_date, birth_place) - nationality - residence (resident_country, resident_city, resident_postal_code, resident_street) - identity-document-derived attributes only (no LEI, no VAT, no personal_administrative_number unless relevant in the customer's Member State of nationality) (2) Add a clarifying footnote in the Annex chapeau: "Where an electronic identification means or qualified trust service does not possess all attributes listed in this Annex, the obliged entity may rely on Article 32(3) of this Regulation to obtain and verify the missing attributes through other means in line with Article 22(6) of Regulation (EU) 2024/1624." (3) Add a transitional clause in the Annex: "During the first 36 months following the application date of this Regulation, obliged entities operating in non-financial sectors may verify the customer's identity through electronic identification means where the means provides at least the attributes covering name, date of birth, nationality, and residence, even where additional Annex attributes are not yet available within the EU Digital Identity Wallet rollout." Rationale. The proposals (a) preserve the integrity of the eIDAS-aligned attribute architecture; (b) provide proportionate

Name of the respondent	Question	Answer
		calibration for non-financial sector standard CDD and for SDD scenarios; (c) avoid an implementation cliff during EUDI Wallet rollout; (d) align attribute expectations with the actual transaction logic of real estate brokerage and similar DNFBP services.
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	How would you rate the proposals set out in the draft RTS overall?	Neutral
CEPI — European Real Estate Professional Association & IVD — Immobilienverband Deutschland	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or	Disruptive impact

Name of the respondent	Question	Answer
	allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs

Ceska sporitelna, a.s.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and	We agree

Name of the respondent	Question	Answer
	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Ceska sporitelna, a.s.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree
Ceska sporitelna, a.s.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	trade name, information about the beneficial owner (e.g. identity document), control structure
Ceska sporitelna, a.s.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	No comments
Ceska sporitelna, a.s.	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would welcome any additional clarification in the RTS in relation to Article 41 of Regulation (EU) 2024/1624. Such clarification could assist obliged entities in more consistently identifying customers applying for residence rights under investment-based residence schemes. In particular, it would be helpful to clarify whether indicative overviews of jurisdictions

Name of the respondent	Question	Answer
		offering such schemes exist and whether any indicators or markings exist that would allow this type of residence to be distinguished (e.g. on residence permits).
Ceska sporitelna, a.s.	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Ceska sporitelna, a.s.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Ceska sporitelna, a.s.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	We request clarification of the term trade name, as it is not legally defined in some Member States. Without further clarification, it is unclear whether it should be required only for entities where the trade name is formally recorded under national law, or for all legal entities. Furthermore, we recommend specifying how obliged entities should verify the existence and validity of a trade name when it is based solely on the client's declaration.
Ceska sporitelna, a.s.	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Ceska sporitelna, a.s.	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We note that not all identity documents, including passports issued in third countries, contain the holder's signature. At the same time, certain identity documents issued within the EU may legitimately not include a signature, for example due to the holder's age or health condition. We therefore propose amending the wording of Article 6 to explicitly reflect these cases and to clarify the approach to such documents, provided that all other required elements are met.
Ceska sporitelna, a.s.	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes

Name of the respondent	Question	Answer
Ceska sporitelna, a.s.	Please specify which recital you refer to, and share your comments below.	(7) We kindly request clarification whether a birth certificate may be considered a sufficient and credible means for the full identification and verification of a minor child, including in situations where the minor child is permitted to actively use financial products, and not only granted passive access (e.g. account view-only access). Furthermore, we request confirmation whether this approach may also be applied in non-face-to-face identification scenarios, provided that the parent or legal guardian is fully identified and verified in a face-to-face (F2F) manner and acts on behalf of the minor child. (9) The proposed scope of mandatory beneficial ownership identification data does not sufficiently consider practical implementation aspects. In current practice, obliged entities encounter difficulties in obtaining the required information, both in relation to beneficial owners located in EU Member States and, in particular, in third countries, where customers frequently refer to local legal provisions that are presented as limiting or preventing the provision or sharing of such information. Any further extension of the required data set, especially the inclusion of identity documents, may further aggravate these challenges and lead to situations where full compliance with the Regulation may not be achievable. (9) The RTS covers situations where a beneficial owner cannot be identified and requires obliged entities to identify senior managing officials (SMOs) and apply equivalent identification and verification measures. In practice, determining the relevant SMOs may be complicated, particularly for entities with a complex governance and control structure. In this context, we ask whether the Guidelines on the identification of beneficial owners, explicitly envisaged by Regulation (EU) 2024/1624, are expected to be issued and, if so, within what timeframe, as

Name of the respondent	Question	Answer
		they would be essential for consistent and harmonized application by obliged entities. (12) We suggest clarifying and expanding this provision to explicitly cover other forms of representation beyond parental representation of minors, such as representation of persons under legal guardianship or representation of legal entities, to ensure legal certainty and consistent application by obliged entities. (13) Based on which criteria should obliged entities determine whether goods fall under the categories of motor vehicles, vessels or aircraft? Can obtaining a client declaration be considered a sufficient measure for an obliged entity to determine whether the goods are acquired for commercial or non-commercial purposes? (21) The RTS refers to the sharing of information available within a group, but does not clarify whether such sharing under the AMLA Regulation and the RTS can be carried out in compliance with applicable EU legislation on data protection and data sharing (e.g. GDPR) without the need to put in place new legal arrangements between obliged entities. Is such information sharing within a group always mandatory for obliged entities?
Ceska sporitelna, a.s.	Do you have any comments on the Annex in the draft RTS?	Yes
Ceska sporitelna, a.s.	Please share your comments below.	We recommend further specification of the term “unique identifier”, by including a reference to a specific EU legal act or technical standard defining its characteristics, scope, and rules for construction. Such clarification would support a harmonised interpretation and consistent implementation across Member States.
Ceska sporitelna, a.s.	How would you rate the proposals set out in the draft RTS overall?	Good

Name of the respondent	Question	Answer
Ceska sporitelna, a.s.	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available

Ceska sporitelna, a.s.	Please justify your answer to the previous question and provide evidence where possible.	in the order of millions of EUR
CFE Tax Advisers Europe	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	CFE Tax Advisers Europe (CFE) is the umbrella body of 33 national tax institutes and associations of tax advisers from 26 European countries, representing more than 200,000 tax advisers. Our members are obliged entities under EU AML/CFT law and operate within strong national professional structures, including ethical codes, fit-and-proper requirements, supervisory bodies, and ongoing quality reviews. CFE welcomes the opportunity to respond to the public consultation launched by the Authority for Anti-Money Laundering and Countering the Financing of Terrorism (AMLA) on the draft Regulatory Technical Standards (RTS) under Article 28(1) of Regulation (EU) 2024/1624 (AMLR) published on 9 February 2026, with a deadline of 8 May 2026. CFE particularly welcomes AMLA's stated objective of capturing the views of the non-financial sector, given the limited participation of non-

Name of the respondent	Question	Answer
		financial obliged entities in the earlier consultation cycle conducted by the European Banking Authority. CFE supports a robust EU AML/CFT framework. The objective of harmonisation pursued through the AMLR and the AMLA Single Rulebook is one we share. Our comments below are offered in a constructive spirit. 2.1 The Risk-Based Approach Must be Preserved The draft RTS under Article 28(1) AMLR will determine the operational reach of customer due diligence obligations across the Union. CFE strongly supports the risk-based approach required by Articles 6 and 28 AMLR. The RTS should reinforce that approach. Overly prescriptive specification of CDD measures risks transforming risk-based judgement into mechanical box-ticking, which in our experience is consistently less effective than calibrated professional analysis. The scope of information collected should be determined proportionately, taking into account the nature of the service and the identified ML/TF risk. In particular, wording such as “where necessary” and “at least one of the following” should not be interpreted in practice as creating a checklist-based expectation to collect the listed information or documentation in every case, irrespective of risk. Regarding smaller obliged entities, it is appropriate to take account of the characteristics and needs of smaller obliged entities, and to ensure treatment which is appropriate to their specific needs, and the nature of the business. That might include exempting certain obliged entities from performing a

Name of the respondent	Question	Answer
		risk assessment where the risks involved in the sector in which the entity operates are well understood. This is in line with the risk-based approach of this AML Package, which stipulates policies, procedures and controls should be proportionate to the nature of the business, including its risks and complexity, and the size of the obliged entity and respond to the risks of money laundering and terrorist financing that the entity faces, including, for crypto-asset service providers, transactions with self-hosted wallets. 2.2 Sector-Specific Design and Proportionality Tax advisers are not banks. They do not operate payment accounts and they do not perform real-time transaction monitoring. The AML value tax advisers add comes from a deep understanding of the client's business, ownership structure, behaviour and tax profile, built up over engagements that often span many years. RTS designed primarily with the financial sector in mind, for example reliance on automated identification systems, exhaustive documentation of every intermediate entity in an ownership chain, or uniform high-intensity verification, can become disproportionate when applied to small and medium-sized advisory practices, while adding limited AML value. CFE therefore welcomes AMLA's commitment to ensuring applicability across all categories of obliged entities and asks that this commitment be reflected in concrete sectoral calibration in the final RTS. 2.3 The Contribution of the Tax Advisory Profession

Name of the respondent	Question	Answer
		Tax advisers work with clients over many years. This long-term visibility provides continuous insight into ownership, business rationale and behavioural patterns, and allows advisers to detect inconsistencies and anomalies at the design stage of structures, often before money moves, where AML prevention is most effective. Tax advisers operate within strong ethical and professional frameworks, challenge clients on beneficial ownership and economic purpose, and produce considered Suspicious Activity Reports. The professional infrastructure within which CFE members operate, i.e. codes of ethics, supervisory bodies, fit-and-proper requirements, disciplinary mechanisms, ongoing quality reviews, is itself a meaningful line of defence against money laundering and terrorist financing. The RTS should leverage this infrastructure rather than duplicate it.
CFE Tax Advisers Europe	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	3.1 Identification and Verification of the Customer CFE supports the recognition in the draft RTS of official company registers, beneficial ownership registers and other authoritative public sources as reliable and independent verification sources. It should also be recognised that access to official documents, databases and registers differs significantly across Member States. In many cases, reliance on reliable official data is the most practical and proportionate solution. We invite AMLA to confirm in the final RTS that obliged entities may rely on such registers in standard CDD without further duplicative steps, absent specific and justified risk indicators suggesting inaccuracies.

Name of the respondent	Question	Answer
		The introduction of Recital 12 and Article 16 in the AMLA-amended draft, which clarify the documentation that may be collected to verify the existence and scope of any power of representation, is a useful clarification. CFE notes that, for advisory engagements, evidence of representation is typically available in the form of statutory documentation, board resolutions, or powers of attorney. The RTS should confirm that obliged entities may rely on such standard documentation without an additional layer of bespoke verification, where the documents come from reliable and independent sources. For non-financial obliged entities such as tax advisers, the assessment of complex corporate structures must remain proportionate to the nature of the service provided, the identified ML/TF risk and the actual availability of information. In particular, the absence of full group-level documentation should not automatically be treated as a failure to comply with CDD obligations, where the obliged entity has taken and properly documented reasonable verification steps in line with a risk-based approach. Further clarification would also be welcome on when an ownership or control structure may be considered sufficiently understood in practice, especially in the case of trusts, foundations and cross-border structures. 3.2 Verification Methods and Electronic Identification CFE supports the principle of technological neutrality. The RTS should ensure that obliged entities may select verification

Name of the respondent	Question	Answer
		methods proportionate to the risk profile of the customer, including direct verification under Article 22(6)(a) AMLR, eIDAS-compliant electronic identification at the assurance levels of "substantial" or "high" under Article 22(6)(b) AMLR and traditional document-based verification supplemented by professional judgement. CFE notes, however, that although the draft RTS refer to technological neutrality, the provisions on non-face-to-face identification create a strong practical preference for electronic identification methods. This approach does not fully reflect the specific nature of tax advisory services, where client relationships are very often long-term, professional and non-anonymous. Tax advisers rarely deal with walk-in customers, and advisory engagements generally do not involve the movement of client funds. Therefore mandatory or default reliance on electronic identification tools may be disproportionate and difficult to apply consistently, especially given the uneven availability of eID solutions across Member States. The RTS should therefore clearly preserve flexibility and genuine technological neutrality, and explicitly confirm that traditional document-based verification, combined with professional judgement, remains fully acceptable for tax advisers, including in remote engagements. A risk-based approach, rather than a technology-driven one, should remain the key principle.
CFE Tax Advisers Europe	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the	3.3 Identification and Verification of the Beneficial Owner

Name of the respondent	Question	Answer
	information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The requirement to take reasonable measures to verify beneficial ownership must be interpreted proportionately. CFE asks AMLA to address three specific points in the final RTS. First, the RTS should clearly distinguish between Ultimate Beneficial Owners (UBOs) and senior managing officials. Full UBO-level due diligence should not apply to entire management teams when the UBO is already known and verified. Senior managing officials should be used as UBO substitutes only in the narrow fallback situations expressly provided for under Article 22 AMLR. The current drafting may create supervisory pressure to treat entire management bodies as de facto beneficial owners. From a tax advisers' perspective, this risks blurring the legal concept of beneficial ownership and leads to unnecessary data collection that is not linked to actual ML/TF risk. Tax advisers are often best placed to assess whether beneficial ownership is genuinely unclear or whether the structure is simply complex but transparent. AMLA should therefore clearly confirm that SMOs are a strict fallback mechanism, and that exhaustion of UBO identification means objective impossibility or justified doubt, not mere structural or organisational complexity. It would be helpful to clarify which actions and types of documentation are generally sufficient to demonstrate that an obliged entity has "exhausted all possible means" of identifying the beneficial owner. This assessment should remain explicitly risk-based and proportionate, taking into account the identified ML/TF risk, the nature of the service, the complexity of the structure and the realistic availability of reliable information, rather than leading to an automatic reliance on senior managing officials in cases of mere structural complexity.

Name of the respondent	Question	Answer
		Second, the RTS should refine what constitutes a "complex" ownership structure for CDD purposes. The three layers approach creates a rules-based trigger rather than a risk-based assessment. Ordinary private-equity arrangements, standard holding structures and multinational group chains should not automatically be treated as high-risk simply by reason of the number of layers involved. From a tax advisers' perspective, multi-layer ownership structures are common, legitimate and often tax-driven, especially in cross-border business. Structural complexity alone does not indicate higher ML/TF risk. Complexity for AML purposes should be linked to genuine red flags, such as opacity, lack of economic rationale, links with high-risk jurisdictions, nominee arrangements, or unexplained ownership changes, rather than the structural form of legitimate corporate organisation. A rules-based definition of complexity may unintentionally „penalise" legitimate international business structures. Complexity should be therefore defined primarily by reference to risk indicators, with the number of layers serving only as a contextual factor, not as an automatic trigger for enhanced due diligence. Third, highly granular data points, for example, place of birth at city level, or full documentary verification of every intermediate entity in an ownership chain, should be required only where they add real AML value. In a tax advisory context, collecting such data does not necessarily improve the detection of ML/TF risk. They are appropriate for higher-risk scenarios but should not be a default expectation in standard CDD on low-risk advisory engagements. Reserving these requirements for risk-justified cases ensures that compliance resources are

Name of the respondent	Question	Answer
		deployed where they have the greatest preventive effect. For standard, lower-risk advisory engagements, this level of granularity may conflict with the principle of data minimisation and increase data protection and professional secrecy risks without adding meaningful AML value. More extensive data collection should be justified by identified risk factors, not applied as a default. The RTS should therefore clearly link enhanced data granularity to higher-risk situations only and confirm that, for standard CDD, information collected should be limited to what is necessary and proportionate, in line with a risk-based approach. CFE further asks AMLA to clarify in the final RTS the extent to which reliance on official beneficial ownership registers, where available and operating under the transparency standards introduced by AMLD6, is permissible. Reliance on such registers is consistent with Article 22 AMLR and should not be undermined by additional verification expectations in the RTS that do not add proportionate AML value.
CFE Tax Advisers Europe	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	4. Simplified Due Diligence — Article 33 AMLR Effective SDD should allow greater reliance on official registers, reduced frequency of data updates, and lighter documentation of ownership structures where the risk is assessed as low. AMLA should therefore include clear, non-financial examples of SDD applicable to tax advisory services and explicitly confirm that SDD entails a genuine reduction in documentation and monitoring intensity, in line with Article 33 AMLR and the risk-based approach.

Name of the respondent	Question	Answer
		For standard, recurring tax compliance services (e.g., annual corporate tax returns, routine VAT filings) provided to domestic corporate clients without complex cross-border structures, SDD should be the presumed default. Tax advisers should be relieved of the administrative burden of writing extensive, bespoke risk-assessments simply to justify the use of SDD in these inherently low-risk, routine engagements. 5. Enhanced Due Diligence — Articles 34 to 36 AMLR Enhanced due diligence (EDD) plays a critical role in the AML/CFT framework, and CFE supports its application where higher-risk circumstances are identified. The draft RTS should ensure that the triggers for EDD are clearly articulated, that the additional measures expected of obliged entities are operationally workable, and that they are calibrated to the nature of the obliged entity's activities. The determination of source of wealth and source of funds must remain fully risk-based and proportionate to the identified ML/TF risk. The list of documents and information sources referred to in the RTS should be understood as illustrative only and should not be treated in practice as a mandatory or exhaustive documentation package in all EDD cases. In particular, EDD should not automatically result in requests for highly intrusive documentation, such as tax returns or comprehensive asset disclosures, where identified risks can be adequately mitigated through other reliable but less intrusive sources. EDD measures are sometimes framed through a

Name of the respondent	Question	Answer
		financial-sector lens with mainly quantitative focus (transactions, volumes, flows). For tax advisory engagements, EDD typically takes the form of more intensive ownership and economic-rationale analysis, more rigorous source-of-funds and source-of-wealth assessment, and senior-level engagement decisions. The RTS should recognise these forms of enhanced scrutiny as substantively meeting EDD requirements where the underlying risk has been correctly identified, rather than imposing financial-sector-specific measures (such as continuous transaction monitoring) that have limited application in advisory contexts. 6. Ongoing Monitoring — Article 28(1)(d) AMLR Ongoing monitoring is a central feature of effective CDD and CFE supports the obligation. Monitoring must, however, be interpreted in light of the activities of the obliged entity. For tax advisers, monitoring typically consists of periodic review of client information, reassessment of risk in connection with new mandates or material changes, and updating of file documentation. It does not, and cannot, take the form of continuous real-time transaction monitoring. Banking-style" continuous transaction monitoring should be expressly excluded. The final RTS should explicitly recognise this distinction and confirm that monitoring intensity, frequency and methodology are to be calibrated to the nature of the obliged entity's activities and to the assessed risk profile of the customer. A standard expectation of continuous transactional surveillance would not be proportionate or workable for tax advisory

Name of the respondent	Question	Answer
		practices and should be expressly excluded from the RTS as a generally applicable requirement. 7. Pre-Existing Clients and Transitional Arrangements AMLA confirmed at the public hearing on 24 March 2026 that existing customer files must be updated to reflect the new requirements under the AMLR but that there is no expectation of full re-onboarding of all existing customers from 10 July 2027. CFE welcomes this clarification and asks that the final RTS reflect it expressly. Obliged entities should not be required to perform periodic, calendar-based CDD updates for existing low-risk clients. Instead, updates should be strictly trigger-based—required only if the adviser becomes aware of a material change in the client's ownership structure or business activity in the ordinary course of providing the service. A risk-based updating approach is more consistent with proportionality than wholesale re-documentation of entire client portfolios, particularly for small and medium-sized professional firms, for whom the cumulative weight of transition obligations under the AML package will be material. The RTS should confirm that obliged entities may prioritise the updating of higher-risk customer files, while applying lighter-touch updates to lower-risk files in line with normal review cycles.
CFE Tax Advisers Europe	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been	8. Interaction with Reporting Obligations, Professional Secrecy and Data Protection

Name of the respondent	Question	Answer
	covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The RTS should provide clear guidance on the interaction between CDD obligations under Article 28 AMLR, reporting obligations under Article 69 AMLR, professional secrecy regimes, and the General Data Protection Regulation. While the AMLR clarifies this issue to a certain extent, it does not fully resolve it. Further clarification and greater legal certainty would therefore be necessary. Article 21(2) AMLR codifies a functional carve-out for notaries, lawyers, other independent legal professionals, auditors, external accountants and tax advisers when they ascertain a client's legal position or perform tasks connected to judicial proceedings. The RTS on CDD should be drafted in a manner that is fully consistent with that carve-out and with the underlying jurisprudence of the Court of Justice of the European Union. On data protection, the RTS should articulate clear data minimisation and storage limitation principles, in line with Articles 5 and 6 of the General Data Protection Regulation. Information collected for CDD purposes should be strictly limited to what is necessary for the AML/CFT objective, and the RTS should not require collection of granular personal data points that go beyond what proportionality and necessity require. 9. Supervision, Feedback and the Role of National Professional Bodies CFE has consistently noted that a well-calibrated EU oversight

Name of the respondent	Question	Answer
		model should build on, rather than duplicate or replace, the existing supervisory role of national professional bodies. Members of regulated advisory bodies already operate within strict ethical, disciplinary and AML frameworks, with established mechanisms for inspection and enforcement. The real ML/TF risk in our sector typically arises in respect of unregulated or non-affiliated advisers, a structural feature that AMLA's supervisory architecture should reflect. CFE also strongly supports improved feedback mechanisms from Financial Intelligence Units. Without feedback on submitted Suspicious Activity Reports, it is difficult for advisers to refine their risk-detection frameworks or to develop sectoral typologies. We invite AMLA to support, within its mandate, the development of structured feedback channels between FIUs and obliged entities, including through Level-3 guidelines. 10. Implementation, Timelines and Sectoral Guidance The AMLR will apply from 10 July 2027. AMLA is due to submit the final RTS to the European Commission by 10 July 2026. This leaves obliged entities, in particular small and medium-sized practices, a relatively short window in which to update policies, procedures, systems and controls. CFE asks AMLA to ensure that the final RTS are accompanied by: • clear transitional arrangements, including for the treatment of pre-existing clients and the updating of customer files; • realistic implementation timelines that reflect the operational reality of small and medium-sized non-financial practices; • sector-specific Level-3 guidance, developed in consultation with national professional bodies and European federations

Name of the respondent	Question	Answer
		including CFE, addressing the practical application of the RTS in tax advisory and other non-financial contexts. • consideration should be given to developing guidance explicitly tailored to non-financial obliged entities, including tax advisers, ensuring that CDD requirements remain workable in practice and do not impose disproportionate obligations that do not add commensurate AML value. Such guidance should also take due account of the confidential and trust-based nature of professional client relationships in the tax advisory profession; and • coordination with the parallel work on group information sharing and the broader Single Rulebook, to avoid layered or sequenced obligations that compound the implementation burden.
CFE Tax Advisers Europe	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No

Chainalysis	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Given our expertise in crypto-asset monitoring and blockchain analytics, our responses cut across all five consultation questions. The issues are closely interlinked and should therefore be read as a single, coherent submission, although we have aligned our comments to the relevant questions where possible. Recognise Blockchain Analytics Output as Reliable & Independent Relevant to Questions 1, 2, 3, and Article 8 of the draft RTS Article 8 of the draft RTS establishes criteria for assessing whether information sources are reliable and independent, including credibility, official status, currency, accuracy, and resistance to forgery. These criteria are technology-neutral and appropriately flexible. However, the draft RTS provide no explicit recognition that blockchain analytics, which already transforms raw on-chain data into actionable compliance intelligence for obliged entities, can satisfy these criteria. Public blockchain networks provide permanently recorded, cryptographically secured transaction data independently verifiable by any network participant. The compliance value comes from the insight analytics provides: attribution of

Name of the respondent	Question	Answer
		addresses to real-world entities, clustering of addresses under common control, contextual understanding of transaction networks, and aggregated risk intelligence. This output transforms transaction records into intelligence, enabling obliged entities to understand who controls addresses, the services they represent, and why they are ML/TF or sanctions risks. For obliged entities providing services involving digital assets, blockchain analytics from reputable providers is, in many cases, the most reliable information source available for understanding transaction patterns, custody relationships, and counterparty exposure. However, absent explicit recognition in the RTS, there is a material risk that NCAs will treat blockchain analytics as supplementary, requiring duplicative verification through traditional means, even where those are less reliable or accurate. Effective supervision of analytics-based CDD also requires that NCAs supervising obliged entities with material blockchain exposure have access to blockchain analytics capabilities sufficient to assess the adequacy of those entities' CDD frameworks. Where an obliged entity's verification, beneficial ownership corroboration, or sanctions screening relies on blockchain analytics, the supervisor must be able to interrogate the same on-chain data to assess those determinations. Without this, supervision is limited to reviewing policies and sampling reports, and is unable to assess the accuracy of analytics-derived CDD outputs. AMLA should, as part of its supervisory convergence work, encourage NCAs with material blockchain-supervised populations to develop proportionate

Name of the respondent	Question	Answer
		analytics capabilities. AMLA should amend Article 8 of the draft RTS or include clarifying recital language recognising that blockchain analytics constitute a reliable and independent source where the provider demonstrates: methodological transparency regarding attribution and clustering techniques; documented accuracy and confidence levels for different output types; governance frameworks ensuring data quality and continuous validation; and auditability, enabling third parties to verify methodological soundness. Additionally, underlying structural data should be obtained from blockchain network nodes or verified data replication services and cryptographically validated for integrity. Recommendation: AMLA should add a new recital stating: "Blockchain analytics -including entity attribution, address clustering, and contextual intelligence regarding blockchain addresses and transaction networks- may constitute a reliable and independent source of information for verification purposes under Article 8 of this Regulation where such analytics are provided by reputable data services demonstrating methodological transparency, documented accuracy levels, robust governance frameworks, and auditability of techniques. The underlying blockchain-based observations should be cryptographically validated and obtained from network nodes or verified data providers. Obliged entities relying on such analytics should document

Name of the respondent	Question	Answer
		their assessment of source reliability consistent with Article 8 criteria, including evaluation of the provider's quality assurance practices." CONTINUED BELOW
Chainalysis	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	CONTINUED FROM ABOVE: To give practical effect to these quality criteria, we propose a two-tier data quality framework (set out in full in Annex A) that distinguishes between: Tier 1 - Structural data (Forensic Reliability): wallet segments and raw on-chain facts that are deterministic, reproducible, and independently verifiable against blockchain consensus. Structural grouping methodologies meeting this standard must be deterministic; machine-learning-derived groupings do not satisfy it. Tier 2 - Attribution and intelligence (Analytic Confidence): entity attribution, labeled clusters, risk scoring, and typology identification, governed by structured confidence assessments with explicit source characterisation, stated confidence levels, and documented analytic reasoning. It should also include a distinct third analytical step, regardless of which tier, that effectively establishes whether the identified entity operates the wallet infrastructure or is merely a user, which must be completed before any cluster receives a label. This framework underpins our recommendations and ensures that obliged entities calibrate CDD decisions to the analytical basis and confidence level of the outputs they rely on, and that supervisors can evaluate provider quality and obliged entities'

Name of the respondent	Question	Answer
		use of outputs. Recommendation: AMLA should include in recitals or Level 3 guidance a framework that distinguishes between Tier 1 blockchain data (structural, deterministically verifiable) and Tier 2 blockchain analytics (attribution, risk scoring, requiring methodological inference), with corresponding quality standards for each. The detailed framework and proposed guidance language are set out in Annex A. II. Corroboration of Beneficial Ownership with On-Chain Analysis Relevant to Questions 1, 3, 4, and Articles 10, 11, 12 of the draft RTS Articles 10, 11, and 12 address verification of beneficial ownership and understanding of ownership and control structures. For obliged entities providing custody, issuance, or transactional services involving digital assets, beneficial ownership verification presents a challenge: the customer may assert beneficial ownership, but actual custody and control may be held by third parties, layered through smart contracts, or distributed across multiple addresses in ways not reflected in traditional corporate registers. On-chain custody analysis to identify which addresses actually control assets and tracing flows between addresses is critical to corroborate whether asserted ownership is accurate. What on-chain analytics can and cannot do

Name of the respondent	Question	Answer
		Analytics cannot, from blockchain data alone, determine legal beneficial ownership as defined by Article 3(1)(28) AMLR. However, analytics can verify control and custody over digital asset wallets and positions associated with a customer or declared beneficial owner, corroborating beneficial ownership information obtained through registries and customer declarations. Specifically, analytics can: identify clusters of addresses under common control; verify through on-chain behavioural analysis whether a customer's declared wallet activity is consistent with observed transaction patterns, funding sources, and interaction history over time; map which service or entity actually holds custody; and corroborate whether flows are consistent with declared beneficial ownership structures. Article 10 of the draft RTS permits consultation of “other reliable national systems” and collection of information from “third-party sources such as reputable credit agencies and/or comparable reputable data services providers”. This language encompasses blockchain analytics providers (see Section I and Annex A on the quality standards such providers should meet), but the absence of explicit reference creates uncertainty. NCAs may interpret Article 10 as requiring primary reliance on corporate registers even where on-chain custody patterns contradict registry information. AMLA should clarify that where beneficial ownership of digital assets is asserted, obliged entities are expected to use on-chain transaction analysis, where technologically feasible and proportionate, to check that custody and control patterns are consistent with the asserted ownership. This is crucial for

Name of the respondent	Question	Answer
		structures involving nominee arrangements, where registry information reflects legal title but on-chain custody reveals actual control. Recommendation: AMLA should amend Article 10 of the draft RTS by adding point (c): "(c) where beneficial ownership of crypto-assets is asserted, analysing on-chain custody and control of relevant blockchain addresses to corroborate consistency between declared ownership and actual control over crypto-asset wallets and positions, including through the use of blockchain transaction tracing and address clustering methodologies provided by reputable data services providers specialising in blockchain analytics." CONTINUED BELOW
Chainalysis	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	CONTINUED FROM ABOVE III. Ongoing Monitoring Obligations Relevant to Questions 2, 3, and the implementation of Article 26 AMLR While ongoing monitoring falls outside the scope of these draft RTS, we note the following for AMLA's consideration in its forthcoming guidelines on ongoing monitoring, given its bearing on how CDD obligations interact with blockchain-native business models. Article 26 AMLR requires obliged entities to "conduct ongoing monitoring of the business relationship," including scrutiny of transactions to ensure consistency with knowledge of the

Name of the respondent	Question	Answer
		customer and timely updating of documents and information. The draft RTS appropriately do not specify the frequency or methodology of ongoing monitoring, recognising that this must be risk-based and context-dependent. However, this silence creates a risk that obliged entities will underutilise the continuous monitoring capabilities inherent to public ledgers. Traditional financial institutions conduct ongoing monitoring through periodic reviews because they lack visibility into customer transactions occurring elsewhere. However, obliged entities face the opposite circumstance. Every transaction involving a customer's known blockchain addresses is immediately visible on-chain and can be monitored in real-time, including counterparty-level monitoring (continuous 24/7 CDD on specific counterparties and risk profiles) and asset-level monitoring (understanding risk profiles of specific digital assets and ecosystems). In this circumstance, restricting monitoring to periodic reviews would be inconsistent with risk-based obligations. NCAs supervising obliged entities should expect those entities to leverage real-time on-chain transaction visibility for ongoing monitoring. Automated systems analysing on-chain activity for risk indicators, sanctions screening, and pattern anomalies satisfy these obligations more effectively than periodic manual reviews. This is particularly important for obliged entities operating across multiple blockchain networks. Customers increasingly use several chains simultaneously, and illicit actors exploit cross-chain monitoring gaps. Monitoring activity on only one

Name of the respondent	Question	Answer
		chain while the customer has material activity on others does not satisfy ongoing monitoring obligations. Recommendation: AMLA should include in its impact assessment or supervisory guidance a statement clarifying: Where obliged entities provide services involving digital assets and maintain visibility into customers' on-chain transaction activity, ongoing monitoring under Article 26 of Regulation (EU) 2024/1624 should incorporate real-time or near-real-time automated transaction analysis for risk indicators, sanctions screening, and consistency with expected activity. Periodic manual reviews should supplement continuous monitoring rather than serving as the sole ongoing monitoring measure. Where services or custody involve multiple blockchain networks, monitoring systems should, on a risk-sensitive basis, encompass relevant and material transaction activity across those networks. Where technical limitations or data coverage constraints prevent monitoring on specific chains, obliged entities should document these limitations, assess the resulting ML/TF risk, and implement compensating controls proportionate to that risk. IV. Outsourcing & Third-Party Reliance Relevant to Questions 1, 3, and Article 10(b) of the draft RTS Article 10(b) of the draft RTS permits obliged entities to collect verification information from “third-party sources such as reputable credit agencies and/or comparable reputable data services providers.” Many obliged entities appropriately rely on third-party blockchain analytics providers for transaction

Name of the respondent	Question	Answer
		monitoring, sanctions screening, address risk scoring, and beneficial ownership corroboration, rather than developing in-house capabilities. This model is efficient and appropriate, provided that obliged entities understand the underlying methodologies to an appropriate extent, perform their own validation and governance, and retain full responsibility for the resulting CDD and risk management decisions. Where both obliged entities and their supervisors can rely on transparent blockchain data and comparable analytics, supervisory engagement becomes more targeted and proportionate, reviews are more precise, and obliged entities can demonstrate compliance more efficiently. However, reliance on third-party blockchain analytics implicates operational resilience and outsourcing requirements. If an obliged entity cannot form a view on the reliability of its analytics provider's outputs, for example, whether an address is correctly attributed to a high-risk entity, or whether transaction tracing correctly identified the ultimate destination of funds, then the entity cannot be satisfied that its CDD measures are adequate. CONTINUED BELOW IN Q4
Chainalysis	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	CONTINUED FROM ABOVE from Q3 As discussed in Section I (see Annex A for the detailed framework), blockchain analytics outputs fall into two tiers with different transparency requirements. For Tier 1 structural outputs, obliged entities should be able to confirm that reported on-chain facts match the relevant blockchain. For Tier 2 attribution and intelligence outputs, providers should offer transparency about what their outputs represent, including

Name of the respondent	Question	Answer
		stated confidence levels, source characterisation, and governance frameworks, without necessarily disclosing proprietary implementation techniques. Recommendation: AMLA should include guidance clarifying that where obliged entities rely on third-party blockchain analytics providers to satisfy verification obligations under Article 10 of this Regulation or ongoing monitoring under Article 26 AMLR, the entity should have sufficient transparency to assess output reliability. For Tier 1 structural data, this means the ability to confirm that reported on-chain facts match the relevant blockchain and that structural methodologies are documented and deterministic. For Tier 2 attribution and intelligence data, this means access to information about what outputs represent, including stated confidence levels, source characterisation, and governance frameworks, sufficient for the obliged entity to assess fitness for purpose. Importantly, proprietary analytical techniques whose disclosure would compromise their effectiveness need not be disclosed, provided that the obliged entity can assess the reliability and validation history of the outputs. Obliged entities should document their assessment of provider reliability and update this assessment periodically as part of vendor risk management. V. Enhanced Due Diligence & On-Chain Counterparty Risk Analysis Relevant to Questions 1, 3, and Article 34 AMLR implementation Article 34 AMLR requires enhanced due diligence in higher-risk situations, including obtaining additional information on the

Name of the respondent	Question	Answer
		customer, intensifying monitoring, and conducting enhanced scrutiny. While the draft RTS appropriately focus on the source of funds and source of wealth verification, it should also include analysis of the customer's on-chain counterparty exposure using analytics that meet the standards set out in Section I and Annex A (detailing which addresses and entities the customer has transacted with and whether those counterparties present ML/TF or sanctions risks that are managed appropriately). On-chain counterparty analysis is uniquely enabled by blockchain transparency. If a customer's addresses have transacted extensively with addresses associated with illicit entities, this is material risk information that should inform the obliged entity's risk assessment and enhanced monitoring. Traditional financial institutions rarely have visibility into their customers' counterparties in that way; blockchain-enabled entities have complete visibility and could be expected to use it. NCAs supervising CASPs increasingly expect on-chain counterparty screening as part of enhanced due diligence. However, absent any reference in the RTS or Article 34 AMLR risks gaps in interpretation, undermining harmonisation and creating competitive distortions. Recommendation: AMLA should include in future guidance on enhanced due diligence measures under Article 34 AMLR a statement that where customers utilise blockchain addresses, enhanced due diligence should include analysis of on-chain counterparty exposure using blockchain transaction analysis

Name of the respondent	Question	Answer
		and risk assessment methodologies. Material exposures to high-risk counterparties should be investigated and, where appropriate, subject to enhanced monitoring or relationship restrictions. VI. Targeted Sanctions Screening & Cluster-Based Analysis Relevant to Questions 1, 3, and Articles 29 and 30 of the draft RTS Recognition of digital wallet addresses in sanctions screening Chainalysis welcomes Article 30(a)(iii) of the draft RTS's explicit inclusion of "digital wallet addresses" as identifiers to be screened against sanctions lists. This is the only provision in the draft RTS that directly recognises blockchain-native identifiers and appropriately acknowledges that digital asset exposure requires screening methodologies beyond traditional name-matching systems. Critical gap: ownership beyond listed addresses and circumvention risk However, as drafted, Article 30 creates a compliance gap by limiting screening to addresses literally listed on sanctions designations. In practice, sanctioned actors typically control many additional blockchain addresses that are not explicitly designated but are demonstrably owned or controlled by the same entity. These addresses form "clusters" that are identifiable by on-chain transaction analysis and shared control patterns.
Chainalysis	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a	EU and international sanctions lists (predominantly US OFAC) currently designate approximately 1,000 individual digital asset addresses across all sanctioned programmes. However,

Name of the respondent	Question	Answer
	specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	blockchain analytics solutions used by obliged entities for real-time sanctions screening currently identify on the order of millions of addresses as controlled by sanctioned entities through enhanced intelligence and deterministic clustering methodologies. This order-of-magnitude difference illustrates the scale of the detection gap and the utility of blockchain analytics to fill it. Screening only designated addresses while ignoring provably linked addresses creates a systemic vulnerability: an obliged entity could unknowingly transact with a sanctioned actor's operational wallet simply because that specific address has not been individually listed. The EU's 20th sanctions package against Russia places particular emphasis on sanctions circumvention and evasion via intermediaries, third-country facilitators, and opaque ownership structures. Article 29 of the draft RTS already requires screening for circumvention and evasion. In the blockchain context, this necessarily implies looking beyond listed addresses to addresses demonstrably controlled by the same sanctioned entity, precisely the gap that cluster-based screening is designed to close. The clustering methodology underpinning this analysis is set out in Section I and Annex A. For sanctioned entities, clustering is often particularly robust because law enforcement actions and regulatory designations provide ground-truth data for validation. The principle is analogous to the established "50% rule" in traditional sanctions compliance, just as entities majority-owned by a sanctioned person are treated as sanctioned even if not explicitly listed; addresses demonstrably controlled by a sanctioned entity should be screened on a risk-sensitive basis, with screening intensity proportionate to attribution confidence consistent with the Tier 1/Tier 2

Name of the respondent	Question	Answer
		framework. Leveraging Article 30(b) for blockchain intelligence sources Article 30(b) of the draft RTS requires screening “against all other sources available to the obliged entity, including public sources.” This provision should explicitly recognise blockchain analytics services and wallet-risk intelligence as falling within “public sources”. The blockchain itself is an immutable public ledger; services that analyse and attribute on-chain activity provide direct insight into control relationships that traditional data sources cannot. Recognising such analytics as public sources would: provide legal certainty for obliged entities and supervisors already relying on them promote consistent expectations across NCAs on the appropriate use of on-chain intelligence, and ensure that sanctions screening and CDD leverage the best available data rather than being limited to name-based lists and registries. Avoiding false positives: the importance of confidence levels Cluster-based screening does not mean treating every attribution as equivalent to a sanctions designation. Consistent with the Tier 1/Tier 2 framework in Section I and Annex A, obliged entities should calibrate their responses accordingly with attribution confidence: High-confidence clusters should be treated consistently with explicitly designated addresses for screening purposes. High confidence is established through deterministic structural signals, including co-spend analysis on UTXO-based blockchains, deposit-consolidation patterns on account-based blockchains (where deposit addresses sweep to known consolidation points), and change-address identification, or

Name of the respondent	Question	Answer
		through ground-truth attribution supported by law enforcement seizures, regulatory designations, or independently verified open-source intelligence. Medium-confidence clusters (e.g. addresses attributed to sanctioned services via behavioural heuristics) should be flagged for investigation and enhanced scrutiny. Lower-confidence attributions that present elevated risk but insufficient certainty for blocking should be documented and monitored. This graduated approach enables effective sanctions compliance without unacceptable false positive rates. Analytics providers should document confidence levels for sanctions-related clusters, and obliged entities should calibrate their responses accordingly. Recommendation: AMLA should amend Article 30 of the draft RTS to require risk-sensitive screening of addresses attributable to sanctioned entities via blockchain analytics, and clarify in recitals that “public sources” in Article 30(b) includes reputable blockchain intelligence and wallet-risk data services derived from public blockchain data. This amendment would close a critical sanctions evasion gap and ensure that the RTS deliver effective sanctions compliance in blockchain contexts, consistent with the anti-circumvention mandate in Article 29 and the EU's 20th sanctions package focus on intermediary-based evasion.
Chainalysis	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Chainalysis	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	30

Name of the respondent	Question	Answer
Chainalysis	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Insert new text after Article 30(a)(iii): "Obliged entities should, where appropriate and on a risk-sensitive basis, also identify and screen other digital wallet addresses that are reasonably established as owned or controlled by listed persons, bodies or entities, including through the use of reputable blockchain analytics and attribution tools." Add recital clarification: "Blockchain analytics services that attribute addresses to sanctioned persons, bodies, or entities based on deterministic clustering, shared control analysis, or other forensic methodologies applied to public blockchain data constitute 'public sources' within the meaning of Article 30(b). Obliged entities should leverage such services proportionate to the confidence level of attributions, treating high-confidence attributed addresses consistent with explicitly designated addresses for sanctions screening purposes."
Chainalysis	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	10
Chainalysis	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Recommendation: AMLA should amend Article 10 of the draft RTS by adding point (c): "(c) where beneficial ownership of crypto-assets is asserted, analysing on-chain custody and control of relevant blockchain addresses to corroborate consistency between declared ownership and actual control over crypto-asset wallets and positions, including through the use of blockchain transaction tracing and address clustering methodologies provided by

Chainalysis	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Recommendation: AMLA should add a new recital stating: "Blockchain analytics -including entity attribution, address clustering, and contextual intelligence regarding blockchain addresses and transaction networks- may constitute a reliable and independent source of information for verification purposes under Article 8 of this Regulation where such analytics are provided by reputable data services demonstrating methodological transparency, documented accuracy levels, robust governance frameworks, and auditability of techniques. The underlying blockchain-based observations should be cryptographically validated and obtained from network nodes or verified data providers. Obliged entities relying on such analytics should document their assessment of source reliability consistent with Article 8 criteria, including evaluation of the provider's quality assurance practices."
Chainalysis	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Chainalysis	Please specify which recital you refer to, and share your comments below.	Add recital clarification: “Blockchain analytics services that attribute addresses to sanctioned persons, bodies, or entities based on deterministic clustering, shared control analysis, or other forensic methodologies applied to public blockchain data constitute ‘public sources’ within the meaning of Article 30(b). Obliged entities should leverage such services proportionate to the

Name of the respondent	Question	Answer
		confidence level of attributions, treating high-confidence attributed addresses consistent with explicitly designated addresses for sanctions screening purposes.” Recommendation: AMLA should add a new recital stating: "Blockchain analytics -including entity attribution, address clustering, and contextual intelligence regarding blockchain addresses and transaction networks- may constitute a reliable and independent source of information for verification purposes under Article 8 of this Regulation where such analytics are provided by reputable data services demonstrating methodological transparency, documented accuracy levels, robust governance frameworks, and auditability of techniques. The underlying blockchain-based observations should be cryptographically validated and obtained from network nodes or verified data providers. Obliged entities relying on such analytics should document their assessment of source reliability consistent with Article 8 criteria, including evaluation of the provider's quality assurance practices."
Chainalysis	Do you have any comments on the Annex in the draft RTS?	No
Chainalysis	How would you rate the proposals set out in the draft RTS overall?	Good
Chamber of Advocates	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	We consider that the draft RTS do not provide sufficient flexibility to reflect the full range of products, services, and business models of obliged entities, particularly within the DNFBP sector. The proposals appear based on an assumed level of standardisation in service delivery and ML/TF risk that does not reflect operational realities. Certain DNFBP services, such as the provision of registered

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	office services, do not involve transactions and therefore do not provide visibility over customer transactional activity. In such cases, applying ongoing transaction monitoring requirements under Article 20 of Regulation (EU) 2024/1624 is neither meaningful nor practicable, as obliged entities cannot access or assess transactional data. Applying these requirements indiscriminately risks disproportionate and, in some cases, unworkable obligations. More broadly, DNFBPs offer diverse services with varying customer interaction and ML/TF risk exposure. Even within the same category, such as auditors or tax advisers, business models differ significantly. A uniform approach may therefore impose unnecessary burdens, particularly on smaller entities, without improving risk mitigation. We therefore consider that the RTS should more clearly recognise the need for flexibility based on the nature of the product or service. Obligations should apply only where relevant and proportionate, with clearer scope for obliged entities to calibrate CDD measures according to product, service, and delivery channel. This could be supported by practical examples across DNFBP activities. We also note that recital (5) does not sufficiently distinguish between declarations from regulated trustees and those from unregulated trustees. The current requirement for third-party certification does not reflect the regulatory oversight and AML/CFT obligations already applicable to regulated trustees. This risks duplication of controls and disproportionate requirements. We therefore propose that the RTS distinguish between regulated and unregulated trustees. Where trustees are regulated and licensed, their declarations should be accepted

Name of the respondent	Question	Answer
		as reliable and independent without additional certification. Independent certification should only be required where trustees are unregulated or unlicensed. Regarding Article 7 on non-face-to-face identification, we support strengthening remote onboarding through eIDAS "substantial" or "high" assurance levels and qualified trust services. However, these solutions are not universally available, particularly outside the EU, and may be costly and complex to implement for SMEs such as CSPs and trustees, especially in lower-risk scenarios. A narrow reliance on eIDAS-compliant methods may therefore undermine proportionality without delivering commensurate risk reduction. We propose that the RTS explicitly allow alternative reliable and independent verification methods on a risk-based basis where eIDAS solutions are unavailable or impractical. These could include multiple official identity documents issued by public authorities or regulated institutions, or certified copies verified by regulated professionals such as lawyers.
Chamber of Advocates	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We agree that the draft RTS are intended to support the effective application of a risk-based approach to AML/CFT compliance. However, in their current form, certain provisions may undermine that objective by creating scope for inconsistent interpretation. While we acknowledge that the draft CDD RTS refer to the principles of proportionality and the risk-based approach, the overall drafting does not appear fully aligned with those principles. In most instances, the requirements remain highly prescriptive and do not adequately reflect the diversity of obliged entities, particularly Designated Non-Financial Businesses and Professions (DNFBPs). Although the aim of achieving a harmonised framework across all obliged

Name of the respondent	Question	Answer
		entities is understandable, the current drafting leaves limited scope for requirements to be applied in a genuinely risk-sensitive manner, taking account of different business models, operational structures and customer scenarios. By way of example, Article 7 adopts a notably prescriptive approach to non-face-to-face verification. Despite the reference to proportionality in Article 1, the provisions governing customer identity verification allow very little flexibility as to the methods that may be used to satisfy those requirements. In particular, the use of qualitative terms such as “effectively supervised”, without further definition, leaves considerable room for interpretation by obliged entities and competent authorities. While a principles-based approach is desirable in order to preserve flexibility, the absence of clearer guidance may lead to divergent application across Member States and sectors, thereby undermining the objective of harmonisation and increasing compliance uncertainty. A further concern is the repeated use of terms such as “on a risk-sensitive basis”, “where necessary” and “reasonable measures” without clearly distinguishing between mandatory obligations and those that may be adapted or disapplied depending on risk. That lack of precision risks creating legal uncertainty and inconsistent supervisory and enforcement outcomes across Member States. Greater clarity is needed to distinguish minimum requirements from those that may be calibrated, supported by practical examples illustrating acceptable risk-based applications. We do, of course, recognise the binding nature of the AMLR and appreciate that AMLA’s mandate must remain aligned with it. However, in order to achieve a more appropriate balance

Name of the respondent	Question	Answer
		between prescriptive requirements and the effective application of the risk-based approach, we would propose, at a minimum, the introduction of a “comply or explain” mechanism. Such an approach would preserve a degree of flexibility for obliged entities while maintaining the integrity of the framework. Although some may see this as creating the possibility of lower standards, that concern could be addressed by introducing clear conditions and safeguards governing its use. In our view, this would create a more balanced framework in which obliged entities are expected to comply with the RTS while retaining sufficient flexibility to apply risk-sensitive measures where justified. To further support that objective, we consider that the RTS should also provide additional clarification of key qualitative concepts, either through definitions or through non-exhaustive examples showing how such terms should be interpreted in practice. At the same time, it would be beneficial to establish clearer baseline expectations while still allowing obliged entities to adjust their approach according to risk. This would strike a more appropriate balance between flexibility and consistency. We also propose that, in order to allow a better application of the risk-based approach within the existing framework, the following sub-paragraph should be included under Article 1 of the draft CDD RTS: “2. Without prejudice to the obligations set out in this Regulation and in Regulation (EU) 2024/1624, obliged entities may, in case of justifiable circumstances, apply alternative measures to those prescribed herein, provided that all of the following conditions are met: a. the deviation is necessary to ensure that the application of a

Name of the respondent	Question	Answer
		specific requirement does not result in a disproportionate burden relative to the identified money laundering or terrorist financing (ML/TF) risk; b. the money laundering and funding of terrorism risk associated with the customer, transaction or business relationship is demonstrably low or effectively mitigated by other measures; c. the alternative measures applied are appropriate, risk-sensitive and achieve an equivalent level of risk mitigation as the standard requirement; d. the rationale behind such deviation is documented appropriately and available to competent authorities upon request.”
Chamber of Advocates	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Given the nature of certain DNFBP activities, there are situations in which someinformation envisaged under the draft RTS for the purposes of CDD is not routinely available, and no alternative solution is currently provided. This is particularly evident in services such as provision of registered office facilities, where obliged entity does not have access to/or visibility over, customer’s transactions & is therefore unable to obtain or verify information relating to the source of funds or carry out ongoing monitoring. In such cases, the application of standard CDD requirements is not feasible, because the necessary information is simply not accessible to obliged entity. In the absence of alternative measures, this creates a risk that obliged entities may be regarded as non-compliant despite acting within practical limits of their role. We therefore consider that the RTS should explicitly recognise such situations & permit alternative approaches or justified limitations where information is inherently unavailable.

Name of the respondent	Question	Answer
		Furthermore, in the context of increasingly complex corporate structures, coupled with heightened sanctions and dual-use risks arising from current geopolitical environment, obliged entities are encountering situations in which obtaining all required CDD information is not feasible in practice. These challenges highlight the potential value of establishing a centralised CDD repository at Union level. One such example concerns group structures & related third-party entities. Obliged entities are increasingly dealing with corporate customers that form part of extensive multinational group structures, including multiple subsidiaries & downstream affiliated entities across different jurisdictions. Where heightened sanctions exposure, export control considerations or potential dual-use concerns are identified through a risk-based assessment, obliged entities may need to conduct additional identification, verification & screening measures in relation to entities within the wider group structure, even where those entities are not themselves direct customers. In practice, however: i.) Those related entities are not parties to the contractual relationship with the obliged entity. ii.) The customer may not exercise effective operational control over them beyond ownership links. iii.) The customer may therefore lack both the legal authority and the practical ability to compel those entities to provide certified identification or verification documentation. As a result, the required CDD information may simply not be obtainable, notwithstanding that obliged entity has taken reasonable and proportionate steps. The draft RTS do not sufficiently address how obliged entities should manage situations in which enhanced due diligence measures are

Name of the respondent	Question	Answer
		triggered by external risk considerations, such as sanctions or dual-use risks, rather than by any lack of cooperation on the part of the customer itself. At present, the same CDD information is frequently collected, verified, stored and refreshed repeatedly by multiple obliged entities, even where those entities are subject to equivalent AML/CFT obligations and supervision. This duplication is particularly evident in cross-border structures and in professional services sectors, including TCSPs, legal practices and tax advisory firms, where reliance on previously verified documentation remains limited. Against that background, we believe that the effectiveness and efficiency of the RTS framework could be improved through consideration of a Centralised or Federated Due Diligence Depositary for standardised CDD information and documentation at Union level. Subject to appropriate governance arrangements, access controls and data protection safeguards, such a mechanism could allow obliged entities to access and rely upon previously verified information while, of course, retaining full responsibility for their own risk assessments and ongoing monitoring obligations. Such a framework could, for example: a)Reduce duplication in the collection, certification and updating of identity and beneficial ownership documentation. b)Improve consistency and data quality across jurisdictions and obliged entities. c)Facilitate supervisory review and ex post verification. d)Better support the proportionality principle underpinning Regulation (EU) 2024/1624, particularly for non-financial obliged entities and lower-risk situations.

Name of the respondent	Question	Answer
		Importantly, this proposal should not reduce CDD obligations or shift responsibility from obliged entities. Any use of a centralised repository should remain optional, risk-based and subject to the obliged entity being satisfied that the information is accurate, current and appropriate. We encourage AMLA to consider further guidance or future initiatives supporting a Union-wide framework for sharing and re-using CDD information in a way that improves AML/CFT effectiveness while reducing duplication and inefficiencies.
Chamber of Advocates	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In light of AMLA's mandate under Article 28(1) of Regulation (EU) 2024/1624 and the wide range of products and services provided by obliged entities across financial and non-financial sectors, including CSPs, trustees, law firms and tax advisers, we consider that the draft RTS should be further calibrated to ensure proportionality, clarity, and effective application of the risk-based approach. Simplified Due Diligence (Articles 3–5, 22) We recommend including additional illustrative scenarios where Simplified Due Diligence (SDD) may apply based on a documented low-risk assessment. Existing supervisory practice already recognises that certain customers and service models present inherently lower ML/TF risk where safeguards exist. Explicit recognition would enhance proportionality, reduce uncertainty, and support supervisory convergence. Examples include: AML/CFT-supervised customers Public institutions Publicly listed companies

Name of the respondent	Question	Answer
		Regulated investment structures and omnibus arrangements Lower-risk professional services with transparent EU-linked profiles Identification Data (Articles 3–5) Under Article 3(c), postal codes should not be mandatory due to limited AML/CFT value and inconsistent availability across Member States. Under Article 4, place-of-birth data should be collected only where available in identity documents or justified by risk assessment, consistent with proportionality and GDPR data minimisation. Article 5 should allow reliance on self-declared nationality, with verification of one nationality generally sufficient. Verification and Non-Face-to-Face Identification (Articles 6–7) Articles 6 and 7 should clarify that verification obligations are means-based and preserve flexibility under Article 22 of the AMLR. Over-reliance on eIDAS-compliant tools risks undermining proportionality, particularly for SMEs and lower-risk cases. Certified documents verified by trusted professionals should remain acceptable alternatives subject to safeguards. Beneficial Ownership and Structure Complexity (Articles 10, 12, 13) Article 10 should clarify acceptable documents and certifiers. Article 12 should not define complexity solely by ownership layers but also consider qualitative factors such as economic rationale, opacity, and high-risk jurisdictions. Article 13 should ensure proportionality for senior managing officials and distinguish them from beneficial owners.

Name of the respondent	Question	Answer
		Trusts, Foundations and Legal Concepts (Articles 14–15) Terminology such as “objects of powers” and “default takers” should be clarified to avoid misalignment with trust law and legal uncertainty. Greater reliance should be placed on regulated trustee declarations, with clearer definitions of “relevant documents” and a distinction between beneficiaries and AMLR beneficial owners. Trustees should generally be treated as the customer; foundations should be treated as customers in their own right. A risk-based approach should apply to licensed corporate trustees. Purpose, Source and Destination of Funds (Article 18) Article 18 should clarify baseline requirements while allowing flexibility where data is not relevant. Source-of-funds categories should be expressly non-exhaustive, and wording on fund flows and intermediaries should be clarified to support a principles-based approach. PEPs and Reliance (Article 19) Derogations should be extended to cover reliance on another obliged entity under Article 17 to avoid duplicative PEP checks in indirect relationships. Reputational Assessment (Article 25) Article 25(b) appears duplicative of existing CDD obligations and could be removed for clarity.

Name of the respondent	Question	Answer
		Recitals and Annex Recitals 13, 14, 15, and 21 should be clarified to ensure consistency and reduce ambiguity. We also suggest considering a tailored RTS for non-financial obliged entities to reflect their operational differences while maintaining harmonised EU AML/CFT standards.
Chamber of Advocates	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We broadly support the objective of improving harmonisation and clarity in customer due diligence (CDD) requirements across the EU. However, we consider that the draft RTS do not sufficiently reflect the diversity of obliged entities, particularly DNFBPs, nor do they adequately embed the principle of proportionality that underpins the risk-based approach. In many respects, the RTS are overly prescriptive and restrict the ability of entities to apply the requirements in a genuinely risk-sensitive way across different business models and scenarios. This is reinforced by the repeated use of expressions such as “risk-sensitive basis”, “where necessary” and “reasonable measures”, without clearly distinguishing between mandatory requirements and those which may be adapted according to risk. That creates legal uncertainty and may lead to inconsistent supervisory expectations across Member States. We therefore recommend a clearer distinction between minimum requirements and those capable of risk-based calibration, supported by practical guidance. Certain provisions also give rise to specific concerns. Article 18(a)(i) appears to require information of a commercial nature, such as referrals or pricing, which may not meaningfully contribute to AML/CFT risk assessment, particularly where the purpose of the relationship is self-evident or legally prescribed. That requirement should be confined to information that is demonstrably relevant for AML/CFT purposes. Similarly, Article

Name of the respondent	Question	Answer
		30 could be read as requiring the screening of all digital wallet addresses, which would be disproportionate where those wallets are not connected to the service being provided, and this should be clarified. Article 21 does not fully reflect standard practice, under which information is collected from the customer and then verified. Requiring additional sources that were not used for identification may create duplication and inefficiency. Greater flexibility should therefore be allowed, including explicit recognition that government-issued identity documents and customer-provided documentation may serve both identification and verification purposes. In addition, Article 4's requirement to collect granular place-of-birth information imposes operational burdens with limited added AML/CFT value and should be limited to the country of birth. More generally, undefined concepts such as "reasonable measures" create interpretative uncertainty. Recital 10 also lacks clarity as to what amounts to exhausting "all possible means" to identify beneficial owners. We recommend including non-exhaustive examples of acceptable steps, together with an indication of the level of effort expected. Similar clarification is also needed under Article 8 in relation to the reliability of sources and whether multiple sources are required. We also recommend introducing an exemption where shares are held in trust by regulated trustees acting solely as service providers and having no economic interest in the underlying entity, so that reliance may be placed on their regulated status. More broadly, the RTS should clearly distinguish between regulated and unregulated trustees. As currently drafted, the provisions result in repeated collection and verification of due diligence information even where trustees are licensed and

Name of the respondent	Question	Answer
		subject to AML/CFT supervision, thereby creating duplication without meaningful risk reduction. Proportionate measures, such as reliance on public registers and trustee declarations, should therefore be permitted for regulated trustees. The RTS also provide limited clarity on certain aspects of sanctions screening, including indirect control, the treatment of intermediaries in lower-risk scenarios and the appropriate frequency of screening. Further guidance would support more consistent application. Overall, a number of provisions appear to have been designed primarily with credit institutions and financial institutions in mind, without sufficient tailoring to DNFBPs or adequate recognition of the diversity within that sector. When combined with reliance on digital identification frameworks that may not yet be fully implemented across all Member States, this limits proportionality and practical applicability. Greater clarity and flexibility are therefore needed to ensure effective and proportionate AML/CFT compliance.
Chamber of Advocates	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Reference is made to Article 3(c). In our view, the inclusion of the postal code should not be mandatory, as the remaining address-related information - such as the building number, apartment number, street name, and city - would already provide sufficient detail regarding the customer's usual place of residence. Although Article 3(c) specifies that this information should be

Name of the respondent	Question	Answer
		obtained “where available”, this wording may give rise to differing interpretations among obliged entities and competent authorities. By way of example, in Malta, postal codes do exist, but they are not consistently reflected on identification documents. As a result, while the information may technically be “available” through external or public sources, it is not, however, necessarily “readily available” or accessible to the obliged entity during the onboarding process. Moreover, the additional AML/CFT value derived from collecting the postal code appears limited. Requiring its collection may therefore create unnecessary operational burdens without delivering a corresponding compliance or risk-mitigation benefit. We would therefore suggest the following revised wording: “(c) where available, postal code, street name, post boxes, building number and the apartment number.”
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	4
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	We consider that the final sentence of Article 4 could be removed. Where the relevant information already appears on an identity document, passport or equivalent document, it is inherently being collected as part of the identification process. Accordingly, imposing a separate obligation to “collect” such information appears unnecessary. In addition, the practical AML/CFT value of obtaining “additional information on the place of birth” appears limited. While such information may occasionally assist in discounting potential screening matches, this is typically achieved through other, more reliable datapoints, such as date of birth, year of birth or nationality. We

Name of the respondent	Question	Answer
		therefore do not consider the inclusion of additional place-of-birth information to be necessary for standard CDD purposes. There is also a broader concern that the systematic collection and use of place-of-birth data within risk assessment processes may give rise to indirect discrimination based on national origin. If country of birth becomes a structural factor within risk models, individuals born outside the EU or in jurisdictions considered "high risk" may automatically receive elevated risk ratings irrespective of their individual circumstances. Such an outcome would be inconsistent with the principle of individualised risk assessment underpinning the AMLR. In most cases, nationality - as already contemplated under Article 5 of the draft RTS - should be sufficient for identifying country-related risk indicators. Furthermore, under the GDPR principle of data minimisation set out in Article 5(1)(c), only personal data that is necessary for the relevant purpose should be processed. We therefore recommend that Article 4 be amended to clarify that country-of-birth information should only be collected where it is contained in the identity document itself or where a specific risk assessment justifies its collection. Proposed wording: "The information on place of birth as referred to in Article 22(1), point (a)(ii), of Regulation (EU) 2024/1624 shall consist of at least the country name, where this information is available from the identity document, passport or equivalent provided by the customer. Obliged entities shall not be required to actively seek this information from other sources unless the risk assessment of the individual customer provides specific grounds to do so."

Name of the respondent	Question	Answer
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	5
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The wording of Article 5 does not appear to fully align with Recital 3 of the draft CDD RTS. Recital 3 seems to contemplate a framework based on the customer's good-faith self-declaration, whereas Article 5, as currently drafted, could be interpreted as imposing a positive obligation on obliged entities to obtain and verify information relating to all nationalities held by the customer. In practice, however, obliged entities may have limited means to independently verify the existence or completeness of multiple nationalities beyond the information disclosed by the customer. For this reason, we believe the wording of Article 5 should be moderated to better reflect practical realities and the principle of proportionality. In our view, it should be sufficient for obliged entities to request customers, through onboarding documentation or declarations, to disclose their nationalities, while requiring verification of only one nationality through supporting identification documentation. We propose the following wording: "5. For the purposes of Article 22 (1), point (a)(iii), of Regulation (EU) 2024/1624 obliged entities shall undertake reasonable measures to obtain information on the all nationalities which the customer holds or, where applicable, the statelessness and refugee or subsidiary protection status of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf or for the benefit of whom a transaction or activity is being conducted."

Name of the respondent	Question	Answer
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	6
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Article 6(3) Our understanding is that Article 6(3) establishes a “means-based” obligation rather than a “results-based” obligation. Obliged entities should not be expected to conclusively prove the authenticity of documents, particularly in cases involving sophisticated or high-quality forgeries. Instead, the obligation should be limited to demonstrating that reasonable, risk-based measures and appropriate professional scepticism were applied, including where third-party verification solutions are used. We therefore propose the following revised wording: “3. Obliged entities shall take reasonable steps to ensure satisfy themselves that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a), and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with.” Article 6(5) Article 6(5) refers to the collection of, inter alia, a certified true copy of an “identity document, passport or equivalent”. In our view, this requirement is overly restrictive and does not sufficiently accommodate the application of a risk-based approach. We also consider that Article 22(6)(a) of the AMLR is being interpreted too narrowly in the draft RTS, thereby unnecessarily constraining the effective application of proportionality and risk sensitivity. Article 22(6)(a) refers to “the submission of an identity document, passport or equivalent and, where relevant, the acquisition of

Name of the respondent	Question	Answer
		information from reliable and independent sources, whether accessed directly or provided by the customer.” Importantly, this wording does not require the exclusive use of originals or certified copies. Rather, it allows obliged entities flexibility to determine appropriate verification measures based on the ML/TF risk presented. Restricting identity verification primarily to certified documentary evidence would significantly limit the operation of the risk-based approach and overlook the AMLR’s express recognition that verification may also be carried out through other reliable and independent means. In addition, a proportionate approach should apply to the collection of identification documentation in order to avoid unnecessary cost and administrative burden. Requirements to obtain original or certified documentation should, in our view, be reserved for situations involving heightened risk, inconsistencies, or doubts regarding the customer’s identity. Accordingly, we believe the RTS should provide greater flexibility for obliged entities to apply different verification measures depending on the level of risk involved. In lower-risk situations, the submission of standard identification documentation should generally suffice, whereas enhanced verification measures - including certified documentation - could be required where the circumstances justify a higher level of scrutiny. We propose the following wording: “5. For the purpose of verifying the identity of the persons referred to in Article 22(6) and Article 22(7), point (a), of Regulation 2024/1624, obliged entities, shall obtain from that person, or from independent sources the

Name of the respondent	Question	Answer
		identity document, passport or equivalent. In case of customers posing a higher risk of ML/TF obliged entities shall apply appropriate mitigation measures, such as, obtaining a certified true copy or those referred under Article 7."
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	In principle, verification of identity through alternative means in a non-face-to-face context should remain acceptable even where the solutions in Article 7(1) are not available. Several considerations support this. The proportionality principle and risk-based approach must remain central to CDD measures. A uniform prescriptive framework across all obliged entities, regardless of size or operational model, risks undermining these principles. The requirement that alternative verification may only be used where the solutions in Article 7(1) are "not available or cannot reasonably be expected" creates a significant operational burden. Demonstrating this condition may require disproportionate resources and system changes, particularly for smaller entities, and is inconsistent with proportionality and the risk-based approach. Article 7 appears more restrictive than Article 22(6) of the AMLR, which allows two alternative verification routes: (a) submission of an identity document, passport or equivalent, plus information from reliable and independent sources where relevant; or (b) electronic identification means meeting eIDAS assurance levels, and qualified trust services.

Name of the respondent	Question	Answer
		Article 22(6)(a) does not limit non-face-to-face verification to electronic means. It allows flexibility to choose the most appropriate method. The draft RTS, however, places undue emphasis on electronic verification as the primary solution. Alternative methods should therefore remain available to ensure alignment with the AMLR and the risk-based approach. These should include certified copies of identity documents provided by trusted professionals such as lawyers, auditors, accountants, and notaries. Appropriate safeguards should apply, including verification of authenticity and certifier authority. This is already partly reflected in Article 10(iv) and should equally apply to identity verification. This flexibility is particularly important for smaller obliged entities, avoiding disproportionate costs and onboarding redesign. We also note the deletion of Article 7(4). While likely intended for legal persons, its substance remains relevant. Acceptance of reproductions of original documents should remain a valid verification method and be reinstated or relocated. Proposed wording “1. To comply with Article 22(6) of Regulation (EU) 2024/1624 in non-face-to-face situations, obliged entities shall apply one of the following: (a) electronic identification means meeting Regulation (EU) No 910/2014 assurance levels ‘substantial’ or ‘high’; (b) qualified trust services under that Regulation;

Name of the respondent	Question	Answer
		(c) certified true copies of identity documents; (d) remote solutions meeting paragraphs 4 and 5; or (e) additional risk-based measures to mitigate higher ML/TF risk. Where certified copies are used, obliged entities shall ensure: (a) certification by legal professionals, notaries, accountants, auditors, or other authorised certifiers; and (b) a statement confirming document authenticity and, where applicable, that the photo is a true likeness of the holder.”
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	10
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	With regard to point (iv) of subparagraph (b) of Article 10, further clarification would be welcome regarding the types of documents that may be obtained under this provision. In particular, additional guidance would be useful as to which documents are considered acceptable when sourced “from the legal entity or legal arrangement”, in order to ensure consistent interpretation and application across obliged entities. In addition, the reference to “persons that are authorised for document certification purposes” would benefit from further clarification as to which categories of professionals or entities are intended to fall within this definition. Clearer guidance on who is considered appropriately authorised to certify such documents would enhance legal certainty and reduce the risk of divergent supervisory interpretations. We propose the following wording: “(iv) documents from the legal entity or the legal arrangement where the beneficial owner is named, and where the identity of the named person is certified by the following

Name of the respondent	Question	Answer
		professionals: lawyers, notaries, accountants or auditors or by other persons authorised to certify documents in the relevant jurisdiction.”
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	12
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	With regard to the complexity of structures, we consider that the threshold of “three or more layers between the customer and the beneficial owner” is set too low. In practice, this may capture large, fully transparent organisational groups with multiple legitimate holding layers, including ownership and control structures of regulated and licensed entities, which do not inherently present higher ML/FT risk. We therefore suggest that, in addition to revisiting the number of layers, a supplementary qualitative criterion be introduced. This should require obliged entities to assess whether the structure is unusual, unnecessarily convoluted or otherwise excessively complex, thereby allowing for a more meaningful, risk-based assessment of complexity. Restricting oneself solely to number of layers does not seem appropriate. With respect to subparagraph (a) of paragraph 1 of Article 12, we do not consider that the mere presence of a legal arrangement or similar structure (such as a foundation) within an ownership chain should automatically indicate increased complexity. By way of example, purpose foundations are commonly and legitimately used in structured finance transactions, including securitisations. Accordingly, subparagraph (a) should be refined to focus on situations where such structures lack a clear commercial or legal rationale within the ownership chain, rather than their mere existence.

Name of the respondent	Question	Answer
		In addition, the use of foundations should not, in itself, be treated as a risk indicator where they are properly registered and where beneficial ownership information is duly disclosed and verified with competent authorities. It is the absence of transparency, rather than the legal form itself, that creates complexity. The provision should therefore be adjusted to better reflect situations where beneficial ownership information is incomplete, unverified, or not adequately disclosed. As regards subparagraph (b) of paragraph 1 of Article 12, we consider that the mere involvement of entities incorporated outside the EU should not automatically be treated as increasing structural complexity. In a globalised commercial environment, it is entirely common for ownership chains to include non-EU entities or legal arrangements. A more appropriate approach would be to focus on higher-risk jurisdictions, such as those identified by the FATF as high-risk or subject to increased monitoring, or those listed by the EU as high-risk third countries for AML/CFT purposes. We would also suggest extending the reference to include legal arrangements, not only legal entities, where these form part of the ownership or control structure. Proposed wording: “1. To understand the ownership and control structure of the customer in accordance with Article 20(1), point (b), of Regulation (EU) 2024/1624, obliged entities shall treat an ownership and control structure as a complex corporate structure where it appears unusual or excessively complex given the nature of the customer’s business there are five or more layers between the customer

Name of the respondent	Question	Answer
		and the beneficial owner and, in addition, more than one of the following conditions is met: (a) there is a legal arrangement or a similar legal entity such as a foundation in any of the layers and there is no economic, legal or other rationale for the use of such legal arrangement or similar legal entity within the ownership and control structure of the customer and the legal arrangement or similar legal entity has not registered its beneficial owners or senior managing officials (as applicable) with its competent authorities; (b) the customer, legal arrangements and legal entities present at any of these layers are registered in jurisdictions linked to third countries categorised by the FATF as high risk countries or subject to increased monitoring or otherwise identified on the EU's list of high risk jurisdictions for ML/FT purposes. (c) there are nominee shareholders or nominee directors involved in the structure; (d) or justification. the structure obfuscates or diminishes transparency of ownership with no legitimate economic rationale 2. In the case of complex corporate structures as referred to in paragraph 1, obliged entities shall, where necessary to complement the measures undertaken pursuant to Article 11, obtain additional information, such as an organigram. 3. Obliged entities shall take risk-sensitive measures to satisfy themselves that the information obtained is accurate."
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	13

Name of the respondent	Question	Answer
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 13(a) requires obliged entities to collect the same information for senior managing officials (SMOs) as they would for beneficial owners. The relevant set of information for beneficial owners is set out in Article 62(1) of the AMLR. However, we do not consider this equivalence to be appropriate, given that SMOs do not present the same risk profile as beneficial owners. In particular, SMOs: (i) do not themselves hold ownership interests in the entity; (ii) nor do they exercise control through ownership or equivalent means. This distinction is also reflected in Recital (125) of the AMLR, which clarifies that, although SMOs are identified in certain circumstances, they are not beneficial owners. Against this background, the full scope of Article 62(1) appears disproportionate when applied to SMOs, as not all of its elements are relevant to their role or associated risk. We therefore recommend that the information to be collected in respect of SMOs be limited to Article 62(1)(a) only, with the remaining subparagraphs (b) to (f) excluded, as they are not applicable to this category of persons. In this regard, we propose the following wording: “In relation to senior managing officials as referred to in Article 22(2), second subparagraph, of Regulation (EU) 2024/1624, obliged entities shall: (a) collect the same information as as set out in Article 62(1)(a). Obliged entities may decide to obtain the address of the registered office of the legal entity instead of the senior managing official’s residential address and country of residence; (b) verify the identity of senior managing officials in the same way as they would for beneficial owners.”

Name of the respondent	Question	Answer
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	14
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	While we acknowledge that the draft RTS builds on terminology already used in the AMLR, we have significant concerns that the introduction and reinterpretation of certain concepts may lead to confusion, misapplication and inconsistency across jurisdictions. In particular, redefining terms that already carry well-established meaning in trust law and practice risks undermining legal certainty and the coherent application of the framework. Misalignment with established trust law terminology The Regulation introduces concepts such as “objects of powers” and “default takers” in the context of discretionary trusts. These terms do not align with generally accepted trust law principles in the context in which they are being used, and may therefore create ambiguity rather than clarity. We recognise that RTS provisions cannot amend the AMLR itself; however, interpretative guidance would be essential to avoid divergent application across Member States. In trust law, a clear distinction exists between: • objects of powers, and • discretionary beneficiaries. A trustee exercising a discretion is under a duty to consider its exercise, whereas a trustee holding a power may choose whether or not to act. Conflating these concepts creates interpretative uncertainty and risks inconsistent application. It appears that the Regulation intends to refer to discretionary beneficiaries when using the term “objects of powers”, defined as natural or legal persons among whom trustees may select beneficiaries in a discretionary

Name of the respondent	Question	Answer
		trust. However, this is itself conceptually inaccurate. In a discretionary trust, all members of the class are beneficiaries; the trustee does not “select beneficiaries” but rather exercises discretion in favour of one or more beneficiaries (often to the exclusion of others, who may actually never benefit). This distinction is fundamental in trust law. The introduction of “default takers” is also problematic. In a discretionary trust, beneficiaries do not benefit due to trustee inaction; rather, benefit arises only where a trustee actively exercises discretion. A concept premised on benefit arising from inaction is inconsistent with the fiduciary duties of trustees and risks recommending a breach of trust (which is what could occur if a trustee where to fail to exercise a discretion). On the contrary, in trust law and practice, “default takers” typically refer to ‘fallback’ or ‘default’ beneficiaries under express provisions (e.g. where no other living beneficiaries exist), not discretionary structures. By way of illustration, a trust instrument could contain a clause that in the event that all beneficiaries are no longer living, the trust assets would be held for the benefit of a chosen charity or a distant relative, as a ‘default’ beneficiary. This misalignment creates legal uncertainty, increases compliance complexity and may ultimately result in non-application of the provision due to its conceptual inconsistency with trust law. Incorrect use of legal concepts The reference to “power of discretion” conflates distinct legal principles. Powers may or may not be exercised by the trustee, whereas discretion imposes an obligation on the trustee to consider whether and how it should

Name of the respondent	Question	Answer
		be exercised. The phrase in Article 15(2)(b) referring to "appointed one or more beneficiaries from amongst the objects of power" is therefore incorrect and should be corrected. Furthermore, in trust law, "appointment" is not the correct term to refer to the distribution of a benefit to a beneficiary. The term 'appointment' refers to the exercise of a power of appointment over property, not to the designation of beneficiaries themselves. Where individuals are added as beneficiaries (from amongst objects of a power), it is typically via a power of addition. If a class of discretionary beneficiaries already exists, no appointment is necessary - the trustee simply exercises discretion to make a distribution. Ambiguity in drafting Clarification is required as to what constitutes "sufficient information" regarding trustee discretion. Given the confidential nature in trusty law of trustee deliberations (since otherwise it would be impossible for a trustee to administer a trust as the trustee would risk being second guessed constantly), reliance on a trustee declaration confirming the existence and exercise (or non-exercise) of discretion should be deemed sufficient, particularly where the trustee is regulated. Similarly, the term "relevant documents" in Article 14(1)(b) is vague and should be replaced with a more precise description of acceptable documentation. Clarification on foundations and legal arrangements While the AMLR refers to foundations under "similar legal entities or arrangements", it would be preferable to

Name of the respondent	Question	Answer
		explicitly reference foundations throughout the RTS to avoid uncertainty.
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	18
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	The opening sentence of Art 18 is qualified by the phrase "where necessary". This appears to reflect the approach set out in Recital 13, which indicates that the info under Art 18 should be collected only where the obliged entity requires further info to satisfy itself as to the purpose and intended nature of the business relationship or occasional transaction. On this basis, it could be interpreted that Article 18 is not intended to apply where the obliged entity already holds sufficient info. However, in the absence of clearly defined minimum standards for assessing the purpose and intended nature of the business relationship - a core AML/CFT concept - there is a risk that obliged entities will apply differing interpretations of the requirement. This may ultimately undermine the objective of harmonisation, leading to divergent practices across the Union. To ensure consistency and a level playing field, we therefore consider that the elements set out in Art 18(a)(i) to (iv) should be regarded as baseline requirements, with obliged entities required to obtain at least one of the information sets provided therein in all cases. We also refer in this regard to our comments on Recital 13. Furthermore, we note that the information listed under points (i) to (iv) may not be equally applicable to all categories of obliged entities. We therefore recommend that the opening wording be further qualified to reflect that certain datapoints may not be relevant in all cases,

Name of the respondent	Question	Answer
		depending on the nature of the obliged entity and the services provided. We propose the following : “For the purposes of Article 20(1), point (c) and Article 25 of Regulation (EU) 2024/1624, obliged entities shall obtain, as applicable:....” Furthermore, with regard to Article 18(c), the list of “source of funds” categories appears non-exhaustive in nature and captures only a limited range of possible sources. However, by requiring obliged entities to obtain “at least one of the following information”, the drafting may in practice restrict the types of source of funds that can be appropriately identified and recorded. By way of example, activities such as crypto mining would not necessarily fall within any of the categories listed under points (i) to (viii) of subparagraph (c). As a result, legitimate and relevant sources of funds risk being excluded from consideration. We therefore suggest that the list should be expressly framed as non-exhaustive, with the emphasis placed on understanding and evidencing the legitimate origin of funds rather than fitting them into a predefined set of categories. In addition, the reference in the opening sentence to “through which the customers funds were transferred” is unclear. While points (i) to (viii) appear to relate to sources of funds, the inclusion of the phrase “and” suggests that a separate and additional requirement may be intended. It is not evident what is meant by this second limb, nor how it is expected to be applied in practice. Further clarification is therefore needed to ensure consistent interpretation and to support the harmonisation objectives pursued by AMLA. With respect to the 4th subparagraph of Article 18, reference is

Name of the respondent	Question	Answer
		made to the “destination of funds” and to whether the recipient is the intended beneficiary or acting as an intermediary. While this distinction is relevant, the provision does not specify what additional steps are required where the recipient acts as an intermediary. Further guidance would therefore be necessary to ensure that the requirement is operationally effective and consistently applied. In this regard, we propose the following: “(iii) whether the recipient of funds is the intended beneficiary of the transferred funds, or acting as intermediary for the beneficiary, and in the latter case, understanding the identity of the beneficiary thereby ensuring that the obliged entity understands the flow of funds to the beneficiary.” Lastly, with regard to the 4th paragraph of Article 18, several of the datapoints listed under point (e) appear relevant for the purpose of building a comprehensive customer business profile. However, the requirement that obliged entities obtain “at least one” of the listed datapoints may, in practice, unduly limit the depth of analysis undertaken when establishing the customer’s business activity or occupation. For example, both the industry in which the customer operates and whether that activity is regulated are key factors in assessing the overall business and risk profile. While we understand that points (i) to (viii) are intended to capture aspects of the customer’s business activity or occupation, the current list appears restrictive and may not fully reflect the range of information necessary for a meaningful assessment.
Chamber of Advocates	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')20	19

Name of the respondent	Question	Answer
Chamber of Advocates	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	Article 19 requires obliged entities to determine whether, inter alia, persons on whose behalf or for whose benefit a transaction is carried out are politically exposed persons (PEPs), or are family members or close associates of PEPs. The only explicit derogation from this obligation is currently set out in Article 44 of Regulation (EU) 2024/1624. In our view, this exemption should be broadened to also cover situations where an obliged entity is performing due diligence on another obliged entity acting on behalf of an underlying customer who may fall within the definition of a PEP, or be a family member or close associate thereof. In such cases, where the obliged entity is already able to apply the measures under Article 17 in respect of the customer relationship, the imposition of additional, duplicative checks on underlying persons does not appear necessary from a risk-based perspective. Accordingly, we consider that where appropriate reliance can be placed on Article 17 measures, no further PEP- specific checks should be required in respect of underlying customers in an indirect relationship context. We propose the following wording: “(a) With the exception of the situations referred to in Article 44 of Regulation (EU) 2024/1624 and Article 17 of this Regulation, before the establishment of the business relationship or the carrying out of the occasional transaction, if the customer, the beneficial owner of the customer and, where relevant, the person on whose behalf or for the benefit of whom a transaction or activity is being carried out, is a politically exposed person, a family member, or person known to be a close associate; and...”

Chamber of Advocates	Do you have any comments on the Annex in the draft RTS?	Yes
Chamber of Advocates	Please share your comments below.	Accompanying Documents, page 35 – Policy Issue 1: Applicability and Proportionality to the Financial and Non-Financial Sectors From the perspective of the non-financial sector, we believe that a dedicated RTS specifically tailored to non-financial obliged entities would more appropriately reflect operational realities and support the principle of proportionality, without diminishing the effectiveness of the AML/CFT framework. Although the core CDD obligations established under Regulation (EU) 2024/1624 apply across all sectors, the way in which those obligations are implemented in practice differs considerably. Financial institutions generally operate transaction-driven business models supported by sophisticated automated systems and established compliance infrastructures. Non-financial obliged entities - such as TCSPs, legal professionals, tax advisers, accountants, auditors and real estate agents - often operate on an advisory, transactional or project-specific basis, rely more heavily on professional judgement and may have limited visibility over customer transactions or limited influence over third parties connected to the customer relationship. Against this background, a single set of horizontally drafted RTS, even where formally grounded in a risk-based approach,

Name of the respondent	Question	Answer
		may still create uncertainty in interpretation, disproportionate compliance obligations and inconsistent supervisory expectations for non-financial obliged entities, particularly for smaller firms and sectors newly brought within scope. A standalone RTS for non-financial obliged entities could maintain consistent AML/CFT standards across the Union while allowing obligations to be calibrated in a manner that better reflects the operational realities and limitations of non-financial business models. This would improve legal certainty, enhance proportionality, and reduce the need for extensive interpretative guidance. We therefore encourage AMLA to consider whether a separate regulatory framework for non-financial obliged entities - either through amendments to the current RTS or through a future initiative - would provide a more balanced approach between harmonisation and practical proportionality, while preserving a strong and consistent AML/CFT regime across the Union.
Chamber of Advocates	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
CHAMBRE NATIONALE DES CONSEILS EXPERTS FINANCIERS	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? La proportionnalité doit être réelle, vérifiable et adaptée aux intermédiaires financiers, pas seulement proclamée dans les considérants.

Name of the respondent	Question	Answer
		Coût de conformité disproportionné au regard de l'exposition du professionnel au risque. En effet, les obligations relatives au filtrage en matière de gel des avoirs relèvent d'une obligation de résultat. Le dispositif qui doit être mis en œuvre par l'intermédiaire (CIF par exemple) risque donc d'être très coûteux si la sanction potentielle conduit à envisager un investissement dans un système de filtrage automatique. Les coûts sont non négligeables. L'obligation de résultat attachée à la lutte contre le blanchiment et le financement du terrorisme crée une obligation quasi systématique/inévitable de se doter un système automatisé. L'obligation qui découle de cette disposition complexifie inutilement les obligations des professionnels qui n'entrent pas en possession des fonds et qui agissent exclusivement en qualité d'intermédiaire sans détention d'actifs. Ce constat est renforcé par le fait que, en tout état de cause, l'établissement financier partenaire pour lequel l'intermédiaire agit réalise lui-même le filtrage, du fait des moyens plus importants (et donc souvent plus efficaces) dont il dispose pour ce faire et du fait qu'il manipule les fonds (il en est le destinataire). Proposition de rédaction : "Article 29 — Filtrage des clients et des bénéficiaires effectifs Les entités assujetties, à l'exception des entités assujetties qui n'entrent pas en possession des fonds ou autres avoirs et qui agissent exclusivement en qualité d'intermédiaire sans détention d'actifs doivent établir si leurs clients, les

Chartered Accountants Ireland	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	There will be challenges for the non financial sector due to the horizontal nature of the RTS and given it is not sector specific .For details of specific measures that may pose operational challenges for obliged entities in the accounting and audit sector, please refer to the following details: • Documents obtained have not been forged or tampered with (Article 6(3)): Further clarity and guidance is required on the reasonable steps that should be taken to ensure all documents obtained are authentic and have not been forged or tampered with, particularly in cases where remote/electronic identification solutions are not being used. We suggest AMLA outlines what checks obliged entities should perform to identify forged/tampered documentation. For example, should resources such as the Public Register of Authentic identity and travel Documents Online (PRADO) be used by obliged entities to perform such checks? This measure may pose operational challenges for obliged entities, particularly smaller entities in the non-financial sector that may not have the resources to implement sophisticated authentication or detection tools to check for forged or tampered documents. Wording to reflect use of a risk-based approach should be added to this article that such checks are performed in situations of elevated risk for forgery and tampering. Further clarity is also needed regarding what forgery/tampering checks should be performed for certified

Name of the respondent	Question	Answer
		documents. Many obliged entities particularly in the accounting and audit sector rely on this documentation for CDD purposes. They often receive scanned copies of certified documents and may not always see the original document. A similar case can also arise with documents used to support proof of address with customers/clients often providing an online printout of a utility bill. Again, clarity is needed regarding what authentication checks should be performed on such documentation to confirm the documents are genuine. • Remote solutions (Article 7(3(a))): It would be helpful to provide examples in the draft RTS regarding what are considered acceptable remote solutions as an alternative to eiDAS tools (for example certified video identification and verification which includes biometric and liveness checks). This is particularly relevant for smaller obliged entities, which may not have the funds and resources to implement extensive electronic verification tools but would need clarity regarding what is considered an acceptable remote solution. • Measures and documentation to support source of funds and destination of funds (Article 18 – particularly part (b), part (d)): The requirements listed in this article may not always be relevant for obliged entities in the professional services sector particularly accountants and/or audit firms. The measures included in this article are more relevant for obliged entities in the financial sector, which process transactions. While it is important for accountants and auditors to understand source of funds in the context of providing professional services, this is usually performed as part of obtaining an overall understanding of the customer/client, rather than focusing on

Name of the respondent	Question	Answer
		understanding of transactions. We suggest wording is amended in Article 18 to include flexibility by adding 'where relevant' to the draft RTS wording to support proportionate and practical application across all sectors. We also suggest that clarity is provided in Article 18 to confirm how obliged entities can collect information related to purpose and intended nature of a business relationship for example, can this information be collected via customer responses to self-declared questions or is there a need to collect supporting evidence and documentation from the customer. It would be helpful if further clarity can be added to Article 18 to explain if obliged entities can rely on information already available within the group (if the obliged entity operates in a group situation). • Information on the reasons for the intended or performed transactions and their consistency with the business relationship (Article 28): The requirements listed in this article are focused on 'transactions' and may not always be relevant for the professional services sector particularly accountants and/or audit firms. The measures included in this article are more relevant for obliged entities in the financial sector, which process transactions. Further flexibility is needed in this article for the non-financial sector (adding wording 'where relevant' to this article) or alternatively including sector-specific requirements for the professional services sector in this article to confirm how such requirements should be managed where services are provided rather than transactions being processed. This is to support practical implementation of these measures in the non-

Name of the respondent	Question	Answer
		financial sector and to reduce operational burden.
Chartered Accountants Ireland	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Chartered Accountants Ireland supports AMLA's risk-based approach for CDD as outlined in Article 1 of the draft RTS. However certain requirements included in the draft RTS are quite prescriptive and lack flexibility, which will impact on the implementation of a risk-based approach by obliged entities, consideration of sector specific risks, and the exercise of professional judgement. The following instances are highlighted for AMLA's consideration: Specification on the provision of place of birth (Article 4): Further flexibility is needed in the article wording to ensure a risk-based and proportionate approach for obliged entities. We suggest that obliged entities should be asked to either obtain details of the place of birth or country of birth depending on what is included on the identification document as such details can differ depending on the identity document provided by the customer. Requirement to collect details of all nationalities (Article 5): This requirement does not allow for the application of a risk-based approach given it requires information to be collected on all nationalities. Wording to convey flexibility in application of this requirement should be included in this article. We perceive a discrepancy with wording currently included in this article versus wording in Recital 3 of the draft RTS, which seems to require verification (rather than information) of one nationality only and we request this is clarified in Article 5 and

Name of the respondent	Question	Answer
		that wording of the article is updated to align with Recital 3. Collecting information regarding all senior managing officials (SMOs) consistent with what is collected for beneficial owners (BOs) (Article 13): This requirement could be considered disproportionate, and it does not necessarily allow for a risk-based approach particularly in relation to the verification of SMO identity . There will be more SMOs than BOs, but they may not pose the same level of risk as BOs. We suggest that wording is updated to reflect that information is collected for a cohort of SMOs only i.e. those that are deemed significant using a risk-based approach (for example the CEO, CFO, certain executive Board members). A similar approach should also be considered for simplified due diligence measures related to SMOs (Article 21) again with the focus on those SMOs that are deemed more significant using a risk-based approach. Complex structure (Article 12): We suggest wording regarding the use of a risk-based approach is added to Article 12 in the context of a complex structure. This would enable obliged entities to consider other factors beyond 'three or more layers between the customer and the beneficial owner' and removing the need to consider point (a) as there is lack of clarity about what is meant in terms of a 'foundation' – differences in the meaning of foundation could arise across jurisdictions. In

Name of the respondent	Question	Answer
		addition, we suggest adding 'high risk' jurisdictions outside of the EU to point (b), which would emphasise the risk-based approach for obliged entities. If risk-based approach considerations are not added to this article, there is a risk that standard holding company structures (many of which are serviced by accountants and auditors) may result in being deemed complex (unnecessarily) and requiring additional CDD requirements, which may inhibit a risk-based approach being used. Screening requirements (Article 30(c) (iii)): The need to perform regular screening in cases where there is a significant change in due diligence data (per 30(c)(iii) should be further clarified in the draft RTS to ensure a risk-based approach can be used. For accountants and auditors, clients are often subject to changes in business operations as part of continual business development and growth, but all such changes may not warrant additional sanction screening. It would be helpful if the article wording clarified that such changes should be risk-assessed and obliged entities should determine if there is an impact on how the obliged entity would treat the client from a sanction screening perspective. We suggest further flexibility is added to the wording of this measure to allow a more risk-based approach.
Chartered Accountants Ireland	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an	Certain concerns exist regarding data collection obligations noted in the draft RTS, which may pose challenges for obliged entities, particularly those in the non-financial sector. This includes the following:

Name of the respondent	Question	Answer
	alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Information regarding multiple nationalities (Article 5), information regarding place of birth including country name (Article 4) and information regarding all SMOs (Article 13) may pose challenges for obliged entities including operational and system challenges to capture and verify this information. A risk-based approach (as noted in our response to question 2 above) should be considered when it comes to collecting and verifying customer information particularly information regarding nationalities, place of birth, and SMOs details. Further clarity and examples are needed in Article 6(2) regarding collecting other identity documents in cases where a passport or a document that meets the requirements per Article 6 (1) is not available. Clarity regarding what other documentation could suffice is needed here particularly in relation to documentation that does not include facial images. Examples and further guidance would be helpful for obliged entities when implementing these CDD measures (similar to the example given in Recital 7 albeit not an operative part of the RTS in the case of minors where a birth certificate would be appropriate to use for identification and verification purposes). Article 10 regarding reasonable measures for verifying beneficial owners by consulting registers (other than the central register) may pose challenges in certain jurisdictions including Ireland. The example registers included in the RTS regarding residence register, tax register, passport database,

Name of the respondent	Question	Answer
		and the land register will not be possible to use in Ireland given either the non-existence of most of these registers or the access restrictions to such registers due to data protection regulations or jurisdictional restrictions in other countries. Further solutions and alternative registers should be included in the RTS to ensure flexibility for obliged entities when performing beneficial ownership checks. Alternatively, wording could be added to this article to provide the option for obliged entities to use 'available public registers.' We also suggest that wording per Recital 8 is included in this article to clarify that the 'consultation of central registers for information on beneficial owners is necessary but not sufficient to fulfil the verification requirements'. In addition, issues can also arise with the reliability of information in public registers as information is not always up to date, which can result in practical challenges when using such registers. We suggest that Article 10(a) is updated to include guidance on alternative verification measures in situations where there is a contradiction between the information in the public register and verification information obtained from other sources. Article 30 (a) regarding screening requirements will pose challenges for the non-financial sector particularly for smaller obliged entities using a manual screening process. Challenges will arise in relation to the need to use transliteration of names,

Name of the respondent	Question	Answer
		and the need to screen aliases or trade names where they differ to the registered name as such information may also not always be available to the obliged entities. In addition, the availability of information related to digital wallet addresses may also pose challenges. It would be helpful for AMLA to clarify how entities are expected to obtain this information beyond what has already been obtained through CDD activities to perform screening. This should reflect at a minimum screening customer information obtained during CDD versus relevant lists of targeted financial sanctions in addition to using resources available such as the EU Sanctions Helpdesk. For obliged entities using existing automated screening tools, such tools will need to be reviewed against the updated requirements in this article to ensure ongoing compliance when the RTS enters into force. It would be helpful to add this context to the article wording. In general, we also suggest that clarifications are provided throughout the RTS outlining where it is possible that obliged entities can leverage collection of responses to self-declared questions via enquiry with customers and/or open source search to support CDD. This includes gathering information regarding nationalities (Article 5) or gathering information to support identification of the purpose and intended nature of a business relationship or occasional transaction (Article 18 and Article 26).
Chartered Accountants Ireland	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	We suggest that the following additional details should be added to the simplified due diligence measures:

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	• Article 20 and 21 measures lack elements of proportionality and a risk-based approach, which will result in challenges for obliged entities. These measures do not reflect ability to rely on information collected elsewhere within the obliged entity's group. • In addition, measures included in Article 21 appear to be moving away from a simplified due diligence approach given obliged entities will need to identify all SMOs. This could inhibit use of a risk based approach in situations where clients which are assessed as low risk under current AML requirements, they will now need to be updated (per Article 33 – when the RTS enters into force) for additional information. This may pose challenges and result in significant costs for obliged entities and their customers/clients, particularly in cases for clients where company Boards change frequently. It will effectively result in these customers/clients going through a higher standard of customer due diligence in the future than what is performed under current requirements. We suggest further proportionality and flexibility wording should be added to Article 21 and to Article 33 (in the context of updating simplified due diligence documentation in the future to comply with new requirements). • We also recommend a clearer indication in the simplified due diligence articles (Article 20 and Article 21) that if customer information is already available within the obliged entity's group, that this can be used and relied upon for performing simplified due diligence. This would support the principle of proportionality outlined in Article 1.

Name of the respondent	Question	Answer
Chartered Accountants Ireland	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	The following additional observations are also noted regarding the draft RTS: Face-to-face (Article 6(6) and non-face-to-face (Article 7(1)): We suggest that a definition of what is meant by face-to-face and non-face-to-face should be included in the operative part of the RTS. For example, face to face is considered to occur in-person, meaning the parties are in the same physical location. Non-face-to-face interactions are considered to occur remotely - meaning that the parties are not in the same physical location. Verification measures conducted on a non-face-to-face basis (Article 7(1)): We perceive there is a discrepancy between Article 7(1), which refers to electronic identification meeting the requirements of Regulation 910/2014 and Article 32, which refers to an Annex with a list of attributes to fulfil the requirements of the AML Regulation (2024/1624). There must be an alignment between 7(1) and Article 32. In addition, it must be clear how the list of attributes in Annex 1, required for electronic identification under the RTS, measure against the minimum list of attributes in Regulation (EU) No 910/2014 as amended by Regulation (EU) 2024/1183 (eiDAS 2.0). Annex VI of Regulation 910/2014 (as amended) provides a minimum list of attributes, which are different from attributes included in the AML Regulation or the draft RTS. It seems there are more attributes to verify under the AML Regulation. It is confusing and unhelpful then to refer to eiDAS, which seems to be different to the AML Regulation. It would also be helpful to

Name of the respondent	Question	Answer
		explain the differences between (1) electronic identification means (2) qualified trust services and (3) remote solutions. Reliable and independent sources of information (Article 8): It would be helpful if further clarity can be provided regarding this requirement in terms of how obliged entities would implement it. For example, would it suffice for obliged entities to have an overall framework regarding reliable/independent sources of information (which would promote a proportionate approach) or must this requirement be documented for each CDD case and included on each client's record? Identification and verification of beneficiaries of trusts and similar legal entities or arrangements (Article 14(2)): We suggest that further clarity and examples are added to explain what is meant by 'timely updates, including on specific material events'. It would be helpful for obliged entities to understand

Name of the respondent	Question	Answer
		what type of event constitutes a material event for example an obligation triggered to notify the obliged entity on the vesting of an interest. Information in relation to the business activity or the occupation of the customer (Article 18 (e) (viii)): It would be helpful to define stakeholders or to provide some examples of stakeholders that should be considered here. Enhanced Due Diligence measures - Additional information on the customer and the beneficial owners (Article 25): We suggest that this article is supplemented by additional guidance providing examples on how obliged entities should collect additional information for example via open source search, reviewing information from other teams in the obliged entity, group information (stored by another entity, which is part of the obliged entity's group). Entry into force (Article 33): The update of CDD information for existing high risk customers to comply with AMLR and the RTS requirements may pose challenges for smaller obliged entities

Name of the respondent	Question	Answer
		given the short timeframe. Such obliged entities may not have significant resources to collect information not previously required for example details regarding a customer's nationalities, details regarding SMOs, or place of birth (as not included on all passports). We suggest AMLA considers adding a proportionality statement ('depending on nature, size, and complexity of the obliged entity') to this article to provide flexibility to smaller obliged entities in terms of the timelines for complying with the update of high risk customer documentation post entry into force of the RTS and the potential to provide more time to do this beyond one year.
Chartered Accountants Ireland	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Chartered Accountants Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	2
Chartered Accountants Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Article 2(ii) Trade name : Additional clarity is needed regarding what is meant by 'trade name'. It would be helpful if 'trade name' was defined in the RTS.
Chartered Accountants Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Chartered Accountants Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Article 6 (4)Documents in a foreign language. Further clarity is needed regarding how obliged entities should ensure they understand the content of documents in a foreign language. Is there an expectation that obliged entities should hire translation services or would publicly available translation tools

Name of the respondent	Question	Answer
		suffice in such cases? This measure may pose challenges for obliged entities, particularly smaller entities in the non-financial sector that may not have the resources to pay for formal translation services. Article 6(5) Details regarding certified copy (Article 6 (5)), certified by persons authorised for document certification purposes (Article 10(b)(iv)), and certified independent professionals (Article 27(d)): Further clarity and definitions are needed in this area across the various articles referenced above in addition to inclusion in Recital 5. This includes clarity and a definition regarding who can be a certified independent professional. We suggest that a certified independent professional should be a reputable independent source such as a solicitor, accountant, or notary public. We suggest that a certified copy referred to in Article 6 should be one certified by this certified independent professional. Additional clarity and updated wording are needed throughout Articles 6(5), Article 10(b)(iv), and Article 27(d), regarding the area of certification of documentation by independent professionals. Article 6(6) Electronic identification in face-to-face context (Article 6(6)): Further clarity is needed regarding cases where electronic identification could be used in a face-to-face situation. Does this mean that automated or electronic solutions other than eiDAS (for example certified video identification and verification which includes biometric and liveness checks) could

Name of the respondent	Question	Answer
		also be used in such cases if the electronic identification tool (eiDAS) is not used by the obliged entity? Further clarity is also needed to explain when electronic identification in a face-to-face situation could be used. The wording 'where they are available' is not clear in the article wording. For example, will it be appropriate for obliged entities to continue using face-to-face verification and to only use electronic identification for non-face-to-face if they choose to do so.
Chartered Accountants Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	7

Chartered Accountants Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	article 16 Requirements for verifying the existence and scope of power of representation (Article 16): Further clarity and guidance are needed regarding information and documentation, which could be used to verify the existence and scope of the power of representation for example adding details if obtaining power of attorney documentation would suffice in this situation. There are also cost implications to implementing the verification process related to powers of representation, which could be significant for smaller obliged entities, particularly in the non-financial sector.
Chartered Accountants Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	22
Chartered Accountants Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Article 22 Sectoral simplified measures with respect to pooled accounts (Article 22): Accountancy firms may have pooled client accounts and may therefore be an account holder referred to in Article 22. It would be useful to obtain further clarification as to how a financial institution will satisfy itself that the account holder “applies robust and risk-sensitive CDD measures on its clients and the clients' beneficial owners" given this will have a

Name of the respondent	Question	Answer
		direct impact on accountancy firms who hold client monies and who open accounts with a credit institution in such cases.
Chartered Accountants Ireland	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	27
Chartered Accountants Ireland	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Article 27(b) regarding additional information on source of funds and source of wealth of the customer and of the beneficial owners, We would be glad of further clarity on information that can be relied upon for source of funds and source of wealth particularly in the case of the non-financial sector including accountants and auditors. Regarding the use of audited accounts (Article 27(b)) by auditors, there is the potential for a self-review risk to the robustness of the CDD process if an auditor seeking to identify the company or its participators relies on financial statements audited by themselves. Article 27(g), Further clarity and guidance or definitions are needed regarding what is meant by various terminology used including reputable credit agencies, comparable reputable data service providers, reputable media publications, and reputable commercially available service providers that can be relied upon for CDD purposes. This is particularly pertinent in a global information environment, which is increasingly vulnerable to misinformation and disinformation and without additional guidance, challenges may arise for obliged entities to identify the appropriate third-parties to use.

Name of the respondent	Question	Answer
Chartered Accountants Ireland	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Chartered Accountants Ireland	Please specify which recital you refer to, and share your comments below.	Identification and verification of legal entities and arrangements, discretionary trusts, and the exercise of discretion can be complex. Obliged entities may incur legal costs (which could be substantial) of advice or possible legal opinions to be satisfied that their CDD is correct and complete particularly smaller obliged entities in the non-financial sector. We are concerned about possible substantial costs in relation to information and verification of powers of representation (Article 16) and the new requirement on non-face-to-face verification (Article 7).Perhaps the possible additional burden of these costs could be acknowledged in the Recitals .
Chartered Accountants Ireland	Do you have any comments on the Annex in the draft RTS?	No
Chartered Accountants Ireland	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Christie's International plc	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We believe that further clarification in the RTS on specific points relevant to the cultural goods sector will make application of these provisions more effective and proportionate. TIMING OF VERIFICATION Article 23 of Regulation 2024/1624 requires CDD to be carried out before an occasional transaction, but provides no specific guidance for the cultural or high-value goods sectors, creating a risk of inconsistent interpretation across Member States.

Name of the respondent	Question	Answer
		In practice, it is not always possible to conduct CDD before a transaction is initiated, particularly in art fairs or auctions where buyers may act quickly. For example, auctions will often have hundreds of bidders, many who register in the 24 hours (and sometimes within the hour) before the auction starts. Similarly art fair visitors will make a spontaneous decision to purchase from an art dealer when attending the fair. The RTS should clarify that for obliged entities in the cultural goods sector, CDD must be completed before the transaction is finalised—i.e. before the transfer of ownership or release of the goods. Christie's supports the new Article proposed by CINOA in its response to this consultation: Proposed new Article – Timing of the verification of the customer and beneficial owner identity "In the case of transactions involving cultural goods and high-value goods in order to comply with the timing requirements pursuant to Article 23(1) of Regulation (EU) 2024/1624, obliged entities shall be permitted to agree to a transaction before complying with the verification of the identity of the customer, the beneficial owner, and of any persons pursuant to Article 20(1), points (h) and (i) of Regulation (EU) 2024/1624, but shall have completed this verification before conclusion of the transaction and before the goods are in the possession of the customer." IDENTIFICATION OF THE BENEFICIAL OWNER It is normal art market practice for several professional intermediaries to be involved in a chain between the seller and

Name of the respondent	Question	Answer
		the buyer of a piece of art or other cultural good. Art dealers and advisors are a significant and important sector of the market and their use by clients is common to ensure the client gets the best deal. Client relationships are closely guarded by dealers and advisors, given their commercial value. Take the following example of a chain: The owner of a work of art takes it to a dealer. The dealer consigns it to an auction house as the auction house's seller of record, but is acting on the owner's behalf. The auction house sells to a buyer who is an art advisor. The art advisor is the auction house's buyer of record but acting as agent for the end buyer. In this transaction there will be 3 obliged entities (the dealer acting for the seller, the auction house, and the art advisor acting for the buyer). If each obliged entity must identify the beneficial owner of the property being sold and the source of funds, that is significant duplication. It is also contrary to market practice where a seller would not expect their identity to be known to a buyer, and a buyer would not expect their identity to be known to the seller. Dealers and advisors are in practice reluctant to disclose their client's identities to auction houses and other intermediaries out of concern that the recipient of the information will in future cut them out of the chain and deal with their client directly. As currently drafted the client due diligence provisions give no guidance on the extent to which any of the obliged entities in the chain must identify all "beneficial owners", leading to lack of clarity for all parties on their obligations.

Name of the respondent	Question	Answer
		Recommendation The UK art market has addressed this situation in an elegant way with clarification that each obliged entity is only required to do due diligence on the obliged entity next to them in the chain. The next obliged entity is responsible for the due diligence on their end client. Christie's proposes that there is similar guidance in the RTS such that if an obliged entity that is an intermediary in the sale of cultural goods receives payment for the item from, or makes payment for the item to, another obliged entity, that second obliged entity is considered the first obliged entity's customer for due diligence purposes. Disclosure of the second obliged entity's end customer to the first obliged entity is not required.
Christie's International plc	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	A more effective approach could be achieved with further clarification on the application of Simplified Due Diligence. The measures set out in Section 5 of the RTS (and in particular Articles 20, 21 and 24) which permit a lighter touch when verifying the beneficial owner, or the purpose and intended nature of the transaction are far more suitable for the art market than the provisions set out in Article 10, 11 and 18. For example, the inability to rely on central registers for beneficial ownership identification for standard due diligence is disproportionate. There are no obvious other public registers available to the art market, and most credit agencies and data service providers themselves pull data from central public registers. While asking lawyers or accountants to certify a company's beneficial ownership registers may be appropriate

Name of the respondent	Question	Answer
		for situations of high risk, this is not a practical measure or proportionate to the risk posed by most standard risk corporate clients. In our opinion the simplified due diligence measures adequately address the risk posed by most art market clients, who will typically be engaging in occasional transactions rather than a business relationship. At the moment it is not clear to what extent the factors listed in Annex II of Regulation 2024/1624 must be met in order for a client to be low risk, enabling the application of simplified due diligence. Does the client or transaction have to be low risk in relation to ALL of these Annex II categories (for example, have a low risk geographic factor, a low risk product/service factor, a low risk client type factor)? Guidance in the RTS on this point would be useful. Recommendation: We support the amendment proposed by CINOA in its response to this consultation: "In determining whether a low degree of ML/TF risk exists in accordance with Article 33 of Regulation (EU) 2024/1624, obliged entities trading in cultural goods shall be able to take into account the following factors, in addition to the factors listed in Annex II of the Regulation: (a) a low level of risk associated with the customer; (b) lower value transactions; (c) transactions that demonstrate no complexity and are consistent with usual market practices in the sector; (d) the customer is established or resident in a jurisdiction

Name of the respondent	Question	Answer
		assessed as presenting a low level of money laundering and terrorist financing risk; and (e) transactions where funds are channelled through accounts held with credit or financial institutions subject to EEA supervision."
Christie's International plc	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We would highlight two areas of concern VERIFICATION MEASURES CONDUCTED ON A NON FACE TO FACE BASIS (Article 7 of RTS) We understand that the RTS intends to distinguish between ID verification for face to face transactions (as set out in Article 6(5)) and ID verification for non face to face situations as set out in Article 7. For auction houses, a relatively small proportion of clients attend auctions to bid in person, so most client onboarding will involve non face to face verification. For hundreds of bidders who may be based all around the world, who may register to bid remotely in the 24 hours prior to an auction, it will rarely be possible to obtain certified copies of ID documents. Some clients may have digital IDs but most will not (at least currently). The level of research and investment in eIDAS will not be feasible for the art market (in the same way as it may be for a large financial institution). Christie's agrees that some safeguards (similar to those described in Article 7 (3) of the RTS) are required to ensure (i) inauthentic documents are not used, (ii) real documents are not used by persons other than their owner and (iii) that transmission is secure. These

Name of the respondent	Question	Answer
		safeguards should be sufficient and proportionate for the vast majority of art market transactions but, given the clear preference for eIDAS methods expressed in Article 7(1) and 7(4) of the RTS, Christie's is concerned that individual obliged entities may struggle to convince supervisors that this is a proportionate approach. SOURCE OF FUNDS -Article 18 (c)(i)-(vii) of RTS Requiring art professionals to obtain and assess at least one of these categories in order to understand both (i) the activity that generated the funds and (ii) the means through which the customer's funds were transferred is, in practice, not workable in the art market. Art market participants typically operate on a transactional, non-continuous basis, engaging with customers on a one-off or occasional basis (e.g. galleries, art fairs, or auctions). In this context, requesting detailed information on a customer's revenue or income sources, such as employment, business income, or investments can be both practically unfeasible and often perceived as intrusive or inappropriate within the cultural and commercial norms of buying a 'consumer' good without wanting or needing financing. Customers are thus usually unwilling to disclose such sensitive personal and financial information to non-financial obliged entities. However, most traders will be in a position to assess the likelihood of a customer having the funds by considering their profession or status. With regard to the means through which funds are transferred,

Name of the respondent	Question	Answer
		art professionals typically rely on payments processed through regulated financial institutions, which are subject to comprehensive AML/CTF obligations, including customer due diligence and transaction monitoring. Art professionals do not have visibility over the underlying funding chain, intermediary accounts, or the origin of funds prior to their arrival, and are therefore not in a position to independently assess or validate the transfer pathway. Requiring them to do so would duplicate controls already performed within the regulated financial sector without adding meaningful AML value. These challenges are further compounded by the speed and unpredictability of transactions, at auctions and at art fairs. Proposed amendment: We support the amendment proposed by CINOA in its response to this consultation: "ix. consistency with the known profile of the customer, including the nature and scale of their expected economic activity, provided that payments are executed through credit institutions or financial institutions that are subject to Union law or equivalent anti-money laundering and counter-terrorist financing requirements and no factors have been identified giving rise to suspicion or heightened risk in relation to the customer, the transaction, or the source of funds"
Christie's International plc	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide	PROPOSED SDD MEASURE 1 — Transactions with other regulated art market obliged entities Art market participants commonly transact with other regulated art market obliged entities (see our answer to question 1) which poses a materially lower ML/TF risk.

Name of the respondent	Question	Answer
	concrete drafting proposals and rationale for the specific measures you would propose.	However there is no express SDD provision for regulated non-financial sector obliged entities transacting with one another. This creates a degree of regulatory uncertainty for art market participants who seek to apply a proportionate, risk-based approach to such transactions.. Christie's respectfully requests that the RTS expressly extend the SDD framework to transactions where the customer is a non-financial sector obliged entity listed in Article 3 of the AMLR, that is subject to AML supervision by a competent authority in an EU Member State and transacting in the course of their day to day regulated activity. Proposed drafting: "Simplified due diligence may be applied where the customer is an obliged entity within the meaning of Article 3 of Regulation (EU) 2024/1624, other than a credit institution or financial institution, that is subject to AML supervision by a competent authority in an EU Member State (or in a third country having effective AML/CFT systems) and is transacting in the course of its regulated activity, provided that the obliged entity has verified the customer's regulated status and documented the basis for applying simplified due diligence." PROPOSED SDD MEASURE 2 — Long-standing clients with established clean records Where an obliged entity has maintained an active CDD file for a client for three or more years, has conducted multiple transactions with that client without any ML/TF concern arising, and has updated CDD in accordance with its risk-based review cycle, the RTS should permit a lighter-touch CDD refresh

Name of the respondent	Question	Answer
		— confirmation that existing information remains accurate and complete — rather than a full re-verification. This is consistent with the risk-based approach but currently lacks sufficient legal certainty in the draft RTS. PROPOSED SDD MEASURE 3 — Public institutions and national museums Transactions with EU public bodies, national museums, publicly funded cultural institutions, regional and local government bodies and similar public entities represent a negligible ML/TF risk. These institutions are subject to public law transparency and accountability obligations that far exceed private sector AML standards. The RTS should expressly include public cultural institutions within the SDD categories. Proposed drafting: "Simplified due diligence may be applied where the customer is a public body, national museum, or publicly funded cultural institution established under the law of an EU Member State and acting in the exercise of its public mandate."
Christie's International plc	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	We would make the following observations: In the drive for simplification, much of the sector specific detail that would really assist non-financial sector obliged entities has been lost. This is a shame and has led to guidance which is acceptable to the financial institution sector but may be unworkable, disproportionate and incur significant costs for other sectors, many of whom may have a high proportion of obliged entities consisting of sole proprietors or micro businesses.

Name of the respondent	Question	Answer
		Given that these provisions will become directly applicable to all EU obliged entities, and may be inconsistent with (i) prior more helpful sector specific guidance at a national member state level, or (ii) approaches taken by national supervisory authorities, there will be a significant gap in understanding for some sectors. To address this, there needs to be 1) sufficient transition time for obliged entities in the non-financial sector to prepare. An implementation period of at least 18 months would be advisable when entities can work towards compliance by seeking additional legal advice, implementing new systems and controls without fear of immediate enforcement. 2) a helpline, sector-specific email address or other central resources where obliged entities who are genuinely trying to comply can seek clarification on specific points that are not addressed by the RTS guidance.
Christie's International plc	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	No
Christie's International plc	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Christie's International plc	Do you have any comments on the Annex in the draft RTS?	No

Name of the respondent	Question	Answer
Christie's International plc	How would you rate the proposals set out in the draft RTS overall?	Neutral
Christie's International plc	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Disruptive impact

	of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Christie's International plc	Please justify your answer to the previous question and provide evidence where possible.	The draft RTS, as currently drafted, would impose implementation costs that are significant and disproportionate to the ML/TF risk reduction achieved, particularly for art market participants whose compliance infrastructure — while well-established — is not resourced on the same scale as that of financial institutions. One-off costs Policy and procedure overhaul: Policies and procedures across all regulated EU entities would require comprehensive redrafting. Given the breadth of the RTS provisions — covering CDD timing, beneficial ownership verification steps, PEP governance, SDD eligibility, ongoing monitoring standards and record retention — this represents a substantial one-off commitment of senior compliance and legal resource across multiple jurisdictions and languages.

Name of the respondent	Question	Answer
		Systems development: Client onboarding, transaction monitoring and CDD management systems would require significant development to incorporate RTS-specific data fields, verification logic, escalation workflows and documentation standards. This would involve both internal IT resource and material external vendor costs, and would require extensive testing before deployment. Third-party database access: Meeting the beneficial ownership verification standards implied by the draft RTS — particularly for clients transacting through complex structures such as trusts, foundations and multi-jurisdictional holding companies — would require Christie's to procure access to additional third-party beneficial ownership and identity verification databases. These procurement and integration costs are not negligible. Recurring costs: As currently drafted, the RTS introduces a level of prescriptive, process-driven complexity around CDD that would, in practice, require significant upskilling of onboarding staff, More onboarding staff and compliance staff would ultimately be needed to assist with compliance. There would be significant ongoing external third party vendor and systems costs.
Clearstream Fund Centre S.A.	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only	Clearstream Fund Centre S.A. (hereinafter “Clearstream” or “Respondent”) is largely supportive of the objectives, structure and general principles of the draft RTS. However, Respondent raises concerns in relation to the applicability of certain provisions to the business activities of Clearstream; offering intermediated models in the investment fund industry.

Name of the respondent	Question	Answer
	to a specific sector or service should not be taken into consideration if they do not impact your sector.	Article 22 of the draft RTS is of particular relevance to Clearstream; having a direct impact on its business model. Respondent welcomes the application of simplified due diligence measures (SDD) to certain pooled accounts to enhance the operability of the model and avoid duplication of CDD measures. However, Clearstream has the following concerns and recommendations: Applicability of Article 22 to Clearstream Products & Account Structures Based on the plain reading of Article 22 - “A credit institution that opens an account in which the account holder administers the funds of its clients” - it appears to be primarily intended to capture the omnibus account structure; whereby the interests of several underlying clients are mixed or “pooled” in one account. Respondent notes, however, that there is some ambiguity as to the application of this article to the segregated account structure; whereby the interest of one underlying client is in the account. In the case of segregated accounts, although assets are held on an individual client basis, Clearstream and similar institutions still rely on intermediaries for the application of customer due diligence measures, and do not maintain a direct business relationship with the underlying clients. As a result, the same risk of duplication of controls, as highlighted in Recital (18), continues to exist. Recommendation: Clearstream recommends that the SDD measures outlined in Article 22 be explicitly confirmed as

Name of the respondent	Question	Answer
		applying equally to omnibus and segregated account structures. In this context, respondent recommends that references to “pooled” account structures be clarified or removed, to avoid any unintended interpretation that would limit the scope of the provision to omnibus accounts only.
Clearstream Fund Centre S.A.	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Clearstream raises concerns in relation to the prescriptive criteria listed in Article 22 which may hinder the effective application of a risked based approach. Article 22(b) of the Draft RTS Clearstream draws attention to the ambiguity of the term “no less robust” as it relates to the AML/CFT obligations of third countries. Clarification as to the interpretation of this term and further guidance on obliged entities’ obligations, if any, to perform such assessments is required. Recommendation: Clearstream recommends clarification in the text of RTS that the SDD measures as outlined in Article 22 may be applied (subject to the other criteria there listed) to account holders being obliged entities in third countries which, on the basis of credible sources such as mutual evaluations, detailed assessment reports or published follow-up reports, have requirements to combat money laundering and terrorist financing consistent with the revised FATF Recommendations and effectively implement those requirements. Article 22(d) of the Draft RTS Article 22(d) stipulates that the application of the SDD measures is conditional upon the business relationship in

Name of the respondent	Question	Answer
		question being low risk. Respondent emphasizes that risk assessments on the business relationship address a number of factors; including customer type risks, presence of PEPs, ownership structure, and the broader suite of services provided to the client. As a result, a business relationship may fall outside the “low risk” category due to factors that are unrelated to the client’s regulatory status or the robustness of its AML/CFT framework. In such cases, these risk factors do not materially affect the ability of Clearstream or similar institutions to rely on the customer due diligence measures applied by the account holder to its underlying clients. Respondent therefore considers that the requirement set out in Article 22(d) introduces a granular, relationship-specific constraint on the application of SDD that is not fully aligned with the objective set out in Recital (18), namely, to avoid duplication of due diligence in intermediated structures where appropriate safeguards are already in place. Recommendation: Clearstream recommend the removal of subparagraph (d) as the relevant risk considerations for the application of simplified due diligence are already adequately addressed through the cumulative conditions set out in Article 22(a)–(c) and (e). In particular, these subparagraphs ensure that the SDD measures are only applied to: - Regulated and effectively supervised obliged entities, - That ensure access to relevant information on its underlying clients upon request, - In EU member states or third countries with robust AML/CFT obligations, and

Name of the respondent	Question	Answer
		- Applying robust and risk sensitive customer due diligence measures to its clients. These criteria effectively address all relevant risk factors associated with the specific account structures and custody chains targeted in this article. By contrast, Article 22(d), in its current formulation, introduces a broad, relationship-level risk test that may be driven by factors unrelated to the account holder's AML/CFT framework or the effectiveness of its customer due diligence measures. The removal of Article 22(d) would therefore ensure that the objectives set out in Recital (18) are achieved through a set of proportionate, targeted conditions aligned to the specific risks of the product and intermediated structure, while avoiding undue restrictions on the practical application of simplified due diligence.
Clearstream Fund Centre S.A.	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Article 22(a) of the Draft RTS The usage of the term "immediately" does not take into account complex custody chains, whereby there are multiple layers of intermediation. Where such chains exist, the provision of information "immediately" may be operationally unfeasible. Recommendation: Respondent recommends that the requirement in Article 22(a) to provide information "immediately" upon request be revised to better reflect the operational realities of complex custody chains. In particular, the use of the term "without undue delay" would better reflect the existence of multi-layered intermediated models, where

Name of the respondent	Question	Answer
		access to underlying client information may depend on sequential requests across several entities and jurisdictions. Clearstream further notes that the requirement under Article 22(a) to provide information on underlying clients may also be constrained by local legal frameworks, including bank secrecy and data protection laws applicable in certain jurisdictions. In a number of third countries, intermediary institutions may be subject to legal restrictions that: - Limit the disclosure of client-identifying information; or - Require specific conditions (e.g. client consent, formal requests, or involvement of competent authorities) before such information can be transmitted to third parties. By way of example, both Switzerland and Singapore impose strict banking secrecy /confidentiality obligations under their respective banking acts. Recommendation: Respondent recommends that these local regulatory restrictions be recognized in the text of the RTS.
Clearstream Fund Centre S.A.	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Suggested adaptations to the SDD measures outlined in the draft RTS include ensuring that the application of these SDD measures is made on a risk-based approach that is effectively tailored to the product in question.

Name of the respondent	Question	Answer
Clearstream Fund Centre S.A.	Please justify your answer to the previous question and provide evidence where possible.	The Draft RTS, and in particular the requirements set out in Article 22, would have a significant impact on the business model of Clearstream as well as on the broader investment fund and securities industry. The prescriptive criteria in Article 22 may constrain the application of simplified due diligence measures, resulting in increased instances of duplicated customer due diligence processes across a considerable portion of account holders, at multiple levels of the custody chain. Consequentially, the implementation of necessary processes and technological solutions to manage the associated data flows would result in significant costs, including recurrent costs due to increased workload.
Cnova Pay	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Nous souhaitons formuler des observations ciblées concernant l'application de ces dispositions aux produits de crédit à la consommation de faible valeur, et plus particulièrement aux produits de crédit fractionné (Buy Now, Pay Later – BNPL). _____ I. Insuffisance de flexibilité pour certains produits à faible risque Les propositions figurant dans le projet de RTS ne ménagent pas, en l'état, une flexibilité suffisante pour les produits et services caractérisés par un profil de risque LCB-FT intrinsèquement faible, notamment les crédits à la consommation de faible montant dans lesquels les flux financiers s'effectuent exclusivement via des instruments de paiement réglementés et traçables. Dans ce contexte, l'application de mesures de vérification d'identité standardisées — sans modulation en fonction du niveau de risque effectivement identifié — génère des contraintes opérationnelles disproportionnées au regard des

Name of the respondent	Question	Answer
		objectifs poursuivis par la réglementation LCB-FT, sans apporter de bénéfice matériel en termes de prévention des risques. Limites opérationnelles du régime simplifié existant Le règlement prévoit, dans le cadre des mesures de vigilance simplifiées, la possibilité de reporter la vérification de la pièce d'identité à un stade ultérieur à l'entrée en relation. Si ce mécanisme constitue une avancée, il se heurte, dans la pratique, à des difficultés opérationnelles significatives pour les produits de crédit à court terme. En effet, sur ce type de produits, le cycle de vie de l'opération est particulièrement bref : le crédit est octroyé concomitamment ou immédiatement après la livraison du bien ou la réalisation du service financé. Dans ce schéma, le report de la collecte du document d'identité à une phase postérieure à l'octroi s'avère très difficile à mettre en œuvre en pratique — le lien commercial avec le client étant, à ce stade, largement épuisé — et génère des taux de récupération des justificatifs structurellement faibles, sans que cela reflète un risque LCB-FT accru. Le régime du report, tel que conçu, n'est donc pas adapté à la réalité opérationnelle de ces produits et ne saurait constituer une réponse satisfaisante aux enjeux de proportionnalité. II. Propositions rédactionnelles et justifications Nous proposons que le texte du RTS soit complété ou précisé de la manière suivante : « Dans les situations présentant un faible niveau de risque, notamment pour les produits de crédit à la consommation de faible valeur dans lesquels les transactions sont réalisées

Name of the respondent	Question	Answer
		exclusivement au moyen d'instruments de paiement réglementés et traçables, les entités assujetties peuvent appliquer la vérification d'identité prévue à l'article 22(6) du règlement (UE) 2024/1624 de manière proportionnée au type et au niveau de risque identifié, y compris en s'appuyant sur les informations déclarées par le client et sur des contrôles de cohérence appropriés, dès lors que le niveau d'assurance atteint est proportionné au risque identifié. » Cette formulation s'inscrit dans le cadre de l'article 22(6) du règlement (UE) 2024/1624 et en explicite l'application concrète pour les situations de faible risque, sans créer de dérogation autonome au régime général. Analogie avec le régime applicable à la vérification des bénéficiaires effectifs À l'appui de cette proposition, nous souhaitons attirer l'attention sur le régime existant en matière de vérification des bénéficiaires effectifs en situation de risque faible. Dans ce cadre, la réglementation admet d'ores et déjà que la vérification puisse reposer sur une approche déclarative, sans exiger la production systématique de documents probants. Ce régime, reconnu comme proportionné et efficace, démontre qu'une approche fondée sur le déclaratif peut constituer un dispositif robuste et conforme aux exigences LCB-FT, dès lors qu'elle est combinée avec des contrôles de cohérence adaptés. Par analogie, nous proposons qu'un dispositif de même nature soit formellement consacré pour la vérification d'identité des clients en situation de risque faible, articulant une approche déclarative avec les vérifications opérées par les partenaires spécialisés en détection de la fraude. Un tel dispositif, combinant déclaratif et scores de risque issus d'outils de lutte

Name of the respondent	Question	Answer
		contre la fraude, permet d'atteindre un niveau d'assurance proportionné au risque identifié, tout en garantissant la cohérence et l'exploitabilité opérationnelle du processus KYC. Application spécifique aux produits BNPL Les produits BNPL sont aujourd'hui unanimement reconnus comme présentant un risque LCB-FT faible, ce qui justifie la possibilité de fonder la vérification d'identité sur le seul déclaratif du client, assorti de contrôles de cohérence appropriés. Nous souhaitons que ce régime soit explicitement préservé et cohérent avec le profil de risque intrinsèque de ces produits.
Cnova Pay	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	I. Disposition concernée Les RTS, en cohérence avec le règlement AMLR, imposent aux entités assujetties de collecter les informations relatives aux actionnaires ou associés qui ne constituent pas des bénéficiaires effectifs au sens de la réglementation. Or, le projet de RTS ne fixent pas de conditions permettant de moduler cette obligation en fonction du niveau de risque, ni ne tiennent compte de la disponibilité effective de ces informations. Cette approche uniforme contraste avec la logique même du dispositif LBC/FT, lequel repose pour la détermination des bénéficiaires effectifs sur la notion de contrôle et d'influence déterminante sur la personne morale. Un actionnaire ne détenant qu'une participation minoritaire n'exerce par hypothèse aucun contrôle sur les décisions de la société : son identification ne présente donc pas d'utilité LBC/FT démontrée, que ce soit dans le cadre d'un régime de vigilance simplifiée (SDD) ou de vigilance standard (CDD). L'imposition d'une

Name of the respondent	Question	Answer
		collecte systématique, indifféremment du niveau de risque de la relation d'affaires, nous paraît dès lors incompatible avec une approche fondée sur les risques. À cette absence d'utilité s'ajoute une difficulté pratique majeure : cette information n'est pas systématiquement disponible dans les documents habituellement collectés dans le cadre des diligences KYC. Ainsi, par exemple en France, le Kbis ne mentionne pas la liste des actionnaires. Les entités assujetties se trouveraient donc contraintes de solliciter des documents complémentaires spécifiques, tels que les statuts mis à jour ou un registre des mouvements de titres, dont l'obtention n'est ni aisée ni systématiquement possible. Cette exigence soulève en outre une difficulté de compatibilité avec le principe de minimisation des données consacré par l'article 5, paragraphe 1, point c), du règlement (UE) 2016/679 (RGPD). Ce principe impose que les données à caractère personnel collectées soient adéquates, pertinentes et limitées à ce qui est nécessaire au regard des finalités pour lesquelles elles sont traitées. Or, la collecte systématique des informations nominatives de l'ensemble des actionnaires, y compris ceux dont la participation est infime et le profil de risque négligeable, excède ce qui peut être regardé comme nécessaire à la finalité de prévention du blanchiment et du financement du terrorisme. Les entités assujetties se trouveraient ainsi placées dans une position inconfortable, contraintes de respecter simultanément deux corpus réglementaires européens dont les exigences entreraient en tension directe. Elle est enfin susceptible de générer des coûts opérationnels disproportionnés, notamment pour les entités dont les clients sont des sociétés à actionnariat large ou dispersé.

Name of the respondent	Question	Answer
		II. Proposition rédactionnelle Plutôt que d'imposer une obligation de collecte systématique, nous proposons que les RTS consacrent explicitement une approche fondée sur les risques et sur la disponibilité effective des données pour encadrer cette obligation. Concrètement, nous suggérons que les RTS précisent que la collecte des informations relatives aux actionnaires non-bénéficiaires effectifs ne constitue pas une obligation systématique, mais une mesure dont la mise en œuvre est conditionnée à deux critères cumulatifs : • la disponibilité effective de l'information dans les documents ordinairement collectés dans le cadre des diligences KYC, sans qu'il soit nécessaire d'engager des démarches complémentaires disproportionnées ; et • la pertinence de cette collecte au regard du profil de risque de la relation d'affaires, tel qu'établi par l'entité assujettie dans le cadre de son analyse des risques. La collecte d'informations sur les actionnaires non-bénéficiaires effectifs devrait ainsi relever de la seule appréciation de l'entité assujettie, sans qu'aucun niveau de vigilance ne fasse naître automatiquement une telle obligation. C'est à l'entité assujettie qu'il appartient de déterminer, au cas par cas et en fonction du profil de risque propre à chaque relation d'affaires, si cette collecte est nécessaire et proportionnée à la finalité poursuivie. Cette approche serait plus appropriée pour trois raisons : • elle permettrait de concentrer les efforts de vigilance là où le risque est effectivement présent, et d'alléger une charge administrative disproportionnée dans les cas à faible enjeu. • elle assurerait une cohérence interne au dispositif réglementaire, en alignant le traitement des actionnaires non-bénéficiaires effectifs sur la logique de contrôle et d'influence

Name of the respondent	Question	Answer
		qui fonde l'ensemble du dispositif d'identification. • elle mettrait le dispositif LBC/FT en conformité avec le principe de minimisation des données du RGPD, en limitant la collecte de données personnelles à ce qui est strictement nécessaire et proportionné à la finalité poursuivie, évitant ainsi de placer les entités assujetties dans une situation de conflit normatif entre deux règlements européens d'application directe.
Cnova Pay	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Dans le cadre de notre activité, nous avons identifié une situation dans laquelle les informations requises par le projet de RTS aux fins des mesures de vigilance à l'égard de la clientèle sont systématiquement indisponibles, sans que les dispositions actuelles du texte n'apportent de solution adaptée : celle des bénéficiaires effectifs résidant ou constitués dans des pays tiers. Identification du problème Le projet de RTS impose la collecte et la vérification d'informations relatives aux bénéficiaires effectifs selon des standards uniformes, sans prévoir de régime spécifique tenant compte des contraintes liées aux juridictions extérieures à l'Union européenne. Or, dans la pratique, deux obstacles structurels se cumulent fréquemment : • L'absence ou l'inaccessibilité des registres centraux : de nombreux pays tiers ne disposent pas de registre des bénéficiaires effectifs, ou maintiennent des registres dont l'accès est restreint, payant, non numérisé, ou dont la fiabilité ne peut être objectivement établie ; • La rareté des sources tierces fiables : les bases de données commerciales et les sources documentaires alternatives présentent une couverture géographique inégale,

Name of the respondent	Question	Answer
		particulièrement lacunaire pour certaines régions d'Afrique, d'Asie centrale ou du Moyen-Orient, ce qui ne permet pas de pallier l'absence de registres officiels. Ces obstacles ne relèvent pas d'un manque de diligence de l'entité assujettie, mais d'une réalité structurelle indépendante de sa volonté. Proposition de solution alternative Nous proposons que le texte final des RTS prévoie expressément, pour les bénéficiaires effectifs situés dans des pays tiers ne disposant pas de registre accessible et fiable, la possibilité de recourir à la déclaration du client comme mesure de vérification suffisante, sous réserve du respect de conditions cumulatives garantissant un niveau de vigilance adéquat, notamment : • la documentation formalisée des démarches de vérification entreprises et de leur échec auprès de sources indépendantes ; • la collecte d'une déclaration écrite et signée du client ou de son représentant légal, attestant l'identité et la situation des bénéficiaires effectifs ; • la mise en œuvre de mesures de vigilance complémentaires proportionnées au risque identifié (surveillance renforcée de la relation d'affaires, revues périodiques, etc.). Cette approche est cohérente avec le principe de proportionnalité consacré par la directive (UE) 2024/1640 et permettrait d'éviter que des entités assujettis diligentes se trouvent en situation d'impossibilité de conformité de fait, sans pour autant affaiblir le dispositif global de lutte contre le blanchiment et le financement du terrorisme. Nous appelons par conséquent l'ALMA à clarifier explicitement

Name of the respondent	Question	Answer
		le traitement applicable à ces situations dans le texte définitif des RTS, et à y intégrer un régime dérogatoire documenté et encadré pour les bénéficiaires effectifs ressortissants de juridictions sans registre accessible Disponibilité effective des registres centraux des bénéficiaires effectifs à la date d'entrée en application: De manière plus générale, nous souhaitons attirer l'attention de l'AMLA sur un prérequis fondamental à la mise en œuvre effective des RTS : la disponibilité pleine et entière des registres centraux des bénéficiaires effectifs à la date d'entrée en application du nouveau cadre réglementaire. Le projet de RTS subordonne en effet l'accomplissement de nombreuses obligations de vigilance à la consultation de ces registres, en fixant des conditions précises quant aux modalités d'accès et d'utilisation des données qu'ils contiennent. Or, si ces registres ne sont pas pleinement opérationnels, accessibles en ligne et interopérables à la date à laquelle les nouvelles obligations s'imposent aux entités assujetties, ces dernières se trouveront dans l'impossibilité pratique de satisfaire à leurs obligations de conformité, sans que cette défaillance ne leur soit imputable. Nous appelons en conséquence l'AMLA à s'assurer, en lien avec les autorités nationales compétentes, que l'entrée en vigueur des RTS soit expressément conditionnée à la mise en place effective et vérifiée de ces infrastructures, et à prévoir, à défaut, des dispositions transitoires adaptées permettant aux entités assujetties de recourir à des sources alternatives sans s'exposer à un risque de non-conformité.
Cnova Pay	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what	Les entités assujetties opérant dans le secteur du crédit à la consommation de faible valeur, et plus particulièrement du crédit fractionné (BNPL), font face à des situations dans

Name of the respondent	Question	Answer
	other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	lesquelles les dispositions actuellement envisagées ne traduisent pas suffisamment la logique de proportionnalité au risque que le règlement entend pourtant consacrer. Nous formulons ci-après deux propositions de mesures de vigilance simplifiées, chacune assortie d'une justification et d'une proposition rédactionnelle concrète. Proposition 1 — Vérification d'identité fondée sur le déclaratif en situation de risque faible Justification Pour les produits de crédit à la consommation de faible montant dans lesquels les flux financiers s'effectuent exclusivement via des instruments de paiement réglementés et traçables, le risque BC/FT est structurellement faible. Dans ce contexte, imposer une vérification documentaire systématique génère des contraintes opérationnelles disproportionnées sans apporter de bénéfice matériel en termes de prévention. Le principe de proportionnalité appliqué aux bénéficiaires effectifs en risque faible doit être transposé de façon cohérente à la vérification d'identité des clients dans des situations de risque équivalent. Proposition rédactionnelle « Dans les situations présentant un faible niveau de risque, notamment pour les produits de crédit à la consommation de faible valeur dans lesquels les transactions sont réalisées exclusivement au moyen d'instruments de paiement réglementés et traçables, les entités assujetties peuvent appliquer la vérification d'identité prévue à l'article 22(6) du règlement (UE) 2024/1624 en s'appuyant sur les informations déclarées par le client, combinées à des contrôles de cohérence

		appropriés incluant la vérification par des outils spécialisés de détection de la fraude, dès lors que le niveau d'assurance atteint est proportionné au risque identifié. » Proposition 2 — Régime de vigilance simplifiée pérenne pour les produits BNPL, indépendant de leur encadrement consumériste Justification Les produits BNPL sont unanimement reconnus comme présentant un risque BC/FT faible, ce qui justifie l'application de mesures de vigilance simplifiées fondées sur le déclaratif. Ce constat de faible risque est intrinsèque à la nature de ces produits — montants limités, instruments de paiement traçables, finalité d'usage déterminée — et ne saurait être remis en cause par l'évolution de leur cadre réglementaire sectoriel. L'intégration des produits BNPL dans le champ de la directive sur le crédit aux consommateurs (DCC), prévue à compter de novembre 2026, relève de la protection des consommateurs et ne modifie pas le profil de risque BC/FT de ces produits. Il est donc impératif que le projet de RTS consacre explicitement le maintien du régime simplifié applicable aux BNPL, de façon pérenne et indépendante des évolutions du droit sectoriel. Proposition rédactionnelle « Les produits de crédit fractionné (Buy Now, Pay Later) dont la durée est inférieure à 3 mois et dont les flux de remboursement sont exclusivement effectués par des instruments de paiement réglementés et traçables bénéficient de plein droit des mesures de vigilance simplifiées prévues au présent article, quel que soit le régime juridique sectoriel applicable à ces produits par ailleurs. L'application d'une

Name of the respondent	Question	Answer
	when implementing the provisions of these draft RTS.: Recurrent costs	
Cnova Pay	Please justify your answer to the previous question and provide evidence where possible.	La mise en œuvre du projet de RTS engendrerait pour notre entité des coûts supplémentaires significatifs, tant en termes d'investissements initiaux que de charges opérationnelles récurrentes, sur deux axes principaux. 1. Introduction d'un dispositif de vérification d'identité documentaire L'intégration d'une solution de vérification d'identité dans nos parcours clients implique des coûts ponctuels substantiels : conduite d'un appel d'offres, sélection et contractualisation avec un prestataire spécialisé, puis intégration technique dans nos systèmes d'information existants, qui n'ont pas été conçus pour accueillir ce type de flux. Ces travaux d'intégration, par nature complexes et spécifiques à notre architecture, représentent un effort de développement important. À ces coûts initiaux s'ajoutent des coûts récurrents liés à l'abonnement au service retenu, à la maintenance des interfaces et au suivi opérationnel du dispositif. 2. Collecte des informations relatives aux actionnaires au-delà des bénéficiaires effectifs et des représentants légaux Les dispositions du projet de RTS relatives à la collecte d'informations sur les actionnaires des personnes morales excèdent le périmètre actuellement couvert par nos outils de KYC, lesquels ont été conçus pour collecter et traiter exclusivement les données relatives aux représentants légaux et aux bénéficiaires effectifs. Étendre ce périmètre à l'ensemble des actionnaires nécessiterait une refonte structurelle de nos systèmes de collecte, de stockage et de traitement des

		données, représentant un chantier informatique majeur dont le coût et la durée de mise en œuvre seraient très significatifs. Cette évolution ne saurait être réalisée par simple paramétrage et implique une modification en profondeur de notre architecture de données KYC.
Coinbase	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Coinbase does not agree that the draft RTS as proposed can be effectively applied across all products and services offered. While Coinbase supports the risk-based approach and harmonisation objectives, several provisions are designed around traditional financial services models and do not adequately accommodate digital-first onboarding, crypto-asset service delivery at scale, or the diverse services offered by CASPs. Whilst further detail has been provided in our comments on specific articles, the following points support the conclusion that there is insufficient flexibility provided for: Article 6 (Identity Verification Documents): The "certified copy" requirement risks being interpreted as requiring physical certification, which is incompatible with digital onboarding. Onboarding by Coinbase and other online service providers uses identity document verification combined with biometric measures that meet or exceed the requirements of Article 7(3). To ensure that the RTS do not create barrier to legitimate digital onboarding, Article 6 should confirm that digitally verified copies of identity documents satisfy Article 6 requirements and that "certification" does not require notarisation. Further, Article 6(6) should be amended to expressly permit electronic identification in non-face-to-face contexts. Article 7 (Non-Face-to-Face Verification): eIDAS schemes at

Name of the respondent	Question	Answer
		"substantial" or "high" assurance are available in only a limited number of Member States. The RTS treats fallback verification as secondary, despite reliable biometric tools, including liveness checks, providing equivalent or stronger protection against identity fraud. This creates an unjustified hierarchy that does not reflect technological neutrality. To ensure parity between eIDAS-based and Article 7(3)-compliant remote verification, a technologically neutral approach recognising that liveness and biometric tools provide equivalent fraud mitigation should be adopted and incorporated into the RTS. This avoids disadvantaging customers in Member States without eIDAS schemes. Article 22 (Pooled Accounts): Simplified CDD for pooled accounts is limited to credit institutions, despite CASPs and other financial institutions also operating omnibus account structures. Without coverage, these arrangements risk triggering disproportionate enhanced due diligence for comparable risk profiles. Article 22 should be expanded cover pooled accounts operated by all obliged entity financial institutions, including CASPs, provided conditions in Article 22(a)–(e) are met. The risk rationale for simplified measures applies equally to all regulated entities operating such structures.
Coinbase	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Coinbase does not fully agree that the draft RTS consistently allow for the effective application of a risk-based approach. While we support the principle affirmed in Article 1 that CDD measures should be commensurate with the risk identified, several provisions impose prescriptive, one-size-fits-all requirements that depart from this principle. Whilst further

Name of the respondent	Question	Answer
		detail has been provided in our comments on specific articles, the following points and amendments would support the the risk-based approach affirmed in Article 1, and avoid overly prescriptive requirements that impose disproportionate burdens without commensurate AML/CFT benefit: Article 4 (Place of Birth): Mandatory collection of place of birth beyond country level across all risk levels is disproportionate. Its risk-mitigation value is unclear, and it imposes significant remediation costs for pre-existing customers without corresponding AML/CFT benefit. The RTS should be amended to confirm that "place of birth" means country of birth only, and that more granular data should only be collected on a risk-basis where appropriate and available. Article 6 (Identity Verification Documents): Requiring all Article 6 attributes to be satisfied before deeming an identification document reliable is inconsistent with a risk-based approach. Historically, identity verification requires sufficient reliable information, not verification of every data point. Recital 7 acknowledges customers (e.g. asylum seekers) may lack standard documentation, yet the prescriptive requirements risk financial exclusion contrary to EBA guidance (EBA/Op/2022/01). Article 6 should permit a risk-based approach to non-passport/non-ID documents, rather than requiring all Article 6 attributes be met. Article 11 (Ownership and Control Structure): The blanket obligation to assess the "economic, legal or other rationale" behind all group structures is disproportionate. Legal analysis of corporate structures is prohibitively expensive and

Name of the respondent	Question	Answer
		inappropriate for medium and low risk customers. This obligation should be reserved for complex structures under Article 12 or those presenting elevated ML/TF risk. Article 11 should be amended to limit the obligation to assess the rationale behind group structures to complex structures (as defined in Article 12) or those presenting elevated ML/TF risk indicators, rather than applying it as a blanket obligation. Article 12 (Complex Corporate Structures): Treating the mere presence of any non-EU entity within a corporate structure as an automatic indicator of complexity and higher ML/TF risk is inconsistent with a factual risk-based approach. Many legitimate groups include entities in well-regulated third countries (e.g. UK, Switzerland, or US). To ensure that the complexity trigger is genuinely risk-based, Article 12(1)(b) should be amended to reference only non-EU countries which have been designated as high-risk by the EU.
Coinbase	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	As a digital-first CASP operating at scale across the EU, Coinbase identifies several situations where information required under the draft RTS could be unavailable and the proposals do not provide adequate alternative solutions. 1. Place of Birth Beyond Country Level Data: Article 4 requires collection of place of birth including any additional detail on the identity document. For pre-existing customers onboarded before this requirement, granular place-of-birth data (city, region) was not collected and is not held. Retrospective collection from millions of existing customers would impose significant operational costs through CDD refresh campaigns, with limited AML/CFT benefit. Accordingly, the RTS should clarify that "place of birth" means country of birth only, and

Name of the respondent	Question	Answer
		more granular data should only need to be collected in line with a risk-based approach. 2. Statelessness and Refugee/Subsidiary Protection Status: Article 5 requires obliged entities to obtain information on statelessness and refugee or subsidiary protection status. This information is not typically disclosed voluntarily by customers and may not appear on identity documents. In a digital, non-face-to-face onboarding environment, there is no reliable or standardised mechanism to identify or collect this status, and the draft RTS provides no guidance on the expected means of collection or the consequences of inability to obtain it. AMLA should provide practical guidance on how this information is to be identified and collected. 3. All Nationalities for Underlying End Users in Pooled/Intermediary Structures: Article 5 requires the collection of all nationalities for natural persons on whose behalf a transaction is conducted. In intermediary or pooled account structures, the obliged entity has no direct customer relationship with, or access to, the underlying end users. Collecting all nationalities for these individuals is practically impossible at scale. This obligation should be clarified to confirm that it does not extend to underlying end users in intermediary or pooled account contexts where the obliged entity lacks a direct relationship, or otherwise confirm that reliance on the intermediary's own AML/CFT processes will be sufficient to mitigate the risks associated with this issue. 4. Non-Standard Identity Documents Lacking All Article 6 Attributes: Where customers cannot provide a passport or

Name of the respondent	Question	Answer
		national ID card (e.g. asylum seekers, refugees, or persons from jurisdictions issuing documents that lack all Article 6 attributes) the draft RTS requires all Article 6 conditions be met before deeming an alternative document reliable. It will be incredibly rare for alternative identification documents across the EU and beyond to contain all prescribed characteristics. The "legitimate reasons" exception is subjective and operationally burdensome, and would require documentation of initial attempts and customer-provided justifications. This risks delaying onboarding or causing rejection and driving individuals toward unregulated services. A risk-based approach to non-passport/non-ID documents, requiring sufficient reliable information rather than satisfaction of every Article 6 attribute, should therefore be permitted. This aligns with the EBA's guidance on de-risking (EBA/Op/2022/01) and financial inclusion. 5. eIDAS-Compliant Electronic Identification: Article 7(1) requires eIDAS-compliant electronic identification at "substantial" or "high" assurance levels for non-face-to-face verification. These schemes are currently available in only a limited number of Member States (e.g. Germany, Italy, Estonia, Spain, Luxembourg). For customers from other jurisdictions, this solution is routinely unavailable. The fallback to Article 7(2)–(4) is treated as secondary, yet it will be the norm for the majority of customers. The RTS should ensure that the Article 7(2)–(4) remote verification pathway is treated as a fully equivalent verification method, not an inferior alternative. A technologically neutral approach should be adopted that recognises reliable biometric verification tools as providing equivalent protection.

Name of the respondent	Question	Answer
		6. Pooled Account Simplified Measures for Non-Credit Institutions: Article 22's simplified CDD for pooled accounts is limited to credit institutions. CASPs, EMIs, PIs, and investment firms also operate pooled or omnibus structures but have no equivalent provision, potentially subjecting them to disproportionate enhanced due diligence as correspondent relationships. Article 22 should therefore be extended to all financial institutions operating pooled accounts, provided the conditions in Article 22(a)–(e) are met.
Coinbase	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	As a digital-first CASP operating at scale across the EU, Coinbase identifies several situations where information required under the draft RTS could be unavailable and the proposals do not provide adequate alternative solutions. Each proposal below is anchored in the risk-based approach mandated by the AMLR and reflects the lower ML/TF risks associated with specific products, services, and customer profiles encountered in digital-first financial services. 1. Place of Birth Beyond Country Level Data: Article 4 requires collection of place of birth including any additional detail on the identity document. For pre-existing customers onboarded before this requirement, granular place-of-birth data (city, region) was not collected and is not held. Retrospective collection from millions of existing customers would impose significant operational costs through CDD refresh campaigns, with limited AML/CFT benefit. Accordingly, the RTS should clarify that "place of birth" means country of birth only, and more granular data should only need to be collected in line with a risk-based approach.

Article 22 should therefore be extended to all financial institutions operating pooled accounts, provided the conditions in Article 22(a)–(e) are met.
Coinbase	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Coinbase welcomes the opportunity to respond to the consultation on the draft Regulatory Technical Standards on Customer Due Diligence requirements under Article 28(1) of the Anti-Money Laundering Regulation (Regulation (EU) 2024/1624). Coinbase is a leading global CASP authorised and regulated in multiple EU Member States, including Ireland and Luxembourg, as well as in the United Kingdom and other jurisdictions. We are committed to maintaining the highest standards of AML/CFT compliance and support AMLA's objective of establishing a harmonised, risk-based framework for CDD across the EU. We have set out additional specific observations as they relate to particular Articles in the following form, where we believe clarification, amendment, or reconsideration would strengthen the proportionality, effectiveness, and practical operability. Our comments are informed by our experience as a digital-first, non-face-to-face financial services provider operating at scale across the EU.
Coinbase	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes

Name of the respondent	Question	Answer
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	4
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Concern: Article 4 requires obliged entities to collect at least the country name as the place of birth, and any additional place of birth information contained on the identity document. Comment: We question the proportionality and risk-mitigation value of requiring the collection of place of birth as a mandatory CDD data point. This requirement is not standard practice in many jurisdictions and it is unclear what specific ML/TF risk this data element is intended to identify or mitigate. Collection of place of birth (beyond country) would be unnecessary to achieve the purpose of Article 22(1)(a)(ii), as country of birth would be sufficient, and in the majority of cases, provides no additional useful information to the obliged entity to evaluate the AML/CTF risk. Further, if additional detail on place of birth is required, this would create significant operational costs, particularly in respect of pre-existing customers, as this information will need to be collected and captured as part of future customer CDD refresh. While we acknowledge that place of birth may serve as an additional data point for sanctions and PEP screening (and indeed may assist in confirming or disproving screening matches) the mandatory nature of this requirement across all risk levels appears disproportionate. This comment also applies to Article 22 in the context of low risk situations.

Name of the respondent	Question	Answer
		Recommendation: If this requirement is retained, we request confirmation that "place of birth" refers to the country of birth only. The collection of more granular information (e.g. city or region) should not be mandated; although may be collected where available in line with a risk-based approach.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Concern: Article 5 requires obliged entities to obtain information on all nationalities or, where applicable, the statelessness and refugee or subsidiary protection status, of the customer, any natural person purporting to act on behalf of the customer, and the natural persons on whose behalf, or for the benefit of whom a transaction, or activity is being conducted. Comment: The requirement under Article 5 of the draft RTS (in line with Article 22(1)(a) of the AMLR) requires the collection of information on all nationalities (or other status). Our understanding of the purpose of this requirement is to help regulated entities assess the potential money laundering and sanctions risk of a customer (e.g. a customer who is a national of a high risk or sanctioned country), not to further verify their identity. Therefore, please confirm the wording of “obtain” requires collection but not verification of all nationalities collected, as that has been the standard process in Europe and any deviation would be overly burdensome. We separately seek clarification on the practical application of the requirement to obtain nationality (or other) status on “the natural persons on whose behalf or for the benefit of whom a

Name of the respondent	Question	Answer
		transaction or activity is being conducted" in the context of intermediary or pooled account structures, as the obliged entity does not have a customer relationship with or direct access to the underlying end user. It may therefore be practically difficult, and would in our view be disproportionate and overly burdensome, to collect all nationalities for underlying these end users and ask that this scenario be clarified. We also query how obliged entities are expected to identify and collect information on the "statelessness and refugee or subsidiary protection status" of a customer in practice. This information is not typically disclosed voluntarily and may not appear on identity documents. Guidance on the expected means of collection and the consequences of an inability to obtain this information would be welcomed. Recommendation: AMLA should confirm whether verification of all nationalities is required, should provide practical guidance on the means by which statelessness and protection status are to be identified and collected, and should clarify the application of this requirement in intermediary and pooled account contexts.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	Concern: Article 6(5) requires obliged entities to obtain the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7 on non-face-to-face verification measures. Article 6(6) provides that electronic identification means "shall be permitted to verify the identity

Name of the respondent	Question	Answer
		of the natural person in a face-to-face context". Comment: In our view, a digital copy (e.g. a scanned image or PDF) of an identity document, when verified in accordance with the remote verification measures set out in Article 7 (including liveness checks and document authenticity verification) should be sufficient to satisfy the requirements of Article 6. The requirement for a "certified copy" should not be interpreted as requiring physical certification or notarisation, which would be incompatible with digital-first onboarding processes and would undermine the EU's broader digital strategy. For digital onboarding, physical certification or notarisation of original documents provides limited value in terms of verification of the digital document's veracity. Such veracity checks for digital documents are, and can be, undertaken irrespective of any certification or notarisation, having regard to the digital copy of the document submitted, and the information contained therein. Article 6(6) appears to limit the use of electronic identification means (as described in Article 7(1)) to face-to-face contexts only. This is a significant concern. The regulation should expressly permit the use of electronic identification means (including eIDAS-compliant electronic identification schemes) for the verification of identity in non-face-to-face contexts, without the mandatory collection of a physical identity document. Restricting electronic identification to face-to-face settings is inconsistent with the objectives of eIDAS 2.0 and the European Digital Identity framework, and would create an unjustified barrier to digital onboarding.

Name of the respondent	Question	Answer
		The phrase “equivalent to an identity document or passport” implies that an “identity document” and “passport” will automatically be deemed a sufficient verifying document, even if they do not have all of the features set forth in Article 6. If that is the intent (which we agree it should be to satisfy Article 22(6) of the AMLR), then: 1) this should be clarified beyond a doubt in the RTS; and 2) the term “identity document” should be defined to clarify that they are a category of documents other than identity documents or passports (as no definition of either term is currently provided for in either the AMLR or the RTS). For example, we would propose that national identification cards, government issued driver’s licences, VISAs, residence permits, public service cards used for social welfare entitlements, government issued health cards, documentation in relation to refugees and asylum seekers and other similar government issued documents should fall under the definition of an “identity document” that by default is acceptable, even if it does not contain all of the features set forth in Article 6. The conditions set forth in Article 6 would then apply to other identification documents that do not qualify as a “passport” or “identity document”. Recommendation: We recommend that the draft RTS be updated to: 1) Confirm that digital copies of identity documents, verified through compliant remote solutions under Article 7, satisfy the requirements of Article 6;

Name of the respondent	Question	Answer
		2) Clarify that “certification” does not require physical or formal notarisation of documentation; 3) Amend Article 6(6) to expressly permit the use of electronic identification means in non-face-to-face contexts; 4) The RTS should ensure that it does not create a hierarchy that subordinates electronic identification to physical document collection, given the EU's commitment to digital identity; 5) Provide a clear definition of an “identity document”.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	6
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	Concern: Article 6(5) requires obliged entities to obtain the identity document, passport or equivalent, or a certified copy thereof, or act in accordance with Article 7 on non-face-to-face verification measures. Comment: For documents that do not qualify as an “identity document” or “passport”, it is unreasonable to demand that all of the conditions set forth in Article 6 of the RTS be satisfied before deeming the identification document as reliable. Instead, a risk-based approach, having regard to the nature of the documents, and the reasons for its submission as an alternative to an identity document or passport, should be permitted. We would note this for the following reasons: 1) Verification of the identity of the customer has historically meant that obliged entities must obtain enough reliable information to assure themselves that the person is who they claim to be. It does not mean they need to verify every data point collected from the applicant (i.e. name, date of birth,

Name of the respondent	Question	Answer
		address, etc.). This concept has been adopted by other FATF-regulated countries with equivalent AML/CTF Regimes. As such, not every data element collected from the customer must appear on the verifying identification document collected. 2) Recital 7 of the draft RTS acknowledges that there may be situations where identity documents issued to or held by the customer do not meet the attributes of an identity card or passport, such as where the customer is an asylum seeker. To mitigate the risk of financial exclusion and unwarranted derisking, the criteria laid down in the draft RTS concerning identification documents should be applied in a way that takes into account the reason why a legitimate customer may be unable to provide standard documentation. This is in line with previous statements made by the EBA in its Opinion on 'de risking' (EBA/Op/2022/01) and also its Statement on Financial Inclusion in the context of the Invasion of Ukraine (published 27 April 2022). 3) It will be incredibly rare for other forms of reliable identification documents across the EU and beyond to contain all of these characteristics set out in Article 6 of the RTS. For example, not all identification documents have signatures on them. 4) The term "legitimate reasons" is subjective and would require obliged entities to document: a) initial attempts to obtain an equivalent identification document; b) a "legitimate reason" provided by the customer as to why they cannot provide such an equivalent document. This would potentially add operational costs to obliged entities and either delay the onboarding process or, at worse, cause these applicants to be rejected and force them to engage in underground banking, which would be outside the scope of monitoring by regulated

Name of the respondent	Question	Answer
		financial institutions and law enforcement (contrary to the overall policy intent of the AMLR). Recommendation: The RTS should allow for a risk-based approach to the use of documents other than identity documents or passports on a risk-based approach.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	7
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	Concern: Article 7(1) requires obliged entities to use electronic identification means meeting the "substantial" or "high" assurance levels under Regulation (EU) No 910/2014 (eIDAS) for non-face-to-face verification. Article 7(2) provides that where such solutions are "not available, or cannot reasonably be expected to be provided", obliged entities may use remote solutions meeting the safeguards in paragraphs 3 and 4. Comment: We support the safeguards set out in Article 7(3), which align with industry best practice for remote identity verification (including liveness checks, document authenticity controls, and secure data retention). Our current onboarding processes for EU customers already incorporate identity document verification combined with biometric selfie matching, which we believe meets or exceeds these requirements. However, we reiterate the concern raised under Article 6, namely that the RTS should confirm that a digital copy or image of an identity document, verified through compliant remote solutions (including liveness and document authenticity checks), is sufficient, and that no additional physical

Name of the respondent	Question	Answer
		certification or original document collection is required. We also note that eIDAS-compliant electronic identification schemes at the "substantial" or "high" assurance level are currently available in only a limited number of Member States (e.g. Germany, Italy, Croatia, Estonia, Spain, and Luxembourg). For customers presenting identity documents from other jurisdictions, the fallback to Article 7(2)–(4) will be the norm rather than the exception. The RTS should acknowledge this reality and ensure that the fallback provisions are treated as a fully equivalent verification pathway, not as a secondary or inferior alternative. There are many other reliable biometric screening tools available that permit obliged entities to confidently verify a remotely onboarded customer's identity. Such tools are currently offered by reputable vendors and are presently being used by many sophisticated financial institutions. In our view, these solutions provide the same level of protection as eIDAS solutions. While eIDAS creates a framework for electronic identification, it does not contain additional liveness controls that can mitigate fraud attempts. In our experience, such liveness checks are arguably a stronger mitigant against identity fraud, as they represent biometric techniques to verify the applicant is: a) a real/live person; b) in possession of a valid ID document (not a spoofed one); and c) is who they are claiming to be. We therefore believe that an approach reflecting a technologically neutral approach should be adopted; avoiding a hierarchy of remote onboarding solutions. Recommendation: Confirm that digital copies verified through

Name of the respondent	Question	Answer
		compliant remote solutions are sufficient; ensure parity of treatment between eIDAS-based verification and remote verification solutions meeting the Article 7(3) safeguards.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	11
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Concern: Article 11 requires obliged entities to take risk-sensitive measures to understand the ownership and control structure of the customer, including assessing whether there is an "economic, legal or other rationale behind the structure". Comment: While we support the objective of understanding ownership structures, the nature and extent of inquiry and assessment of the "economic, legal or other rationale" behind a group structure, as drafted, is unclear, and potentially disproportionate and burdensome. In particular, obliged entities should not be required to undertake legal analysis of customer group structures. Such a requirement would be prohibitively expensive, and would not, in our view, be appropriate or proportionate, particularly for lower risk customers. This requirement should only extend to high risk customers. We note that Article 12 of the draft RTS already provides specific, enhanced measures for complex corporate structures (defined as structures with three or more layers between the customer and the beneficial owner, plus additional complexity indicators). The requirement to assess the rationale behind a structure should be linked to the higher-risk, complex structures addressed in Article 12, rather than applied as a blanket obligation for all group structures.

Name of the respondent	Question	Answer
		Recommendation: Clarify that the obligation to assess the economic, legal, or other rationale behind a group structure applies specifically to complex corporate structures as defined in Article 12, or to structures that present elevated ML/TF risk indicators, rather than to all corporate customers.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	12
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Concern: Article 12(1)(b) provides that one of the conditions for treating a structure as "complex" is that "the customer and any legal entities present at any of these layers are registered in jurisdictions outside the EU". Comment: Whilst it is recognised that greater scrutiny should be placed on complex ownership structures, in our view the mere inclusion of a non-EU entity in any layer of an ownership structure should, of itself and without more, be treated as an inherent indicator of complexity and automatically trigger enhanced due diligence. Many legitimate, low-risk, corporate groups include entities incorporated in well-regulated third countries with AML/CFT frameworks equivalent to or no less robust than those of the EU (e.g. the United Kingdom, Switzerland, Singapore, the United States, amongst others). Treating the presence of any non-EU entity as an automatic complexity indicator is inconsistent with a risk-based approach and could result in a disproportionate compliance burden for obliged entities servicing international corporate clients. Recommendation: This condition should be refined to refer to entities registered in third countries that have been designated

Name of the respondent	Question	Answer
		as high-risk by the EU. This would ensure that the complexity indicator is genuinely risk-based and does not capture legitimate structures involving well-regulated jurisdictions.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	16
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	Concern: Article 16 requires obliged entities to obtain information enabling them to verify the "existence and extent of the power of representation" of any person purporting to act on behalf of the customer. Comment: We welcome this requirement in principle but note that the term "person purporting to act on behalf of the customer" is not clearly defined in the draft RTS. We note that in the UK, HM Treasury has clarified that the equivalent terms in the UK refers to entities acting on behalf of individuals or third parties acting on behalf of an organisation (e.g. intermediaries, legal agents, persons with a power of attorney), and is not intended to capture employees of the corporate customer, for example who have the authority to submit trade instructions on the corporate customer's behalf (e.g. authorised signors). We support this approach and recommend it be adopted here for the following reasons: 1) Employees of corporate customers do not represent the same ML/TF risks as the corporate customer itself or its beneficial owners, as they do not directly benefit from the provided services; 2) Furthermore, these employees have already been screened (e.g. background checks) by the corporate customer, further

Name of the respondent	Question	Answer
		reducing any risk; 3) It is also quite common for corporate customers to present lists of authorised signors who have authority to instruct on an account that contain dozens and, in instances of larger financial institutions, hundreds of individuals, therefore requiring regulated entities to perform full CDD on, and "verify the existence" of, all such persons would be disproportionate and operationally overburdensome without delivering meaningful AML/CFT risk mitigation. This is not to say that obliged entities would not, in practice, apply anti-fraud controls or checks to such employees / authorised signors as part of their policies and procedures. However, such anti-fraud measures should be applied on a risk-based approach, and not incorporated as a requirement into the obliged entity's AML/CFT systems and controls. Recommendation: AMLA should provide a clear definition of "person purporting to act on behalf of the customer". This should clarify that this does not include employees of corporate customers who may operationally interact with the obliged entity (e.g. authorised signors), but should only include third parties acting on behalf of the customer (e.g. intermediaries, persons with a power of attorney).
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')16	22
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	Concern: Article 22 provides simplified CDD measures for credit institutions that open pooled accounts (i.e. accounts in which the account holder administers the funds of its clients). As currently drafted, the provision is limited in scope to only credit

Name of the respondent	Question	Answer
		institutions. Comment: We note that pooled account structures are not unique to credit institutions. Other regulated financial service providers (including investment firms, CASPs, electronic money institutions ("EMIs"), and payment institutions ("PIs")) may also operate pooled or omnibus account structures in which they hold, administer or custody funds or assets on behalf of their clients. The rationale for the simplified measures in Article 22 (namely, that the account holder is itself an obliged entity subject to AML/CFT obligations and effective supervision, and that the ML/TF risk is low) equally applies to pooled accounts held by these other categories of regulated entities. This provision therefore should not be limited to credit institutions, and should apply to all financial institutions. We also query whether, in the absence of an express provision covering pooled accounts held by non-credit institution obliged entities, such arrangements would instead be categorised as correspondent relationships (as is currently the case for accounts provided to PIs/EMIs by credit institutions under certain national frameworks). If so, this would result in disproportionately burdensome enhanced due diligence requirements for arrangements that present comparable risk profiles to those covered by Article 22. Recommendation: Article 22 should be expanded to cover pooled accounts operated by all categories of financial institution obliged entities, including investment firms, CASPs,

Name of the respondent	Question	Answer
		EMIs, and PIs, provided that the conditions set out in Article 22(a)–(e) are met. Alternatively, AMLA should clarify the CDD treatment applicable to pooled accounts held by non-credit institution obliged entities.
Coinbase	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')18	29
Coinbase	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).19	Concern: Article 29 requires obliged entities to establish whether customers, beneficial owners, and controlling/owning entities are subject to targeted financial sanctions. It further provides that "where there is a suspicion of circumvention or evasion of targeted financial sanctions" obliged entities must also establish whether the person acting on behalf of the customer is subject to targeted financial sanctions. Comment: We welcome the distinction drawn in Article 29 between the mandatory screening of customers, beneficial owners, and controlling entities on the one hand, and the conditional screening of persons acting on behalf of the customer where there is a suspicion of circumvention or evasion on the other. This is a proportionate and risk-based approach. We request confirmation that this distinction is intentional and that obliged entities are not required to routinely screen all persons acting on behalf of the customer against targeted financial sanctions lists in the absence of a suspicion of circumvention or evasion. Recommendation: Confirm that the screening of persons acting on behalf of the customer

Name of the respondent	Question	Answer
Coinbase	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Coinbase	Do you have any comments on the Annex in the draft RTS?	Yes
Coinbase	Please share your comments below.	Concern: Annex I defines the corresponding list of attributes that electronic identification means and qualified trust services are required to feature for the purpose of applying CDD. These are based on Commission Implementing Regulation (EU) 2024/2977 which lays downs rules on European Digital Identity Wallets. Comment: In terms of the list of attributes set out in Annex I, minor clarification should be provided to confirm that country of birth is sufficient for natural persons, and that the distinction between country and state entries is only applicable where relevant (as not all Member States have federal sub-divisions). Recommendation: Clarify that country of birth is sufficient, and that a distinction between country and state entries is only applicable where relevant.
Coinbase	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Coinbase	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. 	additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: Recurrent costs	
Coinbase	Please justify your answer to the previous question and provide evidence where possible.	As proposed, implementing the draft RTS will require both initial and ongoing resources to implement and continue to operate as designed. Without the clarifications sought, the nature and scale of both initial and ongoing costs are likely to increase, diverting compliance and operational resources away from high risk activities, and undermining an overarching risk-based approach.
Comité permanent de l'horlogerie européenne (CPHE)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	We support the objective of a harmonised and directly applicable EU AML/CFT framework and welcome AMLA's stated commitment to proportionality and a risk-based approach. However, our branch considers that several provisions of the draft RTS are not sufficiently adapted to the operational reality of non-financial obliged entities active in the retail and distribution of high-value goods. While the consultation paper indicates that the RTS are intended to be applicable across both financial and non-financial sectors, the underlying concepts, structure and level of granularity remain largely derived from the banking and financial sector, as also reflected in the preparatory work conducted by the EBA. As a result, a number of requirements are not operationally feasible, not risk-relevant, or lead to duplication of controls already performed by financial institutions. 1. Structural misalignment with transaction-based retail models A central issue raised across the sector indicates that the RTS do not sufficiently distinguish between:

Name of the respondent	Question	Answer
		• business relationships, typical of financial institutions; and • occasional transactions, which are the predominant model in high-value goods retail. Retail interactions are typically: • short in duration, • conducted at the point of sale, • based on limited and often unverifiable customer input, • and do not involve ongoing account relationships or fund management. In addition, in certain business models, in particular those involving multiple legal entities or brands within the same group, customer data is not centralised and cannot be consolidated across entities due to legal, technical and governance constraints, including data protection requirements. As a result, even where repeated interactions may exist at a broader level, they are not observable by the individual obliged entity. This structural limitation further restricts the ability to apply certain due diligence requirements in a consistent and meaningful manner. In this context, a number of requirements — including those relating to expected activity, purpose of the relationship, or ongoing monitoring — are either not meaningful or not realistically implementable. Moreover, applying financial-sector-driven criteria in a retail environment is likely to generate a high volume of false positives, as customer behaviour is often irregular and driven by personal circumstances rather than structured intent. This may ultimately reduce the effectiveness of AML/CFT measures by diverting attention from genuinely higher-risk situations.

Name of the respondent	Question	Answer
		We put in the additional input specific comment and wording.
Comité permanent de l'horlogerie européenne (CPHE)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	We do not agree that the proposals, in their current form, can be effectively applied across the range of products and services offered in the high-value goods retail sector. The draft RTS are based on a conceptual framework that assumes the existence of ongoing customer relationships, the availability of detailed financial and behavioural information, and the ability to conduct in-depth due diligence prior to or during the customer interaction. These assumptions are characteristic of the financial sector but do not correspond to the reality of retail activities, which are predominantly characterised by occasional, transaction-based interactions conducted at the point of sale. In particular, the requirement to collect and assess information relating to the purpose of the transaction, the source of funds or wealth, and the expected future activity of the customer reflects a financial-sector approach to risk assessment that is not suited to retail environments. In the sale of high-value goods, the purpose of the transaction is generally evident from the nature of the activity, and customers are neither in a position nor under any reasonable expectation to provide reliable information about future behaviour or financial background. Moreover, such information is typically unverifiable and therefore of limited value for AML/CFT purposes. The lack of differentiation between business relationships and occasional transactions further exacerbates this issue. By applying broadly similar expectations across different types of

Name of the respondent	Question	Answer
		interactions, the RTS risk imposing disproportionate obligations in low-risk scenarios and undermining the effectiveness of the risk-based approach. In addition, the proposals do not sufficiently take into account the role of financial institutions in the transaction chain. Where payments are made through regulated channels, a significant portion of the AML/CFT risk has already been addressed upstream. Failing to recognise this element results in duplication of controls and does not reflect an efficient allocation of responsibilities. Overall, the absence of sufficient flexibility and sector-specific adaptation limits the applicability of the RTS and creates a risk of inconsistent implementation across different business models. This limitation is further reinforced in business models involving multiple entities or distribution structures, where customer data cannot be aggregated across entities, thereby preventing a comprehensive view of customer activity. Concrete Proposal The RTS should explicitly recognise that their application must be adapted to the nature of the products and services offered and to the business model of the obliged entity. In particular, the RTS should clearly distinguish between business relationships and occasional transactions and ensure that requirements such as expected activity, source of wealth and ongoing monitoring are limited to situations where they are relevant and operationally feasible. The RTS should also clarify that due diligence requirements for transaction-based retail activities must be limited to information that is reasonably available and capable of

Name of the respondent	Question	Answer
		verification at the point of interaction. In addition, it should be explicitly recognised that, for non-cash transactions, obliged entities may take into account the AML/CFT controls already performed by financial institutions involved in the payment process
Comité permanent de l'horlogerie européenne (CPHE)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	We do not agree that the draft RTS, in their current form, allow for the effective application of a risk-based approach in the context of high-value goods retail. Although the RTS refer to proportionality and risk-based principles, their practical effect is to impose a set of prescriptive and largely standardised information requirements that apply irrespective of the specific characteristics of the transaction or the operational capabilities of the obliged entity. In this respect, the framework risks shifting from a genuinely risk-based approach to a formalised and largely rules-driven information collection exercise. This outcome is closely linked to the fact that the RTS are largely based on methodologies developed in the financial sector, where institutions have access to extensive customer data, transaction histories and analytical tools that allow them to assess risk in a meaningful and dynamic manner. In such an environment, the collection of detailed information on the source of funds, customer profile or expected activity can be contextualised and verified. In a retail environment, by contrast, the same information is often unavailable, unverifiable, or devoid of meaningful context. As a result, several of the requirements included in the RTS risk producing limited or no additional AML/CFT value. Information relating to the purpose of the transaction is typically self-evident in a retail sale, while information on the source of

Name of the respondent	Question	Answer
		funds, occupation or expected activity is often based on self-declaration and cannot be independently verified. Requiring the systematic collection of such information does not strengthen risk detection but may instead dilute focus from genuinely higher-risk situations. Furthermore, the RTS do not sufficiently reflect the role of financial institutions in mitigating risk, particularly in the case of non-cash transactions. By not taking into account the checks already performed upstream, the framework creates duplication and fails to allocate responsibilities in a manner consistent with the risk-based approach. Concrete Proposal The RTS should be revised to ensure that the risk-based approach is applied in a substantive and operational manner, taking into account the specific characteristics of non-financial sectors. In particular, the RTS should focus on information that is both relevant to the assessment of risk and capable of being verified by the obliged entity, and should allow for simplified approaches in low-risk, transaction-based scenarios. They should also explicitly
Comité permanent de l'horlogerie européenne (CPHE)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Yes. There are several situations in which the information required under the draft RTS is routinely unavailable or cannot be meaningfully obtained in a retail environment. These situations are not exceptional but reflect the normal operating conditions of high-value goods retail. First, customers are generally not able to provide reliable information on future purchasing behaviour or expected activity, particularly in the context of occasional transactions.

Name of the respondent	Question	Answer
		Any such information would be speculative and therefore of limited value. Second, information on source of funds or source of wealth is typically based on self-declaration and cannot be verified by retail staff. Unlike financial institutions, retailers do not have access to account data or transaction histories that would allow them to assess plausibility. Third, information on occupation or business activity is similarly unverifiable and does not provide meaningful insight into the legitimacy of a transaction in a retail context. Fourth, the identification and verification of beneficial ownership and control structures is not feasible at the point of sale, particularly where complex corporate structures are involved. This again reflects requirements derived from financial-sector practices that are not adapted to retail environments. Fifth, identifying close associates of PEPs is not realistically achievable, even with specialised tools, and is therefore not operationally feasible. Finally, where transactions are conducted through regulated financial channels, retailers have no visibility over the broader financial context of the customer and cannot meaningfully validate assumptions relating to transaction patterns or financial behaviour. These aspects are already assessed by financial institutions. Taken together, these examples demonstrate that the RTS do not sufficiently distinguish between information that is theoretically desirable and information that is realistically obtainable and operationally meaningful. As a conclusion, these limitations reflect not only operational constraints but also structural differences between financial

Name of the respondent	Question	Answer
		and non-financial sectors, which should be explicitly recognised in the RTS. Concrete Proposal The RTS should explicitly limit customer due diligence requirements to information that is: • available at the point of interaction (point of sale), • capable of being verified by the obliged entity, • and relevant to the specific transaction. In particular, the RTS should: • restrict enhanced due diligence elements (such as source of wealth or expected activity) to higher-risk situations or established business relationships; • allow reliance on regulated financial institutions for non-cash transactions; • recognise simplified approaches for occasional transactions, focusing on: o transaction characteristics, o payment methods, o and observable risk indicators. Such an approach would ensure that the framework remains both effective and operationally feasible and would reduce the risk of unjustified refusals of legitimate transactions.
Comité permanent de l'horlogerie européenne (CPHE)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Given the characteristics of high-value goods retail, additional simplified due diligence measures should be explicitly recognised in the RTS. The current framework does not sufficiently reflect that many retail transactions — particularly non-cash, one-off purchases by natural persons — present a comparatively lower ML/TF risk, especially when considered in light of the controls already

Name of the respondent	Question	Answer
		applied by financial institutions. Moreover, occasional transactions and business relationships present fundamentally different risk profiles. While occasional transactions involve less historical information, they do not inherently present higher risk. Conversely, business relationships allow for a more comprehensive understanding of customer behaviour over time. The RTS should therefore explicitly provide for simplified approaches tailored to low-risk, transaction-based scenarios, rather than applying a uniform set of requirements derived from financial-sector models. Concrete Proposal The RTS should include explicit simplified due diligence measures for high-value goods retail, including: • recognition that, where payments are made via regulated financial institutions, obliged entities may rely on the AML/CFT controls performed by those institutions; • limitation of identification requirements to basic data derived from official identity documents, without requiring additional information such as source of funds or expected activity in low-risk situations; • adoption of a transaction-based risk assessment, whereby simplified due diligence is permitted for: o one-off transactions, o non-cash payments, o and absence of specific risk indicators; • confirmation that no ongoing monitoring or periodic review is required for occasional transactions. These measures would ensure that simplified due diligence is applied in a manner that is proportionate, operationally

Name of the respondent	Question	Answer
		feasible, and aligned with the actual risk profile of retail activities.
Comité permanent de l'horlogerie européenne (CPHE)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Comité permanent de l'horlogerie européenne (CPHE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	1
Comité permanent de l'horlogerie européenne (CPHE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	Feedback received across the sector indicates that, in a significant proportion of transactions (in particular non-cash transactions), payments are processed through: • credit institutions, • payment service providers, • and card networks, all of which are themselves subject to extensive AML/CFT obligations, including full KYC, transaction monitoring and sanctions screening. This results in a situation where: • the origin of funds has already been subject to scrutiny, and • the customer has already undergone identification and verification. This results in a duplication of controls and an inefficient allocation of AML/CFT responsibilities, as non-financial obliged entities are required to replicate checks that are already performed more effectively by financial institutions with access

Name of the respondent	Question	Answer
		to broader and more reliable information. Insert in Article 1 (Proportionality and risk-based approach): “In applying this Regulation, obliged entities shall take into account the nature, scale and complexity of their business activities. Where customer due diligence measures have already been carried out by another obliged entity subject to Regulation (EU) 2024/1624 or equivalent requirements, in particular a credit or financial institution involved in the transaction, this shall be considered as a relevant risk-mitigating factor when determining the nature and extent of the measures to be applied.”
Comité permanent de l'horlogerie européenne (CPHE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	6
Comité permanent de l'horlogerie européenne (CPHE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Identification and verification requirements (Articles 5, 6, 8): The provisions relating to identification and verification of customers assume that obliged entities are able to assess document authenticity and the reliability of sources at a level comparable to financial institutions. In reality, retail staff are not equipped with the tools or expertise required to perform such assessments. Retail staff are not trained document experts, and transactions must often be completed within minutes. In addition, systematic copying and retention of identity documents raises data protection concerns, particularly under the GDPR principle of data minimisation. In many cases, visual inspection and recording of key data elements is the only

Name of the respondent	Question	Answer
		feasible and appropriate approach. Clarify in Article 6: “In standard and low-risk situations, obliged entities may fulfil the verification requirement by visual inspection of an original identity document and recording the relevant data. The retention of a full copy of the document shall not be mandatory in the absence of specific risk indicators.”
Comité permanent de l'horlogerie européenne (CPHE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	11
Comité permanent de l'horlogerie européenne (CPHE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	The RTS require obliged entities to identify and verify beneficial ownership and to understand ownership and control structures, including assessing their plausibility and economic rationale. These requirements are clearly inspired by financial-sector practices and assume access to specialised databases, analytical tools and compliance expertise. Such expectations are not compatible with the operational reality of high-value goods retail. In particular, in the context of occasional transactions or standard commercial relationships, retailers are not in a position to conduct in-depth analysis of corporate structures. Feedback received across the sector consistently indicated that: • such analysis requires specialised expertise and resources, • is not feasible at the point of sale, • and is often redundant where customers are already subject to AML/CFT obligations.

Name of the respondent	Question	Answer
		This issue is particularly acute where the RTS extend these requirements to suppliers, even though complex structures are common and legitimate in large corporate groups. Introduce a proportionality clause in Article 11: “For non-financial obliged entities, the assessment of ownership and control structures may be based on information provided by the customer and publicly available registers, without requiring independent verification of each intermediate layer, unless specific risk indicators are present.” Add: “Where the customer is itself an obliged entity under Regulation (EU) 2024/1624 or equivalent requirements, the ownership and control structure may be deemed to correspond to the information available in the relevant beneficial ownership register.”
Comité permanent de l'horlogerie européenne (CPHE)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	12
Comité permanent de l'horlogerie européenne (CPHE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	The RTS require obliged entities to identify and verify beneficial ownership and to understand ownership and control structures, including assessing their plausibility and economic rationale. These requirements are clearly inspired by financial-sector practices and assume access to specialised databases, analytical tools and compliance expertise. Such expectations are not compatible with the operational reality of high-value goods retail. In particular, in the context of occasional transactions or standard commercial relationships,

Comité permanent de l'horlogerie européenne (CPHE)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).21	The requirement to regularly update customer data is not suited to: • occasional transactions, • or relationships that are not continuous. Feedback received across the sector highlighted that treating all customers as if they were in a long-term relationship is

Name of the respondent	Question	Answer
		disproportionate. Insert in Article 23: “For occasional transactions, no periodic update requirement shall apply. Customer due diligence shall be performed at the time of the transaction and updated only where a new transaction or risk indicator justifies it.”
Comité permanent de l'horlogerie européenne (CPHE)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	Yes
Comité permanent de l'horlogerie européenne (CPHE)	Please specify which recital you refer to, and share your comments below.	We refer in particular to recitals (2), (3), (5), (7), as well as recitals (8), (15), (18) and (22), which set out key elements of customer due diligence, including the assessment of the purpose and intended nature of the relationship, the collection of customer information, and expectations regarding ongoing monitoring and customer profiling. These recitals reflect concepts and supervisory expectations that are largely derived from the financial sector, where customer relationships are typically continuous, supported by structured onboarding procedures, and based on access to extensive and verifiable customer information. Such assumptions do not reflect the operational reality of non-financial sectors operating on a transaction-based model, such as high-value goods retail, where interactions are predominantly one-off, conducted at the point of sale, and based on limited and often unverifiable information.

Name of the respondent	Question	Answer
		In particular, the references to ongoing monitoring, expected customer activity, comprehensive customer profiling, and the systematic collection and updating of customer information are not readily transposable to retail environments. The recitals should therefore be clarified to explicitly recognise: – the predominance of occasional transactions, – the absence of structured onboarding, – the limited availability and verifiability of information at the point of sale, and – the role of financial institutions as primary AML/CFT gatekeepers in non-cash transactions. Such clarification would contribute to a more proportionate, operationally feasible and consistent interpretation of the RTS across sectors.
Comité permanent de l'horlogerie européenne (CPHE)	Do you have any comments on the Annex in the draft RTS?	No
Comité permanent de l'horlogerie européenne (CPHE)	How would you rate the proposals set out in the draft RTS overall?	Inadequate

Comité Professionnel des Galeries d'Art (CPGA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	The Comité Professionnel des Galeries d'Art (CPGA) considers that certain proposals contained in the draft RTS cannot be applied uniformly across the full range of products and services offered by art galleries and art dealers, and that greater flexibility should therefore be explicitly provided. While CPGA fully supports the objectives of the EU AML/CFT framework, several provisions of the draft RTS appear to be primarily designed for continuous financial relationships and may therefore be insufficiently adapted to the specific characteristics of the art market, which is characterised in particular by: - a diversity of transactions, - an international clientele, - a predominance of small and medium-sized enterprises, - and the cultural nature of the goods traded. These characteristics apply to both the primary and the secondary art market.

Name of the respondent	Question	Answer
		1. Information requirements formulated in a highly prescriptive manner Several provisions of the draft RTS introduce detailed requirements concerning in particular: - customer identification, - understanding the purpose and nature of the business relationship, - identification of beneficial owners. While CPGA understands the objective of these requirements, their formulation could be interpreted as imposing systematic and exhaustive information collection, regardless of the level of risk identified. In the art market, such an approach may prove difficult to apply in common situations, such as: - transactions conducted in an international context, - acquisitions made during art fairs, - purchases conducted through art advisors, - transactions involving long-standing collectors known to the gallery. In such cases, exhaustive information collection may prove disproportionate in relation to the actual level of risk. 2. Need to preserve the risk-based approach established by the Regulation CPGA recognises that the risk-based approach is a fundamental

Name of the respondent	Question	Answer
		principle of the EU AML/CFT framework, as established by Regulation (EU) 2024/1624. However, certain provisions of the draft RTS could be interpreted as introducing information requirements formulated in a largely systematic manner. It would therefore be useful for the RTS to explicitly clarify that: - customer due diligence measures must be applied proportionately to the level of risk identified, - the depth of due diligence may be adapted depending on the context of the transaction, - the information listed in the RTS should be understood as a reference framework that may be adapted where justified by the level of risk. Such clarification would help ensure that the RTS do not, in practice, limit the flexibility provided by the Regulation. 3. Specific challenges related to the identification of beneficial owners In the art market, buyers may sometimes operate through: - holding companies, - collection structures, - family foundations or trusts. For art galleries, which are predominantly small and medium-sized enterprises, obtaining a full understanding of certain international legal structures may be particularly complex.

Name of the respondent	Question	Answer
		In this context, obligations relating to the identification of beneficial owners should be applied within reasonable limits, taking into account: - the operational capacity of non-financial obliged entities, - and the information reasonably accessible to them. 4. Taking into account the cultural nature of the goods traded The art market also has the particularity of involving cultural goods whose acquisition may be motivated by various considerations: - cultural, - aesthetic, - patrimonial, - or personal. In this context, the purpose of a transaction cannot always be interpreted exclusively through an economic lens. The RTS should therefore recognise that, in sectors such as the art market, the understanding of the purpose of a transaction must be assessed in a proportionate and contextualised manner.
Comité Professionnel des Galeries d'Art (CPGA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii)	The Comité Professionnel des Galeries d'Art (CPGA) fully supports the objective of the draft RTS to enable the effective application of a risk-based approach in the implementation of customer due diligence requirements under Regulation (EU) 2024/1624.

Name of the respondent	Question	Answer
	provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	However, in their current form, certain provisions of the draft RTS may, in practice, limit the flexibility necessary for the effective application of this approach by non-financial obliged entities, including art galleries and art dealers. Several provisions appear to lead to a systematic and standardised collection of information, which could undermine the logic of the risk-based approach. In a sector such as the art market — characterised by diverse business models, an international client base and both occasional and ongoing transactions — it is essential that technical standards allow obliged entities to adapt the intensity of due diligence measures to the level of risk identified. In this respect, certain clarifications and drafting adjustments could strengthen the alignment of the draft RTS with the core principles of the EU AML/CFT framework. 1. Risk of overly standardised application of due diligence requirements Some provisions of the draft RTS describe in detail the information to be collected as part of customer due diligence. While these provisions aim to enhance legal certainty, their wording could be interpreted as requiring the systematic collection of an extensive set of information, regardless of the level of risk associated with the business relationship or transaction.

Name of the respondent	Question	Answer
		Such an interpretation could: - reduce the ability of obliged entities to tailor due diligence measures to the level of risk; - create disproportionate administrative burdens for small and medium-sized businesses in the art market; - divert compliance resources away from genuinely higher-risk situations. Given that the art gallery sector largely consists of SMEs and micro-enterprises, it is particularly important that customer due diligence requirements remain proportionate to the size, structure and risk profile of the obliged entity. 2. Diversity of situations in the art market The art market is characterised by a wide diversity of commercial practices. Both primary market galleries (representing living artists or their estates) and secondary market galleries may: - maintain long-term relationships with collectors; - conduct occasional transactions with new buyers; - operate with international clients; - sell artworks with widely varying price levels and risk profiles. In this context, an effective risk-based approach requires that obliged entities be able to adapt: - the depth of identity verification; - the level of information collected about the customer;

Name of the respondent	Question	Answer
		- the extent of beneficial ownership analysis. An overly rigid interpretation of the information-collection requirements could reduce the ability of galleries to adjust their due diligence procedures to the actual risk profile of the transaction or relationship. 3. Importance of proportionality for non-financial obliged entities The principle of proportionality is a cornerstone of the EU AML/CFT framework. EU legislation recognises that AML/CFT obligations should take into account: - the nature of the business, - the size of the entity, - the risk level associated with the products or services offered. For art galleries, the practical application of this principle means that due diligence obligations should be adaptable where: - the identified ML/TF risk is low; - the customer is already known to the entity; - the transaction presents sufficient transparency and traceability (for example through traceable bank payments). Explicitly clarifying this flexibility in the RTS would strengthen consistency with the proportionality principle established in the AMLR.

Name of the respondent	Question	Answer
Comité Professionnel des Galeries d'Art (CPGA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	The Comité Professionnel des Galeries d'Art (CPGA) considers that, in the sector of art galleries and antique dealers, certain information provided for in the draft RTS may, in practice, regularly be unavailable due to the structural characteristics of the art market and the nature of the transactions involved. These situations relate in particular to: - the often international nature of the art market; - the diversity of legal structures used by collectors; - certain specific situations such as estates or family co-ownership arrangements; - the size and limited administrative resources of many galleries, which are predominantly SMEs or micro-enterprises. In such situations, certain information required under the RTS may not be reasonably accessible, despite the steps taken by galleries. CPGA therefore considers that it would be useful for the RTS to provide more explicit alternative solutions in order to allow non-financial obliged entities to comply with their due diligence obligations while fully applying the risk-based approach provided for under the European AML/CFT framework. Several concrete situations can be identified. 1. Identification of the beneficial owner for certain foreign legal persons In the art market, acquisitions may be carried out through

Name of the respondent	Question	Answer
		various legal structures, including: - holding companies or patrimonial companies; - art investment structures; - private foundations; - trusts or equivalent structures in certain jurisdictions. In some cases, particularly where these structures are established in foreign jurisdictions, the full identification of the beneficial owner may not be immediately accessible to galleries, notably where: - public registers are not accessible; - the available information is limited; - the legal structures involved are complex. These situations may be particularly difficult to manage for small non-financial operators. CPGA considers that the RTS should explicitly clarify that, where certain information is not reasonably accessible, obliged entities may rely on reliable alternative sources of information, including client declarations or publicly available sources. 2. Identification of certain sellers in consignment sales In the secondary art market, galleries frequently act as intermediaries for the sale of artworks entrusted to them on consignment by private individuals. In this context, sellers may include in particular:

Name of the respondent	Question	Answer
		- private collectors; - heirs or beneficiaries in the context of estates; - family co-ownership arrangements; - representatives of estates or structures involving several beneficiaries. In certain situations, particularly in the case of older estates or family co-ownership arrangements, the full identification of all individuals involved may be difficult to establish immediately. For example: - the artwork may be entrusted by a representative of the co-ownership structure; - certain heirs may reside in different jurisdictions; - the full legal documentation relating to the estate may not be immediately available. In such situations, galleries should be able to rely on the legal or authorised representative of the relevant structure, subject to an appropriate risk assessment. 3. Transactions with international clients The art market is inherently international. European galleries regularly work with: - foreign collectors; - international cultural institutions; - foundations and private museums located in other

Name of the respondent	Question	Answer
		jurisdictions. In some cases, certain documentary information may be difficult to obtain quickly, particularly where: - identification documents follow different formats depending on the jurisdiction; - certain foreign databases or registers are not easily accessible; - the transaction takes place within a relatively short timeframe (for example during an art fair). In such situations, obliged entities should be able to rely on reliable alternative sources of information, such as: - foreign public registers; - recognised commercial databases; - information provided by regulated financial institutions involved in the transaction.
Comité Professionnel des Galeries d'Art (CPGA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	The Comité Professionnel des Galeries d'Art (CPGA) fully supports the objective pursued by the AMLA to ensure the effective and harmonised implementation of customer due diligence obligations across the European Union under Regulation (EU) 2024/1624. In accordance with Article 28(1), the regulatory technical standards relating to customer due diligence should nevertheless remain fully compatible with the risk-based approach, while taking into account the specific characteristics of non-financial obliged entities, including art galleries and antique dealers.

Name of the respondent	Question	Answer
		The art gallery sector presents several structural characteristics relevant when assessing money laundering and terrorist financing risks: - galleries primarily act as commercial and cultural intermediaries rather than financial intermediaries; - transactions are predominantly settled through regulated financial institutions, implying a first level of AML/CFT control; - the use of cash is relatively limited in the professional art market; - galleries operate in a highly documented commercial environment (invoices, contracts, catalogues, artwork documentation); - most operators are small and medium-sized enterprises with limited administrative and compliance resources. In this context, it would be useful for the RTS to provide for situations in which simplified due diligence measures may be appropriate where the level of risk is low. 1. Transactions with institutional or professional clients in the European Union Certain transactions are carried out with public cultural institutions, museums, foundations or professional art market participants established in the European Union, which are themselves subject to regulatory obligations or high transparency requirements. Where:

Name of the respondent	Question	Answer
		- the customer entity is clearly identifiable; - it is subject to regulatory obligations or comparable transparency requirements; - no particular risk factor is identified, it may be appropriate for the RTS to recognise the possibility of applying simplified due diligence measures, in line with the risk-based approach. 2. Transactions involving artworks sourced directly from the artist In the primary art market, galleries frequently sell artworks sourced directly from the artist they represent or from the artist's estate. In such situations, the provenance chain is generally clearly documented and traceable. While provenance does not in itself reduce money laundering risk – which depends primarily on the customer and the origin of funds – it may nonetheless constitute a relevant element in the overall risk assessment, particularly within a transparent commercial framework. The RTS could therefore clarify that fully documented provenance may be taken into account as a relevant factor. 3. Transactions with known clients or established business relationships

Name of the respondent	Question	Answer
		Galleries often maintain long-standing relationships with collectors, institutions or professional market participants. Where: - the identity of the customer has already been verified; - the relationship is established; - no material change in the risk profile has been identified, the RTS could recognise the possibility of relying on previously collected information to avoid unnecessary repetition of administrative procedures. 4. Limited use of cash and the filtering role of financial institutions Transactions are predominantly settled through bank transfers or regulated payment service providers. In such cases, financial institutions already perform: - customer due diligence checks; - sanctions screening; - controls relating to the origin of funds. The RTS could recognise that the use of regulated banking channels may constitute a mitigating risk factor. 5. Structural characteristics of the art market Transactions are generally accompanied by substantial documentation, including: - invoices and sales agreements;

Name of the respondent	Question	Answer
		- artwork documentation; - exhibition catalogues; - commercial archives. These elements do not replace due diligence obligations but may be relevant in assessing the level of risk. 6. Ensuring proportionality for SMEs Most art galleries and antique dealers in the European Union are small and medium-sized enterprises. It is essential that the RTS ensure that due diligence requirements remain: - proportionate to the level of risk; - operationally feasible for small structures; - compatible with available administrative resources.
Comité Professionnel des Galeries d'Art (CPGA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Concord Asset Management AD	Please justify your answer to the previous question and provide evidence where possible.	Our organisation already has an established internal framework for combating ML and FT.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Scope clarification – limited applicability: CINOA does not fully agree that the draft RTS can be applied across the range of products and services of art market obliged entities. The sector is characterized by a single, goods transaction-based model, unlike the broader range assumed in the RTS. Situations commonly encountered in the art market have not been addressed, including: (i) For situations where several professional intermediaries are involved in a chain between a seller and buyer of an item of cultural property the term “customer” and the parties on whom customer due diligence is to be performed have not been addressed. CINOA proposes that each obliged entity intermediary be under an obligation to carry out customer due diligence on the entity next to them in the chain – that is to say (i) the persons or entities from and to whom they receive or make payment for goods, and (ii) the persons or entities from whom they receive (but not to whom they pay) a fee for services. Proposal: Proposed definition for incorporation in the CDD RTS: The “customer” of an obliged entity acting as seller, buyer or intermediary in a transaction involving an object is the party from whom the obliged entity receives payment, or to whom it makes payment in respect of the object, or the party that directly remunerates the obliged entity for services connected with that transaction. (ii) The differing definitions of obliged entities for cultural

Name of the respondent	Question	Answer
		goods and high-value goods, particularly in relation to financial thresholds and business relationships create overlapping and potentially conflicting obligations that the RTS does not resolve. The definition of obliged entities for cultural goods is rightly based on entities carrying out transactions above a financial threshold combined with the concept of a business relationship; however, these elements do not sit comfortably together in a market that is predominantly transaction-based. This gives rise to a clear inconsistency with the definition applicable to persons selling high-value goods, which is framed using materially different language and regulatory logic. As many cultural goods also fall within the scope of the high-value goods definition, this results in an overlap of regimes and the imposition of potentially conflicting obligations that require clarification and resolution. (iii) Article 23 requires CDD to be carried out before an occasional transaction, but provides no specific guidance for the cultural or high-value goods sectors, creating a risk of inconsistent interpretation across Member States. In practice, it is not always possible to conduct CDD before a transaction is initiated, particularly in art fairs or auctions where buyers may act quickly or not ultimately purchase. The Regulation should therefore clarify that, for goods, CDD must be completed before the transaction is finalised—i.e. before the transfer of ownership or release of the goods. Proposed new Article – Timing of the verification of the customer and beneficial owner identity: In the case of transactions involving cultural goods and high-value goods in order to comply with the timing requirements pursuant to Article 23(1) of Regulation (EU) 2024/1624, obliged

Name of the respondent	Question	Answer
		entities shall be permitted to agree to a transaction before complying with the verification of the identity of the customer, the beneficial owner, and of any persons pursuant to Article 20(1), points (h) and (i) of Regulation (EU) 2024/1624, but shall have completed this verification before conclusion of the transaction and before the goods are in the possession of the customer.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Risk-based approach – insufficiently operationalised: While the RTS refer to proportionality, several provisions (notably Articles 10–15, 18, 19, 23 and 24) do not sufficiently reflect the operational realities of the art market, which is predominantly composed of micro-businesses with limited resources. Targeted adjustments are needed to ensure that compliance is both effective and proportionate. Our recommendations for individual provisions are set out in full detail in the "Additional Input" section of this survey.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	(See responses in the Additional Substantive Input section, including per-article comments and Questions 2, 4 and 5.) Practical limitations: Art market businesses are predominantly small galleries, dealers, and auction houses, often with 2–3 employees. Occasionally, clients operate through agents, complex corporate structures, trusts, or offshore entities. In these cases, obtaining full information on beneficial ownership, source of funds, or client identity can be routinely unavailable or disproportionately costly, due to legal, cultural, or confidentiality constraints. For example: Proposed alternative solutions (short summaries): Verification options for micro and small businesses

Name of the respondent	Question	Answer
		● Article 7: Instead of requiring official time stamping, allow for dated electronic or paper records documenting verification. "Where technical time-stamping is not available, obliged entities may maintain secure dated electronic or paper records documenting verification, in a manner that is auditable by competent authorities." ● Article 10-15: We do not currently propose a direct solution to the burdensome requirements on beneficial ownership and control structure research but suggest in our additional comments a phased approach to developing a trusted infrastructure, including an operational helpdesk, certified AML service providers, and structured reliance mechanisms. ● Articles 18 and 24: Financial verifications are best carried out by banks/financial institution. Participants in the art market are not well-placed to carry out financial scrutiny of customers, so where the RTS requires financial checks, it should be the financial institutions which provide the funds that are responsible for scrutinizing the source of them, relieving art market participants of obligations outside their control and skill set. Instead, art market obliged entities should be able to rely on observable conditions such as: ● the transaction is consistent with the known profile of the customer, including the nature and scale of their expected economic activity; ● payments are executed through credit institutions or financial institutions that are subject to Union law or equivalent anti-money laundering and counter-terrorist financing requirements; and ● no factors giving rise to suspicion or heightened risk have

Name of the respondent	Question	Answer
		been identified in relation to the customer, the transaction, or the source of funds. ● Article 19(3): Taking into account that some businesses do not operate automated systems and may not be able to verify changes 'without delay' following updates to PEP lists as required under Article 19(2)(a), we request clarification along the following lines: "For obliged entities relying on manual systems, risk-sensitive frequency may be satisfied through: a. event-driven review (e.g. new transaction, change in client behaviour) b. periodic but non-systematic checks based on business judgment c. transaction-triggered reassessment rather than calendar-based screening" ● Article 23: Disproportionate burden of updating customer identification data in the absence of transactions or client engagement over a five-year period. Amendment proposal - Article 23(2)(a): additional "Where no transaction has occurred for a continuous period of five years, the business relationship may be treated as inactive for AML purposes and closed in customer due diligence records, with no further need for monitoring and with due diligence required upon any future reactivation". These measures would provide practical, proportionate solutions while ensuring that compliance responsibility and liability are allocated to entities with the resources and oversight to manage such obligations effectively and thereby

Name of the respondent	Question	Answer
		protecting small art market obliged entities from undue regulatory risk.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	In order to better align due diligence requirements with the low-risk and episodic nature of many transactions in the sector, we propose the following additional simplified due diligence measures. 1. New provision: Standing customer profile for repeat occasional low-risk customers within the scope of the Regulation The inclusion of such a provision would ensure that due diligence measures remain proportionate and risk-based, while taking into account the specific characteristics of the cultural goods market. Obliged entities should be permitted establish a standing customer profile for customers with whom they are in a business relationship, following initial verification in low-risk relationships, with no requirement for re-onboarding or repeated data collection for subsequent transactions, unless triggered by identified risk indicators or material changes in customer circumstances. 2. CINOA recommends the introduction of a sector-specific provision, because the draft RTS does not sufficiently operationalise the risk-based approach in the context of cultural goods, in particular by failing to provide for the application of simplified due diligence in clearly defined low-risk scenarios. New provision – Simplified due diligence in the cultural goods sector In determining whether a low degree of ML/TF risk exists in

Name of the respondent	Question	Answer
		accordance with Article 33 of Regulation (EU) 2024/1624, obliged entities trading in cultural goods shall be able to take into account the following factors, in addition to the factors listed in Annex II of the Regulation: (a) a low level of risk associated with the customer; (b) lower value transactions; (c) transactions that demonstrate no complexity and are consistent with usual market practices in the sector; (d) the customer is established or resident in a jurisdiction assessed as presenting a low level of money laundering and terrorist financing risk; and (e) transactions where funds are channeled through accounts held with credit or financial institutions subject to EEA supervision.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Recommendation to AMLA – Trusted Infrastructure and Simplified CDD for Micro-Businesses (Phased Implementation) We realise that our comments in answer to this question are not directly in scope of the Articles of the RTS, but we do believe that they reflect the needs of our sector, which comprises mainly micro-businesses and small owner-managed businesses. AMLA Infrastructure proposal AMLA should develop a unified EU framework enabling micro-businesses, including art market participants, to meet CDD obligations through trusted infrastructure, combining an operational helpdesk, certified AML service providers, and structured reliance mechanisms. This framework could be implemented in phases to ensure legal clarity, operational

Name of the respondent	Question	Answer
		readiness, and scalable adoption. Phase 1 – Guidance and Operational Support ● Establish an AMLA helpdesk to bridge regulation and practice ● Provide practical interpretation of AML/CFT obligations ● Issue guidance on risk-based decision-making and escalation ● Clarify supervisory expectations and correct use of AML tools Phase 2 – Certification Framework ● Define EU-wide minimum standards for AML/CDD service provider certification, audit, and accreditation ● Align standards with existing EU and international frameworks ● Establish supervisory oversight of accredited providers Phase 3 – Structured Reliance Mechanism ● Enable formal reliance on certified third-party AML/CDD providers and obliged entities ● Introduce standards to which the certified providers would need to adhere in order to obtain certification, including: o Written confirmation of compliance and absence of red flags o Maintain confidentiality and data protection safeguards o Audit-ready record keeping o Establish a central EU register of approved providers Phase 4 – Allocation of Responsibility ● Clarify that responsibility for AML checks rests with certified providers or performing obliged entities ● Ensure micro-businesses are not disproportionately exposed when relying on approved infrastructure

Name of the respondent	Question	Answer
		Outcome A phased approach would progressively build trusted AML infrastructure, reduce duplication, improve legal certainty, and ensure consistent AML/CFT compliance across the EU while maintaining high standards and operational feasibility for micro-businesses.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	7
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	1. Technical implementation limitations issue: While art market professionals can verify, securely store, and maintain client information, many particularly micro-businesses lack the infrastructure to generate official time-stamps through remote verification systems. 2. Policy request - alternative methods of evidencing verification: The RTS should clarify the meaning of “time-stamped” as used in proposed Article 7(3)(e), and whether the expression has the same meaning as used in Regulation (EU) 910/2014. Where complex electronic infrastructure is not available, it should be feasible for micro- businesses to be able to demonstrate the date on which a record was obtained through conventional means, such as the date/time an email

Name of the respondent	Question	Answer
		was received containing information on or the metadata indicating the date an image was taken. 3. Drafting proposal: “Where complex technical time-stamping is not available, obliged entities may maintain dated electronic or paper records documenting verification, in a manner that is auditable by competent authorities.”
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	16
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Awareness raising issue: Agents and client confidentiality: Article 16 of the draft RTS and Article 22 of Regulation (EU) 2024/1624 are concerned with persons purporting to represent an identified customer. In such cases the identity of and identity documentation about the customer are made known and given to the obliged entity – as well as information about the person representing them. This can be a common situation in the art market, for example where a person representing the family office of a wealthy individual acts on behalf of that named individual. We ask AMLA to bear in mind that the above situation differs from an instance where the selling and purchasing parties to the sale of an artwork are represented by a chain of several other intermediary parties that are all obliged entities. (Please see our further remarks on this matter in the accompanying contact form submission.)

Name of the respondent	Question	Answer
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	18
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	1. Technical implementation issue – uncertainty of transaction amounts: b(i), b(ii), b(iii), b(iv) These criteria are inherently difficult for art professionals to apply in practice, given the distinctive characteristics of the art market. Unlike other sectors, artworks are often acquired on an impulse basis rather than as planned or necessary purchases, or when entering into a business relationship for services, which limits the predictability of client behaviour and spending levels. In particular, criterion b(ii) the estimated amount of funds to be used in connection with the product or service -whilst not problematic in the case of occasional transactions (the most common type of transaction in the art market) for business relationships - it remains challenging to operationalize. Transaction values in the art market, even when some kind of business relationship has been started, are frequently uncertain and may not necessarily be determined in advance. This is especially evident in auction contexts, where prices are established through competitive bidding processes and may escalate rapidly within a very short timeframe. As a result, art professionals are often unable to make reliable forecasts on the estimated financial scope of a transaction. 2. Key challenge – source of funds: c(i)-(vii) Requiring art professionals to obtain and assess at least one of these categories in order to understand both (i) the activity

Name of the respondent	Question	Answer
		that generated the funds and (ii) the means through which the customer's funds were transferred is, in practice, not workable in the art market. A. Art market participants typically operate on a transactional, non-continuous basis, engaging with customers on a one-off or occasional basis (e.g. galleries, art fairs, or auctions). In this context, requesting detailed information on a customer's revenue or income sources, such as employment, business income, or investments can be both practically unfeasible and often perceived as intrusive or inappropriate within the cultural and commercial norms of buying a 'consumer' good without wanting or needing financing. Customers are thus usually unwilling to disclose such sensitive personal and financial information to non-financial obliged entities. However, most traders will be in a position to assess the likelihood of a customer having the funds by considering their profession or status. B. With regard to the means through which funds are transferred, art professionals typically rely on payments processed through regulated financial institutions, which are subject to comprehensive AML/CTF obligations, including customer due diligence and transaction monitoring. Art professionals do not have visibility over the underlying funding chain, intermediary accounts, or the origin of funds prior to their arrival, and are therefore not in a position to independently assess or validate the transfer pathway. Requiring them to do so would duplicate controls already performed within the regulated financial sector without adding meaningful AML value. C. These challenges are further compounded by the speed and unpredictability of transactions, particularly at art fairs or in

Name of the respondent	Question	Answer
		auction settings. 3. Proposed amendment– insertion of additional condition for Article 18(c): ix. consistency with the known profile of the customer, including the nature and scale of their expected economic activity, provided that payments are executed through credit institutions or financial institutions that are subject to Union law or equivalent anti-money laundering and counter-terrorist financing requirements and no factors have been identified giving rise to suspicion or heightened risk in relation to the customer, the transaction, or the source of funds.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	19
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	1. Technical implementation issue: Paragraph 2(a) requires a risk-sensitive frequency but does not clarify how this should be operationalised in manual-only environments, where systematic periodic screening systems may not exist. This is important because manual PEP checks are resource-intensive and require access to multiple databases, which is challenging for micro-businesses. It should be noted that as most transactions in the art market are occasional transactions the need to review the status of a past customer does not normally arise. 2. Proposed Amendment- Article 19(3) which takes into account that some businesses will not have automated systems which will prevent them from verifying without delay once the PEP list is updated as stipulated in Article 19(2)(a), we ask for

Name of the respondent	Question	Answer
		clarifications such as: “For obliged entities relying on manual systems, “risk-sensitive frequency” may be satisfied through: a. event-driven review (e.g. new transaction, change in client behaviour) b. periodic but non-systematic checks based on business judgment c. transaction-triggered reassessment rather than calendar-based screening”
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	23
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	1. Technical implementation and proportionality issues – updating customer information: Active monitoring of client data is disproportionately burdensome for micro-businesses. Although most transactions in the art market are occasional, for those which give rise to a business relationship the proposed fixed maximum periods for updating customer information (one year for higher-risk customers and five years for others) may not reflect the episodic, transaction-based nature of relationships in the art market. Art market participants often engage with customers on a non-continuous basis, with long periods of inactivity between transactions. As a result, periodic calendar-based reviews may occur without any new transaction or change in risk, creating limited AML benefit relative to the administrative burden. In the absence of economic engagement dormant relationships should not therefore be treated as continuously active, and this

Name of the respondent	Question	Answer
		should be reflected in the RTS. 2. Amendment proposal- Article 23(2)(a): additional “Where no transaction has occurred for a continuous period of five years, the business relationship involving the sale of cultural goods, or of high value goods may be treated as inactive for AML purposes and closed in customer due diligence records, without any further monitoring obligation, provided that the customer due diligence is carried out upon any subsequent reactivation.”
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	24
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	Technical implementation and proportionality issues: While Article 24 appropriately introduces flexibility for simplified due diligence in low-risk situations, further clarification would be useful to ensure proportionate application in non-financial sectors such as the art market. Recommendation: In particular, the requirements to estimate transaction value and, where necessary, determine source of funds should be applied in a strictly risk-sensitive and context-dependent manner, recognising that in the art market transaction values are often uncertain until completion and may evolve rapidly, particularly in auction settings and fast-moving sale environments for galleries. (See previous response concerning Article 18) It would be helpful to clarify in the RTS that such information may be assessed on a high-level, indicative basis, relying on

Name of the respondent	Question	Answer
		observable transaction context rather than detailed financial verification, in line with the simplified nature of the regime.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	10
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Comments apply to Articles 10–15 collectively. 1. Technical implementations and proportionality issues – ownership and control verification: Identifying and verifying ultimate beneficial owners can be complex when customers operate through corporate structures, trusts, or offshore entities. Information may be limited, ownership can change frequently, and tracing control through intermediaries is often impractical, particularly in cross-border contexts. 2. Structural constraint: The art market sector and many other sectors covered by the RTS is largely composed of micro-businesses, making extensive due diligence disproportionately burdensome relative to their size and resources. We wish to make AMLA aware that in the case of a sale of €1 million Old Master painting sold on the international art market (and therefore at somewhat greater risk of being used for money laundering purposes), it is reasonable to expect a trader to pay a specialist to investigate potentially complex ownership structures, and to spend perhaps €3,000 in the process. However, in the case of the linked sales of three paintings of €3,500 each – where the linking will not need to be relevant for AML purposes until the third painting is about to be sold and the €10,000 total limit is about to be breached – the sales of the first two paintings will not have required any such

Name of the respondent	Question	Answer
		investigation. For the sale of the third picture at €3,500 it would seem disproportionate to have to spend the €3,000 on an investigation into beneficial owners. While the principles of customer due diligence (CDD) are broadly supported, several provisions do not reflect the practical realities of the art market, where galleries, dealers, and auction houses are often micro-businesses or small enterprises with 2–3 employees. Some obligations can be nearly impossible or impose disproportionate administrative burdens, making compliance operationally challenging. While Article 24 appropriately introduces flexibility for simplified due diligence in low-risk situations, further clarification would be useful to ensure proportionate application in non-financial sectors such as the art market. More broadly, certain organisational and governance requirements under Regulation (EU) 2024/1624 raise similar proportionality concerns for micro and small entities.
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Do you have any comments on the Annex in the draft RTS?	No
Confédération Internationale des Négociants en	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate

Name of the respondent	Question	Answer
Oeuvres d'Art (CINOA)		
Confédération Internationale des Négociants en Oeuvres d'Art (CINOA)	Would the implementation of the draft RTS generate any of the following additional costs beyond the adjustments that would be required to implement the rules set out in Chapter III of Regulation (EU) 2024/1624 (customer due diligence)? This question is aimed at understanding the additional costs stemming from the implementation of these specific draft RTS, rather than the additional costs stemming from the provisions of Regulation (EU) 2024/1624. We are interested in understanding the additional costs arising from the implementation of the draft RTS for your obliged entity. Please provide your responses with this context in mind. For this survey, “costs” refer to the financial and resource implications your entity may face in implementing the draft RTS, including both initial setup efforts and ongoing operational commitments. Examples of one-off costs include amending policies and procedures, system upgrades, staff training or consultancy fees. Examples of recurring costs may include additional reporting, monitoring, software subscriptions, or allocation of additional full-time equivalent resources, etc. Please describe and substantiate the specific costs you foresee when implementing the provisions of these draft RTS.: One-off implementation costs	Not applicable/no information available

The Confederation of Swedish Enterprise fully supports the objectives of combating money laundering and terrorist financing. However, we are concerned that the proposed rules

Name of the respondent	Question	Answer
		will unnecessarily and inappropriately jeopardize the personal integrity of beneficial owners. This is true for all beneficial owners, and particularly crucial for individuals facing legitimate security threats. In the following, we limit our comments to two aspects of the RTS, i.e. the information to be obtained in relation to addresses of beneficial owners (Article 3) and the reasonable measures for verification of beneficial owners (Article 10). Business leaders and high-profile individuals often face threats to their personal safety and that of their families. Many such individuals rely on protected identity status to safeguard their personal information. For these individuals, it is critical that their personal information, including protected information, is disseminated as narrowly as possible, since any sharing of sensitive information increases the risk of it falling into the wrong hands. The need for protection of sensitive information and protected identities has been recognized in the applicable EU legal framework as well as the European Court of Justice. The Court has established that measures interfering with fundamental rights must be limited to what is strictly necessary, holding that transparency cannot come at the cost of the right to respect for private and family life or the right to protection of personal data under the Charter of Fundamental Rights of the European Union (the “Charter”) and the Regulation (EU) 2016/679 (GDPR). The draft RTS specifies the information to be collected for identification and verification purposes. This includes information on the beneficial owner's place of residence (residential address) comprising postal code, street name, and

Name of the respondent	Question	Answer
		building number (Article 3). Article 10 sets out reasonable measures for verification of the beneficial owner. The current wording of the draft RTS leaves little room for accommodating the risks for individuals relating to the sharing of their residential address, including the residential address of individuals with legitimate security concerns. From a Swedish perspective, it should in this context be noted that disclosing protected residential addresses to obliged entities may be viewed by the Swedish Tax Authority (the authority responsible in Sweden for protected identities) as careless handling of such protected information. This may result in protective measures being revoked and directly endangering the individual and his/her family. Based on the above, the application of the draft RTS, as currently drafted, risks leading to unnecessary sharing of personal information in a way interfering with fundamental rights and respect for private and family life and personal data, which will limit threatened individuals' ability to serve as beneficial owners and, consequently, to conduct business activities. In addition to limiting the individuals' abilities, this would also have a detrimental effect on the overall competitiveness of businesses in the EU. Where the collection of residential addresses effectively prevents individuals from serving as beneficial owners, the resulting restriction on their ability to conduct business activities would be manifestly disproportionate. The draft RTS thus constitutes a disproportionate interference with Article 16 of the Charter, depriving individuals of the ability to develop economic activities. This cannot be justified as necessary or

Name of the respondent	Question	Answer
		proportionate to the legitimate objectives pursued in the context of combating money laundering and terrorist financing. We believe that it is possible to address these concerns and maintain the effectiveness of anti-money laundering measures and the objectives of the AMLR by revising the draft RTS so that obliged entities should not be obliged to request the residential address of individuals that are beneficial owners. The postal addresses, post boxes, or company addresses should be sufficient. This small amendment is key to protecting the integrity of individuals, and is particularly important for individuals with protected identities. Further, there is no compelling reason why beneficial owners should not be afforded the same flexibility as senior managing officials under Article 13(a) of the draft RTS, which permits obliged entities to collect the address of the registered office of the legal entity instead of the residential address when identifying these officials. Where the collection of alternative address information is not sufficient for verification purposes, obliged entities should be able to take additional measures, as proposed below in relation to Article 10. As response to the next question, we have included our proposed amendments to the RTS, aiming to address the above concerns, while maintaining the objectives of the AMLR.
Confederation of Swedish Enterprise	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	3

Name of the respondent	Question	Answer
Confederation of Swedish Enterprise	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	Proposed amendments to Article 3 of the RTS on customer due diligence under Article 28(1) of Regulation (EU) 2024/1624 (AMLR) The draft amendments below have been designed to ensure compliance with the proportionality requirements established by the European Court of Justice whilst maintaining the effectiveness of customer due diligence measures. Proposed amendments to Article 3 We propose adding a new paragraph to Article 3, as follows: “Where a beneficial owner is a natural person, obliged entities may decide to obtain the postal address, post box address or the address of a registered office of a legal entity with which the natural person is associated, instead of the beneficial owners’ residential address, provided that such address enables the natural person to be reached for the purposes of Article 22(1)(a)(iv) of Regulation (EU) 2024/1624. Where a natural person has a protected identity status granted by a competent national authority, or where there are documented legitimate security concerns, the residential address should not be requested, but the requirement be fulfilled by obtaining a postal address, post box address, or the address of a registered office of a legal entity with which the natural person is associated, provided that such address enables the natural person to be reached for the purposes of Article 22(1)(a)(iv) of Regulation (EU) 2024/1624.”

	explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	
Conseil des Maisons de Vente (CMV)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Le CMV a répondu à la question lors d'une précédente connexion à la présente consultation.
Conseil des Maisons de Vente (CMV)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Le CMV a répondu à la question lors d'une précédente connexion à la présente consultation.
Conseil des Maisons de Vente (CMV)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Le CMV a répondu à la question lors d'une précédente connexion à la présente consultation.
Conseil des Maisons de Vente (CMV)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by evidence. Where necessary, comments should also include a proposed solution.	Le CMV souhaite préciser qu'il a répondu une première fois à la présente consultation mais qu'il n'a pu intégrer l'ensemble des commentaires qu'il a à formuler article par article dans la rubrique "Apports supplémentaires". Aussi le fait-il en répondant en un second temps à la présente consultation.

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	26
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	ARTICLE 26 — INFORMATIONS COMPLEMENTAIRES SUR LA NATURE DE LA RELATION D'AFFAIRES EN SITUATION DE VIGILANCE RENFORCEE Position : Point critique — imprécision structurelle, charge documentaire accrue, risque de grief lors des contrôles L'article 26 impose aux entités assujetties d'obtenir des informations complémentaires leur permettant de s'assurer de l'authenticité et de l'exactitude des informations détenues sur la nature de la relation d'affaires, de vérifier la cohérence de la destination des fonds avec la nature déclarée de cette relation, et d'évaluer si le nombre, le montant, le type, le volume et la fréquence prévisibles des transactions sont cohérents avec l'activité déclarée, l'origine des fonds et l'origine du patrimoine du client. Le CMV relève que ces obligations souffrent du même déficit d'imprécision que celui identifié à l'article 25. Aucun critère ne permet de déterminer à quel niveau de détail et selon quelle méthode la cohérence de la destination des fonds doit être établie, ni selon quels paramètres l'évaluation de la cohérence des transactions prévisibles peut être considérée comme satisfaisante. Cette imprécision expose les entités assujetties à des appréciations divergentes de leurs superviseurs lors des contrôles, sans qu'elles disposent d'aucun critère objectif pour s'en prémunir.

Name of the respondent	Question	Answer
		Par ailleurs, l'article 26 §2 précise que les informations complémentaires peuvent inclure des données sur les clients du client, ses contrats, partenaires commerciaux et associés. Le CMV relève que ces informations présentent une pertinence très limitée pour les maisons de vente, dont le modèle économique repose sur des transactions ponctuelles et non sur des relations d'affaires structurées impliquant des tiers identifiés. Les obtenir de manière systématique en situation de vigilance renforcée représenterait une charge disproportionnée au regard des risques effectivement couverts. Le CMV demande qu'AMLA précise les critères permettant d'établir concrètement la cohérence de la destination des fonds et des transactions prévisibles avec l'activité déclarée du client, et confirme que les informations visées au §2 ne doivent être obtenues que dans la mesure où elles sont pertinentes au regard du modèle économique de l'entité assujettie et du profil de risque du client. Proposition d'ajout à l'article 26 §1 : Ajouter : « For the purposes of this Article, the consistency of the destination of funds and of the anticipated transactions with the customer's declared business activity shall be assessed having regard to the nature of the obliged entity's business and the specific risk profile of the customer, without requiring systematic collection of information that is not relevant to the obliged entity's sector of activity. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	27

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	ARTICLE 27 — INFORMATIONS SUR L'ORIGINE DES FONDS ET L'ORIGINE DU PATRIMOINE EN SITUATION DE VIGILANCE RENFORCEE Position : Liste de documents pensée exclusivement pour le secteur financier, inapplicabilité structurelle pour les maisons de vente L'article 27 établit une liste de documents que les entités assujetties peuvent obtenir pour satisfaire à leurs obligations de vigilance renforcée sur l'origine des fonds et du patrimoine. L'utilisation du terme « may include » préserve formellement le caractère non exhaustif de cette liste. En pratique, son existence risque de figer les attentes des superviseurs autour des documents qui y figurent, au détriment des sources alternatives utilisées par les maisons de vente. Le CMV relève que cette liste a été conçue en pensant exclusivement au secteur financier, dans lequel les clients produisent couramment déclarations fiscales, fiches de salaire, bilans comptables ou actes notariés. Ces documents sont structurellement étrangers à la relation commerciale qui unit une maison de vente à son client. Exiger leur production dans le cadre d'une transaction sur une œuvre d'art serait disproportionné et conduirait inévitablement à une désaffection de la clientèle au profit de circuits moins régulés, contrevenant à l'objectif même de la réglementation. Cette inadaptation n'est pas corrigée par les considérants. Le considérant 21, qui aurait pu offrir un appui, a été rédigé en pensant exclusivement aux groupes financiers et à la problématique de duplication intra-groupe. Les maisons de vente, qui ne font pas partie de tels groupes, n'en tirent aucun bénéfice et se retrouvent sans cadre opérationnel adapté. La seule disposition susceptible de couvrir les sources

Name of the respondent	Question	Answer
		effectivement utilisées par les maisons de vente est la catégorie résiduelle du paragraphe (h), visant toute autre information pertinente provenant de sources indépendantes et fiables offrant un degré élevé d'assurance. Or cette formulation est si exigeante qu'elle sera impossible à satisfaire sans clarification. Les maisons de vente recourent à des recherches en ligne, à la presse économique, à des bases de données spécialisées du marché de l'art et à des plateformes professionnelles— autant de sources dont la conformité au paragraphe (h) n'est pas expressément reconnue. Le CMV demande qu'AMLA précise que les recherches en ligne donnant accès à des sources publiques multiples et les plateformes professionnelles reconnues satisfont aux exigences du paragraphe (h) pour les entités dont l'activité sectorielle ne permet pas raisonnablement d'obtenir les documents listés aux paragraphes (a) à (g). Proposition d'ajout au paragraphe (h) : Ajouter : « For obliged entities whose sector of activity does not allow for the reasonable collection of documents listed in points (a) to (g), online searches providing access to multiple reliable public sources, recognised economic press, specialised sector databases and professional networking platforms shall be deemed to satisfy the requirements of this point, provided the obliged entity documents the sources consulted and the conclusions drawn. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	28

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	ARTICLE 28 — RAISONS DES TRANSACTIONS ET COHERENCE AVEC LA RELATION D'AFFAIRES EN SITUATION DE VIGILANCE RENFORCEE Position : Observation — imprécision des critères, risque de grief documentaire L'article 28 impose aux entités assujetties d'obtenir des informations leur permettant d'évaluer la crédibilité de la raison fournie pour la transaction, la cohérence de l'ensemble des transactions avec l'activité déclarée du client, et d'identifier tout risque plus élevé lié aux parties impliquées. Le CMV relève que ces trois critères souffrent du même déficit d'imprécision que celui identifié aux articles 25 et 26. Selon quelle méthode la crédibilité d'une raison doit-elle être établie ? À quel niveau de détail la cohérence des transactions doit-elle être documentée ? Aucune de ces notions n'est définie, aucun seuil n'est établi. Cette imprécision expose les entités assujetties à des appréciations divergentes de leurs superviseurs lors des contrôles, sans qu'elles disposent d'aucun critère objectif pour s'en prémunir. Le CMV invite AMLA à préciser les critères permettant de déterminer ce qu'impliquent concrètement la crédibilité de la raison fournie et la cohérence des transactions avec la relation d'affaires, afin de donner aux entités assujetties un cadre opérationnel suffisant pour satisfaire à leurs obligations sans s'exposer à un risque permanent de grief lors des contrôles.
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	30

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	ARTICLE 30 — EXIGENCES DE SCREENING POUR LES SANCTIONS FINANCIERES CIBLEES Position : Point critique — incompatibilité structurelle entre translittération et vérification manuelle, présomption d'automatisation inadaptée aux maisons de vente Le CMV relève à titre liminaire que les exigences détaillées de l'article 30 ne trouvent aucun fondement exprès dans le considérant 22, qui se borne à délimiter le champ du screening sans en préciser les modalités. Ces exigences résultent intégralement d'un ajout des présents RTS, sur lequel AMLA dispose d'une marge de manœuvre que le CMV invite à exercer avec tact. Sur les exigences de translittération et de graphie originale L'article 30(a) impose que le screening soit effectué dans la graphie originale et en translittération, tant pour les personnes physiques que morales, en incluant tout alias ou nom commercial différent du nom enregistré. Pour un client portant un nom en caractères non latins et disposant d'un alias, cette exigence conduit à effectuer jusqu'à quatre recherches distinctes par entité, représentant une charge opérationnelle considérable. Le CMV soutient le principe de ce screening et comprend l'objectif poursuivi. Elle relève cependant une incompatibilité structurelle que les présents RTS n'ont pas résolue : la translittération fiable d'un nom en caractères cyrilliques, arabes ou chinois est une opération qui ne peut être conduite de manière rigoureuse que par des outils automatisés. Une translittération manuelle expose inévitablement à des erreurs significatives susceptibles de faire manquer une désignation. Or la grande majorité des maisons de vente ne dispose pas encore des systèmes informatiques permettant cette automatisation.

Name of the respondent	Question	Answer
		L'article 30 les place ainsi dans une situation intenable : soit elles automatisent à un coût disproportionné, soit elles conduisent une translittération manuelle non fiable, soit elles s'abstiennent et s'exposent à un grief. Sur la présomption d'automatisation L'article 30(a) in fine prévoit que les vérifications manuelles ne sont admises qu'à condition d'être proportionnées à la taille et au modèle d'activité de l'entité. Le CMV soutient le principe de l'automatisation, rendue nécessaire par l'exigence même de translittération. Elle demande cependant qu'AMLA prévoie un délai de mise en conformité raisonnable pour les maisons de vente qui ne disposent pas encore des outils nécessaires, et précise les critères permettant de déterminer à quel moment une entité peut être considérée comme ayant satisfait à son obligation de mise en place de solutions automatisées. Proposition de reformulation de l'article 30(a): Remplacer : « Obliged entities may perform manual checks of information subject to screening under this point only where manual checks are proportionate to the size, business model, complexity, or nature of their business » Par : « Obliged entities shall perform screening through means that are proportionate to the size, business model, complexity and nature of their business, which may include automated tools, manual checks, or a combination of both. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')8	32

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	ARTICLE 32 — MOYENS D'IDENTIFICATION ELECTRONIQUE ET SERVICES DE CONFIANCE QUALIFIES Position : Point critique — obligation de conformité sans maîtrise des moyens, charge de vérification technique structurellement incompatible avec le modèle économique des maisons de vente L'article 32 impose aux entités assujetties de s'assurer que les moyens d'identification électronique et services de confiance qualifiés utilisés pour la vérification d'identité présentent les attributs listés à l'Annexe I des présents RTS. Lorsque ces attributs sont manquants, l'article 32 §3 impose à l'entité assujettie d'obtenir les attributs manquants par d'autres moyens, superposant ainsi une vérification complémentaire sur une solution censée précisément simplifier le processus d'identification. Le CMV relève que cette disposition fait peser sur les maisons de vente une obligation de résultat sans leur en donner les moyens. Les attributs des moyens d'identification électronique sont définis et contrôlés par leurs émetteurs — États membres, prestataires de services de confiance qualifiés — et non par les entités assujetties qui les utilisent. Une maison de vente est structurellement dans l'impossibilité d'évaluer si une solution tierce satisfait aux exigences techniques de l'Annexe I, faute de disposer de l'expertise nécessaire. Cette situation est d'autant plus préjudiciable que l'article 32 §3 transforme cette impossibilité en une obligation supplémentaire de collecte, aggravant la charge au lieu de la réduire. Le CMV relève à cet égard qu'il existe déjà, dans le cadre du règlement eIDAS (UE) 910/2014, un mécanisme de notification des schémas d'identification électronique par les États membres, dont la liste est publiée et mise à jour au Journal

Name of the respondent	Question	Answer
		officiel de l'Union européenne conformément à l'article 9(2) dudit règlement. Ce mécanisme offre précisément la garantie de conformité que les présents RTS cherchent à imposer aux entités assujetties, mais au niveau approprié — celui des émetteurs et des autorités compétentes — et non à celui des utilisateurs finaux que sont les maisons de vente. Le CMV demande qu'AMLA précise expressément que les entités assujetties qui recourent à un moyen d'identification électronique figurant sur la liste des schémas eID notifiés au JOUE en application de l'article 9(2) du règlement eIDAS sont réputées satisfaire aux exigences de l'article 32, sans être tenues de procéder elles-mêmes à une vérification des attributs techniques de la solution utilisée. Proposition d'ajout à l'article 32 : Ajouter : « Obliged entities using an electronic identification means included in the list of electronic identification schemes notified to the Commission pursuant to Article 9(2) of Regulation (EU) No 910/2014 shall be deemed to satisfy the requirements of this Article without being required to independently verify the attributes of that means. Where attributes are found to be missing, obliged entities may rely on the notifying Member State's assessment rather than being required to collect missing attributes through additional means. »
Conseil des Maisons de Vente (CMV)	Do you have any comments on the recitals? The recitals are the statements at the start of the draft RTS and are numbered from (1) to (25).	No

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Do you have any comments on the Annex in the draft RTS?	No
Conseil des Maisons de Vente (CMV)	How would you rate the proposals set out in the draft RTS overall?	Somewhat inadequate
Conseil des Maisons de Vente (CMV)	1. Do you agree that the proposals set out in these draft RTS can be applied across the range of products and services provided by your obliged entity? If you do not agree, please: (i) explain why the current proposals do not provide sufficient flexibility; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate. Provisions that are clearly marked as applying only to a specific sector or service should not be taken into consideration if they do not impact your sector.	Le CMV considère que les présents RTS sont globalement applicables à l'activité des maisons de vente, mais que leur application soulève des difficultés structurelles liées aux spécificités du modèle économique de ce secteur, que les présents RTS n'ont pas pleinement anticipées. Les maisons de vente sont des opérateurs du marché de l'art dont l'activité repose sur des transactions ponctuelles avec une clientèle internationale diversifiée. Elles n'entretiennent pas avec leurs clients des relations d'affaires durables impliquant des interactions régulières, contrairement aux établissements financiers pour lesquels les présents RTS ont principalement été conçus. Le processus transactionnel se caractérise, en outre, par une rapidité d'exécution dont les effets diffèrent selon le mode de participation. Lorsque l'enchérisseur s'est préalablement inscrit — que ce soit sur une plateforme de vente en ligne ou auprès de la maison de vente avant la vacation —, les diligences de connaissance du client peuvent être conduites en amont. En revanche, le principe de publicité des enchères, consacré par la loi, autorise toute personne présente en salle à porter une enchère et à devenir adjudicataire dès le prononcé de l'adjudication, lequel emporte transfert immédiat de la propriété. Dans cette seconde hypothèse, aucune vérification préalable n'est matériellement possible, les diligences ne

Name of the respondent	Question	Answer
		pouvant intervenir qu'a posteriori. Cette différence structurelle génère plusieurs difficultés d'applicabilité. En premier lieu, les dispositions relatives à la surveillance continue de la relation d'affaires — notamment les articles 23 et 24 — présupposent une relation d'affaires dans le temps qui n'existe pas pour les maisons de vente. Pour ces entités, la surveillance s'effectue naturellement à l'occasion de chaque transaction, ce qui rend ces dispositions opérationnellement neutres mais prive le régime de vigilance simplifiée de tout bénéfice pratique. En deuxième lieu, certaines des informations listées à l'article 18 n'ont pas de sens appliquées aux ventes volontaires aux enchères. La nature des biens proposés — le plus souvent uniques et singuliers — et la spécificité du mode de vente — adjudication au plus offrant — rendent impossibles à la fois l'identification a priori de la raison pour laquelle le client sollicite les services de la maison de vente, les acquisitions relevant d'achats d'opportunité, et l'estimation du montant des activités envisagées, le niveau d'adjudication étant par définition inconnu jusqu'à la vente. En troisième lieu, les dispositions relatives à la vérification à distance et à l'identification électronique — articles 7 et 32 — supposent une maîtrise technique que les maisons de vente ne possèdent pas. L'applicabilité de ces dispositions est donc conditionnée à la mise en place d'un mécanisme de certification externe des solutions utilisées, tel que celui prévu par le règlement eIDAS. En quatrième lieu, les dispositions relatives à l'origine des fonds en situation de vigilance renforcée — article 27 — listent des documents structurellement étrangers à la relation

Name of the respondent	Question	Answer
		commerciale entre une maison de vente et son client. Exiger la production de déclarations fiscales, de fiches de salaire ou de bilans comptables dans ce contexte conduirait inévitablement à une désaffection de la clientèle au profit de circuits moins régulés. En cinquième lieu, l'exigence de translittération imposée par l'article 30 est techniquement inapplicable sans outils automatisés que la majorité des maisons de vente ne possèdent pas encore. Le CMV renvoie à ses critiques individuelles pour le détail de ces difficultés et ses propositions d'alternatives.
Conseil des Maisons de Vente (CMV)	2. Do you agree that the proposals set out in these draft RTS allow for the effective application of a risk-based approach towards compliance with AML/CFT requirements? If you do not agree, please: (i) specify the provisions concerned; and (ii) provide concrete drafting proposals and explain why the specific measures you propose would be more appropriate.	Tout en reconnaissant que la proposition de règlement répond, dans sa conception, à la préoccupation d'une approche fondée sur les risques, le CMV souhaite faire part de quelques interrogations concernant l'application effective de celle-ci, et ce notamment, du fait : - d'une part, de l'imprécision de certaines notions ou dispositions, - d'autre part, d'exigences disproportionnées pour les petites structures et du manque d'outils actuellement disponibles leur permettant de s'y conformer. Le CMV considère que les dispositions du règlement ne permettent pas de cerner de façon suffisamment précise la notion fondamentale de « sources fiables et indépendantes » (article 8) : les critères pour tenter de la définir apparaissent trop subjectifs pour être opérationnels (notion de « réputation », de « crédibilité » au a)). Par ailleurs, l'évaluation des critères d) -l'exactitude de la source, selon que les informations ou les données fournies ont dû faire l'objet de certains contrôles avant d'être communiquées ou qu'elles concordent avec

Name of the respondent	Question	Answer
		d'autres sources- et e) -la facilité avec laquelle les informations ou données fournies peuvent être falsifiées- apparaît clairement hors de portée des maisons de vente. Le CMV considère qu'il serait utile et plus efficace de fournir aux entités assujetties une liste de catégories de sources fiables et indépendantes. Une telle liste pourrait être insérée dans un prochain guide d'application du règlement. Le CMV remarque que la notion de « réputation » est également présente à l'article 25 relatif aux mesures de diligence approfondie (b)) et à l'article 27 relatif aux informations complémentaires sur l'origine des fonds et du patrimoine du client ou des bénéficiaires effectifs (g). Cette notion gagnerait, selon lui, à être mieux caractérisée. Certaines dispositions manquent également de précision pour être aisément applicables. Ainsi le recueil de toutes les nationalités du client (article 5) : d'un point de vue pratique, comment cette disposition doit-elle être mise en œuvre ? D'autres imposent de nouveaux standards de diligence difficiles à mettre en œuvre pour les plus petites structures. L'exigence nouvelle consistant à devoir s'assurer de l'authenticité des documents fournis en matière de vérification de l'identité du client (article 6, point 3 ; article 25 a)), requiert des compétences techniques que ne possèdent pas les maisons de vente. De même, en matière de vérification d'identité à distance (article 7, point 3), l'obligation, entre autres, de disposer de documents horodatés et d'un stockage sécurisé (e)) est particulièrement exigeante et suppose des outils adéquats. Les maisons de vente ne pourront satisfaire à ces exigences que si des moyens techniques appropriés sont mis à leur disposition pour y répondre. Le CMV tient à souligner cet

Name of the respondent	Question	Answer
		aspect essentiel et demande que l'AMLA et la Commission européenne se penchent sur la question, l'élaboration de tels outils étant la condition première de la bonne application du règlement. Le CMV a bien noté que l'article 7, paragraphe 4, précise que les entités assujetties doivent être capables de démontrer à leur autorité compétente qu'elles ont usé de moyens répondant aux exigences du règlement et le cas échéant justifier de la raison pour laquelle ce n'était pas possible. Le CMV souligne la charge administrative supplémentaire que représentent ces nouvelles dispositions pour les maisons de vente et s'interroge sur la nature de l'autorité compétente concernée : s'agit-il, en France, du CMV ou de l'administration des douanes en charge, depuis 2020, du contrôle des obligations LCB-FT des maisons de vente ? Cet aspect mériterait d'être précisé. Le CMV avoue s'interroger sur sa capacité à assumer cette nouvelle mission de contrôle, qui, en outre, reviendrait de façon plus cohérente aux douanes. D'autres dispositions apparaissent très lourdes pour les maisons de vente. Ainsi, concernant l'identification des personnes politiquement exposées (article 19), le CMV estime qu'il est peu réaliste de demander à de petites structures comme les maisons de vente de réviser régulièrement l'appartenance éventuelle de leurs clients à cette catégorie de personnes. Il considère, par conséquent, que la notion de « fréquence » attachée à cette vérification, n'a pas lieu d'être et ne respecte pas la notion de proportionnalité. Dans le secteur des ventes volontaires, comme dans d'autres secteurs caractérisés par l'existence de petites entités économiques, Le CMV tient à souligner que le moment de la vérification ne peut être que le moment de la transaction (ou juste avant) et que la

Name of the respondent	Question	Answer
		vérification ne peut être effectuée régulièrement entre deux transactions.
Conseil des Maisons de Vente (CMV)	3. Considering the nature of your business, including its size, risks, and complexity, are there any situations where the information to be collected for the purposes of customer due diligence as proposed in these draft RTS is routinely unavailable and the proposals in these draft RTS do not provide an alternative solution? If so, please provide concrete examples of such situations and your proposals for alternative solutions.	Le CMV identifie plusieurs situations dans lesquelles les informations à collecter aux fins de la vigilance à l'égard de la clientèle sont routinièrement indisponibles pour les maisons de vente, sans que les présents RTS ne prévoient de solution alternative adaptée à ce secteur. En premier lieu, les documents listés à l'article 27 pour établir l'origine des fonds et du patrimoine en situation de vigilance renforcée — déclarations fiscales, fiches de salaire, bilans comptables, actes notariés, extraits de registres fonciers — sont structurellement indisponibles dans le contexte d'une transaction sur le marché de l'art. Un client qui souhaite acheter ou vendre une œuvre d'art ne produit pas ces documents dans le cadre de cette relation commerciale, et ne peut raisonnablement être contraint de le faire. Les présents RTS ne prévoient pas de solution alternative explicite pour les secteurs dans lesquels ces documents sont inaccessibles, la catégorie résiduelle du paragraphe (h) étant formulée de manière trop exigeante pour offrir une sécurité juridique suffisante. Le CMV propose que les recherches en ligne, la presse économique et les bases de données spécialisées du marché de l'art soient expressément reconnues comme sources alternatives admissibles. En deuxième lieu, le montant estimé des activités envisagées visé à l'article 18 §b est par définition indisponible dans le cadre d'une vente aux enchères. Le niveau d'adjudication est inconnu jusqu'à la vente et peut être sans commune mesure avec toute estimation préalable. Les présents RTS ne prévoient pas de solution alternative pour les secteurs caractérisés par ce

Name of the respondent	Question	Answer
		mode de vente. En troisième lieu, les registres publics mentionnés à l'article 10(a) — registre de résidence, registre fiscal, base de données de passeports, registre foncier — ne sont pas accessibles aux maisons de vente dans le cadre de leur activité. Les présents RTS ne prévoient pas de solution alternative explicite pour les entités ne disposant pas de cet accès. En quatrième lieu, l'exhaustivité des nationalités du client visée à l'article 5 est structurellement invérifiable, aucun registre centralisé des nationalités multiples n'étant accessible aux entités assujetties. Les présents RTS ne précisent pas que la déclaration du client de bonne foi constitue une solution admissible. En cinquième lieu, la translittération des noms en caractères non latins exigée par l'article 30 est techniquement impossible à conduire de manière fiable sans outils automatisés que la majorité des maisons de vente ne possèdent pas. Les présents RTS ne prévoient pas de solution alternative pour les entités ne disposant pas de ces outils.
Conseil des Maisons de Vente (CMV)	4. Considering AMLA's legal mandate in Article 28(1) of Regulation (EU) 2024/1624, and taking into account your obliged entities' products offered and service provided, what other simplified due diligence measures should be included in the draft RTS, for example because of the associated lower ML/TF risks of these products and services? Please provide concrete drafting proposals and rationale for the specific measures you would propose.	Le CMV considère que les présents RTS offrent une opportunité manquée en matière de vigilance simplifiée. Comme elle l'a souligné dans ses observations sur les articles 23 et 24, le régime de vigilance simplifiée tel qu'encadré par la section 5 ne produit pas de simplification substantielle pour les entités dont le modèle économique repose sur des transactions ponctuelles. Le CMV formule deux propositions concrètes visant à donner au régime simplifié une portée opérationnelle effective. En premier lieu, le CMV propose d'ajouter à la fin de la section 5 un nouvel article ainsi rédigé : « By default, where a customer is an obliged entity, simplified due diligence measures apply. »

Name of the respondent	Question	Answer
		Cette disposition concrétiserait la notion d'écosystème de confiance entre professionnels assujettis et enclencherait un cercle vertueux des diligences dans une perspective de responsabilisation des acteurs. Lorsqu'un client est lui-même soumis à des obligations de vigilance équivalentes à celles de l'entité assujettie, il n'existe aucune justification à ce que cette dernière conduise des diligences d'une intensité identique à celles appliquées à un client non assujetti. Cette mesure est cohérente avec l'esprit du règlement (UE) 2024/1624 et ne crée aucune exemption des obligations de vigilance — elle module simplement leur intensité en fonction du profil de risque objectif du client. En second lieu, le CMV propose qu'il soit explicitement prévu que, lorsqu'un acheteur a été identifié et vérifié par un autre professionnel assujetti — banque, notaire — dans le cadre de la même opération, la réutilisation de ces données soit admise comme mesure de vigilance simplifiée. Cette proposition s'inscrit dans la même logique d'écosystème de confiance : les diligences conduites par un professionnel assujetti dans le cadre d'une même transaction constituent une source fiable et indépendante au sens de l'article 8, et leur réutilisation évite une duplication inutile des contrôles, réduit la charge pesant sur le client et renforce l'effectivité globale du dispositif de vigilance. Le CMV propose que cette mesure soit intégrée dans la section 5 des présents RTS sous la forme d'un article distinct.
Conseil des Maisons de Vente (CMV)	5. Additional observations: Do you have any additional comments relevant to the draft RTS that have not been covered above? Please ensure that comments refer to a specific article, are precise, and, where possible, supported by	Le CMV souhaite faire part d'un commentaire général sur les projets de RTS. Il accueille favorablement l'initiative d'AMLA visant à harmoniser les mesures de vigilance à l'échelle de l'Union et salue la qualité du travail accompli, notamment s'agissant de la

Name of the respondent	Question	Answer
	evidence. Where necessary, comments should also include a proposed solution.	codification des catégories d'origine des fonds à l'article 18 et de la flexibilité introduite par l'approche fondée sur les risques. Elle formule cependant des réserves substantielles sur quatre séries de dispositions, détaillées dans ses critiques individuelles. En premier lieu, plusieurs articles souffrent d'un déficit d'imprécision structurelle qui compromet leur applicabilité pratique et fragilise l'objectif d'harmonisation que les présents RTS ont précisément vocation à réaliser. Les articles 8, 25, 26, 27 et 28 énoncent des critères — crédibilité, authenticité, exactitude, exhaustivité, cohérence — sans les définir, sans établir de seuils ni proposer de méthodologie. Chaque superviseur national conservant une latitude totale pour les interpréter, ces dispositions risquent de reproduire exactement les divergences qu'elles entendent éliminer, et d'exposer les entités assujetties à un risque permanent de grief lors des contrôles. En deuxième lieu, les articles 19 §3 et 30 établissent une présomption en faveur de l'automatisation du screening PPE et des sanctions ciblées qui est structurellement inadaptée aux maisons de vente. Ces entités sont des opérateurs du marché de l'art dont le modèle économique repose sur des transactions ponctuelles — elles ne sont pas des établissements financiers disposant de systèmes d'information sophistiqués. Par ailleurs, l'exigence de translittération imposée par l'article 30 rend l'automatisation techniquement nécessaire mais économiquement disproportionnée pour la grande majorité des maisons de vente qui n'en disposent pas encore. En troisième lieu, les articles 6 §3, 7 et 32 font peser sur les entités assujetties des obligations de vérification technique — authenticité des documents, conformité des solutions de

Name of the respondent	Question	Answer
		vérification à distance, attributs des moyens d'identification électronique — qui supposent une expertise radicalement étrangère au cœur de métier des maisons de vente. Une maison de vente est capable de déceler une vraie œuvre d'art d'une fausse — elle n'est pas en mesure d'évaluer la conformité technique d'une solution informatique ou les caractéristiques de sécurité d'un document d'identité. Ces obligations devraient être satisfaites par référence aux listes officielles existantes, notamment les schémas eID notifiés au JOUE en application du règlement eIDAS. En quatrième lieu, plusieurs dispositions ont été conçues en pensant exclusivement au secteur financier et sont structurellement inadaptées au marché de l'art. La liste de documents de l'article 27 — déclarations fiscales, fiches de salaire, bilans comptables — est étrangère à la relation commerciale qui unit une maison de vente à son client. De même, le considérant 21 sur la non-duplication des informations intra-groupe ne bénéficie pas aux maisons de vente qui ne font pas partie de groupes financiers. Le CMV renvoie à ses critiques individuelles pour le détail des dispositions concernées, les motifs de ses réserves et ses propositions de reformulation.
Conseil des Maisons de Vente (CMV)	Do you have any comments on a specific article in the draft RTS? There is no need to repeat comments made in the previous sections of this survey.	Yes
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')	3

Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).	article 3 INFORMATIONS RELATIVES AUX ADRESSES Position : Ambiguïté juridique — demande de clarification L'article 3 précise que l'information relative à l'adresse doit comprendre le nom complet du pays ou son abréviation selon la norme ISO 3166, la ville ou son équivalent le plus proche, et, lorsqu'ils sont disponibles, le code postal, le nom de la rue, les boîtes postales, le numéro du bâtiment et le numéro d'appartement. Le CMV souhaite attirer l'attention d'AMLA sur une ambiguïté rédactionnelle significative entre le titre et le corps de cet article. Le titre de l'article est rédigé au pluriel — « Addresses » — ce qui pourrait être interprété comme imposant aux entités assujetties de collecter l'ensemble des adresses connues du client : domicile principal, résidence secondaire, adresse professionnelle, adresse fiscale, voire adresse de correspondance. Une telle lecture extensive serait à la fois disproportionnée au regard du risque effectivement couvert et difficilement opérationnelle, en particulier pour les maisons de vente dont la clientèle est fréquemment internationale et multi-résidente. Or, le corps de l'article est rédigé au singulier et ne traite que d'une adresse, sans préciser laquelle ni combien doivent être collectées. Cette incohérence entre le titre et le corps de l'article crée une insécurité juridique réelle, susceptible de donner lieu à des interprétations divergentes entre entités assujetties et superviseurs lors des contrôles. Le CMV demande qu'AMLA clarifie expressément que l'obligation porte sur une seule adresse — celle de résidence habituelle du client ou, à défaut, l'adresse postale à laquelle il peut être joint — et qu'elle mette le titre de l'article en

Name of the respondent	Question	Answer
		cohérence avec son corps. Proposition de reformulation du titre : Remplacer : « Article 3 - Information to be obtained in relation to addresses » Par : « Article 3 - Information to be obtained in relation to the address »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')2	5
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).3	ARTICLE 5 — NATIONALITES Position : Observation — demande de clarification dans le corps des RTS L'article 5 impose aux entités assujetties de collecter l'ensemble des nationalités du client, de toute personne se présentant comme agissant pour le compte du client, et des personnes au nom ou pour le bénéfice desquelles une transaction ou une activité est réalisée. Cette obligation résulte directement de l'article 22 du règlement (UE) 2024/1624. Le CMV souhaite signaler que cette exigence soulève une difficulté pratique fondamentale : aucun registre centralisé des nationalités multiples n'étant accessible aux entités assujetties, celles-ci se trouvent structurellement dans l'impossibilité de vérifier de manière indépendante l'exhaustivité des nationalités d'un client. Le considérant 3 des présents RTS impose aux entités assujetties de collecter des informations pour comprendre la nationalité du client. Il est donc cohérent que les RTS précisent également le mode de collecte admissible. Or, sur ce point, les RTS sont silencieux. Le CMV demande qu'AMLA complète l'article 5 en précisant expressément que l'obligation de collecter l'information sur

Name of the respondent	Question	Answer
		l'existence d'autres nationalités puisse être satisfaite par le recueil de la déclaration du client de bonne foi, sans que l'entité assujettie soit tenue de procéder à une vérification indépendante exhaustive de celle-ci. Proposition d'ajout au corps de l'article 5 : Ajouter : « The obligation to collect information on the existence of other nationalities may be satisfied by obtaining a good faith declaration from the customer. Obliged entities shall not be required to independently verify the exhaustiveness of the nationalities declared, provided that no inconsistency arises from the information collected during the customer due diligence process. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')4	6
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).5	ARTICLE 6 §3 — AUTHENTICITE DES DOCUMENTS DE VERIFICATION D'IDENTITE Position : Point critique — obligation disproportionnée et contradictoire, demande de reformulation L'article 6 §3 impose aux entités assujetties de prendre des mesures raisonnables (« shall take reasonable steps ») pour s'assurer que l'ensemble des documents obtenus pour la vérification de l'identité d'une personne physique sont authentiques et n'ont pas été falsifiés ou altérés. Le CMV souhaite formuler cinq observations cumulatives sur cette disposition. Premièrement, cette obligation crée une contradiction interne aux présents RTS. Le considérant 6 établit implicitement une présomption d'authenticité pour les documents émanant d'une autorité publique, en les présentant comme intrinsèquement

Name of the respondent	Question	Answer
		plus fiables que les autres sources. Or, l'article 6 §3 ignore totalement cette présomption et impose à l'entité assujettie de vérifier l'authenticité de tous les documents sans distinction, y compris ceux émis par une autorité publique tels qu'un passeport ou une carte d'identité nationale. Le CMV demande qu'AMLA rétablisse la cohérence entre les considérants et le corps normatif en intégrant expressément cette présomption d'authenticité dans l'article 6 §3. Deuxièmement, l'article 6 §1, point (e), exige que le document contienne des caractéristiques de sécurité garantissant son authenticité, ce qui implique que l'entité assujettie soit en mesure d'évaluer ces caractéristiques. Or, l'évaluation des éléments de sécurité d'un document d'identité — hologrammes, encres spéciales, micro impression, puces électroniques — relève d'une expertise technique hautement spécialisée que les maisons de vente ne possèdent pas et ne peuvent raisonnablement pas acquérir. Troisièmement, et en lien direct avec ce qui précède, cette mission ressemble davantage à celle des autorités d'enquête — douanes, police aux frontières — qui disposent des équipements et formations spécifiques pour détecter les faux documents. Les présents RTS semblent ainsi opérer une confusion entre le rôle de gatekeeper de l'entité assujettie et celui des autorités de contrôle, confusion que le CMV invite AMLA à corriger. Quatrièmement, la formulation « shall take reasonable steps » est d'une imprécision juridique inacceptable. La notion de « reasonable » n'est définie ni dans les présents RTS ni dans le règlement (UE) 2024/1624, laissant chaque superviseur libre de l'interpréter différemment et exposant les entités assujetties à un risque élevé de grief lors des contrôles.

Name of the respondent	Question	Answer
		Cinquièmement, et surtout, la disposition crée une contradiction rédactionnelle interne : la formulation « shall take reasonable steps » suggère une obligation de moyens, mais elle est immédiatement suivie d'un objectif — s'assurer que les documents sont authentiques et n'ont pas été falsifiés — qui constitue en réalité une obligation de résultat. L'entité assujettie se trouve ainsi placée dans une situation juridiquement intenable : formellement soumise à une obligation de moyens, mais pratiquement tenue à un résultat qu'elle n'a ni les outils, ni l'expertise, ni le mandat légal pour garantir. Proposition de reformulation de l'article 6 §3 : Remplacer : « Obliged entities shall take reasonable steps to ensure that all documents obtained for the verification of the identity of the natural person pursuant to Article 22(6), point (a) and Article 22(7), point (a), of Regulation (EU) 2024/1624, as referred to in paragraphs 1 and 2, are authentic and have not been forged or tampered with. » Par : « Documents issued by a state or public authority shall benefit from a presumption of authenticity. Where the ML/TF risk associated with the customer is assessed as high, obliged entities shall take additional risk-sensitive measures to satisfy themselves of the authenticity of the documents obtained, having regard to their operational capacity. In standard and low-risk situations, obliged entities shall exercise due care when examining such documents without being required to conduct technical authenticity verification. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')6	7

Name of the respondent	Question	Answer
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).7	ARTICLE 7 — VERIFICATION A DISTANCE (NON FACE-A-FACE) Position : Point critique — dépassement potentiel du mandat réglementaire, charge technique et documentaire disproportionnée pour les petites structures LE CMV souhaite formuler deux séries d'observations sur cet article. Sur les paragraphes 1 et 2 L'article 7 §1 dispose que, pour se conformer aux exigences de vérification dans une situation non face to face, les entités assujetties « shall use » des moyens d'identification électronique. Le CMV relève que cette formulation pourrait laisser entendre que le recours à un moyen d'identification électronique constitue une obligation exclusive pour toute vérification à distance. Or, l'article 22(6) du règlement (UE) 2024/1624, qui constitue la base légale de cette disposition, n'impose pas une telle obligation : il ouvre une faculté et permet plus largement l'obtention d'informations fournies par le client par d'autres moyens. Les présents RTS semblent ainsi transformer en obligation ce que le règlement a conçu comme une option, ce qui pourrait constituer un dépassement du mandat confié à AMLA. Le CMV demande qu'AMLA clarifie la rédaction des paragraphes 1 et 2 afin de confirmer que le recours aux moyens d'identification électronique n'est qu'une modalité parmi d'autres pour satisfaire aux exigences de vérification à distance. Sur les paragraphes 3 et 4 Les paragraphes 3 et 4 font peser sur les entités assujetties une charge que le CMV considère comme structurellement incompatible avec les capacités opérationnelles des maisons de vente. D'une part, l'article 7 §3 impose que la solution utilisée

Name of the respondent	Question	Answer
		garantisse l'intégrité et la confidentialité de la communication, que les images, vidéos, sons et données captés soient horodatés et stockés de manière sécurisée dans un format lisible permettant des vérifications a posteriori. Ces exigences supposent une expertise technique pointue en cybersécurité et en architecture informatique qui ne ressort pas des capacités d'une maison de vente. Une maison de vente est capable de déceler une vraie œuvre d'art d'une fausse, elle n'est pas en mesure d'évaluer si une solution informatique tierce satisfait à des critères techniques de sécurité des communications et de conformité des systèmes de stockage. Cette expertise est radicalement étrangère à son cœur de métier et ne peut raisonnablement pas lui être imposée. À cette charge technique s'ajoute une augmentation considérable du volume documentaire à traiter et des coûts de stockage sécurisé associés, disproportionnés au regard de la taille et des moyens de ces structures. D'autre part, l'article 7 §4 impose aux entités assujetties de démontrer à tout moment à leur autorité compétente que la solution utilisée est conforme aux exigences de l'article, constituant une charge probatoire continue que les petites maisons de vente ne sont pas en mesure d'assumer. Cette obligation de démonstration présuppose précisément l'expertise technique que ces entités ne possèdent pas, créant ainsi un cercle vicieux. En effet il est imposé à des structures techniquement non spécialisées de prouver la conformité technique de solutions qu'elles sont dans l'incapacité d'évaluer. Le CMV relève à cet égard qu'il existe déjà, dans le cadre du règlement eIDAS (UE) 910/2014, un mécanisme de notification des schémas d'identification électronique par les États membres, dont la liste est publiée et mise à jour au Journal

Name of the respondent	Question	Answer
		officiel de l'Union européenne conformément à l'article 9(2) dudit règlement. Le CMV demande qu'AMLA s'appuie sur ce mécanisme existant et étende cette logique aux solutions de vérification à distance, en précisant expressément que les entités assujetties qui recourent à une solution figurant sur la liste des schémas eID notifiés au JOUE, ou à une solution certifiée conforme par une autorité compétente désignée, sont réputées satisfaire aux exigences des paragraphes 3 et 4 sans avoir à conduire elles-mêmes cette évaluation. Proposition d'ajout à l'article 7 §4 : Ajouter : « Obliged entities using a remote verification solution that is included in the list of electronic identification schemes notified to the Commission pursuant to Article 9(2) of Regulation (EU) No 910/2014, or that has been certified as compliant by a designated competent authority, shall be deemed to satisfy the requirements of paragraphs 3 and 4 of this Article without being required to conduct an independent technical assessment of that solution. »

Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).9	ARTICLE 8 — SOURCES D'INFORMATION FIABLES ET INDEPENDANTES Position : Point critique — imprécision des critères, risque de divergences d'interprétation, insécurité juridique structurelle Le CMV relève à titre liminaire une contradiction interne aux présents RTS qui affaiblit considérablement la portée de l'article 8. Les considérants 5 et 6 accomplissent un travail utile et concret en énumérant des exemples de sources fiables pour les personnes morales, en établissant qu'un document émis par

Name of the respondent	Question	Answer
		une autorité publique est intrinsèquement plus fiable qu'une source privée, et en précisant qu'une évaluation de fiabilité réalisée une fois pour une source donnée peut être réutilisée pour plusieurs clients. Or l'article 8 ignore totalement ces avancées dans son corps normatif. Il se borne à énoncer cinq critères dont l'examen révèle l'insuffisance opérationnelle. La « crédibilité » d'une source, incluant sa « réputation », n'est définie par aucun seuil ni aucune méthode d'appréciation. Le « statut officiel et l'indépendance » ne font l'objet d'aucune précision sur ce qui distingue une source officielle d'une source privée. Le degré d'« actualité » n'est assorti d'aucune indication temporelle. L'« exactitude » suppose une capacité de recoupement systématique que les entités assujetties ne possèdent pas nécessairement. Enfin, la « facilité avec laquelle les informations peuvent être falsifiées » renvoie à une expertise en analyse documentaire radicalement étrangère au cœur de métier des maisons de vente. Chacun de ces critères est susceptible de lectures divergentes entre entités assujetties et superviseurs, et leur combinaison ne fait qu'amplifier cette insécurité. Cette imprécision structurelle compromet deux des objectifs fondamentaux des présents RTS. D'une part, elle fragilise l'harmonisation que ces RTS ont vocation à réaliser — chaque superviseur national conservant une latitude totale pour apprécier si les mesures prises sont suffisantes, ce qui risque de reproduire les divergences d'interprétation que le règlement (UE) 2024/1624 entendait éliminer. D'autre part, elle génère une insécurité juridique dont les conséquences sont asymétriques — il sera toujours loisible à un superviseur d'estimer, a posteriori, que les mesures prises étaient insuffisantes, sans que l'entité assujettie dispose d'aucun

Name of the respondent	Question	Answer
		critère objectif pour se prémunir contre un tel grief. Le CMV invite instamment AMLA à remédier à cette situation, en rappelant que la fonction première des RTS est précisément de traduire en obligations claires et applicables ce que le règlement laisse à préciser. Par ailleurs, l'absence de toute liste, même indicative, de sources reconnues laisse les entités assujetties sans guide opérationnel. Cette lacune est d'autant plus préjudiciable que les maisons de vente recourent fréquemment à des sources numériques largement accessibles — moteurs de recherche, registres d'entreprises en ligne, presse économique reconnue, plateformes professionnelles — dont la fiabilité n'est pas expressément reconnue par les présents RTS, les exposant à un risque permanent de grief lors des contrôles. Le CMV demande qu'AMLA intègre dans le corps normatif de l'article 8 les présomptions et exemples établis par les considérants 5 et 6, et précise expressément que les documents émis par une autorité publique bénéficient d'une présomption de fiabilité, que les moteurs de recherche donnant accès à des sources multiples et publiques sont présumés satisfaire au critère de fiabilité pour les clients relevant d'une vigilance standard, et qu'une évaluation de la fiabilité d'une source, une fois réalisée, peut être réutilisée pour plusieurs clients. Proposition d'ajout à l'article 8 : Ajouter : « Documents issued by a state or public authority shall be presumed reliable and independent. The following sources shall also be presumed reliable and independent, without prejudice to the obliged entity's risk-sensitive assessment: official registers and government databases; supervised credit and financial institutions; recognised

Name of the respondent	Question	Answer
		economic press and professional platforms such as business registries and professional networking platforms. For customers subject to standard due diligence, search engines providing access to multiple public sources shall be presumed to satisfy the reliability criterion set out in this Article. Where an obliged entity has assessed the reliability and independence of a given source, the results of that assessment may be applied to multiple customers. »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')10	10
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).11	ARTICLE 10 — MESURES RAISONNABLES DE VERIFICATION DU BENEFICIAIRE EFFECTIF Position : Observation — inaccessibilité de certains registres, imprécision persistante de la notion de source réputée Le CMV souhaite formuler deux observations sur cet article. En premier lieu, l'article 10(a) mentionne la possibilité de consulter des registres publics autres que les registres centraux, tels que le registre de résidence, le registre fiscal, la base de données de passeports ou le registre foncier. Le CMV souhaite porter à la connaissance d'AMLA que les maisons de vente n'ont pas accès à ces registres dans le cadre de leur activité. Cette situation n'appelle pas de modification du texte des présents RTS, mais invite AMLA à en tenir compte dans les orientations qu'elle sera amenée à publier, afin de ne pas créer d'attentes superviseurs non fondées à l'égard de ce secteur. En second lieu, l'article 10(b) autorise la collecte d'informations auprès d'agences de crédit réputées et de prestataires de services de données comparables réputés. Le CMV relève que la notion de « réputé » est dépourvue de toute définition

Name of the respondent	Question	Answer
		opérationnelle dans les présents RTS, reproduisant ainsi la même imprécision que celle déjà identifiée à l'article 8. En l'absence de critères permettant de déterminer ce qui confère à une agence ou à un prestataire le caractère de « réputé », les entités assujetties demeurent exposées à des appréciations divergentes de leurs superviseurs lors des contrôles. Le CMV demande qu'AMLA précise les critères permettant de qualifier une agence de crédit ou un prestataire de services de données de « réputé », ou qu'elle renvoie explicitement aux critères établis à l'article 8 afin d'assurer la cohérence du cadre normatif.
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')12	18
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).13	Article 18 — Identification de l'objet et de la nature envisagée de la relation d'affaires ou de la transaction occasionnelle Position : Point critique — risque de systématisation contredisant le caractère conditionnel de l'obligation, demande de clarification textuelle L'article 18 est introduit par la réserve « where necessary », qui conditionne l'ensemble des obligations de collecte énoncées aux points (a) à (e) à une appréciation préalable de nécessité par l'entité assujettie. Le CMV considère que cette réserve est fondamentale et doit être préservée dans toute son étendue. Elle est pleinement cohérente avec le considérant 13, qui établit sans ambiguïté que l'entité assujettie doit préalablement évaluer si les informations déjà en sa possession sont suffisantes, et que la collecte d'informations supplémentaires n'intervient que si cette évaluation révèle un besoin non satisfait.

Name of the respondent	Question	Answer
		Or cette logique en deux temps n'est pas suffisamment ancrée dans le corps normatif de l'article 18 pour résister à une lecture extensive des superviseurs lors des contrôles. Rien dans le corps de l'article ne rappelle explicitement que la collecte des informations listées aux points (a) à (e) est subordonnée à un constat préalable d'insuffisance des informations déjà détenues. Ce silence expose les entités assujetties au risque d'une systématisation de facto de ces obligations, qui viderait de sa substance la réserve introductive et contreviendrait directement à l'article 25 du règlement (UE) 2024/1624. Ce risque est particulièrement préjudiciable pour les maisons de vente, dont la nature des biens proposés à la vente — le plus souvent uniques et singuliers — et la spécificité du mode de vente — adjudication au plus offrant — méritent d'être rappelées. S'agissant du point (a), les informations relatives à la raison pour laquelle le client a sollicité les services, à l'usage prévu des produits ou à la raison justifiant la transaction n'ont pas de sens appliquées aux ventes volontaires : les biens proposés sont en général insubstituables, tout particulièrement dans le segment art et objets de collection, et les acquisitions relèvent d'achats d'opportunité. S'agissant du point (b), les informations relatives au montant estimé des activités envisagées n'ont pas davantage de sens dans ce contexte : par définition, en raison même du procédé de vente aux enchères, ce montant ne peut être estimé à l'avance, le niveau d'adjudication pouvant être sans commune mesure avec le montant espéré. S'agissant du point (c) relatif à l'origine des fonds, le CMV accueille favorablement la codification d'une liste structurée de catégories, qui fournit un cadre de référence utile sur un sujet central pour le marché de l'art. Toutefois, plusieurs des

Name of the respondent	Question	Answer
		documents listés sont inapplicables dans ce contexte. Exiger d'un client qu'il produise sa déclaration fiscale, ses fiches de salaire ou le bilan de son entreprise serait disproportionné et conduirait à une désaffection au profit de circuits moins régulés, contrevenant à l'objectif même de la réglementation. Les maisons de vente disposent de sources alternatives adaptées — recherches en ligne, presse économique, bases de données spécialisées, historique des transactions — offrant un degré satisfaisant d'assurance sur l'origine des fonds. Le CMV demande qu'AMLA confirme que la liste du point (c) est indicative et que les entités assujetties peuvent y substituer des sources alternatives offrant un degré équivalent d'assurance, adaptées à leur activité et au profil de risque du client. Le CMV demande qu'AMLA renforce la clarté du corps normatif de l'article 18 en reprenant explicitement la logique en deux temps établie par le considérant 13, et précise que lorsque la nature même de l'activité de l'entité assujettie rend certaines informations évidentes ou impossibles à obtenir, leur collecte formelle n'est pas requise. Propositions de reformulation : Remplacer au point (a) : « in relation to the purpose and economic rationale of the occasional transaction or business relationship, taking into account the nature of the product or service provided, at least one of the following information » Par : « in relation to the purpose and economic rationale of the occasional transaction or business relationship, taking into account the nature of the product or service provided, and where this permits, at least one of the following information » Remplacer au point (b) : « in relation to the estimated amount of the envisaged activities, at least one of the following information »

		Par : « in relation to the estimated amount of the envisaged activities, where it is possible to determine this, at least one of the following information »
Conseil des Maisons de Vente (CMV)	Please state the article number in simple figures, without referring to the subparagraphs or points (e.g. '3' or '21')14	19
Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).15	ARTICLE 19 — IDENTIFICATION DES PERSONNES POLITIQUEMENT EXPOSEES Position : Point critique — ajouts non prévus par le règlement, insécurité juridique, charge opérationnelle disproportionnée Le CMV relève à titre liminaire que l'article 20(1)(g) du règlement (UE) 2024/1624 se borne à imposer aux entités assujetties de déterminer si le client, le bénéficiaire effectif et la personne pour le compte de laquelle une transaction est menée sont des personnes politiquement exposées, des membres de leur famille ou des personnes étroitement associées. Le règlement ne précise ni la fréquence de cette détermination, ni les modalités de sa mise à jour, ni les outils requis. Les paragraphes 2a, 2b et 3 ajoutent trois exigences sans fondement exprès dans le règlement, sur lesquelles AMLA dispose d'une marge de manœuvre que le CMV invite à exercer avec tact. Sur le paragraphe 2a — Fréquence du screening L'article 19 §2a établit que la détermination du statut PPE doit intervenir à une fréquence fondée sur les risques, sans aucune indication concrète. Cette imprécision laisse une latitude totale aux superviseurs. Pour les maisons de vente, la détermination intervient naturellement à chaque transaction, ce qui constitue la réponse la plus adaptée au risque. Le CMV demande qu'AMLA précise que, pour les entités dont l'activité repose sur

Name of the respondent	Question	Answer
		des transactions ponctuelles, la vérification effectuée à chaque transaction satisfait à cette exigence. Sur le paragraphe 2b — Mise à jour sans délai L'article 19 §2b impose une nouvelle détermination sans délai en cas d'information nouvelle susceptible d'avoir une incidence sur l'identification d'une PPE. Cette exigence suppose une capacité de veille continue structurellement inapplicable pour les maisons de vente de taille modeste. Le CMV demande qu'AMLA précise que cette obligation peut être satisfaite, pour les entités dont l'activité repose sur des transactions ponctuelles, par une vérification systématique à chaque nouvelle transaction. Sur le paragraphe 3 — Automatisation du screening L'article 19 §3 établit une présomption en faveur de l'automatisation dont l'exception pour le recours aux seules vérifications manuelles est trop restrictive, renversant la charge de la preuve d'une manière qui pénalise les petites structures. Les maisons de vente ne sont pas des établissements financiers disposant de systèmes sophistiqués. Leur imposer une présomption d'automatisation revient à exiger des investissements technologiques sans rapport avec les risques couverts. Le CMV demande qu'AMLA précise que le recours aux seules vérifications manuelles est présumé suffisant pour les entités de taille modeste opérant sur la base de transactions ponctuelles. Proposition de reformulation du §3 : Remplacer : « obliged entities shall put in place automated screening tools and measures, or a combination of automated screening tools and manual checks unless the size, business model, complexity or nature of the business of the obliged entity justifies the use of manual checks only »

Name of the respondent	Question	Answer
		Par : « obliged entities shall put in place screening tools and measures proportionate to the size, business model, complexity and nature of their business. Obliged entities whose business model is based on occasional transactions and whose size does not justify investment in automated screening tools may rely on manual checks alone, provided they document the rationale for this approach »

Conseil des Maisons de Vente (CMV)	Please share your comments below, specifying the subparagraph and point, if applicable (e.g. paragraph 1 point (a)).17	ARTICLE 23 — MISE A JOUR DES DONNEES D'IDENTIFICATION EN SITUATION DE VIGILANCE FAIBLE Position : Observation — neutralisation de l'intérêt opérationnel du régime simplifié pour les maisons de vente, et proposition d'un écosystème de confiance entre professionnels assujettis Le CMV comprend l'intérêt de l'article 23, qui impose aux entités assujetties appliquant une fréquence réduite de mise à jour des données d'identification de maintenir une surveillance continue de la relation, afin de s'assurer de l'absence de changement de circonstances, d'événement nécessitant une mise à jour, ou de transactions suspectes. Cette logique est parfaitement adaptée au secteur financier, dont le modèle économique repose sur des relations d'affaires de longue durée impliquant des interactions fréquentes, voire quotidiennes, avec le client. Pour les maisons de vente en revanche, cette obligation de surveillance continue neutralise en pratique l'intérêt opérationnel du régime de vigilance simplifiée. Une maison de vente interagit avec ses clients de manière ponctuelle, à

		l'occasion de chaque transaction. La surveillance des trois conditions cumulatives imposées par l'article 23 s'effectue donc naturellement à chaque nouvelle transaction — ce qui revient en pratique à une vérification aussi fréquente que dans le régime standard, sans que la réduction de fréquence des mises à jour formelles présente un bénéfice opérationnel réel. Le CMV invite AMLA à tenir compte de cette réalité sectorielle dans les orientations qu'elle sera amenée à publier. Elle souhaite à cet égard attirer l'attention d'AMLA sur une piste de simplification que les présents RTS n'ont pas explorée et qui permettrait de donner au régime simplifié une portée opérationnelle effective pour les maisons de vente. L'article 75 du règlement (UE) 2024/1624 reconnaît le principe du partage d'informations entre entités assujetties dans le cadre de partenariats formels, encadrés et soumis à notification aux superviseurs. Ce faisant, le règlement consacre l'idée qu'une entité assujettie peut légitimement s'appuyer sur les diligences conduites par une autre entité assujettie, sous réserve du respect de conditions définies. Le CMV considère que ce principe devrait être étendu, dans un cadre simplifié et adapté aux transactions ponctuelles, aux situations dans lesquelles un acheteur a été identifié et vérifié par un autre professionnel assujetti — banque, notaire — dans le cadre de la même opération. Dans ce cas, la réutilisation des diligences déjà conduites devrait être explicitement reconnue comme mesure de vigilance simplifiée, sans qu'il soit nécessaire de mettre en place un partenariat formel au sens de l'article 75. Cette approche concrétiserait la notion d'écosystème de confiance entre professionnels assujettis et enclencherait un cercle vertueux des diligences dans une perspective de responsabilisation des acteurs.

Name of the respondent	Question	Answer
		Proposition d'ajout à l'article 23 : Ajouter : « Where a customer has been identified and verified by another obliged entity in the context of the same transaction, the obliged entity may rely on those due diligence measures as a simplified due diligence measure, without being required to conduct independent verification, provided that the other obliged entity is subject to AML/CFT obligations equivalent to those set out in Regulation (EU) 2024/1624 and is effectively supervised for compliance with those obligations. »
